Function: One of the font table tag constants.
Notes: Font table tag for font descriptor.

58.4.126 kCTFontTableFeat = "feat"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for layout feature.

58.4.127 kCTFontTableFmtx = "fmtx"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for font metrics.

58.4.128 kCTFontTableFpgm = "fpgm"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for font program.

58.4.129 kCTFontTableFvar = "fvar"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for font variation.

58.4.130 kCTFontTableGasp = "gasp"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for grid-fitting/scan-conversion.

58.4.131 kCTFontTableGDEF = "GDEF"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for glyph definition.

58.4.132 kCTFontTableGlyf = "glyf"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for glyph data.

58.4.133 kCTFontTableGPOS = "GPOS"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for glyph positioning.

58.4.134 kCTFontTableGSUB = "GSUB"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for glyph substitution.

58.4.135 kCTFontTableGvar = "gvar"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for glyph variation.

58.4.136 kCTFontTableHdmx = "hdmx"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for horizontal device metrics.

58.4.137 kCTFontTableHead = "head"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for font header.

58.4.138 kCTFontTableHhea = "hhea"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for horizontal header.

58.4.139 kCTFontTableHmtx = "hmtx"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for horizontal metrics.

58.4.140 kCTFontTableHsty = "hsty"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for horizontal style.

58.4.141 kCTFontTableJSTF = "JSTF"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for justification.

58.4.142 kCTFontTableJust = "just"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for justification.

58.4.143 kCTFontTableKern = "kern"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for kerning.

58.4.144 kCTFontTableKerx = "kerx"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for extended kerning.

58.4.145 kCTFontTableLcar = "lcar"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for ligature caret.

58.4.146 kCTFontTableLoca = "loca"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for index to location.

58.4.147 kCTFontTableLtag = "ltag"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Language tags

58.4.148 kCTFontTableLTSH = "LTSH"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for linear threshold.

58.4.149 kCTFontTableMaxp = "maxp"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for maximum profile.

58.4.150 kCTFontTableMort = "mort"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for morph.

58.4.151 kCTFontTableMorx = "morx"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for extended morph.

58.4.152 kCTFontTableName = "name"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for naming table.

58.4.153 kCTFontTableOpbd = "opbd"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for optical bounds.

58.4.154 kCTFontTableOptionExcludeSynthetic = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the Font Table Option Constants.
Notes:

The font table excludes synthetic font data.
Available in OS X v10.5 and later.
Deprecated in OS X v10.8.

58.4.155 kCTFontTableOptionNoOptions = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the Font Table Option Constants.
Notes: No font table options are specified.

58.4.156 kCTFontTableOS2 = "OS/2"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for OS/2 and Windows-specific metrics.

58.4.157 kCTFontTablePCLT = "PCLT"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for PCL 5 data.

58.4.158 kCTFontTablePost = "post"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for PostScript information.

58.4.159 kCTFontTablePrep = "prep"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for control value program, 'prep' table.

58.4.160 kCTFontTableProp = "prop"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for properties.

58.4.161 kCTFontTableSbit = "sbit"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes:

Font table tag for bitmap data.
Available in OS X v10.7 and later.

58.4.162 kCTFontTableSbix = "sbix"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes:

Font table tag for extended bitmap data.
Available in OS X v10.7 and later.

58.4.163 kCTFontTableTrak = "trak"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for tracking.

58.4.164 kCTFontTableVDMX = "VDMX"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for vertical device metrics.

58.4.165 kCTFontTableVhea = "vhea"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for vertical header.

58.4.166 kCTFontTableVmtx = "vmtx"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for vertical metrics.

58.4.167 kCTFontTableVORG = "VORG"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for vertical origin.

58.4.168 kCTFontTableZapf = "Zapf"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for glyph reference.

58.4.169 kCTFontUIFontAlertHeader = 18

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for alert headers.

58.4.170 kCTFontUIFontApplication = 9

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The default font for text documents.

58.4.171 kCTFontUIFontControlContent = 26

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for contents of user-interface controls.

58.4.172 kCTFontUIFontEmphasizedSystem = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The system font used for emphasis in alerts.

58.4.173 kCTFontUIFontEmphasizedSystemDetail = 20

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The system font used for emphasis in details.

58.4.174 kCTFontUIFontLabel = 10

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for labels and tick marks on full-size sliders.

58.4.175 kCTFontUIFontMenuItem = 12

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for menu items.

58.4.176 kCTFontUIFontMenuItemCmdKey = 14

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for menu-item command-key equivalents.

58.4.177 kCTFontUIFontMenuItemMark = 13

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used to draw menu item marks.

58.4.178 kCTFontUIFontMenuTitle = 11

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for menu titles.

58.4.179 kCTFontUIFontMessage = 23

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for standard interface items, such as button labels, menu items, and so on.

58.4.180 kCTFontUIFontMiniEmphasizedSystem = 7

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The small system font used for emphasis.

58.4.181 kCTFontUIFontMiniSystem = 6

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The standard small system font used for informative text in alerts, column headings in lists, help tags, and small controls.

58.4.182 kCTFontUIFontNone = -1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The user-interface font type is not specified.

58.4.183 kCTFontUIFontPalette = 24

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used in tool palettes.

58.4.184 kCTFontUIFontPushButton = 16

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for a push button (a rounded rectangular button with a text label on it).

58.4.185 kCTFontUIFontSmallEmphasizedSystem = 5

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The system font used for emphasis in alerts.

58.4.186 kCTFontUIFontSmallSystem = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The standard small system font used for informative text in alerts, column headings in lists, help tags, and small controls.

58.4.187 kCTFontUIFontSmallToolbar = 22

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The small font used for labels of toolbar items.

58.4.188 kCTFontUIFontSystem = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The system font used for standard user-interface items such as button labels, menu items, and so on.

58.4.189 kCTFontUIFontSystemDetail = 19

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The standard system font used for details.

58.4.190 kCTFontUIFontToolbar = 21

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for labels of toolbar items.

58.4.191 kCTFontUIFontToolTip = 25

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for tool tips.

58.4.192 kCTFontUIFontUser = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used by default for documents and other text under the user's control (that is, text whose font the user can normally change).

58.4.193 kCTFontUIFontUserFixedPitch = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes:

The font used by default for documents and other text under the user's control when that font is fixed-pitch. Available in OS X v10.5 and later.

58.4.194 kCTFontUIFontUtilityWindowTitle = 17

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for utility window titles.

58.4.195 kCTFontUIFontViews = 8

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The view font used as the default font of text in lists and tables.

58.4.196 kCTFontUIFontWindowTitle = 15

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for utility window titles.

58.5 class CTFrameMBS

58.5.1 class CTFrameMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTFrame opaque type represents a frame containing multiple lines of text.
Example:

```
dim longText as string = "Lorem ipsum dolor sit amet..."

dim ct as new CFStringMBS(longText)
dim s as new CFAttributedStringMBS(ct, nil)

// layout master
dim framesetter as CTFramesetterMBS = CTFramesetterMBS.CreateWithAttributedString(s)

// a column
dim ColumnPath as new CGMutablePathMBS
dim Rect as new CGRectMBS(0, 0, g.Width, g.Height)
ColumnPath.AddRect nil, Rect

// context
# If XojoVersion >= 2019.02 Then
Dim CGContextHandle As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Dim CGContext As CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
# Else
Dim CGContextHandle As Integer = g.Handle(g.HandleTypeCGContextRef)
Dim CGContext As CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
# EndIf

CGContext.SaveGState
// reset text matrix
dim a as CGAffineTransformMBS = CGAffineTransformMBS.Identity
CGContext.TextMatrix = a

dim Frame as CTFrameMBS = framesetter.CreateFrame(0, 0, ColumnPath, nil)

// draw
Frame.Draw(CGContext)

// cleanup
CGContext.RestoreGState
CGContext.Flush
```

Notes:

The frame object is the output resulting from the text-framing process performed by a framesetter object.

You can draw the entire text frame directly into the current graphic context. The frame object contains an array of line objects that can be retrieved for individual rendering or to get glyph information.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

58.5.2 Blog Entries

- CoreText Completed

58.5.3 Blog Entries

- CoreText Completed

58.5.4 Methods

58.5.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

58.5.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

58.5.7 Draw(context as CGContextMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Draws an entire frame into a context.
Notes:

context: The context in which to draw the frame.

If both the frame and the context are valid, the frame is drawn in the context. This call can leave the context in any state and does not flush it after the draw operation.

58.5.8 kCTFrameClippingPathsAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the attributes keys.
Notes:

Specifies array of paths to clip frame.

The value must be a array containing dictionaries. Each dictionary should have a kCTFramePathClipping-PathAttributeName key-value pair, and can have a kCTFramePathFillRuleAttributeName key-value pair and kCTFramePathFillRuleAttributeName key-value pair as optional parameters.
Available in OS X v10.7 and later.

58.5.9 kCTFramePathClippingPathAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the attributes keys.
Notes:

Specifies clipping path. This attribute is valid only in a dictionary contained in an array specified by kCT-FrameClippingPathsAttributeName.

The value must be a CGPathMBS specifying a clipping pat. See kCTFrameClippingPathsAttributeName.
Available in OS X v10.7 and later.

58.5.10 kCTFramePathFillRuleAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The key used to specify the fill rule for a frame.
Notes:

he value must be a CFNumberRef object containing a CTFramePathFillRule constant. See CTFramePath-FillRule Constants for more information. The default value is kCTFramePathFillEvenOdd.
Available in OS X v10.7 and later.

58.5.11 kCTFramePathWidthAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the attributes keys.
Notes:

The key used to specify the frame width.
The value must be a number containing a value specifying the frame width. The default width value is zero.
Available in OS X v10.7 and later.

58.5.12 kCTFrameProgressionAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the attributes keys.
Notes:

Specifies progression for a frame.
A number containing a CTFrameProgression constant. The default is kCTFrameProgressionTopToBottom.
Available in OS X v10.5 and later.

This value determines the line-stacking behavior for a frame and does not affect the appearance of the glyphs within that frame.

58.5.13 LineOrigins(location as Integer, length as Integer) as CGPointMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of line origins for a frame.
Notes:

location and length: The range of line origins you wish to copy. If the length of the range is 0, then the copy operation continues from the start index of the range to the last line origin.

Returns array with CGPoints. Empty array in case of errors.

Special Considerations
In versions of OS X prior to 10.7 and versions of iOS prior to 4.2, this function may function unpredictably if the frame is not rectangular.

58.5.14 Lines as CTLineMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of lines stored in the frame.

58.5.15 Properties

58.5.16 FrameAttributes as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the frame attributes used to create the frame.
Notes:

Returns a reference to a CFDictionary object containing the frame attributes that were used to create the frame, or, if the frame was created without any frame attributes, nil.

You can create a frame with an attributes dictionary to control various aspects of the framing process. These attributes are different from the ones used to create an attributed string.
(Read only property)

58.5.17 Path as CGPathMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the path used to create the frame.
Notes: (Read only property)

58.5.18 StringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the range of characters originally requested to fill the frame.
Notes: (Read only property)

58.5.19 StringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the range of characters originally requested to fill the frame.
Notes: (Read only property)

58.5.20 VisibleStringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the range of characters that actually fit in the frame.
Notes:

This function can be used to cascade frames, because it returns the range of characters that can be seen in the frame. The next frame would start where this frame ends.
(Read only property)

58.5.21 VisibleStringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the range of characters that actually fit in the frame.
Notes:

This function can be used to cascade frames, because it returns the range of characters that can be seen in the frame. The next frame would start where this frame ends.
(Read only property)

58.5.22 Constants

58.5.23 kCTFramePathFillEvenOdd = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify the fill rule used by a frame.
Notes:

Text is filled in the area that would be painted if the path were given to CGContextMBS.EOFillPath.
Available in OS X v10.7 and later.

58.5.24 kCTFramePathFillWindingNumber = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify the fill rule used by a frame.
Notes:

Text is fill in the area that would be painted if the path were given to CGContextMBS.FillPath.
Available in OS X v10.7 and later.

58.5.25 kCTFrameProgressionLeftToRight = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify frame progression types.
Notes:

Lines are stacked left to right for vertical text.
The lines of text within a frame may be stacked for either horizontal or vertical text. Values are enumerated for each stacking type supported by CTFrame. Frames created with a progression type specifying vertical text rotate lines 90 degrees counterclockwise when drawing.

58.5.26 kCTFrameProgressionRightToLeft = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify frame progression types.
Notes:

Lines are stacked right to left for vertical text.
The lines of text within a frame may be stacked for either horizontal or vertical text. Values are enumerated for each stacking type supported by CTFrame. Frames created with a progression type specifying vertical text rotate lines 90 degrees counterclockwise when drawing.

58.5.27 kCTFrameProgressionTopToBottom = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify frame progression types.
Notes:

Lines are stacked top to bottom for horizontal text.
The lines of text within a frame may be stacked for either horizontal or vertical text. Values are enumerated for each stacking type supported by CTFrame. Frames created with a progression type specifying vertical text rotate lines 90 degrees counterclockwise when drawing.

58.6 class CTFramesetterMBS

58.6.1 class CTFramesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTFramesetter opaque type is used to generate text frames. That is, CTFramesetter is an object factory for CTFrame objects.
Notes:

The framesetter takes an attributed string object and a shape descriptor object and calls into the typesetter to create line objects that fill that shape. The output is a frame object containing an array of lines. The frame can then draw itself directly into the current graphic context.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

58.6.4 Methods

58.6.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

58.6.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

58.6.7 CreateFrame(location as Integer, length as Integer, path as CGPathMBS, frameAttributes as dictionary = nil) as CTFrameMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable frame using a framesetter.
Notes:

location and length: The range, of the attributed string that was used to create the framesetter, that is to be typeset in lines fitted into the frame. If the length portion of the range is set to 0, then the framesetter continues to add lines until it runs out of text or space.
path: A CGPath object that specifies the shape of the frame. The path may be non-rectangular in versions of OS X v10.7 or later and versions of iOS 4.2 or later.
frameAttributes: Additional attributes that control the frame filling process can be specified here, or nil if there are no such attributes.

Returns a reference to a new CTFrame object if the call was successful; otherwise, nil.

This call creates a frame full of glyphs in the shape of the path provided by the path parameter. The framesetter continues to fill the frame until it either runs out of text or it finds that text no longer fits.

Special Considerations
In versions of OS X prior to 10.7 and versions of iOS prior to 4.2, this function returns NULL if the CGPath specified by the path parameter is not rectangular.

58.6.8 CreateWithAttributedString(s as CFAttributedStringMBS) as CTFramesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable framesetter object from an attributed string.
Notes:

s: The attributed string with which to construct the framesetter object.

Returns a reference to a CTFramesetter object if the call was successful; otherwise, NULL.
The resultant framesetter object can be used to create and fill text frames with the CreateFrame call.

58.6.9 SuggestFrameSizeWithConstraints(location as Integer, length as Integer, frameAttributes as dictionary, constraints as CGSizeMBS, byref fitRangeLocation as Integer, byref fitRangeLength as Integer) as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Determines the frame size needed for a string range.
Notes:

location and length: The string range to which the frame size applies. The string range is a range over the string used to create the framesetter. If the length portion of the range is set to 0, then the framesetter continues to add lines until it runs out of text or space.
frameAttributes: Additional attributes that control the frame filling process, or NULL if there are no such attributes.
constraints: The width and height to which the frame size is constrained. A value of CGFLOAT_MAX for either dimension indicates that it should be treated as unconstrained.
fitRange: On return, contains the range of the string that actually fit in the constrained size.

Returns the actual dimensions for the given string range and constraints.

This function can be used to determine how much space is needed to display a string, optionally by constraining the space along either dimension.
Available in OS X v10.5 and later.

58.6.10 Properties

58.6.11 TypeSetter as CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the typesetter object being used by the framesetter.
Notes:

Return sa reference to a CTTypesetter object if the call was successful; otherwise, nil. The framesetter maintains a reference to the returned object, which should not be released by the caller.

Each framesetter uses a typesetter internally to perform line breaking and other contextual analysis based on the characters in a string; this function returns the typesetter being used by a particular framesetter in case the caller would like to perform other operations on that typesetter.

Available in OS X v10.5 and later.
(Read only property)

58.7 class CTGlyphInfoMBS

58.7.1 class CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTGlyphInfo opaque type enables you to override a font's specified mapping from Unicode to the glyph ID.
Notes:

Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

58.7.2 Blog Entries

- CoreText Completed

58.7.3 Blog Entries

- CoreText Completed

58.7.4 Methods

58.7.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

58.7.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

58.7.7 CreateWithCharacterIdentifier(cid as Integer, collection as Integer, baseString as string) as CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable glyph info object with a character identifier.
Notes:

cid: A character identifier.
collection: A character collection identifier.
baseString: The part of the string the returned object is intended to override.

Returns a valid reference to an immutable CTGlyphInfoMBS object if glyph info creation was successful; otherwise, nil.

This function creates an immutable glyph info object for a character identifier and a character collection.
Available in OS X v10.5 and later.

58.7.8 CreateWithGlyph(glyph as Integer, font as CTFontMBS, baseString as string) as CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable glyph info object with a glyph index.
Notes:

glyph: The index of the glyph.
font: The font to be associated with the returned CTGlyphInfoMBS object.
baseString: The part of the string the returned object is intended to override.

Returns a valid reference to an immutable CTGlyphInfoMBS object, If glyph info creation was successful; otherwise, nil.

This function creates an immutable glyph info object for a glyph index using a specified font.
Available in OS X v10.5 and later.

58.7.9 CreateWithGlyphName(glyphName as string, font as CTFontMBS, baseString as string) as CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable glyph info object with a glyph name.
Notes:

glyphName: The name of the glyph.
font: The font to be associated with the returned CTGlyphInfo object.
baseString: The part of the string the returned object is intended to override.

Returns a valid reference to an immutable CTGlyphInfo object if glyph info creation was successful; otherwise, nil.
This function creates an immutable glyph info object for a glyph name such as copyright using a specified font.
Available in OS X v10.5 and later.

58.7.10 Properties

58.7.11 CharacterCollection as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the character collection for a glyph info object.
Notes:

If the glyph info object was created with a glyph name or a glyph index, its character collection is kCTIdentityMappingCharacterCollection.
(Read only property)

58.7.12 CharacterIdentifier as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the character identifier for a glyph info object.
Notes: (Read only property)

58.7.13 GlyphName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the glyph name for a glyph info object if that object exists.
Notes: (Read only property)

58.7.14 Constants

58.7.15 kCTAdobeCNS1CharacterCollection = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-CNS1 mapping.

58.7.16 kCTAdobeGB1CharacterCollection = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-GB1 mapping.

58.7.17 kCTAdobeJapan1CharacterCollection = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-Japan1 mapping.

58.7.18 kCTAdobeJapan2CharacterCollection = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-Japan2 mapping.

58.7.19 kCTAdobeKorea1CharacterCollection = 5

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-Korea1 mapping.

58.7.20 kCTCharacterCollectionAdobeCNS1 = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-CNS1 mapping.

58.7.21 kCTCharacterCollectionAdobeGB1 = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-GB1 mapping.

58.7.22 kCTCharacterCollectionAdobeJapan1 = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-Japan1 mapping.

58.7.23 kCTCharacterCollectionAdobeJapan2 = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-Japan2 mapping.

58.7.24 kCTCharacterCollectionAdobeKorea1 = 5

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-Korea1 mapping.

58.7.25 kCTCharacterCollectionIdentityMapping = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The character identifier is equal to the CGGlyph glyph index.

58.7.26 kCTIdentityMappingCharacterCollection = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The character identifier is equal to the CGGlyph glyph index.

58.8 class CTLineMBS

58.8.1 class CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTLine opaque type represents a line of text.
Example:

```
Sub Paint(g As Graphics)
// inside paint event of a Canvas

// create a font, quasi systemFontWithSize:24.0
dim sysUIFont as CTFontMBS = CTFontMBS.CreateUIFontForLanguage(CTFontMBS.kCTFontUIFontSystem, 24.0)

// create a naked string
dim text as string = "Some Text."

// blue
dim cgColor as CGColorMBS = CGColorMBS.CreateGenericRGB(0.0, 0.0, 1.0)

// single underline
dim underline as Integer = CoreTextMBS.kCTUnderlineStyleSingle

// pack it into attributes dictionary
dim attributesDict as new Dictionary
attributesDict.Value(CoreTextMBS.kCTFontAttributeName) = sysUIFont
attributesDict.Value(CoreTextMBS.kCTForegroundColorAttributeName) = cgColor
attributesDict.Value(CoreTextMBS.kCTUnderlineStyleAttributeName) = underline

// make the attributed string
dim cfDic as new CFDictionaryMBS(attributesDict)
dim cfStr as new CFStringMBS(text)
dim stringToDraw as CFAttributedStringMBS = CFAttributedStringMBS.Create( cfStr, cfDic)

// now for the actual drawing

# If XojoVersion >= 2019.02 Then
Dim CGContextHandle As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Dim CGContext As CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
# Else
Dim CGContextHandle As Integer = g.Handle(g.HandleTypeCGContextRef)
Dim CGContext As CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
# EndIf

CGContext.SaveGState
```

```
// reset text matrix
dim a as CGAffineTransformMBS = CGAffineTransformMBS.Identity
CGContext.TextMatrix = a

// draw
dim line as CTLineMBS = CTLineMBS.CreateWithAttributedString(stringToDraw)

dim x as Integer = 10
dim y as Integer = 10

// plus text height
y = y + 24

// swap y
y = g.Height - y

CGContext.TextPosition = new CGPointMBS(x, y)
line.Draw(CGContext)

CGContext.RestoreGState
CGContext.Flush
End Sub
```

Notes:

A CTLine object contains an array of glyph runs. Line objects are created by the typesetter during a frame-setting operation and can draw themselves directly into a graphics context.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

58.8.2 Blog Entries

- CoreText Completed

58.8.3 Blog Entries

- CoreText Completed

58.8.4 Methods

58.8.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

58.8.6 Bounds(options as Integer = 0) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Queries bounds.

58.8.7 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

58.8.8 CreateJustifiedLine(justificationFactor as Double, justificationWidth as Double) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a justified line from an existing line.
Notes:

line: The line from which to create a justified line.
justificationFactor: Full or partial justification. When set to 1.0 or greater, full justification is performed. If this parameter is set to less than 1.0, varying degrees of partial justification are performed. If it is set to 0 or less, no justification is performed.
justificationWidth: The width to which the resultant line is justified. If justificationWidth is less than the actual width of the line, then negative justification is performed (that is, glyphs are squeezed together).

Returns a reference to a justified CTLine object if the call was successful; otherwise, nil.
Available in OS X v10.5 and later.

58.8.9 CreateTruncatedLine(width as Double, truncationType as Integer, truncationToken as CTLineMBS = nil) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a truncated line from an existing line.
Notes:

line: The line from which to create a truncated line.
width: The width at which truncation begins. The line is truncated if its width is greater than the width passed in this parameter.
truncationType: The type of truncation to perform if needed. See constants for possible values.
truncationToken: This token is added at the point where truncation took place, to indicate that the line was truncated. Usually, the truncation token is the ellipsis character (U+2026). If this parameter is set to nil, then no truncation token is used and the line is simply cut off.

Returns a reference to a truncated CTLine object if the call was successful; otherwise, NULL.

The line specified in truncationToken should have a width less than the width specified by the width parameter. If the width of the line specified in truncationToken is greater than width and truncation is needed, the function returns nil.

Available in OS X v10.5 and later.

58.8.10 CreateWithAttributedString(s as CFAttributedStringMBS) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a single immutable line object directly from an attributed string.
Notes:

s: The string from which the line is created.

Returns a reference to a CTLine object if the call was successful; otherwise, nil.

This function allows clients who need very simple line generation to create a line without creating a typesetter object. The typesetting is done under the hood. Without a typesetter object, the line cannot be properly broken. However, for simple things like text labels, line breaking is not an issue.
Available in OS X v10.5 and later.

58.8.11 Draw(context as CGContextMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Draws a complete line.
Notes:

context: The context into which the line is drawn.

This is a convenience function because the line could be drawn run-by-run by getting the glyph runs, getting

the glyphs out of them, and calling a function such as CGContextMBS.ShowGlyphsAtPositions. This call can leave the graphics context in any state and does not flush the context after the draw operation.

Available in OS X v10.5 and later.

58.8.12 GlyphRuns as CTRunMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the array of glyph runs that make up the line object.
Notes:

Returns an array containing the CTRunMBS objects that make up the line.
Available in OS X v10.5 and later.

58.8.13 ImageBounds(context as CGContextMBS) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the image bounds for a line.
Notes:

context: The context for which the image bounds are calculated. This is required because the context could have settings in it that would cause changes in the image bounds.

Returns a rectangle that tightly encloses the paths of the line's glyphs, or, if the line or context is invalid, CGRectNull.
Available in OS X v10.5 and later.

58.8.14 OffsetForStringIndex(charIndex as Integer, byref secondaryOffset as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Determines the graphical offset or offsets for a string index.
Notes:

charIndex: The string index corresponding to the desired position.
secondaryOffset: On output, the secondary offset along the baseline for charIndex. When a single caret is sufficient for a string index, this value will be the same as the primary offset, which is the return value of this function. May be NULL.

Returns the primary offset along the baseline for charIndex, or 0.0 if the line does not support string access.

This function returns the graphical offset or offsets corresponding to a string index, suitable for movement between adjacent lines or for drawing a custom caret. For moving between adjacent lines, the primary offset can be adjusted for any relative indentation of the two lines; a CGPoint constructed with the adjusted offset for its x value and 0.0 for its y value is suitable for passing to CTLineGetStringIndexForPosition. For drawing a custom caret, the returned primary offset corresponds to the portion of the caret that represents the visual insertion location for a character whose direction matches the line's writing direction.

Available in OS X v10.5 and later.

58.8.15 PenOffsetForFlush(flushFactor as Double, flushWidth as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the pen offset required to draw flush text.
Notes:

flushFactor: Determines the type of flushness. A flushFactor of 0 or less indicates left flush. A flushFactor of 1.0 or more indicates right flush. Flush factors between 0 and 1.0 indicate varying degrees of center flush, with a value of 0.5 being totally center flush.
flushWidth: Specifies the width to which the flushness operation should apply.

Returns the offset from the current pen position for the flush operation.
Available in OS X v10.5 and later.

58.8.16 StringIndexForPosition(position as CGPointMBS) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Performs hit testing.
Notes:

position: The location of the mouse click relative to the line's origin.

Returns the string index for the position, or if the line does not support string access, kCFNotFound. Relative to the line's string range, this value can be no less than the first string index and no greater than the last string index plus 1.

This function can be used to determine the string index for a mouse click or other event. This string index corresponds to the character before which the next character should be inserted. This determination is made

by analyzing the string from which a typesetter was created and the corresponding glyphs as embodied by a particular line.
Available in OS X v10.5 and later.

58.8.17 TypographicBounds(byref ascent as Double, byref descent as Double, byref leading as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the typographic bounds of a line.
Notes:

ascent: On output, the ascent of the line.
descent: On output, the descent of the line.
leading: On output, the leading of the line.

Returns the typographic width of the line. If the line is invalid, this function returns 0.

58.8.18 Properties

58.8.19 GlyphCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the total glyph count for the line object.
Notes:

The total glyph count is equal to the sum of all of the glyphs in the glyph runs forming the line.
(Read only property)

58.8.20 StringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the range of characters that originally spawned the glyphs in the line.
Notes: (Read only property)

58.8.21 StringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the range of characters that originally spawned the glyphs in the line.
Notes: (Read only property)

58.8.22 TrailingWhitespaceWidth as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the trailing whitespace width for a line.
Notes:

The width of the line's trailing whitespace. If the line is invalid, this function will always return zero.

Creating a line for a width can result in a line that is actually longer than the desired width due to trailing whitespace. Although this is typically not an issue due to whitespace being invisible, this function can be used to determine what amount of a line's width is due to trailing whitespace.
Available in OS X v10.5 and later.
(Read only property)

58.8.23 Constants

58.8.24 kCTLineBoundsExcludeTypographicLeading = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the line bounds constants.
Notes: Pass this option to exclude typographic leading.

58.8.25 kCTLineBoundsExcludeTypographicShifts = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the line bounds constants.
Notes: Pass this option to ignore cross-stream shifts due to positioning (such as kerning or baseline alignment).

58.8.26 kCTLineBoundsUseGlyphPathBounds = 8

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the line bounds constants.
Notes: Pass this option to use glyph path bounds rather than the default typographic bounds.

58.8.27 kCTLineBoundsUseHangingPunctuation = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the line bounds constants.
Notes: Normally line bounds include all glyphs; pass this option to treat standard punctuation hanging off either end of the line as fully hanging.

58.8.28 kCTLineBoundsUseOpticalBounds = 16

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the line bounds constants.
Notes: Pass this option to use optical bounds. This option overrides kCTLineBoundsUseGlyphPathBounds.

58.8.29 kCTLineTruncationEnd = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the values to tell the truncation engine which type of truncation is being requested..
Notes: Truncate the end of the line, leaving the start portion visible.

58.8.30 kCTLineTruncationMiddle = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the values to tell the truncation engine which type of truncation is being requested..
Notes: Truncate the middle of the line, leaving both the start and the end portions visible.

58.8.31 kCTLineTruncationStart = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the values to tell the truncation engine which type of truncation is being requested..
Notes: Truncate the beginning of the line, leaving the end portion visible.

58.9 class CTMutableFontCollectionMBS

58.9.1 class CTMutableFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The mutable font collection class.
Notes:

Subclass of the CTFontCollectionMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- CoreText Completed

58.9.3 Blog Entries

- CoreText Completed

58.9.4 Methods

58.9.5 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

58.9.6 SetExclusionDescriptors(descriptors() as CTFontDescriptorMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Replaces the array of descriptors to exclude from the match.

58.9.7 SetQueryDescriptors(descriptors() as CTFontDescriptorMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Replaces the array of descriptors to match.

58.10 class CTParagraphStyleMBS

58.10.1 class CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTParagraphStyle opaque type represents paragraph or ruler attributes in an attributed string.
Notes:

A paragraph style object represents a complex attribute value in an attributed string, storing a number of subattributes that affect paragraph layout for the characters of the string. Among these subattributes are alignment, tab stops, writing direction, line-breaking mode, and indentation settings.
Subclass of the CFObjectMBS class.

58.10.4 Methods

58.10.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

58.10.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable paragraph style.
Notes:

Returns a valid reference to an immutable CTParagraphStyle object, If the paragraph style creation was successful; otherwise, nil.

Using this function is the easiest and most efficient way to create a paragraph style. Paragraph styles should be kept immutable for totally lock-free operation. If an invalid paragraph style setting specifier is passed into the settings parameter, nothing bad will happen, but you will be unable to query for this value. The reason is to allow backward compatibility with style setting specifiers that may be introduced in future versions.

Available in OS X v10.5 and later.

58.10.7 Create as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable paragraph style.
Notes:

Returns a valid reference to an immutable CTParagraphStyle object, If the paragraph style creation was successful; otherwise, nil.

Using this function is the easiest and most efficient way to create a paragraph style. Paragraph styles should be kept immutable for totally lock-free operation. If an invalid paragraph style setting specifier is passed into the settings parameter, nothing bad will happen, but you will be unable to query for this value. The reason is to allow backward compatibility with style setting specifiers that may be introduced in future versions.

Available in OS X v10.5 and later.
See also:

- 58.10.8 Create(settings() as CTParagraphStyleSettingMBS) as CTParagraphStyleMBS 11567

58.10.8 Create(settings() as CTParagraphStyleSettingMBS) as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable paragraph style.
Notes:

settings: The settings with which to preload the paragraph style.

Returns a valid reference to an immutable CTParagraphStyle object, If the paragraph style creation was successful; otherwise, nil.

Using this function is the easiest and most efficient way to create a paragraph style. Paragraph styles should be kept immutable for totally lock-free operation. If an invalid paragraph style setting specifier is passed into the settings parameter, nothing bad will happen, but you will be unable to query for this value. The rea-

son is to allow backward compatibility with style setting specifiers that may be introduced in future versions.

Available in OS X v10.5 and later.
See also:

- 58.10.7 Create as CTParagraphStyleMBS 11567

58.10.9 CreateCopy as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable copy of a paragraph style.
Notes: A valid reference to an immutable CTParagraphStyle object that is a copy of the one passed into paragraphStyle, If the paragraphStyle reference is valid; otherwise nil, if any error occurred, including being supplied with an invalid reference.

58.10.10 CreateWithAlignment(Alignment as Integer) as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Creates an immutable paragraph style.
Example:

```
dim a as Integer
dim t as CTParagraphStyleMBS

a = CTParagraphStyleMBS.kCTTextAlignmentRight
t = CTParagraphStyleMBS.CreateWithAlignment(a)

MsgBox str(T.Alignment) // shows 1
```

58.10.11 TabStops as CTTextTabMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTTextTab objects, sorted by location, that define the tab stops for the paragraph style.
Notes: Type: Array of CTTextTabMBS. Default: 12 left-aligned tabs, spaced by 28.0 points. Application: CTFramesetter, CTTypesetter.

58.10.12 Properties

58.10.13 Alignment as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The text alignment.
Notes:

Natural text alignment is realized as left or right alignment, depending on the line sweep direction of the first script contained in the paragraph. Type: CTTextAlignment. Default: kCTNaturalTextAlignment. Application: CTFramesetter.
(Read only property)

58.10.14 BaseWritingDirection as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The base writing direction of the lines.
Notes:

Type: CTWritingDirection. Default: kCTWritingDirectionNatural. Application: CTFramesetter, CTTypesetter.
(Read only property)

58.10.15 DefaultTabInterval as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The documentwide default tab interval.
Notes:

Tabs after the last specified by kCTParagraphStyleSpecifierTabStops are placed at integer multiples of this distance (if positive). Type: CGFloat. Default: 0.0. Application: CTFramesetter, CTTypesetter.
(Read only property)

58.10.16 FirstLineHeadIndent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The distance, in points, from the leading margin of a frame to the beginning of the paragraph's first line.
Notes:

This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

58.10.17 HeadIndent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The distance, in points, from the leading margin of a text container to the beginning of lines other than the first.
Notes:

This value is always nonnegative. Type: CGFloat Default: 0.0 Application: CTFramesetter
(Read only property)

58.10.18 LineBoundsOptions as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The options controlling the alignment of the line edges with the leading and trailing margins.
Notes:

Type: CTLineBoundsOptions
Default: 0 (no options)
Application: CTTypesetter
(Read only property)

58.10.19 LineBreakMode as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The mode that should be used to break lines when laying out the paragraph's text.
Notes:

Type: CTLineBreakMode. Default: kCTLineBreakByWordWrapping. Application: CTFramesetter
(Read only property)

58.10.20 LineHeightMultiple as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The line height multiple.
Notes:

The natural line height of the receiver is multiplied by this factor (if positive) before being constrained by minimum and maximum line height. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

58.10.21 LineSpacingAdjustment as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The space in points added between lines within the paragraph (commonly known as leading).
Notes:

Available in OS X v10.7 and later.
(Read only property)

58.10.22 MaximumLineHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The maximum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic.
Notes:

Glyphs and graphics exceeding this height will overlap neighboring lines. A maximum height of 0 implies no line height limit. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

58.10.23 MaximumLineSpacing as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The maximum space in points between lines within the paragraph (commonly known as leading).
Notes:

This value is always nonnegative.
Available in OS X v10.7 and later.
(Read only property)

58.10.24 MinimumLineHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The minimum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic.
Notes:

This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

58.10.25 MinimumLineSpacing as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The minimum space in points between lines within the paragraph (commonly known as leading).
Notes:

This value is always nonnegative.
Available in OS X v10.7 and later.
(Read only property)

58.10.26 ParagraphSpacing as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The space added at the end of the paragraph to separate it from the following paragraph.
Notes:

This value is always nonnegative and is determined by adding the previous paragraph's kCTParagraphStyleSpecifierParagraphSpacing setting and the current paragraph's kCTParagraphStyleSpecifierParagraphSpacingBefore setting. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

58.10.27 ParagraphSpacingBefore as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The distance between the paragraph's top and the beginning of its text content.
Notes:

Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

58.10.28 TailIndent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The distance, in points, from the margin of a frame to the end of lines.
Notes:

If positive, this value is the distance from the leading margin (for example, the left margin in left-to-right text). If 0 or negative, it's the distance from the trailing margin. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

58.10.29 Constants

58.10.30 kCTLineBreakByCharWrapping = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify what happens when a line is too long for its frame.
Notes: Wrapping occurs before the first character that doesn't fit.

58.10.31 kCTLineBreakByClipping = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify what happens when a line is too long for its frame.
Notes: Lines are simply not drawn past the edge of the frame.

58.10.32 kCTLineBreakByTruncatingHead = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify what happens when a line is too long for its frame.
Notes: Each line is displayed so that the end fits in the frame and the missing text is indicated by an ellipsis glyph.

58.10.33 kCTLineBreakByTruncatingMiddle = 5

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify what happens when a line is too long for its frame.
Notes: Each line is displayed so that the beginning and end fit in the container and the missing text is indicated by an ellipsis glyph in the middle.

58.10.34 kCTLineBreakByTruncatingTail = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify what happens when a line is too long for its frame.
Notes: Each line is displayed so that the beginning fits in the container and the missing text is indicated by an ellipsis glyph.

58.10.35 kCTLineBreakByWordWrapping = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify what happens when a line is too long for its frame.
Notes: Wrapping occurs at word boundaries unless the word itself doesn't fit on a single line.

58.10.36 kCTParagraphStyleSpecifierAlignment = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes:

The text alignment. Natural text alignment is realized as left or right alignment, depending on the line sweep direction of the first script contained in the paragraph. Type: CTTextAlignment. Default: kCTNaturalTextAlignment. Application: CTFramesetter.
Available in OS X v10.5 and later.

58.10.37 kCTParagraphStyleSpecifierBaseWritingDirection = 13

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The base writing direction of the lines. Type: CTWritingDirection. Default: kCTWritingDirectionNatural. Application: CTFramesetter, CTTypesetter.

58.10.38 kCTParagraphStyleSpecifierDefaultTabInterval = 5

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The documentwide default tab interval. Tabs after the last specified by kCTParagraphStyleSpecifierTabStops are placed at integer multiples of this distance (if positive). Type: CGFloat. Default: 0.0.

Application: CTFramesetter, CTTypesetter.

58.10.39 kCTParagraphStyleSpecifierFirstLineHeadIndent = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The distance, in points, from the leading margin of a frame to the beginning of the paragraph's first line. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

58.10.40 kCTParagraphStyleSpecifierHeadIndent = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The distance, in points, from the leading margin of a text container to the beginning of lines other than the first. This value is always nonnegative. Type: CGFloat Default: 0.0 Application: CTFramesetter

58.10.41 kCTParagraphStyleSpecifierLineBoundsOptions = 17

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes:

The options controlling the alignment of the line edges with the leading and trailing margins.

Type: CTLineBoundsOptions
Default: 0 (no options)
Application: CTTypesetter

58.10.42 kCTParagraphStyleSpecifierLineBreakMode = 6

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The mode that should be used to break lines when laying out the paragraph's text. Type: CTLineBreakMode. Default: kCTLineBreakByWordWrapping. Application: CTFramesetter

58.10.43 kCTParagraphStyleSpecifierLineHeightMultiple = 7

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The line height multiple. The natural line height of the receiver is multiplied by this factor (if positive) before being constrained by minimum and maximum line height. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

58.10.44 kCTParagraphStyleSpecifierLineSpacing = 10

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: Deprecated. Use kCTParagraphStyleSpecifierMaximumLineSpacing, kCTParagraphStyleSpecifier-MinimumLineSpacing, and kCTParagraphStyleSpecifierLineSpaceAdjustment to control space between lines. The space in points added between lines within the paragraph (commonly known as leading). This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

58.10.45 kCTParagraphStyleSpecifierLineSpacingAdjustment = 16

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes:

The space in points added between lines within the paragraph (commonly known as leading).
Available in OS X v10.7 and later.

58.10.46 kCTParagraphStyleSpecifierMaximumLineHeight = 8

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The maximum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic. Glyphs and graphics exceeding this height will overlap neighboring lines. A maximum height of 0 implies no line height limit. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

58.10.47 kCTParagraphStyleSpecifierMaximumLineSpacing = 14

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes:

The maximum space in points between lines within the paragraph (commonly known as leading). This value is always nonnegative.
Available in OS X v10.7 and later.

58.10.48 kCTParagraphStyleSpecifierMinimumLineHeight = 9

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The minimum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

58.10.49 kCTParagraphStyleSpecifierMinimumLineSpacing = 15

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes:

The minimum space in points between lines within the paragraph (commonly known as leading). This value is always nonnegative.
Available in OS X v10.7 and later.

58.10.50 kCTParagraphStyleSpecifierParagraphSpacing = 11

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The space added at the end of the paragraph to separate it from the following paragraph. This value is always nonnegative and is determined by adding the previous paragraph's kCTParagraphStyleSpecifierParagraphSpacing setting and the current paragraph's kCTParagraphStyleSpecifierParagraphSpacingBefore setting. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

58.10.51 kCTParagraphStyleSpecifierParagraphSpacingBefore = 12

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.

Notes: The distance between the paragraph's top and the beginning of its text content. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

58.10.52 kCTParagraphStyleSpecifierTabStops = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The CTTextTab objects, sorted by location, that define the tab stops for the paragraph style. Type: CFArray of CTTextTabRef. Default: 12 left-aligned tabs, spaced by 28.0 points. Application: CTFramesetter, CTTypesetter.

58.10.53 kCTParagraphStyleSpecifierTailIndent = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The distance, in points, from the margin of a frame to the end of lines. If positive, this value is the distance from the leading margin (for example, the left margin in left-to-right text). If 0 or negative, it's the distance from the trailing margin. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

58.10.54 kCTTextAlignmentCenter = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify text alignment.
Notes: Text is visually center aligned.

58.10.55 kCTTextAlignmentJustified = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify text alignment.
Notes: Text is fully justified. The last line in a paragraph is naturally aligned.

58.10.56 kCTTextAlignmentLeft = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify text alignment.
Notes: Text is visually left aligned.

58.10.57 kCTTextAlignmentNatural = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify text alignment.
Notes: Text uses the natural alignment of the text's script.

58.10.58 kCTTextAlignmentRight = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify text alignment.
Notes: Text is visually right aligned.

58.10.59 kCTWritingDirectionLeftToRight = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify the writing direction.
Notes: The writing direction is left to right.

58.10.60 kCTWritingDirectionNatural = -1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify the writing direction.
Notes: The writing direction is algorithmically determined using the Unicode Bidirectional Algorithm rules P2 and P3.

58.10.61 kCTWritingDirectionRightToLeft = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify the writing direction.
Notes: The writing direction is right to left.

58.11 class CTParagraphStyleSettingMBS

58.11.1 class CTParagraphStyleSettingMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: This class is used to alter the paragraph style.

58.11.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr11
- CoreText Completed

58.11.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr11

58.11.4 Methods

58.11.5 SetTextTabs(textTabs() as CTTextTabMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Sets the array of text tabs.
Notes: for use with kCTParagraphStyleSpecifierTabStops.

58.11.6 Properties

58.11.7 doubleValue as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The double value.
Notes: (Read and Write property)

58.11.8 intValue as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The integer value.
Notes:

Also used for enumerations.
(Read and Write property)

58.11.9 Spec as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The specifier of the setting.
Notes:

See CTParagraphStyleMBS for possible values.
(Read and Write property)

58.12 class CTRunDelegateMBS

58.12.1 class CTRunDelegateMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The class to get events for CTRun runs.
Notes:

The CTRunDelegate opaque type represents a run delegate, which is assigned to a run (attribute range) to control typographic traits such glyph ascent, glyph descent, and glyph width.

The events defined for CTRunDelegate are used to modify glyph metrics during layout. The values returned by the delegate are applied to each glyph in the run or runs corresponding to the attribute with that delegate.
Subclass of the CFObjectMBS class.

58.12.2 Blog Entries

- CoreText Completed

58.12.3 Blog Entries

- CoreText Completed

58.12.4 Methods

58.12.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

58.12.6 Close

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Shuts down the delegate.
Notes: Please call this to explicit end the delegate and avoid memory leaks.
See also:

- 58.12.9 Close

58.12.7 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable instance of a run delegate.
Notes: The run-delegate object can be used for reserving space in a line or for eliding the glyphs for a range of text altogether.

58.12.8 Events

58.12.9 Close

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Event called when item closes.
See also:

- 58.12.6 Close 11582

58.12.10 GetAscent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Event that determines typographic ascent of glyphs in the run.
Notes: Returns the typographic ascent of glyphs in the run associated with the run delegate.

58.12.11 GetDescent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Event that determines typographic descent of glyphs in the run.
Notes: Returns the typographic descent of glyphs in the run associated with the run delegate.

58.12.12 GetWidth as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Event that determines the typographic width of glyphs in the run.
Notes: Returns the typographic width of glyphs in the run associated with the run delegate. A value of 0.0 indicates that the glyphs should not be drawn.

58.13 class CTRunMBS

58.13.1 class CTRunMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTRun opaque type represents a glyph run, which is a set of consecutive glyphs sharing the same attributes and direction.
Notes:

The typesetter creates glyph runs as it produces lines from character strings, attributes, and font objects. That is, a line is constructed of one or more glyphs runs. Glyph runs can draw themselves into a graphic context, if desired, although most users have no need to interact directly with glyph runs.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

58.13.4 Methods

58.13.5 Advances as CGSizeMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of glyph advances into an array.

58.13.6 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

58.13.7 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

58.13.8 Draw(context as CGContextMBS, location as Integer, length as Integer = 0)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Draws a complete run or part of one.
Notes:

context: The context into which to draw the run.
range: The portion of the run to draw. If the length of the range is set to 0, then the draw operation continues from the start index of the range to the end of the run.

This is a convenience call, because the run could be drawn by accessing the glyphs. This call can leave the graphics context in any state and does not flush the context after the draw operation.

Available in OS X v10.5 and later.

58.13.9 Glyphs as Integer()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of glyphs into an array.

58.13.10 ImageBounds(context as CGContextMBS, location as Integer, length as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the image bounds for a glyph range.
Notes:

context: The context for the image bounds being calculated. This is required because the context could have settings in it that would cause changes in the image bounds.
range: The portion of the run to measure. If the length of the range is set to 0, then the measure operation continues from the start index of the range to the end of the run.

Returns a rectangle that tightly encloses the paths of the run's glyphs, or, if run, context, or range is invalid, CGRectNull.
Available in OS X v10.5 and later.

58.13.11 Positions as CGPointMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of glyph positions into an array.

58.13.12 StringIndices as Integer()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of string indices into an array.
Notes: The indices are the character indices that originally spawned the glyphs that make up the run. They can be used to map the glyphs in the run back to the characters in the backing store.

58.13.13 TypographicBounds(location as Integer, length as Integer, byref ascent as Double, byref descent as Double, byref leading as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the typographic bounds of the run.
Notes:

range: The portion of the run to measure. If the length of the range is set to 0, then the measure operation continues from the range's start index to the end of the run.
ascent: On output, the ascent of the run.
descent: On output, the descent of the run.
leading: On output, the leading of the run.

Returns the typographic width of the run, or if run or range is invalid, 0.
Available in OS X v10.5 and later.

58.13.14 Properties

58.13.15 AttributeValues as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the attribute dictionary that was used to create the glyph run.
Notes:

Return a valid Dictionary or nil on error or if the run has no attributes.

The dictionary returned is either the same one that was set as an attribute dictionary on the original attributed string or a dictionary that has been manufactured by the layout engine. Attribute dictionaries can be manufactured in the case of font substitution or if the run is missing critical attributes.
(Read only property)

58.13.16 GlyphCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the glyph count for the run.
Notes:

run: The run for which to return the glyph count.

Returns the number of glyphs that the run contains, or if there are no glyphs in this run, a value of 0.
Available in OS X v10.5 and later.
(Read only property)

58.13.17 Status as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the run's status.
Notes:

Runs have status that can be used to expedite certain operations. Knowing the direction and ordering of a run's glyphs can aid in string index analysis, whereas knowing whether the positions reference the identity text matrix can avoid expensive comparisons. This status is provided as a convenience, because this information is not strictly necessary but can be helpful in some circumstances.
(Read only property)

58.13.18 StringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the range of characters that originally spawned the glyphs in the run.
Notes:

The range of characters that originally spawned the glyphs, of if run is invalid, an empty range.
(Read only property)

58.13.19 StringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the range of characters that originally spawned the glyphs in the run.
Notes:

The range of characters that originally spawned the glyphs, of if run is invalid, an empty range.
(Read only property)

58.13.20 TextMatrix as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the text matrix needed to draw this run.
Notes:

To properly draw the glyphs in a run, the fields tx and ty of the CGAffineTransform returned by this function should be set to the current text position.
(Read only property)

58.13.21 Constants

58.13.22 kCTRunStatusHasNonIdentityMatrix = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the possible values for the status bitfield.
Notes:

The run requires a specific text matrix to be set in the current Core Graphics context for proper drawing.
Use BitwiseAnd() to check if the status has a given value.

58.13.23 kCTRunStatusNonMonotonic = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the possible values for the status bitfield.
Notes:

The run has been reordered in some way such that the string indices associated with the glyphs are no longer strictly increasing (for left-to-right runs) or decreasing (for right-to-left runs).
Use BitwiseAnd() to check if the status has a given value.

58.13.24 kCTRunStatusNoStatus = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the possible values for the status bitfield.
Notes: The run has no special attributes.

58.13.25 kCTRunStatusRightToLeft = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the possible values for the status bitfield.
Notes:

The run proceeds from right to left.
Use BitwiseAnd() to check if the status has a given value.

58.14 class CTTextTabMBS

58.14.1 class CTTextTabMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTTextTab opaque type represents a tab in a paragraph style, storing an alignment type and location.
Notes:

Core Text supports four alignment types: left, center, right, and decimal. These alignment types are absolute, not based on the line sweep direction of text. For example, tabbed text is always positioned to the left of a right-aligned tab, whether the line sweep direction is left to right or right to left. A tab's location, on the other hand, is relative to the back margin. A tab set at 1.5 inches, for example, is at 1.5 inches from the right in right-to-left text.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

58.14.2 Blog Entries

58.14.4 Methods

58.14.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

58.14.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

58.14.7 Create(alignment as Integer, location as Double, options as Dictionary = nil) as CTTextTabMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates and initializes a new text tab object.
Notes:

alignment: The tab's alignment. This is used to determine the position of text inside the tab column. This parameter must be set to a valid CTTextAlignment value or this function returns nil.
location: The tab's ruler location, relative to the back margin.
options: Options to pass in when the tab is created. Currently, the only option available is kCTTabColumnTerminatorsAttributeName. This parameter is optional and can be set to nil if not needed.
Return a reference to a CTTextTab object if the call was successful; otherwise, nil.
Available in OS X v10.5 and later.

58.14.8 kCTTabColumnTerminatorsAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the options keys.
Notes:

Specifies the terminating character for a tab column.

The value associated with this attribute is a CFCharacterSet object. The character set is used to determine the terminating character for a tab column. The tab and newline characters are implied even if they don't exist in the character set. This attribute can be used to implement decimal tabs, for instance. This attribute is optional.

58.14.9 Properties

58.14.10 Alignment as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the text alignment of the tab.
Notes: (Read only property)

58.14.11 Location as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the tab's ruler location.
Notes:

The tab's ruler location relative to the back margin.
(Read only property)

58.14.12 Options as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the dictionary of attributes associated with the tab.
Notes:

The dictionary of attributes associated with the tab, or if no dictionary is present, nil.
(Read only property)

58.15 class CTTypesetterMBS

58.15.1 class CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTTypesetter opaque type represents a typesetter, which performs line layout.
Notes:

Line layout includes word wrapping, hyphenation, and line breaking in either vertical or horizontal rectangles. A typesetter object takes as input an attributed string and produces a line of typeset glyphs (composed into glyph runs) in a CTLine object. The typesetter performs character-to-glyph encoding, glyph ordering, and positional operations, such as kerning, tracking, and baseline adjustments. If multiline layout is needed, it is performed by a framesetter object, which calls into the typesetter to generate the typeset lines to fill the frame.

A framesetter encapsulates a typesetter and provides a reference to it as a convenience, but a caller may also choose to create a freestanding typesetter.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- CoreText Completed

58.15.3 Blog Entries

- CoreText Completed

58.15.4 Methods

58.15.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

58.15.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

58.15.7 CreateLine(location as Integer, length as Integer, offset as Double = 0.0) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable line from the typesetter at a specified line offset.
Notes:

location and length: The string range on which the line is based. If the length portion of range is set to 0, then the typesetter continues to add glyphs to the line until it runs out of characters in the string. The location and length of the range must be within the bounds of the string, or the call will fail.
offset: The line position offset.

Returns a reference to a CTLine object if the call was successful; otherwise, nil.
The resultant line consists of glyphs in the correct visual order, ready to draw.
Available in OS X v10.6 and later.

58.15.8 CreateWithAttributedString(s as CFAttributedStringMBS) as CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable typesetter object using an attributed string.
Notes:

s: The attributed string to typeset. This parameter must be filled in with a valid CFAttributedString object.

Returns a reference to a CTTypesetter object if the call was successful; otherwise, nil.

The resultant typesetter can be used to create lines, perform line breaking, and do other contextual analysis based on the characters in the string.

Available in OS X v10.5 and later.
See also:

- 58.15.9 CreateWithAttributedString(s as CFAttributedStringMBS, options as dictionary) as CTTypesetterMBS

58.15.9 CreateWithAttributedString(s as CFAttributedStringMBS, options as dictionary) as CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable typesetter object using an attributed string and a dictionary of options.
Notes:

s: The attributed string to typeset. This parameter must be filled in with a valid CFAttributedString object.
options: A dictionary of typesetter options, or nil if there are none.

Returns a reference to a CTTypesetter object if the call was successful; otherwise, nil.

The resultant typesetter can be used to create lines, perform line breaking, and do other contextual analysis based on the characters in the string.
Available in OS X v10.5 and later.
See also:

- 58.15.8 CreateWithAttributedString(s as CFAttributedStringMBS) as CTTypesetterMBS 11594

58.15.10 kCTTypesetterOptionDisableBidiProcessing as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants to control aspects of the typesetter's bidirectional text processing.
Notes:

Disables bidirectional processing. Value must be a CFBoolean object. Default value is false. Normally, typesetting applies the Unicode Bidirectional Algorithm as described in Unicode Standard Annex # 9. If a typesetter is created with this option set to true, no directional reordering is performed, and any directional control characters are ignored.
Available in OS X v10.5 and later.
Deprecated in OS X v10.8.

58.15.11 kCTTypesetterOptionForcedEmbeddingLevel as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants to control aspects of the typesetter's bidirectional text processing.
Notes:

Specifies the embedding level. Value must be a CFNumberRef object. Default is unset. Normally, typesetting applies the Unicode Bidirectional Algorithm as described in Unicode Standard Annex # 9. If present, this option specifies the embedding level, and any directional control characters are ignored.
Available in OS X v10.5 and later.

58.15.12 SuggestClusterBreak(startIndex as Integer, width as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suggests a cluster line breakpoint based on the width provided.
Notes:

startIndex: The starting point for the typographic cluster-break calculations. The break calculations include the character starting at startIndex.
width: The requested typographic cluster-break width.

Return a count of the characters from startIndex that would cause the cluster break. The value returned can be used to construct a character range for CTTypesetterCreateLine.

This cluster break is similar to a character break, except that it does not break apart linguistic clusters. No other contextual analysis is done. This can be used by the caller to implement a different line-breaking scheme, such as hyphenation. A typographic cluster break can also be triggered by a hard-break character in the stream. This function is equivalent to SuggestClusterBreakWithOffset with an offset of 0.0.

Available in OS X v10.5 and later.
See also:

- 58.15.13 SuggestClusterBreak(startIndex as Integer, width as Double, offset as Double) as Integer 11596

58.15.13 SuggestClusterBreak(startIndex as Integer, width as Double, offset as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suggests a cluster line breakpoint based on the specified width and line offset.
Notes:

startIndex: The starting point for the typographic cluster-break calculations. The break calculations include the character starting at startIndex.
width: The requested typographic cluster-break width.
offset: The line offset position.

Returns a count of the characters from startIndex that would cause the cluster break. The value returned can be used to construct a character range for CreateLine.

This cluster break is similar to a character break, except that it does not break apart linguistic clusters. No other contextual analysis is done. This can be used by the caller to implement a different line-breaking scheme, such as hyphenation. A typographic cluster break can also be triggered by a hard-break character

in the stream.

Available in OS X v10.6 and later.
See also:

- 58.15.12 SuggestClusterBreak(startIndex as Integer, width as Double) as Integer 11596

58.15.14 SuggestLineBreak(startIndex as Integer, width as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suggests a contextual line breakpoint based on the width provided.
Notes:

startIndex: The starting point for the line-break calculations. The break calculations include the character starting at startIndex.
width: The requested line-break width.

Returns a count of the characters from startIndex that would cause the line break. The value returned can be used to construct a character range for CreateLine.

The line break can be triggered either by a hard-break character in the stream or by filling the specified width with characters. This function is equivalent to SuggestLineBreakWithOffset with an offset of 0.0.

Available in OS X v10.5 and later.
See also:

- 58.15.15 SuggestLineBreak(startIndex as Integer, width as Double, offset as Double) as Integer 11597

58.15.15 SuggestLineBreak(startIndex as Integer, width as Double, offset as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suggests a contextual line breakpoint based on the width provided and the specified offset.
Notes:

startIndex: The starting point for the line-break calculations. The break calculations include the character starting at startIndex.
width: The requested line-break width.
offset: The line position offset.

Returns a count of the characters from startIndex and offset that would cause the line break. The value returned can be used to construct a character range for CreateLine.

The line break can be triggered either by a hard-break character in the stream or by filling the specified width with characters.
Available in OS X v10.6 and later.
See also:

- 58.15.14 SuggestLineBreak(startIndex as Integer, width as Double) as Integer 11597

Chapter 59

CPUInfo

59.1 class CPUIDMBS

59.1.1 class CPUIDMBS

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class around the CPUID command of x86 CPUs.
Example:

```
dim c as new CPUIDMBS
MsgBox c.BrandString
```

Notes:

This class works only on x86 CPUs.
Values returned in the properties have very CPU vendor specific values.
So Intel and AMD use different meanings for a lot of values.

59.1.6 Methods

59.1.7 BrandString as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The brand string.
Notes: contains the brand string, e.g. "Intel(R) Xeon(TM) CPU 2.40GHz"
See also:

- 59.1.27 BrandString as String 11605

59.1.8 CodeName as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The brief and human-friendly CPU codename, which was recognized.

59.1.9 CPUID(Selector as Integer) as boolean

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls CPUID for the given selector.
Example:

```
dim c as new CPUIDMBS

if c.CPUID(0) then
```

```
MsgBox hex(c.EDX)
end if
```

Notes:

Returns true on success and false on failure.
(always true on x86 CPUs and always false on PowerPC CPUs.)
Result values are stored in the four properties EAX, EBX, ECX and EDX.

59.1.10 ExtFamily as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU extended family.

59.1.11 ExtModel as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU extended model

59.1.12 Family as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU family.
See also:

- 59.1.32 Family as Integer 11606

59.1.13 FeatureName(index as Integer) as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the short textual representation of a CPU flag.
Notes:

A constant string like "fpu", "tsc", "sse2", etc.
See kFeature* constants.

59.1.14 Flags(index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries whether a given feature is available.
Example:

```
dim c as new CPUIDMBS

if c.Flags(CPUIDMBS.kFeatureLM) then
MsgBox "64-bit CPU"
else
MsgBox "32-bit CPU"
end if
```

Notes: See kFeature* constants.

59.1.15 L1DataCache as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: L1 data cache size in KB.
Notes:

Could be zero, if the CPU lacks cache.
If the size cannot be determined, it will be -1.

59.1.16 L1InstructionCache as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: L1 instruction cache size in KB.
Notes:

Could be zero, if the CPU lacks cache. If the size cannot be determined, it will be -1.
On some Intel CPUs, whose instruction cache is in fact a trace cache, the size will be expressed in K uOps.

59.1.17 L2Cache as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: L2 cache size in KB.
Notes:

Could be zero, if the CPU lacks L2 cache.
If the size of the cache could not be determined, it will be -1

59.1.18 L3Cache as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: L3 cache size in KB.
Notes: Zero on most systems.

59.1.19 Model as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU model.
See also:

- 59.1.33 Model as Integer 11607

59.1.20 NumCores as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of CPU cores on the current processor.

59.1.21 NumLogicalCPUs as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of logical processors on the current processor.
Notes: Could be more than the number of physical cores, e.g. when the processor has HyperThreading.

59.1.22 Stepping as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU stepping.
See also:

- 59.1.35 Stepping as Integer 11608

59.1.23 TotalLogicalCPUs as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total number of logical processors.
Notes:

This is num_logical_cpus * { total physical processors in the system }

If you're writing a multithreaded program and you want to run it on all CPUs, this is the number of threads you need.

59.1.24 Vendor as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The recognized CPU vendor.
Notes: See kVendor constants.

59.1.25 VendorName as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The vendor name.
Notes: contains the CPU vendor string, e.g. "GenuineIntel"

59.1.26 Properties

59.1.27 BrandString as String

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string (47 characters maximum) with the brand name of the CPU.
Example:

```
dim c as new CPUIDMBS
MsgBox c.BrandString
```

Notes:

Is "" if not supported.
(Read and Write property)
See also:

- 59.1.7 BrandString as String 11600

59.1.28 EAX as UInt32

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The EAX register value after a CPUID function call.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.EAX)
```

Notes: (Read and Write property)

59.1.29 EBX as UInt32

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The EBX register value after a CPUID function call.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.EBX)
```

Notes: (Read and Write property)

59.1.30 ECX as UInt32

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ECX register value after a CPUID function call.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.ECX)
```

Notes: (Read and Write property)

59.1.31 EDX as UInt32

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The EDX register value after a CPUID function call.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.EDX)
```

Notes: (Read and Write property)

59.1.32 Family as Integer

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Family ID of the CPU.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.Family)
```

Notes:

e.g. Family 6, Model 14 can be an Intel Core Duo CPU.
(Read and Write property)
See also:

- 59.1.12 Family as Integer 11601

59.1.33 Model as Integer

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Model ID of the CPU.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.Model)
```

Notes:

Every CPU Family has several Models.
e.g. Family 6, Model 14 can be an Intel Core Duo CPU.
(Read and Write property)
See also:

- 59.1.19 Model as Integer 11603

59.1.34 ProcessorVendor as String

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Name of the Processor Vendor.
Example:

```
dim c as new CPUIDMBS
MsgBox c.ProcessorVendor
```

Notes:

Possible values:

CPUID_VID_INTEL	"GenuineIntel"
CPUID_VID_UMC	"UMC UMC UMC "
CPUID_VID_AMD	"AuthenticAMD"
CPUID_VID_CYRIX	"CyrixInstead"
CPUID_VID_NEXGEN	"NexGenDriven"
CPUID_VID_CENTAUR	"CentaurHauls"
CPUID_VID_RISE	"RiseRiseRise"
CPUID_VID_SIS	"SiS SiS SiS "
CPUID_VID_TRANSMETA	"GenuineTMx86"
CPUID_VID_NSC	"Geode by NSC"

(Read and Write property)

59.1.35 Stepping as Integer

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The stepping ID of the CPU.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.Stepping)
```

Notes:

Can be seen as a revision number of the processor.
(Read and Write property)
See also:

- 59.1.22 Stepping as Integer 11604

59.1.36 Constants

59.1.37 kFeature100MHzSteps = 80

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: 100 MHz multiplier control

59.1.38 kFeature3DNOW = 56

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: AMD 3DNow! instructions supported

59.1.39 kFeature3DNOWEXT = 57

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: AMD 3DNow! extended instructions supported

59.1.40 kFeature3DNOWPrefetch = 68

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: PREFETCH/PREFETCHW support

59.1.41 kFeatureABM = 65

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: LZCNT instruction support

59.1.42 kFeatureACPI = 20

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: ACPI support (power states)

59.1.43 kFeatureAES = 51

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: AES* instructions supported

59.1.44 kFeatureAPERFMPERF = 91

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: MPERF/APERF MSRs support

59.1.45 kFeatureAPIC = 9

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: APIC support

59.1.46 kFeatureAVX = 54

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Advanced vector extensions supported

59.1.47 kFeatureCID = 40

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Context ID supported

59.1.48 kFeatureCLFLUSH = 18

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: CLFLUSH instruction supported

59.1.49 kFeatureCMOV = 14

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: CMOVxx instructions supported

59.1.50 kFeatureCMP_LEGACY = 63

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: core multi-processing legacy mode

59.1.51 kFeatureConstantTSC = 82

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: TSC ticks at constant rate

59.1.52 kFeatureCPB = 90

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Core performance boost

59.1.53 kFeatureCX16 = 41

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: CMPXCHG16B instruction supported

59.1.54 kFeatureCX8 = 8

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: CMPXCHG8B instruction supported

59.1.55 kFeatureDCA = 44

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Direct cache access supported

59.1.56 kFeatureDE = 2

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Debugging extension

59.1.57 kFeatureDS_CPL = 34

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: CPL Qualified Debug Store

59.1.58 kFeatureDTS = 19

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Debug store supported

59.1.59 kFeatureDTS64 = 32

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: 64-bit Debug store supported

59.1.60 kFeatureEST = 37

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Enhanced SpeedStep

59.1.61 kFeatureF16C = 87

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: 16-bit FP convert instruction support

59.1.62 kFeatureFID = 75

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Frequency ID control

59.1.63 kFeatureFMA3 = 84

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: The FMA3 instruction set

59.1.64 kFeatureFMA4 = 85

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: The FMA4 instruction set

59.1.65 kFeatureFPU = 0

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Floating point unit

59.1.66 kFeatureFXSR = 22

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: FXSAVE / FXRSTOR supported

59.1.67 kFeatureFXSR_OPT = 59

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: FFXSR: FXSAVE and FXRSTOR optimizations

59.1.68 kFeatureHT = 26

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Hyper-threading supported (but might be disabled)

59.1.69 kFeatureHWPState = 81

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Hardware P-state control

59.1.70 kFeatureIA64 = 28

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: IA64 supported (Itanium only)

59.1.71 kFeatureIBS = 70

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Instruction-based sampling

59.1.72 kFeatureLAHF_LM = 62

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: LAHF/SAHF supported in 64-bit mode

59.1.73 kFeatureLM = 61

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Example:

```
dim c as new CPUIDMBS

if c.Flags(CPUIDMBS.kFeatureLM) then
MsgBox "64-bit CPU"
else
MsgBox "32-bit CPU"
end if
```

Notes: Long mode (x86_64/EM64T) supported

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: x86 CPU by UMC

59.1.141 kVendorUnknown = -1

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: Unknown

Chapter 60

CUPS

60.1 class CUPSDestinationMBS

60.1.1 class CUPSDestinationMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The class for a CUPS destination.
Example:

```
dim lines(-1) as string
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
lines.append c.Name
next

MsgBox Join(lines,EndOfLine)
```

60.1.2 Blog Entries

- About plug-in functions returning array

60.1.3 Blog Entries

- About plug-in functions returning array

60.1.4 Methods

60.1.5 Options as CUPSOptionMBS()

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop only.

Function: Options values.

60.1.6 Properties

60.1.7 Instance as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Local instance name or "".
Notes: (Read and Write property)

60.1.8 isDefault as Boolean

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Is this printer the default?
Example:

```
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
if c.isDefault then
MsgBox c.Name
end if
next
```

Notes: (Read and Write property)

60.1.9 Name as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The name of the printer.
Example:

```
dim lines(-1) as string
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
lines.append c.Name
```

next

MsgBox Join(lines,EndOfLine)

Notes: (Read and Write property)

60.2 class CUPSErrorExceptionMBS

60.2.1 class CUPSErrorExceptionMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The error exception raised by some CUPS functions.
Notes: Subclass of the RuntimeException class.

60.3 class CUPSJobMBS

60.3.1 class CUPSJobMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The class for job details.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", true, CUPSMBS.kWhichJobsActive)

if UBound(jobs)<0 then
MsgBox "no job"
else

dim j as CUPSJobMBS = jobs(0)
dim lines(-1) as string

lines.Append "Title: "+j.Title
lines.Append "User: "+j.User
lines.Append "Format: "+j.Format
lines.Append "Dest: "+j.Dest
lines.Append "ID: "+str(j.ID)
lines.Append "Priority: "+str(j.Priority)
lines.Append "Size: "+str(j.Size)
lines.Append "State: "+str(j.State)

if j.CompletedTime<>nil then
lines.Append "CompletedTime: "+j.CompletedTime.AbbreviatedDate+" "+j.CompletedTime.longtime
else
lines.Append "CompletedTime: nil"
end if

if j.CreationTime<>nil then
lines.Append "CreationTime: "+j.CreationTime.AbbreviatedDate+" "+j.CreationTime.longtime
else
lines.Append "CreationTime: nil"
end if

if j.ProcessingTime<>nil then
lines.Append "ProcessingTime: "+j.ProcessingTime.AbbreviatedDate+" "+j.ProcessingTime.longtime
else
lines.Append "ProcessingTime: nil"
end if

MsgBox join(lines,EndOfLine)

end if
```

60.3.2 Properties

60.3.3 CompletedDateTime as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was completed.
Notes:

Value is nil if the value is not set.
(Read and Write property)

60.3.4 CompletedTime as Date

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was completed.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsComplete)

if UBound(jobs)<0 then
MsgBox "no job"
else
dim j as CUPSJobMBS = jobs(0)

MsgBox j.Title+" completed at "+j.CompletedTime.AbbreviatedDate+" "+j.CompletedTime.longtime
end if
```

Notes:

Value is nil if the value is not set.
(Read and Write property)

60.3.5 CreationDateTime as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was created.
Notes:

Value is nil if the value is not set.
(Read and Write property)

60.3.6 CreationTime as Date

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was created.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsComplete)

if UBound(jobs)<0 then
MsgBox "no job"
else
dim j as CUPSJobMBS = jobs(0)

MsgBox j.Title+" completed at "+j.CreationTime.AbbreviatedDate+" "+j.CreationTime.longtime
end if
```

Notes:

Value is nil if the value is not set.
(Read and Write property)

60.3.7 Dest as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Printer or class name.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim lines(-1) as string

for each j as CUPSJobMBS in jobs
lines.Append j.Dest
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

60.3.8 Format as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Document format.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", true, CUPSMBS.kWhichJobsAll)
dim lines(-1) as string

for each j as CUPSJobMBS in jobs
lines.Append j.Format
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

60.3.9 ID as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The job ID.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
MsgBox jobs(0).Title+" has ID "+str(jobs(0).ID)
```

Notes: (Read and Write property)

60.3.10 Priority as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Priority (1-100).
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
MsgBox jobs(0).Title+" has priority "+str(jobs(0).Priority)
```

Notes: (Read and Write property)

60.3.11 ProcessingDateTime as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was processed.
Notes:

Value is nil if the value is not set.
(Read and Write property)

60.3.12 ProcessingTime as Date

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was processed.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsComplete)

if UBound(jobs)<0 then
MsgBox "no job"
else
dim j as CUPSJobMBS = jobs(0)

MsgBox j.Title+" completed at "+j.ProcessingTime.AbbreviatedDate+" "+j.ProcessingTime.longtime
end if
```

Notes:

Value is nil if the value is not set.
(Read and Write property)

60.3.13 Size as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Size in kilobytes.
Example:

```
dim sum as Integer
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
```

```
if UBound(jobs)<0 then
MsgBox "no job"
else
for each j as CUPSJobMBS in jobs
sum=sum+j.Size
next

MsgBox "Total size of all print jobs: "+str(sum)+" KB"
end if
```

Notes: (Read and Write property)

60.3.14 State as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: (Read and Write property)

60.3.15 Title as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Title/job name.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim lines(-1) as string

for each j as CUPSJobMBS in jobs
lines.Append j.Title
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

60.3.16 User as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: User the submitted the job.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim lines(-1) as string

for each j as CUPSJobMBS in jobs
lines.Append j.User
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

60.4 module CUPSMBS

60.4.1 module CUPSMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: All.

Function: The module to control the CUPS printing system.

60.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.1pr1
- MBS Xojo / Real Studio Plugins, version 16.5pr2
- MBS Real Studio Plugins, version 12.5pr8

60.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.1pr1
- MBS Xojo / Real Studio Plugins, version 16.5pr2
- MBS Real Studio Plugins, version 12.5pr8
- About plug-in functions returning array

60.4.4 Methods

60.4.5 CancelJob(name as string, job as Int32)

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Cancel a print job on the default server.
Notes:

name: Name of printer or class
job: Job ID, kJobIDCurrent for the current job, or kJobIDAll for all jobs

Pass kJobIDAll to cancel all jobs or kJobIDCurrent to cancel the current job on the named destination.

Raises exception on error.

60.4.6 GetDefault as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get the default printer or class for the default server.
Example:

```
MsgBox CUPSMBS.GetDefault
```

60.4.7 GetDestinations as CUPSDestinationMBS()

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get the list of destinations from the default server.
Example:

```
dim lines(-1) as string
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
lines.append c.Name
next

MsgBox Join(lines,EndOfLine)
```

Notes: Starting with CUPS 1.2, the returned list of destinations include the printer-info, printer-is-accepting-jobs, printer-is-shared, printer-make-and-model, printer-state, printer-state-change-time, printer-state-reasons, and printer-type attributes as options. CUPS 1.4 adds the marker-change-time, marker-colors, marker-high-levels, marker-levels, marker-low-levels, marker-message, marker-names, marker-types, and printer-commands attributes as well.

60.4.8 GetJobs(name as string, OnlyMyJobs as boolean, whichjobs as Integer) as CUPSJobMBS()

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get the jobs from the default server.
Notes:

name: "" = all destinations, otherwise show jobs for named destination
OnlyMyJobs: false = all users, true = mine
whichjobs: kWhichJobsAll, kWhichJobsActive, or kWhichJobsComplete

A "whichjobs" value of kWhichJobsAll returns all jobs regardless of state, while kWhichJobsActive returns jobs that are pending, processing, or held and kWhichJobsComplete returns jobs that are stopped, canceled,

aborted, or completed.

60.4.9 GetPassword(prompt as string) as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get a password from the user.
Notes: Returns "" if the user does not provide a password.

60.4.10 GetPPD(name as string) as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get the PPD file for a printer on the default server.
Example:

```
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
if c.isDefault then
MsgBox cupsmbs.GetPPD(c.Name)
end if
next
```

Notes:

Returns Filename for PPD file.

For classes, cupsGetPPD returns the PPD file for the first printer in the class.

The returned filename is stored in a static buffer and is overwritten with each call to cupsGetPPD or cupsGetPPD2. The caller "owns" the file that is created and must unlink the returned filename.

60.4.11 LastError as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Return the last IPP status code.

60.4.12 LastErrorString as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Return the last IPP status-message.
Example:

MsgBox CUPSMBS.LastErrorString

Notes: Returns status-message text from last request.

60.4.13 PrintData(name as string, Data as String, Title as string) as Integer

MBS Tools Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print a file to a printer or class on the default server.
Notes:

Name: Destination name
Data: Data to print
Title: Title of job

Returns Job ID or 0 on error

60.4.14 PrintFile(name as string, file as folderitem, title as string) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print a file to a printer or class on the default server.
Example:

```
// Print file on default printer...
dim f as FolderItem = SpecialFolder.Desktop.Child("test.ps")

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
if c.isDefault then

call CUPSMBS.PrintFile(c.Name, f, f.Name)

end if
next
```

Notes:

name: Destination name
filename: File to print
title: Title of job

Returns Job ID or 0 on error
See also:

- 60.4.15 PrintFile(name as string, file as folderitem, title as string, options() as CUPSOptionMBS) as Integer 11644

60.4.15 PrintFile(name as string, file as folderitem, title as string, options() as CUPSOptionMBS) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print a file to a printer or class on the default server.
Notes:

name: Destination name
filename: File to print
title: Title of job
options: Options

Returns Job ID or 0 on error
See also:

- 60.4.14 PrintFile(name as string, file as folderitem, title as string) as Integer 11643

60.4.16 PrintFiles(name as string, files() as folderitem, title as string) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print files to a printer or class on the default server.
Notes:

name: Destination name
filename: Files to print
title: Title of job

Returns Job ID or 0 on error
See also:

- 60.4.17 PrintFiles(name as string, files() as folderitem, title as string, options() as CUPSOptionMBS) as Integer 11645

60.4.17 PrintFiles(name as string, files() as folderitem, title as string, options() as CUPSOptionMBS) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print files to a printer or class on the default server.
Notes:

name: Destination name
files: Files to print
title: Title of job
options: Options

Returns Job ID or 0 on error
See also:

- 60.4.16 PrintFiles(name as string, files() as folderitem, title as string) as Integer 11644

60.4.18 Server as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Return the hostname/address of the default server.
Example:

MsgBox CUPSMBS.Server

Notes: The returned value can be a fully-qualified hostname, a numeric IPv4 or IPv6 address, or a domain socket pathname.

60.4.19 SetDefaultPrinter(printer as string)

MBS Tools Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Sets the default printer.
Notes: Name must be one of CUPSDestinationMBS's name.

60.4.20 SetServer(server as string)

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Set the default server name.
Notes:

server: Server name

The "server" string can be a fully-qualified hostname, a numeric IPv4 or IPv6 address, or a domain socket pathname. Pass "" to restore the default server name.

60.4.21 SetUser(user as string)

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Set the default user name.
Notes:

user: User name

Pass "" to restore the default user name.

60.4.22 User as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Return the current user's name.
Example:

```
MsgBox CUPSMBS.User
```

60.4.23 Constants

60.4.24 kJobAborted = 8

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
```

```
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: Job was aborted.

60.4.25 kJobCanceled = 7

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
```

```
end Select

MsgBox str(State)+": "+s
```

Notes: Job was canceled.

60.4.26 kJobCompleted = 9

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: Job was completed.

60.4.27 kJobHeld = 4

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: Job is held.

60.4.28 kJobIDAll = -1

MBS Tools Plugin, Plugin Version: 9.7.

Function: A job constant for all jobs.

60.4.29 kJobIDCurrent = 0

MBS Tools Plugin, Plugin Version: 9.7.

Function: A job constant for the current job.

60.4.30 kJobPending = 3

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: Job is pending

60.4.31 kJobProcessing = 5

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
```

```
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: Job is processing.

60.4.32 kJobStopped = 6

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select
```

```
MsgBox str(State)+": "+s
```

Notes: Job is stopped.

60.4.33 kPrinterAUTHENTICATED = & h400000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Printer requires authentication

60.4.34 kPrinterBIND = & h0400

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can bind output

60.4.35 kPrinterBW = & h0004

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterBW)=CUPSMBS.kPrinterBW then
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next
```

MsgBox Join(lines,EndOfLine)

Notes: Can do B& W printing

60.4.36 kPrinterCLASS = & h0001

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Printer class

60.4.37 kPrinterCOLLATE = & h0080

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can collage copies

60.4.38 kPrinterCOLOR = & h0008

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterCOLOR)=CUPSMBS.kPrinterCOLOR then
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next

MsgBox Join(lines,EndOfLine)
```

Notes: Can do color printing

60.4.39 kPrinterCOMMANDS = & h800000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Printer supports maintenance commands

60.4.40 kPrinterCOPIES = & h0040

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can do copies

60.4.41 kPrinterCOVER = & h0200

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can cover output

60.4.42 kPrinterDEFAULT = & h20000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Default printer on network

60.4.43 kPrinterDELETE = & h100000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Delete printer

60.4.44 kPrinterDISCOVERED = & h1000000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Printer was automatically discovered and added.

60.4.45 kPrinterDUPLEX = & h0010

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterDUPLEX)=CUPSMBS.kPrinterDUPLEX then
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next

MsgBox Join(lines,EndOfLine)
```

Notes: Can do duplexing

60.4.46 kPrinterFAX = & h40000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
```

```
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterFAX)=CUPSMBS.kPrinterFAX then
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next

MsgBox Join(lines,EndOfLine)
```

Notes: Fax queue

60.4.47 kPrinterIMPLICIT = & h10000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Implicit class

60.4.48 kPrinterLARGE = & h4000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can do D/E/A1/A0

60.4.49 kPrinterLOCAL = & h0000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Local printer or class

60.4.50 kPrinterMEDIUM = & h2000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can do Tabloid/B/C/A3/A2

60.4.51 kPrinterMFP = & h4000000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterMFP)=CUPSMBS.kPrinterMFP then
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next

MsgBox Join(lines,EndOfLine)
```

Notes: Printer with scanning capabilities

60.4.52 kPrinterNotShared = & h200000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Printer is not shared.

60.4.53 kPrinterOPTIONS = & h6fffc

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.

60.4.54 kPrinterPUNCH = & h0100

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can punch output.

60.4.55 kPrinterREJECTING = & h80000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Printer is rejecting jobs.

60.4.56 kPrinterREMOTE = & h0002

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Remote printer or class.

60.4.57 kPrinterSCANNER = & h2000000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterSCANNER)=CUPSMBS.kPrinterSCANNER then
```

```
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next

MsgBox Join(lines,EndOfLine)
```

Notes: Scanner-only device

60.4.58 kPrinterSMALL = & h1000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterSMALL)=CUPSMBS.kPrinterSMALL then
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next

MsgBox Join(lines,EndOfLine)
```

Notes: Can do Letter/Legal/A4.

60.4.59 kPrinterSORT = & h0800

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can sort output.

60.4.60 kPrinterSTAPLE = & h0020

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can staple output.

60.4.61 kPrinterVARIABLE = & h8000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can do variable sizes.

60.4.62 kStatusAttributes = & h040B

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error attributes or values not supported

60.4.63 kStatusAttributesNotSettable = & h0413

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error attributes not settable

60.4.64 kStatusBadRequest = & h0400

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error bad request

60.4.65 kStatusCharset = & h040D

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error charset not supported

60.4.66 kStatusCompressionError = & h0410

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error compression error

60.4.67 kStatusCompressionNotSupported = & h040F

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error compression not supported

60.4.68 kStatusConflict = & h040E

Function: One of the CUPS error constants.
Notes: client error too many subscriptions

60.4.105 kStatusURIScheme = & h040C

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error uri scheme not supported

60.4.106 kStatusVersionNotSupported = & h0503

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: server error version not supported

60.4.107 kWhichJobsActive = 0

MBS Tools Plugin, Plugin Version: 9.7.

Function: One constant for using in GetJobs.

60.4.108 kWhichJobsAll = -1

MBS Tools Plugin, Plugin Version: 9.7.

Function: One constant for using in GetJobs.

60.4.109 kWhichJobsComplete = 1

MBS Tools Plugin, Plugin Version: 9.7.

Function: One constant for using in GetJobs.

60.5 class CUPSMissingFunctionExceptionMBS

60.5.1 class CUPSMissingFunctionExceptionMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The exception raised if a CUPS function is not found.
Notes:

On Windows this method is raised for each function you call.
Subclass of the RuntimeException class.

60.6 class CUPSOptionMBS

60.6.1 class CUPSOptionMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The class for the options in CUPS.
Example:

```
dim options() as CUPSOptionMBS

dim o1 as new CUPSOptionMBS
o1.Name = "media"
o1.Value = "A4"
options.Append o1

dim o2 as new CUPSOptionMBS
o2.Name = "scaling"
o2.Value = "75"
options.Append o2

dim o3 as new CUPSOptionMBS
o3.Name = "Collate"
o3.Value = "True"
options.Append o3

dim o4 as new CUPSOptionMBS
o4.Name = "sides"
o4.Value = "two-sided-long-edge"
options.Append o4
```

60.6.2 Properties

60.6.3 Name as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Name of option.
Notes: (Read and Write property)

60.6.4 Value as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Value of option.
Notes: (Read and Write property)

Chapter 61

CURL

61.1 class CURLEmailMBS

61.1.1 class CURLEmailMBS

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Our plugin class to help building and sending emails.
Example:

```
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "christian Müller"
e.Subject = "Hello World "
e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test Müller"
e.PlainText = "Hello World," + EndOfLine + "Smilies:    "

dim c as new CURLSMBS

if c.SetupEmail(e) then

dim er as Integer = c.Perform
if er = 0 then
MsgBox "Email sent"
end if
end if
```

Notes:

Please make sure you set from, to, subject, plaintext to have a minimum email always.
If your email misses required fields, the email server may silently discard it.

61.1.4 Methods

61.1.5 AddAttachment(data as MemoryBlock, name as string, type as string = "", InlineID as string = "", ContentTypeMethod as String = "")

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an attachment to the email.
Notes:

name: The name for the attachment.
type: Optional, the mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".
data: The data to include.

For best results use attachment sizes below 50 MB.
The plugin will encode your data as Base64. If you want to attach a picture, you can use PictureToPNGStringMBS (mime type "image/png") or PictureToJPEGStringMBS (mime type "image/jpeg") to encode a picture.

Version 15.0 of MBS Plugin can encode file name for preserving non AScII characters. Still for compatibility it is recommended to use simply AScII names.

If InlineID is set, we include the attachment for inlining. Please pass content ID (cID).
Empty text or no parameter gives regular attachment.
You can use AddAttachment several times to add several attachments.

The optional ContentTypeMethod parameter allows to specify the method value for the content-type header. Currently only for sending calendar invitiations.
See also:

- 61.1.6 AddAttachment(data as string, name as string, type as string = "", InlineID as string = "", ContentTypeMethod as String = "") 11675
- 61.1.7 AddAttachment(file as FolderItem, name as string = "", type as string = "", InlineID as string = "", ContentTypeMethod as String = "") 11676

61.1.6 AddAttachment(data as string, name as string, type as string = "", InlineID as string = "", ContentTypeMethod as String = "")

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an attachment to the email.
Notes:

name: The name for the attachment.

type: Optional, the mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".
data: The data to include.

For best results use attachment sizes below 50 MB.
The plugin will encode your data as Base64. If you want to attach a picture, you can use PictureToPNGStringMBS (mime type "image/png") or PictureToJPEGStringMBS (mime type "image/jpeg") to encode a picture.

Version 15.0 of MBS Plugin can encode file name for preserving non AScII characters. Still for compatibility it is recommended to use simply AScII names.

If InlineID is set, we include the attachment for inlining. Please pass content ID (cID).
Empty text or no parameter gives regular attachment.
You can use AddAttachment several times to add several attachments.

The optional ContentTypeMethod parameter allows to specify the method value for the content-type header. Currently only for sending calendar invitiations.
See also:

- 61.1.5 AddAttachment(data as MemoryBlock, name as string, type as string = "", InlineID as string = "", ContentTypeMethod as String = "") 11675
- 61.1.7 AddAttachment(file as FolderItem, name as string = "", type as string = "", InlineID as string = "", ContentTypeMethod as String = "") 11676

61.1.7 AddAttachment(file as FolderItem, name as string = "", type as string = "", InlineID as string = "", ContentTypeMethod as String = "")

MBS CURL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an attachment to the email.
Notes:

name: The name for the attachment. If empty, version 16.2 uses file name from folderitem.
type: Optional, the mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".
file: The file to use. This file is read and content used for attachment.

For best results use attachment sizes below 50 MB.
The plugin will encode your data as Base64. If you want to attach a picture, you can use PictureToPNGStringMBS (mime type "image/png") or PictureToJPEGStringMBS (mime type "image/jpeg") to encode a picture.

Version 15.0 of MBS Plugin can encode file name for preserving non AScII characters. Still for compatibility it is recommended to use simply AScII names.

If InlineID is set, we include the attachment for inlining. Please pass content ID (cID).
Empty text or no parameter gives regular attachment.
You can use AddAttachment several times to add several attachments.

The optional ContentTypeMethod parameter allows to specify the method value for the content-type header.
Currently only for sending calendar invitiations.
See also:

- 61.1.5 AddAttachment(data as MemoryBlock, name as string, type as string = """, InlineID as string = """, ContentTypeMethod as String = """) 11675
- 61.1.6 AddAttachment(data as string, name as string, type as string = """, InlineID as string = """, ContentTypeMethod as String = """) 11675

61.1.8 AddBcc(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a blind copy recipient.
Example:

```
dim e as new CURLEmailMBS

e.AddBcc "test@monkeybreadsoftware.test", "Test Müller"

dim Bccs() as string = e.Bccs
MsgBox Bccs(0)
```

Notes:

Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

61.1.9 Addcc(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a copy recipient.
Example:

```
dim e as new CURLEmailMBS
```

```
e.Addcc "test@monkeybreadsoftware.test", "Test Müller"

dim ccs() as string = e.ccs
MsgBox ccs(0)
```

Notes:

Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

61.1.10 AddHeader(header as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a header entry.
Example:

```
dim e as new CURLEmailMBS

e.AddHeader "X-company: My company, Inc."

dim Headers() as string = e.Headers
MsgBox Headers(0)
```

Notes:

This header is passed as is and not preprocessed.
You can use this function to pass custom headers for "X-Universally-Unique-Identifier:", "Date:", "X-Mailer:", "Message-Id:" and "Mime-Version:".
If you pass header without text following ":", the header is not included.

61.1.11 AddReplyTo(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a recipient for a reply.
Example:

```
dim e as new CURLEmailMBS

e.AddReplyTo "test@monkeybreadsoftware.test", "Test Müller"

dim ReplyTos() as string = e.ReplyTOs
```

```
MsgBox ReplyTos(0)
```

Notes:

Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

61.1.12 AddTo(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a recipient.
Example:

```
dim e as new CURLEmailMBS

e.AddTo "test@monkeybreadsoftware.test", "Test Müller"

dim TOs() as string = e.TOs
MsgBox TOs(0)
```

Notes:

Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

61.1.13 Bccs as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of Bcc recipients.
Example:

```
dim e as new CURLEmailMBS

e.AddBcc "test@monkeybreadsoftware.test", "Test Müller"

dim Bccs() as string = e.Bccs
MsgBox Bccs(0)
```

Notes: Entries may be encoded if necessary.

61.1.14 ccs as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of cc recipients.
Example:

```
dim e as new CURLEmailMBS

e.Addcc "test@monkeybreadsoftware.test", "Test Müller"

dim ccs() as string = e.ccs
MsgBox ccs(0)
```

Notes: Entries may be encoded if necessary.

61.1.15 clearAttachments

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all attachments from this email.
Notes: Useful in case you want to send same email with different attachments to another recipient.

61.1.16 ClearHeaders

MBS CURL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all headers from this email.
Notes: Useful in case you want to send same email with different headers to another recipient.

61.1.17 clearRecipients

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: clears all recipients.
Notes:

Removes all TO, cc, Bcc and ReplyTO entries.
Useful in case you want to send same email to another recipient.

61.1.18 constructor(Encoding as string = "UTF-8")

MBS CURL Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes:

Normally, ignore parameter and use UTF-8.
But alternative you can pass: UTF-8, AScII, MacRoman, Latin1 or Windows.

61.1.19 EmailSource as string

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the source code for the email.
Notes:

This is more for debugging, than for real use.
You can write this into a EML file.

61.1.20 Headers as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of extra header entries.
Example:

```
dim e as new CURLEmailMBS

e.AddHeader "X-company: My company, Inc."

dim Headers() as string = e.Headers
MsgBox Headers(0)
```

61.1.21 ReplyTOs as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of ReplyTo recipients.
Example:

```
dim e as new CURLEmailMBS

e.AddReplyTo "test@monkeybreadsoftware.test", "Test Müller"
```

```
dim ReplyTos() as string = e.ReplyTOs
MsgBox ReplyTos(0)
```

Notes: Entries may be encoded if necessary.

61.1.22 SetFrom(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the email from address.
Example:

```
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "christian Müller"
```

Notes: Please pass email and name of the recipient. If this name contains special characters, it will be automatically encoded with UTF-8.

61.1.23 SetServer(server as string, UseSSL as boolean = false)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the server to use.
Example:

```
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SetServer "smtprelaypool.ispgateway.de", true
```

Notes:

Sets which SMTP server to use.
There are a few combinations possible.
First you can use SetServer with SSL and pass true for UseURL parameter.

Or you pass false for no SSL. Still you can use CURL's OptionFTPSSL set to 3 to allow TLS for an upgrade

of the unencrypted connection to SSL later.

Some servers don't support unencrypted, SSL or TLS, so only one may work.

And ports can be difficult, too. You can use CURL OptionPort to set a port explicit or include it in the server with double colon on the end. common ports are 25, 587 or 465.

Port 465 usually Requires UseSSL=true, but other ports need UseSSL=false.
Sets UseSSL property.

61.1.24 TOs as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of TO recipients.
Example:

```
dim e as new CURLEmailMBS

e.AddTo "test@monkeybreadsoftware.test", "Test Müller"

dim TOs() as string = e.TOs
MsgBox TOs(0)
```

Notes: Entries may be encoded if necessary.

61.1.25 Properties

61.1.26 Attachmentcount as Integer

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of attachments.
Notes: (Read only property)

61.1.27 BoundaryName as String

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional name to use in boundaries for MIME parts.
Notes:

by default MBS Plugin.
(Read and Write property)

61.1.28 HTMLText as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The HTML text of the email.
Notes:

This text is encoded as quoted printable UTF-8 text.
(Read and Write property)

61.1.29 InReplyTo as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The in reply to message ID.
Notes:

Here you can define the message ID of the email you reply to.
(Read and Write property)

61.1.30 MessageID as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a custom message ID.
Notes:

The plugin normally creates one by default when setting from address.
(Read and Write property)

61.1.31 PlainText as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plain text of the email.
Example:

```
dim e as new CURLEmailMBS
e.PlainText = "Hello World," + EndOfLine + "Smilies:    "
```

Notes:

This text is encoded as quoted printable UTF-8 text.
(Read and Write property)

61.1.32 RichText as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The enriched text of the email.
Notes:

This text is encoded as quoted printable UTF-8 text.
This is not to be confused with RTF file format. Enriched text is described here:
http://en.wikipedia.org/wiki/Enriched_text
Please note that most email clients do not support this nowadays.
(Read and Write property)

61.1.33 Server as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The effective server URL used.
Notes:

Only for debugging.
(Read only property)

61.1.34 SMTPPassword as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password for SMTP server authentication.
Example:

```
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SetServer "smtprelaypool.ispgateway.de", true
```

Notes: (Read and Write property)

61.1.35 SMTPServer as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The domain name of the SMTP Server to use.
Example:

```
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SMTPServer = "smtprelaypool.ispgateway.de"
e.UseSSL = true
```

Notes: (Read and Write property)

61.1.36 SMTPUsername as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The username for SMTP server authentication.
Example:

```
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SetServer "smtprelaypool.ispgateway.de", true
```

Notes: (Read and Write property)

61.1.37 Subject as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The subject line.

Example:

```
dim e as new CURLEmailMBS

e.Subject = "Hello World "
```

Notes:

If subject lines contains special characters, it is automatically encoded as UTF-8.
(Read and Write property)

61.1.38 UseSSL as Boolean

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to use SSL or not.
Example:

```
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SMTPServer = "smtprelaypool.ispgateway.de"
e.UseSSL = true
```

Notes:

When using SSL right, please also check cAInfo, cAPath, OptionSSLVerifyHost and OptionSSLVerifyPeer properties on the CURLSMBS class.

Pass false for TLS and later configure CURL for TLS.
Port 465 usually Requires UseSSL=true, but other ports need UseSSL=false.
(Read and Write property)

61.2 class CURLFileInfoMBS

61.2.1 class CURLFileInfoMBS

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for file information.
Notes: Content of this structure depends on information which is known and is achievable (e.g. by FTP LIST parsing).

61.2.2 Properties

61.2.3 Date as Date

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timstamp as a date object.
Notes:

As of plugin version 15.2 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.
(Read only property)

61.2.4 DateTime as DateTime

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timstamp as a date object.
Notes:

As of plugin version 20.5 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.
(Read only property)

61.2.5 FileName as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file name.
Notes: (Read only property)

61.2.6 FileType as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file type.
Notes: (Read only property)

61.2.7 Flags as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The flags.
Notes:

Flags define which fields are set.
Also you can just use the Has properties for same information.
(Read only property)

61.2.8 GID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The group ID.
Notes: (Read only property)

61.2.9 GroupString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The group string.
Notes: (Read only property)

61.2.10 HardLinks as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hard link count.
Notes: (Read only property)

61.2.11 HasFileName as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if filename property is valid.
Notes: (Read only property)

61.2.12 HasFileType as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if filetype property is valid.
Notes: (Read only property)

61.2.13 HasGID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if GID property is valid.
Notes: (Read only property)

61.2.14 HasHardLinks as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if hardlinks property is valid.
Notes: (Read only property)

61.2.15 HasPermissions as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if permissions property is valid.
Notes: (Read only property)

61.2.16 HasSize as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if size property is valid.
Notes: (Read only property)

61.2.17 HasTime as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if time and date properties have values.
Notes: (Read only property)

61.2.18 HasUID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if UID field has a value.
Notes: (Read only property)

61.2.19 IsDirectory as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if entry is a directory.
Notes:

Same as FileType = FileTypeDirectory.
(Read only property)

61.2.20 IsFile as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if entry is a regular file.
Notes:

Same as FileType = FileTypeFile.
(Read only property)

61.2.21 Permissions as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The permission value.
Notes: (Read only property)

61.2.22 PermissionString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The permission string.
Notes: (Read only property)

61.2.23 Size as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file size.
Notes: (Read only property)

61.2.24 Target as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The target for a symlink.
Notes: (Read only property)

61.2.25 Time as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time value.
Notes: (Read only property)

61.2.26 TimeString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time string parsed.
Notes: (Read only property)

61.2.27 UID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user ID.
Notes: (Read only property)

61.2.28 UserString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user ID as text.
Notes: (Read only property)

61.2.29 Constants

61.2.30 FileTypeDeviceBlock = 3

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Block Device

61.2.31 FileTypeDeviceChar = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Character Device

61.2.32 FileTypeDirectory = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Directory

61.2.33 FileTypeDoor = 7

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Door, is possible only on Sun Solaris now.

61.2.34 FileTypeFile = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Regular file

61.2.35 FileTypeNamedPipe = 5

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Named Pipe

61.2.36 FileTypeSocket = 6

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Socket

61.2.37 FileTypeSymlink = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Symbolic links

61.2.38 FileTypeUnknown = 8

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Unknown file type. Should never occur.

61.2.39 FlagKnownFileName = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Filename Known

61.2.40 FlagKnownFileType = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: File Type Known

61.2.41 FlagKnownGID = 32

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: GID Known

61.2.42 FlagKnownHardLinks = 128

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Hardlink Count Known

61.2.43 FlagKnownPermissions = 8

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Permissions Known

61.2.44 FlagKnownSize = 64

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Size Known

61.2.45 FlagKnownTime = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Time Known

61.2.46 FlagKnownUID = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: UID Known

61.3 class CURLListMBS

61.3.1 class CURLListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to hold a list of strings from the CURL library.
Notes: Data is copied for this list, so you can just keep it around.

61.3.2 Methods

61.3.3 Item(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the item with the given index.
Notes: Index is zero based.

61.3.4 List as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts list to a string array.

61.3.5 Operator_Convert as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts list to a string array.

61.3.6 Properties

61.3.7 Count as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of items in this list.
Notes: (Read only property)

61.4 class CURLMBS

61.4.1 class CURLMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to wrap libCURL.
Notes:

We have three variants:

CURLS* classes include a static CURL library with SSL and SSH.
CURLN* classes include a static CURL library with native SSL on Mac and Windows.
CURL* classes without S need you to supply your own CURL library.

All variants can load a custom CURL library or use the one from the system on Mac and Linux.
If no library is loaded or included, the plugin will try to load the system one in constructor.

from the website libCURL website:
https://curl.haxx.se/libcurl/

libCURL is a free and easy-to-use client-side URL transfer library, supporting FTP, FTPS, HTTP, HTTPS, SCP, SFTP, TFTP, TELNET, DICT, FILE and LDAP. libCURL supports SSL certificates, HTTP POST, HTTP PUT, FTP uploading, HTTP form based upload, proxies, cookies, user+password authentication (Basic, Digest, NTLM, Negotiate, Kerberos4), file transfer resume, http proxy tunneling and more!

libCURL is highly portable, it builds and works identically on numerous platforms, including Solaris, NetBSD, FreeBSD, OpenBSD, Darwin, HPUX, IRIX, AIX, Tru64, Linux, UnixWare, HURD, Windows, Amiga, OS/2, BeOs, Mac OS X, Ultrix, QNX, OpenVMS, RISC OS, Novell NetWare, DOS and more...

libCURL is free, thread-safe, IPv6 compatible, feature rich, well supported, fast, thoroughly documented and is already used by many known, big and successful companies and numerous applications.

On Linux you may need to install libraries like ldap: apt-get install libldap-2.4.2:i386

61.4.6 Methods

61.4.7 AddMimePart as CURLMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a new blank mime part.
Notes: Returns mime object, so you can set properties.

61.4.8 AWSPresignURL(AWSAccessKeyId as String, AWSSecretAccessKey as String, Region as String, Service as String, Path as String, Domain as String, Verb as String = "GET", Expires as Integer = 86400, QueryParameters() as String = nil, Headers() as String = nil) as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query predigend URL for Amazon Webservices.
Example:

```
Dim URL As String = CURLMBS.AWSPresignURL( _
"AKIAIOSFODNN7EXAMPLE", _
"wJalrXUtnFEMI/K7MDENG/bPxRfiCYEXAMPLEKEY", _
"us-east-1", _
"s3", _
"/test.txt", _
"examplebucket.s3.amazonaws.com", _
"GET", _
86400 )

Break // see URL in debugger
```

Notes:

This implements AWS4-HMAC-SHA256 pre-signature for credentials.

Works also for other compatible S3 services beside Amazon's like the one from Wasabi or Dell ECS.

Parameter	Description	Example
AWSAccessKeyId	Your access key for AWS.	
AWSSecretAccessKey	Your secret.	
Region	The region to use.	"us-central-1"
Service	The service to use.	"s3"
Path	Path to the URL. Should always start with "/".	"/bucketname/test.jpg"
Domain	Optional the domain to use. By default we just build it from region and service.	"s3.us-central-1.amazonaws.com" or "s3-ap-southeast-2.amazonaws.com"
Verb	The HTTP Operation to do. Can be POST, PUT, GET or DELETE. Default is GET.	"GET"
Expires	Expiration duration. Provides the time period, in seconds, for which the generated presigned URL is valid. For example, 86400 (24 hours). This value is an integer. The minimum value you can set is 1, and the maximum is 604800 (seven days). A presigned URL can be valid for a maximum of seven days because the signing key you use in signature calculation is valid for up to seven days. Default is 86400 for one day.	
QueryParameters	List of query parameters to include.	
Headers	Extra HTTP headers to include. Here you can specify various headers to include in signature and request.	"text=abc"

Returns the pre-signed URL. May raise an exception in case of error.

61.4.9 ClearData

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears data properties.
Notes: Resets OutputData, DebugData and HeaderData.

61.4.10 CloseMTDebugOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the debug output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

61.4.11 CloseMTHeaderOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the header output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

61.4.12 CloseMTInputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the input file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

61.4.13 CloseMTOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

61.4.14 CreateMTDebugOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where debug data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.4.15 CreateMTDebugOutputFile(Path as String) as boolean 11704

61.4.15 CreateMTDebugOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where debug data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.4.14 CreateMTDebugOutputFile(file as folderitem) as boolean 11704

61.4.16 CreateMTHeaderOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where header data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.4.17 CreateMTHeaderOutputFile(Path as String) as boolean 11705

61.4.17 CreateMTHeaderOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where header data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.4.16 CreateMTHeaderOutputFile(file as folderitem) as boolean 11705

61.4.18 CreateMTOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where output data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.

See also:

- 61.4.19 CreateMTOutputFile(Path as String) as boolean 11706

61.4.19 CreateMTOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where output data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.4.18 CreateMTOutputFile(file as folderitem) as boolean 11705

61.4.20 FileInfos as CURLFileInfoMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries array with file information.
Notes:

If you use OptionWildcard, you find after the transfer all CURLFileInfoMBS objects for all the files/folders found.

For MBS Plugin 19.0 or newer you can alternatively run a custom request "MLSD" and than get file infos, too.

61.4.21 FinishMime

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Finishes mime data.
Example:

```
dim c as new CURLMBS

// add mime
dim p as CURLMimePartMBS = c.AddMimePart
```

```
p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: Please call AddMimePart for each part you like to add and than finally FinishMime before calling perform.

61.4.22 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
dim c as new CURLMBS
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string

const CURLFORM_COPYNAME = 1
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues
```

Notes:

Lasterror is set.
See other FormAdd methods for details.

- 61.4.28 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer) 11712
- 61.4.29 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string) 11714

61.4.28 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Several FormAdd methods are there. Send a request to support if you need another parameter combination.

Lasterror is set.

FormAdd() is used to append sections when building a multipart/formdata HTTP POST (sometimes referred to as rfc1867-style posts). Append one section at a time until you've added all the sections you want included and then you call FormFinish.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

First, there are some basics you need to understand about multipart/formdata posts. Each part consists of at least a NAME and a CONTENTS part. If the part is made for file upload, there are also a stored CONTENT-TYPE and a FILENAME. Below, we'll discuss what options you use to set these properties in the parts you want to add to your post.

The options listed first are for making normal parts. The options from CURLFORM_FILE through CURLFORM_BUFFERLENGTH are for file upload parts.

CURLFORM_COPYNAME:
followed by a string which provides the name of this part. libCURL copies the string so your application doesn't need to keep it around after this function call. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_PTRNAME:
followed by a string which provides the name of this part. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_COPYCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL copies the provided data, so your application doesn't need to keep it around after this function call. If the data isn't

null terminated, or if you'd like it to contain zero bytes, you must set the length of the name with CURLFORM_CONTENTSLENGTH.

CURLFORM_PTRCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_CONTENTSLENGTH.

CURLFORM_CONTENTSLENGTH:
followed by a long giving the length of the contents.

CURLFORM_FILECONTENT:
followed by a filename, causes that file to be read and its contents used as data in this part. This part does not automatically become a file upload part simply because its data was read from a file.

CURLFORM_FILE:
followed by a filename, makes this part a file upload part. It sets the filename field to the basename of the provided filename, it reads the contents of the file and passes them as data and sets the content-type if the given file match one of the internally known file extensions. For CURLFORM_FILE the user may send one or more files in one part by providing multiple CURLFORM_FILE arguments each followed by the filename (and each CURLFORM_FILE is allowed to have a CURLFORM_CONTENTTYPE).

CURLFORM_CONTENTTYPE:
is used in combination with CURLFORM_FILE. Followed a string which provides the content-type for this part, possibly instead of an internally chosen one.

CURLFORM_FILENAME:
is used in combination with CURLFORM_FILE. Followed a string, it tells libCURL to use the given string as the filename in the file upload part instead of the actual file name.

CURLFORM_BUFFER:
is used for custom file upload parts without use of CURLFORM_FILE. It tells libCURL that the file contents are already present in a buffer. The parameter is a string which provides the filename field in the content header.

CURLFORM_BUFFERPTR:
is used in combination with CURLFORM_BUFFER. The parameter is the string to be uploaded. You must also use CURLFORM_BUFFERLENGTH to set the number of bytes in the buffer. Keep the buffer variable alive till the upload is finished.

CURLFORM_BUFFERLENGTH:

is used in combination with CURLFORM_BUFFER. The parameter is a long which gives the length of the buffer.

CURLFORM_ARRAY:
Another possibility to send options to CURL_formadd() is the CURLFORM_ARRAY option, that passes an Integer Array and a String Array defining its value. Each element in the form is constructed using the option from the integer array and the value from the string array. All available options can be used in an array, except the CURLFORM_ARRAY option itself!

CURLFORM_CONTENTHEADER:
specifies extra headers for the form POST section. This takes a CURL_slist prepared in the usual way using CURL_slist_append and appends the list of headers to those libCURL automatically generates. The list must exist while the POST occurs, if you free it before the post completes you may experience problems.

PS: CURLFORM_FILE does not work in all CURL versions on all platforms due to a bug with integer numbers.

- 61.4.27 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string) 11711
- 61.4.29 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string) 11714

61.4.29 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string)

MBS CURL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Lasterror is set.
See other FormAdd methods for details.
See also:

- 61.4.22 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string) 11707

61.4.30 FormAddField(fieldName as String, fieldValue as String, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
dim d as new CURLMBS
d.FormAddField("company", "Test, Inc.")
```

Notes:

For fieldName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.
ContentType is optional.

Please call FormFinish method later!

61.4.31 FormAddFile(fieldName as String, fileName as String, fileContent as string, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
// read content of some file
dim file as folderitem = specialFolder.desktop.Child("test.txt")
dim b as BinaryStream = binarystream.Open(file)
dim FileContent as String = b.read(b.length)

// init some curl object
dim d as new CURLMBS

// add the file as part of a form
d.FormAddFile("FileAttachment", "test.txt", FileContent, "text/plain")

// later
d.FormFinish
```

Notes:

For fieldName, fileName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.

Filename is ignored, if empty.
ContentType is optional.

Please call FormFinish method later!

61.4.32 FormClear

MBS CURL Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears current form data.
Notes: You usually don't need to call this as Perform clears form data when transfer is done.

61.4.33 FormData as String

MBS CURL Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries current form data.
Notes: This is more for debugging as it builds form data as if we would send it.

61.4.34 FormFinish

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Finishes constructing a form.
Example:

```
dim c as new CURLMBS
dim namebuffer as string = "name buffer"
dim namelength as Integer = lenb(namebuffer)
dim buffer as string = "test buffer"
dim htmlbuffer as string = "<HTML>test buffer</HTML>"
dim htmlbufferlength as Integer = lenb(htmlbuffer)
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string
dim recordbuffer as string = "record buffer"
dim recordlength as Integer = lenb(recordbuffer)

const CURLFORM_NOTHING = 0
const CURLFORM_COPYNAME = 1
const CURLFORM_PTRNAME = 2
const CURLFORM_NAMELENGTH = 3
const CURLFORM_COPYCONTENTS = 4
const CURLFORM_PTRCONTENTS = 5
const CURLFORM_CONTENTSLENGTH = 6
const CURLFORM_FILECONTENT = 7
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10
const CURLFORM_BUFFER = 11
const CURLFORM_BUFFERPTR = 12
const CURLFORM_BUFFERLENGTH = 13
const CURLFORM_CONTENTTYPE = 14
const CURLFORM_CONTENTHEADER = 15
const CURLFORM_FILENAME = 16

'/* Add simple name/content section */
```

```
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_COPYCONTENTS, "content"

'
'/* Add simple name/content/contenttype section */

c.FormAdd CURLFORM_COPYNAME, "htmlcode", CURLFORM_COPYCONTENTS, "<HTML></HTML>",CURL-
FORM_CONTENTTYPE,"text/html"

'/* Add name/ptrcontent section */
c.FormAdd CURLFORM_COPYNAME, "name_for_ptrcontent", CURLFORM_PTRCONTENTS, buffer

'/* Add ptrname/ptrcontent section */
c.FormAdd CURLFORM_PTRNAME, namebuffer, CURLFORM_PTRCONTENTS, buffer, CURLFORM_NAME-
LENGTH, namelength

'/* Add name/ptrcontent/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "html_code_with_hole", CURLFORM_PTRCONTENTS, html-
buffer, CURLFORM_CONTENTSLENGTH, htmlbufferlength, CURLFORM_CONTENTTYPE, "text/html"

'/* Add simple file section */
c.FormAdd CURLFORM_COPYNAME, "picture", CURLFORM_FILE, "my-face.jpg"

'/* Add file/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "picture",CURLFORM_FILE, "my-face.jpg",CURLFORM_CONTENTTYPE,
"image/jpeg"

'/* Add two file section */
c.FormAdd CURLFORM_COPYNAME, "pictures",CURLFORM_FILE, "my-face.jpg",CURLFORM_FILE,
"your-face.jpg"

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2

'/* Add a buffer to upload */
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_BUFFER, "data", CURLFORM_BUFFERPTR,
recordbuffer, CURLFORM_BUFFERLENGTH, recordlength

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues

'/* Add the content of a file as a normal post text value */
c.FormAdd CURLFORM_COPYNAME, "filecontent", CURLFORM_FILECONTENT, ".bashrc"
'/* Set the form info */
```

c.FormFinish

Notes:

Lasterror is set.
The form is assigned to the HTTPPost property.

61.4.35 GetInfoActiveSocket as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receive the active socket used by this curl session.
Notes:

If the socket is no longer valid, -1 is returned. When you finish working with the socket, the Destructor closes the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly.

This option was added as a replacement for GetInfoLastSocket since that one isn't working on all platforms.

61.4.36 GetInfoAppConnectTime as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time stamp when app connected.

61.4.37 GetInfoCertInfo as CURLListMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries information on the certificate chain.
Example:

```
dim c as new CURLMBS

// do some transfer
c.OptionURL = "https://www.mbsplugins.de/"
dim e as Integer = c.perform
```

```
// query certificate info
dim lists() as CURLListMBS = c.GetInfoCertInfo

for each l as CURLListMBS in lists
MsgBox Join(l, EndOfLine)
next

MsgBox c.DebugData
```

61.4.38 GetInfoConditionUnmet as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return if the time condition prevented the document to get transferred.

61.4.39 GetInfoConnectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, it took from the start until the connect to the remote host (or proxy) was completed.
Notes: The Lasterror property is set. 0 for success.

61.4.40 GetInfoContentLengthDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The content-length of the download.
Notes:

The Lasterror property is set. 0 for success.
This is the value read from the Content-Length: field.

61.4.41 GetInfoContentLengthUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The specified size of the upload.
Notes: The Lasterror property is set. 0 for success.

61.4.42 GetInfoContentType as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The content-type of the downloaded object.
Notes:

The Lasterror property is set. 0 for success.
This is the value read from the Content-Type: field. If you get "", it means that the server didn't send a valid Content-Type header or that the protocol used doesn't support this.

61.4.43 GetInfoCookieList as CURLListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A linked-list of all cookies CURL knows (expired ones, too).
Notes:

The Lasterror property is set. 0 for success.
If there are no cookies (cookies for the handle have not been enabled or simply none have been received) the result is nil.

61.4.44 GetInfoEffectiveMethod as string

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the last used effective HTTP method.
Notes: In cases when you've asked libcurl to follow redirects, the method may very well not be the same method the first request would use.

61.4.45 GetInfoEffectiveURL as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last used effective URL.
Notes: The Lasterror property is set. 0 for success.

61.4.46 GetInfoFileTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the remote time of the retrieved document (in number of seconds since 1 jan 1970 in the GMT/UTC time zone).
Example:

```
// init CURL with options
dim d as new CURLMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes:

The Lasterror property is set. 0 for success.
If you get -1, it can be because of many reasons (unknown, the server hides it or the server doesn't support the command that tells document time etc) and the time of the document is unknown. Note that you must tell the server to collect this information before the transfer is made, by using the OptionFileTime option or you will unconditionally get a -1 back. (Added in 7.5)

61.4.47 GetInfoFTPEntryPath as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a string holding the path of the entry path.
Notes:

That is the initial path libCURL ended up in when logging on to the remote FTP server.
Empty string if unknown.

61.4.48 GetInfoHeaderSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total size of all the headers received.
Notes: The Lasterror property is set. 0 for success.

61.4.49 GetInfoHTTPAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask indicating the authentication method(s) available.
Notes:

The Lasterror property is set. 0 for success.
The meaning of the bits is explained in the HTTPAuth option.

61.4.50 GetInfoHTTPConnectCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last received proxy response code to a CONNECT request.
Notes:

The Lasterror property is set. 0 for success.
none

61.4.51 GetInfoHTTPVersion as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the http version used in the connection.
Notes: The returned value will be kHTTP_VERSION_1_0, kHTTP_VERSION_1_1, or kHTTP_VER-

SION_2_0, or 0 if the version can't be determined.

61.4.52 GetInfoLastSocket as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receive the last socket used by this CURL session.
Notes:

If the socket is no longer valid, -1 is returned. When you finish working with the socket, the destructor will free the handle as usual and let libCURL close the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly. (Added in 7.15.2)

NOTE: this API is not really working on win64, since the SOCKET type on win64 is 64 bit large while its 'long' is only 32 bits.

61.4.53 GetInfoLocalIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries local IP.
Example:

```
dim c as new CURLMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP
MsgBox c.GetInfoLocalIP
```

61.4.54 GetInfoLocalPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the local port of the most recent (primary) connection.
Example:

```
dim c as new CURLMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP and port
MsgBox c.GetInfoLocalIP+":"+str(c.GetInfoLocalPort)
```

61.4.55 GetInfoNameLookupTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, it took from the start until the name resolving was completed.
Notes: The Lasterror property is set. 0 for success.

61.4.56 GetInfoNumConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: How many new connections libCURL had to create to achieve the previous transfer.
Notes:

The Lasterror property is set. 0 for success.
(only the successful connects are counted)
Combined with RedirectCount you are able to know how many times libCURL successfully reused existing connection(s) or not. See the Connection Options to see how libCURL tries to make persistent connections to save time.

61.4.57 GetInfoOSErrno as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The errno variable from a connect failure.
Notes: The Lasterror property is set. 0 for success.

61.4.58 GetInfoPreTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, it took from the start until the file transfer is just about to begin.
Notes:

The Lasterror property is set. 0 for success.
This includes all pre-transfer commands and negotiations that are specific to the particular protocol(s) involved.

61.4.59 GetInfoPrimaryIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the ip address of the most recent (primary) connection.
Example:

```
dim c as new CURLMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

61.4.60 GetInfoPrimaryPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the (remote) port of the most recent (primary) connection.
Example:

```
dim c as new CURLMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

61.4.61 GetInfoProtocol as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the protocol used in the connection.
Notes: See kProtocol* constants.

61.4.62 GetInfoProxyAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask indicating the authentication method(s) available for your proxy authentication.
Notes: The Lasterror property is set. 0 for success.

61.4.63 GetInfoProxyError as integer

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries proxy error code.

61.4.64 GetInfoProxySSLVerifyResult as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the result of the proxy certificate verification.
Notes: receive the result of the certificate verification that was requested (using the OptionProxySSLVerifyPeer option. This is only used for HTTPS proxies.

61.4.65 GetInfoRedirectCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total number of redirections that were actually followed.
Notes: The Lasterror property is set. 0 for success.

61.4.66 GetInfoRedirectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the total time, in seconds, it took for all redirection steps include name lookup, connect, pre-transfer and transfer before final transaction was started.
Notes:

The Lasterror property is set. 0 for success.
RedirectTime contains the complete execution time for multiple redirections. (Added in 7.9.7)

61.4.67 GetInfoRedirectURL as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The redirection URL.

61.4.68 GetInfoReferer as string

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries referrer text.

61.4.69 GetInfoRequestSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total size of the issued requests.
Notes:

The Lasterror property is set. 0 for success.
This is so far only for HTTP requests. Note that this may be more than one request if FOLLOWLOCATION is true.

61.4.70 GetInfoResponseCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last received HTTP or FTP code.
Notes:

The Lasterror property is set. 0 for success.
This will be zero if no server response code has been received. Note that a proxy's CONNECT response should be read with GetInfoHTTPConnectCode and not this.

With HTTP transfer, a successful transfer reports 200 here. If the page is not found, you get 404. Or any other HTTP Response code.

61.4.71 GetInfoRetryAfter as integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the Retry-After retry delay.
Notes:

Receive the number of seconds the HTTP server suggesets the client should wait until the next request is issued.
The information from the "Retry-After:" header.

While the HTTP header might contain a fixed date string, the RetryAfter will always return number of seconds to wait - or zero if there was no header or the header couldn't be parsed.

61.4.72 GetInfoRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP Client sequence counter.

61.4.73 GetInfoRTSPCSEQRecv as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP sequence counter received.

61.4.74 GetInfoRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP Server sequence counter.

61.4.75 GetInfoRTSPSessionID as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP session ID.

61.4.76 GetInfoScheme as string

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the URL scheme (sometimes called protocol) used in the connection

61.4.77 GetInfoSizeDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total amount of bytes that were downloaded.
Notes:

The Lasterror property is set. 0 for success.
The amount is only for the latest transfer and will be reset again for each new transfer.

61.4.78 GetInfoSizeUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total amount of bytes that were uploaded.
Notes: The Lasterror property is set. 0 for success.

61.4.79 GetInfoSpeedDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The average download speed that CURL measured for the complete download.
Notes: The Lasterror property is set. 0 for success.

61.4.80 GetInfoSpeedUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The average upload speed that CURL measured for the complete upload.
Notes: The Lasterror property is set. 0 for success.

61.4.81 GetInfoSSLEngines as CURLListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receive a linked-list of OpenSSL crypto-engines supported.
Notes:

The Lasterror property is set. 0 for success.
Note that engines are normally implemented in separate dynamic libraries. Hence not all the returned engines may be available at run-time.

61.4.82 GetInfoSSLVerifyResult as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the result of the certification verification that was requested (using the SSLVerifyPeer option).
Notes: The Lasterror property is set. 0 for success.

61.4.83 GetInfoStartTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the time, in seconds, it took from the start until the first byte is just about to be transferred.
Notes:

The Lasterror property is set. 0 for success.
This includes the pretransfer time and also the time the server needs to calculate the result.

61.4.84 GetInfoTotalTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total time in seconds for the previous transfer, including name resolving, TCP connect etc.
Notes: The Lasterror property is set. 0 for success.

61.4.85 LoadAPI

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the default CURL library.
Notes:

This method is called by the constructor. So you don't need this except you want to test explicit with APILoaded whether the loading worked before you use the CURLMBS class.

Loads the "libCURL.dll" Windows library (with SSL support this one max require OpenSSL).
Loads on Mac OS X and Linux the libCURL file in /usr/lib.

61.4.86 LoadErrorString as string

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error string from the LoadLibrary function.

61.4.87 LoadLibrary(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the CURL library from the given path.
Notes:

You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 61.4.88 LoadLibrary(path as string) as boolean 11733

61.4.88 LoadLibrary(path as string) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the CURL library from the given path.
Notes:

You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 61.4.87 LoadLibrary(file as folderitem) as boolean 11733

61.4.89 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens input file for reading data while PerformMT runs.
Notes:

The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.4.90 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean 11734

61.4.90 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens input file for reading data while PerformMT runs.
Notes:

The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.4.89 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean 11733

61.4.91 Perform as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a file transfer
Notes:

This function is called after all the options are set, and will perform the transfer as described in the options.

You can do any amount of calls to Perform. If you intend to transfer more than one file, you are even encouraged to do so. libCURL will then attempt to re-use the same connection for the following transfers, thus making the operations faster, less CPU intense and using less network resources. Just note that you will have to use the option properties between the invokes to set options for the following Perform.

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

Possible values for the retun value:

The error value -1 is used from the plugin to report that something is missing like OpenSSL dlls on Windows.

With SFTP, you can get logged error "Upload failed: Operation failed (4/-31)" when upload uses path to folder instead of file in URL.

61.4.92 PerformMT as Integer

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a file transfer with preemptive multithreading.
Notes:

Same as Perform, but with additional multithreading.

As the actual transfer runs on a preemptive thread, the events Debug, Write, Header and Progress are called asynchrounously and run a few milliseconds later. You can return true in Progress event to stop transfer, but you will get more events before the transfer is stopped.

You can call CreateMTDebugOutputFile, CreateMTHeaderOutputFile and CreateMTOutputFile before PerformMT to have output data be written into files. Call OpenMTInputFile to let the plugin read input data (form post or upload) from an input file.

Do not call other CURL functions on this CURLMBS instance while PerformMT is running!

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

To avoid trouble with app hanging on quit of application, be sure to set cancel property to true in window close event to cancel any pending transfer.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

61.4.93 ReceiveData(byref data as Memoryblock, BytesToRead as Int64) as Int64

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receives raw data on a connection.
Notes:

This function receives raw data from the established connection. You may use it together with SendData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

The data memoryblock is a reference to your variable that will get the received data. BytesToRead is the maximum amount of data you can get in that buffer. The function returns the number of received bytes.

To establish the connection, set OptionConnectOnly = true before calling Perform. Note that ReceiveData does not work on connections that were created without this option.

The call will return kError_AGAIN if there is no data to read - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, wait for data to arrive.

Wait on the socket only if ReceiveData returns kError_AGAIN. The reason for this is libcurl or the SSL library may internally cache some data, therefore you should call ReceiveData until all data is read which would include any cached data.

Furthermore if you wait on the socket and it tells you there is data to read, ReceiveData may return CURLE_AGAIN if the only data that was read was for internal SSL processing, and no other data is available.

On success, sets lasterror to kError_OK (0), stores the received data into memory block, and returns the number of bytes it actually read.

On failure, returns zero and lasterror is set to the appropriate error code.

The function may return kError_AGAIN. In this case, use your operating system facilities to wait until data can be read, and retry.

Reading exactly 0 bytes indicates a closed connection.

If there's no socket available to use from the previous transfer, this function returns kError_UNSUPPORTED_PROTOCOL.

61.4.94 Reset

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Re-initializes all options previously set on a specified CURL handle to the default values.

Notes: It does not change the following information kept in the handle: live connections, the Session ID cache, the DNS cache, the cookies and shares.

61.4.95 SendData(data as Memoryblock) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sends raw data over a connection.
Notes:

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.
See also:

- 61.4.96 SendData(data as string) as Integer 11737

61.4.96 SendData(data as string) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sends raw data over a connection.
Notes:

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.
See also:

- 61.4.95 SendData(data as Memoryblock) as Integer 11737

61.4.97 SetInputData(data as MemoryBlock)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 61.4.98 SetInputData(data as string) 11738

61.4.98 SetInputData(data as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

• 61.4.97 SetInputData(data as MemoryBlock) 11738

61.4.99 SetOptionConnectTo(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set list of host:port:connect-to-host:connect-to-port, overrides the URL's host:port (only for the network layer)

61.4.100 SetOptionEmptyPassword

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets an empty password.
Notes:

Normally you have no password unless you set it.
But if you set a password with empty string, the plugin sets CURL to use no password.
This method is to use an empty password.

61.4.101 SetOptionHTTP200Aliases(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A linked list of aliases to be treated as valid HTTP 200 responses.
Notes:

Some servers respond with a custom header response line. For example, IceCast servers respond with "ICY 200 OK". By including this string in your list of aliases, the response will be treated as a valid HTTP header line such as "HTTP/1.0 200 OK".

The alias itself is not parsed for any version strings. So if your alias is "MYHTTP/9.9", LibCURL will not treat the server as responding with HTTP version 9.9. Instead LibCURL will use the value set by option HTTPVersion.

The Lasterror property is set. 0 for success.

61.4.102 SetOptionHTTPHeader(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A linked list of HTTP headers to pass to the server in your HTTP request.
Example:

```
dim c as new CURLMBS
c.SetOptionHTTPHeader array("Expect:", "Content-Type: text/xml", "SOAPAction: ""login""")
```

Notes:

If you add a header that is otherwise generated and used by libCURL internally, your added one will be used instead. If you add a header with no contents as in 'Accept:' (no data on the right side of the colon), the internally used header will get disabled. Thus, using this option you can add new headers, replace internal headers and remove internal headers. To add a header with no contents, make the contents be two quotes: "". The headers included in the linked list must not be CRLF-terminated, because CURL adds CRLF after each header item. Failure to comply with this will result in strange bugs because the server will most likely ignore part of the headers you specified.

The first line in a request (containing the method, usually a GET or POST) is not a header and cannot be replaced using this option. Only the lines following the request-line are headers. Adding this method line in this list of headers will only cause your request to send an invalid header.

Pass an empty array to this to reset back to no custom headers.

The Lasterror property is set. 0 for success.

61.4.103 SetOptionMailRecipients(list() as string)

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the array of email recipient addresses.

61.4.104 SetOptionPostQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an array to a list of FTP commands to pass to the server after your ftp transfer request.

Example:

```
dim d as CURLMBS // your CURL object

dim ws() As String
ws.Append "RNFR Temp.txt"
ws.append "RNTO MyFile.txt"
d.SetOptionPostQuote(ws)
```

Notes:

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.
If you want to do a ftp operation instead of download/upload/directory listing, please use SetOptionQuote.

61.4.105 SetOptionPreQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an array to a list of FTP commands to pass to the server after the transfer type is set.
Notes:

Disable this operation again by using an empty array for this option. Before version 7.15.6, if you also set Nobody to true, this option didn't work.

The Lasterror property is set. 0 for success.

61.4.106 SetOptionProxyHeader(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set list of headers used for proxy requests only.

61.4.107 SetOptionQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an array or a list of FTP commands to pass to the server prior to your ftp request.
Example:

```
dim curl as new CURLMBS
curl.SetOptionQuote array("DELE filename.txt")
```

Notes:

This will be done before any other FTP commands are issued (even before the CWD command).

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.

61.4.108 SetOptionResolve(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Send linked-list of name:port:address sets.

61.4.109 SetOptionTelnetOptions(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provide an array of variables to pass to the telnet negotiations.
Notes:

The variables should be in the format <option=value>. libCURL supports the options 'TTYPE', 'XDISPLOC' and 'NEW_ENV'. See the TELNET standard for details.

The Lasterror property is set. 0 for success.

61.4.110 SetPathCAInfo(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A path holding one or more certificates to verify the peer with.
Example:

```
dim cacert as FolderItem // your cacert.pem file
dim CURL as new CURLMBS
CURL.OptionSSLVerifyHost = 2 // verify server
CURL.OptionSSLVerifyPeer = 1 // proofs certificate is authentic
CURL.SetPathCAInfo cacert
```

Notes:

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

61.4.111 SetPathCAPath(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A path to the directory holding multiple CA certificates to verify the peer with.
Example:

```
dim c as new CURLMBS

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
c.SetPathCAPath cacert
```

Notes:

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if

libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

61.4.112 SetPathCRLFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the path with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes:

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

61.4.113 SetPathIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the path to a CA certificate in PEM format.
Notes:

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSS-

LVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

61.4.114 SetPathNetRCFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the path to the file you want libCURL to use as .netrc file.
Notes:

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

61.4.115 SetPathProxyIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the proxy issuer SSL certificate filename.
Notes:

Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

61.4.116 SetupEmail(email as Variant) as boolean

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Setups existing CURL session for an email transfer.

Example:

```
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "Christian Müller"
e.Subject = "Hello World "
e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test Müller"
e.PlainText = "Hello World," + EndOfLine + "Smilies:    "

dim c as new CURLMBS

if c.SetupEmail(e) then

dim er as Integer = c.Perform
if er = 0 then
MsgBox "Email sent"
end if
end if
```

Notes:

You can set your own settings like proxy after this function call.
If you like you can reuse the email and CURL objects after you sent an email, change values and send another email.
Returns true on success or false on failure.

61.4.117 UpKeep

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform any connection upkeep checks.
Notes:

Perform any connection upkeep checks.
Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.
Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
This function must be explicitly called in order to perform the upkeep work. The connection upkeep interval is set with OptionUpkeepIntervalMS.

61.4.118 Properties

61.4.119 APILoaded as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the CURL library was loaded.
Notes:

The CURLMBS constructor loads the library if it was not loaded before.
(Read only property)

61.4.120 Cancel as Boolean

MBS CURL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Tells CURL instance to cancel transfer as soon as possible.
Notes:

Especially when using PerformMT, you may see your app hang if user tries to quit application. To prevent the hang, please set Cancel = true in window close event. So when app quits and windows get destroyed, the PerformMT will see the Cancel being true and returns soon.
(Read and Write property)

61.4.121 CollectDebugData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to collect debug message data.
Notes:

If you set this property to true, you can grab the data from the transfer in the DebugData Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

61.4.122 CollectHeaderData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to collect header data.
Notes:

If you set this property to true, you can grab the data from the transfer in the headerData Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

61.4.123 CollectOutputData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to collect output data.
Notes:

If you set this property to true, you can grab the data from the transfer in the OutputData Property instead of collecting the pieces yourself in the write event. Of course this is optional and you can still process data in write event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

61.4.124 DebugData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The debug data from CURL.
Notes:

If CollectDebugData property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.
(Read only property)

61.4.125 DebugWithData as Boolean

MBS CURL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to include data in debug messages.
Example:

```
dim c as new CURLMBS
c.DebugWithData = true
```

c.OptionVerbose = true
c.CollectDebugData = true

Notes: (Read and Write property)

61.4.126 Handle as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal handle of the CURL object.
Notes: (Read and Write property)

61.4.127 HeaderData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The header data from CURL.
Notes:

If CollectHeaderData property is true, the plugin puts the data received in header event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.
(Read only property)

61.4.128 InputData as String

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
(Read and Write property)

61.4.129 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The lasterror from the library.
Notes:

Set in the constructor while doing initialization.
Check the kError* constants.
(Read and Write property)

61.4.130 LasterrorMessage as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error message.
Notes: (Read only property)

61.4.131 LasterrorText as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The text for the lasterror code.
Notes:

Static string matched to the error code, so you have an idea what's wrong.
(Read and Write property)

61.4.132 LibraryUsed as String

MBS CURL Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Which library is in use.
Notes:

This is for debugging only to see which library is in use.
(Read only property)

61.4.133 LibVersion as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a human readable string with the version number of libCURL and some of its important components (like OpenSSL version).
Notes: (Read only property)

61.4.134 OptionAbstractUnixSocket as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Path to an abstract Unix domain socket.
Notes: (Read and Write property)
See also ABSTRACT_UNIX_SOCKET option in CURL manual.

61.4.135 OptionAcceptEncoding as String

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the contents of the Accept-Encoding: header sent in a HTTP request, and enables decoding of a response when a Content-Encoding: header is received.
Example:

```
dim c as new CURLMBS
c.OptionAcceptEncoding = "deflate"
```

Notes:

Three encodings are supported: identity, which does nothing, deflate which requests the server to compress its response using the zlib algorithm, and gzip which requests the gzip algorithm. If a zero-length string is set, then an Accept-Encoding: header containing all supported encodings is sent.

This is a request, not an order; the server may or may not do it. This option must be set (to any non-NULL value) or else any unsolicited encoding done by the server is ignored. See the special file README.encoding for details (included with CURL source code).
(Read and Write property)
See also ACCEPT_ENCODING option in CURL manual.

61.4.136 OptionAcceptTimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Time-out accept operations (currently for FTP only) after this amount of milliseconds.
Notes: (Read and Write property)
See also ACCEPTTIMEOUT_MS option in CURL manual.

61.4.137 OptionAddressScope as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an integer specifying the scope_id value to use when connecting to IPv6 link-local or site-local addresses.
Notes:

(Added in CURL 7.19.0)
(Read and Write property)
See also ADDRESS_SCOPE option in CURL manual.

61.4.138 OptionAppend as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to append to the remote file instead of overwrite it.
Notes:

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also APPEND option in CURL manual.

61.4.139 OptionAutoReferer as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When enabled, libCURL will automatically set the Referer: field in requests where it follows a

Location: redirect.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also AUTOREFERER option in CURL manual.

61.4.140 OptionAWSSigV4 as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides AWS V4 signature authentication on HTTP(S) header.
Notes:

Pass a text that is the collection of specific arguments are used for creating outgoing authentication headers. The format of the param option is:

provider1 [:provider2 [:region [:service]]]

provider1, provider2:
The providers arguments are used for generating some authentication parameters such as "Algorithm", "date", "request type" and "signed headers".

region:
The argument is a geographic area of a resources collection. It is extracted from the host name specified in the URL if omitted.

service:
The argument is a function provided by a cloud. It is extracted from the host name specified in the URL if omitted.

Note: This call set CURLOPT_HTTPAUTH to CURLAUTH_AWS_SIGV4. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.

Example with "Test:Try", when curl will do the algorithm, it will generate "TEST-HMAC-SHA256" for "Algorithm", "x-try-date" and "X-Try-Date" for "date", "test4_request" for "request type", "SignedHeaders=content-type;host;x-try-date" for "signed headers"
If you use just "test", instead of "test:try", test will be use for every strings generated

By default, the value of this parameter is empty. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.

(Read and Write property)
See also AWS_SIGV4 option in CURL manual.

61.4.141 OptionBufferSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Your preferred size (in bytes) for the receive buffer in libCURL.
Notes:

The main point of this would be that the write callback gets called more often and with smaller chunks. This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size. (Added in 7.10)

This size is by default set as big as possible (OptionMaxWriteSize), so it only makse sense to use this option if you want it smaller.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also BUFFERSIZE option in CURL manual.

61.4.142 OptionCAInfo as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a file holding one or more certificates to verify the peer with.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:
```

```
Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAINFO option in CURL manual.

61.4.143 OptionCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CAInfo as blob value.
Notes:

Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also CAINFO_BLOB option in CURL manual.

61.4.144 OptionCAPath as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a directory holding multiple CA certificates to verify the peer with.
Example:

```
dim c as new CURLMBS
c.OptionCAPath = "/data/MyCertificates"
```

Notes:

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAPATH option in CURL manual.

61.4.145 OptionCertInfo as boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to enable libCURL's certificate chain info gatherer.
Notes:

With this enabled, libCURL (if built with OpenSSL) will extract lots of information and data about the certificates in the certificate chain used in the SSL connection. This data is then possible to extract after a transfer using GetInfoCertInfo. (Added in 7.19.1)
(Read and Write property)
See also CERTINFO option in CURL manual.

61.4.146 OptionConnectionTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in seconds that you allow the connection to the server to take.
Notes:

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the

OptionTimeout option.
(Read and Write property)
See also CONNECTTIMEOUT option in CURL manual.

61.4.147 OptionConnectionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in milli seconds that you allow the connection to the server to take.
Notes:

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the OptionTimeout option.
(Read and Write property)

61.4.148 OptionConnectOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A true tells the library to perform any required proxy authentication and connection setup, but no data transfer.
Notes:

This option is useful with the CURLMBS.GetInfoLastSocket function. The library can set up the connection and then the application can obtain the most recently used socket for special data transfers. (Added in 7.15.2)
(Read and Write property)
See also CONNECT_ONLY option in CURL manual.

61.4.149 OptionCookie as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It will be used to set a cookie in the http request.
Notes:

The format of the string should be NAME=CONTENTS, where NAME is the cookie name and CONTENTS is what the cookie should contain.

If you need to set multiple cookies, you need to set them all using a single option and thus you need to concatenate them all in one single string. Set multiple cookies in one string like this: "name1=content1; name2=content2;" etc.

Using this option multiple times will only make the latest string override the previously ones.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIE option in CURL manual.

61.4.150 OptionCookieFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The cookie file content.
Notes:

It should contain the name of your file holding cookie data to read. The cookie data may be in Netscape / Mozilla cookie data format or just regular HTTP-style headers dumped to a file.

Given an empty or non-existing file or by passing the empty string (""), this option will enable cookies for this CURL handle, making it understand and parse received cookies and then use matching cookies in future request.

If you use this option multiple times, you just add more files to read. Subsequent files will add more cookies.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEFILE option in CURL manual.

61.4.151 OptionCookieJar as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: File path where to write the cookies to.
Notes:

This will make libCURL write all internally known cookies to the specified file, when the object is destroyed. If no cookies are known, no file will be created. Specify "-" to instead have the cookies written to stdout. Using this option also enables cookies for this session, so if you for example follow a location it will make matching cookies get sent accordingly.

If the cookie jar file can't be created or written to, libCURL will not and cannot report an error for this. Using OptionVerbose or DebugFunction event will get a warning to display, but that is the only visible feedback you get about this possibly lethal situation.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEJAR option in CURL manual.

61.4.152 OptionCookieList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The cookie string.
Notes:

Cookie can be either in Netscape / Mozilla format or just regular HTTP-style header (Set-Cookie: ...) format. If CURL cookie engine was not enabled it will enable its cookie engine. Passing a magic string "ALL" will erase all cookies known by CURL. (Added in 7.14.1) Passing the special string "SESS" will only erase all session cookies known by CURL. (Added in 7.15.4)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIELIST option in CURL manual.

61.4.153 OptionCookieSession as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to mark this as a new cookie "session".
Notes:

It will force libCURL to ignore all cookies it is about to load that are "session cookies" from the previous session. By default, libCURL always stores and loads all cookies, independent if they are session cookies are not. Session cookies are cookies without expiry date and they are meant to be alive and existing for this "session" only.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIESESSION option in CURL manual.

61.4.154 OptionCRLF as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Convert Unix newlines to CRLF newlines on transfers.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also CRLF option in CURL manual.

61.4.155 OptionCRLFile as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a file with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes:

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due

to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)
(Read and Write property)
See also CRLFILE option in CURL manual.

61.4.156 OptionCustomRequest as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It will be user instead of GET or HEAD when doing an HTTP request, or instead of LIST or NLST when doing an ftp directory listing.
Example:

```
dim c as CURLMBS // your CURL instance

c.URL = "ftp://..."
c.customRequest = "MLSD" // ftp advanced directory listing
```

Notes:

This is useful for doing DELETE or other more or less obscure HTTP requests. Don't do this at will, make sure your server supports the command first.

Restore to the internal default by setting this to "".

Many people have wrongly used this option to replace the entire request with their own, including multiple headers and POST contents. While that might work in many cases, it will cause libCURL to send invalid requests and it could possibly confuse the remote server badly. Use CURLOPT_POST and OptionPostFields to set POST data. Use OptionHTTPHeader to replace or extend the set of headers sent by libCURL. Use OptionHTTPVersion to change HTTP version.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For WebDAV, you can set this to "MKCOL" to create a folder at the given URL.
(Read and Write property)
See also CUSTOMREQUEST option in CURL manual.

61.4.157 OptionDefaultProtocol as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the protocol used when curl is given a URL without a protocol.
Notes: (Read and Write property)
See also DEFAULT_PROTOCOL option in CURL manual.

61.4.158 OptionDirListOnly as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For FTP and SFTP based URLs a parameter set to true tells the library to list the names of files in a directory, rather than performing a full directory listing that would normally include file sizes, dates etc.
Notes:

For POP3 a parameter of true tells the library to list the email message or messages on the POP3 server. This can be used to change the default behaviour of libCURL, when combined with a URL that contains a message ID, to perform a "scan listing" which can then be used to determine the size of an email.

Note: For FTP this causes a NLST command to be sent to the FTP server. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

Setting this option to true also implies a directory listing even if the URL doesn't end with a slash, which otherwise is necessary.

Do NOT use this option if you also use OptionWildCardMatch as it will effectively break that feature then.
(Read and Write property)
See also DIRLISTONLY option in CURL manual.

61.4.159 OptionDisableUserNameInURL as Boolean

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disallow specifying username/login in URL.
Notes:

The value true tells the library to not allow URLs that include an username.
(Read and Write property)

61.4.160 OptionDNSCacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timeout in seconds.
Notes:

Name resolves will be kept in memory for this number of seconds. Set to zero (0) to completely disable caching, or set to -1 to make the cached entries remain forever. By default, libCURL caches this info for 60 seconds.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also DNS_CACHE_TIMEOUT option in CURL manual.

61.4.161 OptionDNSInterface as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the name of the network interface that the DNS resolver should bind to.
Notes:

This must be an interface name (not an address). Set this option to "" to use the default setting (don't bind to a specific interface).
(Read and Write property)
See also DNS_INTERFACE option in CURL manual.

61.4.162 OptionDNSLocalIPv4 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the local IPv4 address that the resolver should bind to.
Notes:

The argument should be of string and contain a single numerical IPv4 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP4 option in CURL manual.

61.4.163 OptionDNSLocalIPv6 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the local IPv6 address that the resolver should bind to.
Notes:

The argument should be of type string and contain a single IPv6 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP6 option in CURL manual.

61.4.164 OptionDNSServers as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the name servers to use for DNS resolution.
Notes: (Read and Write property)
See also DNS_SERVERS option in CURL manual.

61.4.165 OptionDNSShuffleAddresses as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to shuffle DNS addresses.
Notes:

When a name is resolved and more than one IP address is returned, shuffle the order of all returned addresses so that they will be used in a random order. This is similar to the ordering behavior of gethostbyname which is no longer used on most platforms.

Addresses will not be reshuffled if a name resolution is completed using the DNS cache. DNSCacheTimeout property can be used together with this option to reduce DNS cache timeout or disable caching entirely if frequent reshuffling is needed.

Since the addresses returned will be reordered randomly, their order will not be in accordance with RFC 3484 or any other deterministic order that may be generated by the system's name resolution implementation. This may have performance impacts and may cause IPv4 to be used before IPv6 or vice versa.
Default is false.
(Read and Write property)
See also DNS_SHUFFLE_ADDRESSES option in CURL manual.

61.4.166 OptionDOHSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to verify the host name in the DOH (DNS-over-HTTPS) SSL certificate.
Notes:

Pass a 2 as asking curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyPeer and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the DOH URL to which you told Curl to connect.
When the verify value is set to 1 it is treated the same as 2. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!
(Read and Write property)
See also DOH_SSL_VERIFYHOST option in CURL manual.

61.4.167 OptionDOHSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to verify the DOH SSL certificate.
Notes:

Pass 1 to enable or 0 to disable.
This option tells curl to verify the authenticity of the DOH (DNS-over-HTTPS) server's certificate. A value of 1 means curl verifies; 0 (zero) means it doesn't.
This option is the DOH equivalent of CURL.SetOptionSSLVerifyPeer and only affects requests to the DOH server.
When negotiating a TLS or SSL connection, the server sends a certificate indicating its identity. Curl verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. curl uses a default bundle of CA certificates (the path for that is determined at build time) and you can specify alternate certificates with the CURL.SetOptionCAInfo option or the CURL.SetOptionCAPath option.
When CURL.SetOptionDOHSSLVerifyPeer is enabled, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the peer certificate verification succeeds regardless.

Authenticating the certificate is not enough to be sure about the server. You typically also want to ensure that the server is the server you mean to be talking to. Use CURL.SetOptionDOHSSLVerifyHost for that. The check that the host name in the certificate is valid for the host name you're connecting to is done independently of the CURL.SetOptionDOHSSLVerifyPeer option.

WARNING: disabling verification of the certificate allows bad guys to man-in-the-middle the communication without you knowing it. Disabling verification makes the communication insecure. Just having encryption on a transfer is not enough as you cannot be sure that you are communicating with the correct end-point.
(Read and Write property)
See also DOH_SSL_VERIFYPEER option in CURL manual.

61.4.168 OptionDOHSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to verify the DOH SSL certificate's status.
Notes:

Pass 2 to ask curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyHost and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the DOH URL to which you told Curl to connect.
When the verify value is set to 1L it is treated the same as 2L. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0L, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!

See also OptionDOHSSLVerifyPeer to verify the digital signature of the DOH server certificate. If libcurl is built against NSS and OptionDOHSSLVerifyPeer is zero, OptionDOHSSLVerifyHost is also set to zero and cannot be overridden.
(Read and Write property)
See also DOH_SSL_VERIFYSTATUS option in CURL manual.

61.4.169 OptionDOHURL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the DNS-over-HTTPS URL.
Notes:

Pass in a string to a URL for the DOH server to use for name resolving. The parameter should be URL-encoded in the following format: "https://host:port/path". It MUST specify a HTTPS URL.

libcurl doesn't validate the syntax or use this variable until the transfer is issued. Even if you set a crazy value here, OptionDOHURL will still return CURLE_OK.

curl sends POST requests to the given DNS-over-HTTPS URL.

To find the DOH server itself, which might be specified using a name, libcurl will use the default name lookup function. You can bootstrap that by providing the address for the DOH server with OptionResolve.

Disable DOH use again by setting this option to "".
(Read and Write property)
See also DOH_URL option in CURL manual.

61.4.170 OptionEGDSocket as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The path name to the Entropy Gathering Daemon socket.
Notes:

It will be used to seed the random engine for SSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also EGDSOCKET option in CURL manual.

61.4.171 OptionExpect100TimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets Expect 100 timeout.
Notes:

Time to wait in milliseconds for a response to a HTTP request containing an Expect: 100-continue header before sending the data anyway.
(Read and Write property)
See also EXPECT_100_TIMEOUT_MS option in CURL manual.

61.4.172 OptionFailOnError as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to fail silently if the HTTP code returned is equal to or larger than 400. The default action would be to return the page normally, ignoring that code.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This method is not fail-safe and there are occasions where non-succesful response codes will slip through, especially when authentication is involved (response codes 401 and 407).

You might get some amounts of headers transferred before this situation is detected, like for when a "100-continue" is received as a response to a POST/PUT and a 401 or 407 is received immediately afterwards.
(Read and Write property)
See also FAILONERROR option in CURL manual.

61.4.173 OptionFileTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether filetime should be querried.
Example:

```
// init CURL with options
dim d as new CURLMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes:

If it is true, libCURL will attempt to get the modification date of the remote document in this operation. This requires that the remote server sends the time or replies to a time querying command.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FILETIME option in CURL manual.

61.4.174 OptionFollowLocation as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A boolean parameter tells the library to follow any Location: header that the server sends as part of an HTTP header.
Example:

```
dim c as new CURLMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
```

Notes:

This means that the library will re-send the same request on the new location and follow new Location: headers all the way until no more such headers are returned. OptionMaxRedirs can be used to limit the number of redirects libCURL will follow.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FOLLOWLOCATION option in CURL manual.

61.4.175 OptionForbitReuse as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to make the next transfer explicitly close the connection when done.

Notes:

Normally, libCURL keep all connections alive when done with one transfer in case there comes a succeeding one that can re-use them. This option should be used with caution and only if you understand what it does. Set to false to have libCURL keep the connection open for possibly later re-use (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.4.176 OptionFreshConnect as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to make the next transfer use a new (fresh) connection by force.
Example:

```
dim c as new CURLMBS

c.OptionFreshConnect=True
```

Notes:

If the connection cache is full before this connection, one of the existing connections will be closed as according to the selected or default policy. This option should be used with caution and only if you understand what it does. Set this to 0 to have libCURL attempt re-using an existing connection (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FRESH_CONNECT option in CURL manual.

61.4.177 OptionFTPAccount as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The FTP account name to use.
Notes:

When an FTP server asks for "account data" after user name and password has been provided, this data is sent off using the ACCT command.

(Read and Write property)
See also FTP_ACCOUNT option in CURL manual.

61.4.178 OptionFTPAlternativeToUser as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The alternative username.
Notes:

Pass a string as parameter, pointing to a string which will be used to authenticate if the usual FTP "USER user" and "PASS password" negotiation fails. This is currently only known to be required when connecting to Tumbleweed's Secure Transport FTPS server using client certificates for authentication. (Added in 7.15.5)
(Read and Write property)
See also FTP_ALTERNATIVE_TO_USER option in CURL manual.

61.4.179 OptionFTPAppend as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to append to the remote file instead of overwrite it.
Deprecated: This item is deprecated and should no longer be used. You can use OptionAppend instead.
Notes:

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.4.180 OptionFTPCreateMissingDirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is 1, CURL will attempt to create any remote directory that it fails to CWD into.
Notes:

CWD is the command that changes working directory. (Added in 7.10.7)

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.
Newer CURL Library versions allow a value of 2 to do a CWD after the directory was created, so this property changed from boolean to integer.
(Read and Write property)
See also FTP_CREATE_MISSING_DIRS option in CURL manual.

61.4.181 OptionFTPFileMethod as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an integer that should have one of the following values.
Notes:

This option controls what method libCURL should use to reach a file on a FTP(S) server. The argument should be one of the following alternatives:

URLFTPMETHOD_MULTICWD = 1

libCURL does a single CWD operation for each path part in the given URL. For deep hierarchies this means very many commands. This is how RFC1738 says it should be done. This is the default but the slowest behavior.

CURLFTPMETHOD_NOCWD = 2

libCURL does no CWD at all. libCURL will do SIZE, RETR, STOR etc and give a full path to the server for all these commands. This is the fastest behavior.

CURLFTPMETHOD_SINGLECWD = 3

libCURL does one CWD with the full target directory and then operates on the file "normally" (like in the multicwd case). This is somewhat more standards compliant than 'nocwd' but without the full penalty of 'multicwd'.
(Read and Write property)
See also FTP_FILEMETHOD option in CURL manual.

61.4.182 OptionFTPListOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to just list the names of an ftp directory, instead of doing a full directory listing that would include file sizes, dates etc.
Deprecated: This item is deprecated and should no longer be used. You can use OptionDirListOnly instead. **Notes:**

This causes an FTP NLST command to be sent. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.4.183 OptionFTPPort as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The port to use for ftp.
Notes:

It will be used to get the IP address to use for the ftp PORT instruction. The PORT instruction tells the remote server to connect to our specified IP address. The string may be a plain IP address, a host name, an network interface name (under Unix) or just a '-' letter to let the library use your systems default IP address. Default FTP operations are passive, and thus won't use PORT.

You disable PORT again and go back to using the passive version by setting this option to "".

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPPORT option in CURL manual.

61.4.184 OptionFTPResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Causes CURL to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to generate a response message for a command before the session is considered hung.
Notes:

While CURL is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionFTPResponseTimeout to a value smaller than OptionTimeout. (Added in 7.10.8)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_RESPONSE_TIMEOUT option in CURL manual.

61.4.185 OptionFTPSkipPasvIP as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If set to a non-zero value, it instructs libCURL to not use the IP address the server suggests in its 227-response to libCURL's PASV command when libCURL connects the data connection.
Notes:

Instead libCURL will re-use the same IP address it already uses for the control connection. But it will use the port number from the 227-response. (Added in 7.14.2)

This option has no effect if PORT, EPRT or EPSV is used instead of PASV.
(Read and Write property)
See also FTP_SKIP_PASV_IP option in CURL manual.

61.4.186 OptionFTPSSL as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Request using SSL / TLS for the transfer.
Example:

```
dim c as CURLMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Deprecated: This item is deprecated and should no longer be used. You can use OptionUseSSL instead.
Notes:

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

(Read and Write property)

61.4.187 OptionFTPSSLAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: What kind of SSL authentication to use for FTP.
Notes:

Pass an integer using one of the values from below, to alter how libCURL issues "AUTH TLS" or "AUTH SSL" when FTP over SSL is activated (see CURLOPT_FTP_SSL). (Added in 7.12.2)

kFTPAUTH_DEFAULT = 0

Allow libCURL to decide

kFTPAUTH_SSL = 1

Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

kFTPAUTH_TLS = 2

Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPSSLAUTH option in CURL manual.

61.4.188 OptionFTPSSLCCC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If enabled, this option makes libCURL use CCC (Clear Command Channel).
Notes:

It shuts down the SSL/TLS layer after authenticating. The rest of the control channel communication will be unencrypted. This allows NAT routers to follow the FTP transaction. Pass a long using one of the values below. (Added in 7.16.1)

CURLFTPSSL_CCC_NONE	0	Don't attempt to use CCC.
CURLFTPSSL_CCC_PASSIVE	1	Do not initiate the shutdown, but wait for the server to do it. Do not send a reply.
CURLFTPSSL_CCC_ACTIVE	2	Initiate the shutdown and wait for a reply.

(Read and Write property)
See also FTP_SSL_CCC option in CURL manual.

61.4.189 OptionFTPUseEPRT as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is true, it tells CURL to use the EPRT (and LPRT) command when doing active FTP downloads (which is enabled by CURLOPT_FTPPORT).
Notes:

Using EPRT means that it will first attempt to use EPRT and then LPRT before using PORT, but if you pass FALSE (zero) to this option, it will not try using EPRT or LPRT, only plain PORT. (Added in 7.10.5)

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPRT option in CURL manual.

61.4.190 OptionFTPUseEPSV as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is true, it tells CURL to use the EPSV command when doing passive FTP downloads (which it always does by default).
Notes:

Using EPSV means that it will first attempt to use EPSV before using PASV, but if you pass FALSE (zero) to this option, it will not try using EPSV, only plain PASV.

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPSV option in CURL manual.

61.4.191 OptionFTPusePret as Boolean

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is true, it tells CURL to send a PRET command before PASV (and EPSV). Certain FTP servers, mainly drftpd, require this non-standard command for directory listings as well as up and downloads in PASV mode.
Notes:

Has no effect when using the active FTP transfers mode. (Added in 7.20.0)
(Read and Write property)
See also FTP_USE_PRET option in CURL manual.

61.4.192 OptionGet as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the true, this forces the HTTP request to get back to GET.
Notes:

usable if a POST, HEAD, PUT or a custom request have been used previously using the same CURL handle.

When setting OptionGet to a true value, it will automatically set OptionNoBody to true (since 7.14.1).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.4.193 OptionGSSAPIDelegation as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Allow GSSAPI credential delegation.
Notes: (Read and Write property)
See also GSSAPI_DELEGATION option in CURL manual.

61.4.194 OptionHappyEyeballsTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The happy eyeballs timeout.
Notes:

Head start in milliseconds to give happy eyeballs.
(Read and Write property)
See also HAPPY_EYEBALLS_TIMEOUT_MS option in CURL manual.

61.4.195 OptionHAProxyProtocol as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to send an HAProxy PROXY protocol header.
Notes:

Set to true to tell the library to send an HAProxy PROXY protocol header at beginning of the connection.
The default action is not to send this header.
This option is primarily useful when sending test requests to a service that expects this header.
Most applications do not need this option.
Default false, do not send HAProxy PROXY protocol header.
(Read and Write property)
See also HAPROXYPROTOCOL option in CURL manual.

61.4.196 OptionHeader as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to include the header in the body output.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This is only relevant for protocols that actually have headers preceding the data (like HTTP).
(Read and Write property)
See also HEADER option in CURL manual.

61.4.197 OptionHeaderOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass in a bitmask of "header options".
Notes: (Read and Write property)
See also HEADEROPT option in CURL manual.

61.4.198 OptionHTTPAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Which http authentication to use.
Notes:

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use. The available bits are listed below. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the UserPassword option. (Added in 7.10.6)

kAuthBASIC = 1

HTTP Basic authentication. This is the default choice, and the only method that is in wide-spread use and supported virtually everywhere. This is sending the user name and password over the network in plain text, easily captured by others.

kAuthDIGEST = 2

HTTP Digest authentication. Digest authentication is defined in RFC2617 and is a more secure way to do

authentication over public networks than the regular old-fashioned Basic method.

kAuthGSSNEGOTIATE = 4

HTTP GSS-Negotiate authentication. The GSS-Negotiate (also known as plain "Negotiate") method was designed by Microsoft and is used in their web applications. It is primarily meant as a support for Kerberos5 authentication but may be also used along with another authentication methods. For more information see IETF draft draft-brezak-spnego-http-04.txt.

You need to build libCURL with a suitable GSS-API library for this to work.

kAuthNTLM = 8

HTTP NTLM authentication. A proprietary protocol invented and used by Microsoft. It uses a challenge-response and hash concept similar to Digest, to prevent the password from being eavesdropped.

You need to build libCURL with OpenSSL support for this option to work, or build libCURL on Windows.

kAuthANY = & hFFFFFFFF

This is a convenience macro that sets all bits and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

kAuthANYSAFE = & hFFFFFFFE

This is a convenience macro that sets all bits except Basic and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPAUTH option in CURL manual.

61.4.199 OptionHTTPContentDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a long to tell libCURL how to act on content decoding.
Notes:

If set to zero, content decoding will be disabled. If set to 1 it is enabled. Note however that libCURL has no default content decoding but requires you to use OptionEncoding for that. (added in 7.16.2)
(Read and Write property)
See also HTTP_CONTENT_DECODING option in CURL manual.

61.4.200 OptionHTTPProxyTunnel as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the parameter to true to get the library to tunnel all operations through a given HTTP proxy.
Notes:

There is a big difference between using a proxy and to tunnel through it. If you don't know what this means, you probably don't want this tunneling option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPPROXYTUNNEL option in CURL manual.

61.4.201 OptionHTTPTransferDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an integer to tell libCURL how to act on transfer decoding.
Notes:

If set to zero, transfer decoding will be disabled, if set to 1 it is enabled (default). libCURL does chunked transfer decoding by default unless this option is set to zero. (added in 7.16.2)
(Read and Write property)
See also HTTP_TRANSFER_DECODING option in CURL manual.

61.4.202 OptionHTTPVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to one of the values described below.
Notes:

They force libCURL to use the specific HTTP versions. This is not sensible to do unless you have a good reason.

kHTTP_VERSION_NONE = 0

We don't care about what version the library uses. libCURL will use whatever it thinks fit.

kHTTP_VERSION_1_0 = 1

Enforce HTTP 1.0 requests.

kHTTP_VERSION_1_1 = 2

Enforce HTTP 1.1 requests.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTP_VERSION option in CURL manual.

61.4.203 OptionIgnoreContentLength as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to ignore the Content-Length header.
Notes:

This is useful for Apache 1.x (and similar servers) which will report incorrect content length for files over 2 gigabytes. If this option is used, CURL will not be able to accurately report progress, and will simply stop the download when the server ends the connection. (added in 7.14.1)
(Read and Write property)
See also IGNORE_CONTENT_LENGTH option in CURL manual.

61.4.204 OptionInFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.

Notes:

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read callback returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INFILESIZE option in CURL manual.

61.4.205 OptionInFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.
Deprecated: This item is deprecated and should no longer be used. You can use OptionInFileSize instead.
Notes:

This value should be passed as a CURL_off_t. (Added in 7.11.0)

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read callback returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.4.206 OptionInterface as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This set the interface name to use as outgoing network interface.
Notes:

The name can be an interface name, an IP address or a host name.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INTERFACE option in CURL manual.

61.4.207 OptionIPResolve as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Allows an application to select what kind of IP addresses to use when resolving host names.
Example:

```
dim c as new CURLMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

Notes:

This is only interesting when using host names that resolve addresses using more than one version of IP. The allowed values are:

kIPRESOLVE_WHATEVER = 0

Default, resolves addresses to all IP versions that your system allows.

kIPRESOLVE_V4 = 1

Resolve to ipv4 addresses.

kIPRESOLVE_V6 = 2

Resolve to ipv6 addresses.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also IPRESOLVE option in CURL manual.

61.4.208 OptionIssuerCert as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a file holding a CA certificate in PEM format.

Notes:

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also ISSUERCERT option in CURL manual.

61.4.209 OptionIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set issuer SSL certificate from memory blob.
Notes:

Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionIssuerCert which instead expects a file name as input.
(Read and Write property)
See also ISSUERCERT_BLOB option in CURL manual.

61.4.210 OptionKeepSendingOnError as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to keep sending on error.
Notes:

Continue to send data if the server responds early with an HTTP status code >= 300
(Read and Write property)
See also KEEP_SENDING_ON_ERROR option in CURL manual.

61.4.211 OptionKeyPassword as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set passphrase to private key.
Notes:

It will be used as the password required to use the OptionSSLKey or OptionSSHPrivateKeyfile private key.
You never needed a pass phrase to load a certificate but you need one to load your private key.
(Read and Write property)
See also KEYPASSWD option in CURL manual.

61.4.212 OptionKRB4Level as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the krb4 security level, this also enables krb4 awareness.
Deprecated: This item is deprecated and should no longer be used. You can use OptionKRBLevel instead.
Notes:

This is a string, 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to "" to disable kerberos4. The kerberos support only works for FTP.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.4.213 OptionKRBLevel as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: FTP kerberos security level.
Notes:

Set the kerberos security level for FTP; this also enables kerberos awareness. This is a string that should match one of the following: 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to NULL to disable kerberos support for FTP.
(Read and Write property)
See also KRBLEVEL option in CURL manual.

61.4.214 OptionLocalPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This sets the local port number of the socket used for connection.
Notes:

This can be used in combination with OptionInterface and you are recommended to use OptionLocalPortRange as well when this is set. Note that port numbers are only valid 1 - 65535. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORT option in CURL manual.

61.4.215 OptionLocalPortRange as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This is the number of attempts libCURL should do to find a working local port number.
Notes:

It starts with the given OptionLocalPort and adds one to the number for each retry. Setting this value to 1 or below will make libCURL do only one try for exact port number. Note that port numbers by nature is a scarce resource that will be busy at times so setting this value to something too low might cause unnecessary connection setup failures. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORTRANGE option in CURL manual.

61.4.216 OptionLoginOptions as String

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Login options string to use for the transfer.
Notes:

For more information about the login options please see RFC 2384, RFC5092 and IETF draft draft-earhart-url-smtp-00.txt

CURLOPT_LOGIN_OPTIONS can be used to set protocol specific login options, such as the preferred authentication mechanism via "AUTH=NTLM" or "AUTH=*", and should be used in conjunction with the OptionUserName option.
Only IMAP, POP3 and SMTP support login options.
(Read and Write property)
See also LOGIN_OPTIONS option in CURL manual.

61.4.217 OptionLowSpeedLimit as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This property contains the transfer speed in bytes per second that the transfer should be below during OptionLowSpeedTime seconds for the library to consider it too slow and abort.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_LIMIT option in CURL manual.

61.4.218 OptionLowSpeedTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This property contains the time in seconds that the transfer should be below the OptionLowSpeedLimit for the library to consider it too slow and abort.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_TIME option in CURL manual.

61.4.219 OptionMailAuth as String

MBS CURL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This string will be used to specify the authentication address (identity) of a submitted message that is being relayed to another server.
Notes:

This optional parameter allows co-operating agents in a trusted environment to communicate the authentication of individual messages and should only be used by the application program, using libCURL, if the application is itself a mail server acting in such an environment. If the application is operating as such and the AUTH address is not known or is invalid, then an empty string should be used for this parameter.

Unlike OptionMailFrom and SetOptionMailRecipients, the address should not be specified within a pair of angled brackets (<>). However, if an empty string is used then a pair of brackets will be sent by libCURL as required by RFC 2554.
(Read and Write property)
See also MAIL_AUTH option in CURL manual.

61.4.220 OptionMailFrom as String

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string that will be used to specify the sender address in a mail when sending an SMTP mail with libCURL.
Notes: (Read and Write property)
See also MAIL_FROM option in CURL manual.

61.4.221 OptionMaxAgeConn as Integer

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum age the connection should have in seconds.
Notes:

Older connections are not reused, but discarded.
(Read and Write property)
See also MAXAGE_CONN option in CURL manual.

61.4.222 OptionMaxConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The set number will be the persistent connection cache size.
Notes:

The set amount will be the maximum amount of simultaneously open connections that libCURL may cache. Default is 5, and there isn't much point in changing this value unless you are perfectly aware of how this work and changes libCURL's behaviour. This concerns connection using any of the protocols that support persistent connections.

When reaching the maximum limit, CURL closes the oldest one in the cache to prevent the number of open connections to increase.

If you already have performed transfers with this CURL handle, setting a smaller MAXCONNECTS than before may cause open connections to get closed unnecessarily.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXCONNECTS option in CURL manual.

61.4.223 OptionMaxFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This allows you to specify the maximum size (in bytes) of a file to download.
Notes:

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned.

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXFILESIZE option in CURL manual.

61.4.224 OptionMaxFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This allows you to specify the maximum size (in bytes) of a file to download.
Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxFileSize instead. **Notes:**

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned. (Added in 7.11.0)

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.4.225 OptionMaxRecvSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the maximum download speed.
Notes:

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)
See also MAX_RECV_SPEED option in CURL manual.

61.4.226 OptionMaxRecvSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the maximum download speed.
Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxRecvSpeed instead. **Notes:**

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)

(Read and Write property)

61.4.227 OptionMaxRedirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The set number will be the redirection limit.
Example:

```
dim c as new CURLMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
```

Notes:

If that many redirections have been followed, the next redirect will cause an error (kError_TOO_MANY_REDIRECTS). This option only makes sense if the CURLOPT_FOLLOWLOCATION is used at the same time. Added in 7.15.1: Setting the limit to 0 will make libCURL refuse any redirect. Set it to -1 for an infinite number of redirects (which is the default)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXREDIRS option in CURL manual.

61.4.228 OptionMaxSendSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the maximum upload speed.
Notes:

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)
See also MAX_SEND_SPEED option in CURL manual.

61.4.229 OptionMaxSendSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the maximum upload speed.
Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxSendSpeed instead. **Notes:**

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)

61.4.230 OptionNetRC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Controls usage of netrc file.
Notes:

This parameter controls the preference of libCURL between using user names and passwords from your textasciitilde /.netrc file, relative to user names and passwords in the URL supplied with OptionURL.

libCURL uses a user name (and supplied or prompted password) supplied with OptionUsername and OptionPassword in preference to any of the options controlled by this parameter.

An integer, set to one of the values described below.

kNETRC_OPTIONAL = 1

The use of your
textasciitilde /.netrc file is optional, and information in the URL is to be preferred. The file will be scanned with the host and user name (to find the password only) or with the host only, to find the first user name and password after that machine, which ever information is not specified in the URL.

Undefined values of the option will have this effect.

kNETRC_IGNORED = 0

The library will ignore the file and use only the information in the URL.

This is the default.

kNETRC_REQUIRED = 2

This value tells the library that use of the file is required, to ignore the information in the URL, and to search the file with the host only.

Only machine name, user name and password are taken into account (init macros and similar things aren't supported).

libCURL does not verify that the file has the correct properties set (as the standard Unix ftp client does). It should only be readable by user.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NETRC option in CURL manual.

61.4.231 OptionNetRCFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string containing the full path name to the file you want libCURL to use as .netrc file.
Notes:

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also NETRC_FILE option in CURL manual.

61.4.232 OptionNewDirectoryPerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer, containing the value of the permissions that will be assigned to newly created directories on the remote server.
Notes:

The default value is 0755, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Value must be octal, so use & o prefix for number.
(Read and Write property)
See also NEW_DIRECTORY_PERMS option in CURL manual.

61.4.233 OptionNewFilePerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer, containing the value of the permissions that will be assigned to newly created files on the remote server.
Notes:

The default value is & o0644, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Be aware that you normally specify this in octal values. So use the & o prefix in Xojo.
(Read and Write property)
See also NEW_FILE_PERMS option in CURL manual.

61.4.234 OptionNoBody as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to not include the body-part in the output.
Notes:

This is only relevant for protocols that have separate header and body parts. On HTTP(S) servers, this will make libCURL do a HEAD request.

To change request to GET, you should use OptionGet. Change request to POST with OptionPost etc.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)
See also NOBODY option in CURL manual.

61.4.235 OptionNoProxy as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string with a comma- separated list of hosts which do not use a proxy, if one is specified.
Notes:

The only wildcard is a single * character, which matches all hosts, and effectively disables the proxy. Each name in this list is matched as either a domain which contains the hostname, or the hostname itself. For example, local.com would match local.com, local.com:80, and www.local.com, but not www.notlocal.com. (Added in 7.19.4)
(Read and Write property)
See also NOPROXY option in CURL manual.

61.4.236 OptionNoSignal as Integer

MBS CURL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to not use signals.
Notes:

If it is true, libCURL will not use any functions that install signal handlers or any functions that cause signals to be sent to the process. This option is mainly here to allow multi-threaded unix applications to still set/use all timeout options etc, without risking getting signals. (Added in 7.10)

If this option is set and libCURL has been built with the standard name resolver, timeouts will not occur while the name resolve takes place. Consider building libCURL with c-ares support to enable asynchronous DNS lookups, which enables nice timeouts for name resolves without signals.

Setting OptionNoSignal to true makes libCURL NOT ask the system to ignore SIGPIPE signals, which otherwise are sent by the system when trying to send data to a socket which is closed in the other end. libCURL makes an effort to never cause such SIGPIPEs to trigger, but some operating systems have no way to avoid them and even on those that have there are some corner cases when they may still happen, contrary to our desire. In addition, using CURLAUTH_NTLM_WB authentication could cause a SIGCHLD signal to be raised.
(Read and Write property)
See also NOSIGNAL option in CURL manual.

61.4.237 OptionPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The password to use for the transfer.
Notes:

The OptionPassword option should be used in conjunction with the OptionUsername option.
(Read and Write property)
See also PASSWORD option in CURL manual.

61.4.238 OptionPathAsIs as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass path as it is and do not resolve dots.
Notes:

Do not squash dot-dot sequences.
(Read and Write property)
See also PATH_AS_IS option in CURL manual.

61.4.239 OptionPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The public key in DER form used to validate the peer public key.
Notes:

Native path to key file.
This option is used only if SSLVerifyPeer is true.
(Read and Write property)
See also PINNEDPUBLICKEY option in CURL manual.

61.4.240 OptionPipeWait as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Wait/don't wait for pipe/mutex to clarify.
Notes: (Read and Write property)

See also PIPEWAIT option in CURL manual.

61.4.241 OptionPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The remote port number to connect to, instead of the one specified in the URL or the default port for the used protocol.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PORT option in CURL manual.

61.4.242 OptionPost as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A boolean parameter tells the library to do a regular HTTP post.
Notes:

This will also make the library use the a "Content-Type: application/x-www-form-urlencoded" header. (This is by far the most commonly used POST method).

Use the OptionPostFields option to specify what data to post.

Optionally, you can provide data to POST using the Read event but then you must make sure to not set OptionPostFields to anything but "". When providing data with an event, you must transmit it using chunked transfer-encoding.

You can override the default POST Content-Type: header by setting your own with OptionHTTPHeader.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use POST to a HTTP 1.1 server, you can send data without knowing the size before starting the POST if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size in the request.

When setting CURLOPT_POST to a non-zero value, it will automatically set OptionNoBody to 0 (since 7.14.1).

If you issue a POST request and then want to make a HEAD or GET using the same re-used handle, you must explictly set the new request type using OptionNoBody or OptionGet or similar.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also POST option in CURL manual.

61.4.243 OptionPostFields as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string which should be the full data to post in an HTTP POST operation.
Example:

```
dim xml as string // XML or JSON to send as payload
dim c as new CURLMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
c.OptionPostFields = xml
c.OptionUserAgent = "Test App"
c.OptionPost = true

// for SOAP use right content type
c.SetOptionHTTPHeader array("Content-Type: application/soap+xml; charset=utf-8")
```

Notes:

You must make sure that the data is formatted the way you want the server to receive it. libCURL will not convert or encode it for you. Most web servers will assume this data to be url-encoded. Take note.

This POST is a normal application/x-www-form-urlencoded kind (and libCURL will set that Content-Type by default when this option is used), which is the most commonly used one by HTML forms. See also the OptionPost. Using OptionPostFields implies OptionPost.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header

with CURLOPT_HTTPHEADER as usual.

To make multipart/formdata posts (aka rfc1867-posts), check out the OptionPost option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COPYPOSTFIELDS option in CURL manual.

61.4.244 OptionPostFieldSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The size of the post data.
Notes:

Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)
See also POSTFIELDSIZE option in CURL manual.

61.4.245 OptionPostFieldSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The size of the post data. (64 bit version)
Deprecated: This item is deprecated and should no longer be used. You can use OptionPostFieldSize instead. **Notes:**

Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)

61.4.246 OptionPostRedir as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask to control how libCURL acts on redirects after POSTs that get a 301 or 302 response back.
Notes:

A parameter with bit 0 set (value CURL_REDIR_POST_301=1) tells the library to respect RFC 2616/10.3.2 and not convert POST requests into GET requests when following a 301 redirection. Setting bit 1 (value CURL_REDIR_POST_302=2) makes libCURL maintain the request method after a 302 redirect. CURL_REDIR_POST_A is a convenience define that sets both bits.

The non-RFC behaviour is ubiquitous in web browsers, so the library does the conversion by default to maintain consistency. However, a server may require a POST to remain a POST after such a redirection. This option is meaningful only when setting OptionFollowLocation. (Added in 7.17.1) (This option was known as CURLOPT_POST301 up to 7.19.0 as it only supported the 301 way before then)
(Read and Write property)
See also POSTREDIR option in CURL manual.

61.4.247 OptionPreProxy as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of pre proxy to use.
Notes: (Read and Write property)
See also PRE_PROXY option in CURL manual.

61.4.248 OptionProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask of kProtocol* constants.
Notes:

If used, this bitmask limits what protocols libCURL may use in the transfer. This allows you to have a libCURL built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default libCURL will accept all protocols it supports. See also OptionRedirProtocols. (Added in 7.19.4)
(Read and Write property)
See also PROTOCOLS option in CURL manual.

61.4.249 OptionProxy as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set HTTP proxy to use.
Example:

```
dim c as CURLMBS // your CURL object
dim psAddress as string // your proxy address
dim psPort as Integer // your proxy port

c.OptionProxy=psAddress
c.OptionProxyPort=psPort
c.OptionProxyType=c.kPROXY_HTTP
```

Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a string holding the host name or dotted IP address. To specify port number in this string, append : [port] to the end of the host name. The proxy string may be prefixed with [protocol] :// since any such prefix will be ignored. The proxy's port number may optionally be specified with the separate option ProxyHost.

When you tell the library to use an HTTP proxy, libCURL will transparently convert operations to HTTP even if you specify an FTP URL etc. This may have an impact on what other features of the library you can use, such as CURLOPT_QUOTE and similar FTP specifics that don't work unless you tunnel through the HTTP proxy. Such tunneling is activated with HTTPProxyTunnel.

libCURL respects the environment variables http_proxy, ftp_proxy, all_proxy etc, if any of those is set. The Proxy option does however override any possibly set environment variables.

Starting with 7.14.1, the proxy host string given in environment variables can be specified the exact same way as the proxy can be set with Proxy, include protocol prefix (http://) and embedded user + password.

You can use WinHTTPClientMBS class on Windows or CFProxyMBS on Mac to discover system proxy settings.
(Read and Write property)
See also PROXY option in CURL manual.

61.4.250 OptionProxyAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Which proxy authentication to use.
Notes:

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use for your proxy authentication. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the ProxyUserPassword option. The bitmask can be constructed by or'ing together the bits listed above for the HTTPAuth option. As of this writing, only Basic, Digest and NTLM work. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PROXYAUTH option in CURL manual.

61.4.251 OptionProxyCAInfo as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CApath or CAfile used to validate the proxy certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

Pass native file path.
This option is used only if CURLMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAINFO option in CURL manual.

61.4.252 OptionProxyCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CAInfo for proxy as blob value.
Notes:

This option is for connecting to an HTTPS proxy, not an HTTPS server.
Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also PROXY_CAINFO_BLOB option in CURL manual.

61.4.253 OptionProxyCAPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CApath directory used to validate the proxy certificate.
Notes:

Pass native file path.
This option is used only if CURLMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAPATH option in CURL manual.

61.4.254 OptionProxyCRLFile as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CRL file for proxy.
Notes:

Pass native file path.
(Read and Write property)
See also PROXY_CRLFILE option in CURL manual.

61.4.255 OptionProxyIssuerCert as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the proxy issuer SSL certificate filename.
Notes:

Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).
(Read and Write property)
See also PROXY_ISSUERCERT option in CURL manual.

61.4.256 OptionProxyIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set proxy issuer SSL certificate from memory blob.
Notes:

Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionProxyIssuerCert which instead expects a file name as input.
(Read and Write property)

See also PROXY_ISSUERCERT_BLOB option in CURL manual.

61.4.257 OptionProxyKeyPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Password for the SSL private key for proxy.
Notes: (Read and Write property)
See also PROXY_KEYPASSWD option in CURL manual.

61.4.258 OptionProxyPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string which should be pointing to the password to use for the transfer while connecting to Proxy.
Notes:

The OptionProxyPassword option should be used in conjunction with the OptionProxyUsername option.
(Added in 7.19.1)
(Read and Write property)
See also PROXYPASSWORD option in CURL manual.

61.4.259 OptionProxyPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The public key in DER form used to validate the proxy public key.
Notes:

This option is used only if CURLMBS.OptionProxySSLVerifyPeer is true.
Please path native file path to key file.
(Read and Write property)
See also PROXY_PINNEDPUBLICKEY option in CURL manual.

61.4.260 OptionProxyPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The proxy port to connect to unless it is specified in the proxy string OptionProxy.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

You can use OptionProxy with port, e.g. "12.34.56.78:8080" or pass port here and proxy without port.
For some users it seems like the option with OptionProxy including port works better.
(Read and Write property)
See also PROXYPORT option in CURL manual.

61.4.261 OptionProxyServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Proxy Service Name.
Notes: (Read and Write property)
See also PROXY_SERVICE_NAME option in CURL manual.

61.4.262 OptionProxySSLCert as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of the file keeping your private SSL-certificate for proxy.
Notes: (Read and Write property)
See also PROXY_SSLCERT option in CURL manual.

61.4.263 OptionProxySSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets private key for proxy cert from memory blob.
Notes:

Pass data, which contains the private key for connecting to the HTTPS proxy. Compatible with OpenSSL.
The format (like "PEM") must be specified with CURL.SetOptionProxySSLKeyType.
(Read and Write property)
See also PROXY_SSLCERT_BLOB option in CURL manual.

61.4.264 OptionProxySSLCertType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Type of the file keeping your SSL-certificate for proxy.
Notes:

Value can be "DER", "PEM" or "ENG".
(Read and Write property)
See also PROXY_SSLCERTTYPE option in CURL manual.

61.4.265 OptionProxySSLCipherList as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify which SSL ciphers to use for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_CIPHER_LIST option in CURL manual.

61.4.266 OptionProxySSLKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of the file keeping your private SSL-key for proxy.
Notes:

Pass native file path.
(Read and Write property)
See also PROXY_SSLKEY option in CURL manual.

61.4.267 OptionProxySSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set private key for proxy cert from memory blob.
Notes:

Pass data, which contains a private key for connecting to the HTTPS proxy. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionProxySSLKeyType.

This option is an alternative to OptionProxySSLKey which instead expects a file name as input.
(Read and Write property)
See also PROXY_SSLKEY_BLOB option in CURL manual.

61.4.268 OptionProxySSLKeyType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets type of the file keeping your private SSL-key for proxy.
Notes:

Value is DER, PEM or ENG.
(Read and Write property)
See also PROXY_SSLKEYTYPE option in CURL manual.

61.4.269 OptionProxySSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable specific SSL features with a bitmask for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_OPTIONS option in CURL manual.

61.4.270 OptionProxySSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable SSL Host verification.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:
```

```
Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

Set if we should verify the Common name from the proxy certificate in ssl handshake, set 1 to check existence, 2 to ensure that it matches the provided hostname.
(Read and Write property)
See also PROXY_SSL_VERIFYHOST option in CURL manual.

61.4.271 OptionProxySSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if we should verify the proxy in ssl handshake.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

set 1 to verify.
(Read and Write property)
See also PROXY_SSL_VERIFYPEER option in CURL manual.

61.4.272 OptionProxySSLVersion as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: What version to specifically try to use for proxy.
Notes:

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVERSION_MAX_ macros.

Default	& h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	& h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	& h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	& h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	& h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)
See also PROXY_SSLVERSION option in CURL manual.

61.4.273 OptionProxyTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify which TLS 1.3 ciphers suites to use for proxy.
Notes:

The list of cipher suites to use for the TLS 1.3 connection to a proxy. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.
(Read and Write property)
See also PROXY_TLS13_CIPHERS option in CURL manual.

61.4.274 OptionProxyTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Password for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_PASSWORD option in CURL manual.

61.4.275 OptionProxyTLSAuthType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set authentication type for authenticated TLS for proxy
Notes: (Read and Write property)
See also PROXY_TLSAUTH_TYPE option in CURL manual.

61.4.276 OptionProxyTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a username for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_USERNAME option in CURL manual.

61.4.277 OptionProxyTransferMode as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If this integer value is set to 1 (one), it tells libCURL to set the transfer mode (binary or ASCII) for FTP transfers done via an HTTP proxy, by appending ;type=a or ;type=i to the URL.
Notes:

Without this setting, or it being set to 0 (zero, the default), OptionTransferText has no effect when doing FTP via a proxy. Beware that not all proxies support this feature. (Added in 7.18.0)
(Read and Write property)
See also PROXY_TRANSFER_MODE option in CURL manual.

61.4.278 OptionProxyType as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This option is to set type of the proxy.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Available options for this are kPROXY_HTTP, kPROXY_SOCKS4 (added in 7.15.2) kPROXY_SOCKS5.
The HTTP type is default.
(Read and Write property)
See also PROXYTYPE option in CURL manual.

61.4.279 OptionProxyUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string, which should be pointing to the user name to use for the transfer while connecting to Proxy.
Notes:

In order to specify the password to be used in conjunction with the user name use the OptionProxyPassword option.
(Read and Write property)
See also PROXYUSERNAME option in CURL manual.

61.4.280 OptionPut as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A non-zero parameter tells the library to use HTTP PUT to transfer data.
Notes:

The data should be set with OptionInFileSize.

This option is deprecated and starting with version 7.12.1 you should instead use OptionUpload.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PUT option in CURL manual.

61.4.281 OptionRandomFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A file name for the random file.
Notes:

The file will be used to read from to seed the random engine for SSL. The more random the specified file is, the more secure the SSL connection will become.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)

See also RANDOM_FILE option in CURL manual.

61.4.282 OptionRange as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string which should contain the specified range you want.
Notes:

It should be in the format "X-Y", where X or Y may be left out. HTTP transfers also support several intervals, separated with commas as in "X-Y,N-M". Using this kind of multiple intervals will cause the HTTP server to send the response document in pieces (using standard MIME separation techniques). Pass a NULL to this option to disable the use of ranges.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RANGE option in CURL manual.

61.4.283 OptionRedirProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer that holds a bitmask of kProtocol* constants.
Notes:

If used, this bitmask limits what protocols libCURL may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This allows you to limit specific transfers to only be allowed to use a subset of protocols in redirections. By default libCURL will allow all protocols except for FILE and SCP. This is a difference compared to pre-7.19.4 versions which unconditionally would follow to all protocols supported. (Added in 7.19.4)
(Read and Write property)
See also REDIR_PROTOCOLS option in CURL manual.

61.4.284 OptionReferer as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The referer to pass to the server.
Notes:

It will be used to set the Referer: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also REFERER option in CURL manual.

61.4.285 OptionRequestTarget as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The request target, instead of extracted from the URL.
Notes: (Read and Write property)
See also REQUEST_TARGET option in CURL manual.

61.4.286 OptionResumeFrom as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It contains the offset in number of bytes that you want the transfer to start from.
Notes:

Set this option to 0 to make the transfer start from the beginning (effectively disabling resume). For FTP, set this option to -1 to make the transfer start from the end of the target file (useful to continue an interrupted upload).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RESUME_FROM option in CURL manual.

61.4.287 OptionResumeFromLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It contains the offset in number of bytes that you want the transfer to start from.
Deprecated: This item is deprecated and should no longer be used. You can use OptionResumeFrom instead. **Notes:**

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.4.288 OptionRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manually initialize the client RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_CLIENT_CSEQ option in CURL manual.

61.4.289 OptionRTSPRequest as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: RTSP request method (OPTIONS, SETUP, PLAY, etc...).
Notes: (Read and Write property)
See also RTSP_REQUEST option in CURL manual.

61.4.290 OptionRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manually initialize the server RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_SERVER_CSEQ option in CURL manual.

61.4.291 OptionRTSPSessionID as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RTSP session identifier.
Notes: (Read and Write property)
See also RTSP_SESSION_ID option in CURL manual.

61.4.292 OptionRTSPStreamURI as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RTSP stream URI.
Notes: (Read and Write property)
See also RTSP_STREAM_URI option in CURL manual.

61.4.293 OptionRTSPTransport as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Transport: header to use in RTSP requests.
Notes: (Read and Write property)
See also RTSP_TRANSPORT option in CURL manual.

61.4.294 OptionSASLAuthZID as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The authorisation identity (identity to act as).
Notes:

Sets the authorisation identity (identity to act as).
Pass a text as parameter, which should be pointing to the authorisation identity (authzid) for the transfer. Only applicable to the PLAIN SASL authentication mechanism where it is optional.
When not specified only the authentication identity (authcid) as specified by the username will be sent to the server, along with the password. The server will derive a authzid from the authcid when not provided, which it will then uses internally.
When the authzid is specified, the use of which is server dependent, it can be used to access another user's inbox, that the user has been granted access to, or a shared mailbox for example.
(Read and Write property)
See also SASL_AUTHZID option in CURL manual.

61.4.295 OptionSASLIR as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable SASL initial response.
Notes: (Read and Write property)

See also SASL_IR option in CURL manual.

61.4.296 OptionServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Service Name.
Notes: (Read and Write property)
See also SERVICE_NAME option in CURL manual.

61.4.297 OptionSocks5Auth as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bitmask of allowed auth methods for connections to SOCKS5 proxies.
Notes: (Read and Write property)
See also SOCKS5_AUTH option in CURL manual.

61.4.298 OptionSocks5GSSAPINEC as Boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to protect SOCKS5 connection is protected.
Notes:

Set to true to enable or false to disable. As part of the gssapi negotiation a protection mode is negotiated. The rfc1961 says in section 4.3/4.4 it should be protected, but the NEC reference implementation does not. If enabled, this option allows the unprotected exchange of the protection mode negotiation. (Added in 7.19.4). (Read and Write property)
See also SOCKS5_GSSAPI_NEC option in CURL manual.

61.4.299 OptionSocks5GSSAPIService as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string holding the name of the service.
Notes:

The default service name for a SOCKS5 server is rcmd/server-fqdn. This option allows you to change it. (Added in 7.19.4)
(Read and Write property)
See also SOCKS5_GSSAPI_SERVICE option in CURL manual.

61.4.300 OptionSSHAuthTypes as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Define the SSH authorization types.
Notes:

Pass a long set to a bitmask consisting of one or more of CURLSSH_AUTH_PUBLICKEY, CURLSSH_AUTH_PASSWORD, CURLSSH_AUTH_HOST, CURLSSH_AUTH_KEYBOARD. Set CURLSSH_AUTH_ANY to let libCURL pick one. (Added in 7.16.1)

constants:
CURLSSH_AUTH_ANY = & hFFFFFFFF
CURLSSH_AUTH_NONE = 0
CURLSSH_AUTH_PUBLICKEY = 1
CURLSSH_AUTH_PASSWORD = 2
CURLSSH_AUTH_HOST = 4
CURLSSH_AUTH_KEYBOARD = 8
CURLSSH_AUTH_DEFAULT = CURLSSH_AUTH_ANY
(Read and Write property)
See also SSH_AUTH_TYPES option in CURL manual.

61.4.301 OptionSSHCompression as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable SSH compression.
Notes: (Read and Write property)
See also SSH_COMPRESSION option in CURL manual.

61.4.302 OptionSSHHostPublicKeyMD5 as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string containing 32 hexadecimal digits with the 128 bit MD5 checksum of the remote host's

public key.
Notes:

libCURL will reject the connection to the host unless the md5sums match. This option is only for SCP and SFTP transfers. (Added in 7.17.1)
(Read and Write property)
See also SSH_HOST_PUBLIC_KEY_MD5 option in CURL manual.

61.4.303 OptionSSHKnownhosts as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string holding the file name of the known_host file to use.
Notes:

The known_hosts file should use the OpenSSH file format as supported by libssh2. If this file is specified, libCURL will only accept connections with hosts that are known and present in that file, with a matching public key. (Added in 7.19.6)
(Read and Write property)
See also SSH_KNOWNHOSTS option in CURL manual.

61.4.304 OptionSSHPrivateKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a path pointing to a file name for your private key.
Example:

```
Dim c As New CURLMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes:

If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa. If the file is password-protected, set the password with OptionSSLKeyPassword. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PRIVATE_KEYFILE option in CURL manual.

61.4.305 OptionSSHPublicKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a path pointing to a file name for your public key.
Example:

```
Dim c As New CURLMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes:

If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa.pub. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PUBLIC_KEYFILE option in CURL manual.

61.4.306 OptionSSLCert as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the file name of your certificate.
Notes:

The default format is "PEM" and can be changed with OptionSSLCERTTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLCERT option in CURL manual.

61.4.307 OptionSSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set SSL client certificate from memory blob.
Notes:

Pass data, which contains a client certificate. The format must be "P12" on Secure Transport or Schannel. The format must be "P12" or "PEM" on OpenSSL. The string "P12" or "PEM" must be specified with OptionSSLCertType.

This option is an alternative to OptionSSLCert which instead expects a file name as input.
(Read and Write property)
See also SSLCERT_BLOB option in CURL manual.

61.4.308 OptionSSLCertPassword as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The certificate password.
Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Notes:** (Read and Write property)

61.4.309 OptionSSLCertType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the format of your certificate.
Notes:

Supported formats are "PEM" and "DER". (Added in 7.9.3)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLCERTTYPE option in CURL manual.

61.4.310 OptionSSLCipherList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string holding the list of ciphers to use for the SSL connection.
Notes:

The list must be syntactically correct, it consists of one or more cipher strings separated by colons. Commas or spaces are also acceptable separators but colons are normally used, !, - and + can be used as operators. Valid examples of cipher lists include 'RC4-SHA', 'SHA1+DES', 'TLSv1' and 'DEFAULT'. The default list is normally set when you compile OpenSSL.

You'll find more details about cipher lists on this URL:

http://www.openssl.org/docs/apps/ciphers.html

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSL_CIPHER_LIST option in CURL manual.

61.4.311 OptionSSLEnableALPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable TLS ALPN extension (http2 over ssl might fail without).
Notes: (Read and Write property)
See also SSL_ENABLE_ALPN option in CURL manual.

61.4.312 OptionSSLEnableNPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable TLS NPN extension (http2 over ssl might fail without)
Notes: (Read and Write property)
See also SSL_ENABLE_NPN option in CURL manual.

61.4.313 OptionSSLEngine as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It will be used as the identifier for the crypto engine you want to use for your private key.
Notes:

If the crypto device cannot be loaded, kError_SSL_ENGINE_NOTFOUND is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE option in CURL manual.

61.4.314 OptionSSLEngineDefault as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the actual crypto engine as the default for (asymmetric) crypto operations.
Notes:

If the crypto device cannot be set, kError_SSL_ENGINE_SETFAILED is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE_DEFAULT option in CURL manual.

61.4.315 OptionSSLFalseStart as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if we should enable TLS false start.
Notes: (Read and Write property)
See also SSL_FALSESTART option in CURL manual.

61.4.316 OptionSSLKey as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the file name of your private key.
Notes:

The default format is "PEM" and can be changed with OptionSSLKEYTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLKEY option in CURL manual.

61.4.317 OptionSSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set private key for client cert from memory blob.
Notes:

Pass data, which contains a private key. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionSSLKeyType.

This option is an alternative to OptionSSLKey which instead expects a file name as input.
(Read and Write property)
See also SSLKEY_BLOB option in CURL manual.

61.4.318 OptionSSLKeyPassword as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The password required to use the OptionSSLKEY private key.
Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Notes:**

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.4.319 OptionSSLKeyType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the format of your private key.
Notes:

Supported formats are "PEM", "DER" and "ENG".

The format "ENG" enables you to load the private key from a crypto engine. In this case OptionSSLKEY is used as an identifier passed to the engine. You have to set the crypto engine with OptionSSLENGINE. "DER" format key file currently does not work because of a bug in OpenSSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLKEYTYPE option in CURL manual.

61.4.320 OptionSSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable specific SSL features with a bitmask.
Notes: (Read and Write property)
See also SSL_OPTIONS option in CURL manual.

61.4.321 OptionSSLSessionIDCache as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to use the SSL session ID cache.
Notes:

Pass false to disable libCURL's use of SSL session-ID caching. Set this to true to enable it. By default all transfers are done using the cache. Note that while nothing ever should get hurt by attempting to reuse SSL session-IDs, there seem to be broken SSL implementations in the wild that may require you to disable this in order for you to succeed. (Added in 7.16.0)
(Read and Write property)
See also SSL_SESSIONID_CACHE option in CURL manual.

61.4.322 OptionSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This option determines whether libCURL verifies that the server cert is for the server it is known as.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

When negotiating an SSL connection, the server sends a certificate indicating its identity.

When OptionSSLVerifyHost is 2, that certificate must indicate that the server is the server to which you

meant to connect, or the connection fails.

CURL considers the server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the URL to which you told CURL to connect.

When the value is 1, the certificate must contain a Common Name field, but it doesn't matter what name it says. (This is not ordinarily a useful setting).

When the value is 0, the connection succeeds regardless of the names in the certificate.

The default, since 7.10, is 2.

The checking this option controls is of the identity that the server claims. The server could be lying. To control lying, see OptionSSLVerifyPeer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYHOST option in CURL manual.

61.4.323 OptionSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Configure whether this CURL instance will verify the SSL peer certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:
```

```
Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

This option determines whether CURL verifies the authenticity of the peer's certificate. A value of 1 means CURL verifies; zero means it doesn't. The default is nonzero, but before 7.10, it was zero.

When negotiating an SSL connection, the server sends a certificate indicating its identity. CURL verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. As of 7.10, CURL installs a default bundle of CA certificates and you can specify alternate certificates with the OptionCAINFO option or the OptionCAPATH option.

When OptionSSLVerifyPeer is nonzero, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the connection succeeds regardless.

Authenticating the certificate is not by itself very useful. You typically want to ensure that the server, as authentically identified by its certificate, is the server you mean to be talking to. Use OptionSSLVerifyHost to control that.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYPEER option in CURL manual.

61.4.324 OptionSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if we should verify the certificate status.
Notes: (Read and Write property)
See also SSL_VERIFYSTATUS option in CURL manual.

61.4.325 OptionSSLVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: What version of SSL/TLS to attempt to use.
Example:

```
dim c as CURLMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes:

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVERSION_MAX_ macros.

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)
See also SSLVERSION option in CURL manual.

61.4.326 OptionStreamDepends as CURLMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set stream dependency on another CURL handle.

Default	& h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	& h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	& h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	& h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	& h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

Notes: (Read and Write property)
See also STREAM_DEPENDS option in CURL manual.

61.4.327 OptionStreamDependsE as CURLMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set E-xclusive stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS_E option in CURL manual.

61.4.328 OptionStreamWeight as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set stream weight, 1 - 256.
Notes:

Default is 16.
(Read and Write property)
See also STREAM_WEIGHT option in CURL manual.

61.4.329 OptionSuppressConnectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Suppress proxy CONNECT response headers from user callbacks.
Notes: (Read and Write property)
See also SUPPRESS_CONNECT_HEADERS option in CURL manual.

61.4.330 OptionTCPFastOpen as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set TCP Fast Open.
Notes: (Read and Write property)
See also TCP_FASTOPEN option in CURL manual.

61.4.331 OptionTCPKeepAlive as Boolean

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If set to true, TCP keepalive probes will be sent.
Notes:

The delay and frequency of these probes can be controlled by the OptionTCPKeepIdle and OptionTCPKeep-Interval options, provided the operating system supports them. Set to false (default behavior) to disable keepalive probes (Added in 7.25.0).
(Read and Write property)
See also TCP_KEEPALIVE option in CURL manual.

61.4.332 OptionTCPKeepIdle as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the delay, in seconds, that the operating system will wait while the connection is idle before sending keepalive probes.
Notes:

Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPIDLE option in CURL manual.

61.4.333 OptionTCPKeepInterval as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the interval, in seconds, that the operating system will wait between sending keepalive probes.
Notes:

Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPINTVL option in CURL manual.

61.4.334 OptionTCPNoDelay as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer specifying whether the TCP_NODELAY option should be set or cleared (true = set, false = clear).
Notes:

The option is cleared by default. This will have no effect after the connection has been established.

Setting this option will disable TCP's Nagle algorithm. The purpose of this algorithm is to try to minimize the number of small packets on the network (where "small packets" means TCP segments less than the Maximum Segment Size (MSS) for the network).

Maximizing the amount of data sent per TCP segment is good because it amortizes the overhead of the send. However, in some cases (most notably telnet or rlogin) small segments may need to be sent without delay. This is less efficient than sending larger amounts of data at a time, and can contribute to congestion on the network if overdone.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TCP_NODELAY option in CURL manual.

61.4.335 OptionTFTPBlockSize as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify block size to use for TFTP data transmission.

Notes:

Valid range as per RFC 2348 is 8-65464 bytes. The default of 512 bytes will be used if this option is not specified. The specified block size will only be used pending support by the remote server. If the server does not return an option acknowledgement or returns an option acknowledgement with no blksize, the default of 512 bytes will be used. (added in 7.19.4)
(Read and Write property)
See also TFTP_BLKSIZE option in CURL manual.

61.4.336 OptionTFTPNoOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether not send any tftp option requests to the server.
Notes: (Read and Write property)
See also TFTP_NO_OPTIONS option in CURL manual.

61.4.337 OptionTimeCondition as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Time condition option.
Notes:

This defines how the OptionTimeValue time value is treated. You can set this parameter to kTimeConditionIfModifiedSince (1) or kTimeConditionIfUnModifiedSince (2). This feature applies to HTTP and FTP.

The last modification time of a file is not always known and in such instances this feature will have no effect even if the given time condition would have not been met.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMECONDITION option in CURL manual.

61.4.338 OptionTimeOut as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in seconds that you allow the libCURL transfer operation to take.
Notes:

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.

In unix-like systems, this might cause signals to be used unless CURLOPT_NOSIGNAL is set.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEOUT option in CURL manual.

61.4.339 OptionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a long as parameter containing the maximum time in milli seconds that you allow the libCURL transfer operation to take.
Notes:

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.
(Read and Write property)
See also TIMEOUT_MS option in CURL manual.

61.4.340 OptionTimeValue as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This should be the time in seconds since 1 jan 1970, and the time will be used in a condition as specified with OptionTimeCondition.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEVALUE option in CURL manual.

61.4.341 OptionTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify which TLS 1.3 ciphers suites to use.
Notes:

string holding the list of cipher suites to use for the TLS 1.3 connection. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.
(Read and Write property)
See also TLS13_CIPHERS option in CURL manual.

61.4.342 OptionTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the TSL authentication password.
Notes:

Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_PASSWORD option in CURL manual.

61.4.343 OptionTLSAuthType as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the TLS authentication type.
Notes:

You can set this to "SRP" to use Secure Remote Password authentication.
Please also set username and password.
The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_TYPE option in CURL manual.

61.4.344 OptionTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the TSL authentication user name.
Notes:

Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_USERNAME option in CURL manual.

61.4.345 OptionTransferEncoding as Boolean

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a request for compressed Transfer Encoding in the outgoing HTTP request.
Notes:

If the server supports this and so desires, it can respond with the HTTP response sent using a compressed Transfer-Encoding that will be automatically uncompressed by libCURL on reception.

Transfer-Encoding differs slightly from the Content-Encoding you ask for with OptionAcceptEncoding in that a Transfer-Encoding is strictly meant to be for the transfer and thus MUST be decoded before the data arrives in the client. Traditionally, Transfer-Encoding has been much less used and supported by both HTTP clients and HTTP servers.
(Read and Write property)
See also TRANSFER_ENCODING option in CURL manual.

61.4.346 OptionTransferText as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to use ASCII mode for ftp transfers, instead of the default binary transfer.
Notes:

For win32 systems it does not set the stdout to binary mode. This option can be usable when transferring text data between systems with different views on certain characters, such as newlines or similar.

libCURL does not do a complete ASCII conversion when doing ASCII transfers over FTP. This is a known limitation/flaw that nobody has rectified. libCURL simply sets the mode to ascii and performs a standard transfer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TRANSFERTEXT option in CURL manual.

61.4.347 OptionUnixSocketPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Path to Unix domain socket.
Notes: (Read and Write property)
See also UNIX_SOCKET_PATH option in CURL manual.

61.4.348 OptionUnrestrictedAuth as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A boolean parameter tells the library it can continue to send authentication (user+password) when following locations, even when hostname changed.
Notes:

This option is meaningful only when setting FollowOption.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UNRESTRICTED_AUTH option in CURL manual.

61.4.349 OptionUpkeepIntervalMS as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Connection upkeep interval.
Notes:

Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.

The user needs to explicitly call Upkeep in order to perform the upkeep work.

Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
(Read and Write property)
See also UPKEEP_INTERVAL_MS option in CURL manual.

61.4.350 OptionUpload as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to prepare for an upload.
Notes:

The OptionInFileSize or OptionInFileSizeLarge options are also interesting for uploads. If the protocol is HTTP, uploading means using the PUT request unless you tell libCURL otherwise.

Using PUT with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use PUT to a HTTP 1.1 server, you can upload data without knowing the size before starting the transfer if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UPLOAD option in CURL manual.

61.4.351 OptionUploadBufferSize as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set preferred upload buffer size.
Notes:

Pass a long specifying your preferred size (in bytes) for the upload buffer in libcurl. It makes libcurl uses a larger buffer that gets passed to the next layer in the stack to get sent off. In some setups and for some protocols, there's a huge performance benefit of having a larger upload buffer.

This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size.

The upload buffer size is by default 64 kilobytes. The maximum buffer size allowed to be set is 2 megabytes. The minimum buffer size allowed to be set is 16 kilobytes.

Since curl 7.61.1 the upload buffer is allocated on-demand - so if the handle isn't used for upload, this buffer will not be allocated at all.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also UPLOAD_BUFFERSIZE option in CURL manual.

61.4.352 OptionURL as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The actual URL to deal with.
Notes:

If you need to pass username or password, please consider using the OptionUsername and OptionPassword properties. If you username or password contains characters like @ or :, you must use those properties.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a char * to a zero terminated string. The string must remain present until CURL no longer needs it, as it doesn't copy the string.

If the given URL lacks the protocol part ("http://" or "ftp://" etc), it will attempt to guess which protocol to use based on the given host name. If the given protocol of the set URL is not supported, libCURL will return on error (kError_UNSUPPORTED_PROTOCOL) when you call Perform. Use VersionInfo for detailed info on which protocols that are supported.

The string given to CURLOPT_URL must be url-encoded and following the RFC 2396:
http://CURL.haxx.se/rfc/rfc2396.txt

CURLOPT_URL is the only option that must be set before Perform is called.
For file uploads or downloads, please include the file name in the URL.

Please do never include username and passwords in URLs, as those get often written to log files and would reveal your credentials!
Instead use OptionUsername and OptionPassword.

If you miss the protocol in the URL, you may get an error about HTTP/0.9 being used and not allowed.
(Read and Write property)
See also URL option in CURL manual.

61.4.353 OptionUserAgent as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user agent string to pass to the server.
Notes:

It will be used to set the User-Agent: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also USERAGENT option in CURL manual.

61.4.354 OptionUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user name to be used in protocol authentication
Notes:

In order to specify the password to be used in conjunction with the user name use the OptionPassword option
(Read and Write property)
See also USERNAME option in CURL manual.

61.4.355 OptionUseSSL as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Request using SSL / TLS for the transfer.
Notes:

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

(Read and Write property)
See also USE_SSL option in CURL manual.

61.4.356 OptionVerbose as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether debug messages are sent to the DebugMessage event.
Notes:

Default is false.
You need to subclass the CURLMBS class to add code in the DebugMessage event.
Or you set CollectDebugData = true and later query DebugData property.
Or you use CreateMTDebugOutputFile to stream them to a file.
(Read and Write property)
See also VERBOSE option in CURL manual.

61.4.357 OptionWildCardMatch as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable wildcard matching.
Notes:

Set onoff to true if you want to transfer multiple files according to a file name pattern. The pattern can be specified as part of the OptionURL option, using an fnmatch-like pattern (Shell Pattern Matching) in the last part of URL (file name).

By default, libCURL uses its internal wildcard matching implementation. You can provide your own matching function by the CURLMBS.FileNameMatch event.

A brief introduction of its syntax follows:

- - ASTERISK

ftp://example.com/some/path/*.txt (for all txt's from the root directory)

? - QUESTION MARK

Question mark matches any (exactly one) character.

ftp://example.com/some/path/photo?.jpeg

[- BRACKET EXPRESSION

The left bracket opens a bracket expression. The question mark and asterisk have no special meaning in a bracket expression. Each bracket expression ends by the right bracket and matches exactly one character. Some examples follow:

[a-zA-Z0-9] or [f-gF-G] - character interval
[abc] - character enumeration
[^abc] or [!abc] - negation
[[:name:]] class expression. Supported classes are alnum,lower, space, alpha, digit, print, upper, blank, graph, xdigit.
[ ] [-!^] - special case - matches only '-', '] ', ' [', '!' or '^'. These characters have no special purpose.
[\[\] \\] - escape syntax. Matches ' [', '] ' or '´.

Using the rules above, a file name pattern can be constructed:

ftp://example.com/some/path/ [a-z [:upper:] \\] .jpeg

This feature is only supported for FTP download. Not for SFTP or HTTP.
(Read and Write property)
See also WILDCARDMATCH option in CURL manual.

61.4.358 OptionXOAuth2Bearer as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The XOAUTH2 bearer token.
Notes: (Read and Write property)
See also XOAUTH2_BEARER option in CURL manual.

61.4.359 OutputData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The output data from CURL.
Notes:

If CollectOutputData property is true, the plugin puts the data received in write event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.
(Read only property)

61.4.360 Paused as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether transfer is paused.
Notes:

You can set it to true while transfer runs to pause it.
(Read and Write property)

61.4.361 ProgressDownloadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes downloaded so far.
Notes: (Read only property)

61.4.362 ProgressDownloadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes to download in total.
Notes: (Read only property)

61.4.363 ProgressPercent as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current download/upload progress in percent.
Notes:

Range from 0 to 100.
(Read only property)

61.4.364 ProgressUploadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes uploaded so far.
Notes: (Read only property)

61.4.365 ProgressUploadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes to upload in total.
Notes: (Read only property)

61.4.366 Version as CURLVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a version object to a filled with information about various run-time features in libCURL.
Notes: (Read only property)

61.4.367 YieldTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether plugin should yield time.
Notes:

If set the plugin will yield time to Xojo back so threads and timers work while you download.

Seems like in RB 2009 this property only has effect if you run CURL in a thread.
(Read and Write property)

61.4.368 Events

61.4.369 ChunkBegin(FileInfo as CURLFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called on begin of a new chunk.
Notes: If splitting of data transfer is enabled, this callback is called before download of an individual chunk started. Note that parameter "remains" works only for FTP wildcard downloading (for now), otherwise is not used.

61.4.370 ChunkEnd(FileInfo as CURLFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Download of a chunk ended.
Notes:

If splitting of data transfer is enabled this callback is called after download of an individual chunk finished. This event is called for skipped or downloaded files.

61.4.371 DebugMessage(infotype as Integer, data as string, dataSize as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: A debug event to get data of ongoing process.
Notes:

You may need to set OptionVerbose to true.

infotype constants:

kInfo_TEXT	0	The data is informational text.
kInfo_HEADER_IN	1	The data is header (or header-like) data received from the peer.
kInfo_HEADER_OUT	2	The data is header (or header-like) data sent to the peer.
kInfo_DATA_IN	3	The data is protocol data received from the peer.
kInfo_DATA_OUT	4	The data is protocol data sent to the peer.
kInfo_SSL_DATA_IN	5	The data is protocol data received from the peer.
kInfo_SSL_DATA_OUT	6	The data is protocol data sent to the peer.

If you set CollectDebugData, the plugin will collect the messages and provide them via the DebugData property. You can still use this event to write your own log instead of in addition.

61.4.372 FileNameMatch(Pattern as String, Name as String) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Match a file against a pattern.
Notes:

If you don't implement this event, you get the default implementation from CURL.
Return kFileNameMatchNoMatch, kFileNameMatchIsMatch or kFileNameMatchFailed.

61.4.373 Finished(Result as Integer)

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when transfer has finished.
Notes:

For Perform and PerformMT it is called before Perform function returns, so in PerformMT this is called on the thread.
For use with CURLMultiMBS, it is called after TransferFinished event and before TransfersFinished event.
If you want to modify GUI and use PeformMT, you may need to start a timer to do so.

61.4.374 Header(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: New Header data was received.
Notes:

You can get error 23 if you don't return lenb(data) in this event.
Or just leave it emtpy so RB will not include it in your application the plugin will return lenb(data) itself.

If you set CollectHeaderData to true, the plugin will collect the messages and provide them via the HeaderData property. You can still use this event to write your own log instead of in addition.

61.4.375 Progress(dltotal as Int64, dlnow as Int64, ultotal as Int64, ulnow as Int64, percent as Double) as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: An event to report progress of ongoing transfers.
Notes:

This function gets called by libCURL with a frequent interval during operation (roughly once per second) no matter if data is being transfered or not. Unknown/unused argument values passed to the callback will be set to zero (like if you only download data, the upload size will remain 0).
Returning a true from this event will cause libCURL to abort the transfer and return kError_ABORTED_BY_CALLBACK.

You can run CURL from a thread to download several things at the same time or keep the GUI more responsive. For better GUI, you can even call a method like app.DoEvents to get the GUI updated more often.

When sending email, ultotal may be zero. In that case use OptionInFileSize to know size of email to upload.

61.4.376 Read(count as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: This event gets called by libCURL as soon as it needs to read data in order to send it to the peer.
Notes:

Return the number of bytes requested. Never return a string with lenb(string)>count. You can return 0 to inform about end of file.

If you stop the current transfer by returning 0 "pre-maturely" (i.e before the server expected it, like when

you've told you will upload N bytes and you upload less than N bytes), you may experience that the server "hangs" waiting for the rest of the data that won't come.

The read event may return CURL_READFUNC_ABORT (& h10000000) to stop the current operation immediately, resulting in a kError_ABORTED_BY_CALLBACK error code from the transfer (Added in 7.12.1)

This event is not called when using PerformMT.

If you provide Input data via SetInputData or OpenMTInputFile method, this event is not called and data is taken from the data you provided.

61.4.377 RestartRead() as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: An event to inform you that reading on the file needs to start at the beginning again.
Notes:

Return true on success.
If you use a binarystream for reading you will have to set position to 0 in this event.

This event is not called when using PerformMT.

61.4.378 Seek(pos as Int64, whence as Integer) as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when CURL needs to perform a seek.
Notes:

Normally only needed if you resume a download (Seek forward) or upload is reset (seek back).
Whence is kSeekOriginCurrent, kSeekOriginEnd or kSeekOriginSet.
Please return one of this constants: kSeekReturnCantSeek, kSeekReturnFail or kSeekReturnOk.

61.4.379 SSHKey(KnownKey as string, KnownKeyLength as Integer, KnownKeyType as Integer, FoundKey as string, FoundKeyLength as Integer, FoundKeyType as Integer, MatchStatus as Integer) as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event for known hosts callback for SFTP and SCP.
Notes:

KnownKey: The known key as string encoded with base64 if KnownKeyLength is zero, otherwise the "raw" data.
KnownKeyLength: The length of the key. Zero for base64 encoded key.
KnownKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
FoundKey: The found key as string encoded with base64 if FoundKeyLength is zero, otherwise the "raw" data.
FoundKeyLength: The length of the key. Zero for base64 encoded key.
FoundKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
MatchStatus: The status CURL found. (0 = OK, 1 = Mismatch, 2 = Missing)

Return one of the following values:

CURLKHSTAT_FINE_ADD_TO_FILE	0	Fine and add to file
CURLKHSTAT_FINE	1	Fine
CURLKHSTAT_REJECT	2	reject the connection, return an error
CURLKHSTAT_DEFER	3	do not accept it, but we can't answer right now so this causes a CURLE_DEFER error but otherwise the connection will be left intact etc

61.4.380 Write(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: This event gets called by libCURL as soon as there is data received that needs to be saved.
Notes:

Return the number of bytes actually taken care of. If that amount differs from the amount passed to your function, it'll signal an error to the library and it will abort the transfer and return kError_WRITE_ERROR.

This function may be called with zero bytes data if the transfered file is empty.

The event function will be passed as much data as possible in all invokes, but you cannot possibly make any assumptions. It may be one byte, it may be thousands. The maximum amount of data that can be passed to the write callback is defined in the CURL.h header file: CURL_MAX_WRITE_SIZE (16384).

If you set CollectOutputData to true, the plugin will automatically collect the data and provide it to you after the transfer with the OutputData property. This collecting feature will only work right, if there is enough free memory. You can of course still process data yourself in this event instead of in addition.

61.4.381 Constants

61.4.382 kAUTH_ANY = & hFFFFFFEF

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: all types set

61.4.383 kAUTH_ANYSAFE = & hFFFFFFEE

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

61.4.384 kAUTH_AWS_SIGV4 = 128

MBS CURL Plugin, Plugin Version: 21.1.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: AWS Signature v4

61.4.385 kAUTH_BASIC = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: Basic (default)

61.4.386 kAUTH_Bearer = 64

MBS CURL Plugin, Plugin Version: 18.3.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: HTTP Bearer token authentication

61.4.387 kAUTH_DIGEST = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: Digest

61.4.388 kAUTH_DIGEST_IE = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: HTTP Digest authentication with an IE flavor. Digest authentication is defined in RFC 2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method. The IE flavor is simply that libCURL will use a special "quirk" that IE is known to have used before version 7 and that some servers require the client to use.

61.4.389 kAUTH_GSSNEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

GSS-Negotiate

Please check SupportsGSSNEGOTIATE property in CURLVersionMBS class whether this is supported/implemented by your copy of the CURL library.

61.4.390 kAUTH_NEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

HTTP Negotiate (SPNEGO) authentication. Negotiate authentication is defined in RFC 4559 and is the most secure way to perform authentication over HTTP.

You need to build libCURL with a suitable GSS-API library or SSPI on Windows for this to work.

61.4.391 kAUTH_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

61.4.392 kAUTH_NTLM = 8

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

61.4.393 kAUTH_NTLM_WB = 32

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

NTLM delegating to winbind helper. Authentication is performed by a separate binary application that is executed when needed. The name of the application is specified at compile time but is typically /usr/bin/ntlm_auth

Note that libCURL will fork when necessary to run the winbind application and kill it when complete, calling waitpid() to await its exit when done. On POSIX operating systems, killing the process will cause a SIGCHLD signal to be raised (regardless of whether OptionNoSignal is set), which must be handled intelligently by the application. In particular, the application must not unconditionally call wait() in its SIGCHLD signal handler to avoid being subject to a race condition. This behavior is subject to change in future versions of libCURL.

61.4.394 kAUTH_Only = & h80000000

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: This is a meta symbol. OR this value together with a single specific auth value to force libCURL to probe for un-restricted auth and if not, only that single auth algorithm is acceptable.

61.4.395 kChunkBeginFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: Failed, so we exit downloads.

61.4.396 kChunkBeginOK = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: OK, download this file.

61.4.397 kChunkBeginSkip = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: Skip the file.

61.4.398 kChunkEndFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkEnd event.
Notes: Failed, so we exit downloads.

61.4.399 kChunkEndOK = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkEnd event.
Notes: Download success.

61.4.400 kError_ABORTED_BY_CALLBACK = 42

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.401 kError_AGAIN = 81

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: socket is not ready for send/recv, wait till it's ready and try again (Added in CURL 7.18.2)

61.4.402 kError_Auth_Error = 94

MBS CURL Plugin, Plugin Version: 19.4.

Function: One of the error constants for the Error event.
Notes: An authentication function returned an error.

61.4.403 kError_BAD_CONTENT_ENCODING = 61

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Unrecognized transfer encoding

61.4.404 kError_BAD_DOWNLOAD_RESUME = 36

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: couldn't resume download

61.4.405 kError_BAD_FUNCTION_ARGUMENT = 43

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.406 kError_CHUNK_FAILED = 88

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Chunk callback reported error.

61.4.407 kError_CONV_FAILED = 75

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Conversion failed.

61.4.408 kError_CONV_REQD = 76

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Not used with plugin.

61.4.409 kError_COULDNT_CONNECT = 7

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Could not connect. Proxy set? Firewall open?

61.4.410 kError_COULDNT_RESOLVE_HOST = 6

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.411 kError_COULDNT_RESOLVE_PROXY = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.412 kError_FAILED_INIT = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.413 kError_FILESIZE_EXCEEDED = 63

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Maximum file size exceeded

61.4.414 kError_FILE_COULDNT_READ_FILE = 37

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.415 kError_FTP_ACCEPT_FAILED = 10

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: While waiting for the server to connect back when an active FTP session is used, an error code was sent over the control connection or similar.

61.4.416 kError_FTP_ACCEPT_TIMEOUT = 12

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: During an active FTP session while waiting for the server to connect, the OptionAcceptTimeoutMS (or the internal default) timeout expired.

61.4.417 kError_FTP_BAD_FILE_LIST = 87

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Unable to parse FTP file list.

61.4.418 kError_FTP_CANT_GET_HOST = 15

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.419 kError_FTP_COULDNT_RETR_FILE = 19

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.420 kError_FTP_COULDNT_SET_TYPE = 17

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.4.421 kError_FTP_COULDNT_USE_REST = 31

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: the REST command failed

61.4.422 kError_FTP_PORT_FAILED = 30

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: FTP PORT operation failed

61.4.423 kError_FTP_PRET_FAILED = 84

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: a PRET command failed

61.4.424 kError_FTP_WEIRD_227_FORMAT = 14

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.425 kError_FTP_WEIRD_PASS_REPLY = 11

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.426 kError_FTP_WEIRD_PASV_REPLY = 13

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.427 kError_FTP_WEIRD_SERVER_REPLY = 8

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.428 kError_FUNCTION_NOT_FOUND = 41

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.429 kError_GOT_NOTHING = 52

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: when this is a specific error

61.4.430 kError_HTTP2 = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: A problem was detected in the HTTP2 framing layer. This is somewhat generic and can be one out of several problems, see the error buffer for details.

61.4.431 kError_HTTP2_STREAM = 92

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: stream error in HTTP/2 framing layer

61.4.432 kError_HTTP3 = 95

MBS CURL Plugin, Plugin Version: 20.5.

Function: One of the error constants for the Error event.
Notes: HTTP3 layer failed.

61.4.433 kError_HTTP_POST_ERROR = 34

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.434 kError_HTTP_RETURNED_ERROR = 22

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.435 kError_INTERFACE_FAILED = 45

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.436 kError_LDAP_CANNOT_BIND = 38

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.437 kError_LDAP_INVALID_URL = 62

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Invalid LDAP URL

61.4.438 kError_LDAP_SEARCH_FAILED = 39

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.439 kError_LOGIN_DENIED = 67

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: user, password or similar was not accepted and we failed to login

61.4.440 kError_NOT_BUILT_IN = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: A requested feature, protocol or option was not found built-in in this libCURL due to a build-time decision. This means that a feature or option was not enabled or explicitly disabled when libCURL was built and in order to get it to function you have to get a rebuilt libCURL.

61.4.441 kError_NO_CONNECTION_AVAILABLE = 89

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes:

For internal use only, will never be returned by libCURL.
No connection available, the session will be queued. (added in 7.30.0)

61.4.442 kError_OK = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.443 kError_OPERATION_TIMEDOUT = 28

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.4.444 kError_OUT_OF_MEMORY = 27

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.445 kError_PARTIAL_FILE = 18

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.446 kError_PEER_FAILED_VERIFICATION = 60

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.4.447 kError_Proxy = 96

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the error constants for the Error event.
Notes: Proxy handshake error.

61.4.448 kError_Quic_Connect_Error = 96

MBS CURL Plugin, Plugin Version: 20.5.

Function: One of the error constants for the Error event.
Notes: Quic had a connect error.

61.4.449 kError_QUOTE_ERROR = 21

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.4.450 kError_RANGE_ERROR = 33

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.4.451 kError_READ_ERROR = 26

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: could open/read from file

61.4.452 kError_RECURSIVE_API_CALL = 93

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: an api function was called from inside a callback/event.

61.4.453 kError_RECV_ERROR = 56

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failure in receiving network data

61.4.454 kError_REMOTE_ACCESS_DENIED = 9

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.4.455 kError_REMOTE_DISK_FULL = 70

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Out of disk space on server.

61.4.456 kError_REMOTE_FILE_EXISTS = 73

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: File already exists.

61.4.457 kError_REMOTE_FILE_NOT_FOUND = 78

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Remote file not found.

61.4.458 kError_RTSP_CSEQ_ERROR = 85

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Mismatch of RTSP CSeq numbers.

61.4.459 kError_RTSP_SESSION_ERROR = 86

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: mismatch of RTSP Session Identifiers

61.4.460 kError_SEND_ERROR = 55

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failed sending network data

61.4.461 kError_SEND_FAIL_REWIND = 65

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Sending the data requires a rewind that failed

61.4.462 kError_SETOPT_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 21.4.

Function: One of the error constants for the Error event.
Notes: Malformed option for CURL via setOpt call.

61.4.463 kError_SSH = 79

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Error from the SSH layer, somewhat generic so the error message will be of interest when this has happened.

61.4.464 kError_SSL_CACERT = 60

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes:

problem with the CA cert (path?)

You can often workaround by setting OptionSSLVerifyPeer = 0 and OptionSSLVerifyHost = 0. But that reduces security.

61.4.465 kError_SSL_CACERT_BADFILE = 77

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Could not load CACERT file, missing or wrong format.

61.4.466 kError_SSL_CERTPROBLEM = 58

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: problem with the local certificate

61.4.467 kError_SSL_CIPHER = 59

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: couldn't use specified cipher

61.4.468 kError_SSL_ClientCert = 97

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the error constants for the Error event.
Notes: Client-side certificate required.

61.4.469 kError_SSL_CONNECT_ERROR = 35

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: wrong when connecting with SSL

61.4.470 kError_SSL_CRL_BADFILE = 82

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Could not load CRL file, missing or wrong format (Added in 7.19.0)

61.4.471 kError_SSL_ENGINE_INITFAILED = 66

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failed to initialise ENGINE

61.4.472 kError_SSL_ENGINE_NOTFOUND = 53

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: SSL crypto engine not found

61.4.473 kError_SSL_ENGINE_SETFAILED = 54

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: can not set SSL crypto engine as default

61.4.474 kError_SSL_INVALIDCERTSTATUS = 91

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: invalid certificate status

61.4.475 kError_SSL_ISSUER_ERROR = 83

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Issuer check failed. (Added in CURL 7.19.0)

61.4.476 kError_SSL_PINNEDPUBKEYNOTMATCH = 90

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: specified pinned public key did not match.

61.4.477 kError_SSL_SHUTDOWN_FAILED = 80

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Failed to shut down the SSL connection.

61.4.478 kError_TELNET_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Malformed option for CURL via setOpt call. Used to be for telnet, but now generic.

61.4.479 kError_TFTP_ILLEGAL = 71

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Illegal TFTP operation.

61.4.480 kError_TFTP_NOSUCHUSER = 74

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: No such user.

61.4.481 kError_TFTP_NOTFOUND = 68

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: File not found on server.

61.4.482 kError_TFTP_PERM = 69

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Permission problem on server.

61.4.483 kError_TFTP_UNKNOWNID = 72

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Unknown transfer ID.

61.4.484 kError_TOO_MANY_REDIRECTS = 47

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: catch endless re-direct loops

61.4.485 kError_UNKNOWN_TELNET_OPTION = 48

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: User specified an unknown option

61.4.486 kError_UNSUPPORTED_PROTOCOL = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.487 kError_UPLOAD_FAILED = 25

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.4.488 kError_URL_MALFORMAT = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.489 kError_USE_SSL_FAILED = 64

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Requested FTP SSL level failed

61.4.490 kError_WRITE_ERROR = 23

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.4.491 kFileNameMatchFailed = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: Failed.

61.4.492 kFileNameMatchIsMatch = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: Is Match.

61.4.493 kFileNameMatchNoMatch = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: No match.

61.4.494 kFormArray = 8

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.495 kFormBuffer = 11

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.496 kFormBufferLength = 13

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.497 kFormBufferPtr = 12

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.498 kFormContentHeader = 15

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.499 kFormContentsLength = 6

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.500 kFormContentType = 14

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.501 kFormCopyContents = 4

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.502 kFormCopyName = 1

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.503 kFormEnd = 17

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.504 kFormFile = 10

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.505 kFormFileContent = 7

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.506 kFormFilename = 16

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.507 kFormNameLength = 3

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.508 kFormPtrContents = 5

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.509 kFormPtrName = 2

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.4.510 kFTPAUTH_DEFAULT=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Allow libCURL to decide

61.4.511 kFTPAUTH_SSL=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

61.4.512 kFTPAUTH_TLS=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

61.4.513 kFTPMethodDefault = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: let libcurl pick

61.4.514 kFTPMethodMultiCWD = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: single CWD operation for each path part

61.4.515 kFTPMethodNoCWD = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: no CWD at all

61.4.516 kFTPMethodSingleCWD = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: one CWD to full dir, then work on file

61.4.517 kFTPSSL_ALL=3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

61.4.518 kFTPSSL_CONTROL=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

61.4.519 kFTPSSL_NONE=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Don't attempt to use SSL.

61.4.520 kFTPSSL_TRY=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Try using SSL, proceed as normal otherwise.

61.4.521 kGSSAPIDelegationFlag = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: delegate always

61.4.522 kGSSAPIDelegationNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: no delegation (default)

61.4.523 kGSSAPIDelegationPolicyFlag = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: if permitted by policy

61.4.524 kHTTP_VERSION_1_0 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Enforce HTTP 1.0 requests.

61.4.525 kHTTP_VERSION_1_1 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Enforce HTTP 1.1 requests.

61.4.526 kHTTP_VERSION_2TLS = 4

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: use version 2 for HTTPS, version 1.1 for HTTP

61.4.527 kHTTP_VERSION_2_0 = 3

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 2 in the request

61.4.528 kHTTP_VERSION_2_PRIOR_KNOWLEDGE = 5

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 2 without HTTP/1.1 Upgrade

61.4.529 kHTTP_VERSION_3 = 30

MBS CURL Plugin, Plugin Version: 19.4.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 3 in the request

61.4.530 kHTTP_VERSION_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: We don't care about what version the library uses. libCURL will use whatever it thinks fit.

61.4.531 kINFO_DATA_IN = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data received from the peer.

61.4.532 kINFO_DATA_OUT = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data sent to the peer.

61.4.533 kINFO_HEADER_IN = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is header (or header-like) data received from the peer.

61.4.534 kINFO_HEADER_OUT = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is header (or header-like) data sent to the peer.

61.4.535 kINFO_SSL_DATA_IN = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data received from the peer.

61.4.536 kINFO_SSL_DATA_OUT = 6

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data sent to the peer.

61.4.537 kINFO_TEXT = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is informational text.

61.4.538 kIPRESOLVE_V4 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

61.4.539 kIPRESOLVE_V6 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLMBS
c.OptionIPResolve = c.kIPRESOLVE_V6
```

61.4.540 kIPRESOLVE_WHATEVER=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLMBS
c.OptionIPResolve = c.kIPRESOLVE_WHATEVER
```

61.4.541 kNETRC_IGNORED=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes:

The .netrc will never be read.
This is the default.

61.4.542 kNETRC_OPTIONAL=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes: A user:password in the URL will be preferred to one in the .netrc.

61.4.543 kNETRC_REQUIRED=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes: A user:password in the URL will be ignored. Unless one is set programmatically, the .netrc will be queried.

61.4.544 kProtocolAll = -1

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Enable all protocols.

61.4.545 kProtocolDICT = & h200

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: DICT

61.4.546 kProtocolFILE = & h400

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: File

61.4.547 kProtocolFTP = 4

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: FTP

61.4.548 kProtocolFTPS = 8

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: FTPS

61.4.549 kProtocolGopher = & h2000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Gopher

61.4.550 kProtocolGophers = & h20000000

MBS CURL Plugin, Plugin Version: 21.1.

Function: One of the constants for the OptionProtocols properties.

61.4.551 kProtocolHTTP = 1

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: HTTP

61.4.552 kProtocolHTTPS = 2

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: HTTPS

61.4.553 kProtocolIMAP = & h1000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: IMAP

61.4.554 kProtocolIMAPS = & h2000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: IMAPS

61.4.555 kProtocolLDAP = & h80

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: LDAP

61.4.556 kProtocolLDAPS = & h100

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: LDAPS

61.4.557 kProtocolMQTT = & h10000000

MBS CURL Plugin, Plugin Version: 20.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: MQTT

61.4.558 kProtocolPOP3 = & h4000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: POP3

61.4.559 kProtocolPOP3S = & h8000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: POP3S

61.4.560 kProtocolRTMP = & h80000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMP

61.4.561 kProtocolRTMPE = & h200000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPE

61.4.562 kProtocolRTMPS = & h800000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPS

61.4.563 kProtocolRTMPT = & h100000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPT

61.4.564 kProtocolRTMPTE = & h400000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPTE

61.4.565 kProtocolRTMPTS = & h1000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPTS

61.4.566 kProtocolRTSP = & h40000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTSP

61.4.567 kProtocolSCP = & h10

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SCP

61.4.568 kProtocolSFTP = & h20

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SFTP

61.4.569 kProtocolSMB = & h4000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMB

61.4.570 kProtocolSMBS = & h8000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMBS

61.4.571 kProtocolSMTP = & h10000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMTP

61.4.572 kProtocolSMTPS = & h20000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMTPS

61.4.573 kProtocolTelnet = & h40

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Telnet

61.4.574 kProtocolTFTP = & h800

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: TFTP

61.4.575 kPROXY_HTTP = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

61.4.576 kPROXY_HTTP10 = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Force to use CONNECT HTTP/1.0.

61.4.577 kPROXY_HTTP11 = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Connect using HTTP/1.1.

61.4.578 kPROXY_SOCKS4 = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

61.4.579 kPROXY_SOCKS4A = 6

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Using SOCKS 4A.

61.4.580 kPROXY_SOCKS5 = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

61.4.581 kPROXY_SOCKS5_Hostname = 7

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Use the SOCKS5 protocol but pass along the host name rather than the IP address. added in 7.18.0

61.4.582 kSeekOriginCurrent = 1

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to current file position.

61.4.583 kSeekOriginEnd = 2

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to end of file.

61.4.584 kSeekOriginSet = 0

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to start of file.

61.4.585 kSeekReturnCantSeek = 3

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Return this value if you can't seek as you are not using a file, but for example a stream.

61.4.586 kSeekReturnFail = 2

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Returns this value if your seek operation failed.

61.4.587 kSeekReturnOk = 1

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Returns this value if your seek operation succeeded.

61.4.588 kSSHAuthAgent = 16

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: agent (ssh-agent, pageant...)

61.4.589 kSSHAuthAny = -1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: Any allowed

61.4.590 kSSHAuthDefault = -1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: Default: Any

61.4.591 kSSHAuthGSSAPI = 32

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: gssapi (kerberos, ...)

61.4.592 kSSHAuthHost = 4

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: host key files

61.4.593 kSSHAuthKeyboard = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: keyboard interactive

61.4.594 kSSHAuthNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: none allowed, silly but complete

61.4.595 kSSHAuthPassword = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: password

61.4.596 kSSHAuthPublicKey = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: public/private key files

61.4.597 kSSLOptionAllowBeast = 1

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to allow the BEAST SSL vulnerability in the name of improving interoperability with older servers. Some SSL libraries have introduced work-arounds for this flaw but those work-arounds sometimes make the SSL communication fail. To regain functionality with those broken servers, a user can this

way allow the vulnerability back.

61.4.598 kSSLOptionAutoClientCert = 32

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the SSL option flags.
Notes: Tells libcurl to automatically locate and use a client certificate for authentication. (Schannel)

61.4.599 kSSLOptionNativeCA = 16

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to use standard certificate store of operating system. Currently implemented under MS-Windows.

61.4.600 kSSLOptionNoPartialChain = 4

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to *NOT* accept a partial certificate chain if possible. The OpenSSL backend has this ability.

61.4.601 kSSLOptionNoRevoke = 2

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to disable certificate revocation checks for those SSL backends where such behavior is present.

61.4.602 kSSLOptionRevokeBestEffort = 8

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to ignore certificate revocation offline checks and ignore missing revocation list for those

SSL backends where such behavior is present.

61.4.603 kSSLVersionDefault = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).

61.4.604 kSSLVersionSSLv2 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: SSL v2 (but not SSLv3)

61.4.605 kSSLVersionSSLv3 = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: SSL v3 (but not SSLv2)

61.4.606 kSSLVersionTLSv1 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.0 or later

61.4.607 kSSLVersionTLSv10 = 4

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.0 or later (Added in 7.34.0)

61.4.608 kSSLVersionTLSv11 = 5

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.1 or later (Added in 7.34.0)

61.4.609 kSSLVersionTLSv12 = 6

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.2 or later (Added in 7.34.0)

61.4.610 kSSLVersionTLSv13 = 7

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.3 or later (Added in 7.52.0)

61.4.611 kTimeConditionIfModifiedSince = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.

61.4.612 kTimeConditionIfUnModifiedSince = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.

61.4.613 kTimeConditionNone = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.
Notes: No condition.

61.4.614 kUpkeepIntervalDefault = 50000

MBS CURL Plugin, Plugin Version: 18.5.

Function: The default connection upkeep interval in milliseconds.

61.4.615 kUseSSLall = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

61.4.616 kUseSSLcontrol = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

61.4.617 kUseSSLnone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Don't attempt to use SSL.

61.4.618 kUseSSLtry = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Try using SSL, proceed as normal otherwise.

61.5 class CURLMimePartMBS

61.5.1 class CURLMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for mime parts.
Notes:

You can provide data via file path, folderitem, data in memoryblock or string.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.5.2 Methods

61.5.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

61.5.4 Headers as String()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries header.

61.5.5 SetHeaders(headers() as String)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets header.

61.5.6 Properties

61.5.7 DataMemory as Memoryblock

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part data source from memory data.
Notes: (Read and Write property)

61.5.8 DataString as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part data source from memory data.
Example:

```
dim c as new CURLMBS

// add mime
dim p as CURLMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: (Read and Write property)

61.5.9 Encoding as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime data transfer encoder.
Notes:

If set to binary, 8bit, 7bit, base64 or quoted-printable, the matching encoding is applied.
(Read and Write property)

61.5.10 File as FolderItem

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file to stream.
Notes:

When you set property, the plugin will open file and may raise IOException on failure.
(Read and Write property)

61.5.11 FileName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part remote file name.
Notes:

If mime type is not set, we pick extension from file name.
This includes gif, jpg, jpeg, png, svg, txt, htm, html, pdf and xml file extensions.
(Read and Write property)

61.5.12 FilePath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part data source from named file.
Notes: (Read and Write property)

61.5.13 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

61.5.14 MimeType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part type.
Notes: (Read and Write property)

61.5.15 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime/form part name.
Notes: (Read and Write property)

61.5.16 Parent as Variant

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parent object.
Notes: (Read only property)

61.5.17 Constants

61.5.18 kEncoding7bit = "7bit"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: 7bit

61.5.19 kEncoding8bit = "8bit"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: 8bit

61.5.20 kEncodingBase64 = "base64"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Base64

61.5.21 kEncodingBinary = "binary"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Binary mode

61.5.22 kEncodingNone = ""

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: No mode, so data is passed through and header has no encoding defined.

61.5.23 kEncodingQuotedPrintable = "quoted-printable"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Quoted printable

61.5.24 kMimeTypeGIF = "image/gif"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: GIF

61.5.25 kMimeTypeHTML = "text/html"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: HTML

61.5.26 kMimeTypeJPEG = "image/jpeg"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: JPEG

61.5.27 kMimeTypePDF = "application/pdf"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: PDF

61.5.28 kMimeTypePNG = "image/png"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: PNG

61.5.29 kMimeTypeSVG = "image/svg+xml"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: SVG

61.5.30 kMimeTypeText = "text/plain"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: Text

61.5.31 kMimeTypeXML = "application/xml"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: XML

61.6 class CURLMissingFunctionExceptionMBS

61.6.1 class CURLMissingFunctionExceptionMBS

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An exception raised if a CURL library function is not loaded.
Notes:

If you call load library before you use the CURLMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

61.7 class CURLMultiMBS

61.7.1 class CURLMultiMBS

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for multiple CURL transfers running in parallel.

61.7.2 Methods

61.7.3 AddCURL(CURL as CURLMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a standard CURL handle to the multi stack.
Notes: Lasterror is set.

61.7.4 CURLs as CURLMBS()

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries list of current CURL instances.

61.7.5 ErrorString(ErrorCode as Integer) as String

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries text message for a given error code.

61.7.6 Perform

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks for things to see.
Notes:

When the app thinks there's data available for CURL it calls this function to read/write whatever there is right now. This returns as soon as the reads and writes are done. This function does not require that there actually is data available for reading or that data can be written, it can be called just in case.

Lasterror is set. This only provides errors etc regarding the whole multi stack. There might still have occurred problems on invidual transfers even when this returns OK.

Sets RunningTransfers property.

61.7.7 RemoveCURL(CURL as CURLMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes a CURL handle from the multi stack again.
Notes:

Lasterror is set.
Plugin calls this automatically when TransferFinished event was called.

61.7.8 Properties

61.7.9 ChunkLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A connection with a chunk length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

61.7.10 ContentLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A connection with a content-length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

61.7.11 Handle as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

61.7.12 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

61.7.13 MaxConcurrentStreams as Integer

MBS CURL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum number of concurrent connections to a server.
Notes:

Maximum number of concurrent streams to support on a connection.
(Read and Write property)

61.7.14 MaxConnects as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of entries in the connection cache.
Notes: (Read and Write property)

61.7.15 MaxHostConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of (pipelining) connections to one host.
Notes: (Read and Write property)

61.7.16 MaxPipelineLength as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of requests in a pipeline.
Notes: (Read and Write property)

61.7.17 MaxTotalConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of open connections in total.
Notes: (Read and Write property)

61.7.18 Pipelining as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to 1 to enable pipelining for this multi handle.
Notes:

Only for HTTP protocol.
Used to be a boolean property for 15.0 to 18.1, but changed to integer for 18.2.
(Read and Write property)

61.7.19 RunningTransfers as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of running transfers.
Notes:

Set by Perform method.
(Read only property)

61.7.20 Events

61.7.21 TransferFinished(CURL as CURLMBS, result as Integer, RemainingFinishedTransfers as Integer)

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: One transfer finished.
Notes:

Query CURL object for details.
Result is the result of the transfer as returned by Perform method of CURL object.
RemainingFinishedTransfers is how many transfers are also finished and will be called right after this event.

This event fires always when the queue is empty.
You may want to turn off the timer calling Perform method when this event fires.
Later you can start timer again if you call Add method.

61.7.22 TransfersFinished

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: All pending transfers finished.

61.7.23 Constants

61.7.24 kErrorAddedAlready = 7

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: An easy handle already added to a multi handle was attempted to get added - again.

61.7.25 kErrorBadEadyHandle = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the multi interface error codes.
Notes: An easy handle was not good/valid.

61.7.26 kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: The passed-in handle is not a valid CURLM handle.

61.7.27 kErrorBadSocket = 5

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: The passed in socket argument did not match.

61.7.28 kErrorCallPerform = -1

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Please call Perform soon to do some tasks.

61.7.29 kErrorInternalError = 4

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: This is a libCURL bug.

61.7.30 kErrorOK = 0

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Everything OK.

61.7.31 kErrorOutOfMemory = 3

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Running low on memory.

61.7.32 kErrorRecursiveAPICall = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the multi interface error codes.
Notes: An api function was called from inside an event.

61.7.33 kErrorUnknownOption = 6

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Tried to set unsupported option.

61.7.34 kPipeHTTP1 = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: Pipe with HTTP/1.1.

61.7.35 kPipeMultiPlex = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: Pipe with multiplex.

61.7.36 kPipeNothing = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: No piping.

61.8 class CURLNFileInfoMBS

61.8.1 class CURLNFileInfoMBS

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for file information.
Notes: Content of this structure depends on information which is known and is achievable (e.g. by FTP LIST parsing).

61.8.2 Properties

61.8.3 Date as Date

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timstamp as a date object.
Notes:

As of plugin version 15.2 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.
(Read only property)

61.8.4 DateTime as DateTime

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timstamp as a date object.
Notes:

As of plugin version 20.5 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.
(Read only property)

61.8.5 FileName as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file name.
Notes: (Read only property)

61.8.6 FileType as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file type.
Notes: (Read only property)

61.8.7 Flags as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The flags.
Notes:

Flags define which fields are set.
Also you can just use the Has properties for same information.
(Read only property)

61.8.8 GID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The group ID.
Notes: (Read only property)

61.8.9 GroupString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The group string.
Notes: (Read only property)

61.8.10 HardLinks as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hard link count.
Notes: (Read only property)

61.8.11 HasFileName as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if filename property is valid.
Notes: (Read only property)

61.8.12 HasFileType as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if filetype property is valid.
Notes: (Read only property)

61.8.13 HasGID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if GID property is valid.
Notes: (Read only property)

61.8.14 HasHardLinks as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if hardlinks property is valid.
Notes: (Read only property)

61.8.15 HasPermissions as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if permissions property is valid.
Notes: (Read only property)

61.8.16 HasSize as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if size property is valid.
Notes: (Read only property)

61.8.17 HasTime as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if time and date properties have values.
Notes: (Read only property)

61.8.18 HasUID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if UID field has a value.
Notes: (Read only property)

61.8.19 IsDirectory as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if entry is a directory.
Notes:

Same as FileType = FileTypeDirectory.
(Read only property)

61.8.20 IsFile as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if entry is a regular file.
Notes:

Same as FileType = FileTypeFile.
(Read only property)

61.8.21 Permissions as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The permission value.
Notes: (Read only property)

61.8.22 PermissionString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The permission string.
Notes: (Read only property)

61.8.23 Size as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file size.
Notes: (Read only property)

61.8.24 Target as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The target for a symlink.
Notes: (Read only property)

61.8.25 Time as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time value.
Notes: (Read only property)

61.8.26 TimeString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time string parsed.
Notes: (Read only property)

61.8.27 UID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user ID.
Notes: (Read only property)

61.8.28 UserString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user ID as text.
Notes: (Read only property)

61.8.29 Constants

61.8.30 FileTypeDeviceBlock = 3

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Block Device

61.8.31 FileTypeDeviceChar = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Character Device

61.8.32 FileTypeDirectory = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Directory

61.8.33 FileTypeDoor = 7

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Door, is possible only on Sun Solaris now.

61.8.34 FileTypeFile = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Regular file

61.8.35 FileTypeNamedPipe = 5

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Named Pipe

61.8.36 FileTypeSocket = 6

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Socket

61.8.37 FileTypeSymlink = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Symbolic links

61.8.38 FileTypeUnknown = 8

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Unknown file type. Should never occur.

61.8.39 FlagKnownFileName = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Filename Known

61.8.40 FlagKnownFileType = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: File Type Known

61.8.41 FlagKnownGID = 32

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: GID Known

61.8.42 FlagKnownHardLinks = 128

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Hardlink Count Known

61.8.43 FlagKnownPermissions = 8

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Permissions Known

61.8.44 FlagKnownSize = 64

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Size Known

61.8.45 FlagKnownTime = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Time Known

61.8.46 FlagKnownUID = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: UID Known

61.9 class CURLNListMBS

61.9.1 class CURLNListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to hold a list of strings from the CURL library.
Notes: Data is copied for this list, so you can just keep it around.

61.9.2 Methods

61.9.3 Item(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the item with the given index.
Notes: Index is zero based.

61.9.4 List as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts list to a string array.

61.9.5 Operator_Convert as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts list to a string array.

61.9.6 Properties

61.9.7 Count as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of items in this list.
Notes: (Read only property)

61.10 class CURLNMBS

61.10.1 class CURLNMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to wrap libCURL.
Notes:

We have three variants:

CURLS* classes include a static CURL library with SSL and SSH.
CURLN* classes include a static CURL library with native SSL on Mac and Windows.
CURL* classes without S need you to supply your own CURL library.

All variants can load a custom CURL library or use the one from the system on Mac and Linux.
If no library is loaded or included, the plugin will try to load the system one in constructor.

from the website libCURL website:
https://curl.haxx.se/libcurl/

libCURL is a free and easy-to-use client-side URL transfer library, supporting FTP, FTPS, HTTP, HTTPS, SCP, SFTP, TFTP, TELNET, DICT, FILE and LDAP. libCURL supports SSL certificates, HTTP POST, HTTP PUT, FTP uploading, HTTP form based upload, proxies, cookies, user+password authentication (Basic, Digest, NTLM, Negotiate, Kerberos4), file transfer resume, http proxy tunneling and more!

libCURL is highly portable, it builds and works identically on numerous platforms, including Solaris, NetBSD, FreeBSD, OpenBSD, Darwin, HPUX, IRIX, AIX, Tru64, Linux, UnixWare, HURD, Windows, Amiga, OS/2, BeOs, Mac OS X, Ultrix, QNX, OpenVMS, RISC OS, Novell NetWare, DOS and more...

libCURL is free, thread-safe, IPv6 compatible, feature rich, well supported, fast, thoroughly documented and is already used by many known, big and successful companies and numerous applications.

On Linux you may need to install libraries like ldap: apt-get install libldap-2.4.2:i386

61.10.6 Methods

61.10.7 AddMimePart as CURLNMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a new blank mime part.
Notes: Returns mime object, so you can set properties.

61.10.8 AWSPresignURL(AWSAccessKeyId as String, AWSSecretAccessKey as String, Region as String, Service as String, Path as String, Domain as String, Verb as String = "GET", Expires as Integer = 86400, QueryParameters() as String = nil, Headers() as String = nil) as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query predigend URL for Amazon Webservices.
Example:

```
Dim URL As String = CURLNMBS.AWSPresignURL( _
"AKIAIOSFODNN7EXAMPLE", _
"wJalrXUtnFEMI/K7MDENG/bPxRfiCYEXAMPLEKEY", _
"us-east-1", _
"s3", _
"/test.txt", _
"examplebucket.s3.amazonaws.com", _
"GET", _
86400 )

Break // see URL in debugger
```

Notes:

This implements AWS4-HMAC-SHA256 pre-signature for credentials.

Works also for other compatible S3 services beside Amazon's like the one from Wasabi or Dell ECS.

Parameter	Description	Example
AWSAccessKeyId	Your access key for AWS.	
AWSSecretAccessKey	Your secret	
Region	The region to use.	"eu-central-1"
Service	The service to use.	"s3"
Path	The path for the URL. Should always start with "/".	"/bucketname/test.jpg"
Domain	Optional the domain to use. By default we just build it from region and service.	"s3.eu-central-1.amazonaws.com" or "s3-ap-southeast-2.amazonaws.com"
Verb	The HTTP Operation to do. Can be POST, PUT, GET or DELETE. Default is GET.	"GET"
Expires	Expiration duration. Provides the time period, in seconds, for which the generated presigned URL is valid. For example, 86400 (24 hours). This value is an integer. The minimum value you can set is 1, and the maximum is 604800 (seven days). A presigned URL can be valid for a maximum of seven days because the signing key you use in signature calculation is valid for up to seven days. Default is 86400 for one day.	
QueryParameters	List of query parameters to include.	"test=abc"
Headers	Extra HTTP headers to include. Here you can specify various headers to include in signature and request.	

Returns the pre-signed URL. May raise an exception in case of error.

61.10.9 ClearData

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears data properties.
Notes: Resets OutputData, DebugData and HeaderData.

61.10.10 CloseMTDebugOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the debug output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

61.10.11 CloseMTHeaderOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the header output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

61.10.12 CloseMTInputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the input file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

61.10.13 CloseMTOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

61.10.14 CreateMTDebugOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where debug data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.10.15 CreateMTDebugOutputFile(Path as String) as boolean 11927

61.10.15 CreateMTDebugOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where debug data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.10.14 CreateMTDebugOutputFile(file as folderitem) as boolean 11927

61.10.16 CreateMTHeaderOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where header data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.

See also:

- 61.10.17 CreateMTHeaderOutputFile(Path as String) as boolean 11928

61.10.17 CreateMTHeaderOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where header data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.10.16 CreateMTHeaderOutputFile(file as folderitem) as boolean 11927

61.10.18 CreateMTOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where output data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.10.19 CreateMTOutputFile(Path as String) as boolean 11928

61.10.19 CreateMTOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where output data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.10.18 CreateMTOutputFile(file as folderitem) as boolean 11928

61.10.20 FileInfos as CURLNFileInfoMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries array with file information.
Notes:

If you use OptionWildcard, you find after the transfer all CURLNFileInfoMBS objects for all the files/folders found.

For MBS Plugin 19.0 or newer you can alternatively run a custom request "MLSD" and than get file infos, too.

61.10.21 FinishMime

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Finishes mime data.
Example:

```
dim c as new CURLNMBS

// add mime
dim p as CURLMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: Please call AddMimePart for each part you like to add and than finally FinishMime before calling perform.

61.10.22 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
dim c as new CURLNMBS
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string

const CURLFORM_COPYNAME = 1
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues
```

Notes:

Lasterror is set.

61.10.28 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Several FormAdd methods are there. Send a request to support if you need another parameter combination.

Lasterror is set.

FormAdd() is used to append sections when building a multipart/formdata HTTP POST (sometimes referred to as rfc1867-style posts). Append one section at a time until you've added all the sections you want included and then you call FormFinish.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

First, there are some basics you need to understand about multipart/formdata posts. Each part consists of at least a NAME and a CONTENTS part. If the part is made for file upload, there are also a stored CONTENT-TYPE and a FILENAME. Below, we'll discuss what options you use to set these properties in the parts you want to add to your post.

The options listed first are for making normal parts. The options from CURLFORM_FILE through CURLFORM_BUFFERLENGTH are for file upload parts.

CURLFORM_COPYNAME:
followed by a string which provides the name of this part. libCURL copies the string so your application doesn't need to keep it around after this function call. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_PTRNAME:
followed by a string which provides the name of this part. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_COPYCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL copies the provided data, so your application doesn't need to keep it around after this function call. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set the length of the name with CURLFORM_CONTENTSLENGTH.

CURLFORM_PTRCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_CONTENTSLENGTH.

CURLFORM_CONTENTSLENGTH:
followed by a long giving the length of the contents.

CURLFORM_FILECONTENT:

followed by a filename, causes that file to be read and its contents used as data in this part. This part does not automatically become a file upload part simply because its data was read from a file.

CURLFORM_FILE:
followed by a filename, makes this part a file upload part. It sets the filename field to the basename of the provided filename, it reads the contents of the file and passes them as data and sets the content-type if the given file match one of the internally known file extensions. For CURLFORM_FILE the user may send one or more files in one part by providing multiple CURLFORM_FILE arguments each followed by the filename (and each CURLFORM_FILE is allowed to have a CURLFORM_CONTENTTYPE).

CURLFORM_CONTENTTYPE:
is used in combination with CURLFORM_FILE. Followed a string which provides the content-type for this part, possibly instead of an internally chosen one.

CURLFORM_FILENAME:
is used in combination with CURLFORM_FILE. Followed a string, it tells libCURL to use the given string as the filename in the file upload part instead of the actual file name.

CURLFORM_BUFFER:
is used for custom file upload parts without use of CURLFORM_FILE. It tells libCURL that the file contents are already present in a buffer. The parameter is a string which provides the filename field in the content header.

CURLFORM_BUFFERPTR:
is used in combination with CURLFORM_BUFFER. The parameter is the string to be uploaded. You must also use CURLFORM_BUFFERLENGTH to set the number of bytes in the buffer. Keep the buffer variable alive till the upload is finished.

CURLFORM_BUFFERLENGTH:
is used in combination with CURLFORM_BUFFER. The parameter is a long which gives the length of the buffer.

CURLFORM_ARRAY:
Another possibility to send options to CURL_formadd() is the CURLFORM_ARRAY option, that passes an Integer Array and a String Array defining its value. Each element in the form is constructed using the option from the integer array and the value from the string array. All available options can be used in an array, except the CURLFORM_ARRAY option itself!

CURLFORM_CONTENTHEADER:
specifies extra headers for the form POST section. This takes a CURL_slist prepared in the usual way using CURL_slist_append and appends the list of headers to those libCURL automatically generates. The list must exist while the POST occurs, if you free it before the post completes you may experience problems.

PS: CURLFORM_FILE does not work in all CURL versions on all platforms due to a bug with integer numbers.

- 61.10.29 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string) 11937

61.10.29 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string)

MBS CURL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Lasterror is set.
See other FormAdd methods for details.
See also:

- 61.10.22 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string) 11930
- 61.10.23 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string) 11931
- 61.10.24 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer) 11931

- 61.10.25 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Number4 as Integer) 11932
- 61.10.26 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Text4 as string) 11933

61.10.30 FormAddField(fieldName as String, fieldValue as String, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
dim d as new CURLNMBS
d.FormAddField("company", "Test, Inc.")
```

Notes:

For fieldName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.
ContentType is optional.

Please call FormFinish method later!

61.10.31 FormAddFile(fieldName as String, fileName as String, fileContent as string, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
// read content of some file
dim file as folderitem = specialFolder.desktop.Child("test.txt")
dim b as BinaryStream = binarystream.Open(file)
dim FileContent as String = b.read(b.length)
```

```
// init some curl object
dim d as new CURLNMBS

// add the file as part of a form
d.FormAddFile("FileAttachment", "test.txt", FileContent, "text/plain")

// later
d.FormFinish
```

Notes:

For fieldName, fileName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.

Filename is ignored, if empty.
ContentType is optional.

Please call FormFinish method later!

61.10.32 FormClear

MBS CURL Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears current form data.
Notes: You usually don't need to call this as Perform clears form data when transfer is done.

61.10.33 FormData as String

MBS CURL Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries current form data.
Notes: This is more for debugging as it builds form data as if we would send it.

61.10.34 FormFinish

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Finishes constructing a form.
Example:

```
dim c as new CURLNMBS
dim namebuffer as string = "name buffer"
dim namelength as Integer = lenb(namebuffer)
dim buffer as string = "test buffer"
dim htmlbuffer as string = "<HTML>test buffer</HTML>"
dim htmlbufferlength as Integer = lenb(htmlbuffer)
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string
dim recordbuffer as string = "record buffer"
dim recordlength as Integer = lenb(recordbuffer)

const CURLFORM_NOTHING = 0
const CURLFORM_COPYNAME = 1
const CURLFORM_PTRNAME = 2
const CURLFORM_NAMELENGTH = 3
const CURLFORM_COPYCONTENTS = 4
const CURLFORM_PTRCONTENTS = 5
const CURLFORM_CONTENTSLENGTH = 6
const CURLFORM_FILECONTENT = 7
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10
const CURLFORM_BUFFER = 11
const CURLFORM_BUFFERPTR = 12
const CURLFORM_BUFFERLENGTH = 13
const CURLFORM_CONTENTTYPE = 14
const CURLFORM_CONTENTHEADER = 15
const CURLFORM_FILENAME = 16

'/* Add simple name/content section */

c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_COPYCONTENTS, "content"

'
'/* Add simple name/content/contenttype section */

c.FormAdd CURLFORM_COPYNAME, "htmlcode", CURLFORM_COPYCONTENTS, "<HTML></HTML>",CURL-
FORM_CONTENTTYPE,"text/html"

'/* Add name/ptrcontent section */
c.FormAdd CURLFORM_COPYNAME, "name_for_ptrcontent", CURLFORM_PTRCONTENTS, buffer

'/* Add ptrname/ptrcontent section */
c.FormAdd CURLFORM_PTRNAME, namebuffer, CURLFORM_PTRCONTENTS, buffer, CURLFORM_NAME-
```

LENGTH, namelength

```
'/* Add name/ptrcontent/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "html_code_with_hole", CURLFORM_PTRCONTENTS, htmlbuffer, CURLFORM_CONTENTSLENGTH, htmlbufferlength, CURLFORM_CONTENTTYPE, "text/html"

'/* Add simple file section */
c.FormAdd CURLFORM_COPYNAME, "picture", CURLFORM_FILE, "my-face.jpg"

'/* Add file/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "picture",CURLFORM_FILE, "my-face.jpg",CURLFORM_CONTENTTYPE, "image/jpeg"

'/* Add two file section */
c.FormAdd CURLFORM_COPYNAME, "pictures",CURLFORM_FILE, "my-face.jpg",CURLFORM_FILE, "your-face.jpg"

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2

'/* Add a buffer to upload */
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_BUFFER, "data", CURLFORM_BUFFERPTR, recordbuffer, CURLFORM_BUFFERLENGTH, recordlength

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues

'/* Add the content of a file as a normal post text value */
c.FormAdd CURLFORM_COPYNAME, "filecontent", CURLFORM_FILECONTENT, ".bashrc"
'/* Set the form info */

c.FormFinish
```

Notes:

Lasterror is set.
The form is assigned to the HTTPPost property.

61.10.35 GetInfoActiveSocket as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receive the active socket used by this curl session.
Notes:

If the socket is no longer valid, -1 is returned. When you finish working with the socket, the Destructor closes the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly.

This option was added as a replacement for GetInfoLastSocket since that one isn't working on all platforms.

61.10.36 GetInfoAppConnectTime as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time stamp when app connected.

61.10.37 GetInfoCertInfo as CURLNListMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries information on the certificate chain.
Example:

```
dim c as new CURLNMBS

// do some transfer
c.OptionURL = "https://www.mbsplugins.de/"
dim e as Integer = c.perform

// query certificate info
dim lists() as CURLNListMBS = c.GetInfoCertInfo

for each l as CURLNListMBS in lists
MsgBox Join(l, EndOfLine)
next

MsgBox c.DebugData
```

61.10.38 GetInfoConditionUnmet as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return if the time condition prevented the document to get transferred.

61.10.39 GetInfoConnectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, it took from the start until the connect to the remote host (or proxy) was completed.
Notes: The Lasterror property is set. 0 for success.

61.10.40 GetInfoContentLengthDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The content-length of the download.
Notes:

The Lasterror property is set. 0 for success.
This is the value read from the Content-Length: field.

61.10.41 GetInfoContentLengthUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The specified size of the upload.
Notes: The Lasterror property is set. 0 for success.

61.10.42 GetInfoContentType as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The content-type of the downloaded object.
Notes:

The Lasterror property is set. 0 for success.
This is the value read from the Content-Type: field. If you get "", it means that the server didn't send a valid Content-Type header or that the protocol used doesn't support this.

61.10.43 GetInfoCookieList as CURLNListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A linked-list of all cookies CURL knows (expired ones, too).
Notes:

The Lasterror property is set. 0 for success.
If there are no cookies (cookies for the handle have not been enabled or simply none have been received) the result is nil.

61.10.44 GetInfoEffectiveMethod as string

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the last used effective HTTP method.
Notes: In cases when you've asked libcurl to follow redirects, the method may very well not be the same method the first request would use.

61.10.45 GetInfoEffectiveURL as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last used effective URL.
Notes: The Lasterror property is set. 0 for success.

61.10.46 GetInfoFileTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the remote time of the retrieved document (in number of seconds since 1 jan 1970 in the GMT/UTC time zone).
Example:

```
// init CURL with options
dim d as new CURLNMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes:

The Lasterror property is set. 0 for success.
If you get -1, it can be because of many reasons (unknown, the server hides it or the server doesn't support the command that tells document time etc) and the time of the document is unknown. Note that you must tell the server to collect this information before the transfer is made, by using the OptionFileTime option or you will unconditionally get a -1 back. (Added in 7.5)

61.10.47 GetInfoFTPEntryPath as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a string holding the path of the entry path.
Notes:

That is the initial path libCURL ended up in when logging on to the remote FTP server.
Empty string if unknown.

61.10.48 GetInfoHeaderSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total size of all the headers received.
Notes: The Lasterror property is set. 0 for success.

61.10.49 GetInfoHTTPAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask indicating the authentication method(s) available.
Notes:

The Lasterror property is set. 0 for success.
The meaning of the bits is explained in the HTTPAuth option.

61.10.50 GetInfoHTTPConnectCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last received proxy response code to a CONNECT request.
Notes:

The Lasterror property is set. 0 for success.
none

61.10.51 GetInfoHTTPVersion as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the http version used in the connection.
Notes: The returned value will be kHTTP_VERSION_1_0, kHTTP_VERSION_1_1, or kHTTP_VERSION_2_0, or 0 if the version can't be determined.

61.10.52 GetInfoLastSocket as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receive the last socket used by this CURL session.
Notes:

If the socket is no longer valid, -1 is returned. When you finish working with the socket, the destructor will free the handle as usual and let libCURL close the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly. (Added in 7.15.2)

NOTE: this API is not really working on win64, since the SOCKET type on win64 is 64 bit large while its

'long' is only 32 bits.

61.10.53 GetInfoLocalIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries local IP.
Example:

```
dim c as new CURLNMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP
MsgBox c.GetInfoLocalIP
```

61.10.54 GetInfoLocalPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the local port of the most recent (primary) connection.
Example:

```
dim c as new CURLNMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP and port
MsgBox c.GetInfoLocalIP+":"+str(c.GetInfoLocalPort)
```

61.10.55 GetInfoNameLookupTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, it took from the start until the name resolving was completed.

Notes: The Lasterror property is set. 0 for success.

61.10.56 GetInfoNumConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: How many new connections libCURL had to create to achieve the previous transfer.
Notes:

The Lasterror property is set. 0 for success.
(only the successful connects are counted)
Combined with RedirectCount you are able to know how many times libCURL successfully reused existing connection(s) or not. See the Connection Options to see how libCURL tries to make persistent connections to save time.

61.10.57 GetInfoOSErrno as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The errno variable from a connect failure.
Notes: The Lasterror property is set. 0 for success.

61.10.58 GetInfoPreTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, it took from the start until the file transfer is just about to begin.
Notes:

The Lasterror property is set. 0 for success.
This includes all pre-transfer commands and negotiations that are specific to the particular protocol(s) involved.

61.10.59 GetInfoPrimaryIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the ip address of the most recent (primary) connection.
Example:

```
dim c as new CURLNMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

61.10.60 GetInfoPrimaryPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the (remote) port of the most recent (primary) connection.
Example:

```
dim c as new CURLNMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

61.10.61 GetInfoProtocol as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the protocol used in the connection.
Notes: See kProtocol* constants.

61.10.62 GetInfoProxyAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask indicating the authentication method(s) available for your proxy authentication.
Notes: The Lasterror property is set. 0 for success.

61.10.63 GetInfoProxyError as integer

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries proxy error code.

61.10.64 GetInfoProxySSLVerifyResult as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the result of the proxy certificate verification.
Notes: receive the result of the certificate verification that was requested (using the OptionProxySSLVerifyPeer option. This is only used for HTTPS proxies.

61.10.65 GetInfoRedirectCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total number of redirections that were actually followed.
Notes: The Lasterror property is set. 0 for success.

61.10.66 GetInfoRedirectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the total time, in seconds, it took for all redirection steps include name lookup, connect, pretransfer and transfer before final transaction was started.
Notes:

The Lasterror property is set. 0 for success.
RedirectTime contains the complete execution time for multiple redirections. (Added in 7.9.7)

61.10.67 GetInfoRedirectURL as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The redirection URL.

61.10.68 GetInfoReferer as string

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries referrer text.

61.10.69 GetInfoRequestSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total size of the issued requests.
Notes:

The Lasterror property is set. 0 for success.
This is so far only for HTTP requests. Note that this may be more than one request if FOLLOWLOCATION is true.

61.10.70 GetInfoResponseCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last received HTTP or FTP code.
Notes:

The Lasterror property is set. 0 for success.
This will be zero if no server response code has been received. Note that a proxy's CONNECT response should be read with GetInfoHTTPConnectCode and not this.

With HTTP transfer, a successful transfer reports 200 here. If the page is not found, you get 404. Or any other HTTP Response code.

61.10.71 GetInfoRetryAfter as integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the Retry-After retry delay.
Notes:

Receive the number of seconds the HTTP server suggesets the client should wait until the next request is issued.
The information from the "Retry-After:" header.

While the HTTP header might contain a fixed date string, the RetryAfter will always return number of seconds to wait - or zero if there was no header or the header couldn't be parsed.

61.10.72 GetInfoRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP Client sequence counter.

61.10.73 GetInfoRTSPCSEQRecv as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP sequence counter received.

61.10.74 GetInfoRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP Server sequence counter.

61.10.75 GetInfoRTSPSessionID as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP session ID.

61.10.76 GetInfoScheme as string

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the URL scheme (sometimes called protocol) used in the connection

61.10.77 GetInfoSizeDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total amount of bytes that were downloaded.
Notes:

The Lasterror property is set. 0 for success.
The amount is only for the latest transfer and will be reset again for each new transfer.

61.10.78 GetInfoSizeUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total amount of bytes that were uploaded.
Notes: The Lasterror property is set. 0 for success.

61.10.79 GetInfoSpeedDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The average download speed that CURL measured for the complete download.
Notes: The Lasterror property is set. 0 for success.

61.10.80 GetInfoSpeedUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The average upload speed that CURL measured for the complete upload.
Notes: The Lasterror property is set. 0 for success.

61.10.81 GetInfoSSLEngines as CURLNListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receive a linked-list of OpenSSL crypto-engines supported.
Notes:

The Lasterror property is set. 0 for success.
Note that engines are normally implemented in separate dynamic libraries. Hence not all the returned engines may be available at run-time.

61.10.82 GetInfoSSLVerifyResult as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the result of the certification verification that was requested (using the SSLVerifyPeer option).
Notes: The Lasterror property is set. 0 for success.

61.10.83 GetInfoStartTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the time, in seconds, it took from the start until the first byte is just about to be transferred.
Notes:

The Lasterror property is set. 0 for success.
This includes the pretransfer time and also the time the server needs to calculate the result.

61.10.84 GetInfoTotalTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total time in seconds for the previous transfer, including name resolving, TCP connect etc.
Notes: The Lasterror property is set. 0 for success.

61.10.85 LoadAPI

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the default CURL library.
Notes:

This method is called by the constructor. So you don't need this except you want to test explicit with APILoaded whether the loading worked before you use the CURLNMBS class.

Loads the "libCURL.dll" Windows library (with SSL support this one max require OpenSSL).
Loads on Mac OS X and Linux the libCURL file in /usr/lib.

61.10.86 LoadErrorString as string

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error string from the LoadLibrary function.

61.10.87 LoadLibrary(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the CURL library from the given path.
Notes:

You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 61.10.88 LoadLibrary(path as string) as boolean 11955

61.10.88 LoadLibrary(path as string) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the CURL library from the given path.
Notes:

You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 61.10.87 LoadLibrary(file as folderitem) as boolean 11955

61.10.89 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens input file for reading data while PerformMT runs.
Notes:

The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.10.90 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean 11956

61.10.90 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens input file for reading data while PerformMT runs.
Notes:

The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.10.89 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean 11956

61.10.91 Perform as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a file transfer
Notes:

This function is called after all the options are set, and will perform the transfer as described in the options.

You can do any amount of calls to Perform. If you intend to transfer more than one file, you are even encouraged to do so. libCURL will then attempt to re-use the same connection for the following transfers, thus making the operations faster, less CPU intense and using less network resources. Just note that you will have to use the option properties between the invokes to set options for the following Perform.

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

Possible values for the retun value:

The error value -1 is used from the plugin to report that something is missing like OpenSSL dlls on Windows.

With SFTP, you can get logged error "Upload failed: Operation failed (4/-31)" when upload uses path to folder instead of file in URL.

61.10.92 PerformMT as Integer

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a file transfer with preemptive multithreading.
Notes:

Same as Perform, but with additional multithreading.

As the actual transfer runs on a preemptive thread, the events Debug, Write, Header and Progress are called asynchrounously and run a few milliseconds later. You can return true in Progress event to stop transfer, but you will get more events before the transfer is stopped.

You can call CreateMTDebugOutputFile, CreateMTHeaderOutputFile and CreateMTOutputFile before PerformMT to have output data be written into files. Call OpenMTInputFile to let the plugin read input data (form post or upload) from an input file.

Do not call other CURL functions on this CURLNMBS instance while PerformMT is running!

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

To avoid trouble with app hanging on quit of application, be sure to set cancel property to true in window close event to cancel any pending transfer.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

61.10.93 ReceiveData(byref data as Memoryblock, BytesToRead as Int64) as Int64

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receives raw data on a connection.
Notes:

This function receives raw data from the established connection. You may use it together with SendData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

The data memoryblock is a reference to your variable that will get the received data. BytesToRead is the maximum amount of data you can get in that buffer. The function returns the number of received bytes.

To establish the connection, set OptionConnectOnly = true before calling Perform. Note that ReceiveData does not work on connections that were created without this option.

The call will return kError_AGAIN if there is no data to read - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, wait for data to arrive.

Wait on the socket only if ReceiveData returns kError_AGAIN. The reason for this is libcurl or the SSL library may internally cache some data, therefore you should call ReceiveData until all data is read which would include any cached data.

Furthermore if you wait on the socket and it tells you there is data to read, ReceiveData may return CURLE_AGAIN if the only data that was read was for internal SSL processing, and no other data is available.

On success, sets lasterror to kError_OK (0), stores the received data into memory block, and returns the number of bytes it actually read.

On failure, returns zero and lasterror is set to the appropriate error code.

The function may return kError_AGAIN. In this case, use your operating system facilities to wait until data can be read, and retry.

Reading exactly 0 bytes indicates a closed connection.

If there's no socket available to use from the previous transfer, this function returns kError_UNSUPPORTED_PROTOCOL.

61.10.94 Reset

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Re-initializes all options previously set on a specified CURL handle to the default values.
Notes: It does not change the following information kept in the handle: live connections, the Session ID cache, the DNS cache, the cookies and shares.

61.10.95 SendData(data as Memoryblock) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sends raw data over a connection.
Notes:

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.
See also:

- 61.10.96 SendData(data as string) as Integer 11960

61.10.96 SendData(data as string) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sends raw data over a connection.
Notes:

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.
See also:

- 61.10.95 SendData(data as Memoryblock) as Integer 11959

61.10.97 SetInputData(data as MemoryBlock)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 61.10.98 SetInputData(data as string) 11961

61.10.98 SetInputData(data as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 61.10.97 SetInputData(data as MemoryBlock) 11960

61.10.99 SetOptionConnectTo(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set list of host:port:connect-to-host:connect-to-port, overrides the URL's host:port (only for the network layer)

61.10.100 SetOptionEmptyPassword

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets an empty password.
Notes:

Normally you have no password unless you set it.
But if you set a password with empty string, the plugin sets CURL to use no password.
This method is to use an empty password.

61.10.101 SetOptionHTTP200Aliases(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A linked list of aliases to be treated as valid HTTP 200 responses.
Notes:

Some servers respond with a custom header response line. For example, IceCast servers respond with "ICY 200 OK". By including this string in your list of aliases, the response will be treated as a valid HTTP header line such as "HTTP/1.0 200 OK".

The alias itself is not parsed for any version strings. So if your alias is "MYHTTP/9.9", LibCURL will not treat the server as responding with HTTP version 9.9. Instead LibCURL will use the value set by option HTTPVersion.

The Lasterror property is set. 0 for success.

61.10.102 SetOptionHTTPHeader(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A linked list of HTTP headers to pass to the server in your HTTP request.
Example:

```
dim c as new CURLNMBS
c.SetOptionHTTPHeader array("Expect:", "Content-Type: text/xml", "SOAPAction: ""login""")
```

Notes:

If you add a header that is otherwise generated and used by libCURL internally, your added one will be used instead. If you add a header with no contents as in 'Accept:' (no data on the right side of the colon), the internally used header will get disabled. Thus, using this option you can add new headers, replace internal headers and remove internal headers. To add a header with no contents, make the contents be two quotes: "". The headers included in the linked list must not be CRLF-terminated, because CURL adds CRLF after each header item. Failure to comply with this will result in strange bugs because the server will most likely ignore part of the headers you specified.

The first line in a request (containing the method, usually a GET or POST) is not a header and cannot be replaced using this option. Only the lines following the request-line are headers. Adding this method line in this list of headers will only cause your request to send an invalid header.

Pass an empty array to this to reset back to no custom headers.

The Lasterror property is set. 0 for success.

61.10.103 SetOptionMailRecipients(list() as string)

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the array of email recipient addresses.

61.10.104 SetOptionPostQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an array to a list of FTP commands to pass to the server after your ftp transfer request.
Example:

```
dim d as CURLNMBS // your CURL object

dim ws() As String
ws.Append "RNFR Temp.txt"
ws.append "RNTO MyFile.txt"
d.SetOptionPostQuote(ws)
```

Notes:

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.
If you want to do a ftp operation instead of download/upload/directory listing, please use SetOptionQuote.

61.10.105 SetOptionPreQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an array to a list of FTP commands to pass to the server after the transfer type is set.
Notes:

Disable this operation again by using an empty array for this option. Before version 7.15.6, if you also set

Nobody to true, this option didn't work.

The Lasterror property is set. 0 for success.

61.10.106 SetOptionProxyHeader(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set list of headers used for proxy requests only.

const kError_FunctionMissing	= -1	
const kError_OK	= 0	
const kError_UNSUPPORTED_PROTOCOL	= 1	
const kError_FAILED_INIT	= 2

const kError_FTP_SSL_FAILED	= 64	Requested FTP SSL level failed
const kError_SEND_FAIL_REWIND	= 65	Sending the data requires a rewind that failed
const kError_SSL_ENGINE_INITFAILED	= 66	failed to initialise ENGINE
const kError_LOGIN_DENIED	= 67	user, password or similar was not accepted and we failed to login

61.10.107 SetOptionQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an array or a list of FTP commands to pass to the server prior to your ftp request.
Example:

```
dim curl as new CURLNMBS
curl.SetOptionQuote array("DELE filename.txt")
```

Notes:

This will be done before any other FTP commands are issued (even before the CWD command).

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.

61.10.108 SetOptionResolve(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Send linked-list of name:port:address sets.

61.10.109 SetOptionTelnetOptions(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provide an array of variables to pass to the telnet negotiations.
Notes:

The variables should be in the format <option=value>. libCURL supports the options 'TTYPE', 'XDISPLOC' and 'NEW_ENV'. See the TELNET standard for details.

The Lasterror property is set. 0 for success.

61.10.110 SetPathCAInfo(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A path holding one or more certificates to verify the peer with.
Example:

```
dim cacert as FolderItem // your cacert.pem file
dim CURL as new CURLMBS
CURL.OptionSSLVerifyHost = 2 // verify server
CURL.OptionSSLVerifyPeer = 1 // proofs certificate is authentic
CURL.SetPathCAInfo cacert
```

Notes:

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

61.10.111 SetPathCAPath(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A path to the directory holding multiple CA certificates to verify the peer with.
Example:

```
dim c as new CURLNMBS

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
c.SetPathCAPath cacert
```

Notes:

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if

libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

61.10.112 SetPathCRLFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the path with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes:

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

61.10.113 SetPathIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the path to a CA certificate in PEM format.
Notes:

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSS-

LVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

61.10.114 SetPathNetRCFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the path to the file you want libCURL to use as .netrc file.
Notes:

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

61.10.115 SetPathProxyIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the proxy issuer SSL certificate filename.
Notes:

Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

61.10.116 SetupEmail(email as Variant) as boolean

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Setups existing CURL session for an email transfer.

Example:

```
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "Christian Müller"
e.Subject = "Hello World "
e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test Müller"
e.PlainText = "Hello World," + EndOfLine + "Smilies:    "

dim c as new CURLNMBS

if c.SetupEmail(e) then

dim er as Integer = c.Perform
if er = 0 then
MsgBox "Email sent"
end if
end if
```

Notes:

You can set your own settings like proxy after this function call.
If you like you can reuse the email and CURL objects after you sent an email, change values and send another email.
Returns true on success or false on failure.

61.10.117 UpKeep

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform any connection upkeep checks.
Notes:

Perform any connection upkeep checks.
Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.
Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
This function must be explicitly called in order to perform the upkeep work. The connection upkeep interval is set with OptionUpkeepIntervalMS.

61.10.118 Properties

61.10.119 APILoaded as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the CURL library was loaded.
Notes:

The CURLNMBS constructor loads the library if it was not loaded before.
(Read only property)

61.10.120 Cancel as Boolean

MBS CURL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Tells CURL instance to cancel transfer as soon as possible.
Notes:

Especially when using PerformMT, you may see your app hang if user tries to quit application. To prevent the hang, please set Cancel = true in window close event. So when app quits and windows get destroyed, the PerformMT will see the Cancel being true and returns soon.
(Read and Write property)

61.10.121 CollectDebugData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to collect debug message data.
Notes:

If you set this property to true, you can grab the data from the transfer in the DebugData Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

61.10.122 CollectHeaderData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to collect header data.
Notes:

If you set this property to true, you can grab the data from the transfer in the headerData Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

61.10.123 CollectOutputData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to collect output data.
Notes:

If you set this property to true, you can grab the data from the transfer in the OutputData Property instead of collecting the pieces yourself in the write event. Of course this is optional and you can still process data in write event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

61.10.124 DebugData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The debug data from CURL.
Notes:

If CollectDebugData property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.
(Read only property)

61.10.125 DebugWithData as Boolean

MBS CURL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to include data in debug messages.
Example:

```
dim c as new CURLNMBS
c.DebugWithData = true
```

c.OptionVerbose = true
c.CollectDebugData = true

Notes: (Read and Write property)

61.10.126 Handle as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal handle of the CURL object.
Notes: (Read and Write property)

61.10.127 HeaderData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The header data from CURL.
Notes:

If CollectHeaderData property is true, the plugin puts the data received in header event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.
(Read only property)

61.10.128 InputData as String

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
(Read and Write property)

61.10.129 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The lasterror from the library.
Notes:

Set in the constructor while doing initialization.
Check the kError* constants.
(Read and Write property)

61.10.130 LasterrorMessage as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error message.
Notes: (Read only property)

61.10.131 LasterrorText as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The text for the lasterror code.
Notes:

Static string matched to the error code, so you have an idea what's wrong.
(Read and Write property)

61.10.132 LibraryUsed as String

MBS CURL Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Which library is in use.
Notes:

This is for debugging only to see which library is in use.
(Read only property)

61.10.133 LibVersion as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a human readable string with the version number of libCURL and some of its important components (like OpenSSL version).
Notes: (Read only property)

61.10.134 OptionAbstractUnixSocket as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Path to an abstract Unix domain socket.
Notes: (Read and Write property)
See also ABSTRACT_UNIX_SOCKET option in CURL manual.

61.10.135 OptionAcceptEncoding as String

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the contents of the Accept-Encoding: header sent in a HTTP request, and enables decoding of a response when a Content-Encoding: header is received.
Example:

```
dim c as new CURLNMBS
c.OptionAcceptEncoding = "deflate"
```

Notes:

Three encodings are supported: identity, which does nothing, deflate which requests the server to compress its response using the zlib algorithm, and gzip which requests the gzip algorithm. If a zero-length string is set, then an Accept-Encoding: header containing all supported encodings is sent.

This is a request, not an order; the server may or may not do it. This option must be set (to any non-NULL value) or else any unsolicited encoding done by the server is ignored. See the special file README.encoding for details (included with CURL source code).
(Read and Write property)
See also ACCEPT_ENCODING option in CURL manual.

61.10.136 OptionAcceptTimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Time-out accept operations (currently for FTP only) after this amount of milliseconds.
Notes: (Read and Write property)
See also ACCEPTTIMEOUT_MS option in CURL manual.

61.10.137 OptionAddressScope as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an integer specifying the scope_id value to use when connecting to IPv6 link-local or site-local addresses.
Notes:

(Added in CURL 7.19.0)
(Read and Write property)
See also ADDRESS_SCOPE option in CURL manual.

61.10.138 OptionAppend as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to append to the remote file instead of overwrite it.
Notes:

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also APPEND option in CURL manual.

61.10.139 OptionAutoReferer as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When enabled, libCURL will automatically set the Referer: field in requests where it follows a

Location: redirect.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also AUTOREFERER option in CURL manual.

61.10.140 OptionAWSSigV4 as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides AWS V4 signature authentication on HTTP(S) header.
Notes:

Pass a text that is the collection of specific arguments are used for creating outgoing authentication headers. The format of the param option is:

provider1 [:provider2 [:region [:service]]]

provider1, provider2:
The providers arguments are used for generating some authentication parameters such as "Algorithm", "date", "request type" and "signed headers".

region:
The argument is a geographic area of a resources collection. It is extracted from the host name specified in the URL if omitted.

service:
The argument is a function provided by a cloud. It is extracted from the host name specified in the URL if omitted.

Note: This call set CURLOPT_HTTPAUTH to CURLAUTH_AWS_SIGV4. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.

Example with "Test:Try", when curl will do the algorithm, it will generate "TEST-HMAC-SHA256" for "Algorithm", "x-try-date" and "X-Try-Date" for "date", "test4_request" for "request type", "SignedHeaders=content-type;host;x-try-date" for "signed headers"
If you use just "test", instead of "test:try", test will be use for every strings generated

By default, the value of this parameter is empty. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.

(Read and Write property)
See also AWS_SIGV4 option in CURL manual.

61.10.141 OptionBufferSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Your preferred size (in bytes) for the receive buffer in libCURL.
Notes:

The main point of this would be that the write callback gets called more often and with smaller chunks. This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size. (Added in 7.10)

This size is by default set as big as possible (OptionMaxWriteSize), so it only makse sense to use this option if you want it smaller.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also BUFFERSIZE option in CURL manual.

61.10.142 OptionCAInfo as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a file holding one or more certificates to verify the peer with.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLNMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:
```

```
Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAINFO option in CURL manual.

61.10.143 OptionCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CAInfo as blob value.
Notes:

Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also CAINFO_BLOB option in CURL manual.

61.10.144 OptionCAPath as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a directory holding multiple CA certificates to verify the peer with.
Example:

```
dim c as new CURLNMBS
c.OptionCAPath = "/data/MyCertificates"
```

Notes:

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAPATH option in CURL manual.

61.10.145 OptionCertInfo as boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to enable libCURL's certificate chain info gatherer.
Notes:

With this enabled, libCURL (if built with OpenSSL) will extract lots of information and data about the certificates in the certificate chain used in the SSL connection. This data is then possible to extract after a transfer using GetInfoCertInfo. (Added in 7.19.1)
(Read and Write property)
See also CERTINFO option in CURL manual.

61.10.146 OptionConnectionTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in seconds that you allow the connection to the server to take.
Notes:

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the

OptionTimeout option.
(Read and Write property)
See also CONNECTTIMEOUT option in CURL manual.

61.10.147 OptionConnectionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in milli seconds that you allow the connection to the server to take.
Notes:

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the OptionTimeout option.
(Read and Write property)

61.10.148 OptionConnectOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A true tells the library to perform any required proxy authentication and connection setup, but no data transfer.
Notes:

This option is useful with the CURLNMBS.GetInfoLastSocket function. The library can set up the connection and then the application can obtain the most recently used socket for special data transfers. (Added in 7.15.2)
(Read and Write property)
See also CONNECT_ONLY option in CURL manual.

61.10.149 OptionCookie as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It will be used to set a cookie in the http request.
Notes:

The format of the string should be NAME=CONTENTS, where NAME is the cookie name and CONTENTS is what the cookie should contain.

If you need to set multiple cookies, you need to set them all using a single option and thus you need to concatenate them all in one single string. Set multiple cookies in one string like this: "name1=content1; name2=content2;" etc.

Using this option multiple times will only make the latest string override the previously ones.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIE option in CURL manual.

61.10.150 OptionCookieFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The cookie file content.
Notes:

It should contain the name of your file holding cookie data to read. The cookie data may be in Netscape / Mozilla cookie data format or just regular HTTP-style headers dumped to a file.

Given an empty or non-existing file or by passing the empty string (""), this option will enable cookies for this CURL handle, making it understand and parse received cookies and then use matching cookies in future request.

If you use this option multiple times, you just add more files to read. Subsequent files will add more cookies.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEFILE option in CURL manual.

61.10.151 OptionCookieJar as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: File path where to write the cookies to.
Notes:

This will make libCURL write all internally known cookies to the specified file, when the object is destroyed. If no cookies are known, no file will be created. Specify "-" to instead have the cookies written to stdout. Using this option also enables cookies for this session, so if you for example follow a location it will make matching cookies get sent accordingly.

If the cookie jar file can't be created or written to, libCURL will not and cannot report an error for this. Using OptionVerbose or DebugFunction event will get a warning to display, but that is the only visible feedback you get about this possibly lethal situation.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEJAR option in CURL manual.

61.10.152 OptionCookieList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The cookie string.
Notes:

Cookie can be either in Netscape / Mozilla format or just regular HTTP-style header (Set-Cookie: ...) format. If CURL cookie engine was not enabled it will enable its cookie engine. Passing a magic string "ALL" will erase all cookies known by CURL. (Added in 7.14.1) Passing the special string "SESS" will only erase all session cookies known by CURL. (Added in 7.15.4)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIELIST option in CURL manual.

61.10.153 OptionCookieSession as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to mark this as a new cookie "session".
Notes:

It will force libCURL to ignore all cookies it is about to load that are "session cookies" from the previous session. By default, libCURL always stores and loads all cookies, independent if they are session cookies are not. Session cookies are cookies without expiry date and they are meant to be alive and existing for this "session" only.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIESESSION option in CURL manual.

61.10.154 OptionCRLF as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Convert Unix newlines to CRLF newlines on transfers.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also CRLF option in CURL manual.

61.10.155 OptionCRLFile as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a file with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes:

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due

to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)
(Read and Write property)
See also CRLFILE option in CURL manual.

61.10.156 OptionCustomRequest as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It will be user instead of GET or HEAD when doing an HTTP request, or instead of LIST or NLST when doing an ftp directory listing.
Example:

```
dim c as CURLNMBS // your CURL instance

c.URL = "ftp://..."
c.customRequest = "MLSD" // ftp advanced directory listing
```

Notes:

This is useful for doing DELETE or other more or less obscure HTTP requests. Don't do this at will, make sure your server supports the command first.

Restore to the internal default by setting this to "".

Many people have wrongly used this option to replace the entire request with their own, including multiple headers and POST contents. While that might work in many cases, it will cause libCURL to send invalid requests and it could possibly confuse the remote server badly. Use CURLOPT_POST and OptionPostFields to set POST data. Use OptionHTTPHeader to replace or extend the set of headers sent by libCURL. Use OptionHTTPVersion to change HTTP version.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For WebDAV, you can set this to "MKCOL" to create a folder at the given URL.
(Read and Write property)
See also CUSTOMREQUEST option in CURL manual.

61.10.157 OptionDefaultProtocol as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the protocol used when curl is given a URL without a protocol.
Notes: (Read and Write property)
See also DEFAULT_PROTOCOL option in CURL manual.

61.10.158 OptionDirListOnly as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For FTP and SFTP based URLs a parameter set to true tells the library to list the names of files in a directory, rather than performing a full directory listing that would normally include file sizes, dates etc.
Notes:

For POP3 a parameter of true tells the library to list the email message or messages on the POP3 server. This can be used to change the default behaviour of libCURL, when combined with a URL that contains a message ID, to perform a "scan listing" which can then be used to determine the size of an email.

Note: For FTP this causes a NLST command to be sent to the FTP server. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

Setting this option to true also implies a directory listing even if the URL doesn't end with a slash, which otherwise is necessary.

Do NOT use this option if you also use OptionWildCardMatch as it will effectively break that feature then.
(Read and Write property)
See also DIRLISTONLY option in CURL manual.

61.10.159 OptionDisableUserNameInURL as Boolean

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disallow specifying username/login in URL.
Notes:

The value true tells the library to not allow URLs that include an username.
(Read and Write property)

61.10.160 OptionDNSCacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timeout in seconds.
Notes:

Name resolves will be kept in memory for this number of seconds. Set to zero (0) to completely disable caching, or set to -1 to make the cached entries remain forever. By default, libCURL caches this info for 60 seconds.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also DNS_CACHE_TIMEOUT option in CURL manual.

61.10.161 OptionDNSInterface as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the name of the network interface that the DNS resolver should bind to.
Notes:

This must be an interface name (not an address). Set this option to "" to use the default setting (don't bind to a specific interface).
(Read and Write property)
See also DNS_INTERFACE option in CURL manual.

61.10.162 OptionDNSLocalIPv4 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the local IPv4 address that the resolver should bind to.
Notes:

The argument should be of string and contain a single numerical IPv4 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP4 option in CURL manual.

61.10.163 OptionDNSLocalIPv6 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the local IPv6 address that the resolver should bind to.
Notes:

The argument should be of type string and contain a single IPv6 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP6 option in CURL manual.

61.10.164 OptionDNSServers as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the name servers to use for DNS resolution.
Notes: (Read and Write property)
See also DNS_SERVERS option in CURL manual.

61.10.165 OptionDNSShuffleAddresses as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to shuffle DNS addresses.
Notes:

When a name is resolved and more than one IP address is returned, shuffle the order of all returned addresses so that they will be used in a random order. This is similar to the ordering behavior of gethostbyname which is no longer used on most platforms.

Addresses will not be reshuffled if a name resolution is completed using the DNS cache. DNSCacheTimeout property can be used together with this option to reduce DNS cache timeout or disable caching entirely if frequent reshuffling is needed.

Since the addresses returned will be reordered randomly, their order will not be in accordance with RFC 3484 or any other deterministic order that may be generated by the system's name resolution implementation. This may have performance impacts and may cause IPv4 to be used before IPv6 or vice versa.
Default is false.
(Read and Write property)
See also DNS_SHUFFLE_ADDRESSES option in CURL manual.

61.10.166 OptionDOHSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to verify the host name in the DOH (DNS-over-HTTPS) SSL certificate.
Notes:

Pass a 2 as asking curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyPeer and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the DOH URL to which you told Curl to connect.
When the verify value is set to 1 it is treated the same as 2. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!
(Read and Write property)
See also DOH_SSL_VERIFYHOST option in CURL manual.

61.10.167 OptionDOHSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to verify the DOH SSL certificate.
Notes:

Pass 1 to enable or 0 to disable.
This option tells curl to verify the authenticity of the DOH (DNS-over-HTTPS) server's certificate. A value of 1 means curl verifies; 0 (zero) means it doesn't.
This option is the DOH equivalent of CURL.SetOptionSSLVerifyPeer and only affects requests to the DOH server.
When negotiating a TLS or SSL connection, the server sends a certificate indicating its identity. Curl verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. curl uses a default bundle of CA certificates (the path for that is determined at build time) and you can specify alternate certificates with the CURL.SetOptionCAInfo option or the CURL.SetOptionCAPath option.
When CURL.SetOptionDOHSSLVerifyPeer is enabled, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the peer certificate verification succeeds regardless.

Authenticating the certificate is not enough to be sure about the server. You typically also want to ensure that the server is the server you mean to be talking to. Use CURL.SetOptionDOHSSLVerifyHost for that. The check that the host name in the certificate is valid for the host name you're connecting to is done independently of the CURL.SetOptionDOHSSLVerifyPeer option.

WARNING: disabling verification of the certificate allows bad guys to man-in-the-middle the communication without you knowing it. Disabling verification makes the communication insecure. Just having encryption on a transfer is not enough as you cannot be sure that you are communicating with the correct end-point.
(Read and Write property)
See also DOH_SSL_VERIFYPEER option in CURL manual.

61.10.168 OptionDOHSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to verify the DOH SSL certificate's status.
Notes:

Pass 2 to ask curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyHost and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the DOH URL to which you told Curl to connect.
When the verify value is set to 1L it is treated the same as 2L. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0L, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!

See also OptionDOHSSLVerifyPeer to verify the digital signature of the DOH server certificate. If libcurl is built against NSS and OptionDOHSSLVerifyPeer is zero, OptionDOHSSLVerifyHost is also set to zero and cannot be overridden.
(Read and Write property)
See also DOH_SSL_VERIFYSTATUS option in CURL manual.

61.10.169 OptionDOHURL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the DNS-over-HTTPS URL.
Notes:

Pass in a string to a URL for the DOH server to use for name resolving. The parameter should be URL-encoded in the following format: "https://host:port/path". It MUST specify a HTTPS URL.

libcurl doesn't validate the syntax or use this variable until the transfer is issued. Even if you set a crazy value here, OptionDOHURL will still return CURLE_OK.

curl sends POST requests to the given DNS-over-HTTPS URL.

To find the DOH server itself, which might be specified using a name, libcurl will use the default name lookup function. You can bootstrap that by providing the address for the DOH server with OptionResolve.

Disable DOH use again by setting this option to "".
(Read and Write property)
See also DOH_URL option in CURL manual.

61.10.170 OptionEGDSocket as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The path name to the Entropy Gathering Daemon socket.
Notes:

It will be used to seed the random engine for SSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also EGDSOCKET option in CURL manual.

61.10.171 OptionExpect100TimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets Expect 100 timeout.
Notes:

Time to wait in milliseconds for a response to a HTTP request containing an Expect: 100-continue header before sending the data anyway.
(Read and Write property)
See also EXPECT_100_TIMEOUT_MS option in CURL manual.

61.10.172 OptionFailOnError as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to fail silently if the HTTP code returned is equal to or larger than 400. The default action would be to return the page normally, ignoring that code.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This method is not fail-safe and there are occasions where non-succesful response codes will slip through, especially when authentication is involved (response codes 401 and 407).

You might get some amounts of headers transferred before this situation is detected, like for when a "100-continue" is received as a response to a POST/PUT and a 401 or 407 is received immediately afterwards.
(Read and Write property)
See also FAILONERROR option in CURL manual.

61.10.173 OptionFileTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether filetime should be querried.
Example:

```
// init CURL with options
dim d as new CURLNMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes:

If it is true, libCURL will attempt to get the modification date of the remote document in this operation. This requires that the remote server sends the time or replies to a time querying command.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FILETIME option in CURL manual.

61.10.174 OptionFollowLocation as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A boolean parameter tells the library to follow any Location: header that the server sends as part of an HTTP header.
Example:

```
dim c as new CURLNMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
```

Notes:

This means that the library will re-send the same request on the new location and follow new Location: headers all the way until no more such headers are returned. OptionMaxRedirs can be used to limit the number of redirects libCURL will follow.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FOLLOWLOCATION option in CURL manual.

61.10.175 OptionForbitReuse as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to make the next transfer explicitly close the connection when done.

Notes:

Normally, libCURL keep all connections alive when done with one transfer in case there comes a succeeding one that can re-use them. This option should be used with caution and only if you understand what it does. Set to false to have libCURL keep the connection open for possibly later re-use (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.10.176 OptionFreshConnect as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to make the next transfer use a new (fresh) connection by force.
Example:

```
dim c as new CURLNMBS

c.OptionFreshConnect=True
```

Notes:

If the connection cache is full before this connection, one of the existing connections will be closed as according to the selected or default policy. This option should be used with caution and only if you understand what it does. Set this to 0 to have libCURL attempt re-using an existing connection (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FRESH_CONNECT option in CURL manual.

61.10.177 OptionFTPAccount as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The FTP account name to use.
Notes:

When an FTP server asks for "account data" after user name and password has been provided, this data is sent off using the ACCT command.

(Read and Write property)
See also FTP_ACCOUNT option in CURL manual.

61.10.178 OptionFTPAlternativeToUser as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The alternative username.
Notes:

Pass a string as parameter, pointing to a string which will be used to authenticate if the usual FTP "USER user" and "PASS password" negotiation fails. This is currently only known to be required when connecting to Tumbleweed's Secure Transport FTPS server using client certificates for authentication. (Added in 7.15.5)
(Read and Write property)
See also FTP_ALTERNATIVE_TO_USER option in CURL manual.

61.10.179 OptionFTPAppend as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to append to the remote file instead of overwrite it.
Deprecated: This item is deprecated and should no longer be used. You can use OptionAppend instead.
Notes:

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.10.180 OptionFTPCreateMissingDirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is 1, CURL will attempt to create any remote directory that it fails to CWD into.
Notes:

CWD is the command that changes working directory. (Added in 7.10.7)

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.
Newer CURL Library versions allow a value of 2 to do a CWD after the directory was created, so this property changed from boolean to integer.
(Read and Write property)
See also FTP_CREATE_MISSING_DIRS option in CURL manual.

61.10.181 OptionFTPFileMethod as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an integer that should have one of the following values.
Notes:

This option controls what method libCURL should use to reach a file on a FTP(S) server. The argument should be one of the following alternatives:

URLFTPMETHOD_MULTICWD = 1

libCURL does a single CWD operation for each path part in the given URL. For deep hierarchies this means very many commands. This is how RFC1738 says it should be done. This is the default but the slowest behavior.

CURLFTPMETHOD_NOCWD = 2

libCURL does no CWD at all. libCURL will do SIZE, RETR, STOR etc and give a full path to the server for all these commands. This is the fastest behavior.

CURLFTPMETHOD_SINGLECWD = 3

libCURL does one CWD with the full target directory and then operates on the file "normally" (like in the multicwd case). This is somewhat more standards compliant than 'nocwd' but without the full penalty of 'multicwd'.
(Read and Write property)
See also FTP_FILEMETHOD option in CURL manual.

61.10.182 OptionFTPListOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to just list the names of an ftp directory, instead of doing a full directory listing that would include file sizes, dates etc.
Deprecated: This item is deprecated and should no longer be used. You can use OptionDirListOnly instead. **Notes:**

This causes an FTP NLST command to be sent. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.10.183 OptionFTPPort as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The port to use for ftp.
Notes:

It will be used to get the IP address to use for the ftp PORT instruction. The PORT instruction tells the remote server to connect to our specified IP address. The string may be a plain IP address, a host name, an network interface name (under Unix) or just a '-' letter to let the library use your systems default IP address. Default FTP operations are passive, and thus won't use PORT.

You disable PORT again and go back to using the passive version by setting this option to "".

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPPORT option in CURL manual.

61.10.184 OptionFTPResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Causes CURL to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to generate a response message for a command before the session is considered hung.
Notes:

While CURL is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionFTPResponseTimeout to a value smaller than OptionTimeout. (Added in 7.10.8)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_RESPONSE_TIMEOUT option in CURL manual.

61.10.185 OptionFTPSkipPasvIP as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If set to a non-zero value, it instructs libCURL to not use the IP address the server suggests in its 227-response to libCURL's PASV command when libCURL connects the data connection.
Notes:

Instead libCURL will re-use the same IP address it already uses for the control connection. But it will use the port number from the 227-response. (Added in 7.14.2)

This option has no effect if PORT, EPRT or EPSV is used instead of PASV.
(Read and Write property)
See also FTP_SKIP_PASV_IP option in CURL manual.

61.10.186 OptionFTPSSL as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Request using SSL / TLS for the transfer.
Example:

```
dim c as CURLNMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Deprecated: This item is deprecated and should no longer be used. You can use OptionUseSSL instead.
Notes:

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

(Read and Write property)

61.10.187 OptionFTPSSLAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: What kind of SSL authentication to use for FTP.
Notes:

Pass an integer using one of the values from below, to alter how libCURL issues "AUTH TLS" or "AUTH SSL" when FTP over SSL is activated (see CURLOPT_FTP_SSL). (Added in 7.12.2)

kFTPAUTH_DEFAULT = 0

Allow libCURL to decide

kFTPAUTH_SSL = 1

Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

kFTPAUTH_TLS = 2

Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPSSLAUTH option in CURL manual.

61.10.188 OptionFTPSSLCCC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If enabled, this option makes libCURL use CCC (Clear Command Channel).
Notes:

It shuts down the SSL/TLS layer after authenticating. The rest of the control channel communication will be unencrypted. This allows NAT routers to follow the FTP transaction. Pass a long using one of the values below. (Added in 7.16.1)

CURLFTPSSL_CCC_NONE	0	Don't attempt to use CCC.
CURLFTPSSL_CCC_PASSIVE	1	Do not initiate the shutdown, but wait for the server to do it. Do not send a reply.
CURLFTPSSL_CCC_ACTIVE	2	Initiate the shutdown and wait for a reply.

(Read and Write property)
See also FTP_SSL_CCC option in CURL manual.

61.10.189 OptionFTPUseEPRT as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is true, it tells CURL to use the EPRT (and LPRT) command when doing active FTP downloads (which is enabled by CURLOPT_FTPPORT).
Notes:

Using EPRT means that it will first attempt to use EPRT and then LPRT before using PORT, but if you pass FALSE (zero) to this option, it will not try using EPRT or LPRT, only plain PORT. (Added in 7.10.5)

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPRT option in CURL manual.

61.10.190 OptionFTPUseEPSV as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is true, it tells CURL to use the EPSV command when doing passive FTP downloads (which it always does by default).
Notes:

Using EPSV means that it will first attempt to use EPSV before using PASV, but if you pass FALSE (zero) to this option, it will not try using EPSV, only plain PASV.

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPSV option in CURL manual.

61.10.191 OptionFTPusePret as Boolean

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is true, it tells CURL to send a PRET command before PASV (and EPSV). Certain FTP servers, mainly drftpd, require this non-standard command for directory listings as well as up and downloads in PASV mode.
Notes:

Has no effect when using the active FTP transfers mode. (Added in 7.20.0)
(Read and Write property)
See also FTP_USE_PRET option in CURL manual.

61.10.192 OptionGet as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the true, this forces the HTTP request to get back to GET.
Notes:

usable if a POST, HEAD, PUT or a custom request have been used previously using the same CURL handle.

When setting OptionGet to a true value, it will automatically set OptionNoBody to true (since 7.14.1).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.10.193 OptionGSSAPIDelegation as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Allow GSSAPI credential delegation.
Notes: (Read and Write property)
See also GSSAPI_DELEGATION option in CURL manual.

61.10.194 OptionHappyEyeballsTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The happy eyeballs timeout.
Notes:

Head start in milliseconds to give happy eyeballs.
(Read and Write property)
See also HAPPY_EYEBALLS_TIMEOUT_MS option in CURL manual.

61.10.195 OptionHAProxyProtocol as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to send an HAProxy PROXY protocol header.
Notes:

Set to true to tell the library to send an HAProxy PROXY protocol header at beginning of the connection.
The default action is not to send this header.
This option is primarily useful when sending test requests to a service that expects this header.
Most applications do not need this option.
Default false, do not send HAProxy PROXY protocol header.
(Read and Write property)
See also HAPROXYPROTOCOL option in CURL manual.

61.10.196 OptionHeader as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to include the header in the body output.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This is only relevant for protocols that actually have headers preceding the data (like HTTP).
(Read and Write property)
See also HEADER option in CURL manual.

61.10.197 OptionHeaderOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass in a bitmask of "header options".
Notes: (Read and Write property)
See also HEADEROPT option in CURL manual.

61.10.198 OptionHTTPAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Which http authentication to use.
Notes:

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use. The available bits are listed below. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the UserPassword option. (Added in 7.10.6)

kAuthBASIC = 1

HTTP Basic authentication. This is the default choice, and the only method that is in wide-spread use and supported virtually everywhere. This is sending the user name and password over the network in plain text, easily captured by others.

kAuthDIGEST = 2

HTTP Digest authentication. Digest authentication is defined in RFC2617 and is a more secure way to do

authentication over public networks than the regular old-fashioned Basic method.

kAuthGSSNEGOTIATE = 4

HTTP GSS-Negotiate authentication. The GSS-Negotiate (also known as plain "Negotiate") method was designed by Microsoft and is used in their web applications. It is primarily meant as a support for Kerberos5 authentication but may be also used along with another authentication methods. For more information see IETF draft draft-brezak-spnego-http-04.txt.

You need to build libCURL with a suitable GSS-API library for this to work.

kAuthNTLM = 8

HTTP NTLM authentication. A proprietary protocol invented and used by Microsoft. It uses a challenge-response and hash concept similar to Digest, to prevent the password from being eavesdropped.

You need to build libCURL with OpenSSL support for this option to work, or build libCURL on Windows.

kAuthANY = & hFFFFFFFF

This is a convenience macro that sets all bits and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

kAuthANYSAFE = & hFFFFFFFE

This is a convenience macro that sets all bits except Basic and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPAUTH option in CURL manual.

61.10.199 OptionHTTPContentDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a long to tell libCURL how to act on content decoding.
Notes:

If set to zero, content decoding will be disabled. If set to 1 it is enabled. Note however that libCURL has no default content decoding but requires you to use OptionEncoding for that. (added in 7.16.2)
(Read and Write property)
See also HTTP_CONTENT_DECODING option in CURL manual.

61.10.200 OptionHTTPProxyTunnel as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the parameter to true to get the library to tunnel all operations through a given HTTP proxy.
Notes:

There is a big difference between using a proxy and to tunnel through it. If you don't know what this means, you probably don't want this tunneling option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPPROXYTUNNEL option in CURL manual.

61.10.201 OptionHTTPTransferDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an integer to tell libCURL how to act on transfer decoding.
Notes:

If set to zero, transfer decoding will be disabled, if set to 1 it is enabled (default). libCURL does chunked transfer decoding by default unless this option is set to zero. (added in 7.16.2)
(Read and Write property)
See also HTTP_TRANSFER_DECODING option in CURL manual.

61.10.202 OptionHTTPVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to one of the values described below.
Notes:

They force libCURL to use the specific HTTP versions. This is not sensible to do unless you have a good reason.

kHTTP_VERSION_NONE = 0

We don't care about what version the library uses. libCURL will use whatever it thinks fit.

kHTTP_VERSION_1_0 = 1

Enforce HTTP 1.0 requests.

kHTTP_VERSION_1_1 = 2

Enforce HTTP 1.1 requests.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTP_VERSION option in CURL manual.

61.10.203 OptionIgnoreContentLength as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to ignore the Content-Length header.
Notes:

This is useful for Apache 1.x (and similar servers) which will report incorrect content length for files over 2 gigabytes. If this option is used, CURL will not be able to accurately report progress, and will simply stop the download when the server ends the connection. (added in 7.14.1)
(Read and Write property)
See also IGNORE_CONTENT_LENGTH option in CURL manual.

61.10.204 OptionInFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.

Notes:

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read callback returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INFILESIZE option in CURL manual.

61.10.205 OptionInFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.
Deprecated: This item is deprecated and should no longer be used. You can use OptionInFileSize instead.
Notes:

This value should be passed as a CURL_off_t. (Added in 7.11.0)

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read callback returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.10.206 OptionInterface as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This set the interface name to use as outgoing network interface.
Notes:

The name can be an interface name, an IP address or a host name.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INTERFACE option in CURL manual.

61.10.207 OptionIPResolve as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Allows an application to select what kind of IP addresses to use when resolving host names.
Example:

```
dim c as new CURLNMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

Notes:

This is only interesting when using host names that resolve addresses using more than one version of IP. The allowed values are:

kIPRESOLVE_WHATEVER = 0

Default, resolves addresses to all IP versions that your system allows.

kIPRESOLVE_V4 = 1

Resolve to ipv4 addresses.

kIPRESOLVE_V6 = 2

Resolve to ipv6 addresses.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also IPRESOLVE option in CURL manual.

61.10.208 OptionIssuerCert as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a file holding a CA certificate in PEM format.

Notes:

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also ISSUERCERT option in CURL manual.

61.10.209 OptionIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set issuer SSL certificate from memory blob.
Notes:

Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionIssuerCert which instead expects a file name as input.
(Read and Write property)
See also ISSUERCERT_BLOB option in CURL manual.

61.10.210 OptionKeepSendingOnError as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to keep sending on error.
Notes:

Continue to send data if the server responds early with an HTTP status code >= 300
(Read and Write property)
See also KEEP_SENDING_ON_ERROR option in CURL manual.

61.10.211 OptionKeyPassword as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set passphrase to private key.
Notes:

It will be used as the password required to use the OptionSSLKey or OptionSSHPrivateKeyfile private key.
You never needed a pass phrase to load a certificate but you need one to load your private key.
(Read and Write property)
See also KEYPASSWD option in CURL manual.

61.10.212 OptionKRB4Level as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the krb4 security level, this also enables krb4 awareness.
Deprecated: This item is deprecated and should no longer be used. You can use OptionKRBLevel instead.
Notes:

This is a string, 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to "" to disable kerberos4. The kerberos support only works for FTP.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.10.213 OptionKRBLevel as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: FTP kerberos security level.
Notes:

Set the kerberos security level for FTP; this also enables kerberos awareness. This is a string that should match one of the following: 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to NULL to disable kerberos support for FTP.
(Read and Write property)
See also KRBLEVEL option in CURL manual.

61.10.214 OptionLocalPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This sets the local port number of the socket used for connection.
Notes:

This can be used in combination with OptionInterface and you are recommended to use OptionLocalPortRange as well when this is set. Note that port numbers are only valid 1 - 65535. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORT option in CURL manual.

61.10.215 OptionLocalPortRange as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This is the number of attempts libCURL should do to find a working local port number.
Notes:

It starts with the given OptionLocalPort and adds one to the number for each retry. Setting this value to 1 or below will make libCURL do only one try for exact port number. Note that port numbers by nature is a scarce resource that will be busy at times so setting this value to something too low might cause unnecessary connection setup failures. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORTRANGE option in CURL manual.

61.10.216 OptionLoginOptions as String

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Login options string to use for the transfer.
Notes:

For more information about the login options please see RFC 2384, RFC5092 and IETF draft draft-earhart-url-smtp-00.txt

CURLOPT_LOGIN_OPTIONS can be used to set protocol specific login options, such as the preferred authentication mechanism via "AUTH=NTLM" or "AUTH=*", and should be used in conjunction with the OptionUserName option.
Only IMAP, POP3 and SMTP support login options.
(Read and Write property)
See also LOGIN_OPTIONS option in CURL manual.

61.10.217 OptionLowSpeedLimit as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This property contains the transfer speed in bytes per second that the transfer should be below during OptionLowSpeedTime seconds for the library to consider it too slow and abort.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_LIMIT option in CURL manual.

61.10.218 OptionLowSpeedTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This property contains the time in seconds that the transfer should be below the OptionLowSpeedLimit for the library to consider it too slow and abort.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_TIME option in CURL manual.

61.10.219 OptionMailAuth as String

MBS CURL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This string will be used to specify the authentication address (identity) of a submitted message that is being relayed to another server.
Notes:

This optional parameter allows co-operating agents in a trusted environment to communicate the authentication of individual messages and should only be used by the application program, using libCURL, if the application is itself a mail server acting in such an environment. If the application is operating as such and the AUTH address is not known or is invalid, then an empty string should be used for this parameter.

Unlike OptionMailFrom and SetOptionMailRecipients, the address should not be specified within a pair of angled brackets (<>). However, if an empty string is used then a pair of brackets will be sent by libCURL as required by RFC 2554.
(Read and Write property)
See also MAIL_AUTH option in CURL manual.

61.10.220 OptionMailFrom as String

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string that will be used to specify the sender address in a mail when sending an SMTP mail with libCURL.
Notes: (Read and Write property)
See also MAIL_FROM option in CURL manual.

61.10.221 OptionMaxAgeConn as Integer

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum age the connection should have in seconds.
Notes:

Older connections are not reused, but discarded.
(Read and Write property)
See also MAXAGE_CONN option in CURL manual.

61.10.222 OptionMaxConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The set number will be the persistent connection cache size.
Notes:

The set amount will be the maximum amount of simultaneously open connections that libCURL may cache. Default is 5, and there isn't much point in changing this value unless you are perfectly aware of how this work and changes libCURL's behaviour. This concerns connection using any of the protocols that support persistent connections.

When reaching the maximum limit, CURL closes the oldest one in the cache to prevent the number of open connections to increase.

If you already have performed transfers with this CURL handle, setting a smaller MAXCONNECTS than before may cause open connections to get closed unnecessarily.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXCONNECTS option in CURL manual.

61.10.223 OptionMaxFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This allows you to specify the maximum size (in bytes) of a file to download.
Notes:

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned.

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXFILESIZE option in CURL manual.

61.10.224 OptionMaxFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This allows you to specify the maximum size (in bytes) of a file to download.
Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxFileSize instead. **Notes:**

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned. (Added in 7.11.0)

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.10.225 OptionMaxRecvSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the maximum download speed.
Notes:

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)
See also MAX_RECV_SPEED option in CURL manual.

61.10.226 OptionMaxRecvSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the maximum download speed.
Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxRecvSpeed instead. **Notes:**

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)

(Read and Write property)

61.10.227 OptionMaxRedirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The set number will be the redirection limit.
Example:

```
dim c as new CURLNMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
```

Notes:

If that many redirections have been followed, the next redirect will cause an error (kError_TOO_MANY_REDIRECTS). This option only makes sense if the CURLOPT_FOLLOWLOCATION is used at the same time. Added in 7.15.1: Setting the limit to 0 will make libCURL refuse any redirect. Set it to -1 for an infinite number of redirects (which is the default)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXREDIRS option in CURL manual.

61.10.228 OptionMaxSendSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the maximum upload speed.
Notes:

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)
See also MAX_SEND_SPEED option in CURL manual.

61.10.229 OptionMaxSendSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the maximum upload speed.
Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxSendSpeed instead. **Notes:**

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)

61.10.230 OptionNetRC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Controls usage of netrc file.
Notes:

This parameter controls the preference of libCURL between using user names and passwords from your textasciitilde /.netrc file, relative to user names and passwords in the URL supplied with OptionURL.

libCURL uses a user name (and supplied or prompted password) supplied with OptionUsername and OptionPassword in preference to any of the options controlled by this parameter.

An integer, set to one of the values described below.

kNETRC_OPTIONAL = 1

The use of your
textasciitilde /.netrc file is optional, and information in the URL is to be preferred. The file will be scanned with the host and user name (to find the password only) or with the host only, to find the first user name and password after that machine, which ever information is not specified in the URL.

Undefined values of the option will have this effect.

kNETRC_IGNORED = 0

The library will ignore the file and use only the information in the URL.

This is the default.

kNETRC_REQUIRED = 2

This value tells the library that use of the file is required, to ignore the information in the URL, and to search the file with the host only.

Only machine name, user name and password are taken into account (init macros and similar things aren't supported).

libCURL does not verify that the file has the correct properties set (as the standard Unix ftp client does). It should only be readable by user.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NETRC option in CURL manual.

61.10.231 OptionNetRCFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string containing the full path name to the file you want libCURL to use as .netrc file.
Notes:

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also NETRC_FILE option in CURL manual.

61.10.232 OptionNewDirectoryPerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer, containing the value of the permissions that will be assigned to newly created directories on the remote server.
Notes:

The default value is 0755, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Value must be octal, so use & o prefix for number.
(Read and Write property)
See also NEW_DIRECTORY_PERMS option in CURL manual.

61.10.233 OptionNewFilePerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer, containing the value of the permissions that will be assigned to newly created files on the remote server.
Notes:

The default value is & o0644, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Be aware that you normally specify this in octal values. So use the & o prefix in Xojo.
(Read and Write property)
See also NEW_FILE_PERMS option in CURL manual.

61.10.234 OptionNoBody as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to not include the body-part in the output.
Notes:

This is only relevant for protocols that have separate header and body parts. On HTTP(S) servers, this will make libCURL do a HEAD request.

To change request to GET, you should use OptionGet. Change request to POST with OptionPost etc.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)
See also NOBODY option in CURL manual.

61.10.235 OptionNoProxy as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string with a comma- separated list of hosts which do not use a proxy, if one is specified.
Notes:

The only wildcard is a single * character, which matches all hosts, and effectively disables the proxy. Each name in this list is matched as either a domain which contains the hostname, or the hostname itself. For example, local.com would match local.com, local.com:80, and www.local.com, but not www.notlocal.com. (Added in 7.19.4)
(Read and Write property)
See also NOPROXY option in CURL manual.

61.10.236 OptionNoSignal as Integer

MBS CURL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to not use signals.
Notes:

If it is true, libCURL will not use any functions that install signal handlers or any functions that cause signals to be sent to the process. This option is mainly here to allow multi-threaded unix applications to still set/use all timeout options etc, without risking getting signals. (Added in 7.10)

If this option is set and libCURL has been built with the standard name resolver, timeouts will not occur while the name resolve takes place. Consider building libCURL with c-ares support to enable asynchronous DNS lookups, which enables nice timeouts for name resolves without signals.

Setting OptionNoSignal to true makes libCURL NOT ask the system to ignore SIGPIPE signals, which otherwise are sent by the system when trying to send data to a socket which is closed in the other end. libCURL makes an effort to never cause such SIGPIPEs to trigger, but some operating systems have no way to avoid them and even on those that have there are some corner cases when they may still happen, contrary to our desire. In addition, using CURLAUTH_NTLM_WB authentication could cause a SIGCHLD signal to be raised.
(Read and Write property)
See also NOSIGNAL option in CURL manual.

61.10.237 OptionPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The password to use for the transfer.
Notes:

The OptionPassword option should be used in conjunction with the OptionUsername option.
(Read and Write property)
See also PASSWORD option in CURL manual.

61.10.238 OptionPathAsIs as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass path as it is and do not resolve dots.
Notes:

Do not squash dot-dot sequences.
(Read and Write property)
See also PATH_AS_IS option in CURL manual.

61.10.239 OptionPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The public key in DER form used to validate the peer public key.
Notes:

Native path to key file.
This option is used only if SSLVerifyPeer is true.
(Read and Write property)
See also PINNEDPUBLICKEY option in CURL manual.

61.10.240 OptionPipeWait as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Wait/don't wait for pipe/mutex to clarify.
Notes: (Read and Write property)

See also PIPEWAIT option in CURL manual.

61.10.241 OptionPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The remote port number to connect to, instead of the one specified in the URL or the default port for the used protocol.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PORT option in CURL manual.

61.10.242 OptionPost as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A boolean parameter tells the library to do a regular HTTP post.
Notes:

This will also make the library use the a "Content-Type: application/x-www-form-urlencoded" header. (This is by far the most commonly used POST method).

Use the OptionPostFields option to specify what data to post.

Optionally, you can provide data to POST using the Read event but then you must make sure to not set OptionPostFields to anything but "". When providing data with an event, you must transmit it using chunked transfer-encoding.

You can override the default POST Content-Type: header by setting your own with OptionHTTPHeader.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use POST to a HTTP 1.1 server, you can send data without knowing the size before starting the POST if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size in the request.

When setting CURLOPT_POST to a non-zero value, it will automatically set OptionNoBody to 0 (since 7.14.1).

If you issue a POST request and then want to make a HEAD or GET using the same re-used handle, you must explictly set the new request type using OptionNoBody or OptionGet or similar.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also POST option in CURL manual.

61.10.243 OptionPostFields as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string which should be the full data to post in an HTTP POST operation.
Example:

```
dim xml as string // XML or JSON to send as payload
dim c as new CURLNMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
c.OptionPostFields = xml
c.OptionUserAgent = "Test App"
c.OptionPost = true

// for SOAP use right content type
c.SetOptionHTTPHeader array("Content-Type: application/soap+xml; charset=utf-8")
```

Notes:

You must make sure that the data is formatted the way you want the server to receive it. libCURL will not convert or encode it for you. Most web servers will assume this data to be url-encoded. Take note.

This POST is a normal application/x-www-form-urlencoded kind (and libCURL will set that Content-Type by default when this option is used), which is the most commonly used one by HTML forms. See also the OptionPost. Using OptionPostFields implies OptionPost.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header

with CURLOPT_HTTPHEADER as usual.

To make multipart/formdata posts (aka rfc1867-posts), check out the OptionPost option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COPYPOSTFIELDS option in CURL manual.

61.10.244 OptionPostFieldSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The size of the post data.
Notes:

Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)
See also POSTFIELDSIZE option in CURL manual.

61.10.245 OptionPostFieldSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The size of the post data. (64 bit version)
Deprecated: This item is deprecated and should no longer be used. You can use OptionPostFieldSize instead. **Notes:**

Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)

61.10.246 OptionPostRedir as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask to control how libCURL acts on redirects after POSTs that get a 301 or 302 response back.
Notes:

A parameter with bit 0 set (value CURL_REDIR_POST_301=1) tells the library to respect RFC 2616/10.3.2 and not convert POST requests into GET requests when following a 301 redirection. Setting bit 1 (value CURL_REDIR_POST_302=2) makes libCURL maintain the request method after a 302 redirect. CURL_REDIR_POST_A is a convenience define that sets both bits.

The non-RFC behaviour is ubiquitous in web browsers, so the library does the conversion by default to maintain consistency. However, a server may require a POST to remain a POST after such a redirection. This option is meaningful only when setting OptionFollowLocation. (Added in 7.17.1) (This option was known as CURLOPT_POST301 up to 7.19.0 as it only supported the 301 way before then)
(Read and Write property)
See also POSTREDIR option in CURL manual.

61.10.247 OptionPreProxy as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of pre proxy to use.
Notes: (Read and Write property)
See also PRE_PROXY option in CURL manual.

61.10.248 OptionProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask of kProtocol* constants.
Notes:

If used, this bitmask limits what protocols libCURL may use in the transfer. This allows you to have a libCURL built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default libCURL will accept all protocols it supports. See also OptionRedirProtocols. (Added in 7.19.4)
(Read and Write property)
See also PROTOCOLS option in CURL manual.

61.10.249 OptionProxy as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set HTTP proxy to use.
Example:

```
dim c as CURLNMBS // your CURL object
dim psAddress as string // your proxy address
dim psPort as Integer // your proxy port

c.OptionProxy=psAddress
c.OptionProxyPort=psPort
c.OptionProxyType=c.kPROXY_HTTP
```

Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a string holding the host name or dotted IP address. To specify port number in this string, append : [port] to the end of the host name. The proxy string may be prefixed with [protocol] :// since any such prefix will be ignored. The proxy's port number may optionally be specified with the separate option ProxyHost.

When you tell the library to use an HTTP proxy, libCURL will transparently convert operations to HTTP even if you specify an FTP URL etc. This may have an impact on what other features of the library you can use, such as CURLOPT_QUOTE and similar FTP specifics that don't work unless you tunnel through the HTTP proxy. Such tunneling is activated with HTTPProxyTunnel.

libCURL respects the environment variables http_proxy, ftp_proxy, all_proxy etc, if any of those is set. The Proxy option does however override any possibly set environment variables.

Starting with 7.14.1, the proxy host string given in environment variables can be specified the exact same way as the proxy can be set with Proxy, include protocol prefix (http://) and embedded user + password.

You can use WinHTTPClientMBS class on Windows or CFProxyMBS on Mac to discover system proxy settings.
(Read and Write property)
See also PROXY option in CURL manual.

61.10.250 OptionProxyAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Which proxy authentication to use.
Notes:

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use for your proxy authentication. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the ProxyUserPassword option. The bitmask can be constructed by or'ing together the bits listed above for the HTTPAuth option. As of this writing, only Basic, Digest and NTLM work. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PROXYAUTH option in CURL manual.

61.10.251 OptionProxyCAInfo as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CApath or CAfile used to validate the proxy certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLNMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

Pass native file path.
This option is used only if CURLNMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAINFO option in CURL manual.

61.10.252 OptionProxyCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CAInfo for proxy as blob value.
Notes:

This option is for connecting to an HTTPS proxy, not an HTTPS server.
Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also PROXY_CAINFO_BLOB option in CURL manual.

61.10.253 OptionProxyCAPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CApath directory used to validate the proxy certificate.
Notes:

Pass native file path.
This option is used only if CURLNMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAPATH option in CURL manual.

61.10.254 OptionProxyCRLFile as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CRL file for proxy.
Notes:

Pass native file path.
(Read and Write property)
See also PROXY_CRLFILE option in CURL manual.

61.10.255 OptionProxyIssuerCert as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the proxy issuer SSL certificate filename.
Notes:

Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).
(Read and Write property)
See also PROXY_ISSUERCERT option in CURL manual.

61.10.256 OptionProxyIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set proxy issuer SSL certificate from memory blob.
Notes:

Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionProxyIssuerCert which instead expects a file name as input.
(Read and Write property)

See also PROXY_ISSUERCERT_BLOB option in CURL manual.

61.10.257 OptionProxyKeyPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Password for the SSL private key for proxy.
Notes: (Read and Write property)
See also PROXY_KEYPASSWD option in CURL manual.

61.10.258 OptionProxyPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string which should be pointing to the password to use for the transfer while connecting to Proxy.
Notes:

The OptionProxyPassword option should be used in conjunction with the OptionProxyUsername option.
(Added in 7.19.1)
(Read and Write property)
See also PROXYPASSWORD option in CURL manual.

61.10.259 OptionProxyPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The public key in DER form used to validate the proxy public key.
Notes:

This option is used only if CURLNMBS.OptionProxySSLVerifyPeer is true.
Please path native file path to key file.
(Read and Write property)
See also PROXY_PINNEDPUBLICKEY option in CURL manual.

61.10.260 OptionProxyPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The proxy port to connect to unless it is specified in the proxy string OptionProxy.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

You can use OptionProxy with port, e.g. "12.34.56.78:8080" or pass port here and proxy without port.
For some users it seems like the option with OptionProxy including port works better.
(Read and Write property)
See also PROXYPORT option in CURL manual.

61.10.261 OptionProxyServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Proxy Service Name.
Notes: (Read and Write property)
See also PROXY_SERVICE_NAME option in CURL manual.

61.10.262 OptionProxySSLCert as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of the file keeping your private SSL-certificate for proxy.
Notes: (Read and Write property)
See also PROXY_SSLCERT option in CURL manual.

61.10.263 OptionProxySSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets private key for proxy cert from memory blob.
Notes:

Pass data, which contains the private key for connecting to the HTTPS proxy. Compatible with OpenSSL.
The format (like "PEM") must be specified with CURL.SetOptionProxySSLKeyType.
(Read and Write property)
See also PROXY_SSLCERT_BLOB option in CURL manual.

61.10.264 OptionProxySSLCertType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Type of the file keeping your SSL-certificate for proxy.
Notes:

Value can be "DER", "PEM" or "ENG".
(Read and Write property)
See also PROXY_SSLCERTTYPE option in CURL manual.

61.10.265 OptionProxySSLCipherList as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify which SSL ciphers to use for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_CIPHER_LIST option in CURL manual.

61.10.266 OptionProxySSLKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of the file keeping your private SSL-key for proxy.
Notes:

Pass native file path.
(Read and Write property)
See also PROXY_SSLKEY option in CURL manual.

61.10.267 OptionProxySSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set private key for proxy cert from memory blob.
Notes:

Pass data, which contains a private key for connecting to the HTTPS proxy. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionProxySSLKeyType.

This option is an alternative to OptionProxySSLKey which instead expects a file name as input.
(Read and Write property)
See also PROXY_SSLKEY_BLOB option in CURL manual.

61.10.268 OptionProxySSLKeyType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets type of the file keeping your private SSL-key for proxy.
Notes:

Value is DER, PEM or ENG.
(Read and Write property)
See also PROXY_SSLKEYTYPE option in CURL manual.

61.10.269 OptionProxySSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable specific SSL features with a bitmask for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_OPTIONS option in CURL manual.

61.10.270 OptionProxySSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable SSL Host verification.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLNMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:
```

```
Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

Set if we should verify the Common name from the proxy certificate in ssl handshake, set 1 to check existence, 2 to ensure that it matches the provided hostname.
(Read and Write property)
See also PROXY_SSL_VERIFYHOST option in CURL manual.

61.10.271 OptionProxySSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if we should verify the proxy in ssl handshake.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLNMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

set 1 to verify.
(Read and Write property)
See also PROXY_SSL_VERIFYPEER option in CURL manual.

61.10.272 OptionProxySSLVersion as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: What version to specifically try to use for proxy.
Notes:

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVERSION_MAX_ macros.

Default	& h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	& h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	& h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	& h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	& h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)
See also PROXY_SSLVERSION option in CURL manual.

61.10.273 OptionProxyTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify which TLS 1.3 ciphers suites to use for proxy.
Notes:

The list of cipher suites to use for the TLS 1.3 connection to a proxy. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.
(Read and Write property)
See also PROXY_TLS13_CIPHERS option in CURL manual.

61.10.274 OptionProxyTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Password for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_PASSWORD option in CURL manual.

61.10.275 OptionProxyTLSAuthType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set authentication type for authenticated TLS for proxy
Notes: (Read and Write property)
See also PROXY_TLSAUTH_TYPE option in CURL manual.

61.10.276 OptionProxyTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a username for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_USERNAME option in CURL manual.

61.10.277 OptionProxyTransferMode as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If this integer value is set to 1 (one), it tells libCURL to set the transfer mode (binary or ASCII) for FTP transfers done via an HTTP proxy, by appending ;type=a or ;type=i to the URL.
Notes:

Without this setting, or it being set to 0 (zero, the default), OptionTransferText has no effect when doing FTP via a proxy. Beware that not all proxies support this feature. (Added in 7.18.0)
(Read and Write property)
See also PROXY_TRANSFER_MODE option in CURL manual.

61.10.278 OptionProxyType as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This option is to set type of the proxy.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Available options for this are kPROXY_HTTP, kPROXY_SOCKS4 (added in 7.15.2) kPROXY_SOCKS5. The HTTP type is default.
(Read and Write property)
See also PROXYTYPE option in CURL manual.

61.10.279 OptionProxyUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string, which should be pointing to the user name to use for the transfer while connecting to Proxy.
Notes:

In order to specify the password to be used in conjunction with the user name use the OptionProxyPassword option.
(Read and Write property)
See also PROXYUSERNAME option in CURL manual.

61.10.280 OptionPut as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A non-zero parameter tells the library to use HTTP PUT to transfer data.
Notes:

The data should be set with OptionInFileSize.

This option is deprecated and starting with version 7.12.1 you should instead use OptionUpload.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PUT option in CURL manual.

61.10.281 OptionRandomFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A file name for the random file.
Notes:

The file will be used to read from to seed the random engine for SSL. The more random the specified file is, the more secure the SSL connection will become.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)

See also RANDOM_FILE option in CURL manual.

61.10.282 OptionRange as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string which should contain the specified range you want.
Notes:

It should be in the format "X-Y", where X or Y may be left out. HTTP transfers also support several intervals, separated with commas as in "X-Y,N-M". Using this kind of multiple intervals will cause the HTTP server to send the response document in pieces (using standard MIME separation techniques). Pass a NULL to this option to disable the use of ranges.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RANGE option in CURL manual.

61.10.283 OptionRedirProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer that holds a bitmask of kProtocol* constants.
Notes:

If used, this bitmask limits what protocols libCURL may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This allows you to limit specific transfers to only be allowed to use a subset of protocols in redirections. By default libCURL will allow all protocols except for FILE and SCP. This is a difference compared to pre-7.19.4 versions which unconditionally would follow to all protocols supported. (Added in 7.19.4)
(Read and Write property)
See also REDIR_PROTOCOLS option in CURL manual.

61.10.284 OptionReferer as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The referer to pass to the server.
Notes:

It will be used to set the Referer: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also REFERER option in CURL manual.

61.10.285 OptionRequestTarget as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The request target, instead of extracted from the URL.
Notes: (Read and Write property)
See also REQUEST_TARGET option in CURL manual.

61.10.286 OptionResumeFrom as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It contains the offset in number of bytes that you want the transfer to start from.
Notes:

Set this option to 0 to make the transfer start from the beginning (effectively disabling resume). For FTP, set this option to -1 to make the transfer start from the end of the target file (useful to continue an interrupted upload).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RESUME_FROM option in CURL manual.

61.10.287 OptionResumeFromLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It contains the offset in number of bytes that you want the transfer to start from.
Deprecated: This item is deprecated and should no longer be used. You can use OptionResumeFrom instead. **Notes:**

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.10.288 OptionRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manually initialize the client RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_CLIENT_CSEQ option in CURL manual.

61.10.289 OptionRTSPRequest as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: RTSP request method (OPTIONS, SETUP, PLAY, etc...).
Notes: (Read and Write property)
See also RTSP_REQUEST option in CURL manual.

61.10.290 OptionRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manually initialize the server RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_SERVER_CSEQ option in CURL manual.

61.10.291 OptionRTSPSessionID as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RTSP session identifier.
Notes: (Read and Write property)
See also RTSP_SESSION_ID option in CURL manual.

61.10.292 OptionRTSPStreamURI as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RTSP stream URI.
Notes: (Read and Write property)
See also RTSP_STREAM_URI option in CURL manual.

61.10.293 OptionRTSPTransport as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Transport: header to use in RTSP requests.
Notes: (Read and Write property)
See also RTSP_TRANSPORT option in CURL manual.

61.10.294 OptionSASLAuthZID as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The authorisation identity (identity to act as).
Notes:

Sets the authorisation identity (identity to act as).
Pass a text as parameter, which should be pointing to the authorisation identity (authzid) for the transfer. Only applicable to the PLAIN SASL authentication mechanism where it is optional.
When not specified only the authentication identity (authcid) as specified by the username will be sent to the server, along with the password. The server will derive a authzid from the authcid when not provided, which it will then uses internally.
When the authzid is specified, the use of which is server dependent, it can be used to access another user's inbox, that the user has been granted access to, or a shared mailbox for example.
(Read and Write property)
See also SASL_AUTHZID option in CURL manual.

61.10.295 OptionSASLIR as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable SASL initial response.
Notes: (Read and Write property)

See also SASL_IR option in CURL manual.

61.10.296 OptionServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Service Name.
Notes: (Read and Write property)
See also SERVICE_NAME option in CURL manual.

61.10.297 OptionSocks5Auth as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bitmask of allowed auth methods for connections to SOCKS5 proxies.
Notes: (Read and Write property)
See also SOCKS5_AUTH option in CURL manual.

61.10.298 OptionSocks5GSSAPINEC as Boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to protect SOCKS5 connection is protected.
Notes:

Set to true to enable or false to disable. As part of the gssapi negotiation a protection mode is negotiated. The rfc1961 says in section 4.3/4.4 it should be protected, but the NEC reference implementation does not. If enabled, this option allows the unprotected exchange of the protection mode negotiation. (Added in 7.19.4). (Read and Write property)
See also SOCKS5_GSSAPI_NEC option in CURL manual.

61.10.299 OptionSocks5GSSAPIService as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string holding the name of the service.
Notes:

The default service name for a SOCKS5 server is rcmd/server-fqdn. This option allows you to change it. (Added in 7.19.4)
(Read and Write property)
See also SOCKS5_GSSAPI_SERVICE option in CURL manual.

61.10.300 OptionSSHAuthTypes as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Define the SSH authorization types.
Notes:

Pass a long set to a bitmask consisting of one or more of CURLSSH_AUTH_PUBLICKEY, CURLSSH_AUTH_PASSWORD, CURLSSH_AUTH_HOST, CURLSSH_AUTH_KEYBOARD. Set CURLSSH_AUTH_ANY to let libCURL pick one. (Added in 7.16.1)

constants:
CURLSSH_AUTH_ANY = & hFFFFFFFF
CURLSSH_AUTH_NONE = 0
CURLSSH_AUTH_PUBLICKEY = 1
CURLSSH_AUTH_PASSWORD = 2
CURLSSH_AUTH_HOST = 4
CURLSSH_AUTH_KEYBOARD = 8
CURLSSH_AUTH_DEFAULT = CURLSSH_AUTH_ANY
(Read and Write property)
See also SSH_AUTH_TYPES option in CURL manual.

61.10.301 OptionSSHCompression as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable SSH compression.
Notes: (Read and Write property)
See also SSH_COMPRESSION option in CURL manual.

61.10.302 OptionSSHHostPublicKeyMD5 as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string containing 32 hexadecimal digits with the 128 bit MD5 checksum of the remote host's

public key.
Notes:

libCURL will reject the connection to the host unless the md5sums match. This option is only for SCP and SFTP transfers. (Added in 7.17.1)
(Read and Write property)
See also SSH_HOST_PUBLIC_KEY_MD5 option in CURL manual.

61.10.303 OptionSSHKnownhosts as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string holding the file name of the known_host file to use.
Notes:

The known_hosts file should use the OpenSSH file format as supported by libssh2. If this file is specified, libCURL will only accept connections with hosts that are known and present in that file, with a matching public key. (Added in 7.19.6)
(Read and Write property)
See also SSH_KNOWNHOSTS option in CURL manual.

61.10.304 OptionSSHPrivateKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a path pointing to a file name for your private key.
Example:

```
Dim c As New CURLNMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes:

If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa. If the file is password-protected, set the password with OptionSSLKeyPassword. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PRIVATE_KEYFILE option in CURL manual.

61.10.305 OptionSSHPublicKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a path pointing to a file name for your public key.
Example:

```
Dim c As New CURLNMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes:

If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa.pub. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PUBLIC_KEYFILE option in CURL manual.

61.10.306 OptionSSLCert as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the file name of your certificate.
Notes:

The default format is "PEM" and can be changed with OptionSSLCERTTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLCERT option in CURL manual.

61.10.307 OptionSSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set SSL client certificate from memory blob.
Notes:

Pass data, which contains a client certificate. The format must be "P12" on Secure Transport or Schannel. The format must be "P12" or "PEM" on OpenSSL. The string "P12" or "PEM" must be specified with OptionSSLCertType.

This option is an alternative to OptionSSLCert which instead expects a file name as input.
(Read and Write property)
See also SSLCERT_BLOB option in CURL manual.

61.10.308 OptionSSLCertPassword as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The certificate password.
Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Notes:** (Read and Write property)

61.10.309 OptionSSLCertType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the format of your certificate.
Notes:

Supported formats are "PEM" and "DER". (Added in 7.9.3)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLCERTTYPE option in CURL manual.

61.10.310 OptionSSLCipherList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string holding the list of ciphers to use for the SSL connection.
Notes:

The list must be syntactically correct, it consists of one or more cipher strings separated by colons. Commas or spaces are also acceptable separators but colons are normally used, !, - and + can be used as operators. Valid examples of cipher lists include 'RC4-SHA', 'SHA1+DES', 'TLSv1' and 'DEFAULT'. The default list is normally set when you compile OpenSSL.

You'll find more details about cipher lists on this URL:

http://www.openssl.org/docs/apps/ciphers.html

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSL_CIPHER_LIST option in CURL manual.

61.10.311 OptionSSLEnableALPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable TLS ALPN extension (http2 over ssl might fail without).
Notes: (Read and Write property)
See also SSL_ENABLE_ALPN option in CURL manual.

61.10.312 OptionSSLEnableNPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable TLS NPN extension (http2 over ssl might fail without)
Notes: (Read and Write property)
See also SSL_ENABLE_NPN option in CURL manual.

61.10.313 OptionSSLEngine as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It will be used as the identifier for the crypto engine you want to use for your private key.
Notes:

If the crypto device cannot be loaded, kError_SSL_ENGINE_NOTFOUND is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE option in CURL manual.

61.10.314 OptionSSLEngineDefault as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the actual crypto engine as the default for (asymmetric) crypto operations.
Notes:

If the crypto device cannot be set, kError_SSL_ENGINE_SETFAILED is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE_DEFAULT option in CURL manual.

61.10.315 OptionSSLFalseStart as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if we should enable TLS false start.
Notes: (Read and Write property)
See also SSL_FALSESTART option in CURL manual.

61.10.316 OptionSSLKey as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the file name of your private key.
Notes:

The default format is "PEM" and can be changed with OptionSSLKEYTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLKEY option in CURL manual.

61.10.317 OptionSSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set private key for client cert from memory blob.
Notes:

Pass data, which contains a private key. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionSSLKeyType.

This option is an alternative to OptionSSLKey which instead expects a file name as input.
(Read and Write property)
See also SSLKEY_BLOB option in CURL manual.

61.10.318 OptionSSLKeyPassword as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The password required to use the OptionSSLKEY private key.
Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Notes:**

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.10.319 OptionSSLKeyType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the format of your private key.
Notes:

Supported formats are "PEM", "DER" and "ENG".

The format "ENG" enables you to load the private key from a crypto engine. In this case OptionSSLKEY is used as an identifier passed to the engine. You have to set the crypto engine with OptionSSLENGINE. "DER" format key file currently does not work because of a bug in OpenSSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLKEYTYPE option in CURL manual.

61.10.320 OptionSSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable specific SSL features with a bitmask.
Notes: (Read and Write property)
See also SSL_OPTIONS option in CURL manual.

61.10.321 OptionSSLSessionIDCache as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to use the SSL session ID cache.
Notes:

Pass false to disable libCURL's use of SSL session-ID caching. Set this to true to enable it. By default all transfers are done using the cache. Note that while nothing ever should get hurt by attempting to reuse SSL session-IDs, there seem to be broken SSL implementations in the wild that may require you to disable this in order for you to succeed. (Added in 7.16.0)
(Read and Write property)
See also SSL_SESSIONID_CACHE option in CURL manual.

61.10.322 OptionSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This option determines whether libCURL verifies that the server cert is for the server it is known as.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLNMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

When negotiating an SSL connection, the server sends a certificate indicating its identity.

When OptionSSLVerifyHost is 2, that certificate must indicate that the server is the server to which you

meant to connect, or the connection fails.

CURL considers the server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the URL to which you told CURL to connect.

When the value is 1, the certificate must contain a Common Name field, but it doesn't matter what name it says. (This is not ordinarily a useful setting).

When the value is 0, the connection succeeds regardless of the names in the certificate.

The default, since 7.10, is 2.

The checking this option controls is of the identity that the server claims. The server could be lying. To control lying, see OptionSSLVerifyPeer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYHOST option in CURL manual.

61.10.323 OptionSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Configure whether this CURL instance will verify the SSL peer certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLNMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:
```

```
Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

This option determines whether CURL verifies the authenticity of the peer's certificate. A value of 1 means CURL verifies; zero means it doesn't. The default is nonzero, but before 7.10, it was zero.

When negotiating an SSL connection, the server sends a certificate indicating its identity. CURL verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. As of 7.10, CURL installs a default bundle of CA certificates and you can specify alternate certificates with the OptionCAINFO option or the OptionCAPATH option.

When OptionSSLVerifyPeer is nonzero, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the connection succeeds regardless.

Authenticating the certificate is not by itself very useful. You typically want to ensure that the server, as authentically identified by its certificate, is the server you mean to be talking to. Use OptionSSLVerifyHost to control that.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYPEER option in CURL manual.

61.10.324 OptionSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if we should verify the certificate status.
Notes: (Read and Write property)
See also SSL_VERIFYSTATUS option in CURL manual.

61.10.325 OptionSSLVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: What version of SSL/TLS to attempt to use.
Example:

```
dim c as CURLNMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes:

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVERSION_MAX_ macros.

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)
See also SSLVERSION option in CURL manual.

61.10.326 OptionStreamDepends as CURLNMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set stream dependency on another CURL handle.

Default	& h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	& h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	& h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	& h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	& h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

Notes: (Read and Write property)
See also STREAM_DEPENDS option in CURL manual.

61.10.327 OptionStreamDependsE as CURLNMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set E-xclusive stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS_E option in CURL manual.

61.10.328 OptionStreamWeight as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set stream weight, 1 - 256.
Notes:

Default is 16.
(Read and Write property)
See also STREAM_WEIGHT option in CURL manual.

61.10.329 OptionSuppressConnectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Suppress proxy CONNECT response headers from user callbacks.
Notes: (Read and Write property)
See also SUPPRESS_CONNECT_HEADERS option in CURL manual.

61.10.330 OptionTCPFastOpen as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set TCP Fast Open.
Notes: (Read and Write property)
See also TCP_FASTOPEN option in CURL manual.

61.10.331 OptionTCPKeepAlive as Boolean

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If set to true, TCP keepalive probes will be sent.
Notes:

The delay and frequency of these probes can be controlled by the OptionTCPKeepIdle and OptionTCPKeep-Interval options, provided the operating system supports them. Set to false (default behavior) to disable keepalive probes (Added in 7.25.0).
(Read and Write property)
See also TCP_KEEPALIVE option in CURL manual.

61.10.332 OptionTCPKeepIdle as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the delay, in seconds, that the operating system will wait while the connection is idle before sending keepalive probes.
Notes:

Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPIDLE option in CURL manual.

61.10.333 OptionTCPKeepInterval as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the interval, in seconds, that the operating system will wait between sending keepalive probes.
Notes:

Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPINTVL option in CURL manual.

61.10.334 OptionTCPNoDelay as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer specifying whether the TCP_NODELAY option should be set or cleared (true = set, false = clear).
Notes:

The option is cleared by default. This will have no effect after the connection has been established.

Setting this option will disable TCP's Nagle algorithm. The purpose of this algorithm is to try to minimize the number of small packets on the network (where "small packets" means TCP segments less than the Maximum Segment Size (MSS) for the network).

Maximizing the amount of data sent per TCP segment is good because it amortizes the overhead of the send. However, in some cases (most notably telnet or rlogin) small segments may need to be sent without delay. This is less efficient than sending larger amounts of data at a time, and can contribute to congestion on the network if overdone.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TCP_NODELAY option in CURL manual.

61.10.335 OptionTFTPBlockSize as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify block size to use for TFTP data transmission.

Notes:

Valid range as per RFC 2348 is 8-65464 bytes. The default of 512 bytes will be used if this option is not specified. The specified block size will only be used pending support by the remote server. If the server does not return an option acknowledgement or returns an option acknowledgement with no blksize, the default of 512 bytes will be used. (added in 7.19.4)
(Read and Write property)
See also TFTP_BLKSIZE option in CURL manual.

61.10.336 OptionTFTPNoOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether not send any tftp option requests to the server.
Notes: (Read and Write property)
See also TFTP_NO_OPTIONS option in CURL manual.

61.10.337 OptionTimeCondition as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Time condition option.
Notes:

This defines how the OptionTimeValue time value is treated. You can set this parameter to kTimeConditionIfModifiedSince (1) or kTimeConditionIfUnModifiedSince (2). This feature applies to HTTP and FTP.

The last modification time of a file is not always known and in such instances this feature will have no effect even if the given time condition would have not been met.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMECONDITION option in CURL manual.

61.10.338 OptionTimeOut as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in seconds that you allow the libCURL transfer operation to take.
Notes:

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.

In unix-like systems, this might cause signals to be used unless CURLOPT_NOSIGNAL is set.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEOUT option in CURL manual.

61.10.339 OptionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a long as parameter containing the maximum time in milli seconds that you allow the libCURL transfer operation to take.
Notes:

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.
(Read and Write property)
See also TIMEOUT_MS option in CURL manual.

61.10.340 OptionTimeValue as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This should be the time in seconds since 1 jan 1970, and the time will be used in a condition as specified with OptionTimeCondition.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEVALUE option in CURL manual.

61.10.341 OptionTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify which TLS 1.3 ciphers suites to use.
Notes:

string holding the list of cipher suites to use for the TLS 1.3 connection. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.
(Read and Write property)
See also TLS13_CIPHERS option in CURL manual.

61.10.342 OptionTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the TSL authentication password.
Notes:

Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_PASSWORD option in CURL manual.

61.10.343 OptionTLSAuthType as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the TLS authentication type.
Notes:

You can set this to "SRP" to use Secure Remote Password authentication.
Please also set username and password.
The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_TYPE option in CURL manual.

61.10.344 OptionTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the TSL authentication user name.
Notes:

Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_USERNAME option in CURL manual.

61.10.345 OptionTransferEncoding as Boolean

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a request for compressed Transfer Encoding in the outgoing HTTP request.
Notes:

If the server supports this and so desires, it can respond with the HTTP response sent using a compressed Transfer-Encoding that will be automatically uncompressed by libCURL on reception.

Transfer-Encoding differs slightly from the Content-Encoding you ask for with OptionAcceptEncoding in that a Transfer-Encoding is strictly meant to be for the transfer and thus MUST be decoded before the data arrives in the client. Traditionally, Transfer-Encoding has been much less used and supported by both HTTP clients and HTTP servers.
(Read and Write property)
See also TRANSFER_ENCODING option in CURL manual.

61.10.346 OptionTransferText as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to use ASCII mode for ftp transfers, instead of the default binary transfer.
Notes:

For win32 systems it does not set the stdout to binary mode. This option can be usable when transferring text data between systems with different views on certain characters, such as newlines or similar.

libCURL does not do a complete ASCII conversion when doing ASCII transfers over FTP. This is a known limitation/flaw that nobody has rectified. libCURL simply sets the mode to ascii and performs a standard transfer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TRANSFERTEXT option in CURL manual.

61.10.347 OptionUnixSocketPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Path to Unix domain socket.
Notes: (Read and Write property)
See also UNIX_SOCKET_PATH option in CURL manual.

61.10.348 OptionUnrestrictedAuth as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A boolean parameter tells the library it can continue to send authentication (user+password) when following locations, even when hostname changed.
Notes:

This option is meaningful only when setting FollowOption.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UNRESTRICTED_AUTH option in CURL manual.

61.10.349 OptionUpkeepIntervalMS as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Connection upkeep interval.
Notes:

Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.

The user needs to explicitly call Upkeep in order to perform the upkeep work.

Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
(Read and Write property)
See also UPKEEP_INTERVAL_MS option in CURL manual.

61.10.350 OptionUpload as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to prepare for an upload.
Notes:

The OptionInFileSize or OptionInFileSizeLarge options are also interesting for uploads. If the protocol is HTTP, uploading means using the PUT request unless you tell libCURL otherwise.

Using PUT with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use PUT to a HTTP 1.1 server, you can upload data without knowing the size before starting the transfer if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UPLOAD option in CURL manual.

61.10.351 OptionUploadBufferSize as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set preferred upload buffer size.
Notes:

Pass a long specifying your preferred size (in bytes) for the upload buffer in libcurl. It makes libcurl uses a larger buffer that gets passed to the next layer in the stack to get sent off. In some setups and for some protocols, there's a huge performance benefit of having a larger upload buffer.

This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size.

The upload buffer size is by default 64 kilobytes. The maximum buffer size allowed to be set is 2 megabytes. The minimum buffer size allowed to be set is 16 kilobytes.

Since curl 7.61.1 the upload buffer is allocated on-demand - so if the handle isn't used for upload, this buffer will not be allocated at all.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also UPLOAD_BUFFERSIZE option in CURL manual.

61.10.352 OptionURL as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The actual URL to deal with.
Notes:

If you need to pass username or password, please consider using the OptionUsername and OptionPassword properties. If you username or password contains characters like @ or :, you must use those properties.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a char * to a zero terminated string. The string must remain present until CURL no longer needs it, as it doesn't copy the string.

If the given URL lacks the protocol part ("http://" or "ftp://" etc), it will attempt to guess which protocol to use based on the given host name. If the given protocol of the set URL is not supported, libCURL will return on error (kError_UNSUPPORTED_PROTOCOL) when you call Perform. Use VersionInfo for detailed info on which protocols that are supported.

The string given to CURLOPT_URL must be url-encoded and following the RFC 2396:
http://CURL.haxx.se/rfc/rfc2396.txt

CURLOPT_URL is the only option that must be set before Perform is called.
For file uploads or downloads, please include the file name in the URL.

Please do never include username and passwords in URLs, as those get often written to log files and would reveal your credentials!
Instead use OptionUsername and OptionPassword.

If you miss the protocol in the URL, you may get an error about HTTP/0.9 being used and not allowed.
(Read and Write property)
See also URL option in CURL manual.

61.10.353 OptionUserAgent as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user agent string to pass to the server.
Notes:

It will be used to set the User-Agent: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also USERAGENT option in CURL manual.

61.10.354 OptionUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user name to be used in protocol authentication
Notes:

In order to specify the password to be used in conjunction with the user name use the OptionPassword option
(Read and Write property)
See also USERNAME option in CURL manual.

61.10.355 OptionUseSSL as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Request using SSL / TLS for the transfer.
Notes:

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

(Read and Write property)
See also USE_SSL option in CURL manual.

61.10.356 OptionVerbose as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether debug messages are sent to the DebugMessage event.
Notes:

Default is false.
You need to subclass the CURLNMBS class to add code in the DebugMessage event.
Or you set CollectDebugData = true and later query DebugData property.
Or you use CreateMTDebugOutputFile to stream them to a file.
(Read and Write property)
See also VERBOSE option in CURL manual.

61.10.357 OptionWildCardMatch as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable wildcard matching.
Notes:

Set onoff to true if you want to transfer multiple files according to a file name pattern. The pattern can be specified as part of the OptionURL option, using an fnmatch-like pattern (Shell Pattern Matching) in the last part of URL (file name).

By default, libCURL uses its internal wildcard matching implementation. You can provide your own matching function by the CURLNMBS.FileNameMatch event.

A brief introduction of its syntax follows:

- - ASTERISK

ftp://example.com/some/path/*.txt (for all txt's from the root directory)

? - QUESTION MARK

Question mark matches any (exactly one) character.

ftp://example.com/some/path/photo?.jpeg

[- BRACKET EXPRESSION

The left bracket opens a bracket expression. The question mark and asterisk have no special meaning in a bracket expression. Each bracket expression ends by the right bracket and matches exactly one character. Some examples follow:

[a-zA-Z0-9] or [f-gF-G] - character interval
[abc] - character enumeration
[^abc] or [!abc] - negation
[[:name:]] class expression. Supported classes are alnum,lower, space, alpha, digit, print, upper, blank, graph, xdigit.
[ ] [-!^] - special case - matches only '-', '] ', ' [', '!' or '^'. These characters have no special purpose.
[\[\] \\] - escape syntax. Matches ' [', '] ' or '´.

Using the rules above, a file name pattern can be constructed:

ftp://example.com/some/path/ [a-z [:upper:] \\] .jpeg

This feature is only supported for FTP download. Not for SFTP or HTTP.
(Read and Write property)
See also WILDCARDMATCH option in CURL manual.

61.10.358 OptionXOAuth2Bearer as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The XOAUTH2 bearer token.
Notes: (Read and Write property)
See also XOAUTH2_BEARER option in CURL manual.

61.10.359 OutputData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The output data from CURL.
Notes:

If CollectOutputData property is true, the plugin puts the data received in write event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.
(Read only property)

61.10.360 Paused as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether transfer is paused.
Notes:

You can set it to true while transfer runs to pause it.
(Read and Write property)

61.10.361 ProgressDownloadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes downloaded so far.
Notes: (Read only property)

61.10.362 ProgressDownloadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes to download in total.
Notes: (Read only property)

61.10.363 ProgressPercent as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current download/upload progress in percent.
Notes:

Range from 0 to 100.
(Read only property)

61.10.364 ProgressUploadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes uploaded so far.
Notes: (Read only property)

61.10.365 ProgressUploadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes to upload in total.
Notes: (Read only property)

61.10.366 Version as CURLNVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a version object to a filled with information about various run-time features in libCURL.
Notes: (Read only property)

61.10.367 YieldTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether plugin should yield time.
Notes:

If set the plugin will yield time to Xojo back so threads and timers work while you download.

Seems like in RB 2009 this property only has effect if you run CURL in a thread.
(Read and Write property)

61.10.368 Events

61.10.369 ChunkBegin(FileInfo as CURLNFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called on begin of a new chunk.
Notes: If splitting of data transfer is enabled, this callback is called before download of an individual chunk started. Note that parameter "remains" works only for FTP wildcard downloading (for now), otherwise is not used.

61.10.370 ChunkEnd(FileInfo as CURLNFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Download of a chunk ended.
Notes:

If splitting of data transfer is enabled this callback is called after download of an individual chunk finished. This event is called for skipped or downloaded files.

61.10.371 DebugMessage(infotype as Integer, data as string, dataSize as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: A debug event to get data of ongoing process.
Notes:

You may need to set OptionVerbose to true.

infotype constants:

kInfo_TEXT	0	The data is informational text.
kInfo_HEADER_IN	1	The data is header (or header-like) data received from the peer.
kInfo_HEADER_OUT	2	The data is header (or header-like) data sent to the peer.
kInfo_DATA_IN	3	The data is protocol data received from the peer.
kInfo_DATA_OUT	4	The data is protocol data sent to the peer.
kInfo_SSL_DATA_IN	5	The data is protocol data received from the peer.
kInfo_SSL_DATA_OUT	6	The data is protocol data sent to the peer.

If you set CollectDebugData, the plugin will collect the messages and provide them via the DebugData property. You can still use this event to write your own log instead of in addition.

61.10.372 FileNameMatch(Pattern as String, Name as String) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Match a file against a pattern.
Notes:

If you don't implement this event, you get the default implementation from CURL.
Return kFileNameMatchNoMatch, kFileNameMatchIsMatch or kFileNameMatchFailed.

61.10.373 Finished(Result as Integer)

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when transfer has finished.
Notes:

For Perform and PerformMT it is called before Perform function returns, so in PerformMT this is called on the thread.
For use with CURLNMultiMBS, it is called after TransferFinished event and before TransfersFinished event.

If you want to modify GUI and use PeformMT, you may need to start a timer to do so.

61.10.374 Header(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: New Header data was received.
Notes:

You can get error 23 if you don't return lenb(data) in this event.
Or just leave it emtpy so RB will not include it in your application the plugin will return lenb(data) itself.

If you set CollectHeaderData to true, the plugin will collect the messages and provide them via the HeaderData property. You can still use this event to write your own log instead of in addition.

61.10.375 Progress(dltotal as Int64, dlnow as Int64, ultotal as Int64, ulnow as Int64, percent as Double) as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: An event to report progress of ongoing transfers.
Notes:

This function gets called by libCURL with a frequent interval during operation (roughly once per second) no matter if data is being transfered or not. Unknown/unused argument values passed to the callback will be set to zero (like if you only download data, the upload size will remain 0).
Returning a true from this event will cause libCURL to abort the transfer and return kError_ABORTED_BY_CALLBACK.

You can run CURL from a thread to download several things at the same time or keep the GUI more responsive. For better GUI, you can even call a method like app.DoEvents to get the GUI updated more often.

When sending email, ultotal may be zero. In that case use OptionInFileSize to know size of email to upload.

61.10.376 Read(count as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: This event gets called by libCURL as soon as it needs to read data in order to send it to the peer.
Notes:

Return the number of bytes requested. Never return a string with lenb(string)>count. You can return 0 to inform about end of file.

If you stop the current transfer by returning 0 "pre-maturely" (i.e before the server expected it, like when you've told you will upload N bytes and you upload less than N bytes), you may experience that the server "hangs" waiting for the rest of the data that won't come.

The read event may return CURL_READFUNC_ABORT (& h10000000) to stop the current operation immediately, resulting in a kError_ABORTED_BY_CALLBACK error code from the transfer (Added in 7.12.1)

This event is not called when using PerformMT.

If you provide Input data via SetInputData or OpenMTInputFile method, this event is not called and data is taken from the data you provided.

61.10.377 RestartRead() as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: An event to inform you that reading on the file needs to start at the beginning again.
Notes:

Return true on success.
If you use a binarystream for reading you will have to set position to 0 in this event.

This event is not called when using PerformMT.

61.10.378 Seek(pos as Int64, whence as Integer) as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when CURL needs to perform a seek.
Notes:

Normally only needed if you resume a download (Seek forward) or upload is reset (seek back).
Whence is kSeekOriginCurrent, kSeekOriginEnd or kSeekOriginSet.
Please return one of this constants: kSeekReturnCantSeek, kSeekReturnFail or kSeekReturnOk.

61.10.379 SSHKey(KnownKey as string, KnownKeyLength as Integer, KnownKeyType as Integer, FoundKey as string, FoundKeyLength as Integer, FoundKeyType as Integer, MatchStatus as Integer) as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event for known hosts callback for SFTP and SCP.
Notes:

KnownKey: The known key as string encoded with base64 if KnownKeyLength is zero, otherwise the "raw" data.
KnownKeyLength: The length of the key. Zero for base64 encoded key.
KnownKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
FoundKey: The found key as string encoded with base64 if FoundKeyLength is zero, otherwise the "raw" data.
FoundKeyLength: The length of the key. Zero for base64 encoded key.
FoundKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
MatchStatus: The status CURL found. (0 = OK, 1 = Mismatch, 2 = Missing)

Return one of the following values:

CURLKHSTAT_FINE_ADD_TO_FILE	0	Fine and add to file
CURLKHSTAT_FINE	1	Fine
CURLKHSTAT_REJECT	2	reject the connection, return an error
CURLKHSTAT_DEFER	3	do not accept it, but we can't answer right now so this causes a CURLE_DEFER error but otherwise the connection will be left intact etc

61.10.380 Write(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: This event gets called by libCURL as soon as there is data received that needs to be saved.
Notes:

Return the number of bytes actually taken care of. If that amount differs from the amount passed to your function, it'll signal an error to the library and it will abort the transfer and return kError_WRITE_ERROR.

This function may be called with zero bytes data if the transfered file is empty.

The event function will be passed as much data as possible in all invokes, but you cannot possibly make any assumptions. It may be one byte, it may be thousands. The maximum amount of data that can be passed to the write callback is defined in the CURL.h header file: CURL_MAX_WRITE_SIZE (16384).

If you set CollectOutputData to true, the plugin will automatically collect the data and provide it to you after the transfer with the OutputData property. This collecting feature will only work right, if there is

enough free memory. You can of course still process data yourself in this event instead of in addition.

61.10.381 Constants

61.10.382 kAUTH_ANY = & hFFFFFFEF

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: all types set

61.10.383 kAUTH_ANYSAFE = & hFFFFFFEE

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

61.10.384 kAUTH_AWS_SIGV4 = 128

MBS CURL Plugin, Plugin Version: 21.1.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: AWS Signature v4

61.10.385 kAUTH_BASIC = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: Basic (default)

61.10.386 kAUTH_Bearer = 64

MBS CURL Plugin, Plugin Version: 18.3.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: HTTP Bearer token authentication

61.10.387 kAUTH_DIGEST = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: Digest

61.10.388 kAUTH_DIGEST_IE = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: HTTP Digest authentication with an IE flavor. Digest authentication is defined in RFC 2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method. The IE flavor is simply that libCURL will use a special "quirk" that IE is known to have used before version 7 and that some servers require the client to use.

61.10.389 kAUTH_GSSNEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

GSS-Negotiate

Please check SupportsGSSNEGOTIATE property in CURLNVersionMBS class whether this is supported/implemented by your copy of the CURL library.

61.10.390 kAUTH_NEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

HTTP Negotiate (SPNEGO) authentication. Negotiate authentication is defined in RFC 4559 and is the most secure way to perform authentication over HTTP.

You need to build libCURL with a suitable GSS-API library or SSPI on Windows for this to work.

61.10.391 kAUTH_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

61.10.392 kAUTH_NTLM = 8

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

61.10.393 kAUTH_NTLM_WB = 32

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

NTLM delegating to winbind helper. Authentication is performed by a separate binary application that is executed when needed. The name of the application is specified at compile time but is typically /usr/bin/ntlm_auth

Note that libCURL will fork when necessary to run the winbind application and kill it when complete, calling waitpid() to await its exit when done. On POSIX operating systems, killing the process will cause a SIGCHLD signal to be raised (regardless of whether OptionNoSignal is set), which must be handled intelligently by the application. In particular, the application must not unconditionally call wait() in its SIGCHLD signal handler to avoid being subject to a race condition. This behavior is subject to change in future versions of libCURL.

61.10.394 kAUTH_Only = & h80000000

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: This is a meta symbol. OR this value together with a single specific auth value to force libCURL to probe for un-restricted auth and if not, only that single auth algorithm is acceptable.

61.10.395 kChunkBeginFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: Failed, so we exit downloads.

61.10.396 kChunkBeginOK = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: OK, download this file.

61.10.397 kChunkBeginSkip = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: Skip the file.

61.10.398 kChunkEndFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkEnd event.
Notes: Failed, so we exit downloads.

61.10.399 kChunkEndOK = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkEnd event.
Notes: Download success.

61.10.400 kError_ABORTED_BY_CALLBACK = 42

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.401 kError_AGAIN = 81

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: socket is not ready for send/recv, wait till it's ready and try again (Added in CURL 7.18.2)

61.10.402 kError_Auth_Error = 94

MBS CURL Plugin, Plugin Version: 19.4.

Function: One of the error constants for the Error event.
Notes: An authentication function returned an error.

61.10.403 kError_BAD_CONTENT_ENCODING = 61

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Unrecognized transfer encoding

61.10.404 kError_BAD_DOWNLOAD_RESUME = 36

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: couldn't resume download

61.10.405 kError_BAD_FUNCTION_ARGUMENT = 43

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.406 kError_CHUNK_FAILED = 88

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Chunk callback reported error.

61.10.407 kError_CONV_FAILED = 75

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Conversion failed.

61.10.408 kError_CONV_REQD = 76

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Not used with plugin.

61.10.409 kError_COULDNT_CONNECT = 7

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Could not connect. Proxy set? Firewall open?

61.10.410 kError_COULDNT_RESOLVE_HOST = 6

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.411 kError_COULDNT_RESOLVE_PROXY = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.412 kError_FAILED_INIT = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.413 kError_FILESIZE_EXCEEDED = 63

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Maximum file size exceeded

61.10.414 kError_FILE_COULDNT_READ_FILE = 37

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.415 kError_FTP_ACCEPT_FAILED = 10

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: While waiting for the server to connect back when an active FTP session is used, an error code was sent over the control connection or similar.

61.10.416 kError_FTP_ACCEPT_TIMEOUT = 12

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: During an active FTP session while waiting for the server to connect, the OptionAcceptTimeoutMS (or the internal default) timeout expired.

61.10.417 kError_FTP_BAD_FILE_LIST = 87

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Unable to parse FTP file list.

61.10.418 kError_FTP_CANT_GET_HOST = 15

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.419 kError_FTP_COULDNT_RETR_FILE = 19

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.420 kError_FTP_COULDNT_SET_TYPE = 17

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.10.421 kError_FTP_COULDNT_USE_REST = 31

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: the REST command failed

61.10.422 kError_FTP_PORT_FAILED = 30

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: FTP PORT operation failed

61.10.423 kError_FTP_PRET_FAILED = 84

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: a PRET command failed

61.10.424 kError_FTP_WEIRD_227_FORMAT = 14

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.425 kError_FTP_WEIRD_PASS_REPLY = 11

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.426 kError_FTP_WEIRD_PASV_REPLY = 13

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.427 kError_FTP_WEIRD_SERVER_REPLY = 8

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.428 kError_FUNCTION_NOT_FOUND = 41

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.429 kError_GOT_NOTHING = 52

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: when this is a specific error

61.10.430 kError_HTTP2 = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: A problem was detected in the HTTP2 framing layer. This is somewhat generic and can be one out of several problems, see the error buffer for details.

61.10.431 kError_HTTP2_STREAM = 92

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: stream error in HTTP/2 framing layer

61.10.432 kError_HTTP3 = 95

MBS CURL Plugin, Plugin Version: 20.5.

Function: One of the error constants for the Error event.
Notes: HTTP3 layer failed.

61.10.433 kError_HTTP_POST_ERROR = 34

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.434 kError_HTTP_RETURNED_ERROR = 22

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.435 kError_INTERFACE_FAILED = 45

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.436 kError_LDAP_CANNOT_BIND = 38

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.437 kError_LDAP_INVALID_URL = 62

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Invalid LDAP URL

61.10.438 kError_LDAP_SEARCH_FAILED = 39

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.439 kError_LOGIN_DENIED = 67

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: user, password or similar was not accepted and we failed to login

61.10.440 kError_NOT_BUILT_IN = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: A requested feature, protocol or option was not found built-in in this libCURL due to a build-time decision. This means that a feature or option was not enabled or explicitly disabled when libCURL was built and in order to get it to function you have to get a rebuilt libCURL.

61.10.441 kError_NO_CONNECTION_AVAILABLE = 89

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes:

For internal use only, will never be returned by libCURL.
No connection available, the session will be queued. (added in 7.30.0)

61.10.442 kError_OK = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.443 kError_OPERATION_TIMEDOUT = 28

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.10.444 kError_OUT_OF_MEMORY = 27

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.445 kError_PARTIAL_FILE = 18

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.446 kError_PEER_FAILED_VERIFICATION = 60

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.10.447 kError_Proxy = 96

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the error constants for the Error event.
Notes: Proxy handshake error.

61.10.448 kError_Quic_Connect_Error = 96

MBS CURL Plugin, Plugin Version: 20.5.

Function: One of the error constants for the Error event.
Notes: Quic had a connect error.

61.10.449 kError_QUOTE_ERROR = 21

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.10.450 kError_RANGE_ERROR = 33

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.10.451 kError_READ_ERROR = 26

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: could open/read from file

61.10.452 kError_RECURSIVE_API_CALL = 93

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: an api function was called from inside a callback/event.

61.10.453 kError_RECV_ERROR = 56

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failure in receiving network data

61.10.454 kError_REMOTE_ACCESS_DENIED = 9

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.10.455 kError_REMOTE_DISK_FULL = 70

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Out of disk space on server.

61.10.456 kError_REMOTE_FILE_EXISTS = 73

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: File already exists.

61.10.457 kError_REMOTE_FILE_NOT_FOUND = 78

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Remote file not found.

61.10.458 kError_RTSP_CSEQ_ERROR = 85

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Mismatch of RTSP CSeq numbers.

61.10.459 kError_RTSP_SESSION_ERROR = 86

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: mismatch of RTSP Session Identifiers

61.10.460 kError_SEND_ERROR = 55

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failed sending network data

61.10.461 kError_SEND_FAIL_REWIND = 65

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Sending the data requires a rewind that failed

61.10.462 kError_SETOPT_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 21.4.

Function: One of the error constants for the Error event.
Notes: Malformed option for CURL via setOpt call.

61.10.463 kError_SSH = 79

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Error from the SSH layer, somewhat generic so the error message will be of interest when this has happened.

61.10.464 kError_SSL_CACERT = 60

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes:

problem with the CA cert (path?)

You can often workaround by setting OptionSSLVerifyPeer = 0 and OptionSSLVerifyHost = 0. But that reduces security.

61.10.465 kError_SSL_CACERT_BADFILE = 77

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Could not load CACERT file, missing or wrong format.

61.10.466 kError_SSL_CERTPROBLEM = 58

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: problem with the local certificate

61.10.467 kError_SSL_CIPHER = 59

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: couldn't use specified cipher

61.10.468 kError_SSL_ClientCert = 97

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the error constants for the Error event.
Notes: Client-side certificate required.

61.10.469 kError_SSL_CONNECT_ERROR = 35

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: wrong when connecting with SSL

61.10.470 kError_SSL_CRL_BADFILE = 82

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Could not load CRL file, missing or wrong format (Added in 7.19.0)

61.10.471 kError_SSL_ENGINE_INITFAILED = 66

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failed to initialise ENGINE

61.10.472 kError_SSL_ENGINE_NOTFOUND = 53

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: SSL crypto engine not found

61.10.473 kError_SSL_ENGINE_SETFAILED = 54

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: can not set SSL crypto engine as default

61.10.474 kError_SSL_INVALIDCERTSTATUS = 91

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: invalid certificate status

61.10.475 kError_SSL_ISSUER_ERROR = 83

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Issuer check failed. (Added in CURL 7.19.0)

61.10.476 kError_SSL_PINNEDPUBKEYNOTMATCH = 90

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: specified pinned public key did not match.

61.10.477 kError_SSL_SHUTDOWN_FAILED = 80

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Failed to shut down the SSL connection.

61.10.478 kError_TELNET_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Malformed option for CURL via setOpt call. Used to be for telnet, but now generic.

61.10.479 kError_TFTP_ILLEGAL = 71

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Illegal TFTP operation.

61.10.480 kError_TFTP_NOSUCHUSER = 74

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: No such user.

61.10.481 kError_TFTP_NOTFOUND = 68

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: File not found on server.

61.10.482 kError_TFTP_PERM = 69

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Permission problem on server.

61.10.483 kError_TFTP_UNKNOWNID = 72

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Unknown transfer ID.

61.10.484 kError_TOO_MANY_REDIRECTS = 47

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: catch endless re-direct loops

61.10.485 kError_UNKNOWN_TELNET_OPTION = 48

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: User specified an unknown option

61.10.486 kError_UNSUPPORTED_PROTOCOL = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.487 kError_UPLOAD_FAILED = 25

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.10.488 kError_URL_MALFORMAT = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.489 kError_USE_SSL_FAILED = 64

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Requested FTP SSL level failed

61.10.490 kError_WRITE_ERROR = 23

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.10.491 kFileNameMatchFailed = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: Failed.

61.10.492 kFileNameMatchIsMatch = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: Is Match.

61.10.493 kFileNameMatchNoMatch = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: No match.

61.10.494 kFormArray = 8

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.495 kFormBuffer = 11

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.496 kFormBufferLength = 13

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.497 kFormBufferPtr = 12

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.498 kFormContentHeader = 15

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.499 kFormContentsLength = 6

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.500 kFormContentType = 14

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.501 kFormCopyContents = 4

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.502 kFormCopyName = 1

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.503 kFormEnd = 17

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.504 kFormFile = 10

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.505 kFormFileContent = 7

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.506 kFormFilename = 16

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.507 kFormNameLength = 3

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.508 kFormPtrContents = 5

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.509 kFormPtrName = 2

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.10.510 kFTPAUTH_DEFAULT=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Allow libCURL to decide

61.10.511 kFTPAUTH_SSL=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

61.10.512 kFTPAUTH_TLS=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

61.10.513 kFTPMethodDefault = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: let libcurl pick

61.10.514 kFTPMethodMultiCWD = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: single CWD operation for each path part

61.10.515 kFTPMethodNoCWD = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: no CWD at all

61.10.516 kFTPMethodSingleCWD = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: one CWD to full dir, then work on file

61.10.517 kFTPSSL_ALL=3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

61.10.518 kFTPSSL_CONTROL=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

61.10.519 kFTPSSL_NONE=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Don't attempt to use SSL.

61.10.520 kFTPSSL_TRY=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Try using SSL, proceed as normal otherwise.

61.10.521 kGSSAPIDelegationFlag = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: delegate always

61.10.522 kGSSAPIDelegationNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: no delegation (default)

61.10.523 kGSSAPIDelegationPolicyFlag = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: if permitted by policy

61.10.524 kHTTP_VERSION_1_0 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Enforce HTTP 1.0 requests.

61.10.525 kHTTP_VERSION_1_1 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Enforce HTTP 1.1 requests.

61.10.526 kHTTP_VERSION_2TLS = 4

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: use version 2 for HTTPS, version 1.1 for HTTP

61.10.527 kHTTP_VERSION_2_0 = 3

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 2 in the request

61.10.528 kHTTP_VERSION_2_PRIOR_KNOWLEDGE = 5

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 2 without HTTP/1.1 Upgrade

61.10.529 kHTTP_VERSION_3 = 30

MBS CURL Plugin, Plugin Version: 19.4.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 3 in the request

61.10.530 kHTTP_VERSION_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: We don't care about what version the library uses. libCURL will use whatever it thinks fit.

61.10.531 kINFO_DATA_IN = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data received from the peer.

61.10.532 kINFO_DATA_OUT = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data sent to the peer.

61.10.533 kINFO_HEADER_IN = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is header (or header-like) data received from the peer.

61.10.534 kINFO_HEADER_OUT = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is header (or header-like) data sent to the peer.

61.10.535 kINFO_SSL_DATA_IN = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data received from the peer.

61.10.536 kINFO_SSL_DATA_OUT = 6

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data sent to the peer.

61.10.537 kINFO_TEXT = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is informational text.

61.10.538 kIPRESOLVE_V4 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLNMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

61.10.539 kIPRESOLVE_V6 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLNMBS
c.OptionIPResolve = c.kIPRESOLVE_V6
```

61.10.540 kIPRESOLVE_WHATEVER=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLNMBS
c.OptionIPResolve = c.kIPRESOLVE_WHATEVER
```

61.10.541 kNETRC_IGNORED=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes:

The .netrc will never be read.
This is the default.

61.10.542 kNETRC_OPTIONAL=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes: A user:password in the URL will be preferred to one in the .netrc.

61.10.543 kNETRC_REQUIRED=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes: A user:password in the URL will be ignored. Unless one is set programmatically, the .netrc will be queried.

61.10.544 kProtocolAll = -1

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Enable all protocols.

61.10.545 kProtocolDICT = & h200

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: DICT

61.10.546 kProtocolFILE = & h400

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: File

61.10.547 kProtocolFTP = 4

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: FTP

61.10.548 kProtocolFTPS = 8

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: FTPS

61.10.549 kProtocolGopher = & h2000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Gopher

61.10.550 kProtocolGophers = & h20000000

MBS CURL Plugin, Plugin Version: 21.1.

Function: One of the constants for the OptionProtocols properties.

61.10.551 kProtocolHTTP = 1

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: HTTP

61.10.552 kProtocolHTTPS = 2

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: HTTPS

61.10.553 kProtocolIMAP = & h1000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: IMAP

61.10.554 kProtocolIMAPS = & h2000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: IMAPS

61.10.555 kProtocolLDAP = & h80

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: LDAP

61.10.556 kProtocolLDAPS = & h100

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: LDAPS

61.10.557 kProtocolMQTT = & h10000000

MBS CURL Plugin, Plugin Version: 20.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: MQTT

61.10.558 kProtocolPOP3 = & h4000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: POP3

61.10.559 kProtocolPOP3S = & h8000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: POP3S

61.10.560 kProtocolRTMP = & h80000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMP

61.10.561 kProtocolRTMPE = & h200000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPE

61.10.562 kProtocolRTMPS = & h800000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPS

61.10.563 kProtocolRTMPT = & h100000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPT

61.10.564 kProtocolRTMPTE = & h400000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPTE

61.10.565 kProtocolRTMPTS = & h1000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPTS

61.10.566 kProtocolRTSP = & h40000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTSP

61.10.567 kProtocolSCP = & h10

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SCP

61.10.568 kProtocolSFTP = & h20

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SFTP

61.10.569 kProtocolSMB = & h4000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMB

61.10.570 kProtocolSMBS = & h8000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMBS

61.10.571 kProtocolSMTP = & h10000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMTP

61.10.572 kProtocolSMTPS = & h20000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMTPS

61.10.573 kProtocolTelnet = & h40

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Telnet

61.10.574 kProtocolTFTP = & h800

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: TFTP

61.10.575 kPROXY_HTTP = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

61.10.576 kPROXY_HTTP10 = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Force to use CONNECT HTTP/1.0.

61.10.577 kPROXY_HTTP11 = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Connect using HTTP/1.1.

61.10.578 kPROXY_SOCKS4 = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

61.10.579 kPROXY_SOCKS4A = 6

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Using SOCKS 4A.

61.10.580 kPROXY_SOCKS5 = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

61.10.581 kPROXY_SOCKS5_Hostname = 7

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Use the SOCKS5 protocol but pass along the host name rather than the IP address. added in 7.18.0

61.10.582 kSeekOriginCurrent = 1

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to current file position.

61.10.583 kSeekOriginEnd = 2

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to end of file.

61.10.584 kSeekOriginSet = 0

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to start of file.

61.10.585 kSeekReturnCantSeek = 3

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Return this value if you can't seek as you are not using a file, but for example a stream.

61.10.586 kSeekReturnFail = 2

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Returns this value if your seek operation failed.

61.10.587 kSeekReturnOk = 1

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Returns this value if your seek operation succeeded.

61.10.588 kSSHAuthAgent = 16

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: agent (ssh-agent, pageant...)

61.10.589 kSSHAuthAny = -1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: Any allowed

61.10.590 kSSHAuthDefault = -1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: Default: Any

61.10.591 kSSHAuthGSSAPI = 32

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: gssapi (kerberos, ...)

61.10.592 kSSHAuthHost = 4

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: host key files

61.10.593 kSSHAuthKeyboard = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: keyboard interactive

61.10.594 kSSHAuthNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: none allowed, silly but complete

61.10.595 kSSHAuthPassword = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: password

61.10.596 kSSHAuthPublicKey = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: public/private key files

61.10.597 kSSLOptionAllowBeast = 1

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to allow the BEAST SSL vulnerability in the name of improving interoperability with older servers. Some SSL libraries have introduced work-arounds for this flaw but those work-arounds sometimes make the SSL communication fail. To regain functionality with those broken servers, a user can this way allow the vulnerability back.

61.10.598 kSSLOptionAutoClientCert = 32

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the SSL option flags.
Notes: Tells libcurl to automatically locate and use a client certificate for authentication. (Schannel)

61.10.599 kSSLOptionNativeCA = 16

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to use standard certificate store of operating system. Currently implemented under MS-Windows.

61.10.600 kSSLOptionNoPartialChain = 4

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to *NOT* accept a partial certificate chain if possible. The OpenSSL backend has this ability.

61.10.601 kSSLOptionNoRevoke = 2

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to disable certificate revocation checks for those SSL backends where such behavior is present.

61.10.602 kSSLOptionRevokeBestEffort = 8

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to ignore certificate revocation offline checks and ignore missing revocation list for those SSL backends where such behavior is present.

61.10.603 kSSLVersionDefault = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).

61.10.604 kSSLVersionSSLv2 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: SSL v2 (but not SSLv3)

61.10.605 kSSLVersionSSLv3 = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: SSL v3 (but not SSLv2)

61.10.606 kSSLVersionTLSv1 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.0 or later

61.10.607 kSSLVersionTLSv10 = 4

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.0 or later (Added in 7.34.0)

61.10.608 kSSLVersionTLSv11 = 5

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.1 or later (Added in 7.34.0)

61.10.609 kSSLVersionTLSv12 = 6

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.2 or later (Added in 7.34.0)

61.10.610 kSSLVersionTLSv13 = 7

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.3 or later (Added in 7.52.0)

61.10.611 kTimeConditionIfModifiedSince = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.

61.10.612 kTimeConditionIfUnModifiedSince = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.

61.10.613 kTimeConditionNone = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.
Notes: No condition.

61.10.614 kUpkeepIntervalDefault = 50000

MBS CURL Plugin, Plugin Version: 18.5.

Function: The default connection upkeep interval in milliseconds.

61.10.615 kUseSSLall = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

61.10.616 kUseSSLcontrol = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

61.10.617 kUseSSLnone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Don't attempt to use SSL.

61.10.618 kUseSSLtry = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Try using SSL, proceed as normal otherwise.

61.11 class CURLNMimePartMBS

61.11.1 class CURLNMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for mime parts.
Notes:

You can provide data via file path, folderitem, data in memoryblock or string.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.11.2 Methods

61.11.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

61.11.4 Headers as String()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries header.

61.11.5 SetHeaders(headers() as String)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets header.

61.11.6 Properties

61.11.7 DataMemory as Memoryblock

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part data source from memory data.
Notes: (Read and Write property)

61.11.8 DataString as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part data source from memory data.
Example:

```
dim c as new CURLNMBS

// add mime
dim p as CURLNMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: (Read and Write property)

61.11.9 Encoding as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime data transfer encoder.
Notes:

If set to binary, 8bit, 7bit, base64 or quoted-printable, the matching encoding is applied.
(Read and Write property)

61.11.10 File as FolderItem

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file to stream.
Notes:

When you set property, the plugin will open file and may raise IOException on failure.
(Read and Write property)

61.11.11 FileName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part remote file name.
Notes:

If mime type is not set, we pick extension from file name.
This includes gif, jpg, jpeg, png, svg, txt, htm, html, pdf and xml file extensions.
(Read and Write property)

61.11.12 FilePath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part data source from named file.
Notes: (Read and Write property)

61.11.13 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

61.11.14 MimeType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part type.
Notes: (Read and Write property)

61.11.15 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime/form part name.
Notes: (Read and Write property)

61.11.16 Parent as Variant

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parent object.
Notes: (Read only property)

61.11.17 Constants

61.11.18 kEncoding7bit = "7bit"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: 7bit

61.11.19 kEncoding8bit = "8bit"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: 8bit

61.11.20 kEncodingBase64 = "base64"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Base64

61.11.21 kEncodingBinary = "binary"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Binary mode

61.11.22 kEncodingNone = ""

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: No mode, so data is passed through and header has no encoding defined.

61.11.23 kEncodingQuotedPrintable = "quoted-printable"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Quoted printable

61.11.24 kMimeTypeGIF = "image/gif"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: GIF

61.11.25 kMimeTypeHTML = "text/html"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: HTML

61.11.26 kMimeTypeJPEG = "image/jpeg"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: JPEG

61.11.27 kMimeTypePDF = "application/pdf"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: PDF

61.11.28 kMimeTypePNG = "image/png"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: PNG

61.11.29 kMimeTypeSVG = "image/svg+xml"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: SVG

61.11.30 kMimeTypeText = "text/plain"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: Text

61.11.31 kMimeTypeXML = "application/xml"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: XML

61.12 class CURLNMissingFunctionExceptionMBS

61.12.1 class CURLNMissingFunctionExceptionMBS

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An exception raised if a CURL library function is not loaded.
Notes:

If you call load library before you use the CURLNMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

61.13 class CURLNMultiMBS

61.13.1 class CURLNMultiMBS

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for multiple CURL transfers running in parallel.

61.13.2 Methods

61.13.3 AddCURL(CURL as CURLNMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a standard CURL handle to the multi stack.
Notes: Lasterror is set.

61.13.4 CURLs as CURLNMBS()

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries list of current CURL instances.

61.13.5 ErrorString(ErrorCode as Integer) as String

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries text message for a given error code.

61.13.6 Perform

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks for things to see.
Notes:

When the app thinks there's data available for CURL it calls this function to read/write whatever there is right now. This returns as soon as the reads and writes are done. This function does not require that there actually is data available for reading or that data can be written, it can be called just in case.

Lasterror is set. This only provides errors etc regarding the whole multi stack. There might still have occurred problems on invidual transfers even when this returns OK.

Sets RunningTransfers property.

61.13.7 RemoveCURL(CURL as CURLNMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes a CURL handle from the multi stack again.
Notes:

Lasterror is set.
Plugin calls this automatically when TransferFinished event was called.

61.13.8 Properties

61.13.9 ChunkLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A connection with a chunk length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

61.13.10 ContentLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A connection with a content-length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

61.13.11 Handle as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

61.13.12 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

61.13.13 MaxConcurrentStreams as Integer

MBS CURL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum number of concurrent connections to a server.
Notes:

Maximum number of concurrent streams to support on a connection.
(Read and Write property)

61.13.14 MaxConnects as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of entries in the connection cache.
Notes: (Read and Write property)

61.13.15 MaxHostConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of (pipelining) connections to one host.
Notes: (Read and Write property)

61.13.16 MaxPipelineLength as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of requests in a pipeline.
Notes: (Read and Write property)

61.13.17 MaxTotalConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of open connections in total.
Notes: (Read and Write property)

61.13.18 Pipelining as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to 1 to enable pipelining for this multi handle.
Notes:

Only for HTTP protocol.
Used to be a boolean property for 15.0 to 18.1, but changed to integer for 18.2.
(Read and Write property)

61.13.19 RunningTransfers as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of running transfers.
Notes:

Set by Perform method.
(Read only property)

61.13.20 Events

61.13.21 TransferFinished(CURL as CURLNMBS, result as Integer, RemainingFinishedTransfers as Integer)

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: One transfer finished.
Notes:

Query CURL object for details.
Result is the result of the transfer as returned by Perform method of CURL object.
RemainingFinishedTransfers is how many transfers are also finished and will be called right after this event.

This event fires always when the queue is empty.
You may want to turn off the timer calling Perform method when this event fires.
Later you can start timer again if you call Add method.

61.13.22 TransfersFinished

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: All pending transfers finished.

61.13.23 Constants

61.13.24 kErrorAddedAlready = 7

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: An easy handle already added to a multi handle was attempted to get added - again.

61.13.25 kErrorBadEadyHandle = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the multi interface error codes.
Notes: An easy handle was not good/valid.

61.13.26 kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: The passed-in handle is not a valid CURLM handle.

61.13.27 kErrorBadSocket = 5

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: The passed in socket argument did not match.

61.13.28 kErrorCallPerform = -1

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Please call Perform soon to do some tasks.

61.13.29 kErrorInternalError = 4

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: This is a libCURL bug.

61.13.30 kErrorOK = 0

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Everything OK.

61.13.31 kErrorOutOfMemory = 3

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Running low on memory.

61.13.32 kErrorRecursiveAPICall = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the multi interface error codes.
Notes: An api function was called from inside an event.

61.13.33 kErrorUnknownOption = 6

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Tried to set unsupported option.

61.13.34 kPipeHTTP1 = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: Pipe with HTTP/1.1.

61.13.35 kPipeMultiPlex = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: Pipe with multiplex.

61.13.36 kPipeNothing = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: No piping.

61.14 class CURLNNotInitializedExceptionMBS

61.14.1 class CURLNNotInitializedExceptionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An exception raised if CURL library is not initialized.
Notes:

If you call load library before you use the CURLMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

61.15 class CURLNotInitializedExceptionMBS

61.15.1 class CURLNotInitializedExceptionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An exception raised if CURL library is not initialized.
Notes:

If you call load library before you use the CURLMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

61.16 class CURLNSSLBackendMBS

61.16.1 class CURLNSSLBackendMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a SSL backend.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.16.2 Methods

61.16.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

61.16.4 List as CURLNSSLBackendMBS()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Lists the backends.
Example:

```
dim list() as CURLNSSLBackendMBS = CURLNSSLBackendMBS.List

for each l as CURLNSSLBackendMBS in list
MsgBox l.name
next
```

Notes: The list may not be available if called too late.

61.16.5 SetSSLBackend(id as Integer) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the SSL backend.
Notes:

When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 61.16.6 SetSSLBackend(name as string) as Integer 12138

61.16.6 SetSSLBackend(name as string) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the SSL backend.
Notes:

When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 61.16.5 SetSSLBackend(id as Integer) as Integer 12137

61.16.7 Properties

61.16.8 ID as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ID of this SSL backend.
Notes: (Read only property)

61.16.9 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of this SSL backend.
Notes: (Read only property)

61.16.10 Constants

61.16.11 kErrorNoBackends = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: libcurl was built without any SSL support

61.16.12 kErrorOK = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: OK

61.16.13 kErrorTooLate = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: You can't set SSL backend after SSL initialization.

61.16.14 kErrorUnknownBackend = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: Unknown backend name or ID.

61.16.15 kSSLBackendAXTLS = 10

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: AXTLS

61.16.16 kSSLBackendDarwinSSL = 9

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: DarwinSSL

61.16.17 kSSLBackendGNUTLS = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: GNUTLS

61.16.18 kSSLBackendGSKIT = 5

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: GSKIT

61.16.19 kSSLBackendMBEDTLS = 11

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: MBEDTLS

61.16.20 kSSLBackendMesaLink = 12

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the SSL backend IDs.
Notes: MesaLink

61.16.21 kSSLBackendNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.

61.16.22 kSSLBackendNSS = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: NSS

61.16.23 kSSLBackendOpenSSL = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: OpenSSL or BoringSSL

61.16.24 kSSLBackendPolarSSL = 6

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: PolarSSL

61.16.25 kSSLBackendSChannel = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: SChannel

61.16.26 kSSLBackendSecureTransport = 9

MBS CURL Plugin, Plugin Version: 19.2.

Function: One of the SSL backend IDs.
Notes: DarwinSSL

61.16.27 kSSLBackendWolfSSL = 7

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: WolfSSL

61.17 class CURLNURLMBS

61.17.1 class CURLNURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for CURL's URL parser.
Example:

```
dim c as new CURLNURLMBS

c.URL = "www.test.de/Hello World test.pdf"

// setting URL will repair the spaces
c.path = c.Path

MsgBox c.URL
```

61.17.2 Methods

61.17.3 Clone as CURLNURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Duplicates the object.

61.17.4 Constructor

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new URL object.

61.17.5 Properties

61.17.6 Flags as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The flags to use.
Notes:

Our default is combination of:

- kFlagsNoDefaultPort
- kFlagsNonSupportScheme
- kFlagsURLDecode
- kFlagsURLEncode
- kFlagsGuessScheme
- kFlagsDefaultScheme

(Read and Write property)

61.17.7 Fragment as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set fragment part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.17.8 Handle as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

61.17.9 Host as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set host part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.17.10 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code reported by one of the functions.
Notes:

This changes while using debugger because getting or setting properties also sets this property.
(Read and Write property)

61.17.11 Options as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set options part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.17.12 Password as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set password part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.17.13 Path as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set path part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.17.14 Port as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set port part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.17.15 Query as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set query part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.17.16 Scheme as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set scheme part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.17.17 URL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set full URL.
Example:

```
Dim c As New CURLNURLMBS

// load absolute URL
c.URL = "http://domain.com/folder/page1.htm"

// load relative URL
c.URL = "page2.htm"

// get final URL
MsgBox c.URL
```

Notes:

Sets lasterror property.
(Read and Write property)

61.17.18 User as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set user part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.17.19 ZoneID as String

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The zone ID.
Notes: (Read and Write property)

61.17.20 Constants

61.17.21 kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

An argument that should be a CURLU pointer was passed in as a NULL.
Should never happen with plugin as you would get exception.

61.17.22 kErrorBadPartpointer = 2

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

A NULL pointer was passed to the 'part' argument of curl_url_get.
Should never happen with plugin as you would get exception.

61.17.23 kErrorBadPortNumber = 4

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: The port number was not a decimal number between 0 and 65535.

61.17.24 kErrorMalformedInput = 3

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: A malformed input was passed to a URL API function.

61.17.25 kErrorNoFragment = 17

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no fragment part in the URL.

61.17.26 kErrorNoHost = 14

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no host part in the URL.

61.17.27 kErrorNoOptions = 13

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no options part in the URL.

61.17.28 kErrorNoPassword = 12

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no password part in the URL.

61.17.29 kErrorNoPort = 15

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no port part in the URL.

61.17.30 kErrorNoQuery = 16

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no query part in the URL.

61.17.31 kErrorNoScheme = 10

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no scheme part in the URL.

61.17.32 kErrorNoUser = 11

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no user part in the URL.

61.17.33 kErrorOk = 0

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: No error.

61.17.34 kErrorOutOfMemory = 7

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: A memory function failed.

61.17.35 kErrorUnknownPart = 9

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: An unknown part ID was passed to a URL API function.

61.17.36 kErrorUnsupportedScheme = 5

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: This libcurl build doesn't support the given URL scheme.

61.17.37 kErrorUrlDecode = 6

MBS CURL Plugin, Plugin Version: 18.5.

Function: URL decode error, most likely because of rubbish in the input.

61.17.38 kErrorUserNotAllowed = 8

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Credentials was passed in the URL when prohibited.

61.17.39 kFlagsAllowSpace = 2048

MBS CURL Plugin, Plugin Version: 21.4.

Function: One of the flags.
Notes: Whether to allow space character in URLs.

61.17.40 kFlagsAppendQuery = 256

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Append a form style part.

61.17.41 kFlagsDefaultPort = 1

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Return default port number.

61.17.42 kFlagsDefaultScheme = 4

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Return default scheme if missing.

61.17.43 kFlagsDisallowUser = 32

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: No user+password allowed.

61.17.44 kFlagsGuessScheme = 512

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Legacy curl-style guessing.

61.17.45 kFlagsNoAuthority = 1024

MBS CURL Plugin, Plugin Version: 20.0.

Function: Allow URLs without authority.
Notes: Allow empty authority when the scheme is unknown.

61.17.46 kFlagsNoDefaultPort = 2

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Act as if no port number was set, if the port number matches the default for the scheme.

61.17.47 kFlagsNonSupportScheme = 8

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Allow non-supported scheme.

61.17.48 kFlagsPathAsIs = 16

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Leave dot sequences.

61.17.49 kFlagsURLDecode = 64

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: URL decode on get.

61.17.50 kFlagsURLEncode = 128

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: URL encode on set.

61.18 class CURLNVersionMBS

61.18.1 class CURLNVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to hold version information from libCURL.

61.18.2 Methods

61.18.3 Constructor

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

61.18.4 Protocol(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An array containing the names protocols that libCURL supports (using lowercase letters).
Notes:

The protocol names are the same as would be used in URLs.
Index is zero based.

61.18.5 Properties

61.18.6 brotliVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Brotli library version string.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

61.18.7 brotliVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version of brotli version.
Notes: (Read only property)

61.18.8 CAInfo as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The built-in default CURLOPT_CAINFO.
Notes:

Should be empty within plugin.
(Read only property)

61.18.9 CAPath as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The built-in default CURLOPT_CAPATH.
Notes:

Should be empty within plugin.
(Read only property)

61.18.10 Features as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bits which define what features libCURL can and can't.
Notes:

Use the Supports Boolean properties instead.
Additional feature bits may be found in the libCURL documentation.
(Read only property)

61.18.11 gsaslVersion as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version string of the GNU SASL Library version.
Notes: (Read only property)

61.18.12 Host as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string showing what host information that this libCURL was built for.
Notes:

As discovered by a configure script or set by the build environment.
e.g. "powerpc-apple-darwin8.0"
(Read only property)

61.18.13 hyperVersion as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Human readable string.
Notes: (Read only property)

61.18.14 iconvVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version number of iconv library.
Notes: (Read only property)

61.18.15 libidnVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version of LibIDN used.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

61.18.16 libsshVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version of LibSSH2 used.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

61.18.17 LibZVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string (there is no numerical version).
Notes:

If libCURL has no libz support, this is "".
e.g. "1.2.3"
(Read only property)

61.18.18 nghttp2Version as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version string for nghttp2 library.
Notes: (Read only property)

61.18.19 nghttp2VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version number for nghttp2.
Notes:

Numeric nghttp2 version: (MAJOR * 65536) + (MINOR * 256) + PATCH
(Read only property)

61.18.20 ProtocolCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of entries in the Protocol array.
Notes: (Read only property)

61.18.21 quicVersion as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version of quic version.
Notes:

human readable quic (+ HTTP/3) library version.
(Read only property)

61.18.22 SSLVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string for the OpenSSL version used.
Notes:

If libCURL has no SSL support, this is "".
e.g. " OpenSSL/0.9.7l"
(Read only property)

61.18.23 SupportsASYNCHDNS as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for asynchronous name lookups, which allows more exact timeouts (even on Windows) and less blocking when using the multi interface.
Notes:

(added in 7.10.7)
(Read only property)

61.18.24 SupportsBrotli as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Brotli features are present.
Notes: (Read only property)

61.18.25 SupportsConv as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Character conversions supported.
Notes: (Read only property)

61.18.26 SupportsGSSAPI as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Built against a GSS-API library.
Notes: (Read only property)

61.18.27 SupportsGSSNEGOTIATE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports HTTP GSS-Negotiate
Notes:

(added in 7.10.6)
(Read only property)

61.18.28 SupportsHTTP2 as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether currently used CURL library supports HTTP2.
Example:

```
dim c as new CURLNMBS
dim v as CURLNVersionMBS = c.version

if v.SupportsHTTP2 then
MsgBox "HTTP2 is supported"
else
MsgBox "HTTP2 is not supported"
end if
```

Notes:

While our CURL Plugin with CURLNMBS plugin may not support this currently, you could use LoadLibrary function to load a CURL library supporting it.
(Read only property)

61.18.29 SupportsHTTP3 as Boolean

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether HTTP3 features are present.
Notes: (Read only property)

61.18.30 SupportsHTTPSProxy as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: HTTPS-proxy support built-in.
Notes: (Read only property)

61.18.31 SupportsIDN as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for IDNA, domain names with international letters.
Notes:

(Added in 7.12.0)
(Read only property)

61.18.32 SupportsIPV6 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports IPv6
Notes: (Read only property)

61.18.33 SupportsKERBEROS4 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports kerberos4 (when using FTP).
Notes: (Read only property)

61.18.34 SupportsKerberos5 as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Kerberos V5 auth is supported.
Notes: (Read only property)

61.18.35 SupportsLARGEFILE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for large files.
Notes:

(Added in 7.11.1)
(Read only property)

61.18.36 SupportsLIBZ as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports HTTP deflate using libz
Notes:

(Added in 7.10)
(Read only property)

61.18.37 SupportsMultiSSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Multiple SSL backends available.
Notes: (Read only property)

61.18.38 SupportsNTLM as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports HTTP NTLM
Example:

```
dim c as new CURLNMBS
dim v as CURLNVersionMBS = c.Version

MsgBox "SupportsNTLM: "+str(v.SupportsNTLM)
```

Notes:

(added in 7.10.6)
(Read only property)

61.18.39 SupportsNTLMWB as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NTLM delegation to winbind helper is supported.
Notes: (Read only property)

61.18.40 SupportsPSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Mozilla's Public Suffix List, used for cookie domain verification.
Notes: (Read only property)

61.18.41 SupportsSPNEGO as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for SPNEGO authentication
Notes:

(Simple and Protected GSS-API Negotiation Mechanism, defined in RFC 2478.) (added in 7.10.8)
(Read only property)

61.18.42 SupportsSSL as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports SSL (HTTPS/FTPS)
Notes:

(Added in 7.10)
(Read only property)

61.18.43 SupportsSSPI as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for SSPI.
Notes:

This is only available on Windows and makes libCURL use Windows-provided functions for NTLM authentication. It also allows libCURL to use the current user and the current user's password without the app having to pass them on. (Added in 7.13.2)
(Read only property)

61.18.44 SupportsTLSAUTHSRP as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: TLS-SRP auth is supported.
Notes: (Read only property)

61.18.45 SupportsUnicode as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether unicode for Windows is enabled.
Notes:

libcurl was built with Unicode support on Windows. This makes non-ASCII characters work in filenames and options passed to libcurl. (Added in 7.72.0)
(Read only property)

61.18.46 SupportsUnixSockets as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unix domain sockets support.
Notes: (Read only property)

61.18.47 SupportsZSTD as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Supports HTTP zstd content encoding using zstd library.
Notes:

Added in CURL 7.72.0
(Read only property)

61.18.48 Version as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string for the libCURL version.
Notes:

e.g. "7.13.1"
(Read only property)

61.18.49 VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version of libCURL as number.
Notes:

a 24 bit number created like this:
<8 bits major number>| <8 bits minor number>| <8 bits patch number>.
Version 7.9.8 is therefore returned as 0x070908.
(Read only property)

61.18.50 zstdVersion as String

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Human readable string version for zstd library.
Notes: (Read only property)

61.18.51 zstdVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Numeric Zstd version.
Notes:

Major 8 bits, minor 12 bits, Patch 12 bits.
(Read only property)

61.19 class CURLSFileInfoMBS

61.19.1 class CURLSFileInfoMBS

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for file information.
Notes: Content of this structure depends on information which is known and is achievable (e.g. by FTP LIST parsing).

61.19.8 Properties

61.19.9 Date as Date

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timstamp as a date object.
Notes:

As of plugin version 15.2 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.
(Read only property)

61.19.10 DateTime as DateTime

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The timstamp as a date object.
Notes:

As of plugin version 20.5 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.

(Read only property)

61.19.11 FileName as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file name.
Notes: (Read only property)

61.19.12 FileType as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file type.
Notes: (Read only property)

61.19.13 Flags as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes:

Flags define which fields are set.
Also you can just use the Has properties for same information.
(Read only property)

61.19.14 GID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The group ID.
Notes: (Read only property)

61.19.15 GroupString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The group string.
Notes: (Read only property)

61.19.16 HardLinks as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hard link count.
Notes: (Read only property)

61.19.17 HasFileName as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if filename property is valid.
Notes: (Read only property)

61.19.18 HasFileType as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if filetype property is valid.
Notes: (Read only property)

61.19.19 HasGID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if GID property is valid.
Notes: (Read only property)

61.19.20 HasHardLinks as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if hardlinks property is valid.
Notes: (Read only property)

61.19.21 HasPermissions as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if permissions property is valid.
Notes: (Read only property)

61.19.22 HasSize as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if size property is valid.
Notes: (Read only property)

61.19.23 HasTime as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if time and date properties have values.
Notes: (Read only property)

61.19.24 HasUID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if UID field has a value.
Notes: (Read only property)

61.19.25 IsDirectory as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if entry is a directory.
Notes:

Same as FileType = FileTypeDirectory.
(Read only property)

61.19.26 IsFile as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if entry is a regular file.
Notes:

Same as FileType = FileTypeFile.
(Read only property)

61.19.27 Permissions as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The permission value.
Notes: (Read only property)

61.19.28 PermissionString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The permission string.
Notes: (Read only property)

61.19.29 Size as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file size.
Notes: (Read only property)

61.19.30 Target as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target for a symlink.
Notes: (Read only property)

61.19.31 Time as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time value.
Notes: (Read only property)

61.19.32 TimeString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time string parsed.
Notes: (Read only property)

61.19.33 UID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user ID.
Notes: (Read only property)

61.19.34 UserString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user ID as text.
Notes: (Read only property)

61.19.35 Constants

61.19.36 FileTypeDeviceBlock = 3

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Block Device

61.19.37 FileTypeDeviceChar = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Character Device

61.19.38 FileTypeDirectory = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Directory

61.19.39 FileTypeDoor = 7

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Door, is possible only on Sun Solaris now.

61.19.40 FileTypeFile = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Regular file

61.19.41 FileTypeNamedPipe = 5

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Named Pipe

61.19.42 FileTypeSocket = 6

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Socket

61.19.43 FileTypeSymlink = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Symbolic links

61.19.44 FileTypeUnknown = 8

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Unknown file type. Should never occur.

61.19.45 FlagKnownFileName = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Filename Known

61.19.46 FlagKnownFileType = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: File Type Known

61.19.47 FlagKnownGID = 32

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: GID Known

61.19.48 FlagKnownHardLinks = 128

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Hardlink Count Known

61.19.49 FlagKnownPermissions = 8

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Permissions Known

61.19.50 FlagKnownSize = 64

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Size Known

61.19.51 FlagKnownTime = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Time Known

61.19.52 FlagKnownUID = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: UID Known

61.20 class CURLSListMBS

61.20.1 class CURLSListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to hold a list of strings from the CURL library.
Notes: Data is copied for this list, so you can just keep it around.

61.20.2 Methods

61.20.3 Item(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the item with the given index.
Notes: Index is zero based.

61.20.4 List as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts list to a string array.

61.20.5 Operator_Convert as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts list to a string array.

61.20.6 Properties

61.20.7 Count as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of items in this list.
Notes: (Read only property)

61.21 class CURLSMBS

61.21.1 class CURLSMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to wrap libCURL.
Notes:

We have three variants:

CURLS* classes include a static CURL library with SSL and SSH.
CURLN* classes include a static CURL library with native SSL on Mac and Windows.
CURL* classes without S need you to supply your own CURL library.

All variants can load a custom CURL library or use the one from the system on Mac and Linux.
If no library is loaded or included, the plugin will try to load the system one in constructor.

from the website libCURL website:
https://curl.haxx.se/libcurl/

libCURL is a free and easy-to-use client-side URL transfer library, supporting FTP, FTPS, HTTP, HTTPS, SCP, SFTP, TFTP, TELNET, DICT, FILE and LDAP. libCURL supports SSL certificates, HTTP POST, HTTP PUT, FTP uploading, HTTP form based upload, proxies, cookies, user+password authentication (Basic, Digest, NTLM, Negotiate, Kerberos4), file transfer resume, http proxy tunneling and more!

libCURL is highly portable, it builds and works identically on numerous platforms, including Solaris, NetBSD, FreeBSD, OpenBSD, Darwin, HPUX, IRIX, AIX, Tru64, Linux, UnixWare, HURD, Windows, Amiga, OS/2, BeOs, Mac OS X, Ultrix, QNX, OpenVMS, RISC OS, Novell NetWare, DOS and more...

libCURL is free, thread-safe, IPv6 compatible, feature rich, well supported, fast, thoroughly documented and is already used by many known, big and successful companies and numerous applications.

On Linux you may need to install libraries like ldap: apt-get install libldap-2.4.2:i386

61.21.8 Methods

61.21.9 AddMimePart as CURLSMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new blank mime part.
Notes: Returns mime object, so you can set properties.

61.21.10 AWSPresignURL(AWSAccessKeyId as String, AWSSecretAccessKey as String, Region as String, Service as String, Path as String, Domain as String, Verb as String = "GET", Expires as Integer = 86400, QueryParameters() as String = nil, Headers() as String = nil) as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query predigend URL for Amazon Webservices.
Example:

```
Dim URL As String = CURLSMBS.AWSPresignURL( _
"AKIAIOSFODNN7EXAMPLE", _
"wJalrXUtnFEMI/K7MDENG/bPxRfiCYEXAMPLEKEY", _
"us-east-1", _
"s3", _
"/test.txt", _
"examplebucket.s3.amazonaws.com", _
"GET", _
86400 )

Break // see URL in debugger
```

Notes:

This implements AWS4-HMAC-SHA256 pre-signature for credentials.

Works also for other compatible S3 services beside Amazon's like the one from Wasabi or Dell ECS.

Parameter	Description	Example
AWSAccessKeyId	Your access key for AWS.	
AWSSecretAccessKey	Your secret.	
Region	The region to use.	"us-central-1"
Service	The service to use.	"s3"
Path	Path part of the URL. Should always start with "/".	"/bucketname/test.jpg"
Domain	Optional the domain to use. By default we just build it from region and service.	"s3.us-central-1.amazonaws.com" or "s3-us-west2east-2.amazonaws.com"
Verb	The HTTP Operation to do. Can be POST, PUT, GET or DELETE. Default is GET.	"GET"
Expires	Expiration duration. Provides the time period, in seconds, for which the generated presigned URL is valid. For example, 86400 (24 hours). This value is an integer. The minimum value you can set is 1, and the maximum is 604800 (seven days). A presigned URL can be valid for a maximum of seven days because the signing key you use in signature calculation is valid for up to seven days. Default is 86400 for one day.	
QueryParameters	List of query parameters to include.	
Headers	Extra HTTP headers to include. Here you can specify various headers to include in signature and request.	"test=abc"

Returns the pre-signed URL. May raise an exception in case of error.

61.21.11 CipherNames as String()

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all cipher algorithms.
Example:

```
// see hash and encryption algorithms available
dim CipherNames() as string = CURLSMBS.CipherNames
dim DigestNames() as string = CURLSMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

61.21.12 ClearData

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears data properties.
Notes: Resets OutputData, DebugData and HeaderData.

61.21.13 CloseMTDebugOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the debug output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

61.21.14 CloseMTHeaderOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the header output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

61.21.15 CloseMTInputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the input file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

61.21.16 CloseMTOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

61.21.17 CreateMTDebugOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where debug data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

• 61.21.18 CreateMTDebugOutputFile(Path as String) as boolean 12183

61.21.18 CreateMTDebugOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where debug data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

• 61.21.17 CreateMTDebugOutputFile(file as folderitem) as boolean 12182

61.21.19 CreateMTHeaderOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where header data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

• 61.21.20 CreateMTHeaderOutputFile(Path as String) as boolean 12183

61.21.20 CreateMTHeaderOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where header data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.21.19 CreateMTHeaderOutputFile(file as folderitem) as boolean 12183

61.21.21 CreateMTOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where output data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.21.22 CreateMTOutputFile(Path as String) as boolean 12184

61.21.22 CreateMTOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where output data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.21.21 CreateMTOutputFile(file as folderitem) as boolean 12184

61.21.23 DigestNames as String()

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all digest algorithms.
Example:

```
// see hash and encryption algorithms available
dim CipherNames() as string = CURLSMBS.CipherNames
dim DigestNames() as string = CURLSMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

61.21.24 FileInfos as CURLSFileInfoMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array with file information.
Notes:

If you use OptionWildcard, you find after the transfer all CURLSFileInfoMBS objects for all the files/folders found.

For MBS Plugin 19.0 or newer you can alternatively run a custom request "MLSD" and than get file infos, too.

61.21.25 FinishMime

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes mime data.
Example:

```
dim c as new CURLSMBS

// add mime
dim p as CURLMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: Please call AddMimePart for each part you like to add and than finally FinishMime before calling perform.

61.21.26 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
dim c as new CURLSMBS
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string

const CURLFORM_COPYNAME = 1
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues
```

Notes:

Lasterror is set.
See other FormAdd methods for details.

- 61.21.32 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer) 12190
- 61.21.33 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string) 12193

61.21.30 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Text4 as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Lasterror is set.
See other FormAdd methods for details.

- 61.21.33 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string) 12193

61.21.32 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Several FormAdd methods are there. Send a request to support if you need another parameter combination.

Lasterror is set.

FormAdd() is used to append sections when building a multipart/formdata HTTP POST (sometimes referred to as rfc1867-style posts). Append one section at a time until you've added all the sections you want included and then you call FormFinish.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

First, there are some basics you need to understand about multipart/formdata posts. Each part consists of at least a NAME and a CONTENTS part. If the part is made for file upload, there are also a stored CONTENT-TYPE and a FILENAME. Below, we'll discuss what options you use to set these properties in the parts you want to add to your post.

The options listed first are for making normal parts. The options from CURLFORM_FILE through CURLFORM_BUFFERLENGTH are for file upload parts.

CURLFORM_COPYNAME:
followed by a string which provides the name of this part. libCURL copies the string so your application doesn't need to keep it around after this function call. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_PTRNAME:
followed by a string which provides the name of this part. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_COPYCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL copies the provided data, so your application doesn't need to keep it around after this function call. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set the length of the name with CURLFORM_CONTENTSLENGTH.

CURLFORM_PTRCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_CONTENTSLENGTH.

CURLFORM_CONTENTSLENGTH:
followed by a long giving the length of the contents.

CURLFORM_FILECONTENT:
followed by a filename, causes that file to be read and its contents used as data in this part. This part does not automatically become a file upload part simply because its data was read from a file.

CURLFORM_FILE:
followed by a filename, makes this part a file upload part. It sets the filename field to the basename of the provided filename, it reads the contents of the file and passes them as data and sets the content-type if the given file match one of the internally known file extensions. For CURLFORM_FILE the user may send one or more files in one part by providing multiple CURLFORM_FILE arguments each followed by the filename (and each CURLFORM_FILE is allowed to have a CURLFORM_CONTENTTYPE).

CURLFORM_CONTENTTYPE:
is used in combination with CURLFORM_FILE. Followed a string which provides the content-type for this part, possibly instead of an internally chosen one.

CURLFORM_FILENAME:
is used in combination with CURLFORM_FILE. Followed a string, it tells libCURL to use the given string

as the filename in the file upload part instead of the actual file name.

CURLFORM_BUFFER:
is used for custom file upload parts without use of CURLFORM_FILE. It tells libCURL that the file contents are already present in a buffer. The parameter is a string which provides the filename field in the content header.

CURLFORM_BUFFERPTR:
is used in combination with CURLFORM_BUFFER. The parameter is the string to be uploaded. You must also use CURLFORM_BUFFERLENGTH to set the number of bytes in the buffer. Keep the buffer variable alive till the upload is finished.

CURLFORM_BUFFERLENGTH:
is used in combination with CURLFORM_BUFFER. The parameter is a long which gives the length of the buffer.

CURLFORM_ARRAY:
Another possibility to send options to CURL_formadd() is the CURLFORM_ARRAY option, that passes an Integer Array and a String Array defining its value. Each element in the form is constructed using the option from the integer array and the value from the string array. All available options can be used in an array, except the CURLFORM_ARRAY option itself!

CURLFORM_CONTENTHEADER:
specifies extra headers for the form POST section. This takes a CURL_slist prepared in the usual way using CURL_slist_append and appends the list of headers to those libCURL automatically generates. The list must exist while the POST occurs, if you free it before the post completes you may experience problems.

PS: CURLFORM_FILE does not work in all CURL versions on all platforms due to a bug with integer numbers.

- 61.21.26 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string) 12185
- 61.21.27 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string) 12187
- 61.21.28 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer) 12187
- 61.21.29 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Number4 as Integer) 12188
- 61.21.30 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Text4 as string) 12189

- 61.21.31 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string) 12189
- 61.21.33 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string) 12193

61.21.33 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string)

MBS CURL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Lasterror is set.
See other FormAdd methods for details.
See also:

- 61.21.26 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string) 12185
- 61.21.27 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string) 12187
- 61.21.28 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer) 12187
- 61.21.29 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Number4 as Integer) 12188
- 61.21.30 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Text4 as string) 12189
- 61.21.31 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string) 12189
- 61.21.32 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer) 12190

61.21.34 FormAddField(fieldName as String, fieldValue as String, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
dim d as new CURLSMBS
d.FormAddField("company", "Test, Inc.")
```

Notes:

For fieldName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.
ContentType is optional.

Please call FormFinish method later!

61.21.35 FormAddFile(fieldName as String, fileName as String, fileContent as string, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
// read content of some file
dim file as folderitem = specialFolder.desktop.Child("test.txt")
dim b as BinaryStream = binarystream.Open(file)
dim FileContent as String = b.read(b.length)

// init some curl object
dim d as new CURLSMBS

// add the file as part of a form
d.FormAddFile("FileAttachment", "test.txt", FileContent, "text/plain")

// later
d.FormFinish
```

Notes:

For fieldName, fileName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.

Filename is ignored, if empty.
ContentType is optional.

Please call FormFinish method later!

61.21.36 FormClear

MBS CURL Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears current form data.
Notes: You usually don't need to call this as Perform clears form data when transfer is done.

61.21.37 FormData as String

MBS CURL Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current form data.
Notes: This is more for debugging as it builds form data as if we would send it.

61.21.38 FormFinish

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes constructing a form.
Example:

```
dim c as new CURLSMBS
dim namebuffer as string = "name buffer"
dim namelength as Integer = lenb(namebuffer)
dim buffer as string = "test buffer"
dim htmlbuffer as string = "<HTML>test buffer</HTML>"
dim htmlbufferlength as Integer = lenb(htmlbuffer)
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string
dim recordbuffer as string = "record buffer"
dim recordlength as Integer = lenb(recordbuffer)

const CURLFORM_NOTHING = 0
const CURLFORM_COPYNAME = 1
const CURLFORM_PTRNAME = 2
const CURLFORM_NAMELENGTH = 3
const CURLFORM_COPYCONTENTS = 4
const CURLFORM_PTRCONTENTS = 5
const CURLFORM_CONTENTSLENGTH = 6
const CURLFORM_FILECONTENT = 7
```

```
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10
const CURLFORM_BUFFER = 11
const CURLFORM_BUFFERPTR = 12
const CURLFORM_BUFFERLENGTH = 13
const CURLFORM_CONTENTTYPE = 14
const CURLFORM_CONTENTHEADER = 15
const CURLFORM_FILENAME = 16

'/* Add simple name/content section */

c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_COPYCONTENTS, "content"

,
'/* Add simple name/content/contenttype section */

c.FormAdd CURLFORM_COPYNAME, "htmlcode", CURLFORM_COPYCONTENTS, "<HTML></HTML>",CURL-
FORM_CONTENTTYPE,"text/html"

'/* Add name/ptrcontent section */
c.FormAdd CURLFORM_COPYNAME, "name_for_ptrcontent", CURLFORM_PTRCONTENTS, buffer

'/* Add ptrname/ptrcontent section */
c.FormAdd CURLFORM_PTRNAME, namebuffer, CURLFORM_PTRCONTENTS, buffer, CURLFORM_NAME-
LENGTH, namelength

'/* Add name/ptrcontent/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "html_code_with_hole", CURLFORM_PTRCONTENTS, html-
buffer, CURLFORM_CONTENTSLENGTH, htmlbufferlength, CURLFORM_CONTENTTYPE, "text/html"

'/* Add simple file section */
c.FormAdd CURLFORM_COPYNAME, "picture", CURLFORM_FILE, "my-face.jpg"

'/* Add file/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "picture",CURLFORM_FILE, "my-face.jpg",CURLFORM_CONTENTTYPE,
"image/jpeg"

'/* Add two file section */
c.FormAdd CURLFORM_COPYNAME, "pictures",CURLFORM_FILE, "my-face.jpg",CURLFORM_FILE,
"your-face.jpg"

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2
```

```
'/* Add a buffer to upload */
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_BUFFER, "data", CURLFORM_BUFFERPTR,
recordbuffer, CURLFORM_BUFFERLENGTH, recordlength

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues

'/* Add the content of a file as a normal post text value */
c.FormAdd CURLFORM_COPYNAME, "filecontent", CURLFORM_FILECONTENT, ".bashrc"
'/* Set the form info */

c.FormFinish
```

Notes:

Lasterror is set.
The form is assigned to the HTTPPost property.

61.21.39 GetInfoActiveSocket as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receive the active socket used by this curl session.
Notes:

If the socket is no longer valid, -1 is returned. When you finish working with the socket, the Destructor closes the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly.

This option was added as a replacement for GetInfoLastSocket since that one isn't working on all platforms.

61.21.40 GetInfoAppConnectTime as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time stamp when app connected.

61.21.41 GetInfoCertInfo as CURLSListMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries information on the certificate chain.
Example:

```
dim c as new CURLSMBS

// do some transfer
c.OptionURL = "https://www.mbsplugins.de/"
dim e as Integer = c.perform

// query certificate info
dim lists() as CURLSListMBS = c.GetInfoCertInfo

for each l as CURLSListMBS in lists
MsgBox Join(l, EndOfLine)
next

MsgBox c.DebugData
```

61.21.42 GetInfoConditionUnmet as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return if the time condition prevented the document to get transferred.

61.21.43 GetInfoConnectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time, in seconds, it took from the start until the connect to the remote host (or proxy) was completed.
Notes: The Lasterror property is set. 0 for success.

61.21.44 GetInfoContentLengthDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content-length of the download.
Notes:

The Lasterror property is set. 0 for success.
This is the value read from the Content-Length: field.

61.21.45 GetInfoContentLengthUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The specified size of the upload.
Notes: The Lasterror property is set. 0 for success.

61.21.46 GetInfoContentType as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content-type of the downloaded object.
Notes:

The Lasterror property is set. 0 for success.
This is the value read from the Content-Type: field. If you get "", it means that the server didn't send a valid Content-Type header or that the protocol used doesn't support this.

61.21.47 GetInfoCookieList as CURLSListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A linked-list of all cookies CURL knows (expired ones, too).
Notes:

The Lasterror property is set. 0 for success.
If there are no cookies (cookies for the handle have not been enabled or simply none have been received) the result is nil.

61.21.48 GetInfoEffectiveMethod as string

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the last used effective HTTP method.
Notes: In cases when you've asked libcurl to follow redirects, the method may very well not be the same method the first request would use.

61.21.49 GetInfoEffectiveURL as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last used effective URL.

Notes: The Lasterror property is set. 0 for success.

61.21.50 GetInfoFileTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: the remote time of the retrieved document (in number of seconds since 1 jan 1970 in the GMT/UTC time zone).
Example:

```
// init CURL with options
dim d as new CURLSMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes:

The Lasterror property is set. 0 for success.
If you get -1, it can be because of many reasons (unknown, the server hides it or the server doesn't support the command that tells document time etc) and the time of the document is unknown. Note that you must tell the server to collect this information before the transfer is made, by using the OptionFileTime option or you will unconditionally get a -1 back. (Added in 7.5)

61.21.51 GetInfoFTPEntryPath as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string holding the path of the entry path.
Notes:

That is the initial path libCURL ended up in when logging on to the remote FTP server.
Empty string if unknown.

61.21.52 GetInfoHeaderSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total size of all the headers received.
Notes: The Lasterror property is set. 0 for success.

61.21.53 GetInfoHTTPAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A bitmask indicating the authentication method(s) available.
Notes:

The Lasterror property is set. 0 for success.
The meaning of the bits is explained in the HTTPAuth option.

61.21.54 GetInfoHTTPConnectCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last received proxy response code to a CONNECT request.
Notes:

The Lasterror property is set. 0 for success.
none

61.21.55 GetInfoHTTPVersion as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the http version used in the connection.
Notes: The returned value will be kHTTP_VERSION_1_0, kHTTP_VERSION_1_1, or kHTTP_VERSION_2_0, or 0 if the version can't be determined.

61.21.56 GetInfoLastSocket as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receive the last socket used by this CURL session.
Notes:

If the socket is no longer valid, -1 is returned. When you finish working with the socket, the destructor will free the handle as usual and let libCURL close the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly. (Added in 7.15.2)

NOTE: this API is not really working on win64, since the SOCKET type on win64 is 64 bit large while its 'long' is only 32 bits.

61.21.57 GetInfoLocalIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries local IP.
Example:

```
dim c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP
MsgBox c.GetInfoLocalIP
```

61.21.58 GetInfoLocalPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the local port of the most recent (primary) connection.
Example:

```
dim c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP and port
MsgBox c.GetInfoLocalIP+":"+str(c.GetInfoLocalPort)
```

61.21.59 GetInfoNameLookupTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time, in seconds, it took from the start until the name resolving was completed.
Notes: The Lasterror property is set. 0 for success.

61.21.60 GetInfoNumConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: How many new connections libCURL had to create to achieve the previous transfer.
Notes:

The Lasterror property is set. 0 for success.
(only the successful connects are counted)
Combined with RedirectCount you are able to know how many times libCURL successfully reused existing connection(s) or not. See the Connection Options to see how libCURL tries to make persistent connections to save time.

61.21.61 GetInfoOSErrno as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The errno variable from a connect failure.
Notes: The Lasterror property is set. 0 for success.

61.21.62 GetInfoPreTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time, in seconds, it took from the start until the file transfer is just about to begin.
Notes:

The Lasterror property is set. 0 for success.
This includes all pre-transfer commands and negotiations that are specific to the particular protocol(s) involved.

61.21.63 GetInfoPrimaryIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the ip address of the most recent (primary) connection.
Example:

```
dim c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

61.21.64 GetInfoPrimaryPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the (remote) port of the most recent (primary) connection.
Example:

```
dim c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

61.21.65 GetInfoProtocol as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the protocol used in the connection.
Notes: See kProtocol* constants.

61.21.66 GetInfoProxyAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A bitmask indicating the authentication method(s) available for your proxy authentication.
Notes: The Lasterror property is set. 0 for success.

61.21.67 GetInfoProxyError as integer

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries proxy error code.

61.21.68 GetInfoProxySSLVerifyResult as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the result of the proxy certificate verification.
Notes: receive the result of the certificate verification that was requested (using the OptionProxySSLVerifyPeer option. This is only used for HTTPS proxies.

61.21.69 GetInfoRedirectCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total number of redirections that were actually followed.
Notes: The Lasterror property is set. 0 for success.

61.21.70 GetInfoRedirectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: the total time, in seconds, it took for all redirection steps include name lookup, connect, pretransfer and transfer before final transaction was started.
Notes:

The Lasterror property is set. 0 for success.
RedirectTime contains the complete execution time for multiple redirections. (Added in 7.9.7)

61.21.71 GetInfoRedirectURL as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The redirection URL.

61.21.72 GetInfoReferer as string

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries referrer text.

61.21.73 GetInfoRequestSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total size of the issued requests.
Notes:

The Lasterror property is set. 0 for success.
This is so far only for HTTP requests. Note that this may be more than one request if FOLLOWLOCATION is true.

61.21.74 GetInfoResponseCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last received HTTP or FTP code.
Notes:

The Lasterror property is set. 0 for success.
This will be zero if no server response code has been received. Note that a proxy's CONNECT response should be read with GetInfoHTTPConnectCode and not this.

With HTTP transfer, a successful transfer reports 200 here. If the page is not found, you get 404. Or any other HTTP Response code.

61.21.75 GetInfoRetryAfter as integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the Retry-After retry delay.
Notes:

Receive the number of seconds the HTTP server suggesets the client should wait until the next request is issued.
The information from the "Retry-After:" header.

While the HTTP header might contain a fixed date string, the RetryAfter will always return number of

seconds to wait - or zero if there was no header or the header couldn't be parsed.

61.21.76 GetInfoRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query RTSP Client sequence counter.

61.21.77 GetInfoRTSPCSEQRecv as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query RTSP sequence counter received.

61.21.78 GetInfoRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query RTSP Server sequence counter.

61.21.79 GetInfoRTSPSessionID as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query RTSP session ID.

61.21.80 GetInfoScheme as string

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the URL scheme (sometimes called protocol) used in the connection

61.21.81 GetInfoSizeDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total amount of bytes that were downloaded.
Notes:

The Lasterror property is set. 0 for success.
The amount is only for the latest transfer and will be reset again for each new transfer.

61.21.82 GetInfoSizeUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total amount of bytes that were uploaded.
Notes: The Lasterror property is set. 0 for success.

61.21.83 GetInfoSpeedDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The average download speed that CURL measured for the complete download.
Notes: The Lasterror property is set. 0 for success.

61.21.84 GetInfoSpeedUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The average upload speed that CURL measured for the complete upload.
Notes: The Lasterror property is set. 0 for success.

61.21.85 GetInfoSSLEngines as CURLSListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receive a linked-list of OpenSSL crypto-engines supported.
Notes:

The Lasterror property is set. 0 for success.
Note that engines are normally implemented in separate dynamic libraries. Hence not all the returned engines may be available at run-time.

61.21.86 GetInfoSSLVerifyResult as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: the result of the certification verification that was requested (using the SSLVerifyPeer option).
Notes: The Lasterror property is set. 0 for success.

61.21.87 GetInfoStartTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: the time, in seconds, it took from the start until the first byte is just about to be transferred.
Notes:

The Lasterror property is set. 0 for success.
This includes the pretransfer time and also the time the server needs to calculate the result.

61.21.88 GetInfoTotalTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total time in seconds for the previous transfer, including name resolving, TCP connect etc.
Notes: The Lasterror property is set. 0 for success.

61.21.89 LoadAPI

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the default CURL library.
Notes:

This method is called by the constructor. So you don't need this except you want to test explicit with APILoaded whether the loading worked before you use the CURLSMBS class.

Loads the "libCURL.dll" Windows library (with SSL support this one max require OpenSSL).
Loads on Mac OS X and Linux the libCURL file in /usr/lib.

61.21.90 LoadErrorString as string

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error string from the LoadLibrary function.

61.21.91 LoadLibrary(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the CURL library from the given path.
Notes:

You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 61.21.92 LoadLibrary(path as string) as boolean 12210

61.21.92 LoadLibrary(path as string) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the CURL library from the given path.
Notes:

You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 61.21.91 LoadLibrary(file as folderitem) as boolean 12210

61.21.93 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens input file for reading data while PerformMT runs.
Notes:

The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.

See also:

- 61.21.94 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean 12211

61.21.94 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens input file for reading data while PerformMT runs.
Notes:

The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 61.21.93 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean 12210

61.21.95 Perform as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform a file transfer
Notes:

This function is called after all the options are set, and will perform the transfer as described in the options.

You can do any amount of calls to Perform. If you intend to transfer more than one file, you are even encouraged to do so. libCURL will then attempt to re-use the same connection for the following transfers, thus making the operations faster, less CPU intense and using less network resources. Just note that you will have to use the option properties between the invokes to set options for the following Perform.

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

Possible values for the retun value:

The error value -1 is used from the plugin to report that something is missing like OpenSSL dlls on Windows.

With SFTP, you can get logged error "Upload failed: Operation failed (4/-31)" when upload uses path to folder instead of file in URL.

61.21.96 PerformMT as Integer

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform a file transfer with preemptive multithreading.
Notes:

Same as Perform, but with additional multithreading.

As the actual transfer runs on a preemptive thread, the events Debug, Write, Header and Progress are called asynchrounously and run a few milliseconds later. You can return true in Progress event to stop transfer, but you will get more events before the transfer is stopped.

You can call CreateMTDebugOutputFile, CreateMTHeaderOutputFile and CreateMTOutputFile before PerformMT to have output data be written into files. Call OpenMTInputFile to let the plugin read input data (form post or upload) from an input file.

Do not call other CURL functions on this CURLSMBS instance while PerformMT is running!

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

To avoid trouble with app hanging on quit of application, be sure to set cancel property to true in window close event to cancel any pending transfer.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

61.21.97 ReceiveData(byref data as Memoryblock, BytesToRead as Int64) as Int64

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receives raw data on a connection.
Notes:

This function receives raw data from the established connection. You may use it together with SendData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

The data memoryblock is a reference to your variable that will get the received data. BytesToRead is the maximum amount of data you can get in that buffer. The function returns the number of received bytes.

To establish the connection, set OptionConnectOnly = true before calling Perform. Note that ReceiveData does not work on connections that were created without this option.

The call will return kError_AGAIN if there is no data to read - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, wait for data to arrive.

Wait on the socket only if ReceiveData returns kError_AGAIN. The reason for this is libcurl or the SSL library may internally cache some data, therefore you should call ReceiveData until all data is read which would include any cached data.

Furthermore if you wait on the socket and it tells you there is data to read, ReceiveData may return CURLE_AGAIN if the only data that was read was for internal SSL processing, and no other data is available.

On success, sets lasterror to kError_OK (0), stores the received data into memory block, and returns the number of bytes it actually read.

On failure, returns zero and lasterror is set to the appropriate error code.

The function may return kError_AGAIN. In this case, use your operating system facilities to wait until data can be read, and retry.

Reading exactly 0 bytes indicates a closed connection.

If there's no socket available to use from the previous transfer, this function returns kError_UNSUPPORTED_PROTOCOL.

61.21.98 Reset

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Re-initializes all options previously set on a specified CURL handle to the default values.
Notes: It does not change the following information kept in the handle: live connections, the Session ID cache, the DNS cache, the cookies and shares.

61.21.99 SendData(data as Memoryblock) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends raw data over a connection.
Notes:

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.
See also:

- 61.21.100 SendData(data as string) as Integer 12214

61.21.100 SendData(data as string) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends raw data over a connection.
Notes:

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.
See also:

- 61.21.99 SendData(data as Memoryblock) as Integer 12213

61.21.101 SetInputData(data as MemoryBlock)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 61.21.102 SetInputData(data as string) 12215

61.21.102 SetInputData(data as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 61.21.101 SetInputData(data as MemoryBlock) 12215

61.21.103 SetOptionConnectTo(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set list of host:port:connect-to-host:connect-to-port, overrides the URL's host:port (only for the network layer)

61.21.104 SetOptionEmptyPassword

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an empty password.
Notes:

Normally you have no password unless you set it.
But if you set a password with empty string, the plugin sets CURL to use no password.
This method is to use an empty password.

61.21.105 SetOptionHTTP200Aliases(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A linked list of aliases to be treated as valid HTTP 200 responses.
Notes:

Some servers respond with a custom header response line. For example, IceCast servers respond with "ICY 200 OK". By including this string in your list of aliases, the response will be treated as a valid HTTP header line such as "HTTP/1.0 200 OK".

The alias itself is not parsed for any version strings. So if your alias is "MYHTTP/9.9", LibCURL will not treat the server as responding with HTTP version 9.9. Instead LibCURL will use the value set by option HTTPVersion.

The Lasterror property is set. 0 for success.

61.21.106 SetOptionHTTPHeader(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A linked list of HTTP headers to pass to the server in your HTTP request.
Example:

```
dim c as new CURLSMBS
c.SetOptionHTTPHeader array("Expect:", "Content-Type: text/xml", "SOAPAction: ""login""")
```

Notes:

If you add a header that is otherwise generated and used by libCURL internally, your added one will be used instead. If you add a header with no contents as in 'Accept:' (no data on the right side of the colon), the internally used header will get disabled. Thus, using this option you can add new headers, replace internal headers and remove internal headers. To add a header with no contents, make the contents be two quotes:

"". The headers included in the linked list must not be CRLF-terminated, because CURL adds CRLF after each header item. Failure to comply with this will result in strange bugs because the server will most likely ignore part of the headers you specified.

The first line in a request (containing the method, usually a GET or POST) is not a header and cannot be replaced using this option. Only the lines following the request-line are headers. Adding this method line in this list of headers will only cause your request to send an invalid header.

Pass an empty array to this to reset back to no custom headers.

The Lasterror property is set. 0 for success.

61.21.107 SetOptionMailRecipients(list() as string)

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the array of email recipient addresses.

61.21.108 SetOptionPostQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an array to a list of FTP commands to pass to the server after your ftp transfer request.
Example:

```
dim d as CURLSMBS // your CURL object

dim ws() As String
ws.Append "RNFR Temp.txt"
ws.append "RNTO MyFile.txt"
d.SetOptionPostQuote(ws)
```

Notes:

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.
If you want to do a ftp operation instead of download/upload/directory listing, please use SetOptionQuote.

61.21.109 SetOptionPreQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an array to a list of FTP commands to pass to the server after the transfer type is set.
Notes:

Disable this operation again by using an empty array for this option. Before version 7.15.6, if you also set Nobody to true, this option didn't work.

The Lasterror property is set. 0 for success.

61.21.110 SetOptionProxyHeader(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set list of headers used for proxy requests only.

61.21.111 SetOptionQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an array or a list of FTP commands to pass to the server prior to your ftp request.
Example:

```
dim curl as new CURLSMBS
curl.SetOptionQuote array("DELE filename.txt")
```

Notes:

This will be done before any other FTP commands are issued (even before the CWD command).

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.

61.21.112 SetOptionResolve(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Send linked-list of name:port:address sets.

61.21.113 SetOptionTelnetOptions(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provide an array of variables to pass to the telnet negotiations.
Notes:

The variables should be in the format <option=value>. libCURL supports the options 'TTYPE', 'XDISPLOC' and 'NEW_ENV'. See the TELNET standard for details.

The Lasterror property is set. 0 for success.

61.21.114 SetPathCAInfo(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A path holding one or more certificates to verify the peer with.
Example:

```
dim cacert as FolderItem // your cacert.pem file
dim CURL as new CURLMBS
CURL.OptionSSLVerifyHost = 2 // verify server
CURL.OptionSSLVerifyPeer = 1 // proofs certificate is authentic
CURL.SetPathCAInfo cacert
```

Notes:

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

61.21.115 SetPathCAPath(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A path to the directory holding multiple CA certificates to verify the peer with.
Example:

```
dim c as new CURLSMBS

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
c.SetPathCAPath cacert
```

Notes:

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

61.21.116 SetPathCRLFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the path with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes:

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

61.21.117 SetPathIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the path to a CA certificate in PEM format.
Notes:

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

61.21.118 SetPathNetRCFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the path to the file you want libCURL to use as .netrc file.
Notes:

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

61.21.119 SetPathProxyIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the proxy issuer SSL certificate filename.
Notes:

Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Oth-

erwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

61.21.120 SetupAWS(AWSAccessKeyId as String, AWSSecretAccessKey as String, Region as String, Service as String, Path as String, Domain as String, Verb as String, HashedPayload as String = """, Headers() as String = nil, queryParameters() as string = nil, NoSSL as boolean = false) as boolean

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Setup CURL to transfer to Amazon Webservices.
Notes:

This implements AWS4-HMAC-SHA256 signature for credentials, sets authentication, URL, HTTP Headers and other parameters.
For upload or post, please set input parameters first.

AWSAccessKeyId	Your access key for AWS.	
AWSSecretAccessKey	Your secret.	
Region	The region to use.	"eu-central-1"
Service	The service to use.	"s3"
Path	The path for the URL. Should always start with "/".	"/test.jpg"
Domain	Optional the domain to use. By default we just build it from region and service.	"s3.eu-central-1.amazonaws.com" or "s3-ap-southeast-2.amazonaws.com"
Verb	The HTTP Operation to do. Can be POST, PUT, GET or DELETE.	"PUT"
HashedPayload	The hashed payload. If empty, we calculate it automatically from input data or postfields. This is a lowercase hex SHA256.	
Headers	Optional extra HTTP headers to include.	"x-amz-acl: public-read"
queryParameters	Optional query parameter list with entries like "key=value", URL encoded.	

Returns true on success or false on failure.
Throws exceptions when parameters are insufficient.

Works also for other compatible S3 services beside Amazon's like the one from Wasabi or Dell ECS.

61.21.121 SetupEmail(email as Variant) as boolean

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Setups existing CURL session for an email transfer.
Example:

```
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "Christian Müller"
e.Subject = "Hello World "
```

```
e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test Müller"
e.PlainText = "Hello World," + EndOfLine + "Smilies:   "

dim c as new CURLSMBS

if c.SetupEmail(e) then

dim er as Integer = c.Perform
if er = 0 then
MsgBox "Email sent"
end if
end if
```

Notes:

You can set your own settings like proxy after this function call.
If you like you can reuse the email and CURL objects after you sent an email, change values and send another email.
Returns true on success or false on failure.

61.21.122 SetupOAuth(ConsumerKey as String, ConsumerSecret as String, AccessToken as String, AccessTokenSecret as String, HTTPVerb as String, URL as String, Parameters() as String = nil, Headers() as String = nil, Datas() as String = nil, Nonce as String = "", Timestamp as String = "", HMAC as String = "", Verifier as String = "", Realm as String = "") as boolean

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Setups an OAuth signed transfer.
Notes:

The plugin calculates the signature and adds headers for authorization to the CURL handle.
Sets URL with parameters and optionally data values for POST.

Added Realm parameter for version 20.5.

Parameter	Description	Example
ConsumerKey	The oauth consumer key.	"xvz1evFS4wEEPTGEFPHBog"
ConsumerSecret	The oauth consumer secret.	"kAcSOqF21Fu85e7zjz7ZN2U4ZRhfV3WpwPAoE3Z7kBw"
AccessToken	The oauth access token.	"370773112-GmHxMAgYyLbNEtIKZeRNFsMKPR9EyMZeS9weJAEb"
AccessTokenSecret	The oauth access token secret. Can be empty if not yet known.	"LswwdoUaIvS8ltyTt5jkRh4J50vUPVVHtR2YPi5kE"
HTTPVerb	The HTTP verb. e.g. POST, PUT, GET, DELETE. Default if empty is GET.	"POST"
URL	The URL to query without parameters.	"https://api.twitter.com/1.1/statuses/update.json"
Parameters	List of parameters. Can be empty. Please pass list with newline as delimiter. Values should be URL encoded already.	"include_entities=true"
Headers	List of additional header entries to include. Can be empty. We automatically set Authorization header.	"Accept: application/json§Content-Type: application/json"
Datas	Data value list for POST.	"status=Hello§others=123"
Nonce	The nonce value. If empty, we generate it automatically for you.	"kYjzVBB8Y0ZFabxSWbWovY3uYSQ2pTgmZeNu2VS4cg"
Timestamp	The timestamp to use for signature. If empty, we query current timestamp (same as you calling Time.UnixTimeStamp)	1318622958
HMAC	Which HMAC algorithm to use. Can be HMAC-SHA512, HMAC-SHA256 or HMAC-SHA1. Default is HMAC-SHA1 if parameter is missing or empty.	"HMAC-SHA1"
Verifier	The verifier. Usually an ID shown on a website after login to the service and authorization of an app.	"3456789"

61.21.123 UpKeep

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform any connection upkeep checks.
Notes:

Perform any connection upkeep checks.
Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.
Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
This function must be explicitly called in order to perform the upkeep work. The connection upkeep interval is set with OptionUpkeepIntervalMS.

61.21.124 UseSystemCertificates as Integer

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Windows, Targets: All.

Function: Read certificate from system and installs them in CURL session,.
Notes:

For macOS and Windows we load the available certificates from keychain or Windows Certificate Store and pass them to CURL. This is better than having no certificates at all.
Even better is normally to provide a cacert.pem file with only the expected certificates.

Returns number of certificates loaded.

61.21.125 Properties

61.21.126 APILoaded as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the CURL library was loaded.
Notes:

The CURLSMBS constructor loads the library if it was not loaded before.
(Read only property)

61.21.127 Cancel as Boolean

MBS CURL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tells CURL instance to cancel transfer as soon as possible.
Notes:

Especially when using PerformMT, you may see your app hang if user tries to quit application. To prevent the hang, please set Cancel = true in window close event. So when app quits and windows get destroyed, the PerformMT will see the Cancel being true and returns soon.
(Read and Write property)

61.21.128 CollectDebugData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to collect debug message data.
Notes:

If you set this property to true, you can grab the data from the transfer in the DebugData Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

61.21.129 CollectHeaderData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to collect header data.
Notes:

If you set this property to true, you can grab the data from the transfer in the headerData Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

61.21.130 CollectOutputData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to collect output data.
Notes:

If you set this property to true, you can grab the data from the transfer in the OutputData Property instead of collecting the pieces yourself in the write event. Of course this is optional and you can still process data in write event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

61.21.131 DebugData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The debug data from CURL.
Notes:

If CollectDebugData property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.
(Read only property)

61.21.132 DebugWithData as Boolean

MBS CURL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to include data in debug messages.
Example:

```
dim c as new CURLSMBS
c.DebugWithData = true
c.OptionVerbose = true
c.CollectDebugData = true
```

Notes: (Read and Write property)

61.21.133 Handle as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle of the CURL object.

Notes: (Read and Write property)

61.21.134 HeaderData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The header data from CURL.
Notes:

If CollectHeaderData property is true, the plugin puts the data received in header event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.
(Read only property)

61.21.135 InputData as String

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
(Read and Write property)

61.21.136 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The lasterror from the library.
Notes:

Set in the constructor while doing initialization.
Check the kError* constants.
(Read and Write property)

61.21.137 LasterrorMessage as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.
Notes: (Read only property)

61.21.138 LasterrorText as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text for the lasterror code.
Notes:

Static string matched to the error code, so you have an idea what's wrong.
(Read and Write property)

61.21.139 LibraryUsed as String

MBS CURL Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which library is in use.
Notes:

This is for debugging only to see which library is in use.
(Read only property)

61.21.140 LibVersion as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a human readable string with the version number of libCURL and some of its important components (like OpenSSL version).
Notes: (Read only property)

61.21.141 OptionAbstractUnixSocket as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Path to an abstract Unix domain socket.
Notes: (Read and Write property)
See also ABSTRACT_UNIX_SOCKET option in CURL manual.

61.21.142 OptionAcceptEncoding as String

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the contents of the Accept-Encoding: header sent in a HTTP request, and enables decoding of a response when a Content-Encoding: header is received.
Example:

```
dim c as new CURLSMBS
c.OptionAcceptEncoding = "deflate"
```

Notes:

Three encodings are supported: identity, which does nothing, deflate which requests the server to compress its response using the zlib algorithm, and gzip which requests the gzip algorithm. If a zero-length string is set, then an Accept-Encoding: header containing all supported encodings is sent.

This is a request, not an order; the server may or may not do it. This option must be set (to any non-NULL value) or else any unsolicited encoding done by the server is ignored. See the special file README.encoding for details (included with CURL source code).
(Read and Write property)
See also ACCEPT_ENCODING option in CURL manual.

61.21.143 OptionAcceptTimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Time-out accept operations (currently for FTP only) after this amount of milliseconds.
Notes: (Read and Write property)
See also ACCEPTTIMEOUT_MS option in CURL manual.

61.21.144 OptionAddressScope as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an integer specifying the scope_id value to use when connecting to IPv6 link-local or site-local addresses.
Notes:

(Added in CURL 7.19.0)
(Read and Write property)
See also ADDRESS_SCOPE option in CURL manual.

61.21.145 OptionAppend as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to append to the remote file instead of overwrite it.
Notes:

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also APPEND option in CURL manual.

61.21.146 OptionAutoReferer as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: When enabled, libCURL will automatically set the Referer: field in requests where it follows a Location: redirect.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also AUTOREFERER option in CURL manual.

61.21.147 OptionAWSSigV4 as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provides AWS V4 signature authentication on HTTP(S) header.
Notes:

Pass a text that is the collection of specific arguments are used for creating outgoing authentication headers.
The format of the param option is:

provider1 [:provider2 [:region [:service]]]

provider1, provider2:
The providers arguments are used for generating some authentication parameters such as "Algorithm", "date", "request type" and "signed headers".

region:

The argument is a geographic area of a resources collection. It is extracted from the host name specified in the URL if omitted.

service:
The argument is a function provided by a cloud. It is extracted from the host name specified in the URL if omitted.

Note: This call set CURLOPT_HTTPAUTH to CURLAUTH_AWS_SIGV4. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.

Example with "Test:Try", when curl will do the algorithm, it will generate "TEST-HMAC-SHA256" for "Algorithm", "x-try-date" and "X-Try-Date" for "date", "test4_request" for "request type", "SignedHeaders=content-type;host;x-try-date" for "signed headers"
If you use just "test", instead of "test:try", test will be use for every strings generated

By default, the value of this parameter is empty. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.
(Read and Write property)
See also AWS_SIGV4 option in CURL manual.

61.21.148 OptionBufferSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Your preferred size (in bytes) for the receive buffer in libCURL.
Notes:

The main point of this would be that the write callback gets called more often and with smaller chunks. This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size. (Added in 7.10)

This size is by default set as big as possible (OptionMaxWriteSize), so it only makse sense to use this option if you want it smaller.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also BUFFERSIZE option in CURL manual.

61.21.149 OptionCAInfo as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string naming a file holding one or more certificates to verify the peer with.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLSMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAINFO option in CURL manual.

61.21.150 OptionCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CAInfo as blob value.

Notes:

Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also CAINFO_BLOB option in CURL manual.

61.21.151 OptionCAPath as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string naming a directory holding multiple CA certificates to verify the peer with.
Example:

```
dim c as new CURLSMBS
c.OptionCAPath = "/data/MyCertificates"
```

Notes:

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAPATH option in CURL manual.

61.21.152 OptionCertInfo as boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to enable libCURL's certificate chain info gatherer.
Notes:

With this enabled, libCURL (if built with OpenSSL) will extract lots of information and data about the certificates in the certificate chain used in the SSL connection. This data is then possible to extract after a transfer using GetInfoCertInfo. (Added in 7.19.1)

(Read and Write property)
See also CERTINFO option in CURL manual.

61.21.153 OptionConnectionTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum time in seconds that you allow the connection to the server to take.
Notes:

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the OptionTimeout option.
(Read and Write property)
See also CONNECTTIMEOUT option in CURL manual.

61.21.154 OptionConnectionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum time in milli seconds that you allow the connection to the server to take.
Notes:

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the OptionTimeout option.
(Read and Write property)

61.21.155 OptionConnectOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A true tells the library to perform any required proxy authentication and connection setup, but no data transfer.
Notes:

This option is useful with the CURLSMBS.GetInfoLastSocket function. The library can set up the connection and then the application can obtain the most recently used socket for special data transfers. (Added in 7.15.2)
(Read and Write property)
See also CONNECT_ONLY option in CURL manual.

61.21.156 OptionCookie as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: It will be used to set a cookie in the http request.
Notes:

The format of the string should be NAME=CONTENTS, where NAME is the cookie name and CONTENTS is what the cookie should contain.

If you need to set multiple cookies, you need to set them all using a single option and thus you need to concatenate them all in one single string. Set multiple cookies in one string like this: "name1=content1; name2=content2;" etc.

Using this option multiple times will only make the latest string override the previously ones.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIE option in CURL manual.

61.21.157 OptionCookieFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cookie file content.
Notes:

It should contain the name of your file holding cookie data to read. The cookie data may be in Netscape / Mozilla cookie data format or just regular HTTP-style headers dumped to a file.

Given an empty or non-existing file or by passing the empty string (""), this option will enable cookies for this CURL handle, making it understand and parse received cookies and then use matching cookies in future request.

If you use this option multiple times, you just add more files to read. Subsequent files will add more cookies.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)

See also COOKIEFILE option in CURL manual.

61.21.158 OptionCookieJar as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: File path where to write the cookies to.
Notes:

This will make libCURL write all internally known cookies to the specified file, when the object is destroyed. If no cookies are known, no file will be created. Specify "-" to instead have the cookies written to stdout. Using this option also enables cookies for this session, so if you for example follow a location it will make matching cookies get sent accordingly.

If the cookie jar file can't be created or written to, libCURL will not and cannot report an error for this. Using OptionVerbose or DebugFunction event will get a warning to display, but that is the only visible feedback you get about this possibly lethal situation.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEJAR option in CURL manual.

61.21.159 OptionCookieList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cookie string.
Notes:

Cookie can be either in Netscape / Mozilla format or just regular HTTP-style header (Set-Cookie: ...) format. If CURL cookie engine was not enabled it will enable its cookie engine. Passing a magic string "ALL" will erase all cookies known by CURL. (Added in 7.14.1) Passing the special string "SESS" will only erase all session cookies known by CURL. (Added in 7.15.4)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIELIST option in CURL manual.

61.21.160 OptionCookieSession as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to mark this as a new cookie "session".
Notes:

It will force libCURL to ignore all cookies it is about to load that are "session cookies" from the previous session. By default, libCURL always stores and loads all cookies, independent if they are session cookies are not. Session cookies are cookies without expiry date and they are meant to be alive and existing for this "session" only.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIESESSION option in CURL manual.

61.21.161 OptionCRLF as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert Unix newlines to CRLF newlines on transfers.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also CRLF option in CURL manual.

61.21.162 OptionCRLFile as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string naming a file with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes:

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)
(Read and Write property)
See also CRLFILE option in CURL manual.

61.21.163 OptionCustomRequest as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: It will be user instead of GET or HEAD when doing an HTTP request, or instead of LIST or NLST when doing an ftp directory listing.
Example:

```
dim c as CURLSMBS // your CURL instance

c.URL = "ftp://..."
c.customRequest = "MLSD" // ftp advanced directory listing
```

Notes:

This is useful for doing DELETE or other more or less obscure HTTP requests. Don't do this at will, make sure your server supports the command first.

Restore to the internal default by setting this to "".

Many people have wrongly used this option to replace the entire request with their own, including multiple headers and POST contents. While that might work in many cases, it will cause libCURL to send invalid requests and it could possibly confuse the remote server badly. Use CURLOPT_POST and OptionPostFields to set POST data. Use OptionHTTPHeader to replace or extend the set of headers sent by libCURL. Use OptionHTTPVersion to change HTTP version.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For WebDAV, you can set this to "MKCOL" to create a folder at the given URL.
(Read and Write property)
See also CUSTOMREQUEST option in CURL manual.

61.21.164 OptionDefaultProtocol as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the protocol used when curl is given a URL without a protocol.
Notes: (Read and Write property)
See also DEFAULT_PROTOCOL option in CURL manual.

61.21.165 OptionDirListOnly as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: For FTP and SFTP based URLs a parameter set to true tells the library to list the names of files in a directory, rather than performing a full directory listing that would normally include file sizes, dates etc.
Notes:

For POP3 a parameter of true tells the library to list the email message or messages on the POP3 server. This can be used to change the default behaviour of libCURL, when combined with a URL that contains a message ID, to perform a "scan listing" which can then be used to determine the size of an email.

Note: For FTP this causes a NLST command to be sent to the FTP server. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

Setting this option to true also implies a directory listing even if the URL doesn't end with a slash, which otherwise is necessary.

Do NOT use this option if you also use OptionWildCardMatch as it will effectively break that feature then.
(Read and Write property)
See also DIRLISTONLY option in CURL manual.

61.21.166 OptionDisableUserNameInURL as Boolean

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Disallow specifying username/login in URL.
Notes:

The value true tells the library to not allow URLs that include an username.
(Read and Write property)

61.21.167 OptionDNSCacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The timeout in seconds.
Notes:

Name resolves will be kept in memory for this number of seconds. Set to zero (0) to completely disable caching, or set to -1 to make the cached entries remain forever. By default, libCURL caches this info for 60 seconds.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also DNS_CACHE_TIMEOUT option in CURL manual.

61.21.168 OptionDNSInterface as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the name of the network interface that the DNS resolver should bind to.
Notes:

This must be an interface name (not an address). Set this option to "" to use the default setting (don't bind to a specific interface).
(Read and Write property)
See also DNS_INTERFACE option in CURL manual.

61.21.169 OptionDNSLocalIPv4 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the local IPv4 address that the resolver should bind to.
Notes:

The argument should be of string and contain a single numerical IPv4 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP4 option in CURL manual.

61.21.170 OptionDNSLocalIPv6 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the local IPv6 address that the resolver should bind to.
Notes:

The argument should be of type string and contain a single IPv6 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP6 option in CURL manual.

61.21.171 OptionDNSServers as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the name servers to use for DNS resolution.
Notes: (Read and Write property)
See also DNS_SERVERS option in CURL manual.

61.21.172 OptionDNSShuffleAddresses as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to shuffle DNS addresses.
Notes:

When a name is resolved and more than one IP address is returned, shuffle the order of all returned addresses so that they will be used in a random order. This is similar to the ordering behavior of gethostbyname which is no longer used on most platforms.

Addresses will not be reshuffled if a name resolution is completed using the DNS cache. DNSCacheTimeout property can be used together with this option to reduce DNS cache timeout or disable caching entirely if frequent reshuffling is needed.

Since the addresses returned will be reordered randomly, their order will not be in accordance with RFC 3484 or any other deterministic order that may be generated by the system's name resolution implementation. This may have performance impacts and may cause IPv4 to be used before IPv6 or vice versa.
Default is false.
(Read and Write property)
See also DNS_SHUFFLE_ADDRESSES option in CURL manual.

61.21.173 OptionDOHSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to verify the host name in the DOH (DNS-over-HTTPS) SSL certificate.
Notes:

Pass a 2 as asking curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyPeer and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the DOH URL to which you told Curl to connect.
When the verify value is set to 1 it is treated the same as 2. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!
(Read and Write property)
See also DOH_SSL_VERIFYHOST option in CURL manual.

61.21.174 OptionDOHSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to verify the DOH SSL certificate.
Notes:

Pass 1 to enable or 0 to disable.
This option tells curl to verify the authenticity of the DOH (DNS-over-HTTPS) server's certificate. A value of 1 means curl verifies; 0 (zero) means it doesn't.
This option is the DOH equivalent of CURL.SetOptionSSLVerifyPeer and only affects requests to the DOH server.
When negotiating a TLS or SSL connection, the server sends a certificate indicating its identity. Curl verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. curl uses a default bundle of CA certificates (the path for that is determined at build time) and you can specify alternate certificates with the CURL.SetOptionCAInfo option or the CURL.SetOptionCAPath option.
When CURL.SetOptionDOHSSLVerifyPeer is enabled, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the peer certificate verification succeeds regardless.
Authenticating the certificate is not enough to be sure about the server. You typically also want to ensure that the server is the server you mean to be talking to. Use CURL.SetOptionDOHSSLVerifyHost for that. The check that the host name in the certificate is valid for the host name you're connecting to is done independently of the CURL.SetOptionDOHSSLVerifyPeer option.

WARNING: disabling verification of the certificate allows bad guys to man-in-the-middle the communication without you knowing it. Disabling verification makes the communication insecure. Just having encryption on a transfer is not enough as you cannot be sure that you are communicating with the correct end-point.

(Read and Write property)
See also DOH_SSL_VERIFYPEER option in CURL manual.

61.21.175 OptionDOHSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to verify the DOH SSL certificate's status.
Notes:

Pass 2 to ask curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyHost and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the DOH URL to which you told Curl to connect.
When the verify value is set to 1L it is treated the same as 2L. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0L, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!

See also OptionDOHSSLVerifyPeer to verify the digital signature of the DOH server certificate. If libcurl is built against NSS and OptionDOHSSLVerifyPeer is zero, OptionDOHSSLVerifyHost is also set to zero and cannot be overridden.
(Read and Write property)
See also DOH_SSL_VERIFYSTATUS option in CURL manual.

61.21.176 OptionDOHURL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provides the DNS-over-HTTPS URL.
Notes:

Pass in a string to a URL for the DOH server to use for name resolving. The parameter should be URL-encoded in the following format: "https://host:port/path". It MUST specify a HTTPS URL.

libcurl doesn't validate the syntax or use this variable until the transfer is issued. Even if you set a crazy value here, OptionDOHURL will still return CURLE_OK.

curl sends POST requests to the given DNS-over-HTTPS URL.

To find the DOH server itself, which might be specified using a name, libcurl will use the default name lookup function. You can bootstrap that by providing the address for the DOH server with OptionResolve.

Disable DOH use again by setting this option to "".
(Read and Write property)
See also DOH_URL option in CURL manual.

61.21.177 OptionEGDSocket as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The path name to the Entropy Gathering Daemon socket.
Notes:

It will be used to seed the random engine for SSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also EGDSOCKET option in CURL manual.

61.21.178 OptionExpect100TimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets Expect 100 timeout.
Notes:

Time to wait in milliseconds for a response to a HTTP request containing an Expect: 100-continue header before sending the data anyway.
(Read and Write property)
See also EXPECT_100_TIMEOUT_MS option in CURL manual.

61.21.179 OptionFailOnError as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to fail silently if the HTTP code returned is equal to or larger than 400. The default action would be to return the page normally, ignoring that code.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This method is not fail-safe and there are occasions where non-succesful response codes will slip through, especially when authentication is involved (response codes 401 and 407).

You might get some amounts of headers transferred before this situation is detected, like for when a "100-continue" is received as a response to a POST/PUT and a 401 or 407 is received immediately afterwards.
(Read and Write property)
See also FAILONERROR option in CURL manual.

61.21.180 OptionFileTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether filetime should be querried.
Example:

```
// init CURL with options
dim d as new CURLSMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes:

If it is true, libCURL will attempt to get the modification date of the remote document in this operation. This requires that the remote server sends the time or replies to a time querying command.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FILETIME option in CURL manual.

61.21.181 OptionFollowLocation as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A boolean parameter tells the library to follow any Location: header that the server sends as part of an HTTP header.
Example:

```
dim c as new CURLSMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
```

Notes:

This means that the library will re-send the same request on the new location and follow new Location: headers all the way until no more such headers are returned. OptionMaxRedirs can be used to limit the number of redirects libCURL will follow.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FOLLOWLOCATION option in CURL manual.

61.21.182 OptionForbitReuse as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to make the next transfer explicitly close the connection when done.
Notes:

Normally, libCURL keep all connections alive when done with one transfer in case there comes a succeeding one that can re-use them. This option should be used with caution and only if you understand what it does. Set to false to have libCURL keep the connection open for possibly later re-use (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.21.183 OptionFreshConnect as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to make the next transfer use a new (fresh) connection by force.
Example:

```
dim c as new CURLSMBS

c.OptionFreshConnect=True
```

Notes:

If the connection cache is full before this connection, one of the existing connections will be closed as according to the selected or default policy. This option should be used with caution and only if you understand what it does. Set this to 0 to have libCURL attempt re-using an existing connection (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FRESH_CONNECT option in CURL manual.

61.21.184 OptionFTPAccount as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The FTP account name to use.
Notes:

When an FTP server asks for "account data" after user name and password has been provided, this data is sent off using the ACCT command.
(Read and Write property)
See also FTP_ACCOUNT option in CURL manual.

61.21.185 OptionFTPAlternativeToUser as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alternative username.
Notes:

Pass a string as parameter, pointing to a string which will be used to authenticate if the usual FTP "USER user" and "PASS password" negotiation fails. This is currently only known to be required when connecting to Tumbleweed's Secure Transport FTPS server using client certificates for authentication. (Added in 7.15.5)
(Read and Write property)
See also FTP_ALTERNATIVE_TO_USER option in CURL manual.

61.21.186 OptionFTPAppend as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to append to the remote file instead of overwrite it.
Deprecated: This item is deprecated and should no longer be used. You can use OptionAppend instead.
Notes:

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.21.187 OptionFTPCreateMissingDirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the value is 1, CURL will attempt to create any remote directory that it fails to CWD into.
Notes:

CWD is the command that changes working directory. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
Newer CURL Library versions allow a value of 2 to do a CWD after the directory was created, so this property changed from boolean to integer.
(Read and Write property)
See also FTP_CREATE_MISSING_DIRS option in CURL manual.

61.21.188 OptionFTPFileMethod as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an integer that should have one of the following values.
Notes:

This option controls what method libCURL should use to reach a file on a FTP(S) server. The argument should be one of the following alternatives:

URLFTPMETHOD_MULTICWD = 1

libCURL does a single CWD operation for each path part in the given URL. For deep hierarchies this means very many commands. This is how RFC1738 says it should be done. This is the default but the slowest

behavior.

CURLFTPMETHOD_NOCWD = 2

libCURL does no CWD at all. libCURL will do SIZE, RETR, STOR etc and give a full path to the server for all these commands. This is the fastest behavior.

CURLFTPMETHOD_SINGLECWD = 3

libCURL does one CWD with the full target directory and then operates on the file "normally" (like in the multicwd case). This is somewhat more standards compliant than 'nocwd' but without the full penalty of 'multicwd'.
(Read and Write property)
See also FTP_FILEMETHOD option in CURL manual.

61.21.189 OptionFTPListOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to just list the names of an ftp directory, instead of doing a full directory listing that would include file sizes, dates etc.
Deprecated: This item is deprecated and should no longer be used. You can use OptionDirListOnly instead. **Notes:**

This causes an FTP NLST command to be sent. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.21.190 OptionFTPPort as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The port to use for ftp.
Notes:

It will be used to get the IP address to use for the ftp PORT instruction. The PORT instruction tells the remote server to connect to our specified IP address. The string may be a plain IP address, a host name, an network interface name (under Unix) or just a '-' letter to let the library use your systems default IP address. Default FTP operations are passive, and thus won't use PORT.

You disable PORT again and go back to using the passive version by setting this option to "".

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPPORT option in CURL manual.

61.21.191 OptionFTPResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Causes CURL to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to generate a response message for a command before the session is considered hung.
Notes:

While CURL is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionFTPResponseTimeout to a value smaller than OptionTimeout. (Added in 7.10.8)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_RESPONSE_TIMEOUT option in CURL manual.

61.21.192 OptionFTPSkipPasvIP as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set to a non-zero value, it instructs libCURL to not use the IP address the server suggests in its 227-response to libCURL's PASV command when libCURL connects the data connection.
Notes:

Instead libCURL will re-use the same IP address it already uses for the control connection. But it will use the port number from the 227-response. (Added in 7.14.2)

This option has no effect if PORT, EPRT or EPSV is used instead of PASV.
(Read and Write property)
See also FTP_SKIP_PASV_IP option in CURL manual.

61.21.193 OptionFTPSSL as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Request using SSL / TLS for the transfer.
Example:

```
dim c as CURLSMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Deprecated: This item is deprecated and should no longer be used. You can use OptionUseSSL instead.
Notes:

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

(Read and Write property)

61.21.194 OptionFTPSSLAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: What kind of SSL authentication to use for FTP.
Notes:

Pass an integer using one of the values from below, to alter how libCURL issues "AUTH TLS" or "AUTH SSL" when FTP over SSL is activated (see CURLOPT_FTP_SSL). (Added in 7.12.2)

kFTPAUTH_DEFAULT = 0

Allow libCURL to decide

kFTPAUTH_SSL = 1

Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

kFTPAUTH_TLS = 2

Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPSSLAUTH option in CURL manual.

61.21.195 OptionFTPSSLCCC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If enabled, this option makes libCURL use CCC (Clear Command Channel).
Notes:

It shuts down the SSL/TLS layer after authenticating. The rest of the control channel communication will be unencrypted. This allows NAT routers to follow the FTP transaction. Pass a long using one of the values below. (Added in 7.16.1)

CURLFTPSSL_CCC_NONE	0	Don't attempt to use CCC.
CURLFTPSSL_CCC_PASSIVE	1	Do not initiate the shutdown, but wait for the server to do it. Do not send a reply.
CURLFTPSSL_CCC_ACTIVE	2	Initiate the shutdown and wait for a reply.

(Read and Write property)
See also FTP_SSL_CCC option in CURL manual.

61.21.196 OptionFTPUseEPRT as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the value is true, it tells CURL to use the EPRT (and LPRT) command when doing active FTP downloads (which is enabled by CURLOPT_FTPPORT).
Notes:

Using EPRT means that it will first attempt to use EPRT and then LPRT before using PORT, but if you pass FALSE (zero) to this option, it will not try using EPRT or LPRT, only plain PORT. (Added in 7.10.5)

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPRT option in CURL manual.

61.21.197 OptionFTPUseEPSV as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the value is true, it tells CURL to use the EPSV command when doing passive FTP downloads (which it always does by default).
Notes:

Using EPSV means that it will first attempt to use EPSV before using PASV, but if you pass FALSE (zero) to this option, it will not try using EPSV, only plain PASV.

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPSV option in CURL manual.

61.21.198 OptionFTPusePret as Boolean

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the value is true, it tells CURL to send a PRET command before PASV (and EPSV). Certain FTP servers, mainly drftpd, require this non-standard command for directory listings as well as up and downloads in PASV mode.
Notes:

Has no effect when using the active FTP transfers mode. (Added in 7.20.0)
(Read and Write property)
See also FTP_USE_PRET option in CURL manual.

61.21.199 OptionGet as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the true, this forces the HTTP request to get back to GET.
Notes:

usable if a POST, HEAD, PUT or a custom request have been used previously using the same CURL handle.

When setting OptionGet to a true value, it will automatically set OptionNoBody to true (since 7.14.1).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.21.200 OptionGSSAPIDelegation as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allow GSSAPI credential delegation.
Notes: (Read and Write property)
See also GSSAPI_DELEGATION option in CURL manual.

61.21.201 OptionHappyEyeballsTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The happy eyeballs timeout.
Notes:

Head start in milliseconds to give happy eyeballs.
(Read and Write property)
See also HAPPY_EYEBALLS_TIMEOUT_MS option in CURL manual.

61.21.202 OptionHAProxyProtocol as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to send an HAProxy PROXY protocol header.
Notes:

Set to true to tell the library to send an HAProxy PROXY protocol header at beginning of the connection.
The default action is not to send this header.
This option is primarily useful when sending test requests to a service that expects this header.
Most applications do not need this option.
Default false, do not send HAProxy PROXY protocol header.
(Read and Write property)

See also HAPROXYPROTOCOL option in CURL manual.

61.21.203 OptionHeader as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to include the header in the body output.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This is only relevant for protocols that actually have headers preceding the data (like HTTP).
(Read and Write property)
See also HEADER option in CURL manual.

61.21.204 OptionHeaderOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass in a bitmask of "header options".
Notes: (Read and Write property)
See also HEADEROPT option in CURL manual.

61.21.205 OptionHTTPAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which http authentication to use.
Notes:

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use. The available bits are listed below. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the UserPassword option. (Added in 7.10.6)

kAuthBASIC = 1

HTTP Basic authentication. This is the default choice, and the only method that is in wide-spread use and supported virtually everywhere. This is sending the user name and password over the network in plain text,

easily captured by others.

kAuthDIGEST = 2

HTTP Digest authentication. Digest authentication is defined in RFC2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method.

kAuthGSSNEGOTIATE = 4

HTTP GSS-Negotiate authentication. The GSS-Negotiate (also known as plain "Negotiate") method was designed by Microsoft and is used in their web applications. It is primarily meant as a support for Kerberos5 authentication but may be also used along with another authentication methods. For more information see IETF draft draft-brezak-spnego-http-04.txt.

You need to build libCURL with a suitable GSS-API library for this to work.

kAuthNTLM = 8

HTTP NTLM authentication. A proprietary protocol invented and used by Microsoft. It uses a challenge-response and hash concept similar to Digest, to prevent the password from being eavesdropped.

You need to build libCURL with OpenSSL support for this option to work, or build libCURL on Windows.

kAuthANY = & hFFFFFFFF

This is a convenience macro that sets all bits and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

kAuthANYSAFE = & hFFFFFFFE

This is a convenience macro that sets all bits except Basic and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPAUTH option in CURL manual.

61.21.206 OptionHTTPContentDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass a long to tell libCURL how to act on content decoding.
Notes:

If set to zero, content decoding will be disabled. If set to 1 it is enabled. Note however that libCURL has no default content decoding but requires you to use OptionEncoding for that. (added in 7.16.2)
(Read and Write property)
See also HTTP_CONTENT_DECODING option in CURL manual.

61.21.207 OptionHTTPProxyTunnel as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the parameter to true to get the library to tunnel all operations through a given HTTP proxy.
Notes:

There is a big difference between using a proxy and to tunnel through it. If you don't know what this means, you probably don't want this tunneling option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPPROXYTUNNEL option in CURL manual.

61.21.208 OptionHTTPTransferDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an integer to tell libCURL how to act on transfer decoding.
Notes:

If set to zero, transfer decoding will be disabled, if set to 1 it is enabled (default). libCURL does chunked transfer decoding by default unless this option is set to zero. (added in 7.16.2)
(Read and Write property)
See also HTTP_TRANSFER_DECODING option in CURL manual.

61.21.209 OptionHTTPVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to one of the values described below.
Notes:

They force libCURL to use the specific HTTP versions. This is not sensible to do unless you have a good reason.

kHTTP_VERSION_NONE = 0

We don't care about what version the library uses. libCURL will use whatever it thinks fit.

kHTTP_VERSION_1_0 = 1

Enforce HTTP 1.0 requests.

kHTTP_VERSION_1_1 = 2

Enforce HTTP 1.1 requests.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTP_VERSION option in CURL manual.

61.21.210 OptionIgnoreContentLength as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to ignore the Content-Length header.
Notes:

This is useful for Apache 1.x (and similar servers) which will report incorrect content length for files over 2 gigabytes. If this option is used, CURL will not be able to accurately report progress, and will simply stop the download when the server ends the connection. (added in 7.14.1)
(Read and Write property)
See also IGNORE_CONTENT_LENGTH option in CURL manual.

61.21.211 OptionInFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: When uploading a file to a remote site, this option should be used to tell libCURL what the

expected size of the infile is.
Notes:

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read callback returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INFILESIZE option in CURL manual.

61.21.212 OptionInFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.
Deprecated: This item is deprecated and should no longer be used. You can use OptionInFileSize instead.
Notes:

This value should be passed as a CURL_off_t. (Added in 7.11.0)

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read callback returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.21.213 OptionInterface as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This set the interface name to use as outgoing network interface.
Notes:

The name can be an interface name, an IP address or a host name.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INTERFACE option in CURL manual.

61.21.214 OptionIPResolve as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows an application to select what kind of IP addresses to use when resolving host names.
Example:

```
dim c as new CURLSMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

Notes:

This is only interesting when using host names that resolve addresses using more than one version of IP. The allowed values are:

kIPRESOLVE_WHATEVER = 0

Default, resolves addresses to all IP versions that your system allows.

kIPRESOLVE_V4 = 1

Resolve to ipv4 addresses.

kIPRESOLVE_V6 = 2

Resolve to ipv6 addresses.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also IPRESOLVE option in CURL manual.

61.21.215 OptionIssuerCert as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string naming a file holding a CA certificate in PEM format.
Notes:

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also ISSUERCERT option in CURL manual.

61.21.216 OptionIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set issuer SSL certificate from memory blob.
Notes:

Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionIssuerCert which instead expects a file name as input.
(Read and Write property)
See also ISSUERCERT_BLOB option in CURL manual.

61.21.217 OptionKeepSendingOnError as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to keep sending on error.

Notes:

Continue to send data if the server responds early with an HTTP status code >= 300
(Read and Write property)
See also KEEP_SENDING_ON_ERROR option in CURL manual.

61.21.218 OptionKeyPassword as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set passphrase to private key.
Notes:

It will be used as the password required to use the OptionSSLKey or OptionSSHPrivateKeyfile private key. You never needed a pass phrase to load a certificate but you need one to load your private key.
(Read and Write property)
See also KEYPASSWD option in CURL manual.

61.21.219 OptionKRB4Level as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the krb4 security level, this also enables krb4 awareness.
Deprecated: This item is deprecated and should no longer be used. You can use OptionKRBLevel instead.
Notes:

This is a string, 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to "" to disable kerberos4. The kerberos support only works for FTP.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.21.220 OptionKRBLevel as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: FTP kerberos security level.
Notes:

Set the kerberos security level for FTP; this also enables kerberos awareness. This is a string that should match one of the following: 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to NULL to disable kerberos support for FTP.
(Read and Write property)

See also KRBLEVEL option in CURL manual.

61.21.221 OptionLocalPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This sets the local port number of the socket used for connection.
Notes:

This can be used in combination with OptionInterface and you are recommended to use OptionLocalPortRange as well when this is set. Note that port numbers are only valid 1 - 65535. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORT option in CURL manual.

61.21.222 OptionLocalPortRange as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the number of attempts libCURL should do to find a working local port number.
Notes:

It starts with the given OptionLocalPort and adds one to the number for each retry. Setting this value to 1 or below will make libCURL do only one try for exact port number. Note that port numbers by nature is a scarce resource that will be busy at times so setting this value to something too low might cause unnecessary connection setup failures. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORTRANGE option in CURL manual.

61.21.223 OptionLoginOptions as String

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Login options string to use for the transfer.
Notes:

For more information about the login options please see RFC 2384, RFC5092 and IETF draft draft-earhart-url-smtp-00.txt

CURLOPT_LOGIN_OPTIONS can be used to set protocol specific login options, such as the preferred authentication mechanism via "AUTH=NTLM" or "AUTH=*", and should be used in conjunction with the OptionUserName option.
Only IMAP, POP3 and SMTP support login options.
(Read and Write property)

See also LOGIN_OPTIONS option in CURL manual.

61.21.224 OptionLowSpeedLimit as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This property contains the transfer speed in bytes per second that the transfer should be below during OptionLowSpeedTime seconds for the library to consider it too slow and abort.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_LIMIT option in CURL manual.

61.21.225 OptionLowSpeedTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This property contains the time in seconds that the transfer should be below the OptionLowSpeedLimit for the library to consider it too slow and abort.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_TIME option in CURL manual.

61.21.226 OptionMailAuth as String

MBS CURL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This string will be used to specify the authentication address (identity) of a submitted message that is being relayed to another server.
Notes:

This optional parameter allows co-operating agents in a trusted environment to communicate the authentication of individual messages and should only be used by the application program, using libCURL, if the application is itself a mail server acting in such an environment. If the application is operating as such and the AUTH address is not known or is invalid, then an empty string should be used for this parameter.

Unlike OptionMailFrom and SetOptionMailRecipients, the address should not be specified within a pair of angled brackets (<>). However, if an empty string is used then a pair of brackets will be sent by libCURL as required by RFC 2554.

(Read and Write property)
See also MAIL_AUTH option in CURL manual.

61.21.227 OptionMailFrom as String

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string that will be used to specify the sender address in a mail when sending an SMTP mail with libCURL.
Notes: (Read and Write property)
See also MAIL_FROM option in CURL manual.

61.21.228 OptionMaxAgeConn as Integer

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum age the connection should have in seconds.
Notes:

Older connections are not reused, but discarded.
(Read and Write property)
See also MAXAGE_CONN option in CURL manual.

61.21.229 OptionMaxConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The set number will be the persistent connection cache size.
Notes:

The set amount will be the maximum amount of simultaneously open connections that libCURL may cache. Default is 5, and there isn't much point in changing this value unless you are perfectly aware of how this work and changes libCURL's behaviour. This concerns connection using any of the protocols that support persistent connections.

When reaching the maximum limit, CURL closes the oldest one in the cache to prevent the number of open connections to increase.

If you already have performed transfers with this CURL handle, setting a smaller MAXCONNECTS than before may cause open connections to get closed unnecessarily.

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXCONNECTS option in CURL manual.

61.21.230 OptionMaxFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This allows you to specify the maximum size (in bytes) of a file to download.
Notes:

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned.

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXFILESIZE option in CURL manual.

61.21.231 OptionMaxFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This allows you to specify the maximum size (in bytes) of a file to download.
Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxFileSize instead. **Notes:**

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned. (Added in 7.11.0)

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.21.232 OptionMaxRecvSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the maximum download speed.
Notes:

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)
See also MAX_RECV_SPEED option in CURL manual.

61.21.233 OptionMaxRecvSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the maximum download speed.
Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxRecvSpeed instead. **Notes:**

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)

61.21.234 OptionMaxRedirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The set number will be the redirection limit.
Example:

```
dim c as new CURLSMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
```

Notes:

If that many redirections have been followed, the next redirect will cause an error (kError_TOO_MANY_REDIRECTS). This option only makes sense if the CURLOPT_FOLLOWLOCATION is used at the same time. Added in 7.15.1: Setting the limit to 0 will make libCURL refuse any redirect. Set it to -1 for an infinite number of redirects (which is the default)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXREDIRS option in CURL manual.

61.21.235 OptionMaxSendSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the maximum upload speed.
Notes:

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)
See also MAX_SEND_SPEED option in CURL manual.

61.21.236 OptionMaxSendSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the maximum upload speed.
Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxSendSpeed instead. **Notes:**

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)

61.21.237 OptionNetRC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Controls usage of netrc file.
Notes:

This parameter controls the preference of libCURL between using user names and passwords from your textasciitilde /.netrc file, relative to user names and passwords in the URL supplied with OptionURL.

libCURL uses a user name (and supplied or prompted password) supplied with OptionUsername and OptionPassword in preference to any of the options controlled by this parameter.

An integer, set to one of the values described below.

kNETRC_OPTIONAL = 1

The use of your
textasciitilde /.netrc file is optional, and information in the URL is to be preferred. The file will be scanned with the host and user name (to find the password only) or with the host only, to find the first user name and password after that machine, which ever information is not specified in the URL.

Undefined values of the option will have this effect.

kNETRC_IGNORED = 0

The library will ignore the file and use only the information in the URL.

This is the default.

kNETRC_REQUIRED = 2

This value tells the library that use of the file is required, to ignore the information in the URL, and to search the file with the host only.

Only machine name, user name and password are taken into account (init macros and similar things aren't supported).

libCURL does not verify that the file has the correct properties set (as the standard Unix ftp client does). It should only be readable by user.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NETRC option in CURL manual.

61.21.238 OptionNetRCFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string containing the full path name to the file you want libCURL to use as .netrc file.
Notes:

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also NETRC_FILE option in CURL manual.

61.21.239 OptionNewDirectoryPerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An integer, containing the value of the permissions that will be assigned to newly created directories on the remote server.
Notes:

The default value is 0755, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Value must be octal, so use & o prefix for number.
(Read and Write property)
See also NEW_DIRECTORY_PERMS option in CURL manual.

61.21.240 OptionNewFilePerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An integer, containing the value of the permissions that will be assigned to newly created files on the remote server.
Notes:

The default value is & o0644, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Be aware that you normally specify this in octal values. So use the & o prefix in Xojo.
(Read and Write property)
See also NEW_FILE_PERMS option in CURL manual.

61.21.241 OptionNoBody as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to not include the body-part in the output.
Notes:

This is only relevant for protocols that have separate header and body parts. On HTTP(S) servers, this will make libCURL do a HEAD request.

To change request to GET, you should use OptionGet. Change request to POST with OptionPost etc.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NOBODY option in CURL manual.

61.21.242 OptionNoProxy as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string with a comma- separated list of hosts which do not use a proxy, if one is specified.
Notes:

The only wildcard is a single * character, which matches all hosts, and effectively disables the proxy. Each name in this list is matched as either a domain which contains the hostname, or the hostname itself. For example, local.com would match local.com, local.com:80, and www.local.com, but not www.notlocal.com. (Added in 7.19.4)
(Read and Write property)
See also NOPROXY option in CURL manual.

61.21.243 OptionNoSignal as Integer

MBS CURL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not use signals.
Notes:

If it is true, libCURL will not use any functions that install signal handlers or any functions that cause signals to be sent to the process. This option is mainly here to allow multi-threaded unix applications to still set/use all timeout options etc, without risking getting signals. (Added in 7.10)

If this option is set and libCURL has been built with the standard name resolver, timeouts will not occur while the name resolve takes place. Consider building libCURL with c-ares support to enable asynchronous DNS lookups, which enables nice timeouts for name resolves without signals.

Setting OptionNoSignal to true makes libCURL NOT ask the system to ignore SIGPIPE signals, which otherwise are sent by the system when trying to send data to a socket which is closed in the other end. libCURL makes an effort to never cause such SIGPIPEs to trigger, but some operating systems have no way to avoid them and even on those that have there are some corner cases when they may still happen, contrary to our desire. In addition, using CURLAUTH_NTLM_WB authentication could cause a SIGCHLD signal to be raised.
(Read and Write property)
See also NOSIGNAL option in CURL manual.

61.21.244 OptionPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password to use for the transfer.
Notes:

The OptionPassword option should be used in conjunction with the OptionUsername option.
(Read and Write property)
See also PASSWORD option in CURL manual.

61.21.245 OptionPathAsIs as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass path as it is and do not resolve dots.
Notes:

Do not squash dot-dot sequences.
(Read and Write property)
See also PATH_AS_IS option in CURL manual.

61.21.246 OptionPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The public key in DER form used to validate the peer public key.
Notes:

Native path to key file.
This option is used only if SSLVerifyPeer is true.

(Read and Write property)
See also PINNEDPUBLICKEY option in CURL manual.

61.21.247 OptionPipeWait as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Wait/don't wait for pipe/mutex to clarify.
Notes: (Read and Write property)
See also PIPEWAIT option in CURL manual.

61.21.248 OptionPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The remote port number to connect to, instead of the one specified in the URL or the default port for the used protocol.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PORT option in CURL manual.

61.21.249 OptionPost as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A boolean parameter tells the library to do a regular HTTP post.
Notes:

This will also make the library use the a "Content-Type: application/x-www-form-urlencoded" header. (This is by far the most commonly used POST method).

Use the OptionPostFields option to specify what data to post.

Optionally, you can provide data to POST using the Read event but then you must make sure to not set OptionPostFields to anything but "". When providing data with an event, you must transmit it using chunked transfer-encoding.

You can override the default POST Content-Type: header by setting your own with OptionHTTPHeader.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use POST to a HTTP 1.1 server, you can send data without knowing the size before starting the POST if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size in the request.

When setting CURLOPT_POST to a non-zero value, it will automatically set OptionNoBody to 0 (since 7.14.1).

If you issue a POST request and then want to make a HEAD or GET using the same re-used handle, you must explictly set the new request type using OptionNoBody or OptionGet or similar.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also POST option in CURL manual.

61.21.250 OptionPostFields as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string which should be the full data to post in an HTTP POST operation.
Example:

```
dim xml as string // XML or JSON to send as payload
dim c as new CURLSMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
c.OptionPostFields = xml
c.OptionUserAgent = "Test App"
c.OptionPost = true

// for SOAP use right content type
c.SetOptionHTTPHeader array("Content-Type: application/soap+xml; charset=utf-8")
```

Notes:

You must make sure that the data is formatted the way you want the server to receive it. libCURL will not convert or encode it for you. Most web servers will assume this data to be url-encoded. Take note.

This POST is a normal application/x-www-form-urlencoded kind (and libCURL will set that Content-Type by default when this option is used), which is the most commonly used one by HTML forms. See also the OptionPost. Using OptionPostFields implies OptionPost.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

To make multipart/formdata posts (aka rfc1867-posts), check out the OptionPost option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COPYPOSTFIELDS option in CURL manual.

61.21.251 OptionPostFieldSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the post data.
Notes:

Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)
See also POSTFIELDSIZE option in CURL manual.

61.21.252 OptionPostFieldSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the post data. (64 bit version)
Deprecated: This item is deprecated and should no longer be used. You can use OptionPostFieldSize instead. **Notes:**

Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)

61.21.253 OptionPostRedir as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A bitmask to control how libCURL acts on redirects after POSTs that get a 301 or 302 response back.
Notes:

A parameter with bit 0 set (value CURL_REDIR_POST_301=1) tells the library to respect RFC 2616/10.3.2 and not convert POST requests into GET requests when following a 301 redirection. Setting bit 1 (value CURL_REDIR_POST_302=2) makes libCURL maintain the request method after a 302 redirect. CURL_REDIR_POST_A is a convenience define that sets both bits.

The non-RFC behaviour is ubiquitous in web browsers, so the library does the conversion by default to maintain consistency. However, a server may require a POST to remain a POST after such a redirection. This option is meaningful only when setting OptionFollowLocation. (Added in 7.17.1) (This option was known as CURLOPT_POST301 up to 7.19.0 as it only supported the 301 way before then)
(Read and Write property)
See also POSTREDIR option in CURL manual.

61.21.254 OptionPreProxy as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of pre proxy to use.
Notes: (Read and Write property)
See also PRE_PROXY option in CURL manual.

61.21.255 OptionProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A bitmask of kProtocol* constants.
Notes:

If used, this bitmask limits what protocols libCURL may use in the transfer. This allows you to have a libCURL built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default libCURL will accept all protocols it supports. See also OptionRedirProtocols. (Added in 7.19.4)
(Read and Write property)
See also PROTOCOLS option in CURL manual.

61.21.256 OptionProxy as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set HTTP proxy to use.
Example:

```
dim c as CURLSMBS // your CURL object
dim psAddress as string // your proxy address
dim psPort as Integer // your proxy port

c.OptionProxy=psAddress
c.OptionProxyPort=psPort
c.OptionProxyType=c.kPROXY_HTTP
```

Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a string holding the host name or dotted IP address. To specify port number in this string, append : [port] to the end of the host name. The proxy string may be prefixed with [protocol] :// since any such prefix will be ignored. The proxy's port number may optionally be specified with the separate option ProxyHost.

When you tell the library to use an HTTP proxy, libCURL will transparently convert operations to HTTP even if you specify an FTP URL etc. This may have an impact on what other features of the library you can use, such as CURLOPT_QUOTE and similar FTP specifics that don't work unless you tunnel through the HTTP proxy. Such tunneling is activated with HTTPProxyTunnel.

libCURL respects the environment variables http_proxy, ftp_proxy, all_proxy etc, if any of those is set. The Proxy option does however override any possibly set environment variables.

Starting with 7.14.1, the proxy host string given in environment variables can be specified the exact same way as the proxy can be set with Proxy, include protocol prefix (http://) and embedded user + password.

You can use WinHTTPClientMBS class on Windows or CFProxyMBS on Mac to discover system proxy settings.
(Read and Write property)
See also PROXY option in CURL manual.

61.21.257 OptionProxyAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which proxy authentication to use.
Notes:

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use for your proxy authentication. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the ProxyUserPassword option. The bitmask can be constructed by or'ing together the bits listed above for the HTTPAuth option. As of this writing, only Basic, Digest and NTLM work. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PROXYAUTH option in CURL manual.

61.21.258 OptionProxyCAInfo as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CApath or CAfile used to validate the proxy certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLSMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

Pass native file path.

This option is used only if CURLSMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAINFO option in CURL manual.

61.21.259 OptionProxyCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CAInfo for proxy as blob value.
Notes:

This option is for connecting to an HTTPS proxy, not an HTTPS server.
Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also PROXY_CAINFO_BLOB option in CURL manual.

61.21.260 OptionProxyCAPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CApath directory used to validate the proxy certificate.
Notes:

Pass native file path.
This option is used only if CURLSMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAPATH option in CURL manual.

61.21.261 OptionProxyCRLFile as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: CRL file for proxy.
Notes:

Pass native file path.
(Read and Write property)
See also PROXY_CRLFILE option in CURL manual.

61.21.262 OptionProxyIssuerCert as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the proxy issuer SSL certificate filename.
Notes:

Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).
(Read and Write property)
See also PROXY_ISSUERCERT option in CURL manual.

61.21.263 OptionProxyIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set proxy issuer SSL certificate from memory blob.
Notes:

Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionProxyIssuerCert which instead expects a file name as input.
(Read and Write property)
See also PROXY_ISSUERCERT_BLOB option in CURL manual.

61.21.264 OptionProxyKeyPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Password for the SSL private key for proxy.
Notes: (Read and Write property)
See also PROXY_KEYPASSWD option in CURL manual.

61.21.265 OptionProxyPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string which should be pointing to the password to use for the transfer while connecting to Proxy.
Notes:

The OptionProxyPassword option should be used in conjunction with the OptionProxyUsername option.
(Added in 7.19.1)
(Read and Write property)
See also PROXYPASSWORD option in CURL manual.

61.21.266 OptionProxyPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The public key in DER form used to validate the proxy public key.
Notes:

This option is used only if CURLSMBS.OptionProxySSLVerifyPeer is true.
Please path native file path to key file.
(Read and Write property)
See also PROXY_PINNEDPUBLICKEY option in CURL manual.

61.21.267 OptionProxyPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The proxy port to connect to unless it is specified in the proxy string OptionProxy.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

You can use OptionProxy with port, e.g. "12.34.56.78:8080" or pass port here and proxy without port.

For some users it seems like the option with OptionProxy including port works better.
(Read and Write property)
See also PROXYPORT option in CURL manual.

61.21.268 OptionProxyServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Proxy Service Name.
Notes: (Read and Write property)
See also PROXY_SERVICE_NAME option in CURL manual.

61.21.269 OptionProxySSLCert as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the file keeping your private SSL-certificate for proxy.
Notes: (Read and Write property)
See also PROXY_SSLCERT option in CURL manual.

61.21.270 OptionProxySSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets private key for proxy cert from memory blob.
Notes:

Pass data, which contains the private key for connecting to the HTTPS proxy. Compatible with OpenSSL.
The format (like "PEM") must be specified with CURL.SetOptionProxySSLKeyType.
(Read and Write property)
See also PROXY_SSLCERT_BLOB option in CURL manual.

61.21.271 OptionProxySSLCertType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Type of the file keeping your SSL-certificate for proxy.
Notes:

Value can be "DER", "PEM" or "ENG".
(Read and Write property)

See also PROXY_SSLCERTTYPE option in CURL manual.

61.21.272 OptionProxySSLCipherList as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify which SSL ciphers to use for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_CIPHER_LIST option in CURL manual.

61.21.273 OptionProxySSLKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the file keeping your private SSL-key for proxy.
Notes:

Pass native file path.
(Read and Write property)
See also PROXY_SSLKEY option in CURL manual.

61.21.274 OptionProxySSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set private key for proxy cert from memory blob.
Notes:

Pass data, which contains a private key for connecting to the HTTPS proxy. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionProxySSLKeyType.

This option is an alternative to OptionProxySSLKey which instead expects a file name as input.
(Read and Write property)
See also PROXY_SSLKEY_BLOB option in CURL manual.

61.21.275 OptionProxySSLKeyType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets type of the file keeping your private SSL-key for proxy.
Notes:

Value is DER, PEM or ENG.
(Read and Write property)
See also PROXY_SSLKEYTYPE option in CURL manual.

61.21.276 OptionProxySSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable specific SSL features with a bitmask for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_OPTIONS option in CURL manual.

61.21.277 OptionProxySSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable SSL Host verification.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLSMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

Set if we should verify the Common name from the proxy certificate in ssl handshake, set 1 to check existence, 2 to ensure that it matches the provided hostname.
(Read and Write property)
See also PROXY_SSL_VERIFYHOST option in CURL manual.

61.21.278 OptionProxySSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set if we should verify the proxy in ssl handshake.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLSMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

set 1 to verify.
(Read and Write property)
See also PROXY_SSL_VERIFYPEER option in CURL manual.

61.21.279 OptionProxySSLVersion as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: What version to specifically try to use for proxy.
Notes:

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

See also kSSLVersion* constants.

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVERSION_MAX_ macros.

Default	& h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	& h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	& h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	& h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	& h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)
See also PROXY_SSLVERSION option in CURL manual.

61.21.280 OptionProxyTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify which TLS 1.3 ciphers suites to use for proxy.
Notes:

The list of cipher suites to use for the TLS 1.3 connection to a proxy. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.
(Read and Write property)
See also PROXY_TLS13_CIPHERS option in CURL manual.

61.21.281 OptionProxyTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Password for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_PASSWORD option in CURL manual.

61.21.282 OptionProxyTLSAuthType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set authentication type for authenticated TLS for proxy
Notes: (Read and Write property)
See also PROXY_TLSAUTH_TYPE option in CURL manual.

61.21.283 OptionProxyTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set a username for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_USERNAME option in CURL manual.

61.21.284 OptionProxyTransferMode as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If this integer value is set to 1 (one), it tells libCURL to set the transfer mode (binary or ASCII) for FTP transfers done via an HTTP proxy, by appending ;type=a or ;type=i to the URL.
Notes:

Without this setting, or it being set to 0 (zero, the default), OptionTransferText has no effect when doing FTP via a proxy. Beware that not all proxies support this feature. (Added in 7.18.0)

(Read and Write property)
See also PROXY_TRANSFER_MODE option in CURL manual.

61.21.285 OptionProxyType as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option is to set type of the proxy.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Available options for this are kPROXY_HTTP, kPROXY_SOCKS4 (added in 7.15.2) kPROXY_SOCKS5.
The HTTP type is default.
(Read and Write property)
See also PROXYTYPE option in CURL manual.

61.21.286 OptionProxyUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string, which should be pointing to the user name to use for the transfer while connecting to Proxy.
Notes:

In order to specify the password to be used in conjunction with the user name use the OptionProxyPassword option.
(Read and Write property)
See also PROXYUSERNAME option in CURL manual.

61.21.287 OptionPut as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A non-zero parameter tells the library to use HTTP PUT to transfer data.
Notes:

The data should be set with OptionInFileSize.

This option is deprecated and starting with version 7.12.1 you should instead use OptionUpload.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PUT option in CURL manual.

61.21.288 OptionRandomFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A file name for the random file.
Notes:

The file will be used to read from to seed the random engine for SSL. The more random the specified file is, the more secure the SSL connection will become.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also RANDOM_FILE option in CURL manual.

61.21.289 OptionRange as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string which should contain the specified range you want.
Notes:

It should be in the format "X-Y", where X or Y may be left out. HTTP transfers also support several intervals, separated with commas as in "X-Y,N-M". Using this kind of multiple intervals will cause the HTTP server to send the response document in pieces (using standard MIME separation techniques). Pass a NULL to this option to disable the use of ranges.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RANGE option in CURL manual.

61.21.290 OptionRedirProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An integer that holds a bitmask of kProtocol* constants.
Notes:

If used, this bitmask limits what protocols libCURL may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This allows you to limit specific transfers to only be allowed to use a subset of protocols in redirections. By default libCURL will allow all protocols except for FILE and SCP. This is a difference compared to pre-7.19.4 versions which unconditionally would follow to all protocols supported. (Added in 7.19.4)
(Read and Write property)
See also REDIR_PROTOCOLS option in CURL manual.

61.21.291 OptionReferer as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The referer to pass to the server.
Notes:

It will be used to set the Referer: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also REFERER option in CURL manual.

61.21.292 OptionRequestTarget as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The request target, instead of extracted from the URL.
Notes: (Read and Write property)
See also REQUEST_TARGET option in CURL manual.

61.21.293 OptionResumeFrom as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: It contains the offset in number of bytes that you want the transfer to start from.

Notes:

Set this option to 0 to make the transfer start from the beginning (effectively disabling resume). For FTP, set this option to -1 to make the transfer start from the end of the target file (useful to continue an interrupted upload).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RESUME_FROM option in CURL manual.

61.21.294 OptionResumeFromLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: It contains the offset in number of bytes that you want the transfer to start from.
Deprecated: This item is deprecated and should no longer be used. You can use OptionResumeFrom instead. **Notes:**

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.21.295 OptionRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Manually initialize the client RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_CLIENT_CSEQ option in CURL manual.

61.21.296 OptionRTSPRequest as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: RTSP request method (OPTIONS, SETUP, PLAY, etc...).
Notes: (Read and Write property)
See also RTSP_REQUEST option in CURL manual.

61.21.297 OptionRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Manually initialize the server RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_SERVER_CSEQ option in CURL manual.

61.21.298 OptionRTSPSessionID as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RTSP session identifier.
Notes: (Read and Write property)
See also RTSP_SESSION_ID option in CURL manual.

61.21.299 OptionRTSPStreamURI as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RTSP stream URI.
Notes: (Read and Write property)
See also RTSP_STREAM_URI option in CURL manual.

61.21.300 OptionRTSPTransport as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Transport: header to use in RTSP requests.
Notes: (Read and Write property)
See also RTSP_TRANSPORT option in CURL manual.

61.21.301 OptionSASLAuthZID as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The authorisation identity (identity to act as).
Notes:

Sets the authorisation identity (identity to act as).
Pass a text as parameter, which should be pointing to the authorisation identity (authzid) for the transfer.
Only applicable to the PLAIN SASL authentication mechanism where it is optional.

When not specified only the authentication identity (authcid) as specified by the username will be sent to the server, along with the password. The server will derive a authzid from the authcid when not provided, which it will then uses internally.
When the authzid is specified, the use of which is server dependent, it can be used to access another user's inbox, that the user has been granted access to, or a shared mailbox for example.
(Read and Write property)
See also SASL_AUTHZID option in CURL manual.

61.21.302 OptionSASLIR as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable SASL initial response.
Notes: (Read and Write property)
See also SASL_IR option in CURL manual.

61.21.303 OptionServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Service Name.
Notes: (Read and Write property)
See also SERVICE_NAME option in CURL manual.

61.21.304 OptionSocks5Auth as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitmask of allowed auth methods for connections to SOCKS5 proxies.
Notes: (Read and Write property)
See also SOCKS5_AUTH option in CURL manual.

61.21.305 OptionSocks5GSSAPINEC as Boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to protect SOCKS5 connection is protected.
Notes:

Set to true to enable or false to disable. As part of the gssapi negotiation a protection mode is negotiated. The rfc1961 says in section 4.3/4.4 it should be protected, but the NEC reference implementation does not. If enabled, this option allows the unprotected exchange of the protection mode negotiation. (Added in 7.19.4).

(Read and Write property)
See also SOCKS5_GSSAPI_NEC option in CURL manual.

61.21.306 OptionSocks5GSSAPIService as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string holding the name of the service.
Notes:

The default service name for a SOCKS5 server is rcmd/server-fqdn. This option allows you to change it. (Added in 7.19.4)
(Read and Write property)
See also SOCKS5_GSSAPI_SERVICE option in CURL manual.

61.21.307 OptionSSHAuthTypes as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Define the SSH authorization types.
Notes:

Pass a long set to a bitmask consisting of one or more of CURLSSH_AUTH_PUBLICKEY, CURLSSH_AUTH_PASSWORD, CURLSSH_AUTH_HOST, CURLSSH_AUTH_KEYBOARD. Set CURLSSH_AUTH_ANY to let libCURL pick one. (Added in 7.16.1)

constants:
CURLSSH_AUTH_ANY = & hFFFFFFFF
CURLSSH_AUTH_NONE = 0
CURLSSH_AUTH_PUBLICKEY = 1
CURLSSH_AUTH_PASSWORD = 2
CURLSSH_AUTH_HOST = 4
CURLSSH_AUTH_KEYBOARD = 8
CURLSSH_AUTH_DEFAULT = CURLSSH_AUTH_ANY
(Read and Write property)
See also SSH_AUTH_TYPES option in CURL manual.

61.21.308 OptionSSHCompression as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable SSH compression.
Notes: (Read and Write property)

See also SSH_COMPRESSION option in CURL manual.

61.21.309 OptionSSHHostPublicKeyMD5 as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string containing 32 hexadecimal digits with the 128 bit MD5 checksum of the remote host's public key.
Notes:

libCURL will reject the connection to the host unless the md5sums match. This option is only for SCP and SFTP transfers. (Added in 7.17.1)
(Read and Write property)
See also SSH_HOST_PUBLIC_KEY_MD5 option in CURL manual.

61.21.310 OptionSSHKnownhosts as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string holding the file name of the known_host file to use.
Notes:

The known_hosts file should use the OpenSSH file format as supported by libssh2. If this file is specified, libCURL will only accept connections with hosts that are known and present in that file, with a matching public key. (Added in 7.19.6)
(Read and Write property)
See also SSH_KNOWNHOSTS option in CURL manual.

61.21.311 OptionSSHPrivateKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass a path pointing to a file name for your private key.
Example:

```
Dim c As New CURLSMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes:

If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa. If the file is password-protected, set the password with OptionSSLKeyPassword.
(Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PRIVATE_KEYFILE option in CURL manual.

61.21.312 OptionSSHPublicKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass a path pointing to a file name for your public key.
Example:

```
Dim c As New CURLSMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes:

If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa.pub. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PUBLIC_KEYFILE option in CURL manual.

61.21.313 OptionSSLCert as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string should be the file name of your certificate.
Notes:

The default format is "PEM" and can be changed with OptionSSLCERTTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLCERT option in CURL manual.

61.21.314 OptionSSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set SSL client certificate from memory blob.
Notes:

Pass data, which contains a client certificate. The format must be "P12" on Secure Transport or Schannel. The format must be "P12" or "PEM" on OpenSSL. The string "P12" or "PEM" must be specified with OptionSSLCertType.

This option is an alternative to OptionSSLCert which instead expects a file name as input.
(Read and Write property)
See also SSLCERT_BLOB option in CURL manual.

61.21.315 OptionSSLCertPassword as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The certificate password.
Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Notes:** (Read and Write property)

61.21.316 OptionSSLCertType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string should be the format of your certificate.
Notes:

Supported formats are "PEM" and "DER". (Added in 7.9.3)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLCERTTYPE option in CURL manual.

61.21.317 OptionSSLCipherList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string holding the list of ciphers to use for the SSL connection.
Notes:

The list must be syntactically correct, it consists of one or more cipher strings separated by colons. Commas or spaces are also acceptable separators but colons are normally used, !, - and + can be used as operators. Valid examples of cipher lists include 'RC4-SHA', 'SHA1+DES', 'TLSv1' and 'DEFAULT'. The default list is normally set when you compile OpenSSL.

You'll find more details about cipher lists on this URL:

http://www.openssl.org/docs/apps/ciphers.html

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSL_CIPHER_LIST option in CURL manual.

61.21.318 OptionSSLEnableALPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable TLS ALPN extension (http2 over ssl might fail without).
Notes: (Read and Write property)
See also SSL_ENABLE_ALPN option in CURL manual.

61.21.319 OptionSSLEnableNPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable TLS NPN extension (http2 over ssl might fail without)

Notes: (Read and Write property)
See also SSL_ENABLE_NPN option in CURL manual.

61.21.320 OptionSSLEngine as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: It will be used as the identifier for the crypto engine you want to use for your private key.
Notes:

If the crypto device cannot be loaded, kError_SSL_ENGINE_NOTFOUND is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE option in CURL manual.

61.21.321 OptionSSLEngineDefault as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the actual crypto engine as the default for (asymmetric) crypto operations.
Notes:

If the crypto device cannot be set, kError_SSL_ENGINE_SETFAILED is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE_DEFAULT option in CURL manual.

61.21.322 OptionSSLFalseStart as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set if we should enable TLS false start.
Notes: (Read and Write property)
See also SSL_FALSESTART option in CURL manual.

61.21.323 OptionSSLKey as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string should be the file name of your private key.
Notes:

The default format is "PEM" and can be changed with OptionSSLKEYTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLKEY option in CURL manual.

61.21.324 OptionSSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set private key for client cert from memory blob.
Notes:

Pass data, which contains a private key. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionSSLKeyType.

This option is an alternative to OptionSSLKey which instead expects a file name as input.
(Read and Write property)
See also SSLKEY_BLOB option in CURL manual.

61.21.325 OptionSSLKeyPassword as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password required to use the OptionSSLKEY private key.
Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Notes:**

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

61.21.326 OptionSSLKeyType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string should be the format of your private key.
Notes:

Supported formats are "PEM", "DER" and "ENG".

The format "ENG" enables you to load the private key from a crypto engine. In this case OptionSSLKEY is used as an identifier passed to the engine. You have to set the crypto engine with OptionSSLENGINE. "DER" format key file currently does not work because of a bug in OpenSSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLKEYTYPE option in CURL manual.

61.21.327 OptionSSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable specific SSL features with a bitmask.
Notes: (Read and Write property)
See also SSL_OPTIONS option in CURL manual.

61.21.328 OptionSSLSessionIDCache as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to use the SSL session ID cache.
Notes:

Pass false to disable libCURL's use of SSL session-ID caching. Set this to true to enable it. By default all transfers are done using the cache. Note that while nothing ever should get hurt by attempting to reuse SSL session-IDs, there seem to be broken SSL implementations in the wild that may require you to disable this in order for you to succeed. (Added in 7.16.0)
(Read and Write property)
See also SSL_SESSIONID_CACHE option in CURL manual.

61.21.329 OptionSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option determines whether libCURL verifies that the server cert is for the server it is known as.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLSMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

When negotiating an SSL connection, the server sends a certificate indicating its identity.

When OptionSSLVerifyHost is 2, that certificate must indicate that the server is the server to which you meant to connect, or the connection fails.

CURL considers the server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the URL to which you told CURL to connect.

When the value is 1, the certificate must contain a Common Name field, but it doesn't matter what name it says. (This is not ordinarily a useful setting).

When the value is 0, the connection succeeds regardless of the names in the certificate.

The default, since 7.10, is 2.

The checking this option controls is of the identity that the server claims. The server could be lying. To control lying, see OptionSSLVerifyPeer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYHOST option in CURL manual.

61.21.330 OptionSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Configure whether this CURL instance will verify the SSL peer certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLSMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

This option determines whether CURL verifies the authenticity of the peer's certificate. A value of 1 means CURL verifies; zero means it doesn't. The default is nonzero, but before 7.10, it was zero.

When negotiating an SSL connection, the server sends a certificate indicating its identity. CURL verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. As of 7.10, CURL installs a default bundle of CA certificates and you can specify alternate certificates with the OptionCAINFO option or the OptionCAPATH option.

When OptionSSLVerifyPeer is nonzero, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the connection succeeds regardless.

Authenticating the certificate is not by itself very useful. You typically want to ensure that the server, as authentically identified by its certificate, is the server you mean to be talking to. Use OptionSSLVerifyHost to control that.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYPEER option in CURL manual.

61.21.331 OptionSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set if we should verify the certificate status.
Notes: (Read and Write property)
See also SSL_VERIFYSTATUS option in CURL manual.

61.21.332 OptionSSLVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: What version of SSL/TLS to attempt to use.
Example:

```
dim c as CURLSMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes:

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVER-

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

SION_MAX_ macros.

Default	& h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	& h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	& h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	& h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	& h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)
See also SSLVERSION option in CURL manual.

61.21.333 OptionStreamDepends as CURLSMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS option in CURL manual.

61.21.334 OptionStreamDependsE as CURLSMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set E-xclusive stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS_E option in CURL manual.

61.21.335 OptionStreamWeight as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set stream weight, 1 - 256.
Notes:

Default is 16.
(Read and Write property)
See also STREAM_WEIGHT option in CURL manual.

61.21.336 OptionSuppressConnectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Suppress proxy CONNECT response headers from user callbacks.
Notes: (Read and Write property)
See also SUPPRESS_CONNECT_HEADERS option in CURL manual.

61.21.337 OptionTCPFastOpen as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set TCP Fast Open.
Notes: (Read and Write property)
See also TCP_FASTOPEN option in CURL manual.

61.21.338 OptionTCPKeepAlive as Boolean

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set to true, TCP keepalive probes will be sent.
Notes:

The delay and frequency of these probes can be controlled by the OptionTCPKeepIdle and OptionTCPKeep-Interval options, provided the operating system supports them. Set to false (default behavior) to disable keepalive probes (Added in 7.25.0).
(Read and Write property)

See also TCP_KEEPALIVE option in CURL manual.

61.21.339 OptionTCPKeepIdle as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the delay, in seconds, that the operating system will wait while the connection is idle before sending keepalive probes.
Notes:

Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPIDLE option in CURL manual.

61.21.340 OptionTCPKeepInterval as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the interval, in seconds, that the operating system will wait between sending keepalive probes.
Notes:

Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPINTVL option in CURL manual.

61.21.341 OptionTCPNoDelay as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An integer specifying whether the TCP_NODELAY option should be set or cleared (true = set, false = clear).
Notes:

The option is cleared by default. This will have no effect after the connection has been established.

Setting this option will disable TCP's Nagle algorithm. The purpose of this algorithm is to try to minimize the number of small packets on the network (where "small packets" means TCP segments less than the Maximum Segment Size (MSS) for the network).

Maximizing the amount of data sent per TCP segment is good because it amortizes the overhead of the send. However, in some cases (most notably telnet or rlogin) small segments may need to be sent without delay. This is less efficient than sending larger amounts of data at a time, and can contribute to congestion

on the network if overdone.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TCP_NODELAY option in CURL manual.

61.21.342 OptionTFTPBlockSize as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify block size to use for TFTP data transmission.
Notes:

Valid range as per RFC 2348 is 8-65464 bytes. The default of 512 bytes will be used if this option is not specified. The specified block size will only be used pending support by the remote server. If the server does not return an option acknowledgement or returns an option acknowledgement with no blksize, the default of 512 bytes will be used. (added in 7.19.4)
(Read and Write property)
See also TFTP_BLKSIZE option in CURL manual.

61.21.343 OptionTFTPNoOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether not send any tftp option requests to the server.
Notes: (Read and Write property)
See also TFTP_NO_OPTIONS option in CURL manual.

61.21.344 OptionTimeCondition as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Time condition option.
Notes:

This defines how the OptionTimeValue time value is treated. You can set this parameter to kTimeConditionIfModifiedSince (1) or kTimeConditionIfUnModifiedSince (2). This feature applies to HTTP and FTP.

The last modification time of a file is not always known and in such instances this feature will have no effect even if the given time condition would have not been met.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMECONDITION option in CURL manual.

61.21.345 OptionTimeOut as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum time in seconds that you allow the libCURL transfer operation to take.
Notes:

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.

In unix-like systems, this might cause signals to be used unless CURLOPT_NOSIGNAL is set.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEOUT option in CURL manual.

61.21.346 OptionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass a long as parameter containing the maximum time in milli seconds that you allow the libCURL transfer operation to take.
Notes:

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.
(Read and Write property)
See also TIMEOUT_MS option in CURL manual.

61.21.347 OptionTimeValue as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This should be the time in seconds since 1 jan 1970, and the time will be used in a condition as specified with OptionTimeCondition.

Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEVALUE option in CURL manual.

61.21.348 OptionTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify which TLS 1.3 ciphers suites to use.
Notes:

string holding the list of cipher suites to use for the TLS 1.3 connection. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.
(Read and Write property)
See also TLS13_CIPHERS option in CURL manual.

61.21.349 OptionTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the TSL authentication password.
Notes:

Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_PASSWORD option in CURL manual.

61.21.350 OptionTLSAuthType as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the TLS authentication type.
Notes:

You can set this to "SRP" to use Secure Remote Password authentication.
Please also set username and password.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_TYPE option in CURL manual.

61.21.351 OptionTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the TSL authentication user name.
Notes:

Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_USERNAME option in CURL manual.

61.21.352 OptionTransferEncoding as Boolean

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a request for compressed Transfer Encoding in the outgoing HTTP request.
Notes:

If the server supports this and so desires, it can respond with the HTTP response sent using a compressed Transfer-Encoding that will be automatically uncompressed by libCURL on reception.

Transfer-Encoding differs slightly from the Content-Encoding you ask for with OptionAcceptEncoding in that a Transfer-Encoding is strictly meant to be for the transfer and thus MUST be decoded before the data arrives in the client. Traditionally, Transfer-Encoding has been much less used and supported by both HTTP clients and HTTP servers.
(Read and Write property)
See also TRANSFER_ENCODING option in CURL manual.

61.21.353 OptionTransferText as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to use ASCII mode for ftp transfers, instead of the default binary transfer.
Notes:

For win32 systems it does not set the stdout to binary mode. This option can be usable when transferring text data between systems with different views on certain characters, such as newlines or similar.

libCURL does not do a complete ASCII conversion when doing ASCII transfers over FTP. This is a known limitation/flaw that nobody has rectified. libCURL simply sets the mode to ascii and performs a standard transfer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TRANSFERTEXT option in CURL manual.

61.21.354 OptionUnixSocketPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Path to Unix domain socket.
Notes: (Read and Write property)
See also UNIX_SOCKET_PATH option in CURL manual.

61.21.355 OptionUnrestrictedAuth as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A boolean parameter tells the library it can continue to send authentication (user+password) when following locations, even when hostname changed.
Notes:

This option is meaningful only when setting FollowOption.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UNRESTRICTED_AUTH option in CURL manual.

61.21.356 OptionUpkeepIntervalMS as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connection upkeep interval.
Notes:

Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.

The user needs to explicitly call Upkeep in order to perform the upkeep work.

Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
(Read and Write property)
See also UPKEEP_INTERVAL_MS option in CURL manual.

61.21.357 OptionUpload as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to prepare for an upload.
Notes:

The OptionInFileSize or OptionInFileSizeLarge options are also interesting for uploads. If the protocol is HTTP, uploading means using the PUT request unless you tell libCURL otherwise.

Using PUT with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use PUT to a HTTP 1.1 server, you can upload data without knowing the size before starting the transfer if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UPLOAD option in CURL manual.

61.21.358 OptionUploadBufferSize as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set preferred upload buffer size.
Notes:

Pass a long specifying your preferred size (in bytes) for the upload buffer in libcurl. It makes libcurl uses a larger buffer that gets passed to the next layer in the stack to get sent off. In some setups and for some protocols, there's a huge performance benefit of having a larger upload buffer.

This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size.

The upload buffer size is by default 64 kilobytes. The maximum buffer size allowed to be set is 2 megabytes. The minimum buffer size allowed to be set is 16 kilobytes.

Since curl 7.61.1 the upload buffer is allocated on-demand - so if the handle isn't used for upload, this buffer will not be allocated at all.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also UPLOAD_BUFFERSIZE option in CURL manual.

61.21.359 OptionURL as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The actual URL to deal with.
Notes:

If you need to pass username or password, please consider using the OptionUsername and OptionPassword properties. If you username or password contains characters like @ or :, you must use those properties.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a char * to a zero terminated string. The string must remain present until CURL no longer needs it, as it doesn't copy the string.

If the given URL lacks the protocol part ("http://" or "ftp://" etc), it will attempt to guess which protocol to use based on the given host name. If the given protocol of the set URL is not supported, libCURL will return on error (kError_UNSUPPORTED_PROTOCOL) when you call Perform. Use VersionInfo for detailed info on which protocols that are supported.

The string given to CURLOPT_URL must be url-encoded and following the RFC 2396:
http://CURL.haxx.se/rfc/rfc2396.txt

CURLOPT_URL is the only option that must be set before Perform is called.
For file uploads or downloads, please include the file name in the URL.

Please do never include username and passwords in URLs, as those get often written to log files and would reveal your credentials!
Instead use OptionUsername and OptionPassword.

If you miss the protocol in the URL, you may get an error about HTTP/0.9 being used and not allowed.
(Read and Write property)
See also URL option in CURL manual.

61.21.360 OptionUserAgent as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user agent string to pass to the server.
Notes:

It will be used to set the User-Agent: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also USERAGENT option in CURL manual.

61.21.361 OptionUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user name to be used in protocol authentication
Notes:

In order to specify the password to be used in conjunction with the user name use the OptionPassword option
(Read and Write property)
See also USERNAME option in CURL manual.

61.21.362 OptionUseSSL as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Request using SSL / TLS for the transfer.
Notes:

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

(Read and Write property)
See also USE_SSL option in CURL manual.

61.21.363 OptionVerbose as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether debug messages are sent to the DebugMessage event.
Notes:

Default is false.
You need to subclass the CURLSMBS class to add code in the DebugMessage event.
Or you set CollectDebugData = true and later query DebugData property.
Or you use CreateMTDebugOutputFile to stream them to a file.
(Read and Write property)
See also VERBOSE option in CURL manual.

61.21.364 OptionWildCardMatch as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable wildcard matching.
Notes:

Set onoff to true if you want to transfer multiple files according to a file name pattern. The pattern can be specified as part of the OptionURL option, using an fnmatch-like pattern (Shell Pattern Matching) in the last part of URL (file name).

By default, libCURL uses its internal wildcard matching implementation. You can provide your own matching function by the CURLSMBS.FileNameMatch event.

A brief introduction of its syntax follows:

- - ASTERISK

ftp://example.com/some/path/*.txt (for all txt's from the root directory)

? - QUESTION MARK

Question mark matches any (exactly one) character.

ftp://example.com/some/path/photo?.jpeg

[- BRACKET EXPRESSION

The left bracket opens a bracket expression. The question mark and asterisk have no special meaning in a bracket expression. Each bracket expression ends by the right bracket and matches exactly one character. Some examples follow:

[a-zA-Z0-9] or [f-gF-G] - character interval
[abc] - character enumeration
[^abc] or [!abc] - negation
[[:name:]] class expression. Supported classes are alnum,lower, space, alpha, digit, print, upper, blank, graph, xdigit.
[ ] [-!^] - special case - matches only '-', '] ', ' [', '!' or '^'. These characters have no special purpose.
[\[\] \\] - escape syntax. Matches ' [', '] ' or '´.

Using the rules above, a file name pattern can be constructed:

ftp://example.com/some/path/ [a-z [:upper:] \\] .jpeg

This feature is only supported for FTP download. Not for SFTP or HTTP.
(Read and Write property)
See also WILDCARDMATCH option in CURL manual.

61.21.365 OptionXOAuth2Bearer as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The XOAUTH2 bearer token.
Notes: (Read and Write property)
See also XOAUTH2_BEARER option in CURL manual.

61.21.366 OutputData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output data from CURL.
Notes:

If CollectOutputData property is true, the plugin puts the data received in write event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.
(Read only property)

61.21.367 Paused as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether transfer is paused.
Notes:

You can set it to true while transfer runs to pause it.
(Read and Write property)

61.21.368 ProgressDownloadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bytes downloaded so far.
Notes: (Read only property)

61.21.369 ProgressDownloadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bytes to download in total.
Notes: (Read only property)

61.21.370 ProgressPercent as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current download/upload progress in percent.
Notes:

Range from 0 to 100.
(Read only property)

61.21.371 ProgressUploadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bytes uploaded so far.
Notes: (Read only property)

61.21.372 ProgressUploadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bytes to upload in total.
Notes: (Read only property)

61.21.373 Version as CURLSVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a version object to a filled with information about various run-time features in libCURL.
Notes: (Read only property)

61.21.374 YieldTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether plugin should yield time.
Notes:

If set the plugin will yield time to Xojo back so threads and timers work while you download.

Seems like in RB 2009 this property only has effect if you run CURL in a thread.
(Read and Write property)

61.21.375 Events

61.21.376 ChunkBegin(FileInfo as CURLSFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called on begin of a new chunk.
Notes: If splitting of data transfer is enabled, this callback is called before download of an individual chunk started. Note that parameter "remains" works only for FTP wildcard downloading (for now), otherwise is not used.

61.21.377 ChunkEnd(FileInfo as CURLSFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Download of a chunk ended.
Notes:

If splitting of data transfer is enabled this callback is called after download of an individual chunk finished. This event is called for skipped or downloaded files.

61.21.378 DebugMessage(infotype as Integer, data as string, dataSize as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: A debug event to get data of ongoing process.
Notes:

You may need to set OptionVerbose to true.

infotype constants:

If you set CollectDebugData, the plugin will collect the messages and provide them via the DebugData property. You can still use this event to write your own log instead of in addition.

kInfo_TEXT	0	The data is informational text.
kInfo_HEADER_IN	1	The data is header (or header-like) data received from the peer.
kInfo_HEADER_OUT	2	The data is header (or header-like) data sent to the peer.
kInfo_DATA_IN	3	The data is protocol data received from the peer.
kInfo_DATA_OUT	4	The data is protocol data sent to the peer.
kInfo_SSL_DATA_IN	5	The data is protocol data received from the peer.
kInfo_SSL_DATA_OUT	6	The data is protocol data sent to the peer.

61.21.379 FileNameMatch(Pattern as String, Name as String) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Match a file against a pattern.
Notes:

If you don't implement this event, you get the default implementation from CURL.
Return kFileNameMatchNoMatch, kFileNameMatchIsMatch or kFileNameMatchFailed.

61.21.380 Finished(Result as Integer)

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when transfer has finished.
Notes:

For Perform and PerformMT it is called before Perform function returns, so in PerformMT this is called on the thread.
For use with CURLSMultiMBS, it is called after TransferFinished event and before TransfersFinished event.
If you want to modify GUI and use PeformMT, you may need to start a timer to do so.

61.21.381 Header(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: New Header data was received.
Notes:

You can get error 23 if you don't return lenb(data) in this event.
Or just leave it emtpy so RB will not include it in your application the plugin will return lenb(data) itself.

If you set CollectHeaderData to true, the plugin will collect the messages and provide them via the HeaderData property. You can still use this event to write your own log instead of in addition.

61.21.382 Progress(dltotal as Int64, dlnow as Int64, ultotal as Int64, ulnow as Int64, percent as Double) as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: An event to report progress of ongoing transfers.
Notes:

This function gets called by libCURL with a frequent interval during operation (roughly once per second) no matter if data is being transfered or not. Unknown/unused argument values passed to the callback will be set to zero (like if you only download data, the upload size will remain 0).
Returning a true from this event will cause libCURL to abort the transfer and return kError_ABORTED_BY_CALLBACK.

You can run CURL from a thread to download several things at the same time or keep the GUI more responsive. For better GUI, you can even call a method like app.DoEvents to get the GUI updated more often.

When sending email, ultotal may be zero. In that case use OptionInFileSize to know size of email to upload.

61.21.383 Read(count as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: This event gets called by libCURL as soon as it needs to read data in order to send it to the peer.
Notes:

Return the number of bytes requested. Never return a string with lenb(string)>count. You can return 0 to inform about end of file.

If you stop the current transfer by returning 0 "pre-maturely" (i.e before the server expected it, like when you've told you will upload N bytes and you upload less than N bytes), you may experience that the server "hangs" waiting for the rest of the data that won't come.

The read event may return CURL_READFUNC_ABORT (& h10000000) to stop the current operation immediately, resulting in a kError_ABORTED_BY_CALLBACK error code from the transfer (Added in 7.12.1)

This event is not called when using PerformMT.

If you provide Input data via SetInputData or OpenMTInputFile method, this event is not called and data is taken from the data you provided.

61.21.384 RestartRead() as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: An event to inform you that reading on the file needs to start at the beginning again.
Notes:

Return true on success.
If you use a binarystream for reading you will have to set position to 0 in this event.

This event is not called when using PerformMT.

61.21.385 Seek(pos as Int64, whence as Integer) as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when CURL needs to perform a seek.
Notes:

Normally only needed if you resume a download (Seek forward) or upload is reset (seek back).
Whence is kSeekOriginCurrent, kSeekOriginEnd or kSeekOriginSet.
Please return one of this constants: kSeekReturnCantSeek, kSeekReturnFail or kSeekReturnOk.

61.21.386 SSHKey(KnownKey as string, KnownKeyLength as Integer, KnownKeyType as Integer, FoundKey as string, FoundKeyLength as Integer, FoundKeyType as Integer, MatchStatus as Integer) as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event for known hosts callback for SFTP and SCP.
Notes:

KnownKey: The known key as string encoded with base64 if KnownKeyLength is zero, otherwise the "raw" data.
KnownKeyLength: The length of the key. Zero for base64 encoded key.
KnownKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
FoundKey: The found key as string encoded with base64 if FoundKeyLength is zero, otherwise the "raw" data.
FoundKeyLength: The length of the key. Zero for base64 encoded key.
FoundKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
MatchStatus: The status CURL found. (0 = OK, 1 = Mismatch, 2 = Missing)

Return one of the following values:

CURLKHSTAT_FINE_ADD_TO_FILE	0	Fine and add to file
CURLKHSTAT_FINE	1	Fine
CURLKHSTAT_REJECT	2	reject the connection, return an error
CURLKHSTAT_DEFER	3	do not accept it, but we can't answer right now so this causes a CURLE_DEFER error but otherwise the connection will be left intact etc

61.21.387 Write(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: This event gets called by libCURL as soon as there is data received that needs to be saved.
Notes:

Return the number of bytes actually taken care of. If that amount differs from the amount passed to your function, it'll signal an error to the library and it will abort the transfer and return kError_WRITE_ERROR.

This function may be called with zero bytes data if the transfered file is empty.

The event function will be passed as much data as possible in all invokes, but you cannot possibly make any assumptions. It may be one byte, it may be thousands. The maximum amount of data that can be passed to the write callback is defined in the CURL.h header file: CURL_MAX_WRITE_SIZE (16384).

If you set CollectOutputData to true, the plugin will automatically collect the data and provide it to you after the transfer with the OutputData property. This collecting feature will only work right, if there is enough free memory. You can of course still process data yourself in this event instead of in addition.

61.21.388 Constants

61.21.389 kAUTH_ANY = & hFFFFFFEF

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: all types set

61.21.390 kAUTH_ANYSAFE = & hFFFFFFEE

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

61.21.391 kAUTH_AWS_SIGV4 = 128

MBS CURL Plugin, Plugin Version: 21.1.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: AWS Signature v4

61.21.392 kAUTH_BASIC = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: Basic (default)

61.21.393 kAUTH_Bearer = 64

MBS CURL Plugin, Plugin Version: 18.3.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: HTTP Bearer token authentication

61.21.394 kAUTH_DIGEST = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: Digest

61.21.395 kAUTH_DIGEST_IE = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: HTTP Digest authentication with an IE flavor. Digest authentication is defined in RFC 2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method. The IE flavor is simply that libCURL will use a special ”quirk” that IE is known to have used before version 7 and that some servers require the client to use.

61.21.396 kAUTH_GSSNEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

GSS-Negotiate

Please check SupportsGSSNEGOTIATE property in CURLSVersionMBS class whether this is supported/implemented by your copy of the CURL library.

61.21.397 kAUTH_NEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

HTTP Negotiate (SPNEGO) authentication. Negotiate authentication is defined in RFC 4559 and is the most secure way to perform authentication over HTTP.

You need to build libCURL with a suitable GSS-API library or SSPI on Windows for this to work.

61.21.398 kAUTH_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

61.21.399 kAUTH_NTLM = 8

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

61.21.400 kAUTH_NTLM_WB = 32

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

NTLM delegating to winbind helper. Authentication is performed by a separate binary application that is executed when needed. The name of the application is specified at compile time but is typically /usr/bin/ntlm_auth

Note that libCURL will fork when necessary to run the winbind application and kill it when complete, calling waitpid() to await its exit when done. On POSIX operating systems, killing the process will cause a SIGCHLD signal to be raised (regardless of whether OptionNoSignal is set), which must be handled intelligently by the application. In particular, the application must not unconditionally call wait() in its SIGCHLD signal handler to avoid being subject to a race condition. This behavior is subject to change in future versions of libCURL.

61.21.401 kAUTH_Only = & h80000000

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: This is a meta symbol. OR this value together with a single specific auth value to force libCURL to probe for un-restricted auth and if not, only that single auth algorithm is acceptable.

61.21.402 kChunkBeginFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: Failed, so we exit downloads.

61.21.403 kChunkBeginOK = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: OK, download this file.

61.21.404 kChunkBeginSkip = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: Skip the file.

61.21.405 kChunkEndFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkEnd event.
Notes: Failed, so we exit downloads.

61.21.406 kChunkEndOK = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkEnd event.
Notes: Download success.

61.21.407 kError_ABORTED_BY_CALLBACK = 42

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.408 kError_AGAIN = 81

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: socket is not ready for send/recv, wait till it's ready and try again (Added in CURL 7.18.2)

61.21.409 kError_Auth_Error = 94

MBS CURL Plugin, Plugin Version: 19.4.

Function: One of the error constants for the Error event.
Notes: An authentication function returned an error.

61.21.410 kError_BAD_CONTENT_ENCODING = 61

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Unrecognized transfer encoding

61.21.411 kError_BAD_DOWNLOAD_RESUME = 36

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: couldn't resume download

61.21.412 kError_BAD_FUNCTION_ARGUMENT = 43

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.413 kError_CHUNK_FAILED = 88

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Chunk callback reported error.

61.21.414 kError_CONV_FAILED = 75

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Conversion failed.

61.21.415 kError_CONV_REQD = 76

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Not used with plugin.

61.21.416 kError_COULDNT_CONNECT = 7

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Could not connect. Proxy set? Firewall open?

61.21.417 kError_COULDNT_RESOLVE_HOST = 6

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.418 kError_COULDNT_RESOLVE_PROXY = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.419 kError_FAILED_INIT = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.420 kError_FILESIZE_EXCEEDED = 63

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Maximum file size exceeded

61.21.421 kError_FILE_COULDNT_READ_FILE = 37

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.422 kError_FTP_ACCEPT_FAILED = 10

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: While waiting for the server to connect back when an active FTP session is used, an error code was sent over the control connection or similar.

61.21.423 kError_FTP_ACCEPT_TIMEOUT = 12

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: During an active FTP session while waiting for the server to connect, the OptionAcceptTimeoutMS (or the internal default) timeout expired.

61.21.424 kError_FTP_BAD_FILE_LIST = 87

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Unable to parse FTP file list.

61.21.425 kError_FTP_CANT_GET_HOST = 15

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.426 kError_FTP_COULDNT_RETR_FILE = 19

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.427 kError_FTP_COULDNT_SET_TYPE = 17

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.21.428 kError_FTP_COULDNT_USE_REST = 31

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: the REST command failed

61.21.429 kError_FTP_PORT_FAILED = 30

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: FTP PORT operation failed

61.21.430 kError_FTP_PRET_FAILED = 84

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: a PRET command failed

61.21.431 kError_FTP_WEIRD_227_FORMAT = 14

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.432 kError_FTP_WEIRD_PASS_REPLY = 11

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.433 kError_FTP_WEIRD_PASV_REPLY = 13

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.434 kError_FTP_WEIRD_SERVER_REPLY = 8

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.435 kError_FUNCTION_NOT_FOUND = 41

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.436 kError_GOT_NOTHING = 52

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: when this is a specific error

61.21.437 kError_HTTP2 = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: A problem was detected in the HTTP2 framing layer. This is somewhat generic and can be one out of several problems, see the error buffer for details.

61.21.438 kError_HTTP2_STREAM = 92

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: stream error in HTTP/2 framing layer

61.21.439 kError_HTTP3 = 95

MBS CURL Plugin, Plugin Version: 20.5.

Function: One of the error constants for the Error event.
Notes: HTTP3 layer failed.

61.21.440 kError_HTTP_POST_ERROR = 34

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.441 kError_HTTP_RETURNED_ERROR = 22

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.442 kError_INTERFACE_FAILED = 45

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.443 kError_LDAP_CANNOT_BIND = 38

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.444 kError_LDAP_INVALID_URL = 62

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Invalid LDAP URL

61.21.445 kError_LDAP_SEARCH_FAILED = 39

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.446 kError_LOGIN_DENIED = 67

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: user, password or similar was not accepted and we failed to login

61.21.447 kError_NOT_BUILT_IN = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: A requested feature, protocol or option was not found built-in in this libCURL due to a build-time decision. This means that a feature or option was not enabled or explicitly disabled when libCURL was built and in order to get it to function you have to get a rebuilt libCURL.

61.21.448 kError_NO_CONNECTION_AVAILABLE = 89

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes:

For internal use only, will never be returned by libCURL.
No connection available, the session will be queued. (added in 7.30.0)

61.21.449 kError_OK = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.450 kError_OPERATION_TIMEDOUT = 28

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.21.451 kError_OUT_OF_MEMORY = 27

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.452 kError_PARTIAL_FILE = 18

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.453 kError_PEER_FAILED_VERIFICATION = 60

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.21.454 kError_Proxy = 96

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the error constants for the Error event.
Notes: Proxy handshake error.

61.21.455 kError_Quic_Connect_Error = 96

MBS CURL Plugin, Plugin Version: 20.5.

Function: One of the error constants for the Error event.
Notes: Quic had a connect error.

61.21.456 kError_QUOTE_ERROR = 21

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.21.457 kError_RANGE_ERROR = 33

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.21.458 kError_READ_ERROR = 26

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: could open/read from file

61.21.459 kError_RECURSIVE_API_CALL = 93

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: an api function was called from inside a callback/event.

61.21.460 kError_RECV_ERROR = 56

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failure in receiving network data

61.21.461 kError_REMOTE_ACCESS_DENIED = 9

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.21.462 kError_REMOTE_DISK_FULL = 70

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Out of disk space on server.

61.21.463 kError_REMOTE_FILE_EXISTS = 73

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: File already exists.

61.21.464 kError_REMOTE_FILE_NOT_FOUND = 78

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Remote file not found.

61.21.465 kError_RTSP_CSEQ_ERROR = 85

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Mismatch of RTSP CSeq numbers.

61.21.466 kError_RTSP_SESSION_ERROR = 86

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: mismatch of RTSP Session Identifiers

61.21.467 kError_SEND_ERROR = 55

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failed sending network data

61.21.468 kError_SEND_FAIL_REWIND = 65

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Sending the data requires a rewind that failed

61.21.469 kError_SETOPT_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 21.4.

Function: One of the error constants for the Error event.
Notes: Malformed option for CURL via setOpt call.

61.21.470 kError_SSH = 79

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Error from the SSH layer, somewhat generic so the error message will be of interest when this has happened.

61.21.471 kError_SSL_CACERT = 60

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes:

problem with the CA cert (path?)

You can often workaround by setting OptionSSLVerifyPeer = 0 and OptionSSLVerifyHost = 0. But that reduces security.

61.21.472 kError_SSL_CACERT_BADFILE = 77

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Could not load CACERT file, missing or wrong format.

61.21.473 kError_SSL_CERTPROBLEM = 58

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: problem with the local certificate

61.21.474 kError_SSL_CIPHER = 59

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: couldn't use specified cipher

61.21.475 kError_SSL_ClientCert = 97

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the error constants for the Error event.
Notes: Client-side certificate required.

61.21.476 kError_SSL_CONNECT_ERROR = 35

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: wrong when connecting with SSL

61.21.477 kError_SSL_CRL_BADFILE = 82

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Could not load CRL file, missing or wrong format (Added in 7.19.0)

61.21.478 kError_SSL_ENGINE_INITFAILED = 66

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failed to initialise ENGINE

61.21.479 kError_SSL_ENGINE_NOTFOUND = 53

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: SSL crypto engine not found

61.21.480 kError_SSL_ENGINE_SETFAILED = 54

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: can not set SSL crypto engine as default

61.21.481 kError_SSL_INVALIDCERTSTATUS = 91

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: invalid certificate status

61.21.482 kError_SSL_ISSUER_ERROR = 83

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Issuer check failed. (Added in CURL 7.19.0)

61.21.483 kError_SSL_PINNEDPUBKEYNOTMATCH = 90

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: specified pinned public key did not match.

61.21.484 kError_SSL_SHUTDOWN_FAILED = 80

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Failed to shut down the SSL connection.

61.21.485 kError_TELNET_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Malformed option for CURL via setOpt call. Used to be for telnet, but now generic.

61.21.486 kError_TFTP_ILLEGAL = 71

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Illegal TFTP operation.

61.21.487 kError_TFTP_NOSUCHUSER = 74

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: No such user.

61.21.488 kError_TFTP_NOTFOUND = 68

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: File not found on server.

61.21.489 kError_TFTP_PERM = 69

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Permission problem on server.

61.21.490 kError_TFTP_UNKNOWNID = 72

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Unknown transfer ID.

61.21.491 kError_TOO_MANY_REDIRECTS = 47

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: catch endless re-direct loops

61.21.492 kError_UNKNOWN_TELNET_OPTION = 48

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: User specified an unknown option

61.21.493 kError_UNSUPPORTED_PROTOCOL = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.494 kError_UPLOAD_FAILED = 25

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

61.21.495 kError_URL_MALFORMAT = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.496 kError_USE_SSL_FAILED = 64

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Requested FTP SSL level failed

61.21.497 kError_WRITE_ERROR = 23

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

61.21.498 kFileNameMatchFailed = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: Failed.

61.21.499 kFileNameMatchIsMatch = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: Is Match.

61.21.500 kFileNameMatchNoMatch = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: No match.

61.21.501 kFormArray = 8

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.502 kFormBuffer = 11

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.503 kFormBufferLength = 13

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.504 kFormBufferPtr = 12

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.505 kFormContentHeader = 15

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.506 kFormContentsLength = 6

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.507 kFormContentType = 14

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.508 kFormCopyContents = 4

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.509 kFormCopyName = 1

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.510 kFormEnd = 17

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.511 kFormFile = 10

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.512 kFormFileContent = 7

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.513 kFormFilename = 16

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.514 kFormNameLength = 3

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.515 kFormPtrContents = 5

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.516 kFormPtrName = 2

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

61.21.517 kFTPAUTH_DEFAULT=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Allow libCURL to decide

61.21.518 kFTPAUTH_SSL=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

61.21.519 kFTPAUTH_TLS=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

61.21.520 kFTPMethodDefault = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: let libcurl pick

61.21.521 kFTPMethodMultiCWD = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: single CWD operation for each path part

61.21.522 kFTPMethodNoCWD = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: no CWD at all

61.21.523 kFTPMethodSingleCWD = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: one CWD to full dir, then work on file

61.21.524 kFTPSSL_ALL=3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

61.21.525 kFTPSSL_CONTROL=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

61.21.526 kFTPSSL_NONE=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Don't attempt to use SSL.

61.21.527 kFTPSSL_TRY=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Try using SSL, proceed as normal otherwise.

61.21.528 kGSSAPIDelegationFlag = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: delegate always

61.21.529 kGSSAPIDelegationNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: no delegation (default)

61.21.530 kGSSAPIDelegationPolicyFlag = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: if permitted by policy

61.21.531 kHTTP_VERSION_1_0 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Enforce HTTP 1.0 requests.

61.21.532 kHTTP_VERSION_1_1 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Enforce HTTP 1.1 requests.

61.21.533 kHTTP_VERSION_2TLS = 4

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: use version 2 for HTTPS, version 1.1 for HTTP

61.21.534 kHTTP_VERSION_2_0 = 3

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 2 in the request

61.21.535 kHTTP_VERSION_2_PRIOR_KNOWLEDGE = 5

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 2 without HTTP/1.1 Upgrade

61.21.536 kHTTP_VERSION_3 = 30

MBS CURL Plugin, Plugin Version: 19.4.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 3 in the request

61.21.537 kHTTP_VERSION_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: We don't care about what version the library uses. libCURL will use whatever it thinks fit.

61.21.538 kINFO_DATA_IN = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data received from the peer.

61.21.539 kINFO_DATA_OUT = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data sent to the peer.

61.21.540 kINFO_HEADER_IN = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is header (or header-like) data received from the peer.

61.21.541 kINFO_HEADER_OUT = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is header (or header-like) data sent to the peer.

61.21.542 kINFO_SSL_DATA_IN = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data received from the peer.

61.21.543 kINFO_SSL_DATA_OUT = 6

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data sent to the peer.

61.21.544 kINFO_TEXT = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is informational text.

61.21.545 kIPRESOLVE_V4 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLSMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

61.21.546 kIPRESOLVE_V6 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLSMBS
c.OptionIPResolve = c.kIPRESOLVE_V6
```

61.21.547 kIPRESOLVE_WHATEVER=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLSMBS
c.OptionIPResolve = c.kIPRESOLVE_WHATEVER
```

61.21.548 kNETRC_IGNORED=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes:

The .netrc will never be read.
This is the default.

61.21.549 kNETRC_OPTIONAL=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes: A user:password in the URL will be preferred to one in the .netrc.

61.21.550 kNETRC_REQUIRED=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes: A user:password in the URL will be ignored. Unless one is set programmatically, the .netrc will be queried.

61.21.551 kProtocolAll = -1

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Enable all protocols.

61.21.552 kProtocolDICT = & h200

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: DICT

61.21.553 kProtocolFILE = & h400

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: File

61.21.554 kProtocolFTP = 4

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: FTP

61.21.555 kProtocolFTPS = 8

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: FTPS

61.21.556 kProtocolGopher = & h2000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Gopher

61.21.557 kProtocolGophers = & h20000000

MBS CURL Plugin, Plugin Version: 21.1.

Function: One of the constants for the OptionProtocols properties.

61.21.558 kProtocolHTTP = 1

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: HTTP

61.21.559 kProtocolHTTPS = 2

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: HTTPS

61.21.560 kProtocolIMAP = & h1000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: IMAP

61.21.561 kProtocolIMAPS = & h2000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: IMAPS

61.21.562 kProtocolLDAP = & h80

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: LDAP

61.21.563 kProtocolLDAPS = & h100

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: LDAPS

61.21.564 kProtocolMQTT = & h10000000

MBS CURL Plugin, Plugin Version: 20.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: MQTT

61.21.565 kProtocolPOP3 = & h4000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: POP3

61.21.566 kProtocolPOP3S = & h8000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: POP3S

61.21.567 kProtocolRTMP = & h80000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMP

61.21.568 kProtocolRTMPE = & h200000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPE

61.21.569 kProtocolRTMPS = & h800000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPS

61.21.570 kProtocolRTMPT = & h100000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPT

61.21.571 kProtocolRTMPTE = & h400000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPTE

61.21.572 kProtocolRTMPTS = & h1000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPTS

61.21.573 kProtocolRTSP = & h40000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTSP

61.21.574 kProtocolSCP = & h10

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SCP

61.21.575 kProtocolSFTP = & h20

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SFTP

61.21.576 kProtocolSMB = & h4000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMB

61.21.577 kProtocolSMBS = & h8000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMBS

61.21.578 kProtocolSMTP = & h10000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMTP

61.21.579 kProtocolSMTPS = & h20000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMTPS

61.21.580 kProtocolTelnet = & h40

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Telnet

61.21.581 kProtocolTFTP = & h800

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: TFTP

61.21.582 kPROXY_HTTP = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

61.21.583 kPROXY_HTTP10 = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Force to use CONNECT HTTP/1.0.

61.21.584 kPROXY_HTTP11 = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Connect using HTTP/1.1.

61.21.585 kPROXY_SOCKS4 = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

61.21.586 kPROXY_SOCKS4A = 6

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Using SOCKS 4A.

61.21.587 kPROXY_SOCKS5 = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

61.21.588 kPROXY_SOCKS5_Hostname = 7

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Use the SOCKS5 protocol but pass along the host name rather than the IP address. added in 7.18.0

61.21.589 kSeekOriginCurrent = 1

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to current file position.

61.21.590 kSeekOriginEnd = 2

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to end of file.

61.21.591 kSeekOriginSet = 0

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to start of file.

61.21.592 kSeekReturnCantSeek = 3

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Return this value if you can't seek as you are not using a file, but for example a stream.

61.21.593 kSeekReturnFail = 2

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Returns this value if your seek operation failed.

61.21.594 kSeekReturnOk = 1

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Returns this value if your seek operation succeeded.

61.21.595 kSSHAuthAgent = 16

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: agent (ssh-agent, pageant...)

61.21.596 kSSHAuthAny = -1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: Any allowed

61.21.597 kSSHAuthDefault = -1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: Default: Any

61.21.598 kSSHAuthGSSAPI = 32

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: gssapi (kerberos, ...)

61.21.599 kSSHAuthHost = 4

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: host key files

61.21.600 kSSHAuthKeyboard = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: keyboard interactive

61.21.601 kSSHAuthNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: none allowed, silly but complete

61.21.602 kSSHAuthPassword = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: password

61.21.603 kSSHAuthPublicKey = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: public/private key files

61.21.604 kSSLOptionAllowBeast = 1

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to allow the BEAST SSL vulnerability in the name of improving interoperability with older servers. Some SSL libraries have introduced work-arounds for this flaw but those work-arounds sometimes make the SSL communication fail. To regain functionality with those broken servers, a user can this

way allow the vulnerability back.

61.21.605 kSSLOptionAutoClientCert = 32

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the SSL option flags.
Notes: Tells libcurl to automatically locate and use a client certificate for authentication. (Schannel)

61.21.606 kSSLOptionNativeCA = 16

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to use standard certificate store of operating system. Currently implemented under MS-Windows.

61.21.607 kSSLOptionNoPartialChain = 4

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to *NOT* accept a partial certificate chain if possible. The OpenSSL backend has this ability.

61.21.608 kSSLOptionNoRevoke = 2

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to disable certificate revocation checks for those SSL backends where such behavior is present.

61.21.609 kSSLOptionRevokeBestEffort = 8

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to ignore certificate revocation offline checks and ignore missing revocation list for those

SSL backends where such behavior is present.

61.21.610 kSSLVersionDefault = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).

61.21.611 kSSLVersionSSLv2 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: SSL v2 (but not SSLv3)

61.21.612 kSSLVersionSSLv3 = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: SSL v3 (but not SSLv2)

61.21.613 kSSLVersionTLSv1 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.0 or later

61.21.614 kSSLVersionTLSv10 = 4

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.0 or later (Added in 7.34.0)

61.21.615 kSSLVersionTLSv11 = 5

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.1 or later (Added in 7.34.0)

61.21.616 kSSLVersionTLSv12 = 6

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.2 or later (Added in 7.34.0)

61.21.617 kSSLVersionTLSv13 = 7

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.3 or later (Added in 7.52.0)

61.21.618 kTimeConditionIfModifiedSince = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.

61.21.619 kTimeConditionIfUnModifiedSince = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.

61.21.620 kTimeConditionNone = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.
Notes: No condition.

61.21.621 kUpkeepIntervalDefault = 50000

MBS CURL Plugin, Plugin Version: 18.5.

Function: The default connection upkeep interval in milliseconds.

61.21.622 kUseSSLall = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

61.21.623 kUseSSLcontrol = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

61.21.624 kUseSSLnone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Don't attempt to use SSL.

61.21.625 kUseSSLtry = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Try using SSL, proceed as normal otherwise.

61.22 class CURLSMimePartMBS

61.22.1 class CURLSMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for mime parts.
Notes:

You can provide data via file path, folderitem, data in memoryblock or string.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.22.5 Videos

- Presentation from Munich conference about MBS Plugins.
- Presentation from Xojo Developer Conference 2019 in Miami.

61.22.6 Methods

61.22.7 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

61.22.8 Headers as String()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries header.

61.22.9 SetHeaders(headers() as String)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets header.

61.22.10 Properties

61.22.11 DataMemory as Memoryblock

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part data source from memory data.
Notes: (Read and Write property)

61.22.12 DataString as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part data source from memory data.
Example:

```
dim c as new CURLSMBS

// add mime
dim p as CURLSMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: (Read and Write property)

61.22.13 Encoding as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime data transfer encoder.
Notes:

If set to binary, 8bit, 7bit, base64 or quoted-printable, the matching encoding is applied.
(Read and Write property)

61.22.14 File as FolderItem

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file to stream.
Notes:

When you set property, the plugin will open file and may raise IOException on failure.
(Read and Write property)

61.22.15 FileName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part remote file name.
Notes:

If mime type is not set, we pick extension from file name.
This includes gif, jpg, jpeg, png, svg, txt, htm, html, pdf and xml file extensions.
(Read and Write property)

61.22.16 FilePath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part data source from named file.
Notes: (Read and Write property)

61.22.17 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

61.22.18 MimeType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part type.
Notes: (Read and Write property)

61.22.19 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime/form part name.
Notes: (Read and Write property)

61.22.20 Parent as Variant

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent object.
Notes: (Read only property)

61.22.21 Constants

61.22.22 kEncoding7bit = "7bit"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: 7bit

61.22.23 kEncoding8bit = "8bit"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: 8bit

61.22.24 kEncodingBase64 = "base64"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Base64

61.22.25 kEncodingBinary = "binary"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Binary mode

61.22.26 kEncodingNone = ""

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: No mode, so data is passed through and header has no encoding defined.

61.22.27 kEncodingQuotedPrintable = "quoted-printable"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Quoted printable

61.22.28 kMimeTypeGIF = "image/gif"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: GIF

61.22.29 kMimeTypeHTML = "text/html"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: HTML

61.22.30 kMimeTypeJPEG = "image/jpeg"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: JPEG

61.22.31 kMimeTypePDF = "application/pdf"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: PDF

61.22.32 kMimeTypePNG = "image/png"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: PNG

61.22.33 kMimeTypeSVG = "image/svg+xml"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: SVG

61.22.34 kMimeTypeText = "text/plain"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: Text

61.22.35 kMimeTypeXML = "application/xml"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: XML

61.23 class CURLSMissingFunctionExceptionMBS

61.23.1 class CURLSMissingFunctionExceptionMBS

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: An exception raised if a CURL library function is not loaded.
Notes:

If you call load library before you use the CURLSMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

61.24 class CURLSMultiMBS

61.24.1 class CURLSMultiMBS

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for multiple CURL transfers running in parallel.

61.24.4 Methods

61.24.5 AddCURL(CURL as CURLSMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a standard CURL handle to the multi stack.
Notes: Lasterror is set.

61.24.6 CURLs as CURLSMBS()

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of current CURL instances.

61.24.7 ErrorString(ErrorCode as Integer) as String

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries text message for a given error code.

61.24.8 Perform

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks for things to see.
Notes:

When the app thinks there's data available for CURL it calls this function to read/write whatever there is right now. This returns as soon as the reads and writes are done. This function does not require that there actually is data available for reading or that data can be written, it can be called just in case.

Lasterror is set. This only provides errors etc regarding the whole multi stack. There might still have occurred problems on invidual transfers even when this returns OK.

Sets RunningTransfers property.

61.24.9 RemoveCURL(CURL as CURLSMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes a CURL handle from the multi stack again.
Notes:

Lasterror is set.
Plugin calls this automatically when TransferFinished event was called.

61.24.10 Properties

61.24.11 ChunkLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A connection with a chunk length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

61.24.12 ContentLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A connection with a content-length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

61.24.13 Handle as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

61.24.14 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

61.24.15 MaxConcurrentStreams as Integer

MBS CURL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum number of concurrent connections to a server.
Notes:

Maximum number of concurrent streams to support on a connection.
(Read and Write property)

61.24.16 MaxConnects as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of entries in the connection cache.
Notes: (Read and Write property)

61.24.17 MaxHostConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of (pipelining) connections to one host.
Notes: (Read and Write property)

61.24.18 MaxPipelineLength as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of requests in a pipeline.
Notes: (Read and Write property)

61.24.19 MaxTotalConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of open connections in total.
Notes: (Read and Write property)

61.24.20 Pipelining as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to 1 to enable pipelining for this multi handle.
Notes:

Only for HTTP protocol.
Used to be a boolean property for 15.0 to 18.1, but changed to integer for 18.2.
(Read and Write property)

61.24.21 RunningTransfers as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of running transfers.
Notes:

Set by Perform method.
(Read only property)

61.24.22 Events

61.24.23 TransferFinished(CURL as CURLSMBS, result as Integer, RemainingFinishedTransfers as Integer)

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: One transfer finished.
Notes:

Query CURL object for details.
Result is the result of the transfer as returned by Perform method of CURL object.
RemainingFinishedTransfers is how many transfers are also finished and will be called right after this event.

This event fires always when the queue is empty.
You may want to turn off the timer calling Perform method when this event fires.
Later you can start timer again if you call Add method.

61.24.24 TransfersFinished

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: All pending transfers finished.

61.24.25 Constants

61.24.26 kErrorAddedAlready = 7

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: An easy handle already added to a multi handle was attempted to get added - again.

61.24.27 kErrorBadEadyHandle = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the multi interface error codes.
Notes: An easy handle was not good/valid.

61.24.28 kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: The passed-in handle is not a valid CURLM handle.

61.24.29 kErrorBadSocket = 5

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: The passed in socket argument did not match.

61.24.30 kErrorCallPerform = -1

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Please call Perform soon to do some tasks.

61.24.31 kErrorInternalError = 4

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: This is a libCURL bug.

61.24.32 kErrorOK = 0

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Everything OK.

61.24.33 kErrorOutOfMemory = 3

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Running low on memory.

61.24.34 kErrorRecursiveAPICall = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the multi interface error codes.
Notes: An api function was called from inside an event.

61.24.35 kErrorUnknownOption = 6

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Tried to set unsupported option.

61.24.36 kPipeHTTP1 = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: Pipe with HTTP/1.1.

61.24.37 kPipeMultiPlex = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: Pipe with multiplex.

61.24.38 kPipeNothing = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: No piping.

61.25 class CURLSNotInitializedExceptionMBS

61.25.1 class CURLSNotInitializedExceptionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An exception raised if CURL library is not initialized.
Notes:

If you call load library before you use the CURLMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

61.26 class CURLSSLBackendMBS

61.26.1 class CURLSSLBackendMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a SSL backend.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.26.2 Methods

61.26.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

61.26.4 List as CURLSSLBackendMBS()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Lists the backends.
Example:

```
dim list() as CURLSSLBackendMBS = CURLSSLBackendMBS.List

for each l as CURLSSLBackendMBS in list
MsgBox l.name
next
```

Notes: The list may not be available if called too late.

61.26.5 SetSSLBackend(id as Integer) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the SSL backend.
Notes:

When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 61.26.6 SetSSLBackend(name as string) as Integer 12387

61.26.6 SetSSLBackend(name as string) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the SSL backend.
Notes:

When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 61.26.5 SetSSLBackend(id as Integer) as Integer 12386

61.26.7 Properties

61.26.8 ID as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ID of this SSL backend.
Notes: (Read only property)

61.26.9 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of this SSL backend.
Notes: (Read only property)

61.26.10 Constants

61.26.11 kErrorNoBackends = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: libcurl was built without any SSL support

61.26.12 kErrorOK = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: OK

61.26.13 kErrorTooLate = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: You can't set SSL backend after SSL initialization.

61.26.14 kErrorUnknownBackend = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: Unknown backend name or ID.

61.26.15 kSSLBackendAXTLS = 10

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: AXTLS

61.26.16 kSSLBackendDarwinSSL = 9

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: DarwinSSL

61.26.17 kSSLBackendGNUTLS = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: GNUTLS

61.26.18 kSSLBackendGSKIT = 5

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: GSKIT

61.26.19 kSSLBackendMBEDTLS = 11

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: MBEDTLS

61.26.20 kSSLBackendMesaLink = 12

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the SSL backend IDs.
Notes: MesaLink

61.26.21 kSSLBackendNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.

61.26.22 kSSLBackendNSS = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: NSS

61.26.23 kSSLBackendOpenSSL = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: OpenSSL or BoringSSL

61.26.24 kSSLBackendPolarSSL = 6

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: PolarSSL

61.26.25 kSSLBackendSChannel = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: SChannel

61.26.26 kSSLBackendSecureTransport = 9

MBS CURL Plugin, Plugin Version: 19.2.

Function: One of the SSL backend IDs.
Notes: DarwinSSL

61.26.27 kSSLBackendWolfSSL = 7

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: WolfSSL

61.27 class CURLSSSLBackendMBS

61.27.1 class CURLSSSLBackendMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a SSL backend.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.28.7 Videos

- Presentation from Xojo Developer Conference 2019 in Miami.

61.28.8 Methods

61.28.9 Clone as CURLSURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Duplicates the object.

61.28.10 Constructor

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new URL object.

61.28.11 Properties

61.28.12 Flags as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags to use.
Notes:

Our default is combination of:

- kFlagsNoDefaultPort
- kFlagsNonSupportScheme
- kFlagsURLDecode
- kFlagsURLEncode
- kFlagsGuessScheme

- kFlagsDefaultScheme

(Read and Write property)

61.28.13 Fragment as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set fragment part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.28.14 Handle as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

61.28.15 Host as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set host part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.28.16 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported by one of the functions.
Notes:

This changes while using debugger because getting or setting properties also sets this property.
(Read and Write property)

61.28.17 Options as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set options part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.28.18 Password as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set password part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.28.19 Path as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set path part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.28.20 Port as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set port part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.28.21 Query as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set query part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.28.22 Scheme as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set scheme part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.28.23 URL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set full URL.
Example:

```
Dim c As New CURLSURLMBS

// load absolute URL
c.URL = "http://domain.com/folder/page1.htm"

// load relative URL
c.URL = "page2.htm"

// get final URL
MsgBox c.URL
```

Notes:

Sets lasterror property.
(Read and Write property)

61.28.24 User as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set user part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.28.25 ZoneID as String

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The zone ID.
Notes: (Read and Write property)

61.28.26 Constants

61.28.27 kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

An argument that should be a CURLU pointer was passed in as a NULL.
Should never happen with plugin as you would get exception.

61.28.28 kErrorBadPartpointer = 2

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

A NULL pointer was passed to the 'part' argument of curl_url_get.
Should never happen with plugin as you would get exception.

61.28.29 kErrorBadPortNumber = 4

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: The port number was not a decimal number between 0 and 65535.

61.28.30 kErrorMalformedInput = 3

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: A malformed input was passed to a URL API function.

61.28.31 kErrorNoFragment = 17

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no fragment part in the URL.

61.28.32 kErrorNoHost = 14

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no host part in the URL.

61.28.33 kErrorNoOptions = 13

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no options part in the URL.

61.28.34 kErrorNoPassword = 12

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no password part in the URL.

61.28.35 kErrorNoPort = 15

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no port part in the URL.

61.28.36 kErrorNoQuery = 16

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no query part in the URL.

61.28.37 kErrorNoScheme = 10

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no scheme part in the URL.

61.28.38 kErrorNoUser = 11

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no user part in the URL.

61.28.39 kErrorOk = 0

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: No error.

61.28.40 kErrorOutOfMemory = 7

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: A memory function failed.

61.28.41 kErrorUnknownPart = 9

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: An unknown part ID was passed to a URL API function.

61.28.42 kErrorUnsupportedScheme = 5

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: This libcurl build doesn't support the given URL scheme.

61.28.43 kErrorUrlDecode = 6

MBS CURL Plugin, Plugin Version: 18.5.

Function: URL decode error, most likely because of rubbish in the input.

61.28.44 kErrorUserNotAllowed = 8

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Credentials was passed in the URL when prohibited.

61.28.45 kFlagsAllowSpace = 2048

MBS CURL Plugin, Plugin Version: 21.4.

Function: One of the flags.
Notes: Whether to allow space character in URLs.

61.28.46 kFlagsAppendQuery = 256

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Append a form style part.

61.28.47 kFlagsDefaultPort = 1

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Return default port number.

61.28.48 kFlagsDefaultScheme = 4

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Return default scheme if missing.

61.28.49 kFlagsDisallowUser = 32

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: No user+password allowed.

61.28.50 kFlagsGuessScheme = 512

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Legacy curl-style guessing.

61.28.51 kFlagsNoAuthority = 1024

MBS CURL Plugin, Plugin Version: 20.0.

Function: Allow URLs without authority.
Notes: Allow empty authority when the scheme is unknown.

61.28.52 kFlagsNoDefaultPort = 2

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Act as if no port number was set, if the port number matches the default for the scheme.

61.28.53 kFlagsNonSupportScheme = 8

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Allow non-supported scheme.

61.28.54 kFlagsPathAsIs = 16

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Leave dot sequences.

61.28.55 kFlagsURLDecode = 64

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: URL decode on get.

61.28.56 kFlagsURLEncode = 128

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: URL encode on set.

61.29 class CURLSVersionMBS

61.29.1 class CURLSVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to hold version information from libCURL.

61.29.2 Blog Entries

- MBS Xojo Plugins, version 20.4pr5
- MBS Xojo Plugins, version 20.2pr6
- MBS Xojo Plugins, version 19.4pr7
- MBS Xojo Plugins, version 18.2pr3

61.29.3 Blog Entries

- MBS Xojo Plugins, version 20.4pr5
- MBS Xojo Plugins, version 20.2pr6
- MBS Xojo Plugins, version 19.4pr7
- MBS Xojo Plugins, version 18.2pr3

61.29.4 Methods

61.29.5 Constructor

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

61.29.6 Protocol(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An array containing the names protocols that libCURL supports (using lowercase letters).
Notes:

The protocol names are the same as would be used in URLs.
Index is zero based.

61.29.7 Properties

61.29.8 brotliVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Brotli library version string.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

61.29.9 brotliVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version of brotli version.
Notes: (Read only property)

61.29.10 CAInfo as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The built-in default CURLOPT_CAINFO.
Notes:

Should be empty within plugin.
(Read only property)

61.29.11 CAPath as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The built-in default CURLOPT_CAPATH.
Notes:

Should be empty within plugin.
(Read only property)

61.29.12 Features as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bits which define what features libCURL can and can't.
Notes:

Use the Supports Boolean properties instead.
Additional feature bits may be found in the libCURL documentation.
(Read only property)

61.29.13 gsaslVersion as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the GNU SASL Library version.
Notes: (Read only property)

61.29.14 Host as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ascii string showing what host information that this libCURL was built for.
Notes:

As discovered by a configure script or set by the build environment.
e.g. "powerpc-apple-darwin8.0"
(Read only property)

61.29.15 hyperVersion as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Human readable string.
Notes: (Read only property)

61.29.16 iconvVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version number of iconv library.
Notes: (Read only property)

61.29.17 libidnVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version of LibIDN used.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

61.29.18 libsshVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version of LibSSH2 used.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

61.29.19 LibZVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ascii string (there is no numerical version).
Notes:

If libCURL has no libz support, this is "".
e.g. "1.2.3"
(Read only property)

61.29.20 nghttp2Version as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string for nghttp2 library.
Notes: (Read only property)

61.29.21 nghttp2VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version number for nghttp2.
Notes:

Numeric nghttp2 version: (MAJOR * 65536) + (MINOR * 256) + PATCH
(Read only property)

61.29.22 ProtocolCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of entries in the Protocol array.
Notes: (Read only property)

61.29.23 quicVersion as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of quic version.
Notes:

human readable quic (+ HTTP/3) library version.
(Read only property)

61.29.24 SSLVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ascii string for the OpenSSL version used.
Notes:

If libCURL has no SSL support, this is "".
e.g. " OpenSSL/0.9.7l"
(Read only property)

61.29.25 SupportsASYNCHDNS as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for asynchronous name lookups, which allows more exact timeouts (even on Windows) and less blocking when using the multi interface.
Notes:

(added in 7.10.7)
(Read only property)

61.29.26 SupportsBrotli as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Brotli features are present.
Notes: (Read only property)

61.29.27 SupportsConv as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Character conversions supported.
Notes: (Read only property)

61.29.28 SupportsGSSAPI as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Built against a GSS-API library.
Notes: (Read only property)

61.29.29 SupportsGSSNEGOTIATE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports HTTP GSS-Negotiate
Notes:

(added in 7.10.6)
(Read only property)

61.29.30 SupportsHTTP2 as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether currently used CURL library supports HTTP2.
Example:

```
dim c as new CURLSMBS
dim v as CURLSVersionMBS = c.version

if v.SupportsHTTP2 then
MsgBox "HTTP2 is supported"
else
MsgBox "HTTP2 is not supported"
end if
```

Notes:

While our CURL Plugin with CURLSMBS plugin may not support this currently, you could use LoadLibrary function to load a CURL library supporting it.
(Read only property)

61.29.31 SupportsHTTP3 as Boolean

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether HTTP3 features are present.
Notes: (Read only property)

61.29.32 SupportsHTTPSProxy as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: HTTPS-proxy support built-in.
Notes: (Read only property)

61.29.33 SupportsIDN as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for IDNA, domain names with international letters.
Notes:

(Added in 7.12.0)
(Read only property)

61.29.34 SupportsIPV6 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports IPv6
Notes: (Read only property)

61.29.35 SupportsKERBEROS4 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports kerberos4 (when using FTP).
Notes: (Read only property)

61.29.36 SupportsKerberos5 as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Kerberos V5 auth is supported.
Notes: (Read only property)

61.29.37 SupportsLARGEFILE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for large files.
Notes:

(Added in 7.11.1)
(Read only property)

61.29.38 SupportsLIBZ as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports HTTP deflate using libz
Notes:

(Added in 7.10)
(Read only property)

61.29.39 SupportsMultiSSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiple SSL backends available.
Notes: (Read only property)

61.29.40 SupportsNTLM as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports HTTP NTLM
Example:

```
dim c as new CURLSMBS
dim v as CURLSVersionMBS = c.Version

MsgBox "SupportsNTLM: "+str(v.SupportsNTLM)
```

Notes:

(added in 7.10.6)
(Read only property)

61.29.41 SupportsNTLMWB as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: NTLM delegation to winbind helper is supported.
Notes: (Read only property)

61.29.42 SupportsPSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mozilla's Public Suffix List, used for cookie domain verification.
Notes: (Read only property)

61.29.43 SupportsSPNEGO as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for SPNEGO authentication
Notes:

(Simple and Protected GSS-API Negotiation Mechanism, defined in RFC 2478.) (added in 7.10.8)
(Read only property)

61.29.44 SupportsSSL as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports SSL (HTTPS/FTPS)
Notes:

(Added in 7.10)
(Read only property)

61.29.45 SupportsSSPI as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for SSPI.
Notes:

This is only available on Windows and makes libCURL use Windows-provided functions for NTLM authentication. It also allows libCURL to use the current user and the current user's password without the app having to pass them on. (Added in 7.13.2)
(Read only property)

61.29.46 SupportsTLSAUTHSRP as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: TLS-SRP auth is supported.
Notes: (Read only property)

61.29.47 SupportsUnicode as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether unicode for Windows is enabled.
Notes:

libcurl was built with Unicode support on Windows. This makes non-ASCII characters work in filenames and options passed to libcurl. (Added in 7.72.0)
(Read only property)

61.29.48 SupportsUnixSockets as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unix domain sockets support.
Notes: (Read only property)

61.29.49 SupportsZSTD as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supports HTTP zstd content encoding using zstd library.
Notes:

Added in CURL 7.72.0
(Read only property)

61.29.50 Version as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ascii string for the libCURL version.
Notes:

e.g. ”7.13.1”
(Read only property)

61.29.51 VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of libCURL as number.
Notes:

a 24 bit number created like this:
<8 bits major number>| <8 bits minor number>| <8 bits patch number>.

Version 7.9.8 is therefore returned as 0x070908.
(Read only property)

61.29.52 zstdVersion as String

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Human readable string version for zstd library.
Notes: (Read only property)

61.29.53 zstdVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Numeric Zstd version.
Notes:

Major 8 bits, minor 12 bits, Patch 12 bits.
(Read only property)

61.30 class CURLURLMBS

61.30.1 class CURLURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for CURL's URL parser.
Example:

```
dim c as new CURLURLMBS

c.URL = "www.test.de/Hello World test.pdf"

// setting URL will repair the spaces
c.path = c.Path

MsgBox c.URL
```

61.30.2 Methods

61.30.3 Clone as CURLURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Duplicates the object.

61.30.4 Constructor

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new URL object.

61.30.5 Properties

61.30.6 Flags as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The flags to use.
Notes:

Our default is combination of:

- kFlagsNoDefaultPort
- kFlagsNonSupportScheme
- kFlagsURLDecode
- kFlagsURLEncode
- kFlagsGuessScheme
- kFlagsDefaultScheme

(Read and Write property)

61.30.7 Fragment as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set fragment part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.30.8 Handle as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

61.30.9 Host as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set host part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.30.10 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code reported by one of the functions.
Notes:

This changes while using debugger because getting or setting properties also sets this property.
(Read and Write property)

61.30.11 Options as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set options part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.30.12 Password as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set password part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.30.13 Path as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set path part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.30.14 Port as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set port part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.30.15 Query as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set query part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.30.16 Scheme as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set scheme part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.30.17 URL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set full URL.
Example:

```
Dim c As New CURLURLMBS

// load absolute URL
c.URL = "http://domain.com/folder/page1.htm"

// load relative URL
c.URL = "page2.htm"

// get final URL
MsgBox c.URL
```

Notes:

Sets lasterror property.
(Read and Write property)

61.30.18 User as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set user part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

61.30.19 ZoneID as String

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The zone ID.
Notes: (Read and Write property)

61.30.20 Constants

61.30.21 kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

An argument that should be a CURLU pointer was passed in as a NULL.
Should never happen with plugin as you would get exception.

61.30.22 kErrorBadPartpointer = 2

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

A NULL pointer was passed to the 'part' argument of curl_url_get.
Should never happen with plugin as you would get exception.

61.30.23 kErrorBadPortNumber = 4

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: The port number was not a decimal number between 0 and 65535.

61.30.24 kErrorMalformedInput = 3

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: A malformed input was passed to a URL API function.

61.30.25 kErrorNoFragment = 17

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no fragment part in the URL.

61.30.26 kErrorNoHost = 14

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no host part in the URL.

61.30.27 kErrorNoOptions = 13

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no options part in the URL.

61.30.28 kErrorNoPassword = 12

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no password part in the URL.

61.30.29 kErrorNoPort = 15

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no port part in the URL.

61.30.30 kErrorNoQuery = 16

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no query part in the URL.

61.30.31 kErrorNoScheme = 10

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no scheme part in the URL.

61.30.32 kErrorNoUser = 11

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no user part in the URL.

61.30.33 kErrorOk = 0

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: No error.

61.30.34 kErrorOutOfMemory = 7

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: A memory function failed.

61.30.35 kErrorUnknownPart = 9

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: An unknown part ID was passed to a URL API function.

61.30.36 kErrorUnsupportedScheme = 5

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: This libcurl build doesn't support the given URL scheme.

61.30.37 kErrorUrlDecode = 6

MBS CURL Plugin, Plugin Version: 18.5.

Function: URL decode error, most likely because of rubbish in the input.

61.30.38 kErrorUserNotAllowed = 8

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Credentials was passed in the URL when prohibited.

61.30.39 kFlagsAllowSpace = 2048

MBS CURL Plugin, Plugin Version: 21.4.

Function: One of the flags.
Notes: Whether to allow space character in URLs.

61.30.40 kFlagsAppendQuery = 256

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Append a form style part.

61.30.41 kFlagsDefaultPort = 1

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Return default port number.

61.30.42 kFlagsDefaultScheme = 4

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Return default scheme if missing.

61.30.43 kFlagsDisallowUser = 32

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: No user+password allowed.

61.30.44 kFlagsGuessScheme = 512

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Legacy curl-style guessing.

61.30.45 kFlagsNoAuthority = 1024

MBS CURL Plugin, Plugin Version: 20.0.

Function: Allow URLs without authority.
Notes: Allow empty authority when the scheme is unknown.

61.30.46 kFlagsNoDefaultPort = 2

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Act as if no port number was set, if the port number matches the default for the scheme.

61.30.47 kFlagsNonSupportScheme = 8

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Allow non-supported scheme.

61.30.48 kFlagsPathAsIs = 16

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Leave dot sequences.

61.30.49 kFlagsURLDecode = 64

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: URL decode on get.

61.30.50 kFlagsURLEncode = 128

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: URL encode on set.

61.31 class CURLVersionMBS

61.31.1 class CURLVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to hold version information from libCURL.

61.31.2 Methods

61.31.3 Constructor

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

61.31.4 Protocol(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An array containing the names protocols that libCURL supports (using lowercase letters).
Notes:

The protocol names are the same as would be used in URLs.
Index is zero based.

61.31.5 Properties

61.31.6 brotliVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Brotli library version string.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

61.31.7 brotliVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version of brotli version.
Notes: (Read only property)

61.31.8 CAInfo as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The built-in default CURLOPT_CAINFO.
Notes:

Should be empty within plugin.
(Read only property)

61.31.9 CAPath as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The built-in default CURLOPT_CAPATH.
Notes:

Should be empty within plugin.
(Read only property)

61.31.10 Features as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bits which define what features libCURL can and can't.
Notes:

Use the Supports Boolean properties instead.
Additional feature bits may be found in the libCURL documentation.
(Read only property)

61.31.11 gsaslVersion as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version string of the GNU SASL Library version.
Notes: (Read only property)

61.31.12 Host as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string showing what host information that this libCURL was built for.
Notes:

As discovered by a configure script or set by the build environment.
e.g. "powerpc-apple-darwin8.0"
(Read only property)

61.31.13 hyperVersion as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Human readable string.
Notes: (Read only property)

61.31.14 iconvVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version number of iconv library.
Notes: (Read only property)

61.31.15 libidnVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version of LibIDN used.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

61.31.16 libsshVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version of LibSSH2 used.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

61.31.17 LibZVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string (there is no numerical version).
Notes:

If libCURL has no libz support, this is "".
e.g. "1.2.3"
(Read only property)

61.31.18 nghttp2Version as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version string for nghttp2 library.
Notes: (Read only property)

61.31.19 nghttp2VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version number for nghttp2.
Notes:

Numeric nghttp2 version: (MAJOR * 65536) + (MINOR * 256) + PATCH
(Read only property)

61.31.20 ProtocolCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of entries in the Protocol array.
Notes: (Read only property)

61.31.21 quicVersion as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version of quic version.
Notes:

human readable quic (+ HTTP/3) library version.
(Read only property)

61.31.22 SSLVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string for the OpenSSL version used.
Notes:

If libCURL has no SSL support, this is "".
e.g. " OpenSSL/0.9.7l"
(Read only property)

61.31.23 SupportsASYNCHDNS as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for asynchronous name lookups, which allows more exact timeouts (even on Windows) and less blocking when using the multi interface.
Notes:

(added in 7.10.7)
(Read only property)

61.31.24 SupportsBrotli as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Brotli features are present.
Notes: (Read only property)

61.31.25 SupportsConv as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Character conversions supported.
Notes: (Read only property)

61.31.26 SupportsGSSAPI as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Built against a GSS-API library.
Notes: (Read only property)

61.31.27 SupportsGSSNEGOTIATE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports HTTP GSS-Negotiate
Notes:

(added in 7.10.6)
(Read only property)

61.31.28 SupportsHTTP2 as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether currently used CURL library supports HTTP2.
Example:

```
dim c as new CURLMBS
dim v as CURLVersionMBS = c.version

if v.SupportsHTTP2 then
MsgBox "HTTP2 is supported"
else
MsgBox "HTTP2 is not supported"
end if
```

Notes:

While our CURL Plugin with CURLMBS plugin may not support this currently, you could use LoadLibrary function to load a CURL library supporting it.
(Read only property)

61.31.29 SupportsHTTP3 as Boolean

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether HTTP3 features are present.
Notes: (Read only property)

61.31.30 SupportsHTTPSProxy as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: HTTPS-proxy support built-in.
Notes: (Read only property)

61.31.31 SupportsIDN as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for IDNA, domain names with international letters.
Notes:

(Added in 7.12.0)
(Read only property)

61.31.32 SupportsIPV6 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports IPv6
Notes: (Read only property)

61.31.33 SupportsKERBEROS4 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports kerberos4 (when using FTP).
Notes: (Read only property)

61.31.34 SupportsKerberos5 as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Kerberos V5 auth is supported.
Notes: (Read only property)

61.31.35 SupportsLARGEFILE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for large files.
Notes:

(Added in 7.11.1)
(Read only property)

61.31.36 SupportsLIBZ as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports HTTP deflate using libz
Notes:

(Added in 7.10)
(Read only property)

61.31.37 SupportsMultiSSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Multiple SSL backends available.
Notes: (Read only property)

61.31.38 SupportsNTLM as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports HTTP NTLM
Example:

```
dim c as new CURLMBS
dim v as CURLVersionMBS = c.Version

MsgBox "SupportsNTLM: "+str(v.SupportsNTLM)
```

Notes:

(added in 7.10.6)
(Read only property)

61.31.39 SupportsNTLMWB as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NTLM delegation to winbind helper is supported.
Notes: (Read only property)

61.31.40 SupportsPSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Mozilla's Public Suffix List, used for cookie domain verification.
Notes: (Read only property)

61.31.41 SupportsSPNEGO as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for SPNEGO authentication
Notes:

(Simple and Protected GSS-API Negotiation Mechanism, defined in RFC 2478.) (added in 7.10.8)
(Read only property)

61.31.42 SupportsSSL as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports SSL (HTTPS/FTPS)
Notes:

(Added in 7.10)
(Read only property)

61.31.43 SupportsSSPI as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for SSPI.
Notes:

This is only available on Windows and makes libCURL use Windows-provided functions for NTLM authentication. It also allows libCURL to use the current user and the current user's password without the app having to pass them on. (Added in 7.13.2)
(Read only property)

61.31.44 SupportsTLSAUTHSRP as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: TLS-SRP auth is supported.
Notes: (Read only property)

61.31.45 SupportsUnicode as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether unicode for Windows is enabled.
Notes:

libcurl was built with Unicode support on Windows. This makes non-ASCII characters work in filenames and options passed to libcurl. (Added in 7.72.0)
(Read only property)

61.31.46 SupportsUnixSockets as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unix domain sockets support.
Notes: (Read only property)

61.31.47 SupportsZSTD as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Supports HTTP zstd content encoding using zstd library.
Notes:

Added in CURL 7.72.0
(Read only property)

61.31.48 Version as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string for the libCURL version.
Notes:

e.g. "7.13.1"
(Read only property)

61.31.49 VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version of libCURL as number.
Notes:

a 24 bit number created like this:
<8 bits major number>| <8 bits minor number>| <8 bits patch number>.
Version 7.9.8 is therefore returned as 0x070908.
(Read only property)

61.31.50 zstdVersion as String

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Human readable string version for zstd library.
Notes: (Read only property)

61.31.51 zstdVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Numeric Zstd version.
Notes:

Major 8 bits, minor 12 bits, Patch 12 bits.
(Read only property)

61.32 Globals

61.32.1 FileExtensionToMimeTypeMBS(FileExtension as String) as string

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds a mime type for a file extension.
Example:

```
dim FileExtension as string = MimeTypeToFileExtensionMBS("application/pdf")
dim MimeType as string = FileExtensionToMimeTypeMBS("pdf")
Break
```

Notes:

Please report any missing mime type in our lookup table, so we can add more.
See also MimeTypeToFileExtensionMBS.
Returns empty string if not found.

61.32.2 Blog Entries

- MBS Xojo Plugins, version 19.4pr2
- MBS Xojo / Real Studio Plugins, version 15.4pr1

61.32.3 MimeTypeToFileExtensionMBS(MimeType as String) as string

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns file extension for given mime type.
Example:

```
dim FileExtension as string = MimeTypeToFileExtensionMBS("application/pdf")
dim MimeType as string = FileExtensionToMimeTypeMBS("pdf")
Break
```

Notes:

Extension is returned with dot prefix.
Please report any missing file extensions in our lookup table, so we can add more.
See also FileExtensionToMimeTypeMBS.
Returns empty string if not found.

61.32.4 Blog Entries

- MBS Xojo Plugins, version 19.4pr2
- MBS Xojo / Real Studio Plugins, version 15.4pr1

Chapter 62

Currency, Date and Time Format

62.1 Globals

62.1.1 CDblMBS(text as string, byref value as Double, locale as string = "") as boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a double value from a text with given locale.
Example:

```
dim value as Double
if CDblMBS("12,345", value, "de_DE") then
MsgBox str(value)
end if
```

Notes:

Returns true on success and false on failure.
Value is set to the value detected.
Raises exception on invalid locale.

62.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.0
- MBS Real Studio Plugins, version 13.0pr8
- CDbl and Format with locales

62.1.3 Xojo Developer Magazine

- 11.2, page 10: News

62.1.4 FormatDateMBS(format as string, value as date, locale as string = "") as string

MBS Util Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Formats a date with C time formatting functions.
Example:

```
// for Mac, Windows and Linux we usually have different locale names
dim fr as string
# if TargetMacOS then
fr = "fr_FR"
# elseif TargetWin32 then
fr = "fra"
# elseif TargetLinux
fr = "fr_FR.UTF8"
# else
?
# endif

dim d as new date
MsgBox FormatDateMBS("% x % X", d, fr)
```

Notes:

locale is the name of the locale to use. You can pass empty string to use default/current locale.
Format is a format string like for strftime command in C.

The format specification is a string and may contain special character sequences called conversion specifications, each of which is introduced by a '% ' character and terminated by some other character known as a conversion specifier character. All other character sequences are ordinary character sequences.

The characters of ordinary character sequences (including the null byte) are copied verbatim from format to s. However, the characters of conversion specifications are replaced as follows:

Some conversion specifications can be modified by preceding the conversion specifier character by the E or O modifier to indicate that an alternative format should be used. If the alternative format or specification does not exist for the current locale, the behavior will be as if the unmodified conversion specification were used. (SU) The Single UNIX Specification mentions % Ec, % EC, % Ex, % EX, % Ey, % EY, % Od, % Oe, % OH, % OI, % Om, % OM, % OS, % Ou, % OU, % OV, % Ow, % OW, % Oy, where the effect of the O

modifier is to use alternative numeric symbols (say, roman numerals), and that of the E modifier is to use a locale-dependent alternative representation.

62.1.6 FormatDateTimeMBS(format as string, value as dateTime, locale as string = "") as string

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Formats a date with C time formatting functions.
Notes: Same as FormatDateMBS, but using DateTime class instead.

62.1.7 FormatMBS(format as string, value as Double, locale as string = "") as string

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Formats a double value.
Example:

```
MsgBox FormatMBS("% 1.2f", 12.345, "de_DE")
```

Notes:

locale is the name of the locale to use. You can pass empty string to use default/current locale.
Format is a format string like for printf command in C.

The FormatMBS formats the value under control of the format. The format is a character string which contains three types of objects: plain characters, which are simply copied to standard output, character escape sequences which are converted and copied to the standard output, and format specifications, each of

which causes printing of the next successive argument.

Character escape sequences are in backslash notation as defined in the ANSI X3.159-1989 ("ANSI C89"), with extensions. The characters and their meanings are as follows:

Each format specification is introduced by the percent character ("% "). The remainder of the format specification includes, in the following order:

Zero or more of the following flags:

62.1.10 ParseDateMBS(format as string, text as string, byref value as date, locale as string = "") as boolean

MBS Util Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Parses a date.
Example:

```
dim s as string = "2013-11-12 18:31:01"
dim f as string = "% Y-% m-% d % H:% M:% S"
dim d as date

if ParseDateMBS(f, s, d) then
MsgBox d.LongDate + " "+ d.LongTime
end if
```

Notes:

locale is the name of the locale to use. You can pass empty string to use default/current locale.
Format is a format string like for strftime command in C.

On success returns true. But even for half parsed dates you can find values in date.
Locale not supported on Windows.
The plugin does not support parsing time zones.

The ParseDateMBS function is the converse function to FormateDateMBS and converts the character string pointed to by s to values which are stored in the date, using the format specified by format. Here format is a character string that consists of field descriptors and text characters, reminiscent of scanf (in C++). Each field descriptor consists of a % character followed by another character that specifies the replacement for the field descriptor. All other characters in the format string must have a matching character in the input string, except for whitespace, which matches zero or more whitespace characters in the input string. There should be whitespace or other alphanumeric characters between any two field descriptors.

The ParseDateMBS function processes the input string from left to right. Each of the three possible input elements (whitespace, literal, or format) are handled one after the other. If the input cannot be matched to the format string the function stops. The remainder of the format and input strings are not processed.

The supported input field descriptors are listed below. In case a text string (such as a weekday or month name) is to be matched, the comparison is case insensitive. In case a number is to be matched, leading zeros are permitted but not required.

Some field descriptors can be modified by the E or O modifier characters to indicate that an alternative format or specification should be used. If the alternative format or specification does not exist in the current locale, the unmodified field descriptor is used.
The E modifier specifies that the input string may contain alternative locale-dependent versions of the date and time representation:

Returns true on success. If the functions fails to match all of the format string and therefore an error occurred the function returns false.

Before libc 5.4.13 whitespace (and the 'n' and 't' specifications) was not handled, no 'E' and 'O' locale modifier characters were accepted, and the 'C' specification was a synonym for the 'c' specification.

The 'y' (year in century) specification is taken to specify a year in the 20th century by libc4 and libc5. It is taken to be a year in the range 1950-2049 by glibc 2.0. It is taken to be a year in 1969-2068 since glibc 2.1.

For reasons of symmetry, glibc tries to support for ParseDateMBS the same format characters as for FormatDateMBS. (In most cases the corresponding fields are parsed, but no field in tm is changed.) This leads to

Similarly, because of GNU extensions to FormatDateMBS, % k is accepted as a synonym for % H, and % l

should be accepted as a synonym for % I, and % P is accepted as a synonym for % p. Finally

The glibc implementation does not require whitespace between two field descriptors.

62.1.13 ParseDateTimeMBS(format as string, text as string, byref value as dateTime, locale as string = "") as boolean

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a date.
Notes: Same as ParseDateMBS, but using DateTime class instead.

62.2 class LocaleMBS

62.2.1 class LocaleMBS

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plugin class which provides parameters for formatting numbers, especially currency values.
Example:

```
dim l as LocaleMBS = LocaleMBS.Locale("de_DE")
MsgBox l.CurrencySymbol
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

62.2.6 Methods

62.2.7 Constructor

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

62.2.8 Locale(Locale as string = "") as LocaleMBS

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries C locale for the given locale name.
Example:

```
dim l as LocaleMBS = LocaleMBS.Locale("de_DE")
MsgBox l.CurrencySymbol
```

Notes:

Returns nil if no locale for that name was found.

If name is empty, you get current locale. If you use locale name "C", you get the default C locale.
The locale name depends on the OS. For Mac and Linux you can see available locales in /usr/share/locale directory.
For Windows, please take a look here:
http://msdn.microsoft.com/en-us/library/hzz3tw78(v=vs.71).aspx

62.2.9 Properties

62.2.10 CurrencySymbol as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The local currency symbol.
Example:

```
dim l as LocaleMBS = LocaleMBS.Locale("de_DE")
MsgBox l.CurrencySymbol
```

Notes: (Read only property)

62.2.11 DecimalPoint as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decimal point character, except for currency values, cannot be an empty string.
Notes: (Read only property)

62.2.12 FracDigits as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of digits after the decimal point in the local style for currency values.
Notes: (Read only property)

62.2.13 Grouping as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sizes of the groups of digits, except for currency values.
Notes:

This is a string where the asc value gives the actual value, representing group size from low order digit groups to high order (right to left). The list may be terminated with 0 or CHAR_MAX. If the list is terminated with 0, the last group size before the 0 is repeated to account for all the digits. If the list is terminated with CHAR_MAX, no more grouping is performed.

See example project for a function to decode.
(Read only property)

62.2.14 IntCurrSymbol as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The standardized international currency symbol.
Notes: (Read only property)

62.2.15 IntFracDigits as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of digits after the decimal point in an international-style currency value.
Notes: (Read only property)

62.2.16 IntNegCSPrecedes as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the currency symbol precedes the currency value for negative values, false if it follows.
Notes:

For internationally formatted monetary quantities.
(Read only property)

62.2.17 IntNegSepBySpace as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if a space is inserted between the currency symbol and the currency value for negative values, false otherwise.
Notes:

For internationally formatted monetary quantities.

(Read only property)

62.2.18 IntNegSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the NegativeSign with respect to a negative quantity and the CurrencySymbol.
Notes:

For internationally formatted monetary quantities.

Possible values:

(Read only property)

62.2.19 IntPosCSPrecedes as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the currency symbol precedes the currency value for nonnegative values, false if it follows.
Notes:

For internationally formatted monetary quantities.
(Read only property)

62.2.20 IntPosSepBySpace as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if a space is inserted between the currency symbol and the currency value for nonnegative values, false otherwise.
Notes:

For internationally formatted monetary quantities.
(Read only property)

62.2.21 IntPosSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the PositiveSign with respect to a nonnegative quantity and the CurrencySymbol.
Notes:

For internationally formatted monetary quantities.

Possible values:

(Read only property)

62.2.22 monDecimalPoint as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decimal point character for currency values.
Notes: (Read only property)

62.2.23 monGrouping as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Like grouping but for currency values.
Notes: (Read only property)

62.2.24 monThousandsSep as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The separator for digit groups in currency values.
Notes: (Read only property)

62.2.25 Name as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the locale.
Notes:

The name may be different to the one you asked for as some locales are mapped to others internally.
(Read only property)

62.2.26 NegativeSign as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The character used to denote negative currency values, usually a minus sign.
Notes: (Read only property)

62.2.27 NegCSPrecedes as Boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the currency symbol precedes the currency value for negative values, false if it follows.
Notes: (Read only property)

62.2.28 NegSepBySpace as Boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if a space is inserted between the currency symbol and the currency value for negative values, false otherwise.
Notes: (Read only property)

62.2.29 NegSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the NegativeSign with respect to a negative quantity and the CurrencySymbol.
Notes:

Possible values:

(Read only property)

62.2.30 PosCSPrecedes as Boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the currency symbol precedes the currency value for nonnegative values, false if it follows.
Notes: (Read only property)

62.2.31 PositiveSign as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The character used to denote nonnegative currency values, usually the empty string.
Notes: (Read only property)

62.2.32 PosSepBySpace as Boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if a space is inserted between the currency symbol and the currency value for nonnegative values, false otherwise.
Notes: (Read only property)

62.2.33 PosSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the PositiveSign with respect to a nonnegative quantity and the CurrencySymbol.
Notes:

Possible values:

(Read only property)

62.2.34 ThousandsSep as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The separator between groups of digits before the decimal point, except for currency values.
Notes: (Read only property)

% a The abbreviated weekday name according to the current locale.

% A The full weekday name according to the current locale.

% b The abbreviated month name according to the current locale.

% B The full month name according to the current locale.

% c The preferred date and time representation for the current locale.

% C The century number (year/100) as a 2-digit integer. (SU)

% d The day of the month as a decimal number (range 01 to 31).

% D Equivalent to % m/% d/% y. (Yecch-for Americans only. Americans should note that in other countries % d/% m/% y is rather common. This means that in international context this format is ambiguous and should not be used.) (SU)

% e Like % d, the day of the month as a decimal number, but a leading zero is replaced by a space. (SU)

% E Modifier: use alternative format, see below. (SU)

% F Equivalent to % Y-% m-% d (the ISO 8601 date format). (C99)

% G The ISO 8601 week-based year (see NOTES) with century as a decimal number. The 4-digit year corresponding to the ISO week number (see % V). This has the same format and value as % Y, except that if the ISO week number belongs to the previous or next year, that year is used instead. (TZ)

% g Like % G, but without century, that is, with a 2-digit year (00-99). (TZ)

% h Equivalent to % b. (SU)

% H The hour as a decimal number using a 24-hour clock (range 00 to 23).

% I The hour as a decimal number using a 12-hour clock (range 01 to 12).

% j The day of the year as a decimal number (range 001 to 366).

% k The hour (24-hour clock) as a decimal number (range 0 to 23); single digits are preceded by a blank. (See also % H.) (TZ)

% l The hour (12-hour clock) as a decimal number (range 1 to 12); single digits are preceded by a blank. (See also % I.) (TZ)

% m The month as a decimal number (range 01 to 12).

% M The minute as a decimal number (range 00 to 59).

% n A newline character. (SU)

% O Modifier: use alternative format, see below. (SU)

% p Either "AM" or "PM" according to the given time value, or the corresponding strings for the current locale. Noon is treated as "PM" and midnight as "AM".

% P Like % p but in lowercase: "am" or "pm" or a corresponding string for the current locale. (GNU)

% r The time in a.m. or p.m. notation. In the POSIX locale this is equivalent to % I:% M:% S % p. (SU)

% R The time in 24-hour notation (% H:% M). (SU) For a version including the seconds, see % T below.

% s The number of seconds since the Epoch, 1970-01-01 00:00:00 +0000 (UTC). (TZ)

% S The second as a decimal number (range 00 to 60). (The range is up to 60 to allow for occasional leap seconds.)

% t A tab character. (SU)

% T The time in 24-hour notation (% H:% M:% S). (SU)

% u The day of the week as a decimal, range 1 to 7, Monday being 1. See also % w. (SU)

% U The week number of the current year as a decimal number, range 00 to 53,

\a	Write a <bell>character.
\b	Write a <backspace>character.
\c	Ignore remaining characters in this string.
\f	Write a <form-feed>character.
\n	Write a <new-line>character.
\r	Write a <carriage return>character.
\t	Write a <tab>character.
\v	Write a <vertical tab>character.
\'	Write a <single quote>character.
\\	Write a backslash character.
\num or \0num	Write an 8-bit character whose ASCII value is the 1-, 2-, or 3-digit octal number num.

% %	The % character.
% a or % A	The weekday name according to the current locale, in abbreviated form or the full name.
% b or % B or % h	The month name according to the current locale, in abbreviated form or the full name.
% c	The date and time representation for the current locale.
% C	The century number (0-99).
% d or % e	The day of month (1-31).
% D	Equivalent to % m/% d/% y. (This is the American style date, very confusing to non-Americans, especially since % d/% m/% y is widely used in Europe. The ISO 8601 standard format is % Y-% m-% d.)
% H	The hour (0-23).
% I	The hour on a 12-hour clock (1-12).
% j	The day number in the year (1-366).
% m	The month number (1-12).
% M	The minute (0-59).
% n	Arbitrary whitespace.
% p	The locale's equivalent of AM or PM. (Note: there may be none.)
% r	The 12-hour clock time (using the locale's AM or PM). In the POSIX locale equivalent to % I:% M:% S % p. If t_fmt_ampm is empty in the LC_TIME part of the current locale then the behavior is undefined.
% R	Equivalent to % H:% M.
% S	The second (0-60; 60 may occur for leap seconds; earlier also 61 was allowed).
% t	Arbitrary whitespace.
% T	Equivalent to % H:% M:% S.
% U	The week number with Sunday the first day of the week (0-53). The first Sunday of January is the first day of week 1.
% w	The weekday number (0-6) with Sunday = 0.
% W	The week number with Monday the first day of the week (0-53). The first Monday of January is the first day of week 1.
% x	The date, using the locale's date format.
% X	The time, using the locale's time format.
% y	The year within century (0-99). When a century is not otherwise specified, values in the range 69-99 refer to years in the twentieth century (1969-1999); values in the range 00-68 refer to years in the twenty-first century (2000-2068).
% Y	The year, including century (for example, 1991).

% Ec	The locale's alternative date and time representation.
% EC	The name of the base year (period) in the locale's alternative representation.
% Ex	The locale's alternative date representation.
% EX	The locale's alternative time representation.
% Ey	The offset from % EC (year only) in the locale's alternative representation.
% EY	The full alternative year representation. The O modifier specifies that the numerical input may be in an alternative locale-dependent format:
% Od or % Oe	The day of the month using the locale's alternative numeric symbols; leading zeros are permitted but not required.
% OH	The hour (24-hour clock) using the locale's alternative numeric symbols.
% OI	The hour (12-hour clock) using the locale's alternative numeric symbols.
% Om	The month using the locale's alternative numeric symbols.
% OM	The minutes using the locale's alternative numeric symbols.
% OS	The seconds using the locale's alternative numeric symbols.
% OU	The week number of the year (Sunday as the first day of the week) using the locale's alternative numeric symbols.
% Ow	The number of the weekday (Sunday=0) using the locale's alternative numeric symbols.
% OW	The week number of the year (Monday as the first day of the week) using the locale's alternative numeric symbols.
% Oy	The year (offset from % C) using the locale's alternative numeric symbols.

% F	Equivalent to % Y-% m-% d, the ISO 8601 date format.
% g	The year corresponding to the ISO week number, but without the century (0-99).
% G	The year corresponding to the ISO week number. (For example, 1991.)
% u	The day of the week as a decimal number (1-7, where Monday = 1).
% V	The ISO 8601:1988 week number as a decimal number (1-53). If the week (starting on Monday) containing 1 January has four or more days in the new year, then it is considered week 1. Otherwise, it is the last week of the previous year, and the next week is week 1.
% z	An RFC-822/ISO 8601 standard timezone specification.
% Z	The timezone name.

% s	The number of seconds since the Epoch, 1970-01-01 00:00:00 +0000 (UTC). Leap seconds are not counted unless leap second support is available.

62.3 class NSLocaleDateMBS

62.3.1 class NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: A class for a date format.
Notes: Should be used with the NSLocaleMBS class, but can be used on its own, too.

62.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr4

62.3.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr4

62.3.4 Methods

62.3.5 Constructor

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The default constructor.
Notes: Creates a different object than the once you get by the NSLocaleMBS class. But this date information you get than works on Mac OS X 10.0. The NSLocaleMBS class is Mac OS X 10.4 only.
See also:

- 62.3.6 Constructor(locale as NSLocaleMBS) 12467

62.3.6 Constructor(locale as NSLocaleMBS)

MBS MacBase Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The constructor.
Example:

```
dim n1 as new NSLocaleDateMBS
dim n2 as new NSLocaleDateMBS(NSLocaleMBS.currentLocale)
dim n3 as new NSLocaleDateMBS(NSLocaleMBS.systemLocale)

break // see differences in debugger
```

Notes: Initializes the object for a given locale.
See also:

- 62.3.5 Constructor 12467

62.3.7 eraSymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the array of era symbols.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.eraSymbols

MsgBox join(s,", ")

// shows for example "v. Chr., n. Chr." (in Germany)
// shows for example "BC, AD" (in USA)
// shows for example "av. J.-C., ap. J.-C." (in France)
```

Notes:

for example, "BCE", "CE" in the USA.
On error returns an empty array.

62.3.8 longEraSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the long era symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.longEraSymbols

MsgBox join(s,", ")

// shows for example "v. Chr., n. Chr." (in Germany)
// shows for example "Before Christ, Anno Domini" (in USA)
// shows for example "avant Jésus-Christ, après Jésus-Christ" (in France)
```

Notes:

An array containing strings representing the era symbols for the receiver (for example, { "Before Common Era", "Common Era" }).
Available in Mac OS X v10.5 and later.

62.3.9 monthSymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the month symbols.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.monthSymbols

MsgBox join(s,", ")

// shows for example "Januar, Februar, März, April, Mai, Juni, Juli, August, September, Oktober, November, Dezember" (in Germany)
// shows for example "January, February, March, April, May, June, July, August, September, October, November, December" (in USA)
// shows for example "janvier, février, mars, avril, mai, juin, juillet, août, septembre, octobre, novembre, décembre" (in France)
```

Notes: On error returns an empty array.

62.3.10 quarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the quarter symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.quarterSymbols

MsgBox join(s,", ")

// shows for example "1. Quartal, 2. Quartal, 3. Quartal, 4. Quartal" (in Germany)
// shows for example "1st quarter, 2nd quarter, 3rd quarter, 4th quarter" (in USA)
// shows for example "1er trimestre, 2e trimestre, 3e trimestre, 4e trimestre" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

62.3.11 shortMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the array of short month.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortMonthSymbols

MsgBox join(s,", ")

// shows for example "Jan, Feb, Mrz, Apr, Mai, Jun, Jul, Aug, Sep, Okt, Nov, Dez" (in Germany)
// shows for example "Jan, Feb, Mar, Apr, May, Jun, Jul, Aug, Sep, Oct, Nov, Dec" (in USA)
// shows for example "janv., févr., mars, avr., mai, juin, juil., août, sept., oct., nov., déc." (in France)
```

Notes: On error returns an empty array.

62.3.12 shortQuarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the short quarter symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortQuarterSymbols

MsgBox join(s,", ")

// shows for example "Q1, Q2, Q3, Q4" (in Germany)
// shows for example "Q1, Q2, Q3, Q4" (in USA)
// shows for example "T1, T2, T3, T4" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

62.3.13 shortStandaloneMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the short standalone month symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortStandaloneMonthSymbols

MsgBox join(s,", ")

// shows for example "Jan, Feb, Mär, Apr, Mai, Jun, Jul, Aug, Sep, Okt, Nov, Dez" (in Germany)
// shows for example "Jan, Feb, Mar, Apr, May, Jun, Jul, Aug, Sep, Oct, Nov, Dec" (in USA)
// shows for example "janv., févr., mars, avr., mai, juin, juil., août, sept., oct., nov., déc." (in France)
```

Notes: Available in Mac OS X v10.5 and later.

62.3.14 shortStandaloneQuarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the short standalone quarter symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortStandaloneQuarterSymbols

MsgBox join(s,", ")

// shows for example "Q1, Q2, Q3, Q4" (in Germany)
// shows for example "Q1, Q2, Q3, Q4" (in USA)
// shows for example "T1, T2, T3, T4" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

62.3.15 shortStandaloneWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of short standalone weekday symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortStandaloneWeekdaySymbols

MsgBox join(s,", ")

// shows for example "So., Mo., Di., Mi., Do., Fr., Sa." (in Germany)
// shows for example "Sun, Mon, Tue, Wed, Thu, Fri, Sat" (in USA)
// shows for example "dim., lun., mar., mer., jeu., ven., sam." (in France)
```

Notes: Available in Mac OS X v10.5 and later.

62.3.16 shortWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Sets the short weekday symbols.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortWeekdaySymbols

MsgBox join(s,", ")

// shows for example "So., Mo., Di., Mi., Do., Fr., Sa." (in Germany)
// shows for example "Sun, Mon, Tue, Wed, Thu, Fri, Sat" (in USA)
// shows for example "dim., lun., mar., mer., jeu., ven., sam." (in France)
```

Notes: On error returns an empty array.

62.3.17 standaloneMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the standalone month symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
```

```
dim s(-1) as string = n.standaloneMonthSymbols

MsgBox join(s,", ")

// shows for example "Januar, Februar, März, April, Mai, Juni, Juli, August, September, Oktober, November, Dezember" (in Germany)
// shows for example "January, February, March, April, May, June, July, August, September, October, November, December" (in USA)
// shows for example "janvier, février, mars, avril, mai, juin, juillet, août, septembre, octobre, novembre, décembre" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

62.3.18 standaloneQuarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the standalone quarter symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.standaloneQuarterSymbols

MsgBox join(s,", ")

// shows for example "1. Quartal, 2. Quartal, 3. Quartal, 4. Quartal" (in Germany)
// shows for example "1st quarter, 2nd quarter, 3rd quarter, 4th quarter" (in USA)
// shows for example "1er trimestre, 2e trimestre, 3e trimestre, 4e trimestre" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

62.3.19 standaloneWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of standalone weekday symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.standaloneWeekdaySymbols
```

```
MsgBox join(s,", ")

// shows for example "Sonntag, Montag, Dienstag, Mittwoch, Donnerstag, Freitag, Samstag" (in Germany)
// shows for example "Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday" (in USA)
// shows for example "dimanche, lundi, mardi, mercredi, jeudi, vendredi, samedi" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

62.3.20 verySHortMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the very short month symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.verySHortMonthSymbols

MsgBox join(s,", ")

// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in Germany)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in USA)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

62.3.21 verySHortStandaloneMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the very short month symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.verySHortStandaloneMonthSymbols

MsgBox join(s,", ")

// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in Germany)
```

```
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in USA)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

62.3.22 verySHortStandaloneWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of very short standalone weekday symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.verySHortStandaloneWeekdaySymbols

MsgBox join(s,", ")

// shows for example "S, M, D, M, D, F, S" (in Germany)
// shows for example "S, M, T, W, T, F, S" (in USA)
// shows for example "D, L, M, M, J, V, S" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

62.3.23 verySHortWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of very short weekday symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.verySHortWeekdaySymbols

MsgBox join(s,", ")

// shows for example "S, M, D, M, D, F, S" (in Germany)
// shows for example "S, M, T, W, T, F, S" (in USA)
// shows for example "D, L, M, M, J, V, S" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

62.3.24 weekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of weekday symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.weekdaySymbols

MsgBox join(s,", ")

// shows for example "Sonntag, Montag, Dienstag, Mittwoch, Donnerstag, Freitag, Samstag" (in Germany)
// shows for example "Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday" (in USA)
// shows for example "dimanche, lundi, mardi, mercredi, jeudi, vendredi, samedi" (in France)
```

Notes: Available in Mac OS X v10.4 and later.

62.3.25 Properties

62.3.26 AMSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the AM symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong

MsgBox n.AMSymbol // shows for example "vorm." (in Germany)
```

Notes: (Read only property)

62.3.27 dateFormat as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the date format string,
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong

MsgBox n.dateFormat // shows for example: "d. MMMM yyyy" (in Germany)
```

Notes:

Format of this string (if object was made with new):
http://developer.apple.com/documentation/Cocoa/Conceptual/DataFormatting/Articles/dfDateFormatter-Syntax.html# //apple_ref/doc/uid/20000194

If you got this object from NSLocale, it uses a different format.
(Read only property)

62.3.28 PMSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the PM symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong

MsgBox n.PMSymbol // shows for example "nachm." (in Germany)
```

Notes: (Read only property)

62.4 class NSLocaleMBS

62.4.1 class NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The class for Cocoas localization data.
Example:

```
dim n as NSLocaleMBS

n=NSLocaleMBS.currentLocale

MsgBox n.CountryCode
```

Notes: Available in Mac OS X v10.4 and later.

62.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr4
- MBS Real Studio Plugins, version 12.5pr8
- MBS REALbasic plug-in 9.6

62.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr4
- MBS Real Studio Plugins, version 12.5pr8
- MBS REALbasic plug-in 9.6

62.4.4 Methods

62.4.5 autoupdatingCurrentLocale as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the current logical locale for the current user.
Notes:

The current logical locale for the current user. The locale is formed from the settings for the current user's chosen system locale overlaid with any custom settings the user has specified in System Preferences.

The object always reflects the current state of the current user's locale settings.

Settings you get from this locale do change as the user's settings change (contrast with currentLocale).

Note that if you cache values based on the locale or related information, those caches will of course not be automatically updated by the updating of the locale object.

Available in Mac OS X v10.5 and later.

62.4.6 availableLocaleIdentifiers as string()

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns an array of strings, each of which identifies a locale available on the system.
Example:

```
MsgBox join(NSLocaleMBS.availableLocaleIdentifiers,", ")

// shows "zh_Hans_CN, sq_AL, he_IL, uz_Latn, en_CA, zh, kk_Cyrl, sr_Cyrl,
// fr_CA, sr_Cyrl_RS, fr_LU, bg_BG, es_ES, da_DK, el_CY, ja_JP, kok_IN,
// mt_MT, ar_JO, de_LU, uz_Cyrl, pt_PT, af, ms_MY, nl_BE, es_US, en_PH,
// es_HN, be, sr_Latn_BA, es_CR, ca, vi_VN, zh_Hant_HK, bg, gu_IN, si_LK,
// am, or_IN, en_ZA, ar_YE, da, uk_UA, ar_OM, es_PE, cs_CZ, kk_Cyrl_KZ,
// de_AT, lv_LV, en_NZ, ar_BH, ar, en_AU, az_Cyrl, de, as, bn, zh_Hans_SG,
// es_PY, es_EC, ne_IN, pa_Guru_IN, fa, sw_KE, es_AR, az, fr_FR,
// en_US_POSIX, sr_Cyrl_BA, cs, zh_Hans, eu_ES, ga, en_PK, ar_LB, el,
// zh_Hant_TW, et_EE, fi, en, uz_Arab_AF, sw_TZ, it_CH, en_ZW, ha, eo,
// ar_SA, cy, th_TH, bn_BD, te_IN, ml_IN, he, es, fo, en_IN, et, om_KE,
// haw, eu, gl, ta_IN, zh_Hans_MO, id, fr, hi, ja, es_SV, hu_HU, en_SG,
// nn_NO, az_Latn, ii, id_ID, es_DO, fr_CH, ka, es_UY, en_MT, ar_QA, ar_TN,
// gu, de_CH, gv, sk_SK, hr, kn_IN, de_LI, ar_EG, el_GR, ar_SD, hu, af_NA,
// zh_Hant, ti_ER, ar_LY, is, ka_GE, it, om_ET, hy, ii_CN, hr_HR, ps_AF,
// pa_Arab_PK, es_NI, en_TT, pa_Guru, kk, kl, be_BY, km, zh_Hans_HK, kn,
// sv_SE, es_BO, ko, nb, ne_NP, pa_Arab, fr_MC, is_IS, ne, ar_SY, mk,

// ar_KW, haw_US, sr_Cyrl_ME, es_PA, es_CO, kl_GL, sr_Latn, uz, ur_IN,
// zh_Hant_MO, ha_Latn_NG, es_GT, tr_TR, fa_IR, pl_PL, sv_FI, ar_DZ"
```

Notes: Available in Mac OS X v10.4 and later.

62.4.7 canonicalLanguageIdentifierFromString(s as string) as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: eturns a canonical language identifier by mapping an arbitrary locale identification string to the canonical identifier.
Notes:

s: A string representation of an arbitrary locale identifier.
Returns a string that represents the canonical language identifier for the specified arbitrary locale identifier.
Available in Mac OS X v10.6 and later.

62.4.8 canonicalLocaleIdentifierFromString(s as string) as string

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the canonical identifier for a given locale identification string.
Notes: Available in Mac OS X v10.4 and later.

62.4.9 characterDirectionForLanguage(isoLangCode as string) as Integer

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the character direction for the specified ISO language code.
Notes:

Returns the character direction for the language. See constants for possible values. If the appropriate direction can't be determined NSLocaleLanguageDirectionUnknown is returned.

Available in Mac OS X v10.6 and later.

62.4.10 commonISOCurrencyCodes as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns an array of common ISO currency codes.
Example:

MsgBox join(NSLocaleMBS.commonISOCurrencyCodes,", ")

```
// shows "AED, AFN, ALL, AMD, ANG, AOA, ARS, AUD, AWG, AZN,
// BAM, BBD, BDT, BGN, BHD, BIF, BMD, BND, BOB, BRL, BSD, BTN,
// BWP, BYR, BZD, CAD, CDF, CHF, CLP, CNY, COP, CRC, CUP, CVE,
// CZK, DJF, DKK, DOP, DZD, EEK, EGP, ERN, ETB, EUR, FJD, FKP,
// GBP, GEL, GHS, GIP, GMD, GNF, GTQ, GWP, GYD, HKD, HNL, HRK,
// HTG, HUF, IDR, ILS, INR, IQD, IRR, ISK, JMD, JOD, JPY, KES,
// KGS, KHR, KMF, KPW, KRW, KWD, KYD, KZT, LAK, LBP, LKR, LRD,
// LSL, LTL, LVL, LYD, MAD, MDL, MGA, MKD, MMK, MNT, MOP, MRO,
// MUR, MVR, MWK, MXN, MYR, MZE, MZN, NAD, NGN, NIO, NOK, NPR,
// NZD, OMR, PAB, PEN, PGK, PHP, PKR, PLN, PYG, QAR, RON, RSD,
// RUB, RWF, SAR, SBD, SCR, SDG, SEK, SGD, SHP, SKK, SLL, SOS,
// SRD, STD, SVC, SYP, SZL, THB, TJS, TMM, TND, TOP, TRY, TTD,
// TWD, TZS, UAH, UGX, USD, UYU, UZS, VEF, VND, VUV, WST, XAF,
// XCD, XOF, XPF, YER, ZAR, ZMK, ZWD"
```

Notes:

Common codes may include, for example, AED, AUD, BZD, DKK, EUR, GBP, JPY, KES, MXN, OMR, STD, USD, XCD, and ZWD.
Available in Mac OS X v10.5 and later.

62.4.11 Constructor

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The default constructor.
Notes:

Available in Mac OS X v10.4 and later.
Loads the same values for this object as if you just take the object from NSLocaleMBS.currentLocale.
See also:

- 62.4.12 Constructor(Identifier as string) 12481

62.4.12 Constructor(Identifier as string)

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: The constructor.
Example:

```
dim a(-1) as string = NSLocalembs.availableLocaleIdentifiers
```

```
// show all identifers:
dim s(-1) as string
s.Append "All available Locale Identifiers:"

dim c as Integer = UBound(a)

for i as Integer=0 to c
dim identifier as string=a(i)
s.Append identifier
next

MsgBox Join(s)

// now show the currency symbols:

redim s(-1)
s.Append "All Currency symbols:"

c = UBound(a)
for i as Integer=0 to c
dim identifier as string=a(i)
dim n as new NSLocaleMBS(identifier)
s.Append n.CurrencySymbol
next

MsgBox Join(s)
```

Notes:

Available in Mac OS X v10.4 and later.
Pass in the country identifier which you get with the availableLocaleIdentifiers function.
See also:

- 62.4.11 Constructor 12481

62.4.13 currentLocale as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the logical locale for the current user.
Notes:

Available in Mac OS X v10.4 and later.

The logical locale for the current user. The locale is formed from the settings for the current user's chosen system locale overlaid with any custom settings the user has specified in System Preferences.

This method may return a retained cached object.

Discussion:
Settings you get from this locale do not change as System Preferences are changed so that your operations are consistent. Typically you perform some operations on the returned object and then allow it to be disposed of. Moreover, since the returned object may be cached, you do not need to hold on to it indefinitely.

62.4.14 displayName(key as string, value as string) as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the display name for the given value.
Example:

```
dim displayNameString as string

// The first uses the fr_FR locale.

dim frLocale as new NSLocaleMBS("fr_FR")

displayNameString = frLocale.displayName(frLocale.NSLocaleIdentifier, "fr_FR")
MsgBox "display name for fr_FR in fr_FR: "+displayNameString
// shows: "display name for fr_FR in fr_FR: français (France)"

displayNameString = frLocale.displayName(frLocale.NSLocaleIdentifier, "en_US")
MsgBox "display name for en_US in fr_FR: "+displayNameString
// shows: "display name for en_US in fr_FR: anglais (États-Unis)"

// The following example uses the en_GB locale.

dim gbLocale as new NSLocaleMBS("en_US")

displayNameString = gbLocale.displayName(frLocale.NSLocaleIdentifier, "fr_FR")
MsgBox "display name for fr_FR in en_US: "+displayNameString
// shows: "display name for fr_FR in en_US: French (France)"

displayNameString = gbLocale.displayName(frLocale.NSLocaleIdentifier, "en_US")
MsgBox "display name for en_US in en_US: "+displayNameString
// shows: "display name for en_US in en_US: English (United States)"
```

Notes:

Not all locale property keys have values with display name values.

You can use the NSLocaleIdentifier key to get the name of a locale in the language of another locale, as illustrated in the example code above.

62.4.15 ExemplarCharacterSet as Variant

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The exemplar character set for the locale.
Example:

```
dim n as NSLocaleMBS = NSLocaleMBS.currentLocale

MsgBox n.ExemplarCharacterSet.StringValue
// shows "ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyzÄÖÜßäöü" in Germany
```

Notes:

Returns a NSCharacterSetMBS object.
Available in Mac OS X v10.4 and later.

62.4.16 GetString(key as string) as string

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns a string for one of the NSLocate keys.
Notes:

Available in Mac OS X v10.4 and later.
This keys can be found int he NSLocale reference from Apple.

62.4.17 ISOCountryCodes as string()

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns an array of strings that represents all known legal country codes.
Example:

```
MsgBox join(NSLocaleMBS.ISOCountryCodes,", ")

// shows "AD, AE, AF, AG, AI, AL, AM, AN, AO, AQ, AR, AS, AT, AU,
```

```
// AW, AX, AZ, BA, BB, BD, BE, BF, BG, BH, BI, BJ, BL, BM, BN, BO,
// BR, BS, BT, BV, BW, BY, BZ, CA, CC, CD, CF, CG, CH, CI, CK, CL,
// CM, CN, CO, CR, CU, CV, CX, CY, CZ, DE, DJ, DK, DM, DO, DZ, EC,
// EE, EG, EH, ER, ES, ET, FI, FJ, FK, FM, FO, FR, GA, GB, GD, GE,
// GF, GG, GH, GI, GL, GM, GN, GP, GQ, GR, GS, GT, GU, GW, GY, HK,
// HM, HN, HR, HT, HU, ID, IE, IL, IM, IN, IO, IQ, IR, IS, IT, JE,
// JM, JO, JP, KE, KG, KH, KI, KM, KN, KP, KR, KW, KY, KZ, LA, LB,
// LC, LI, LK, LR, LS, LT, LU, LV, LY, MA, MC, MD, ME, MF, MG, MH,
// MK, ML, MM, MN, MO, MP, MQ, MR, MS, MT, MU, MV, MW, MX, MY, MZ,
// NA, NC, NE, NF, NG, NI, NL, false, NP, NR, NU, NZ, OM, PA, PE, PF,
// PG, PH, PK, PL, PM, PN, PR, PS, PT, PW, PY, QA, RE, RO, RS, RU,
// RW, SA, SB, SC, SD, SE, SG, SH, SI, SJ, SK, SL, SM, SN, SO, SR,
// ST, SV, SY, SZ, TC, TD, TF, TG, TH, TJ, TK, TL, TM, TN, TO, TR,
// TT, TV, TW, TZ, UA, UG, UM, US, UY, UZ, VA, VC, VE, VG, VI, VN,
// VU, WF, WS, YE, YT, ZA, ZM, ZW"
```

Notes:

Available in Mac OS X v10.4 and later.
Note that many of country codes do not have any supporting locale data in Mac OS X.

62.4.18 ISOCurrencyCodes as string()

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns an array of strings that represents all known legal ISO currency codes.
Example:

```
MsgBox join(NSLocaleMBS.ISOCurrencyCodes,", ")

// shows "ADP, AED, AFA, AFN, ALK, ALL, AMD, ANG, AOA, AOK, AON, AOR,
// ARA, ARP, ARS, ATS, AUD, AWG, AZM, AZN, BAD, BAM, BBD, BDT, BEC,
// BEF, BEL, BGL, BGM, BGN, BHD, BIF, BMD, BND, BOB, BOP, BOV, BRB,
// BRC, BRE, BRL, BRN, BRR, BSD, BTN, BUK, BWP, BYB, BYR, BZD, CAD,
// CDF, CHE, CHF, CHW, CLF, CLP, CNX, CNY, COP, COU, CRC, CSD, CSK,
// CUP, CVE, CYP, CZK, DDM, DEM, DJF, DKK, DOP, DZD, ECS, ECV, EEK,
// EGP, EQE, ERN, ESA, ESB, ESP, ETB, EUR, FIM, FJD, FKP, FRF, GBP,
// GEK, GEL, GHC, GHS, GIP, GMD, GNF, GNS, GQE, GRD, GTQ, GWE, GWP,
// GYD, HKD, HNL, HRD, HRK, HTG, HUF, IDR, IEP, ILP, ILS, INR, IQD,
// IRR, ISK, ITL, JMD, JOD, JPY, KES, KGS, KHR, KMF, KPW, KRW, KWD,
// KYD, KZT, LAK, LBP, LKR, LRD, LSL, LSM, LTL, LTT, LUC, LUF, LUL,
// LVL, LVR, LYD, MAD, MAF, MDL, MGA, MGF, MKD, MLF, MMK, MNT, MOP,
// MRO, MTL, MTP, MUR, MVR, MWK, MXN, MXP, MXV, MYR, MZE, MZM, MZN,
// NAD, NGN, NIC, NIO, NLG, NOK, NPR, NZD, OMR, PAB, PEI, PEN, PES,
// PGK, PHP, PKR, PLN, PLZ, PTE, PYG, QAR, RHD, ROL, RON, RSD, RUB,
```

// RUR, RWF, SAR, SBD, SCR, SDD, SDG, SDP, SEK, SGD, SHP, SIT, SKK,
// SLL, SOS, SRD, SRG, STD, SUR, SVC, SYP, SZL, THB, TJR, TJS, TMM,
// TND, TOP, TPE, TRL, TRY, TTD, TWD, TZS, UAH, UAK, UGS, UGX, USD,
// USN, USS, UYP, UYI, UYU, UZS, VEB, VEF, VND, VUV, WST, XAF, XAG,
// XAU, XBA, XBB, XBC, XBD, XCD, XDR, XEU, XFO, XFU, XOF, XPD, XPF,
// XPT, XRE, XTS, XXX, YDD, YER, YUD, YUM, YUN, ZAL, ZAR, ZMK, ZRN,
// ZRZ, ZWD"

Notes:

Available in Mac OS X v10.4 and later.

Note that some of the currency codes may not have any supporting locale data in Mac OS X.

62.4.19 ISOLanguageCodes as string()

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns an array of strings that represents all known legal ISO language codes.
Example:

MsgBox join(NSLocaleMBS.ISOLanguageCodes,", ")

// shows "aa, ab, ace, ach, ada, ady, ae, af, afa, afh, ain, ak, akk,
// ale, alg, alt, am, an, ang, anp, apa, ar, arc, arn, arp, art, arw,

// ypk, za, zap, zbl, zen, zh, znd, zu, zun, zxx, zza"

Notes:

Available in Mac OS X v10.4 and later.

Note that many of the language codes will not have any supporting locale data in Mac OS X.

62.4.20 lineDirectionForLanguage(isoLangCode as string) as Integer

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the line direction for the specified ISO language code.
Notes:

Returns the line direction for the language. See constants for possible values. If the appropriate direction can't be determined NSLocaleLanguageDirectionUnknown is returned.

Available in Mac OS X v10.6 and later.

62.4.21 localeIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the identifier for the receiver.
Notes:

The identifier for the receiver. This may not be the same string that the locale was created with, since NSLocale may canonicalize it.

Available in Mac OS X v10.4 and later.

62.4.22 localeIdentifierFromWindowsLocaleCode(code as Integer) as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns a locale identifier from a Windows locale code.
Notes: Available in Mac OS X v10.6 and later.

62.4.23 NSBuddhistCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Buddhist calendar.
Available in Mac OS X v10.4 and later.

62.4.24 NSChineseCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Chinese calendar (unsupported).

Note that the Chinese calendar is not supported in Mac OS X v10.4-10.5. Although you can create a calendar using this constant, the object will not function correctly.

Available in Mac OS X v10.4 and later.

62.4.25 NSGregorianCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Gregorian calendar.
Available in Mac OS X v10.4 and later.

62.4.26 NSHebrewCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Hebrew calendar.

Available in Mac OS X v10.4 and later.

62.4.27 NSIndianCalendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Indian calendar

Available in Mac OS X v10.6 and later.

62.4.28 NSIslamicCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Islamic calendar.

Available in Mac OS X v10.4 and later.

62.4.29 NSIslamicCivilCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Islamic civil calendar.

Available in Mac OS X v10.4 and later.

62.4.30 NSISO8601Calendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the ISO8601. The ISO8601 calendar is not yet implemented.

Available in Mac OS X v10.6 and later.

62.4.31 NSJapaneseCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Japanese calendar.
Available in Mac OS X v10.4 and later.

62.4.32 NSLocaleAlternateQuotationBeginDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes:

The key for the alternating begin quotation symbol associated with the locale. In some locales, when quotations are nested, the quotation characters alternate. Thus, NSLocaleQuotationBeginDelimiterKey, then NSLocaleAlternateQuotationBeginDelimiterKey, etc.

The corresponding value is a string.
Available in Mac OS X v10.6 and later.

62.4.33 NSLocaleAlternateQuotationEndDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes:

The key for the alternating enda quotation symbol associated with the locale. In some locales, when quotations are nested, the quotation characters alternate. Thus, NSLocaleQuotationEndDelimiterKey, then NSLocaleAlternateQuotationEndDelimiterKey, etc.

The corresponding value is a string.

Available in Mac OS X v10.6 and later.

62.4.34 NSLocaleCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.

62.4.35 NSLocaleCollationIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

62.4.36 NSLocaleCollatorIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes:

The key for the collation identifier for the locale.
The corresponding value is a string. If unknown, "" is returned.
Available in Mac OS X v10.6 and later.

62.4.37 NSLocaleCountryCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

62.4.38 NSLocaleCurrencyCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

62.4.39 NSLocaleCurrencySymbol as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

62.4.40 NSLocaleDecimalSeparator as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

62.4.41 NSLocaleExemplarCharacterSet as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

62.4.42 NSLocaleGroupingSeparator as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

62.4.43 NSLocaleIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Example:

```
dim n as new NSLocaleMBS("de")

MsgBox n.displayName(n.NSLocaleIdentifier, "en")
```

62.4.44 NSLocaleLanguageCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

62.4.45 NSLocaleMeasurementSystem as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

62.4.46 NSLocaleQuotationBeginDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes:

The key for the begin quotation symbol associated with the locale.
The corresponding value is a string.
Available in Mac OS X v10.6 and later.

62.4.47 NSLocaleQuotationEndDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes:

The key for the begin quotation symbol associated with the locale.
The corresponding value is string.
Available in Mac OS X v10.6 and later.

62.4.48 NSLocaleScriptCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

62.4.49 NSLocaleUsesMetricSystem as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

62.4.50 NSLocaleVariantCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

62.4.51 NSPersianCalendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Persian calendar.
Available in Mac OS X v10.6 and later.

62.4.52 NSRepublicOfChinaCalendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Republic of China (Taiwan) calendar.

A Chinese calendar can be created, and one can do calendrical calculations with it, but it should not be used for formatting as the necessary underlying functionality is not functioning correctly yet.

Available in Mac OS X v10.6 and later.

62.4.53 preferredLanguages as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the user's language preference order as an array of strings.
Example:

MsgBox join(NSLocaleMBS.preferredLanguages,", ")

// shows "de, en, fr, es, it, pt, pt-PT, nl, sv, nb, da, fi, ru, pl, zh-Hans, ja, zh-Hant, ko"

Notes:

The user's language preference order as an array of String objects, each of which is a canonicalized IETF BCP 47 language identifier.

Available in Mac OS X v10.5 and later.
This is the language the user prefers. To get the country linked to the number and date formats, use the CountryCode property.

62.4.54 systemLocale as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the "root", canonical locale, that contains fixed "backstop" settings that provide values for otherwise undefined keys.
Notes: Available in Mac OS X v10.4 and later.

62.4.55 windowsLocaleCodeFromLocaleIdentifier(s as string) as Integer

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns a Window locale code from the locale identifier.
Notes: Available in Mac OS X v10.6 and later.

62.4.56 Properties

62.4.57 CollationIdentifier as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The collation associated with the locale.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.CollationIdentifier // shows "" in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.58 CountryCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The country code.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.CountryCode // shows "DE" in Germany
```

Notes:

An example value might be "ES".
Available in Mac OS X v10.4 and later.

This code here is the country where the number and date settings belong to. This is not the language the user has. To get the languages, check the preferredLanguages array.
(Read only property)

62.4.59 CurrencyCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The currency code associated with the locale.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.CurrencyCode // shows "EUR" in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.60 CurrencySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The currency symbol associated with the locale.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.CurrencySymbol // shows "€" in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.61 DateFull as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The full date format.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.62 DateLong as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The long date format.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.63 DateMedium as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The medium date format.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.64 DateShort as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The short date format.
Example:

```
MsgBox NSLocaleMBS.currentLocale.DateShort.dateFormat
// in Germany: "dd.MM.yy"
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.65 DecimalSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The decimal separator associated with the locale.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.DecimalSeparator // shows "," in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.66 GroupingSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The numeric grouping separator associated with the locale.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.GroupingSeparator // shows "." in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.67 Identifier as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The locale identifier.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.Identifier // shows "de_DE" in Germany
```

Notes:

An example value might be "es_ES_PREEURO".
Available in Mac OS X v10.4 and later.
(Read only property)

62.4.68 LanguageCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The language code.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.LanguageCode // shows "de" in Germany
```

Notes:

An example value might be "es".
Available in Mac OS X v10.4 and later.
(Read only property)

62.4.69 MeasurementSystem as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The measurement system associated with the locale.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.MeasurementSystem // shows "Metric" in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.70 NumberCurrency as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The currency style for number formatting.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.71 NumberDecimal as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Specifies a decimal style for numbers.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.72 NumberPercent as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The percent style for number formatting.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.73 NumberScientific as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Specifies a scientific style for numbers.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.74 NumberSpellOut as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Specifies a spell-out format; for numbers, ”23” becomes ”twenty-three”.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.75 ScriptCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The locale script code.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.ScriptCode // shows "" in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.76 UsesMetricSystem as Boolean

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The flag that indicates whether the locale uses the metric system.
Example:

```
dim n as new NSLocaleMBS
dim v as Variant

v=n.UsesMetricSystem
MsgBox v // shows "True" in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

62.4.77 VariantCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The locale variant code.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.VariantCode // shows "" in Germany
```

Notes:

An example value might be "PREEURO".
Available in Mac OS X v10.4 and later.
(Read only property)

62.4.78 Constants

62.4.79 NSLocaleLanguageDirectionBottomToTop = 4

MBS MacBase Plugin, Plugin Version: 9.6.

Function: One of the constants describing the text direction for a language.
Notes:

The language direction is from bottom to top.
Available in Mac OS X v10.6 and later.

62.4.80 NSLocaleLanguageDirectionLeftToRight = 1

MBS MacBase Plugin, Plugin Version: 9.6.

Function: One of the constants describing the text direction for a language.
Notes:

The language direction is from left to right.
Available in Mac OS X v10.6 and later.

62.4.81 NSLocaleLanguageDirectionRightToLeft = 2

MBS MacBase Plugin, Plugin Version: 9.6.

Function: One of the constants describing the text direction for a language.
Notes:

The language direction is from right to left.
Available in Mac OS X v10.6 and later.

62.4.82 NSLocaleLanguageDirectionTopToBottom = 3

MBS MacBase Plugin, Plugin Version: 9.6.

Function: One of the constants describing the text direction for a language.
Notes:

The language direction is from top to bottom.
Available in Mac OS X v10.6 and later.

62.4.83 NSLocaleLanguageDirectionUnknown = 0

MBS MacBase Plugin, Plugin Version: 9.6.

Function: One of the constants describing the text direction for a language.
Notes:

The direction of the language is unknown.
Available in Mac OS X v10.6 and later.

62.5 class NSLocaleNumberMBS

62.5.1 class NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: A class for a number format.
Notes: Should be used with the NSLocaleMBS class, but can be used on its own, too.

62.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr4
- MBS Plugins 10.3 Release Notes

62.5.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr4
- MBS Plugins 10.3 Release Notes

62.5.4 Methods

62.5.5 Constructor

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes:

Loads values.
No the same values as if you get when using this class with NSLocaleMBS.
See also:

- 62.5.6 Constructor(locale as NSLocaleMBS) 12505

62.5.6 Constructor(locale as NSLocaleMBS)

MBS MacBase Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The constructor.
Example:

```
dim n1 as new NSLocaleNumberMBS
dim n2 as new NSLocaleNumberMBS(NSLocaleMBS.currentLocale)
```

```
dim n3 as new NSLocaleNumberMBS(NSLocaleMBS.systemLocale)

break // see differences in debugger
```

Notes: Initializes the object for a given locale.
See also:

- 62.5.5 Constructor 12505

62.5.7 Properties

62.5.8 alwaysShowsDecimalSeparator as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver always shows a decimal separator, even if the number is an integer.
Notes: (Read and Write property)

62.5.9 currencyCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the currency code.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.currencycode
// shows for example: e.g "EUR" (in Germany)
```

Notes:

A currency code is a three-letter code that is, in most cases, composed of a country's two-character Internet country code plus an extra character to denote the currency unit. For example, the currency code for the Australian dollar is "AUD". Currency codes are based on the ISO 4217 standard.

Available in Mac OS X v10.4 and later.
(Read and Write property)

62.5.10 currencyDecimalSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the currency decimal separator as a string.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.currencyDecimalSeparator
// shows for example: e.g "," (in Germany)
```

Notes: (Read and Write property)

62.5.11 currencyGroupingSeparator as String

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The currency grouping separator for the receiver.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

62.5.12 currencySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the local currency symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.currencycode
// shows for example: e.g "€" (in Germany)
```

Notes: (Read and Write property)

62.5.13 decimalSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns a string containing the character to represent decimal separators.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.decimalSeparator
// shows for example: e.g "," (in Germany)
```

Notes: (Read and Write property)

62.5.14 exponentSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used as an exponent symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.exponentSymbol
// shows for example: e.g "E" (in Germany)
```

Notes:

The exponent symbol is the "E" or "e" in the scientific notation of numbers, as in 1.0e+56.
(Read and Write property)

62.5.15 format as String

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The format used by the receiver.
Notes: (Read and Write property)

62.5.16 groupingSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns a string containing the grouping separator.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.groupingSeparator
// shows for example: e.g "." (in Germany)
```

Notes:

For example, the grouping separator used in the United States is the comma ("10,000") whereas in France it is the period ("10.000").
(Read and Write property)

62.5.17 hasThousandSeparators as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver's format includes thousand separators.
Notes: (Read and Write property)

62.5.18 internationalCurrencySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the international currency symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.internationalCurrencySymbol
// shows for example: e.g "EUR" (in Germany)
```

Notes:

A country typically has a local currency symbol and an international currency symbol. The local symbol is used within the country, while the international currency symbol is used in international contexts to specify

that country's currency unambiguously. The international currency symbol is often represented by a Unicode code point.
(Read and Write property)

62.5.19 Lenient as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver uses heuristics to guess at the date which is intended by a string.
Notes: (Read and Write property)

62.5.20 localizesFormat as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver localizes formats.
Notes: (Read and Write property)

62.5.21 minusSign as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used to represent the minus sign.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.minusSign
// shows for example: e.g "-" (in Germany)
```

Notes: (Read and Write property)

62.5.22 negativeFormat as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the format used to display negative numbers.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeFormat
// shows for example: e.g "# ,# # 0.00 ¤" (in Germany)
```

Notes: (Read and Write property)

62.5.23 negativeInfinitySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the symbol used to represent negative infinity.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeInfinitySymbol
// shows for example: e.g "" (in Germany)
```

Notes: (Read only property)

62.5.24 negativePrefix as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string which is inserted as a prefix to negative values.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativePrefix
// shows for example: e.g "-" (in Germany)
```

Notes: (Read and Write property)

62.5.25 negativeSuffix as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string which adds as a suffix to negative values.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeSuffix
// shows for example: e.g "€" (in Germany)
```

Notes: (Read and Write property)

62.5.26 nilSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used to represent a nil value.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.nilSymbol
// shows for example: e.g "" (in Germany)
```

Notes: (Read only property)

62.5.27 notANumberSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the symbol used to represent NaN ("not a number") when it converts values.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.notANumberSymbol
// shows for example: e.g "NaN" (in Germany)
```

Notes: (Read only property)

62.5.28 paddingCharacter as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns a string containing the padding character.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.paddingCharacter
// shows for example: e.g "*" (in Germany)
```

Notes: (Read and Write property)

62.5.29 PartialStringValidationEnabled as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether partial string validation is enabled.
Notes: (Read and Write property)

62.5.30 percentSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string that is used to represent the percent symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.percentSymbol
// shows for example: e.g "% " (in Germany)
```

Notes: (Read and Write property)

62.5.31 perMillSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string that is used for the per-thousands symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.perMillSymbol
// shows for example: e.g "‰" (in Germany)
```

Notes: (Read and Write property)

62.5.32 plusSign as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used for the plus sign.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.plusSign
// shows for example: e.g "+" (in Germany)
```

Notes: (Read and Write property)

62.5.33 positiveFormat as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the format used to display positive numbers.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeFormat
// shows for example: e.g "# ,# # 0.00 ¤" (in Germany)
```

Notes: (Read and Write property)

62.5.34 positiveInfinitySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used for the positive infinity symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.positiveInfinitySymbol
// shows for example: e.g "" (in Germany)
```

Notes: (Read only property)

62.5.35 positivePrefix as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used as the prefix for positive values.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.positivePrefix
// shows for example: e.g "" (in Germany)
```

Notes: (Read and Write property)

62.5.36 positiveSuffix as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used as the suffix for positive values.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.positiveSuffix
// shows for example: e.g " €" (in Germany)
```

Notes: (Read and Write property)

62.5.37 thousandSeparator as String

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver's format includes thousand separators.
Notes: (Read and Write property)

62.5.38 usesGroupingSeparator as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver uses the grouping separator.
Notes: (Read and Write property)

62.5.39 usesSignificantDigits as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver uses significant digits.
Notes: (Read and Write property)

62.5.40 zeroSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used as the zero symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.zeroSymbol
```

// shows for example: e.g "0" (in Germany)

Notes: (Read and Write property)

62.6 class WinLocalizationMBS

62.6.1 class WinLocalizationMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for details about the current localization
Example:

```
dim l as WinLocalizationMBS
l=new WinLocalizationMBS
```

Notes:

This class has a constructor to specify whether you want unicode or not.

You may write yourself functions to acquire the details you need in your application from the Windows and from the Mac classes.
Also you may consider to update your values as the user may change them while your application is running.

62.6.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

62.6.4 Methods

62.6.5 AbbreviatedDayName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized name of the day.
Notes:

Index from 0 to 6.
e.g. on a German Windows XP system: AbbreviatedDayName(0)="Mo"

62.6.6 AbbreviatedMonthName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized month name.
Notes:

Index from 0 to 12. 0=January, 11=December, 12=13th month if exists.
e.g. on a German Windows XP system: AbbreviatedMonthName(0)="Jan"

62.6.7 Constructor

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to get the values for the current locale.
Notes:

There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.
See also:

- 62.6.8 Constructor(LanguageID as Integer, SortID as Integer) 12519
- 62.6.9 Constructor(LCID as Integer) 12520
- 62.6.10 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer) 12520

62.6.8 Constructor(LanguageID as Integer, SortID as Integer)

MBS Win Plugin, Plugin Version: 9.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to query values for a given language.
Notes:

There are four constructors:

- You can pass nothing to get the current locale.

- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.
See also:

- 62.6.7 Constructor 12519
- 62.6.9 Constructor(LCID as Integer) 12520
- 62.6.10 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer) 12520

62.6.9 Constructor(LCID as Integer)

MBS Win Plugin, Plugin Version: 9.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to query values for a given language.
Notes:

There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.
See also:

- 62.6.7 Constructor 12519
- 62.6.8 Constructor(LanguageID as Integer, SortID as Integer) 12519
- 62.6.10 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer) 12520

62.6.10 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer)

MBS Win Plugin, Plugin Version: 9.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to query values for a given language.
Notes:

There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.
See also:

- 62.6.7 Constructor 12519
- 62.6.8 Constructor(LanguageID as Integer, SortID as Integer) 12519
- 62.6.9 Constructor(LCID as Integer) 12520

62.6.11 LongDayName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized name of the day.
Notes:

Index from 0 to 6.
e.g. on a German Windows XP system: LongDayName(0)="Montag"

62.6.12 LongMonthName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized month name.
Notes:

Index from 0 to 12. 0=January, 11=December, 12=13th month if exists.
e.g. on a German Windows XP system: LongMonthName(0)="Januar"

62.6.13 Properties

62.6.14 CalendarTypeSpecifier as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Current calendar type.
Notes:

This type can be one of these values:

Value	Meaning
1	Gregorian (as in United States)
2	Gregorian (English strings always)
3	Era: Year of the Emperor (Japan)
4	Era: Year of Taiwan Region
5	Tangun Era (Korea)

e.g. on a German Windows XP system: "1"
(Read only property)

62.6.15 CalendarTypeSpecifier2 as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Additional calendar types.
Notes:

This can be a zero-separated list of one or more of these calendars type values:

Value	Meaning
0	No additional types valid
1	Gregorian (as in United States)
2	Gregorian (English strings always)
3	Era: Year of the Emperor (Japan)
4	Era: Year of Taiwan Region
5	Tangun Era (Korea)

e.g. on a German Windows XP system: ""
(Read only property)

62.6.16 CountryCode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Country code, based on international phone codes, also referred to as IBM country codes.
Notes:

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "49"
(Read only property)

62.6.17 CountryNameAbbreviated as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Abbreviated name of the country from the ISO Standard 3166.
Notes:

e.g. on a German Windows XP system: "DEU"
(Read only property)

62.6.18 CountryNameAbbreviatedISO as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: ISO abbreviated country name.
Notes:

e.g. on a German Windows XP system: "DE"
(Read only property)

62.6.19 CountryNameEnglish as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Full English name of the country.
Notes:

This is always restricted to characters mappable into the ASCII 127-character subset.
e.g. on a German Windows XP system: "English"
(Read only property)

62.6.20 CountryNameLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Full localized name of the country.
Notes:

e.g. on a German Windows XP system: "Deutschland"
(Read only property)

62.6.21 CountryNameNative as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native name of the country.
Notes:

e.g. on a German Windows XP system: "Deutschland"
(Read only property)

62.6.22 CurrencyDecimalSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used as the monetary decimal separator.
Notes:

e.g. on a German Windows XP system: ","
(Read only property)

62.6.23 CurrencyDigitsInternational as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of fractional digits for the international monetary format.
Notes:

The maximum number of characters allowed for this string is 3.
e.g. on a German Windows XP system: "2"
(Read only property)

62.6.24 CurrencyDigitsLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of fractional digits for the local monetary format.
Notes:

The maximum number of characters allowed for this string is 3.
e.g. on a German Windows XP system: "2"
(Read only property)

62.6.25 CurrencyGroupingMode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sizes for each group of monetary digits to the left of the decimal.
Notes:

An explicit size is needed for each group; sizes are separated by semicolons. If the last value is zero, the preceding value is repeated. To group thousands, specify 3;0, for example.
e.g. on a German Windows XP system: "3;0"
(Read only property)

62.6.26 CurrencyNameEnglish as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The full English name of the currency associated with the locale.
Notes:

e.g. on a German Windows XP system: "Euro"
Introduced with Windows 2000.
(Read only property)

62.6.27 CurrencyNameNative as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The native name of the currency associated with the locale.
Notes:

e.g. on a German Windows XP system: "Euro"
Introduced with Windows 2000.
(Read only property)

62.6.28 CurrencyNegativeMode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Negative currency mode.
Notes:

The maximum number of characters allowed for this string is 3. The mode can be one of the following values:

Value	Example
0	($ 1.1)
1	–$ 1.1
2	$ –1.1
3	$ 1.1–
4	(1.1$)
5	–1.1$
6	1.1–$
7	1.1$ –
8	–1.1 $ (space before $)
9	–$ 1.1 (space after $)
10	1.1 $ – (space before $)
11	$ 1.1– (space after $)
12	$ –1.1 (space after $)
13	1.1– $ (space before $)
14	($ 1.1) (space after $)
15	(1.1 $) (space before $)

e.g. on a German Windows XP system: ”8”
(Read only property)

62.6.29 CurrencyPositiveMode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Positive currency mode.
Notes:

The maximum number of characters allowed for this string is 2. The mode can be one of the following values:

e.g. on a German Windows XP system: ”3”
(Read only property)

Value	Meaning
0	Prefix, no separation
1	Suffix, no separation
2	Prefix, 1-char. separation
3	Suffix, 1-char. separation

62.6.30 CurrencySymbolInternational as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Three characters of the international monetary symbol specified in ISO 4217, "Codes for the Representation of Currencies and Funds," followed by the character separating this string from the amount.
Example:

```
Dim WinLoc As WinLocalizationMBS
dim s as string

WinLoc=New WinLocalizationMBS

s=WinLoc.CurrencySymbolLocalized
msgbox str(lenb(s))+" "+str(len(s))+" "+s
s=WinLoc.CurrencySymbolInternational
msgbox str(lenb(s))+" "+str(len(s))+" "+s
```

Notes:

e.g. on a German Windows XP system: "EUR"
(Read only property)

62.6.31 CurrencySymbolLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String used as the local monetary symbol.
Example:

```
Dim WinLoc As WinLocalizationMBS
dim s as string

WinLoc=New WinLocalizationMBS
```

```
s=WinLoc.CurrencySymbolLocalized
msgbox str(lenb(s))+" "+str(len(s))+" "+s
s=WinLoc.CurrencySymbolInternational
msgbox str(lenb(s))+" "+str(len(s))+" "+s
```

Notes:

e.g. on a German Windows XP system: "€"
(Read only property)

62.6.32 CurrencyThousandSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used as the monetary separator between groups of digits to the left of the decimal.
Notes:

e.g. on a German Windows XP system: "."
(Read only property)

62.6.33 DateLeadingZerosDay as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for leading zeros in day fields.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	No leading zeros for days
1	Leading zeros for days

e.g. on a German Windows XP system: "1"
(Read only property)

62.6.34 DateLeadingZerosMonth as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for leading zeros in month fields.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	No leading zeros for months
1	Leading zeros for months

e.g. on a German Windows XP system: "1"
(Read only property)

62.6.35 DateLongFormatOrdering as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Long date format-ordering specifier.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	Month-Day-Year
1	Day-Month-Year
2	Year-Month-Day

e.g. on a German Windows XP system: "1"
(Read only property)

62.6.36 DateLongFormatString as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Long date formatting string for this locale.
Notes:

The string can consist of a combination of day, month, and year format pictures defined in the Day, Month, Year, and Era Format Pictures table in National Language Support Constants and any string of characters enclosed in single quotes. Characters in single quotes remain as given.
e.g. on a German Windows XP system: "dddd, d. MMMM yyyy"
(Read only property)

62.6.37 DateSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) for the date separator.
Notes:

e.g. on a German Windows XP system: "."
(Read only property)

62.6.38 DateShortFormatOrdering as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Short date format-ordering specifier.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	Month-Day-Year
1	Day-Month-Year
2	Year-Month-Day

e.g. on a German Windows XP system: "1"
(Read only property)

62.6.39 DateShortFormatString as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Short date formatting string for this locale.
Example:

```
dim w as new WinLocalizationMBS

MsgBox w.DateShortFormatString
```

Notes:

The string can consist of a combination of day, month, and year format pictures defined in Day, Month, Year, and Era Format Pictures table in National Language Support Constants.
e.g. on a German Windows XP system: "dd.MM.yyyy"
(Read only property)

62.6.40 DateShortYearMonth as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Year/Month formatting string for the locale.
Notes:

This string shows the proper format for a date string that contains only the year and the month.
e.g. on a German Windows XP system: "MMMM yyyy"
Introduced with Windows 2000.
(Read only property)

62.6.41 DecimalSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used as the decimal separator.
Notes:

e.g. on a German Windows XP system: ","
(Read only property)

62.6.42 DefaultCodePageANSI as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: American National Standards Institute (ANSI) code page associated with this locale.
Notes:

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "1252"

(Read only property)

62.6.43 DefaultCodePageEBCDIC as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Default EBCDIC code page associated with the locale.
Notes:

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "20273"
Introduced with Windows 2000.
(Read only property)

62.6.44 DefaultCodePageMac as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Original equipment manufacturer (OEM) code page associated with the country.
Notes:

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "10000"
(Read only property)

62.6.45 DefaultCodePageOEM as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Original equipment manufacturer (OEM) code page associated with the locale.
Notes:

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "850"
(Read only property)

62.6.46 DefaultCountryCode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Country code for the principal country in this locale.
Notes:

This is provided so that partially specified locales can be completed with default values. The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "49"
(Read only property)

62.6.47 DefaultLanguageID as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Language identifier for the principal language spoken in this locale.
Notes:

This is provided so that partially specified locales can be completed with default values. The maximum number of characters allowed for this string is 5.
e.g. on a German Windows XP system: "0407"
(Read only property)

62.6.48 DigitGrouping as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sizes for each group of digits to the left of the decimal.
Notes:

An explicit size is needed for each group; sizes are separated by semicolons. If the last value is zero, the preceding value is repeated. To group thousands, specify 3;0, for example.
e.g. on a German Windows XP system: "3;0"
(Read only property)

62.6.49 DigitSubstitution as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Unkown.
Notes:

0 = context, 1 = none, 2 = national
e.g. on a German Windows XP system: "1"
Introduced with Windows 2000.
(Read only property)

62.6.50 FirstDayOfWeek as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for the first day in a week.
Notes:

Value from 0 to 6.
e.g. on a German Windows XP system: "0"
(Read only property)

62.6.51 FirstWeekOfYear as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for the first week of the year.
Notes:

The specifier can be one of these values:

Value	Meaning
0	Week containing 1/1 is the first week of that year.
1	First full week following 1/1 is the first week of that year.
2	First week containing at least 4 days is the first week of that year.

e.g. on a German Windows XP system: "2"
(Read only property)

62.6.52 LanguageID as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Language identifier indicating the language.
Notes:

The maximum number of characters allowed for this string is 5.
e.g. on a German Windows XP system: "0407"
(Read only property)

62.6.53 LanguageNameAbbreviated as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Abbreviated name of the language, created by taking the 2-letter language abbreviation from the ISO Standard 639 and adding a third letter, as appropriate, to indicate the sublanguage.
Notes:

e.g. on a German Windows XP system: "DEU"
(Read only property)

62.6.54 LanguageNameAbbreviatedISO as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: ISO abbreviated language name.
Notes:

e.g. on a German Windows XP system: "de"
(Read only property)

62.6.55 LanguageNameEnglish as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Full English name of the language from the International Organization for Standardization (ISO) Standard 639.
Notes:

This is always restricted to characters mappable into the ASCII 127-character subset.
e.g. on a German Windows XP system: "German"
(Read only property)

62.6.56 LanguageNameLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Full localized name of the language.
Notes:

e.g. on a German Windows XP system: "Deutsch (Deutschland)"
(Read only property)

62.6.57 LanguageNameNativ as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native name of the language.
Notes:

e.g. on a German Windows XP system: "Deutsch"
(Read only property)

62.6.58 LeadingZeros as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for leading zeros in decimal fields.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	No leading zeros
1	Leading zeros

e.g. on a German Windows XP system: "1"
(Read only property)

62.6.59 ListItemSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used to separate list items.
Notes:

For example, a comma is used in many locales.
e.g. on a German Windows XP system: ";"
(Read only property)

62.6.60 MeasureSystem as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: System of measurement.
Notes:

This value is 0 if the metric system (Systéme International d'Unités, or S.I.) is used and 1 if the U.S. system is used. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "0"
(Read only property)

62.6.61 NativeASCII0to9 as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native equivalents to ASCII 0 through 9.
Notes:

e.g. on a German Windows XP system: "0123456789"
(Read only property)

62.6.62 NegativeNumberMode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Negative number mode.
Notes:

The mode can be one of these values:

Value	Meaning
0	(1.1)
1	–1.1
2	– 1.1
3	1.1–
4	1.1 –

e.g. on a German Windows XP system: "1"
(Read only property)

62.6.63 NegSepBySpace as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Separation of monetary symbol in a negative monetary value.
Notes:

This value is 1 if the monetary symbol is separated by a space from the negative amount, 0 if it is not. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "1"
(Read only property)

62.6.64 NegSymPrecedes as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Position of monetary symbol in a negative monetary value.
Notes:

This value is 1 if the monetary symbol precedes the negative amount, 0 if it follows it. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "0"
(Read only property)

62.6.65 NumberOfFraction as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of fractional digits.
Notes:

The maximum number of characters allowed for this string is 3.
e.g. on a German Windows XP system: "2"
(Read only property)

62.6.66 Papersize as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Default paper size associated with the locale.
Notes:

Possible values:

e.g. on a German Windows XP system: "9"
Introduced with Windows 2000.
(Read only property)

1 Letter
5 Legal
8 DIN A3
9 DIN A4

62.6.67 PosSepBySpace as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Separation of monetary symbol in a positive monetary value.
Notes:

This value is 1 if the monetary symbol is separated by a space from a positive amount, 0 if it is not. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "1"
(Read only property)

62.6.68 PosSymPrecedes as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Position of monetary symbol in a positive monetary value.
Notes:

This value is 1 if the monetary symbol precedes the positive amount, 0 if it follows it. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "0"
(Read only property)

62.6.69 SignNegative as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String value for the negative sign.
Notes:

e.g. on a German Windows XP system: "-"
(Read only property)

62.6.70 SignNegativePosition as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Formatting index for negative values.
Notes:

This index uses the same values as SignPositivePosition. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "1"
(Read only property)

62.6.71 SignPositive as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String value for the positive sign.
Notes:

e.g. on a German Windows XP system: ""
(Read only property)

62.6.72 SignPositivePosition as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Formatting index for positive values.
Notes:

The maximum number of characters allowed for this string is 2. The index can be one of the following values:

Value	Meaning
0	Parentheses surround the amount and the monetary symbol.
1	The sign string precedes the amount and the monetary symbol.
2	The sign string succeeds the amount and the monetary symbol.
3	The sign string immediately precedes the monetary symbol.
4	The sign string immediately succeeds the monetary symbol.

e.g. on a German Windows XP system: "1"
(Read only property)

62.6.73 Sortname as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The full localized name of the sort for the given locale ID.
Notes:

e.g. on a German Windows XP system: "Wörterbuch"
Introduced with Windows 2000.
(Read only property)

62.6.74 ThousandSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used to separate groups of digits to the left of the decimal.
Notes:

e.g. on a German Windows XP system: "."
(Read only property)

62.6.75 TimeAM as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String for the AM designator.
Notes:

e.g. on a German Windows XP system: ""
(Read only property)

62.6.76 TimeCenturyFormatSpecifier as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for full 4-digit century.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

e.g. on a German Windows XP system: "1"
(Read only property)

Value	Meaning
0	Abbreviated 2-digit century
1	Full 4-digit century

62.6.77 TimeFormatSpecifier as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Time format specifier.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	AM / PM 12-hour format
1	24-hour format

e.g. on a German Windows XP system: "1"
(Read only property)

62.6.78 TimeLeadingZeros as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for leading zeros in time fields.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	No leading zeros for hours
1	Leading zeros for hours

e.g. on a German Windows XP system: "1"
(Read only property)

62.6.79 TimeMarkerPosition as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Unkown.
Notes:

e.g. on a German Windows XP system: "0"
(Read only property)

62.6.80 TimePM as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String for the PM designator.
Notes:

e.g. on a German Windows XP system: ""
(Read only property)

62.6.81 TimeSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) for the time separator.
Notes:

e.g. on a German Windows XP system: ":"
(Read only property)

62.6.82 TimeShortFormatString as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Time formatting strings for this locale.
Notes:

The string can consist of a combination of the hour, minute, and second format pictures defined in the Hour, Minute, and Second Format Pictures table in National Language Support Constants.
e.g. on a German Windows XP system: "HH:mm:ss"
(Read only property)

62.6.83 Constants

62.6.84 LANG_AFRIKAANS = & h36

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.85 LANG_ALBANIAN = & h1c

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.86 LANG_ARABIC = 1

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.87 LANG_ARMENIAN = & h2b

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.88 LANG_ASSAMESE = & h4d

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.89 LANG_AZERI = & h2c

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.90 LANG_BASQUE = & h2d

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.91 LANG_BELARUSIAN = & h23

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.92 LANG_BENGALI = & h45

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.93 LANG_BULGARIAN = 2

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.94 LANG_CATALAN = 3

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.95 LANG_CHINESE = 4

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.96 LANG_CROATIAN = & h1a

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.97 LANG_CZECH = 5

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.98 LANG_DANISH = 6

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.99 LANG_DUTCH = & h13

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.100 LANG_ENGLISH = 9

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.101 LANG_ESTONIAN = & h25

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.102 LANG_FAEROESE = & h38

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.103 LANG_FARSI = & h29

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.104 LANG_FINNISH = & h0b

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.105 LANG_FRENCH = & h0c

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.106 LANG_GEORGIAN = & h37

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.107 LANG_GERMAN = 7

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.108 LANG_GREEK = 8

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.109 LANG_GUJARATI = & h47

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.110 LANG_HEBREW = & h0d

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.111 LANG_HINDI = & h39

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.112 LANG_HUNGARIAN = & h0e

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.113 LANG_ICELANDIC = & h0f

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.114 LANG_INDONESIAN = & h21

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.115 LANG_ITALIAN = & h10

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.116 LANG_JAPANESE = & h11

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.117 LANG_KANNADA = & h4b

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.118 LANG_KASHMIRI = & h60

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.119 LANG_KAZAK = & h3f

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.120 LANG_KONKANI = & h57

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.121 LANG_KOREAN = & h12

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.122 LANG_LATVIAN = & h26

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.123 LANG_LITHUANIAN = & h27

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.124 LANG_MACEDONIAN = & h2f

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.125 LANG_MALAY = & h3e

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.126 LANG_MALAYALAM = & h4c

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.127 LANG_MANIPURI = & h58

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.128 LANG_MARATHI = & h4e

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.129 LANG_NEPALI = & h61

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.130 LANG_NEUTRAL = 0

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.131 LANG_NORWEGIAN = & h14

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.132 LANG_ORIYA = & h48

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.133 LANG_POLISH = & h15

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

62.6.134 LANG_PORTUGUESE = & h16

Chapter 63

Data Types

63.1 class ComplexDoubleMBS

63.1.1 class ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for complex numbers.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(4,7)

dim sum as ComplexDoubleMBS = c+d

MsgBox sum.str
```

63.1.2 Blog Entries

- New MBS REALbasic Plugin Version 10.4
- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr4

63.1.3 Blog Entries

- New MBS REALbasic Plugin Version 10.4
- MBS REALbasic Plugins Version 10.4 release notes

- MBS REALbasic Plugins, version 10.4pr4

63.1.4 Methods

63.1.5 abs as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The absolute value of the complex number.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.abs)
```

63.1.6 Add(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the given value to this complex number.
See also:

- 63.1.7 Add(x as Double) 12576

63.1.7 Add(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the given value to this complex number.
See also:

- 63.1.6 Add(c as ComplexDoubleMBS) 12576

63.1.8 arg as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return phase angle of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.arg)
```

63.1.9 conj as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns complex conjugate.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim e as ComplexDoubleMBS = c.conj
MsgBox e.str
```

63.1.10 Constructor(other as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the values from the given one.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(c)

d.Add 1 // modify second object
MsgBox "d: "+d.str+", c: "+c.str
```

See also:

- 63.1.11 Constructor(x as Double = 0.0, y as Double = 0.0) 12577

63.1.11 Constructor(x as Double = 0.0, y as Double = 0.0)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the given values.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.Real)+" "+str(c.Imag)
```

See also:

- 63.1.10 Constructor(other as ComplexDoubleMBS) 12577

63.1.12 cos as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return cosine of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.cos.str
```

63.1.13 cosh as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic cosine of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.cosh.str
```

63.1.14 Divide(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides this complex number by the given complex number.
See also:

- 63.1.15 Divide(x as Double) 12578

63.1.15 Divide(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides this complex number by the given value.
See also:

- 63.1.14 Divide(c as ComplexDoubleMBS) 12578

63.1.16 exp as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return exponential of complex.
Notes:

dim c as new ComplexDoubleMBS(1,2)
MsgBox c.exp.str

63.1.17 log as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return natural logarith of complex.
Example:

dim c as new ComplexDoubleMBS(10,10)
MsgBox c.log.str

63.1.18 log10 as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return common logarithm of complex.
Example:

dim c as new ComplexDoubleMBS(10,0)
MsgBox c.log10.str

63.1.19 Multiply(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mulitplies this complex number with the given value.
See also:

- 63.1.20 Multiply(x as Double) 12579

63.1.20 Multiply(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies this complex number with the given value.
See also:

- 63.1.19 Multiply(c as ComplexDoubleMBS) 12579

63.1.21 norm as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return norm of complex number.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.norm)
```

63.1.22 Operator_Add(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to add two complex numbers.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c+d
MsgBox e.str
```

See also:

- 63.1.23 Operator_Add(x as Double) as ComplexDoubleMBS 12580

63.1.23 Operator_Add(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to add a value to this complex number.
Example:

```
dim c as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c+2
MsgBox e.str
```

See also:

- 63.1.22 Operator_Add(c as ComplexDoubleMBS) as ComplexDoubleMBS 12580

63.1.24 Operator_Compare(c as ComplexDoubleMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two complex numbers.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(1,2)

if c = d then
MsgBox "equal"
else
MsgBox "not equal"
end if
```

63.1.25 Operator_Divide(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to divide one complex number by another.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c/d
MsgBox e.str
```

See also:

- 63.1.26 Operator_Divide(x as Double) as ComplexDoubleMBS 12581

63.1.26 Operator_Divide(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to divide a complex number by the given value.
Example:

```
dim c as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c/2
MsgBox e.str
```

See also:

- 63.1.25 Operator_Divide(c as ComplexDoubleMBS) as ComplexDoubleMBS 12581

63.1.27 Operator_Multiply(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to multiply two complex numbers.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c*d
MsgBox e.str
```

See also:

- 63.1.28 Operator_Multiply(x as Double) as ComplexDoubleMBS 12582

63.1.28 Operator_Multiply(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to multiply a double to a complex number.
Example:

```
dim c as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c*2
MsgBox e.str
```

See also:

- 63.1.27 Operator_Multiply(c as ComplexDoubleMBS) as ComplexDoubleMBS 12582

63.1.29 Operator_Power(x as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to calculate the power of two complex numbers.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
```

```
dim e as ComplexDoubleMBS = c^d
MsgBox e.str
```

63.1.30 Operator_Subtract(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to subtract one complex number from another.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c-d
MsgBox e.str
```

See also:

- 63.1.31 Operator_Subtract(x as Double) as ComplexDoubleMBS 12583

63.1.31 Operator_Subtract(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to subtract the given value from this complex number.
Example:

```
dim c as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c-2
MsgBox e.str
```

See also:

- 63.1.30 Operator_Subtract(c as ComplexDoubleMBS) as ComplexDoubleMBS 12583

63.1.32 PI as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PI constant.
Example:

MsgBox str(ComplexDoubleMBS.PI)

63.1.33 polar(rho as Double, theta as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the given polar coordinate.
Example:

```
MsgBox ComplexDoubleMBS.polar(10, 0.5).str
```

63.1.34 pow(x as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return complex power.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(2,0)
dim m as ComplexDoubleMBS = c.pow(d)

MsgBox "c: "+c.str+EndOfLine+"d: "+d.str+EndOfLine+"c^d: "+m.str
```

See also:

- 63.1.35 pow(x as Double) as ComplexDoubleMBS 12584
- 63.1.36 pow(x as Double, y as ComplexDoubleMBS) as ComplexDoubleMBS 12585

63.1.35 pow(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return complex power.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim m as ComplexDoubleMBS = c.pow(2)

MsgBox "c: "+c.str+EndOfLine+"c^2: "+m.str
```

See also:

- 63.1.34 pow(x as ComplexDoubleMBS) as ComplexDoubleMBS 12584
- 63.1.36 pow(x as Double, y as ComplexDoubleMBS) as ComplexDoubleMBS 12585

63.1.36 pow(x as Double, y as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the power of the given values.
Example:

```
dim x as new ComplexDoubleMBS(2,3)
dim c as ComplexDoubleMBS = ComplexDoubleMBS.pow(2, x)

MsgBox c.str
```

See also:

- 63.1.34 pow(x as ComplexDoubleMBS) as ComplexDoubleMBS 12584
- 63.1.35 pow(x as Double) as ComplexDoubleMBS 12584

63.1.37 sin as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return sine of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.sin.str
```

63.1.38 sinh as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic sine of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.sinh.str
```

63.1.39 sqrt as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return square root of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim r as ComplexDoubleMBS = c.sqrt
dim m as ComplexDoubleMBS = r*r

MsgBox "number: "+c.str+EndOfLine+"root: "+r.str+EndOfLine+"back: "+m.str
```

63.1.40 str as string

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows the number in an human readable format.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.str
```

Notes: The actual format can change.

63.1.41 Subtract(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts the given complex number from this complex number.
See also:

- 63.1.42 Subtract(x as Double)

63.1.42 Subtract(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts the given value from this complex number.
See also:

- 63.1.41 Subtract(c as ComplexDoubleMBS) 12586

63.1.43 tan as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return tangent of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.tan.str
```

63.1.44 tanh as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic tangent of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.tanh.str
```

63.1.45 Properties

63.1.46 Imag as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the imaginary part of the complex number.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.Imag)
```

Notes: (Read and Write property)

63.1.47 Real as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the real part of the complex number.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.Real)
```

Notes: (Read and Write property)

63.2 class ComplexSingleMBS

63.2.1 class ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for complex numbers.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(4,7)

dim sum as ComplexSingleMBS = c+d

MsgBox sum.str
```

63.2.2 Blog Entries

- MBS REALbasic Plugins, version 10.4pr4

63.2.4 Methods

63.2.5 abs as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The absolute value of the complex number.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.abs)
```

63.2.6 Add(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the given value to this complex number.
See also:

- 63.2.7 Add(x as single) 12590

63.2.7 Add(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the given value to this complex number.
See also:

- 63.2.6 Add(c as ComplexSingleMBS) 12590

63.2.8 arg as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return phase angle of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.arg)
```

63.2.9 conj as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns complex conjugate.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim e as ComplexSingleMBS = c.conj
MsgBox e.str
```

63.2.10 Constructor(other as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the values from the given one.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(c)

d.Add 1 // modify second object
MsgBox "d: "+d.str+", c: "+c.str
```

See also:

- 63.2.11 Constructor(x as single = 0.0, y as single = 0.0) 12591

63.2.11 Constructor(x as single = 0.0, y as single = 0.0)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the given values.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.Real)+" "+str(c.Imag)
```

See also:

- 63.2.10 Constructor(other as ComplexSingleMBS) 12590

63.2.12 cos as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return cosine of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.cos.str
```

63.2.13 cosh as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic cosine of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.cosh.str
```

63.2.14 Divide(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides this complex number by the given complex number.
See also:

- 63.2.15 Divide(x as single) 12592

63.2.15 Divide(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides this complex number by the given value.
See also:

- 63.2.14 Divide(c as ComplexSingleMBS) 12592

63.2.16 exp as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return exponential of complex.
Notes:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.exp.str
```

63.2.17 log as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return natural logarith of complex.
Example:

```
dim c as new ComplexSingleMBS(10,10)
MsgBox c.log.str
```

63.2.18 log10 as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return common logarithm of complex.
Example:

```
dim c as new ComplexSingleMBS(10,0)
MsgBox c.log10.str
```

63.2.19 Multiply(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mulitplies this complex number with the given value.
See also:

- 63.2.20 Multiply(x as single) 12593

63.2.20 Multiply(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies this complex number with the given value.
See also:

- 63.2.19 Multiply(c as ComplexSingleMBS) 12593

63.2.21 norm as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return norm of complex number.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.norm)
```

63.2.22 Operator_Add(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to add two complex numbers.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c+d
MsgBox e.str
```

See also:

- 63.2.23 Operator_Add(x as single) as ComplexSingleMBS 12594

63.2.23 Operator_Add(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to add a value to this complex number.
Example:

```
dim c as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c+2
MsgBox e.str
```

See also:

- 63.2.22 Operator_Add(c as ComplexSingleMBS) as ComplexSingleMBS 12594

63.2.24 Operator_Compare(c as ComplexSingleMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two complex numbers.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(1,2)

if c = d then
MsgBox "equal"
else
MsgBox "not equal"
```

```
end if
```

63.2.25 Operator_Divide(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to divide one complex number by another.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c/d
MsgBox e.str
```

See also:

- 63.2.26 Operator_Divide(x as single) as ComplexSingleMBS 12595

63.2.26 Operator_Divide(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to divide a complex number by the given value.
Example:

```
dim c as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c/2
MsgBox e.str
```

See also:

- 63.2.25 Operator_Divide(c as ComplexSingleMBS) as ComplexSingleMBS 12595

63.2.27 Operator_Multiply(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to multiply two complex numbers.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
```

```
dim e as ComplexSingleMBS = c*d
MsgBox e.str
```

See also:

- 63.2.28 Operator_Multiply(x as single) as ComplexSingleMBS 12596

63.2.28 Operator_Multiply(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to multiply a single to a complex number.
Example:

```
dim c as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c*2
MsgBox e.str
```

See also:

- 63.2.27 Operator_Multiply(c as ComplexSingleMBS) as ComplexSingleMBS 12595

63.2.29 Operator_Power(x as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to calculate the power of two complex numbers.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c^d
MsgBox e.str
```

63.2.30 Operator_Subtract(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to subtract one complex number from another.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c-d
MsgBox e.str
```

See also:

- 63.2.31 Operator_Subtract(x as single) as ComplexSingleMBS 12597

63.2.31 Operator_Subtract(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to subtract the given value from this complex number.
Example:

```
dim c as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c-2
MsgBox e.str
```

See also:

- 63.2.30 Operator_Subtract(c as ComplexSingleMBS) as ComplexSingleMBS 12596

63.2.32 PI as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PI constant.
Example:

```
MsgBox str(ComplexSingleMBS.PI)
```

63.2.33 polar(rho as single, theta as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the given polar coordinate.
Example:

```
MsgBox ComplexSingleMBS.polar(10, 0.5).str
```

63.2.34 pow(x as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return complex power.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(2,0)
dim m as ComplexSingleMBS = c.pow(d)

MsgBox "c: "+c.str+EndOfLine+"d: "+d.str+EndOfLine+"c^d: "+m.str
```

See also:

- 63.2.35 pow(x as single) as ComplexSingleMBS 12598
- 63.2.36 pow(x as single, y as ComplexSingleMBS) as ComplexSingleMBS 12598

63.2.35 pow(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return complex power.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim m as ComplexSingleMBS = c.pow(2)

MsgBox "c: "+c.str+EndOfLine+"c^2: "+m.str
```

See also:

- 63.2.34 pow(x as ComplexSingleMBS) as ComplexSingleMBS 12598
- 63.2.36 pow(x as single, y as ComplexSingleMBS) as ComplexSingleMBS 12598

63.2.36 pow(x as single, y as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the power of the given values.
Example:

```
dim x as new ComplexSingleMBS(2,3)
dim c as ComplexSingleMBS = ComplexSingleMBS.pow(2, x)

MsgBox c.str
```

See also:

- 63.2.34 pow(x as ComplexSingleMBS) as ComplexSingleMBS 12598
- 63.2.35 pow(x as single) as ComplexSingleMBS 12598

63.2.37 sin as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return sine of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.sin.str
```

63.2.38 sinh as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic sine of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.sinh.str
```

63.2.39 sqrt as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return square root of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim r as ComplexSingleMBS = c.sqrt
```

```
dim m as ComplexSingleMBS = r*r

MsgBox "number: "+c.str+EndOfLine+"root: "+r.str+EndOfLine+"back: "+m.str
```

63.2.40 str as string

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows the number in an human readable format.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.str
```

Notes: The actual format can change.

63.2.41 Subtract(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts the given complex number from this complex number.
See also:

- 63.2.42 Subtract(x as single) 12600

63.2.42 Subtract(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts the given value from this complex number.
See also:

- 63.2.41 Subtract(c as ComplexSingleMBS) 12600

63.2.43 tan as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return tangent of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.tan.str
```

63.2.44 tanh as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic tangent of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.tanh.str
```

63.2.45 Properties

63.2.46 Imag as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the imaginary part of the complex number.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.Imag)
```

Notes: (Read and Write property)

63.2.47 Real as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the real part of the complex number.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.Real)
```

Notes: (Read and Write property)

63.3 Globals

63.3.1 FFTDoubleAbsMBS(x as MemoryBlock, N as Integer = -1) as Double()

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation and applies abs operation on result.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Memoryblock contains DoubleValue values (8 byte each).
If N is not provided, the plugin chooses a value.
See also:

- 63.3.2 FFTDoubleAbsMBS(x() as ComplexDoubleMBS, N as Integer = -1) as Double() 12602
- 63.3.3 FFTDoubleAbsMBS(x() as Double, N as Integer = -1) as Double() 12602

63.3.2 FFTDoubleAbsMBS(x() as ComplexDoubleMBS, N as Integer = -1) as Double()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation and applies abs operation on result.
Deprecated: This item is deprecated and should no longer be used. **Notes:** If N is not provided, the plugin chooses a value.
See also:

- 63.3.1 FFTDoubleAbsMBS(x as MemoryBlock, N as Integer = -1) as Double() 12602
- 63.3.3 FFTDoubleAbsMBS(x() as Double, N as Integer = -1) as Double() 12602

63.3.3 FFTDoubleAbsMBS(x() as Double, N as Integer = -1) as Double()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation and applies abs operation on result.
Deprecated: This item is deprecated and should no longer be used. **Notes:** If N is not provided, the plugin chooses a value.

63.3.5 FFTDoubleMBS(x() as ComplexDoubleMBS, N as Integer = -1) as ComplexDoubleMBS()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation.
Deprecated: This item is deprecated and should no longer be used. **Notes:** If N is not provided, the plugin chooses a value.
See also:

- 63.3.6 FFTDoubleMBS(x() as Double, N as Integer = -1) as ComplexDoubleMBS() 12603

63.3.6 FFTDoubleMBS(x() as Double, N as Integer = -1) as ComplexDoubleMBS()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation.
Deprecated: This item is deprecated and should no longer be used. **Notes:** If N is not provided, the plugin chooses a value.

63.3.12 FFTSingleMBS(x() as ComplexSingleMBS, N as Integer = -1) as ComplexSingleMBS()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation.
Deprecated: This item is deprecated and should no longer be used. See also:

• 63.3.13 FFTSingleMBS(x() as single, N as Integer = -1) as ComplexSingleMBS() 12605

63.3.13 FFTSingleMBS(x() as single, N as Integer = -1) as ComplexSingleMBS()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation.
Deprecated: This item is deprecated and should no longer be used. **Notes:** If N is not provided, the plugin chooses a value.

63.4 class IntegerHashSetIteratorMBS

63.4.1 class IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerHashSet class.
Example:

```
// Create a map
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
```

```
wend
```

63.4.2 Methods

63.4.3 isEqual(other as IntegerHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)
i.MoveNext
wend
```

63.4.4 isNotEqual(other as IntegerHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
```

```
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

63.4.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.4.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

63.5 class IntegerHashSetMBS

63.5.1 class IntegerHashSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash set with integers.
Example:

```
dim s as new IntegerHashSetMBS

s.insert 1
s.insert 2

MsgBox str(s.Count) // shows 2
```

Notes: You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

63.5.2 Methods

63.5.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.5.4 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 63.5.5 Constructor(Keys() as Integer) 12608

63.5.5 Constructor(Keys() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.

See also:

- 63.5.4 Constructor 12608

63.5.6 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

63.5.7 find(key as Integer) as IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.5.8 first as IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

63.5.9 insert(key as Integer)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

63.5.10 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.5.11 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)

for each v as Integer in m.Keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.5.12 last as IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
dim m as new IntegerHashSetMBS
```

```
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

63.5.13 lookup(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
dim set as new IntegerHashSetMBS

set.insert 1
set.insert 2

MsgBox str(set.lookup(3)) // shows false as value is missing
MsgBox str(set.lookup(1)) // shows true as value is found
```

Notes: Returns true if yes and false if no.

63.5.14 Remove(first as IntegerHashSetIteratorMBS, last as IntegerHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.5.15 Remove(key as Integer) as Integer 12612
- 63.5.16 Remove(pos as IntegerHashSetIteratorMBS) 12612

63.5.15 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.5.14 Remove(first as IntegerHashSetIteratorMBS, last as IntegerHashSetIteratorMBS) 12611
- 63.5.16 Remove(pos as IntegerHashSetIteratorMBS) 12612

63.5.16 Remove(pos as IntegerHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.5.14 Remove(first as IntegerHashSetIteratorMBS, last as IntegerHashSetIteratorMBS) 12611
- 63.5.15 Remove(key as Integer) as Integer 12612

63.5.17 Properties

63.5.18 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new IntegerHashSetMBS

v.insert 1
v.insert 5

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

63.5.19 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
dim set as new IntegerHashSetMBS

set.insert 1
set.insert 2

MsgBox str(set.Count)
```

Notes: (Read only property)

63.5.20 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.5.21 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.6 class IntegerOrderedSetIteratorMBS

63.6.1 class IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerOrderedSet class.
Example:

```
// Create a map
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

63.6.2 Methods

63.6.3 isEqual(other as IntegerOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)
i.MoveNext
wend
```

63.6.4 isNotEqual(other as IntegerOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

63.6.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.6.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

63.6.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

63.7 class IntegerOrderedSetMBS

63.7.1 class IntegerOrderedSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered set with integers.
Example:

```
dim s as new IntegerOrderedSetMBS

s.insert 1
s.insert 2

MsgBox str(s.Count) // shows 2
```

Notes: You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

63.7.2 Methods

63.7.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.7.4 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 63.7.5 Constructor(Keys() as Integer) 12617

63.7.5 Constructor(Keys() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.

See also:

- 63.7.4 Constructor 12617

63.7.6 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

63.7.7 find(key as Integer) as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.7.8 first as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

63.7.9 insert(key as Integer)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

63.7.10 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.7.11 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)

for each v as Integer in m.Keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.7.12 last as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
dim m as new IntegerOrderedSetMBS
```

```
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

63.7.13 lookup(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
dim set as new IntegerOrderedSetMBS

set.insert 1
set.insert 2

MsgBox str(set.lookup(3)) // shows false as value is missing
MsgBox str(set.lookup(1)) // shows true as value is found
```

Notes: Returns true if yes and false if no.

63.7.14 LowerBound(key as Integer) as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

63.7.15 Remove(first as IntegerOrderedSetIteratorMBS, last as IntegerOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.7.16 Remove(key as Integer) as Integer 12621
- 63.7.17 Remove(pos as IntegerOrderedSetIteratorMBS) 12621

63.7.16 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.7.15 Remove(first as IntegerOrderedSetIteratorMBS, last as IntegerOrderedSetIteratorMBS) 12621
- 63.7.17 Remove(pos as IntegerOrderedSetIteratorMBS) 12621

63.7.17 Remove(pos as IntegerOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.7.15 Remove(first as IntegerOrderedSetIteratorMBS, last as IntegerOrderedSetIteratorMBS) 12621
- 63.7.16 Remove(key as Integer) as Integer 12621

63.7.18 UpperBound(key as Integer) as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

63.7.19 Properties

63.7.20 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
dim set as new IntegerOrderedSetMBS

set.insert 1
set.insert 2

MsgBox str(set.Count)
```

Notes: (Read only property)

63.7.21 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.7.22 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.8 class IntegerToIntegerHashMapIteratorMBS

63.8.1 class IntegerToIntegerHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToIntegerHashMap class.
Example:

```
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.8.2 Methods

63.8.3 isEqual(other as IntegerToIntegerHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.8.4 isNotEqual(other as IntegerToIntegerHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.8.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.8.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.8.7 Properties

63.8.8 Value as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

63.9 class IntegerToIntegerHashMapMBS

63.9.1 class IntegerToIntegerHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with integers as keys and values.
Example:

```
dim s as new IntegerToIntegerHashMapMBS

s.Value(1)=3
s.Value(2)=4

MsgBox str(s.Count) // shows 2

MsgBox str(s.Value(1)+s.Value(2)) // shows 7
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

63.9.2 Methods

63.9.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.9.4 AddValues(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.9.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.9.6 Clone as IntegerToIntegerHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

63.9.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

63.9.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 63.9.9 Constructor(dic as dictionary) 12627
- 63.9.10 Constructor(other as IntegerToIntegerHashMapMBS) 12628

63.9.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 63.9.8 Constructor 12627
- 63.9.10 Constructor(other as IntegerToIntegerHashMapMBS) 12628

63.9.10 Constructor(other as IntegerToIntegerHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 63.9.8 Constructor 12627
- 63.9.9 Constructor(dic as dictionary) 12627

63.9.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

63.9.12 find(key as Integer) as IntegerToIntegerHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.9.13 first as IntegerToIntegerHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
```

```
i.MoveNext
wend
```

63.9.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

63.9.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.9.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerToIntegerHashMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.9.17 last as IntegerToIntegerHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.9.18 lookup(key as Integer, defaultvalue as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new IntegerToIntegerHashMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

63.9.19 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

63.9.20 Remove(first as IntegerToIntegerHashMapIteratorMBS, last as IntegerToIntegerHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.9.21 Remove(key as Integer) as Integer 12631
- 63.9.22 Remove(pos as IntegerToIntegerHashMapIteratorMBS) 12631

63.9.21 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.9.20 Remove(first as IntegerToIntegerHashMapIteratorMBS, last as IntegerToIntegerHashMapIteratorMBS) 12631
- 63.9.22 Remove(pos as IntegerToIntegerHashMapIteratorMBS) 12631

63.9.22 Remove(pos as IntegerToIntegerHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.9.20 Remove(first as IntegerToIntegerHashMapIteratorMBS, last as IntegerToIntegerHashMapIteratorMBS) 12631
- 63.9.21 Remove(key as Integer) as Integer 12631

63.9.23 ValueAtIndex(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.9.24 Values as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new IntegerToIntegerHashMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

63.9.25 Properties

63.9.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new IntegerToIntegerHashMapMBS

v.value(1)=10
v.value(2)=20

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

63.9.27 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new IntegerToIntegerHashMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)

63.9.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.9.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.9.30 value(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

63.10 class IntegerToIntegerOrderedMapIteratorMBS

63.10.1 class IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToIntegerOrderedMap class.
Example:

```
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.10.2 Methods

63.10.3 isEqual(other as IntegerToIntegerOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.10.4 isNotEqual(other as IntegerToIntegerOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.10.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.10.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.10.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

63.10.8 Properties

63.10.9 Value as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

63.11 class IntegerToIntegerOrderedMapMBS

63.11.1 class IntegerToIntegerOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map for integers for keys and values.
Example:

```
dim s as new IntegerToIntegerHashMapMBS

s.Value(1)=3
s.Value(2)=4

MsgBox str(s.Count) // shows 2

MsgBox str(s.Value(1)+s.Value(2)) // shows 7
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

63.11.2 Methods

63.11.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.11.4 AddValues(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.11.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.11.6 Clone as IntegerToIntegerOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

63.11.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

63.11.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 63.11.9 Constructor(dic as dictionary) 12638
- 63.11.10 Constructor(other as IntegerToIntegerOrderedMapMBS) 12639

63.11.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 63.11.8 Constructor 12638
- 63.11.10 Constructor(other as IntegerToIntegerOrderedMapMBS) 12639

63.11.10 Constructor(other as IntegerToIntegerOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 63.11.8 Constructor 12638
- 63.11.9 Constructor(dic as dictionary) 12638

63.11.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

63.11.12 find(key as Integer) as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.11.13 first as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
```

```
i.MoveNext
wend
```

63.11.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

63.11.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.11.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerToIntegerOrderedMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.11.17 last as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.11.18 lookup(key as Integer, defaultvalue as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new IntegerToIntegerOrderedMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

63.11.19 LowerBound(key as Integer) as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

63.11.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

63.11.21 Remove(first as IntegerToIntegerOrderedMapIteratorMBS, last as IntegerToIntegerOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.11.22 Remove(key as Integer) as Integer 12642
- 63.11.23 Remove(pos as IntegerToIntegerOrderedMapIteratorMBS) 12642

63.11.22 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.11.21 Remove(first as IntegerToIntegerOrderedMapIteratorMBS, last as IntegerToIntegerOrderedMapIteratorMBS) 12642
- 63.11.23 Remove(pos as IntegerToIntegerOrderedMapIteratorMBS) 12642

63.11.23 Remove(pos as IntegerToIntegerOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.11.21 Remove(first as IntegerToIntegerOrderedMapIteratorMBS, last as IntegerToIntegerOrderedMapIteratorMBS) 12642
- 63.11.22 Remove(key as Integer) as Integer 12642

63.11.24 UpperBound(key as Integer) as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

63.11.25 ValueAtIndex(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.11.26 Values as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new IntegerToIntegerOrderedMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

63.11.27 Properties

63.11.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new IntegerToIntegerOrderedMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)

63.11.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.11.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.11.31 value(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

63.12 class IntegerToStringHashMapIteratorMBS

63.12.1 class IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToStringHashMap class.
Example:

```
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.12.2 Methods

63.12.3 isEqual(other as IntegerToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.12.4 isNotEqual(other as IntegerToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.12.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.12.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.12.7 Properties

63.12.8 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

63.13 class IntegerToStringHashMapMBS

63.13.1 class IntegerToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with integers as keys and strings as values.
Example:

```
dim s as new IntegerToStringHashMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" "+s.Value(2) // shows "Hello World"
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

63.13.2 Methods

63.13.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.13.4 AddValues(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.13.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.13.6 Clone as IntegerToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

63.13.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

63.13.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 63.13.9 Constructor(dic as dictionary) 12649
- 63.13.10 Constructor(other as IntegerToStringHashMapMBS) 12650

63.13.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 63.13.8 Constructor 12649
- 63.13.10 Constructor(other as IntegerToStringHashMapMBS) 12650

63.13.10 Constructor(other as IntegerToStringHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 63.13.8 Constructor 12649
- 63.13.9 Constructor(dic as dictionary) 12649

63.13.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

63.13.12 find(key as Integer) as IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.13.13 first as IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
```

```
i.MoveNext
wend
```

63.13.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

63.13.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.13.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerToStringHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.13.17 last as IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.13.18 lookup(key as Integer, defaultvalue as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new IntegerToStringOrderedMapMBS

map.value(10)="Hello"
map.value(100)="World"
map.value(1000)="!"

MsgBox str(map.lookup(5,"?")) // shows "?" as value is missing
MsgBox str(map.lookup(10,"?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

63.13.19 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

63.13.20 Remove(first as IntegerToStringHashMapIteratorMBS, last as IntegerToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.13.21 Remove(key as Integer) as Integer 12653
- 63.13.22 Remove(pos as IntegerToStringHashMapIteratorMBS) 12653

63.13.21 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.13.20 Remove(first as IntegerToStringHashMapIteratorMBS, last as IntegerToStringHashMapIteratorMBS) 12653
- 63.13.22 Remove(pos as IntegerToStringHashMapIteratorMBS) 12653

63.13.22 Remove(pos as IntegerToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.13.20 Remove(first as IntegerToStringHashMapIteratorMBS, last as IntegerToStringHashMapIteratorMBS) 12653
- 63.13.21 Remove(key as Integer) as Integer 12653

63.13.23 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.13.24 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new IntegerToStringHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as string in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

63.13.25 Properties

63.13.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new IntegerToStringHashMapMBS

v.value(1)="Hello"
v.value(2)="World"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

63.13.27 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new IntegerToStringHashMapMBS

map.Value(1)="Hello"
map.Value(2)="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

63.13.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.13.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.13.30 value(key as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

63.14 class IntegerToStringOrderedMapIteratorMBS

63.14.1 class IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToStringOrderedMap class.
Example:

```
// Create a map
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.14.2 Methods

63.14.3 isEqual(other as IntegerToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.14.4 isNotEqual(other as IntegerToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.14.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.14.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.14.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

63.14.8 Properties

63.14.9 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

63.15 class IntegerToStringOrderedMapMBS

63.15.1 class IntegerToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with integer keys and string values.
Example:

```
dim s as new IntegerToStringOrderedMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" "+s.Value(2) // shows "Hello World"
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

63.15.2 Methods

63.15.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.15.4 AddValues(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.15.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.15.6 Clone as IntegerToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

63.15.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

63.15.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 63.15.9 Constructor(dic as dictionary) 12660
- 63.15.10 Constructor(other as IntegerToStringOrderedMapMBS) 12661

63.15.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 63.15.8 Constructor 12660
- 63.15.10 Constructor(other as IntegerToStringOrderedMapMBS) 12661

63.15.10 Constructor(other as IntegerToStringOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 63.15.8 Constructor 12660
- 63.15.9 Constructor(dic as dictionary) 12660

63.15.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

63.15.12 find(key as Integer) as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.15.13 first as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
```

```
i.MoveNext
wend
```

63.15.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

63.15.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.15.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerToStringOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.15.17 last as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.15.18 lookup(key as Integer, defaultvalue as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new IntegerToStringOrderedMapMBS

map.value(10)="Hello"
map.value(100)="World"
map.value(1000)="!"

MsgBox str(map.lookup(5,"?")) // shows "?" as value is missing
MsgBox str(map.lookup(10,"?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

63.15.19 LowerBound(key as Integer) as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

63.15.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

63.15.21 Remove(first as IntegerToStringOrderedMapIteratorMBS, last as IntegerToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.15.22 Remove(key as Integer) as Integer 12664
- 63.15.23 Remove(pos as IntegerToStringOrderedMapIteratorMBS) 12664

63.15.22 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.15.21 Remove(first as IntegerToStringOrderedMapIteratorMBS, last as IntegerToStringOrderedMapIteratorMBS) 12664
- 63.15.23 Remove(pos as IntegerToStringOrderedMapIteratorMBS) 12664

63.15.23 Remove(pos as IntegerToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.15.21 Remove(first as IntegerToStringOrderedMapIteratorMBS, last as IntegerToStringOrderedMapIteratorMBS) 12664
- 63.15.22 Remove(key as Integer) as Integer 12664

63.15.24 UpperBound(key as Integer) as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

63.15.25 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.15.26 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new IntegerToStringOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as string in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

63.15.27 Properties

63.15.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new IntegerToStringOrderedMapMBS

map.Value(1)="Hello"
map.Value(2)="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

63.15.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.15.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.15.31 value(key as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

63.16 class IntegerToVariantHashMapIteratorMBS

63.16.1 class IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToVariantHashMap class.
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.16.2 Methods

63.16.3 isEqual(other as IntegerToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.16.4 isNotEqual(other as IntegerToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.16.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.16.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.16.7 Properties

63.16.8 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

63.17 class IntegerToVariantHashMapMBS

63.17.1 class IntegerToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with integers as keys and variants as values.
Example:

```
dim s as new IntegerToVariantHashMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" "+s.Value(2) // shows "Hello World"
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

63.17.2 Methods

63.17.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.17.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.17.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.17.6 Clone as IntegerToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

63.17.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

63.17.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 63.17.9 Constructor(dic as dictionary) 12671
- 63.17.10 Constructor(other as IntegerToVariantHashMapMBS) 12672

63.17.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 63.17.8 Constructor 12671
- 63.17.10 Constructor(other as IntegerToVariantHashMapMBS) 12672

63.17.10 Constructor(other as IntegerToVariantHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 63.17.8 Constructor 12671
- 63.17.9 Constructor(dic as dictionary) 12671

63.17.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

63.17.12 find(key as Integer) as IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.17.13 first as IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
```

```
i.MoveNext
wend
```

63.17.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

63.17.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.17.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.17.17 last as IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.17.18 lookup(key as Integer, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new IntegerToVariantHashMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

63.17.19 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

63.17.20 Remove(first as IntegerToVariantHashMapIteratorMBS, last as IntegerToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.17.21 Remove(key as Integer) as Integer 12675
- 63.17.22 Remove(pos as IntegerToVariantHashMapIteratorMBS) 12675

63.17.21 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.17.20 Remove(first as IntegerToVariantHashMapIteratorMBS, last as IntegerToVariantHashMapIteratorMBS) 12675
- 63.17.22 Remove(pos as IntegerToVariantHashMapIteratorMBS) 12675

63.17.22 Remove(pos as IntegerToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.17.20 Remove(first as IntegerToVariantHashMapIteratorMBS, last as IntegerToVariantHashMapIteratorMBS) 12675
- 63.17.21 Remove(key as Integer) as Integer 12675

63.17.23 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.17.24 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

63.17.25 Properties

63.17.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new IntegerToVariantHashMapMBS

v.value(1)="Hello"
v.value(2)="World"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

63.17.27 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new IntegerToVariantHashMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)

63.17.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.17.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.17.30 value(key as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

63.18 class IntegerToVariantOrderedMapIteratorMBS

63.18.1 class IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToVariantOrderedMap class.
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.18.2 Methods

63.18.3 isEqual(other as IntegerToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.18.4 isNotEqual(other as IntegerToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.18.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.18.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.18.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

63.18.8 Properties

63.18.9 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

63.19 class IntegerToVariantOrderedMapMBS

63.19.1 class IntegerToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with integers as keys and variants as values.
Example:

```
dim s as new IntegerToVariantOrderedMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" "+s.Value(2) // shows "Hello World"
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

63.19.2 Methods

63.19.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.19.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.19.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.19.6 Clone as IntegerToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

63.19.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

63.19.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 63.19.9 Constructor(dic as dictionary) 12682
- 63.19.10 Constructor(other as IntegerToVariantOrderedMapMBS) 12683

63.19.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 63.19.8 Constructor 12682
- 63.19.10 Constructor(other as IntegerToVariantOrderedMapMBS) 12683

63.19.10 Constructor(other as IntegerToVariantOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 63.19.8 Constructor 12682
- 63.19.9 Constructor(dic as dictionary) 12682

63.19.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

63.19.12 find(key as Integer) as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.19.13 first as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
```

```
i.MoveNext
wend
```

63.19.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

63.19.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.19.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.19.17 last as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.19.18 lookup(key as Integer, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new IntegerToVariantOrderedMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

63.19.19 LowerBound(key as Integer) as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

63.19.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

63.19.21 Remove(first as IntegerToVariantOrderedMapIteratorMBS, last as IntegerToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.19.22 Remove(key as Integer) as Integer 12686
- 63.19.23 Remove(pos as IntegerToVariantOrderedMapIteratorMBS) 12686

63.19.22 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.19.21 Remove(first as IntegerToVariantOrderedMapIteratorMBS, last as IntegerToVariantOrderedMapIteratorMBS) 12686
- 63.19.23 Remove(pos as IntegerToVariantOrderedMapIteratorMBS) 12686

63.19.23 Remove(pos as IntegerToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.19.21 Remove(first as IntegerToVariantOrderedMapIteratorMBS, last as IntegerToVariantOrderedMapIteratorMBS) 12686
- 63.19.22 Remove(key as Integer) as Integer 12686

63.19.24 UpperBound(key as Integer) as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

63.19.25 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.19.26 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

63.19.27 Properties

63.19.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new IntegerToVariantOrderedMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)

63.19.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.19.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.19.31 value(key as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

63.20 class StackDoubleMBS

63.20.1 class StackDoubleMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of doubles.
Example:

```
dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.Top)
```

63.20.2 Methods

63.20.3 Bottom as Double

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.Bottom)
```

63.20.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
dim s as new StackDoubleMBS

call s.Push 5

s.Clear

if s.IsEmpty then
MsgBox "OK"
end if
```

63.20.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

63.20.6 Contains(o as Double) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the items on the stack is equal to the given double value.
Example:

```
dim s as new StackDoubleMBS

call s.Push 5

if s.Contains(5) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

63.20.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
dim s as new StackDoubleMBS

MsgBox str(s.Deep)

call s.Push 5

MsgBox str(s.Deep)
```

63.20.8 Pop as Double

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.pop)
```

Notes: Returns 0 on any error.

63.20.9 PopBottom as Double

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.PopBottom)
```

63.20.10 Push(o as Double) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
dim s as new StackDoubleMBS

call s.Push 5
```

Notes:

Returns true if successfull.
May fail on low memory.

63.20.11 Top as Double

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.Top)
```

Notes: Returns 0 on any error.

63.20.12 Properties

63.20.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
dim s as new StackDoubleMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

63.21 class StackIntegerMBS

63.21.1 class StackIntegerMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of integers.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(S.Top)
```

63.21.2 Methods

63.21.3 Bottom as Integer

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(s.Bottom)
```

63.21.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

s.Clear
```

```
if s.IsEmpty then
MsgBox "OK"
end if
```

63.21.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

63.21.6 Contains(o as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the items on the stack is equal to the given integer value.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

if s.Contains(5) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

63.21.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
dim s as new StackIntegerMBS

MsgBox str(s.Deep)

call s.Push 5
```

MsgBox str(s.Deep)

63.21.8 Pop as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(s.pop)
```

Notes: Returns 0 on any error.

63.21.9 PopBottom as Integer

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(s.PopBottom)
```

63.21.10 Push(o as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
dim s as new StackIntegerMBS
call s.Push 5
```

Notes:

Returns true if successfull.
May fail on low memory.

63.21.11 Top as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(S.Top)
```

Notes: Returns 0 on any error.

63.21.12 Properties

63.21.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
dim s as new StackIntegerMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

63.22 class StackObjectMBS

63.22.1 class StackObjectMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of objects.
Example:

```
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.top).title
```

63.22.2 Methods

63.22.3 Bottom as object

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.Bottom).title
```

63.22.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
dim s as new StackObjectMBS

call s.Push window1

s.Clear

if s.IsEmpty then
MsgBox "OK"
end if
```

63.22.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

63.22.6 Contains(o as object) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the object references on the stack is equal to the given object reference.
Example:

```
dim s as new StackObjectMBS

call s.Push window1

if s.Contains(window1) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

63.22.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
dim s as new StackObjectMBS

MsgBox str(s.Deep)

call s.Push window1

MsgBox str(s.Deep)
```

63.22.8 Pop as object

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.pop).title
```

Notes: Returns nil on any error.

63.22.9 PopBottom as object

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.PopBottom).title
```

63.22.10 Push(o as object) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
dim s as new StackObjectMBS
call s.Push window1
```

Notes:

Returns true if successfull.
May fail on low memory.
Does not push nil.

63.22.11 Top as object

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.top).title
```

Notes: Returns nil on any error.

63.22.12 Properties

63.22.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
dim s as new StackObjectMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push window1

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

63.23 class StackSingleMBS

63.23.1 class StackSingleMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of singles.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(S.Top)
```

63.23.2 Methods

63.23.3 Bottom as single

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(s.Bottom)
```

63.23.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

s.Clear
```

```
if s.IsEmpty then
MsgBox "OK"
end if
```

63.23.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

63.23.6 Contains(o as single) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the items on the stack is equal to the given single value.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

if s.Contains(5) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

63.23.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
dim s as new StackSingleMBS

MsgBox str(s.Deep)

call s.Push 5
```

```
MsgBox str(s.Deep)
```

63.23.8 Pop as single

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(s.Pop)
```

Notes: Returns 0 on any error.

63.23.9 PopBottom as single

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(S.PopBottom)
```

63.23.10 Push(o as single) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
dim s as new StackSingleMBS
call s.Push 5
```

Notes:

Returns true if successfull.
May fail on low memory.

63.23.11 Top as single

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(S.Top)
```

Notes: Returns 0 on any error.

63.23.12 Properties

63.23.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
dim s as new StackSingleMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

63.24 class StackStringMBS

63.24.1 class StackStringMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of strings.
Example:

```
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.pop
```

63.24.2 Methods

63.24.3 Bottom as string

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.bottom
```

63.24.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
dim s as new StackStringMBS

call s.Push "abc"

s.Clear

if s.IsEmpty then
MsgBox "OK"
end if
```

63.24.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

63.24.6 Contains(o as string) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the string references on the stack is equal to the given double reference.
Example:

```
dim s as new StackStringMBS

call s.Push "Hello"

if s.Contains("Hello") then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

63.24.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
dim s as new StackStringMBS

MsgBox str(s.Deep)

call s.Push "Hello"

MsgBox str(s.Deep)
```

63.24.8 Pop as string

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.pop
```

Notes: Returns "" on any error.

63.24.9 PopBottom as string

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.PopBottom
```

63.24.10 Push(o as string) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
dim s as new StackStringMBS
call s.Push "Hello"
```

Notes:

Returns true if successfull.
May fail on low memory.

63.24.11 Top as string

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.Top
```

Notes: Returns "" on any error.

63.24.12 Properties

63.24.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
dim s as new StackStringMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push "Hello"

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

63.25 class StackVariantMBS

63.25.1 class StackVariantMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of variants.
Example:

```
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.PopBottom
```

63.25.2 Methods

63.25.3 Bottom as Variant

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.Bottom
```

63.25.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
dim s as new StackVariantMBS

call s.Push 5

s.Clear
```

```
if s.IsEmpty then
MsgBox "OK"
end if
```

63.25.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

63.25.6 Contains(o as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the variant references on the stack is equal to the given variant reference.
Example:

```
dim s as new StackObjectMBS

call s.Push window1

if s.Contains(window1) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

63.25.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
dim s as new StackVariantMBS

MsgBox str(s.Deep)

call s.Push window1
```

MsgBox str(s.Deep)

63.25.8 Pop as Variant

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.pop
```

Notes: Returns nil on any error.

63.25.9 PopBottom as Variant

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.PopBottom
```

63.25.10 Push(o as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
dim s as new StackVariantMBS
call s.Push 5
```

Notes:

Returns true if successfull.
May fail on low memory.

63.25.11 Top as Variant

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.top
```

Notes: Returns nil on any error.

63.25.12 Properties

63.25.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
dim s as new StackVariantMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

63.26 class StringHashSetIteratorMBS

63.26.1 class StringHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringHashSet class.
Example:

```
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.26.2 Methods

63.26.3 isEqual(other as StringHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend
```

63.26.4 isNotEqual(other as StringHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.26.5 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.26.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.27 class StringHashSetMBS

63.27.1 class StringHashSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash set with strings.
Example:

```
dim s as new StringHashSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2
```

Notes:

All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

63.27.2 Methods

63.27.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.27.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 63.27.5 Constructor(Keys() as string) 12720

63.27.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Example:

```
dim s() as string = array("Hello", "World", "test")

dim set as new StringHashSetMBS(s)

MsgBox str(set.Count)+" entries: "+Join(set.keys,", ")
```

Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 63.27.4 Constructor(CaseSensitive as Boolean = true) 12719

63.27.6 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

63.27.7 find(key as string) as StringHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.27.8 first as StringHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
```

```
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.27.9 insert(key as string)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

63.27.10 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.27.11 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")

for each v as string in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.27.12 last as StringHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.27.13 lookup(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
dim set as new StringHashSetMBS

set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

Notes: Returns true if yes and false if no.

63.27.14 Remove(first as StringHashSetIteratorMBS, last as StringHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.27.15 Remove(key as string) as Integer 12723
- 63.27.16 Remove(pos as StringHashSetIteratorMBS) 12723

63.27.15 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.27.14 Remove(first as StringHashSetIteratorMBS, last as StringHashSetIteratorMBS) 12723
- 63.27.16 Remove(pos as StringHashSetIteratorMBS) 12723

63.27.16 Remove(pos as StringHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.27.14 Remove(first as StringHashSetIteratorMBS, last as StringHashSetIteratorMBS) 12723
- 63.27.15 Remove(key as string) as Integer 12723

63.27.17 Properties

63.27.18 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new StringHashSetMBS

v.insert "1"
v.insert "Hello"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

63.27.19 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new StringHashSetMBS(true)
dim s2 as new StringHashSetMBS(false)

s1.insert "a"
s1.insert "A"

s2.insert "a"
s2.insert "A"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

63.27.20 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
dim set as new StringHashSetMBS

set.insert "a"
set.insert "b"
```

MsgBox str(set.Count)

Notes: (Read only property)

63.27.21 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.27.22 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.28 class StringOrderedSetIteratorMBS

63.28.1 class StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringOrderedSet class.
Example:

```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.28.2 Methods

63.28.3 isEqual(other as StringOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend
```

63.28.4 isNotEqual(other as StringOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.28.5 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.28.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.28.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

63.29 class StringOrderedSetMBS

63.29.1 class StringOrderedSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered set of strings.
Example:

```
dim s as new StringOrderedSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2
```

Notes:

All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

63.29.2 Methods

63.29.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.29.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 63.29.5 Constructor(Keys() as string) 12730

63.29.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Example:

```
dim s() as string = array("Hello", "World", "test")

dim set as new StringOrderedSetMBS(s)

MsgBox str(set.Count)+" entries: "+Join(set.keys,", ")
```

Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 63.29.4 Constructor(CaseSensitive as Boolean = true) 12729

63.29.6 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

63.29.7 find(key as string) as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.29.8 first as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
```

```
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.29.9 insert(key as string)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

63.29.10 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.29.11 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")

for each v as string in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.29.12 last as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.29.13 lookup(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
dim set as new StringOrderedSetMBS

set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

Notes: Returns true if yes and false if no.

63.29.14 LowerBound(key as string) as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

63.29.15 Remove(first as StringOrderedSetIteratorMBS, last as StringOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.29.16 Remove(key as string) as Integer 12733
- 63.29.17 Remove(pos as StringOrderedSetIteratorMBS) 12733

63.29.16 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.29.15 Remove(first as StringOrderedSetIteratorMBS, last as StringOrderedSetIteratorMBS) 12733
- 63.29.17 Remove(pos as StringOrderedSetIteratorMBS) 12733

63.29.17 Remove(pos as StringOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.29.15 Remove(first as StringOrderedSetIteratorMBS, last as StringOrderedSetIteratorMBS) 12733
- 63.29.16 Remove(key as string) as Integer 12733

63.29.18 UpperBound(key as string) as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

63.29.19 Properties

63.29.20 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new StringOrderedSetMBS(true)
dim s2 as new StringOrderedSetMBS(false)

s1.insert "a"
s1.insert "A"

s2.insert "a"
s2.insert "A"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

63.29.21 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
dim set as new StringOrderedSetMBS

set.insert "a"
set.insert "b"

MsgBox str(set.Count)
```

Notes: (Read only property)

63.29.22 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.29.23 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.30 class StringToStringHashMapIteratorMBS

63.30.1 class StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringToStringHashMap class.
Example:

```
// Create a map
dim m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.30.4 Methods

63.30.5 isEqual(other as StringToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.30.6 isNotEqual(other as StringToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.30.7 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.30.8 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.30.9 Properties

63.30.10 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

63.31 class StringToStringHashMapMBS

63.31.1 class StringToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with strings as keys and values.
Example:

```
dim s as new StringToStringHashMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes:

All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

63.31.4 Methods

63.31.5 AddKeys(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys

function returns always nil.

63.31.6 AddValues(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.31.7 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.31.8 Clone as StringToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

63.31.9 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.
Example:

```
dim d as new Dictionary
d.Value("Hello") = "World"

// convert o map
dim m as new StringToStringHashMapMBS(d)
MsgBox str(m.Count)

// convert back
dim o as Dictionary = m.CloneDictionary
MsgBox o.Value("Hello")
```

63.31.10 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 63.31.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 12741
- 63.31.12 Constructor(other as StringToStringHashMapMBS) 12741

63.31.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
Example:

```
dim d as new Dictionary
d.Value("Hello") = "World"

// convert o map
dim m as new StringToStringHashMapMBS(d)
MsgBox str(m.Count)

// convert back
dim o as Dictionary = m.CloneDictionary
MsgBox o.Value("Hello")
```

See also:

- 63.31.10 Constructor(CaseSensitive as Boolean = true) 12741
- 63.31.12 Constructor(other as StringToStringHashMapMBS) 12741

63.31.12 Constructor(other as StringToStringHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
Example:

```
dim d as new Dictionary
d.Value("Hello") = "World"
```

```
// convert o map
dim m as new StringToStringHashMapMBS(d)
MsgBox str(m.Count)

// convert back
dim o as StringToStringHashMapMBS = m.Clone
MsgBox o.Value("Hello")
```

See also:

- 63.31.10 Constructor(CaseSensitive as Boolean = true) 12741
- 63.31.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 12741

63.31.13 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

63.31.14 find(key as string) as StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.31.15 first as StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
```

```
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.31.16 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

63.31.17 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.31.18 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new StringToStringHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.31.19 last as StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.31.20 lookup(key as string, defaultvalue as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new StringToStringHashMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

63.31.21 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.
Example:

```
dim d as new Dictionary
d.Value("Hello") = "World"

// convert o map
dim m as StringToStringHashMapMBS = d
MsgBox str(m.Count)

// convert back
dim o as Dictionary = m
MsgBox o.Value("Hello")
```

63.31.22 Remove(first as StringToStringHashMapIteratorMBS, last as StringToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.31.23 Remove(key as string) as Integer 12745
- 63.31.24 Remove(pos as StringToStringHashMapIteratorMBS) 12745

63.31.23 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.31.22 Remove(first as StringToStringHashMapIteratorMBS, last as StringToStringHashMapIteratorMBS) 12745
- 63.31.24 Remove(pos as StringToStringHashMapIteratorMBS) 12745

63.31.24 Remove(pos as StringToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.31.22 Remove(first as StringToStringHashMapIteratorMBS, last as StringToStringHashMapIteratorMBS) 12745
- 63.31.23 Remove(key as string) as Integer 12745

63.31.25 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.31.26 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new StringToStringHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

63.31.27 Properties

63.31.28 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new StringToStringHashMapMBS

v.value("1")="Hello"
v.value("2")="World"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

63.31.29 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new StringToStringHashMapMBS(true)
dim s2 as new StringToStringHashMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

63.31.30 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new StringToStringHashMapMBS

map.Value("?")="?"
map.Value("Hello")="World"
```

MsgBox str(map.Count)

Notes: (Read only property)

63.31.31 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.31.32 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.31.33 value(key as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

63.32 class StringToStringOrderedMapIteratorMBS

63.32.1 class StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringToStringOrderedMap class.
Example:

```
// Create a map
dim m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.32.2 Blog Entries

63.32.3 Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

63.32.4 Methods

63.32.5 isEqual(other as StringToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.32.6 isNotEqual(other as StringToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.32.7 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.32.8 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.32.9 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

63.32.10 Properties

63.32.11 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

63.33 class StringToStringOrderedMapMBS

63.33.1 class StringToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with strings for keys and values.
Example:

```
dim s as new StringToStringOrderedMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes:

All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

63.33.4 Methods

63.33.5 AddKeys(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys

function returns always nil.

63.33.6 AddValues(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.33.7 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.33.8 Clone as StringToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

63.33.9 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

63.33.10 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 63.33.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 12755
- 63.33.12 Constructor(other as StringToStringOrderedMapMBS) 12755

63.33.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 63.33.10 Constructor(CaseSensitive as Boolean = true) 12754
- 63.33.12 Constructor(other as StringToStringOrderedMapMBS) 12755

63.33.12 Constructor(other as StringToStringOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 63.33.10 Constructor(CaseSensitive as Boolean = true) 12754
- 63.33.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 12755

63.33.13 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

63.33.14 find(key as string) as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.33.15 first as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new StringToStringOrderedMapMBS
```

```
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.33.16 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

63.33.17 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.33.18 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new StringToStringOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
```

```
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.33.19 last as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.33.20 lookup(key as string, defaultvalue as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new StringToStringOrderedMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"
```

```
MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

63.33.21 LowerBound(key as string) as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

63.33.22 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

63.33.23 Remove(first as StringToStringOrderedMapIteratorMBS, last as StringToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.33.24 Remove(key as string) as Integer 12758
- 63.33.25 Remove(pos as StringToStringOrderedMapIteratorMBS) 12759

63.33.24 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.33.23 Remove(first as StringToStringOrderedMapIteratorMBS, last as StringToStringOrderedMapIteratorMBS) 12758
- 63.33.25 Remove(pos as StringToStringOrderedMapIteratorMBS) 12759

63.33.25 Remove(pos as StringToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.33.23 Remove(first as StringToStringOrderedMapIteratorMBS, last as StringToStringOrderedMapIteratorMBS) 12758
- 63.33.24 Remove(key as string) as Integer 12758

63.33.26 UpperBound(key as string) as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

63.33.27 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.33.28 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new StringToStringOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

63.33.29 Properties

63.33.30 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new StringToStringOrderedMapMBS(true)
dim s2 as new StringToStringOrderedMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

63.33.31 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new StringToStringOrderedMapMBS

map.Value("?")="?"
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

63.33.32 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.33.33 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.33.34 value(key as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

63.34 class StringToVariantHashMapIteratorMBS

63.34.1 class StringToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringToVariantHashMap class.
Example:

```
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.34.2 Blog Entries

63.34.4 Methods

63.34.5 isEqual(other as StringToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.34.6 isNotEqual(other as StringToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.34.7 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.34.8 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.34.9 Properties

63.34.10 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

63.35 class StringToVariantHashMapMBS

63.35.1 class StringToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with strings as keys and variants as values.
Example:

```
dim s as new StringToVariantHashMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes:

All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

63.35.4 Methods

63.35.5 AddKeys(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.35.6 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.35.7 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.35.8 Clone as StringToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

63.35.9 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

63.35.10 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 63.35.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

- 63.35.12 Constructor(other as StringToVariantHashMapMBS) 12767

63.35.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 63.35.10 Constructor(CaseSensitive as Boolean = true) 12766
- 63.35.12 Constructor(other as StringToVariantHashMapMBS) 12767

63.35.12 Constructor(other as StringToVariantHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 63.35.10 Constructor(CaseSensitive as Boolean = true) 12766
- 63.35.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 12767

63.35.13 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

63.35.14 find(key as string) as StringToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.35.15 first as StringToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.35.16 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

63.35.17 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Example:

```
dim v as new StringToVariantHashMapMBS
v.Value("Hello") = "World"
MsgBox v.Key(0)+": "+v.ValueAtIndex(0)
```

Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.35.18 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new StringToVariantHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.35.19 last as StringToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.35.20 lookup(key as string, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new StringToVariantHashMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

63.35.21 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

63.35.22 Remove(first as StringToVariantHashMapIteratorMBS, last as StringToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.35.23 Remove(key as string) as Integer 12770
- 63.35.24 Remove(pos as StringToVariantHashMapIteratorMBS) 12771

63.35.23 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.35.22 Remove(first as StringToVariantHashMapIteratorMBS, last as StringToVariantHashMapIteratorMBS) 12770
- 63.35.24 Remove(pos as StringToVariantHashMapIteratorMBS) 12771

63.35.24 Remove(pos as StringToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.35.22 Remove(first as StringToVariantHashMapIteratorMBS, last as StringToVariantHashMapIteratorMBS) 12770
- 63.35.23 Remove(key as string) as Integer 12770

63.35.25 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Example:

```
dim v as new StringToVariantHashMapMBS
v.Value("Hello") = "World"
MsgBox v.Key(0)+": "+v.ValueAtIndex(0)
```

Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.35.26 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new StringToVariantHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

63.35.27 Properties

63.35.28 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new StringToVariantHashMapMBS

v.value("1")="Hello"
v.value("2")="World"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

63.35.29 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new StringToVariantHashMapMBS(true)
dim s2 as new StringToVariantHashMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

63.35.30 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new StringToVariantHashMapMBS

map.Value("?")="?"
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

63.35.31 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.35.32 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.35.33 value(key as string) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Example:

```
dim v as new StringToVariantHashMapMBS
v.Value("Hello") = "World"
MsgBox v.Key(0)+": "+v.ValueAtIndex(0)
```

Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

63.36 class StringToVariantOrderedMapIteratorMBS

63.36.1 class StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringToVariantOrderedMap class.
Example:

```
// Create a map
dim m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.36.4 Methods

63.36.5 isEqual(other as StringToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.36.6 isNotEqual(other as StringToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.36.7 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.36.8 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.36.9 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

63.36.10 Properties

63.36.11 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

63.37 class StringToVariantOrderedMapMBS

63.37.1 class StringToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with strings as keys and variants as values.
Example:

```
dim s as new StringToVariantOrderedMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes:

All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

63.37.4 Methods

63.37.5 AddKeys(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys

function returns always nil.

63.37.6 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.37.7 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.37.8 Clone as StringToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

63.37.9 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

63.37.10 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 63.37.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 12781
- 63.37.12 Constructor(other as StringToVariantOrderedMapMBS) 12781

63.37.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 63.37.10 Constructor(CaseSensitive as Boolean = true) 12780
- 63.37.12 Constructor(other as StringToVariantOrderedMapMBS) 12781

63.37.12 Constructor(other as StringToVariantOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 63.37.10 Constructor(CaseSensitive as Boolean = true) 12780
- 63.37.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 12781

63.37.13 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

63.37.14 find(key as string) as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.37.15 first as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new StringToVariantOrderedMapMBS
```

```
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.37.16 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

63.37.17 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.37.18 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new StringToVariantOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
```

```
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.37.19 last as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

63.37.20 lookup(key as string, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new StringToVariantOrderedMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"
```

```
MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

63.37.21 LowerBound(key as string) as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

63.37.22 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

63.37.23 Remove(first as StringToVariantOrderedMapIteratorMBS, last as StringToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.37.24 Remove(key as string) as Integer 12784
- 63.37.25 Remove(pos as StringToVariantOrderedMapIteratorMBS) 12785

63.37.24 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.37.23 Remove(first as StringToVariantOrderedMapIteratorMBS, last as StringToVariantOrderedMapIteratorMBS) 12784
- 63.37.25 Remove(pos as StringToVariantOrderedMapIteratorMBS) 12785

63.37.25 Remove(pos as StringToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.37.23 Remove(first as StringToVariantOrderedMapIteratorMBS, last as StringToVariantOrderedMapIteratorMBS) 12784
- 63.37.24 Remove(key as string) as Integer 12784

63.37.26 UpperBound(key as string) as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

63.37.27 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.37.28 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new StringToVariantOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

63.37.29 Properties

63.37.30 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new StringToVariantOrderedMapMBS(true)
dim s2 as new StringToVariantOrderedMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

63.37.31 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new StringToVariantOrderedMapMBS

map.Value("?")="?"
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

63.37.32 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.37.33 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.37.34 value(key as string) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

63.38 class VariantHashSetIteratorMBS

63.38.1 class VariantHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the VariantHashSet class.
Example:

```
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.38.2 Methods

63.38.3 isEqual(other as VariantHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend
```

63.38.4 isNotEqual(other as VariantHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.38.5 Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.38.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.39 class VariantHashSetMBS

63.39.1 class VariantHashSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash set with variants.
Example:

```
dim s as new VariantHashSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2

s.insert ConvertEncoding("test",encodings.UTF16)
s.insert ConvertEncoding("Test",encodings.UTF16)

MsgBox str(s.Count) // shows 4
```

Notes:

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

63.39.2 Methods

63.39.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.39.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.

See also:

- 63.39.5 Constructor(Keys() as string) 12792
- 63.39.6 Constructor(Keys() as Variant) 12792

63.39.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 63.39.4 Constructor(CaseSensitive as Boolean = true) 12791
- 63.39.6 Constructor(Keys() as Variant) 12792

63.39.6 Constructor(Keys() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 63.39.4 Constructor(CaseSensitive as Boolean = true) 12791
- 63.39.5 Constructor(Keys() as string) 12792

63.39.7 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

63.39.8 find(key as Variant) as VariantHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.39.9 first as VariantHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.39.10 insert(key as Variant)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

63.39.11 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.39.12 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new VariantHashSetMBS

m.insert("1")
m.insert("2")

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.39.13 last as VariantHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.39.14 lookup(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
dim set as new VariantHashSetMBS

set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

Notes: Returns true if yes and false if no.

63.39.15 Remove(first as VariantHashSetIteratorMBS, last as VariantHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.39.16 Remove(key as Variant) as Integer 12795
- 63.39.17 Remove(pos as VariantHashSetIteratorMBS) 12795

63.39.16 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.39.15 Remove(first as VariantHashSetIteratorMBS, last as VariantHashSetIteratorMBS) 12795
- 63.39.17 Remove(pos as VariantHashSetIteratorMBS) 12795

63.39.17 Remove(pos as VariantHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.39.15 Remove(first as VariantHashSetIteratorMBS, last as VariantHashSetIteratorMBS) 12795

- 63.39.16 Remove(key as Variant) as Integer 12795

63.39.18 Properties

63.39.19 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new VariantHashSetMBS

v.insert "1"
v.insert "Hello"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

63.39.20 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new VariantHashSetMBS(true)
dim s2 as new VariantHashSetMBS(false)

s1.insert("a")
s1.insert("A")

s2.insert("a")
s2.insert("A")

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

63.39.21 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
dim set as new VariantHashSetMBS

set.insert 1
set.insert 2

MsgBox str(set.Count)
```

Notes: (Read only property)

63.39.22 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.39.23 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.40 class VariantOrderedSetIteratorMBS

63.40.1 class VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the VariantOrderedSet class.
Example:

```
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.40.2 Methods

63.40.3 isEqual(other as VariantOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend
```

63.40.4 isNotEqual(other as VariantOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.40.5 Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.40.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.40.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

63.41 class VariantOrderedSetMBS

63.41.1 class VariantOrderedSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered set with variants.
Example:

```
dim s as new VariantOrderedSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2

s.insert ConvertEncoding("test",encodings.UTF16)
s.insert ConvertEncoding("Test",encodings.UTF16)

MsgBox str(s.Count) // shows 4
```

Notes:

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

63.41.2 Methods

63.41.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.41.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.

See also:

- 63.41.5 Constructor(Keys() as string) 12802
- 63.41.6 Constructor(Keys() as Variant) 12802

63.41.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 63.41.4 Constructor(CaseSensitive as Boolean = true) 12801
- 63.41.6 Constructor(Keys() as Variant) 12802

63.41.6 Constructor(Keys() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 63.41.4 Constructor(CaseSensitive as Boolean = true) 12801
- 63.41.5 Constructor(Keys() as string) 12802

63.41.7 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

63.41.8 find(key as Variant) as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.41.9 first as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.41.10 insert(key as Variant)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

63.41.11 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.41.12 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new VariantOrderedSetMBS

m.insert("1")
m.insert("2")

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.41.13 last as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

63.41.14 lookup(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
dim set as new VariantOrderedSetMBS

set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

Notes: Returns true if yes and false if no.

63.41.15 LowerBound(key as Variant) as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

63.41.16 Remove(first as VariantOrderedSetIteratorMBS, last as VariantOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.41.17 Remove(key as Variant) as Integer 12805
- 63.41.18 Remove(pos as VariantOrderedSetIteratorMBS) 12806

63.41.17 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.41.16 Remove(first as VariantOrderedSetIteratorMBS, last as VariantOrderedSetIteratorMBS) 12805
- 63.41.18 Remove(pos as VariantOrderedSetIteratorMBS) 12806

63.41.18 Remove(pos as VariantOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.41.16 Remove(first as VariantOrderedSetIteratorMBS, last as VariantOrderedSetIteratorMBS) 12805
- 63.41.17 Remove(key as Variant) as Integer 12805

63.41.19 UpperBound(key as Variant) as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

63.41.20 Properties

63.41.21 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new VariantOrderedSetMBS(true)
dim s2 as new VariantOrderedSetMBS(false)

s1.insert("a")
s1.insert("A")

s2.insert("a")
s2.insert("A")

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

63.41.22 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
dim set as new VariantOrderedSetMBS

set.insert 1
set.insert 2

MsgBox str(set.Count)
```

Notes: (Read only property)

63.41.23 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.41.24 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.42 class VariantToVariantHashMapIteratorMBS

63.42.1 class VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the VariantToVariantHashMap class.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.42.3 Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

63.42.4 Methods

63.42.5 isEqual(other as VariantToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.42.6 isNotEqual(other as VariantToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.42.7 Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.42.8 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.42.9 Properties

63.42.10 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

63.43 class VariantToVariantHashMapMBS

63.43.1 class VariantToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an hash map with variants and keys and values.
Example:

```
dim s as new VariantToVariantHashMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes:

Think of this class like the reimplementation for dictionary class with being case sensitive.

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

63.43.4 Methods

63.43.5 AddKeys(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.43.6 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.43.7 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.43.8 Clone as VariantToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

63.43.9 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

63.43.10 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 63.43.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 12813
- 63.43.12 Constructor(other as VariantToVariantHashMapMBS) 12813

63.43.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 63.43.10 Constructor(CaseSensitive as Boolean = true) 12812
- 63.43.12 Constructor(other as VariantToVariantHashMapMBS) 12813

63.43.12 Constructor(other as VariantToVariantHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 63.43.10 Constructor(CaseSensitive as Boolean = true) 12812
- 63.43.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 12813

63.43.13 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

63.43.14 find(key as Variant) as VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.43.15 first as VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.43.16 hasKey(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

63.43.17 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.43.18 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.43.19 last as VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.43.20 lookup(key as Variant, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new VariantToVariantHashMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

63.43.21 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

63.43.22 Remove(first as VariantToVariantHashMapIteratorMBS, last as VariantToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.43.23 Remove(key as Variant) as Integer 12816
- 63.43.24 Remove(pos as VariantToVariantHashMapIteratorMBS) 12817

63.43.23 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.43.22 Remove(first as VariantToVariantHashMapIteratorMBS, last as VariantToVariantHashMapIteratorMBS) 12816
- 63.43.24 Remove(pos as VariantToVariantHashMapIteratorMBS) 12817

63.43.24 Remove(pos as VariantToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.43.22 Remove(first as VariantToVariantHashMapIteratorMBS, last as VariantToVariantHashMapIteratorMBS) 12816
- 63.43.23 Remove(key as Variant) as Integer 12816

63.43.25 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.43.26 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

63.43.27 Properties

63.43.28 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new VariantToVariantHashMapMBS

v.value(1)="Hello"
v.value(2)="World"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

63.43.29 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new VariantToVariantHashMapMBS(true)
dim s2 as new VariantToVariantHashMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

63.43.30 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new VariantToVariantHashMapMBS

map.Value(1)=true
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

63.43.31 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.43.32 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.43.33 value(key as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

63.44 class VariantToVariantMapIteratorMBS

63.44.1 class VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the VariantToVariantMap class.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.44.2 Methods

63.44.3 isEqual(other as VariantToVariantMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.44.4 isNotEqual(other as VariantToVariantMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.44.5 Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

63.44.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.44.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

63.44.8 Properties

63.44.9 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

63.45 class VariantToVariantOrderedMapMBS

63.45.1 class VariantToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with variants as keys and values.
Example:

```
dim s as new VariantToVariantOrderedMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes:

Think of this class like the reimplementation for dictionary class with being case sensitive and with storing items ordered.

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

63.45.2 Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

63.45.3 Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

63.45.4 Methods

63.45.5 AddKeys(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.45.6 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

63.45.7 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

63.45.8 Clone as VariantToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

63.45.9 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

63.45.10 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 63.45.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 12825
- 63.45.12 Constructor(other as VariantToVariantOrderedMapMBS) 12825

63.45.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 63.45.10 Constructor(CaseSensitive as Boolean = true) 12824
- 63.45.12 Constructor(other as VariantToVariantOrderedMapMBS) 12825

63.45.12 Constructor(other as VariantToVariantOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 63.45.10 Constructor(CaseSensitive as Boolean = true) 12824
- 63.45.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 12825

63.45.13 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

63.45.14 find(key as Variant) as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

63.45.15 first as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.45.16 hasKey(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

63.45.17 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.45.18 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

63.45.19 last as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

63.45.20 lookup(key as Variant, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new VariantToVariantOrderedMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

63.45.21 LowerBound(key as Variant) as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

63.45.22 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

63.45.23 Remove(first as VariantToVariantMapIteratorMBS, last as VariantToVariantMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 63.45.24 Remove(key as Variant) as Integer 12829
- 63.45.25 Remove(pos as VariantToVariantMapIteratorMBS) 12829

63.45.24 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 63.45.23 Remove(first as VariantToVariantMapIteratorMBS, last as VariantToVariantMapIteratorMBS) 12828
- 63.45.25 Remove(pos as VariantToVariantMapIteratorMBS) 12829

63.45.25 Remove(pos as VariantToVariantMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 63.45.23 Remove(first as VariantToVariantMapIteratorMBS, last as VariantToVariantMapIteratorMBS) 12828
- 63.45.24 Remove(key as Variant) as Integer 12829

63.45.26 UpperBound(key as Variant) as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

63.45.27 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

63.45.28 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

63.45.29 Properties

63.45.30 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new VariantToVariantOrderedMapMBS(true)
dim s2 as new VariantToVariantOrderedMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

63.45.31 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new VariantToVariantOrderedMapMBS

map.Value(1)=true
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

63.45.32 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

63.45.33 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

63.45.34 value(key as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

Chapter 64

DDE

64.1 class DDEBinaryDataMBS

64.1.1 class DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Binary Data for DDEMBS conversation.
Notes: Be carefully: This objects for data received inside a DDEMBS Event are read only. Passing an object to a function normally destroys it.

64.1.2 Methods

64.1.3 Mem as memoryblock

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the data as a memoryblock.

64.1.4 size as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the size of this data object.

64.1.5 Str as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the data as a string.

64.1.6 Properties

64.1.7 Handle as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for this data.
Notes: (Read and Write property)

64.1.8 Release as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the destructor will release the data handle or not.
Notes: (Read and Write property)

64.2 class DDEContextInfoMBS

64.2.1 class DDEContextInfoMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Details for a connection.

64.2.2 Properties

64.2.3 Ansi as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the other side works with Ansi strings (the normal ones).
Notes:

Currently this DDEMBS Classes are only tested for ANSI Systems. And I'm not sure if Xojo itself does handle Unicode correctly on Windows.
(Read and Write property)

64.2.4 CountryID as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The country ID for this connection.
Notes:

Some Windows country constants:

(Read and Write property)

64.2.5 Flags as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flags for this connection.
Notes:

Currently not used by Windows.
(Read and Write property)

64.2.6 LangID as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The language ID for this connection.
Notes:

Some Windows language constants:

(Read and Write property)

64.2.7 Security as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: A user defined security code.
Notes:

A security value, which may be anything you need.
Maybe a code to verify that it is your app or the encryption code?
(Read and Write property)

64.2.8 Unicode as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the other side works with Unicode strings.
Notes:

Currently this DDEMBS Classes are only tested for ANSI Systems. And I'm not sure if Xojo itself does handle Unicode correctly on Windows.
(Read and Write property)

64.3 class DDEMBS

64.3.1 class DDEMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gives access to Windows DDE functions.
Notes: DDE on Windows is like AppleEvents on Mac OS, but not so comfortable.

64.3.2 Methods

64.3.3 clientTransaction(type as Integer,topic as DDEStringMBS) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Short version of ClientTransaction with datatype=CF_TEXT and data=nil.
See also:

- 64.3.4 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as DDEBinaryDataMBS 12839
- 64.3.5 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as DDEBinaryDataMBS 12839

64.3.4 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Shortversion of ClientTransaction with datatype=CF_TEXT.
See also:

- 64.3.3 clientTransaction(type as Integer,topic as DDEStringMBS) as DDEBinaryDataMBS 12839
- 64.3.5 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as DDEBinaryDataMBS 12839

64.3.5 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Example:

```
// List all Excel Topics

dim d as DDEMBS
dim s,topic as DDEStringMBS
dim g as DDEStringMBS
dim m as DDEBinaryDataMBS
dim t,enter,z as string
dim i,c as Integer

list.deleteAllRows
d=new DDEMBS
if d.InitClient then
s=d.newDDEString("Excel")
topic=d.newDDEString("System")
if topic<>nil and s<>nil and d.ConnectToServer(s,topic) then
g=d.newDDEString("Topics")
if g<>nil then
m=d.ClientTransaction(d.XTYP_REQUEST,g)
if m<>nil then
t=m.str
t=left(t,len(t)-1) // remove chr(0) at end
enter=chr(9)
c=countfields(t,Enter)
for i=1 to c
z=nthfield(t,enter,i)

list.addRow z
next
list.listindex=0
else
msgBox "Failed to transfer."
end if
else
msgBox "Fail to create second string."
end if
g=nil // must be released before close
else
msgBox "Fail to create connect."
end if
s=nil // must be released before close
d.close
else
msgBox "Fail to init for Client."
end if
```

Notes:

Use this ClientTransaction if the application returns a value or ClientTransactionBoolean if it returns a boolean.
Data and Datatype are optional. If no datatype is set, the datatype is set to the value of CF_TEXT.
See also:

- 64.3.3 clientTransaction(type as Integer,topic as DDEStringMBS) as DDEBinaryDataMBS 12839
- 64.3.4 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as DDEBinaryDataMBS 12839

64.3.6 clientTransactionBoolean(type as Integer,topic as DDEStringMBS) as Boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Short version of ClientTransactionBoolean with datatype=CF_TEXT and data=nil.
See also:

- 64.3.7 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as Boolean 12841
- 64.3.8 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as Boolean 12841

64.3.7 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as Boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Short version of ClientTransactionBoolean with Datatype=CF_TEXT.
See also:

- 64.3.6 clientTransactionBoolean(type as Integer,topic as DDEStringMBS) as Boolean 12841
- 64.3.8 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as Boolean 12841

64.3.8 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as Boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes:

Use this ClientTransaction if the application returns a value or ClientTransactionBoolean if it returns a boolean.
Data and Datatype are optional. If no datatype is set, the datatype is set to the value of CF_TEXT.
See also:

- 64.3.6 clientTransactionBoolean(type as Integer,topic as DDEStringMBS) as Boolean 12841
- 64.3.7 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as Boolean 12841

64.3.9 close

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the running connection.
Example:

```
dim d as DDEMBS
// work with dde object

if d<>nil then
d.close
d=nil
end if
```

Notes: RB seems to crash, if the object is not destroyed before application is quit.

64.3.10 ConnectToServer(appname as DDEStringMBS, topic as DDEStringMBS) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Connects to the application for the given topic.
Example:

```
dim a,b as DDEStringMBS
dim d as DDEMBS

d=new DDEMBS
if d.InitClient then
a=d.newDDEString("servicename")
b=d.newDDEString("topicname")
```

```
if a<>nil and b<>nil then
if d.ConnectToServer(a,b) then
msgBox "Connected."
return // ok, so leave before closing.
else
msgBox "Failed to connect."
end if
else
msgBox "Unable to make DDE Strings."
end if
d.close // failed

else
msgBox "Failed to initClient."
end if
```

Notes:

Using nil for appname or topic you can try to connect to anyone who accepts.
Renamed in v4.3 to ConnectToServer from Connect for better RB 6 compatibility.

64.3.11 InitClient as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Starts DDE, but only for Client stuff.
Notes:

With plugin version 6.1pr4 and newer you can have eight DDE objects in your application.
With older plugin versions you can only have one instance of the DDEMBS class at all!

64.3.12 InitServer as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Starts DDE for client and server stuff.
Notes:

With plugin version 6.1pr4 and newer you can have eight DDE objects in your application.
With older plugin versions you can only have one instance of the DDEMBS class at all!

64.3.13 NewDDEBinaryData(name as DDEStringMBS,data as memoryblock,offset as Integer,length as Integer,dataformat as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new binary data object.
See also:

- 64.3.14 NewDDEBinaryData(name as DDEStringMBS,data as string) as DDEBinaryDataMBS 12844
- 64.3.15 NewDDEBinaryData(name as DDEStringMBS,data as string,offset as Integer,length as Integer) as DDEBinaryDataMBS 12844

64.3.14 NewDDEBinaryData(name as DDEStringMBS,data as string) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new binary data object.
Notes: A short version of NewDDEBinaryData which takes the whole string.
See also:

- 64.3.13 NewDDEBinaryData(name as DDEStringMBS,data as memoryblock,offset as Integer,length as Integer,dataformat as Integer) as DDEBinaryDataMBS 12844
- 64.3.15 NewDDEBinaryData(name as DDEStringMBS,data as string,offset as Integer,length as Integer) as DDEBinaryDataMBS 12844

64.3.15 NewDDEBinaryData(name as DDEStringMBS,data as string,offset as Integer,length as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new binary data object.
Notes: The offset and length is optional.
See also:

- 64.3.13 NewDDEBinaryData(name as DDEStringMBS,data as memoryblock,offset as Integer,length as Integer,dataformat as Integer) as DDEBinaryDataMBS 12844
- 64.3.14 NewDDEBinaryData(name as DDEStringMBS,data as string) as DDEBinaryDataMBS 12844

64.3.16 NewDDEString(ansistring as string) as DDEStringMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new ANSI DDE string.
Example:

```
dim d as DDEMBS // your DDE object
dim a as DDEStringMBS
a=d.newDDEString("servicename")
```

Notes: ANSI is the normal string encoding on Windows.

64.3.17 NewDDEStringUnicode(unicodestring as string) as DDEStringMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new Unicode DDE string.
Example:

```
dim d as DDEMBS // your DDE object
dim a as DDEStringMBS
a=d.NewDDEStringUnicode("servicename")
```

Notes: Currently this DDE Classes are only tested for ANSI Systems. And I'm not sure if Xojo itself does handle Unicode correctly on Windows.

64.3.18 RegisterService(name as DDEStringMBS) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Registers a service name.
Example:

```
dim d as DDEMBS // your dde object
dim s as DDEStringMBS

if d<>nil then
s=d.newDDEString(editfield1.text)

if s<>nil then
if d.registerService(s) then
msgBox "Registered."
else
msgBox "Register fails."
end if
else
```

```
msgBox "Failed on NewDDEString"
end if
else
msgBox "No DDE object!?"
end if
```

64.3.19 UnRegisterService(name as DDEStringMBS) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Unregisters a service name.
Example:

```
dim d as DDEMBS // your dde object
dim s as DDEStringMBS

if d<>nil then
s=d.newDDEString(editfield1.text)

if s<>nil then
if d.UnRegisterService(s) then
msgBox "Unregistered."
else
msgBox "Unregister fails."
end if
else
msgBox "Failed on NewDDEString"
end if
else
msgBox "No DDE object!?"
end if
```

64.3.20 Properties

64.3.21 LastError as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read only property)

64.3.22 Timeout as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Timeout in milliseconds.
Example:

```
dim d as DDEMBS // your DDE object
d.timeout=10000 // 10 Seconds
```

Notes:

Default is 1000.
(Read and Write property)

64.3.23 Events

64.3.24 AdviceData(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer,data as DDEBinaryDataMBS) as Integer

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes:

A dynamic data exchange (DDE) client receives the AdviceData event after establishing an advise loop with a server. This transaction informs the client that the value of the data item has changed.

Return Values:
A DDE callback function should return DDE_FACK if it processes this transaction, DDE_FBUSY if it is too busy to process this transaction, or DDE_FNOTPROCESSED if it rejects this transaction.

Remarks:
An application must copy the data associated with the DDEBinaryDataMBS object if the application must process the data after the callback function returns.

64.3.25 AdviceRequest(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer,remaincount as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes:

The system sends the AdviceRequest event to a server after the server calls the DdePostAdvise function. This transaction informs the server that an advise transaction is outstanding on the specified topic name and item name pair and that data corresponding to the topic name and item name pair has changed.

Return Values:
The server should first call the NewDDEBinaryData function to create a data object that identifies the changed data and then return this object. The server should return nil if it is unable to complete the transaction.

64.3.26 AdviceStart(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer) as Boolean

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: A client uses this event to establish an advise loop with a server.

64.3.27 AdviceStop(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer)

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: A client uses this event to end an advise loop with a server.

64.3.28 ConfirmConnect(topic as DDEStringMBS, service as DDEStringMBS, myself as Boolean)

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: Your connection was accepted.

64.3.29 Connect(topic as DDEStringMBS, service as DDEStringMBS, myself as Boolean,info as DDEContextInfoMBS) as Boolean

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: Return true if you accept this connection.

64.3.30 Disconnect(myself as Boolean)

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: The connection was closed.

64.3.31 Error(errorcode as Integer)

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes:

A dynamic data exchange (DDE) object receives the Error event when a critical error occurs.

Possible errors:

DMLERR_ADVACKTIMEOUT	& h4000	
DMLERR_BUSY	& h4001	
DMLERR_DATAACKTIMEOUT	& h4002	
DMLERR_DLL_NOT_INITIALIZED	& h4003	
DMLERR_DLL_USAGE	& h4004	
DMLERR_EXECACKTIMEOUT	& h4005	
DMLERR_INVALIDPARAMETER	& h4006	
DMLERR_LOW_MEMORY	& h4007	Memory is low; advise, poke, or execute data may be lost, or the system may fail.
DMLERR_MEMORY_ERROR	& h4008	
DMLERR_NOTPROCESSED	& h4009	
DMLERR_NO_CONV_ESTABLISHED	& h400a	
DMLERR_POKEACKTIMEOUT	& h400b	
DMLERR_POSTMSG_FAILED	& h400c	
DMLERR_REENTRANCY	& h400d	
DMLERR_SERVER_DIED	& h400e	
DMLERR_SYS_ERROR	& h400f	
DMLERR_UNADVACKTIMEOUT	& h4010	
DMLERR_UNFOUND_QUEUE_ID	& h4011	

64.3.32 Execute(topic as DDEStringMBS,data as DDEBinaryDataMBS) as Integer

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes:

A dynamic data exchange (DDE) server object receives the Execute event when a client specifies XTYP_EXECUTE in the ClientTransaction function. A client uses this transaction to send a command string to the server.

Return Values:
A server should return DDE_FACK if it processes this transaction, DDE_FBUSY if it is too busy to process this transaction, or DDE_FNOTPROCESSED if it rejects this transaction.

The data property is only valid while inside the event.

64.3.33 Poke(topic as DDEStringMBS,item as DDEStringMBS,data as DDEBinaryDataMBS) as Integer

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes:

Return Values:
A server should return DDE_FACK if it processes this transaction, DDE_FBUSY if it is too busy to process this transaction, or DDE_FNOTPROCESSED if it rejects this transaction.

64.3.34 Register(application as DDEStringMBS,service as DDEStringMBS)

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: A service is registered. You may add it to your own list.

64.3.35 Request(topic as DDEStringMBS,item as DDEStringMBS,dataformat as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: The server should create a DDEBinaryDataMBS object that identifies the data and then return this object. The server should return nil if it is unable to complete the transaction. If the server returns nil, the client will receive a DDE_FNOTPROCESSED flag.

64.3.36 UnRegister(application as DDEStringMBS,service as DDEStringMBS)

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: A service was unregistered.

64.3.37 WildConnect(topic as DDEStringMBS,service as DDEStringMBS, myself as boolean,info as DDEContextInfoMBS) as DDEStringPairListMBS

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: A connection is tried to all available servers. Return true if you accept.

64.3.38 Constants

64.3.39 CF_BITMAP = 2

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies a Windows bitmap format

64.3.40 CF_DIB = 8

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows Device Independent Bitmap (DIB) format.

64.3.41 CF_DIBV5 = 17

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows Device Independent Bitmap (DIB) format of Windows 2000 and newer.

64.3.42 CF_DIF = 5

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows data interchange format.

64.3.43 CF_ENHMETAFILE = 14

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows enhanced metafile format.

64.3.44 CF_HDROP = 15

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows file drop format.

64.3.45 CF_LOCALE = 16

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows locale format.

64.3.46 CF_METAFILEPICT = 3

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows metafile format.

64.3.47 CF_OEMTEXT = 7

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the standard Windows original equipment manufacturer (OEM) text format.

64.3.48 CF_PALETTE = 9

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows Palette format.

64.3.49 CF_PENDATA = 10

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows pen data format.

64.3.50 CF_RIFF = 11

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Resource Interchange File Format (RIFF) audio format.

64.3.51 CF_SYLK = 4

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows symbolic link format.

64.3.52 CF_TEXT = 1

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the standard American National Standards Institute (ANSI) text format.

64.3.53 CF_TIFF = 6

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Tagged Image File Format (TIFF).

64.3.54 CF_UNICODETEXT = 13

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the standard Windows Unicode text format.

64.3.55 CF_WAVE = 12

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the wave audio format.

64.3.56 DDE_FACK = & h8000

MBS Win Plugin.

Function: A constant for the return parameter of some events.
Notes: Return DDE_FACK if everything was handled well.

64.3.57 DDE_FBUSY = & h4000

MBS Win Plugin.

Function: A constant for the return parameter of some events.
Notes: Return DDE_FBUSY if your application is busy and can't currently handle the request.

64.3.58 DDE_FNOTPROCESSED = 0

MBS Win Plugin.

Function: A constant for the return parameter of some events.
Notes: Return DDE_FNOTPROCESSED if something went wrong will processing this event.

64.3.59 XTYP_EXECUTE = & h4050

MBS Win Plugin.

Function: A constant for the type parameter of ClientTransaction and ClientTransactionBoolean.

64.3.60 XTYP_POKE = & h4090

MBS Win Plugin.

Function: A constant for the type parameter of ClientTransaction and ClientTransactionBoolean.

64.3.61 XTYP_REQUEST = & h20B0

MBS Win Plugin.

Function: A constant for the type parameter of ClientTransaction and ClientTransactionBoolean.

64.4 class DDEStringMBS

64.4.1 class DDEStringMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string for DDEMBS conversation.
Notes: Be carefully: This objects for data received inside a DDEMBS Event are read only. Passing an object to a function normally destroys it.

64.4.2 Methods

64.4.3 Len as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the length of this string.

64.4.4 Mem as memoryblock

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the content of this DDEMBS String as Xojo Memoryblock.

64.4.5 Str as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the content of this DDEMBS String as Xojo string.

64.4.6 Properties

64.4.7 Handle as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for this data.
Notes: (Read and Write property)

64.4.8 Release as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the destructor will release the data handle or not.
Notes: (Read and Write property)

64.5 class DDEStringPairListMBS

64.5.1 class DDEStringPairListMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A list of DDE string pairs.
Notes: Used for the wild connect event.

64.5.2 Methods

64.5.3 Append(item as DDEStringPairMBS)

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds another item to the list.

64.5.4 Count as Integer

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Counts the number of items in the list.

64.5.5 Item(index as Integer) as DDEStringPairMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an item from this list.
Notes:

Returns nil on any error.
Index is from 0 to count-1.

64.6 class DDEStringPairMBS

64.6.1 class DDEStringPairMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A pair of topic and service DDEString objects.
Notes: Used for the wild connect event.

64.6.2 Properties

64.6.3 Service as DDEStringMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The service of this pair.
Notes: (Read and Write property)

64.6.4 Topic as DDEStringMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The topic of this pair.
Notes: (Read and Write property)

Chapter 65

Declare

65.1 class BlockMBS

65.1.1 class BlockMBS

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: A class to use blocks on Mac OS X with declares.

65.1.2 Blog Entries

- Three new controls for iOS in Xojo
- MBS Xojo / Real Studio plug-ins version 16.2
- MBS Xojo / Real Studio Plugins, version 16.2pr6

65.1.6 Methods

65.1.7 Close

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Releases all blocks.

65.1.8 GetBlockB(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockB event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

65.1.9 GetBlockBI(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockBI event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

65.1.10 GetBlockBII(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockBII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

65.1.11 GetBlockBIII(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockBIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

65.1.12 GetBlockBIIII(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockBIIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

65.1.13 GetBlockV(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.

Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockV event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

65.1.14 GetBlockVI(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockVI event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

65.1.15 GetBlockVII(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockVII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

65.1.16 GetBlockVIII(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockVIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

65.1.17 GetBlockVIIII(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockVIIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

65.1.18 Properties

65.1.19 AsyncBoolResult as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: The result for a boolean block called on a non main thread.
Notes:

If you use one of the BlockB methods to get a block and it's called on another thread but the main thread, we return the value of this property instead of the actual event result.
(Read only property)

65.1.20 Synchronous as Boolean

MBS MacFrameworks Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Whether to call events synchronously.
Notes:

If the block is called on another thread, the plugin calls the event on the main thread.
If Synchronous is true, we call the main thread synchronously, else asynchronously.
Default is asynchronously to avoid dead locks.
(Read and Write property)

65.1.21 Events

65.1.22 BlockB(Async_ as boolean, tag as Variant) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed

back AsyncBoolResult for you before this event is called.

65.1.23 BlockBI(Async_ as boolean, tag as Variant, value as Integer) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

65.1.24 BlockBII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

65.1.25 BlockBIII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed

back AsyncBoolResult for you before this event is called.

65.1.26 BlockBIIII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

65.1.27 BlockV(Async_ as boolean, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.

65.1.28 BlockVI(Async_ as boolean, tag as Variant, value as Integer)

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

65.1.29 BlockVII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer)

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

65.1.30 BlockVIII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer)

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

65.1.31 BlockVIIII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer)

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

65.2 class SoftDeclareMBS

65.2.1 class SoftDeclareMBS

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A way to do soft linking to libraries.
Example:

```
// Load the Stuffit Bundle on Mac OS X:
dim f as FolderItem
dim s as SoftDeclareMBS

f=FrameworksFolderMBS(-32765).Child("StuffIt.framework")
s=new SoftDeclareMBS

if s.LoadFrameworkFile(f) then
MsgBox "ok"
end if
```

Notes:

Deprecated. Please move to newer DeclareLibraryMBS and DeclareFunctionMBS classes.

You can make a declare like this:

Declare Function SpeakString lib "SpeechLib" (SpeakString as pstring) as Integer

But what if the SpeechLib is not installed?
Simple, but your application won't even launch on this machine.
Now you can of course use this MBS Plugin using the SpeechMBS functions, which are all week linked.
But you can also use this class to weak link to the SpeechMBS library like this:

```
dim b as boolean, m,p as memoryblock, c as SoftDeclareMBS

c=new SoftDeclareMBS
p=newmemoryBlock(256) // make the string for the first parameter
p.pstring(0)="Hello World!"

m=newmemoryBlock(4) // make the memoryblock for the parameters
m.long(0)=p.Address(0) // set the first parameter to the address of the string buffer

if c.loadlibrary("SpeechLib") then // Load librarys
if c.loadfunction("SpeakString") then // Load function
```

```
b=c.Call(1,m)
end if
end if
```

This way your application will be loaded, you can call the function, but people who don't have the SpeechLib will also here it.

65.2.2 Blog Entries

- LiteSync and Xojo

65.2.5 Xojo Developer Magazine

- 5.1, page 45: Detecting Rosetta, Are we running under emulation? by Christian Schmitz

65.2.6 Methods

65.2.7 CallFunction(param as string,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function.
Example:

```
dim c as SoftDeclareMBS
dim m,p,b as memoryBlock
dim f as folderItem
dim path as string

f=ApplicationsFolderMBS(-32766) // get a folder...
path=f.NativePath

MsgBox path

b=newmemoryBlock(1024)
```

```
b.long(0)=0 // make empty C string

p=newmemoryBlock(lenb(path)+3)
p.cstring(0)=path

m=newmemoryBlock(12+10)
m.long(0)=p.AddressMBS(0)
m.long(4)=b.AddressMBS(0)
m.long(8)=1023

c=new SoftDeclareMBS
if c.LoadDLL("KERNEL32") then
if c.loadfunction("GetShortPathNameA") then
c.CallingMode=0
MsgBox "found function"
if c.CallFunction("iii",m) then
msgbox "Short path is: "+b.cstring(0)
else
msgbox "Failed to call function."
end if
else
msgbox "Loading of function "+c.FunctionName+" failed."
end if
else
msgbox "Loading of Kernel32 failed."
end if
```

Notes:

The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

- 65.2.8 CallFunction(paramcount as Integer,data as memoryblock) as boolean 12871

65.2.8 CallFunction(paramcount as Integer,data as memoryblock) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function.
Example:

```
dim c as SoftDeclareMBS
dim m,p,b as memoryBlock
dim f as folderItem
dim path as string

f=ApplicationsFolderMBS(-32766) // get a folder...
path=f.NativePath

MsgBox path

b=newmemoryBlock(1024)
b.long(0)=0 // make empty C string

p=newmemoryBlock(lenb(path)+3)
p.cstring(0)=path

m=newmemoryBlock(12+10)
m.long(0)=p.AddressMBS(0)
m.long(4)=b.AddressMBS(0)
m.long(8)=1023

c=new SoftDeclareMBS
if c.LoadDLL("KERNEL32") then
if c.loadfunction("GetShortPathNameA") then
c.CallingMode=0
MsgBox "found function"
if c.CallFunction(3,m) then
msgbox "Short path is: "+b.cstring(0)
else
msgbox "Failed to call function."
end if
else
msgbox "Loading of function "+c.FunctionName+" failed."
end if
else
msgbox "Loading of Kernel32 failed."
end if
```

Notes:

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using memoryblock.addressMBS which is part of the plugin. You can even use only one memoryblock for all 3 parameters in the example like this:

m=newmemoryBlock(2100)
m.cstring(1024)=path
m.long(0)=m.address(20)
m.long(4)=m.address(1024)
m.long(8)=1024

First 12 bytes for the parameter table, the next 1000 bytes for the result buffer and finally a thousand bytes for the input string.

Before RB 3.1 this function was named "Call", but RB5 requires that the word "Call" is no longer valid for a function name.

Softdeclare is limited to only 6 parameters for plugin version 3.2. Plugin version 3.3 extends this to 8 parameters.
See also:

- 65.2.7 CallFunction(param as string,data as memoryblock) as boolean 12870

65.2.9 CallFunctionDouble(param as string,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns a double value.
Notes:

The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

- 65.2.10 CallFunctionDouble(paramcount as Integer,data as memoryblock) as boolean 12873

65.2.10 CallFunctionDouble(paramcount as Integer,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns a double value.
Notes:

Fills the ResultDouble property.

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using memoryblock.addressMBS which is part of the plugin.
Only 10 parameters can currently be used.
See also:

- 65.2.9 CallFunctionDouble(param as string,data as memoryblock) as boolean 12873

65.2.11 CallFunctionInteger64(param as string,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns an integer value.
Notes:

The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

- 65.2.12 CallFunctionInteger64(paramcount as Integer,data as memoryblock) as boolean 12874

65.2.12 CallFunctionInteger64(paramcount as Integer,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns an integer value.
Notes:

Fills the ResultInt64 property.

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using memoryblock.addressMBS which is part of the plugin.
Only 10 parameters can currently be used.
See also:

- 65.2.11 CallFunctionInteger64(param as string,data as memoryblock) as boolean 12874

65.2.13 CallMethod(param as string,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns no value.
Notes:

The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

- 65.2.14 CallMethod(paramcount as Integer,data as memoryblock) as boolean 12875

65.2.14 CallMethod(paramcount as Integer,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns no value.
Notes:

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using memoryblock.addressMBS which is part of the plugin.
Only 10 parameters can currently be used.
Returns true on success.
See also:

- 65.2.13 CallMethod(param as string,data as memoryblock) as boolean 12875

65.2.15 CopyLibrary(byref target as SoftDeclareMBS)

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the library handle to another softdeclare object.
Notes:

if target is nil, a new object is created.
The library handle in the target object is set to point to the same library as the original object.

65.2.16 FreeLibrary as boolean

MBS Util Plugin, Plugin Version: 5.4, Platform: Windows, Targets: All.

Function: Releases the library.
Notes:

Only for Windows currently this function releases the handles and unloads the library. Windows internally has a reference counter for the library so memory is only released when the last reference is freed.
Lasterror is set.

65.2.17 LoadConstant(constname as string) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a constant from inside the library.
Example:

```
dim c as SoftDeclareMBS
dim s as CFStringMBS
dim m as MemoryBlock
dim handle as Integer

// Test Mac OS X
// Load the constant kABFirstNameProperty from the Addressbook framework

c=new SoftDeclareMBS

if c.LoadFramework("Addressbook.framework") then
msgbox "Loaded "+c.libname+" to "+format(c.libhandle,"-0")+"."
if c.LoadConstant("kABFirstNameProperty") then
msgbox "Loaded constant "+c.ConstantName+" to "+format(c.ConstantPointer,"-0")+"."

m=NewMemoryBlockFromPtrMBS(c.ConstantPointer) // I hope it's not nil!

handle=m.Long(0)
if handle<>0 then
s=new CFStringMBS
s.Handle=handle

msgbox "Got value: "+s.str
end if
else
msgbox "Loading of constant "+c.ConstantName+" failed."
end if
else
msgbox "Loading of Addressbook.framework failed."
```

end if

Notes: Lasterror is set.

65.2.18 LoadDLL(libname as string) as boolean

MBS Util Plugin, Plugin Version: 5.4, Platform: Windows, Targets: All.

Function: Loads a Windows DLL.
Notes:

Lasterror is set.
libname can be name (e.g. "KERNEL32"), filename (e.g. "KERNEL32.DLL") or path (e.g. "C:\WINDOWS\KERNEL32.DLL").

65.2.19 LoadDLLfromMemory(data as string) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platform: Windows, Targets: All.

Function: Loads a Windows DLL from a string.
Notes:

Some libraries don't like to be loaded from a string.
But else you can pass any DLL file content to this function.

The string is locked so it stays in memory.
On success the handle property is not zero and the function returns true.

65.2.20 LoadDylib(path as string) as boolean

MBS Util Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: Loads a library in Mac OS X dylib format.
Notes: Lasterror and Liberror are set.

65.2.21 LoadFramework(frameworkfilename as string) as boolean

MBS Util Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: Loads a framework in Mac OS X.
Example:

```
// A user's question:
// I am trying to call this to Carbon.framework using the softdeclare function:

// UInt32 SwapQDTextFlags(UInt32 newFlags);

// flags are OR'd

// kQDUseDefaultTextRendering = 0
// kQDUseTrueTypeScalerGlyphs = (1 «0)
// kQDUseCGTextRendering = (1 «1)
// kQDUseCGTextMetrics = (1 «2)
// kQDDontChangeFlags = 0xFFFFFFFF

// The call is to make the system use Quartz rendering for QuickDraw text (like the text in my WASTE-Field). How should I call this?

// The solution code:

dim s as SoftDeclareMBS
dim m as MemoryBlock

const flags=-1 // = 0xFFFFFFFF

s=new SoftDeclareMBS
m=NewMemoryBlock(10)
m.Long(0)=flags

if s.LoadFramework("Carbon.Framework") then
if s.LoadFunction("SwapQDTextFlags") then
if s.CallFunction(1,m) then
MsgBox str(s.Result) // returns 7 for me (using Silk)
end if
end if
end if

// Without any error checking!
```

Notes:

frameworkfilename is e.g. "Carbon.framework"
Lasterror is set.

65.2.22 LoadFrameworkFile(frameworkpath as folderitem) as boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Loads on Mac OS X a framework from the given file specification.
Example:

```
dim f as FolderItem
dim s as SoftDeclareMBS

f=SpecialFolder.Desktop.Child("spellcheck.bundle")
s=new SoftDeclareMBS

if s.LoadFrameworkFile(f) then
MsgBox "OK"
end if
```

Notes:

Returns true if successfull.
Lasterror is set.

65.2.23 LoadFunction(funcname as string) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a function from inside the library.
Example:

```
dim s as SoftDeclareMBS
dim m as MemoryBlock

const flags=-1 // = 0xFFFFFFFF

s=new SoftDeclareMBS
m=NewMemoryBlock(10)
m.Long(0)=flags

if s.LoadLibrary("Carbon.Framework") then
if s.LoadFunction("SwapQDTextFlags") then
if s.CallFunction(1,m) then
MsgBox str(s.Result) // returns 7 for me (using Silk)
end if
end if
end if
```

Notes:

A user's question:
I am trying to call this to Carbon.framework using the softdeclare function:

UInt32 SwapQDTextFlags(UInt32 newFlags);

flags are OR'd

kQDUseDefaultTextRendering = 0
kQDUseTrueTypeScalerGlyphs = (1 «0)
kQDUseCGTextRendering = (1 «1)
kQDUseCGTextMetrics = (1 «2)
kQDDontChangeFlags = 0xFFFFFFFF

The call is to make the system use Quartz rendering for QuickDraw text (like the text in my WASTEField).
How should I call this?

The solution code is above without any error checking!

Lasterror is set.

65.2.24 LoadLibrary(libname as string) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a library.
Notes:

On Mac OS X e.g. "Carbon.framework" or "System.framework".
On Mac OS Carbon inside Classic e.g. "CarbonLib".
On Windows e.g. "KERNEL32" or "USER32".

Lasterror is set.

65.2.25 ParametersSupported(param as string) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether plugin supports the given parameter string.

Notes:

The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

Any new parameter string can be added. Please send an email to support to get a new combination added.

65.2.26 Properties

65.2.27 CallingMode as Integer

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: What calling mode to use.
Notes:

0 = Pascal (default)
1 = C

The Windows API works with Pascal, but calls to QuickTime DLL use C.
(Read and Write property)

65.2.28 ConstantFound as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Was the constant loaded?
Notes:

Set by the LoadConstant function.
(Read and Write property)

65.2.29 ConstantName as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the constant to load.
Notes:

Set by the LoadConstant function.
(Read and Write property)

65.2.30 ConstantPointer as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer of the constant loaded.
Notes:

Set by the LoadConstant function.
(Read and Write property)

65.2.31 FunctionFound as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Was the function loaded?
Notes:

Set by the LoadFunction function.
(Read only property)

65.2.32 FunctionName as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the function to load.
Notes:

Set by the LoadFunction function.
(Read and Write property)

65.2.33 FunctionPointer as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer of the function loaded.
Notes:

Set by the LoadFunction function.
(Read and Write property)

65.2.34 Lasterror as Integer

MBS Util Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes:

LoadLibraryFile, LoadLibrary, LoadFunction, LoadConstant and FreeLibrary set this property.
(Read and Write property)

65.2.35 Liberror as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: An error message from loadlibrary.
Notes:

Set by the LoadLibrary function.
(Read and Write property)

65.2.36 Libfound as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Was the library loaded?
Notes:

Set by the LoadLibrary function.
(Read only property)

65.2.37 Libhandle as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle of the library loaded.
Notes:

Set by the LoadLibrary function.
On Mac OS Classic a CFragConnectionID.
On Mac OS X a CFBundleRef.
On Windows a HINSTANCE.
(Read and Write property)

65.2.38 Libname as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the library to load.
Notes:

Set by the LoadLibrary function.
(Read and Write property)

65.2.39 Result as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The result of the call function.
Notes:

Set by the Call function.
(Read and Write property)

65.2.40 ResultDouble as Double

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The result of the call function CallFunctionDouble.
Notes: (Read and Write property)

65.2.41 ResultInt64 as MemoryBlock

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The result of the call function CallFunctionInteger64.
Example:

```
dim s as SoftDeclareMBS
dim m as MemoryBlock

s=new SoftDeclareMBS
if s.LoadDLL("test64bit.dll") then
if s.LoadFunction("Get64bitNumber") then
if s.CallFunctionInteger64(0,nil) then
MsgBox hex(s.ResultInt64.long(4))+hex(s.ResultInt64.long(0))
end if
end if
end if

' DLL was created with a function like this:
' IMPEXP long long Get64bitNumber()
```

```
' {
' return 0x1122334455667788;
' }
```

Notes: (Read and Write property)

Chapter 66

DirectShow

66.1 class DirectShowAMCameraControlMBS

66.1.1 class DirectShowAMCameraControlMBS

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This interface provides local or remote control over a camera.
Example:

```
dim srcFilter as DirectShowBaseFilterMBS // your device
dim a as DirectShowAMCameraControlMBS = srcFilter.AMCameraControl

// query range for zoom
dim ZoomMin as integer
dim ZoomMax as integer
dim ZoomStep as integer
dim ZoomDefault as Integer
dim ZoomFlags as integer
a.GetRange(a.kPropertyZoom, ZoomMin, ZoomMax, ZoomStep, ZoomDefault, ZoomFlags)
dim ErrorCode as integer = a.Lasterror
dim ErrorText as string = a.LasterrorMessage

Break // check in debugger

// set a minimum value
a.Set(a.kPropertyZoom, (ZoomMax-ZoomMin)/2, 0)
ErrorCode = a.Lasterror
ErrorText = a.LasterrorMessage

Break // check in debugger
```

Notes:

Applications can use this interface to control camera settings such as zoom, pan, aperture adjustment, or shutter speed. To obtain this interface, query the filter that controls the camera.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.1.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr4
- MBS Real Studio Plugins, version 12.4pr9

66.1.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr4
- MBS Real Studio Plugins, version 12.4pr9

66.1.4 Methods

66.1.5 Constructor

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.1.6 Get(PropertySelector as Integer, byref Value as Integer, byref Flags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This method retrieves the current setting of a camera property.
Notes:

PropertySelector: A long value that specifies the property to retrieve, see kProperty* constants.
Value: receives the value of the property.
Flags: Receives a member of the CameraControlFlags enumeration. The returned value indicates whether the setting is controlled manually or automatically.

Lasterror is set.

66.1.7 GetRange(PropertySelector as Integer, byref MinValue as Integer, byref MaxValue as Integer, byref SteppingDelta as Integer, byref DefaultValue as Integer, byref CapsFlags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This method retrieves the range and default value of a specified camera property.
Example:

```
dim srcFilter as DirectShowBaseFilterMBS // your device
dim a as DirectShowAMCameraControlMBS = srcFilter.AMCameraControl

// query range for zoom
dim ZoomMin as integer
dim ZoomMax as integer
dim ZoomStep as integer
dim ZoomDefault as Integer
dim ZoomFlags as integer
a.GetRange(a.kPropertyZoom, ZoomMin, ZoomMax, ZoomStep, ZoomDefault, ZoomFlags)
dim ErrorCode as integer = a.Lasterror
dim ErrorText as string = a.LasterrorMessage

Break // check in debugger
```

Notes:

PropertySelector: A long value that specifies the property to query, see kProperty* constants.
MinValue: Receives the minimum value of the property.
MaxValue: Receives the maximum value of the property.
SteppingDelta: Receives the step size for the property. The step size is the smallest increment by which the property can change.
DefaultValue: Receives the default value of the property.
CapsFlags: Receives an element of the CameraControlFlags enumeration, indicating whether the property is controlled automatically or manually.

Lasterror is set.

66.1.8 Set(PropertySelector as Integer, Value as Integer, Flags as Integer = 0)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This method sets a specified property on the camera.
Notes:

PropertySelector: A long value that specifies the property to set, see kProperty* constants.

Value: A long value that specifes the new value of the property.
Flags: A long value that specifies the desired control setting. See kFlags* constants.

Lasterror is set.

66.1.9 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows properties dialog.
Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.

66.1.10 Properties

66.1.11 Handle as Integer

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IAMCameraControl interface.
(Read and Write property)

66.1.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.1.13 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.1.14 Constants

66.1.15 kFlagsAuto = 1

MBS Win Plugin, Plugin Version: 12.4.

Function: One of te flags for Get/Set.
Notes: The setting is controlled automatically.

66.1.16 kFlagsManual = 2

MBS Win Plugin, Plugin Version: 12.4.

Function: One of te flags for Get/Set.
Notes: The setting is controlled manually.

66.1.17 kPropertyExposure = 4

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes:

Identifies the exposure setting, in log base 2 seconds. In other words, for values less than zero, the exposure time is 1/2n seconds, and for values zero or above, the exposure time is 2n seconds. For example:

Value	Seconds
-3	1/8
-2	1/4
-1	1/2
0	1
1	2
2	4

66.1.18 kPropertyFocus = 6

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the camera's focus setting, as the distance to the optimally focused target, in millimeters. The range and default value are specific to the device.

66.1.19 kPropertyIris = 5

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the camera's iris setting, in units of fstop * 10.

66.1.20 kPropertyPan = 0

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Identifies the camera's pan setting, in degrees. Values range from –180 to +180, with the default set to zero. Positive values are clockwise from the origin (the camera rotates clockwise when viewed from above), and negative values are counterclockwise from the origin.

66.1.21 kPropertyRoll = 2

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Identifies the camera's roll setting, in degrees. Values range from –180 to +180, with the default set to zero. Positive values cause a clockwise rotation of the camera along the image-viewing axis, and negative values cause a counterclockwise rotation of the camera.

66.1.22 kPropertyTilt = 1

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Identifies the camera's tilt setting, in degrees. Values range from –180 to +180, with the default set to zero. Positive values point the imaging plane up, and negative values point the imaging plane down.

66.1.23 kPropertyZoom = 3

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Identifies the camera's zoom setting, in millimeters. Values range from 10 to 600, and the default is specific to the device.

66.2 class DirectShowAMCrossbarMBS

66.2.1 class DirectShowAMCrossbarMBS

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IAMCrossbar interface routes signals from an analog or digital source to a video capture filter.
Notes:

This interface is implemented by the Analog Video Crossbar Filter. The Analog Video Crossbar filter is modeled after a general switching matrix, with n inputs and m outputs. For example, a video card might have two external connectors: a coaxial connector for TV, and an S-video input. These would be represented as input pins on the filter. To select one of the inputs, an application would use the IAMCrossbar interface to "route" an input pin to the filter's output pin, by calling the Route method.

66.2.4 Methods

66.2.5 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the base filter for the crossbar.
Notes:

See also:
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390991(v=vs.85).aspx

66.2.6 CanRoute(OutputPinIndex as Integer, InputPinIndex as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The CanRoute method queries whether a specified input pin can be routed to a specified output pin.
Notes:

OutputPinIndex: Specifies the index of the output pin.
InputPinIndex: Specifies the index of input pin.
Lasterror is set.
Returns true if two pins can be routed.

To route the pins, call the Route method. Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.

66.2.7 Constructor

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.2.8 GetCrossbarPinInfo(IsInputPin as boolean, PinIndex as Integer, byref PinIndexRelated as Integer, byref PhysicalType as Integer)

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The getCrossbarPinInfo method retrieves information about a specified pin.
Notes:

IsInputPin: Specifies the direction of the pin. Use one of the following values.

Value	Meaning
True	Input pin
False	Output pin

PinIndex: Specifies the index of the pin.
PinIndexRelated: Variable that receives the index of the related pin, or –1 if no pin is related to this pin.

The related pin is a pin on the same filter, with the same direction; it typically represents the same physical jack or connector. For example, a video tuner and an audio tuner might be related pins. Typically, if two pins are related, you should route them together.
PhysicalType: Variable that receives a member of the PhysicalConnectorType enumeration, indicating the pin's physical type.

Lasterror is set.
Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.

66.2.9 GetPinCounts(byref OutputPinCount as Integer, byref InputPinCount as Integer)

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The getPinCounts method retrieves the number of input and output pins on the crossbar filter.
Notes:

OutputPinCount: Variable that receives the number of output pins.
InputPinCount: Variable that receives the number of input pins.

Lasterror is set.

The other IAMCrossbar methods take parameters that specify pins by index number. For these methods, output pins and input pins are both indexed from zero. Use the getPinCounts method to determine the upper bounds for each.

66.2.10 IsRoutedTo(InputPinIndex as Integer) as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IsRoutedTo method retrieves the input pin that is currently routed to the specified output pin.
Notes:

OutputPinIndex: Specifies the index of the output pin.
InputPinIndex: Variable that receives the index of the input pin, or -1 if no input pin is routed to this output pin.

Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.
Lasterror is set.

66.2.11 PhysicalPinName(type as Integer) as string

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the name for a given type.
Notes: Just a convenience method to return english names for types.

66.2.12 Route(OutputPinIndex as Integer, InputPinIndex as Integer)

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Route method routes an input pin to an output pin.
Notes:

OutputPinIndex: Specifies the index of the output pin.
InputPinIndex: Specifies the index of the input pin.

Lasterror is set.

Routing two pins causes the output pin to deliver data from that input pin. Only one input pin at a time can be routed to a given output pin.
Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.

66.2.13 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Example:

```
dim Capture as DirectShowCaptureGraphBuilderMBS // your capture graph
dim srcfilter as DirectShowBaseFilterMBS // your source filter

Dim AMCrossbar As DirectShowAMCrossbarMBS = srcfilter.AMCrossbar
If AMCrossbar <>Nil Then
AMCrossbar.ShowPropertyDialog
MsgBox "Result: "+Str(AMCrossbar.Lasterror)+": "+AMCrossbar.LasterrorMessage
Else
MsgBox "No AMCrossbar."
End If
```

Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.

66.2.14 Properties

66.2.15 Handle as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IAMCrossbar interface.
(Read and Write property)

66.2.16 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.2.17 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.2.18 Constants

66.2.19 PhysConn_Audio_1394 = 4103

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an IEEE 1394 pin for audio.

66.2.20 PhysConn_Audio_AESDigital = 4099

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an AES/EBU (Audio Engineering Society/European Broadcast Union) digital pin for audio.

66.2.21 PhysConn_Audio_AudioDecoder = 4105

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an audio decoder pin.

66.2.22 PhysConn_Audio_AUX = 4102

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an AUX pin for audio.

66.2.23 PhysConn_Audio_Line = 4097

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a line pin for audio.

66.2.24 PhysConn_Audio_Mic = 4098

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a microphone pin.

66.2.25 PhysConn_Audio_SCSI = 4101

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a SCSI pin for audio.

66.2.26 PhysConn_Audio_SPDIFDigital = 4100

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an S/PDIF (Sony/Philips Digital Interface Format) digital pin for audio.

66.2.27 PhysConn_Audio_Tuner = 4096

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a tuner pin for audio.

66.2.28 PhysConn_Audio_USB = 4104

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a USB pin for audio.

66.2.29 PhysConn_Video_1394 = 10

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an IEEE 1394 pin for video.

66.2.30 PhysConn_Video_AUX = 9

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an AUX (auxiliary) pin for video.

66.2.31 PhysConn_Video_Black = 15

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Not used.

66.2.32 PhysConn_Video_Composite = 2

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a composite pin for video.

66.2.33 PhysConn_Video_ParallelDigital = 7

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a parallel digital pin for video.

66.2.34 PhysConn_Video_RGB = 4

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an RGB pin for video.

66.2.35 PhysConn_Video_SCART = 14

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a SCART (Peritel) pin for video.

66.2.36 PhysConn_Video_SCSI = 8

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a SCSI (Small Computer System Interface) pin for video.

66.2.37 PhysConn_Video_SerialDigital = 6

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a serial digital pin for video.

66.2.38 PhysConn_Video_SVideo = 3

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an S-Video (Y/C video) pin.

66.2.39 PhysConn_Video_Tuner = 1

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a tuner pin for video.

66.2.40 PhysConn_Video_USB = 11

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a USB (Universal Serial Bus) pin for video.

66.2.41 PhysConn_Video_VideoDecoder = 12

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a video decoder pin.

66.2.42 PhysConn_Video_VideoEncoder = 13

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a video encoder pin.

66.2.43 PhysConn_Video_YRYBY = 5

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a YRYBY (Y, R–Y, B–Y) pin for video.

66.3 class DirectShowAMStreamConfigMBS

66.3.1 class DirectShowAMStreamConfigMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IAMStreamConfig interface sets the output format on certain capture and compression filters, for both audio and video.
Notes:

Applications can use this interface to set format properties, such as the output dimensions and frame rate (for video) or the sample rate and number of channels (for audio).
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.3.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr4
- MBS Xojo / Real Studio Plugins, version 13.4pr7

66.3.3 Blog Entries

66.3.4 Methods

66.3.5 AudioCaps as DirectShowAudioStreamConfigCapsMBS()

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the audio capabilities.
Notes:

Lasterror is set.
Returns empty array for video streams.

66.3.6 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.3.7 MediaTypes as DirectShowMediaTypeMBS()

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries media types.
Notes:

Lasterror is set.
see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd319787(v=vs.85).aspx

66.3.8 NumberOfCapabilities as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the number of format capabilities that this pin supports.
Notes: Lasterror is set.

66.3.9 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Example:

```
dim Capture as DirectShowCaptureGraphBuilderMBS // your capture graph
dim srcfilter as DirectShowBaseFilterMBS // your source filter

Dim AMStreamConfig2 As DirectShowAMStreamConfigMBS = capture.GetStreamConfig(False, srcfilter)
If AMStreamConfig2 <>Nil Then
AMStreamConfig2.ShowPropertyDialog

MsgBox "Result: "+Str(AMStreamConfig2.Lasterror)+": "+AMStreamConfig2.LasterrorMessage
Else
MsgBox "No AMStreamConfig with srcfilter."
End If
```

Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.

66.3.10 VideoCaps as DirectShowVideoStreamConfigCapsMBS()

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the video capabilities.
Notes:

Lasterror is set.
Returns empty array for audio streams.

66.3.11 Properties

66.3.12 Handle as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

66.3.13 Lasterror as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.3.14 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.3.15 Format as DirectShowMediaTypeMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set the preferred output format.
Notes:

Lasterror is set.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd319785(v=vs.85).aspx
http://msdn.microsoft.com/en-us/library/windows/desktop/dd319788(v=vs.85).aspx
(Read and Write computed property)

66.4 class DirectShowAMVideoCompressionMBS

66.4.1 class DirectShowAMVideoCompressionMBS

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IAMVideoCompression interface sets and retrieves video compression properties.
Notes:

It is supported by some video compression filters, and also by some video capture filters that output compressed video. Filters that support this interface expose it through their output pins.
An application can use this interface to control how video is compressed, including characteristics such as the key-frame rate or the compression quality.
A filter that supports this interface might not support every method. Use the Capabilities property to determine which methods the filter supports.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.4.6 Methods

66.4.7 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the base filter.
Notes: Lasterror and LastErrorMessage are set.

66.4.8 Constructor

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.4.9 OverrideFrameSize(FrameNumber as Integer, Size as Integer)

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The frame size of a specified frame.
Notes:

The first frame that the filter delivers is numbered zero.
If the filter supports this method, the CompressionCaps_CanCrunch flag is in the Capabilities property. However, this flag can also indicate that the filter supports setting the bit rate, so it does not guarantee that the OverrideFrameSize method is supported.

Lasterror and LastErrorMessage are set.

66.4.10 OverrideKeyFrame(FrameNumber as Integer)

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The filter to compress a particular frame as a key frame.
Notes:

The first frame that the filter delivers is numbered zero.
If the filter supports this method, you can use it to override the normal key-frame distribution for a particular frame. After the filter creates a key frame, it might reset its count to determine when the next key frame should occur. For example, if the key-frame rate is 10, and an application uses this method to force frame 5 as a key frame, the filter might wait another 10 frames (until frame 15) before it creates the next key frame.

Lasterror and LastErrorMessage are set.

66.4.11 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Example:

```
dim Capture as DirectShowCaptureGraphBuilderMBS // your capture graph
dim encoder as DirectShowBaseFilterMBS // your encoder filter

Dim AMVideoCompression As DirectShowAMVideoCompressionMBS = encoder.AMVideoCompression
If AMVideoCompression <>Nil Then
AMVideoCompression.ShowPropertyDialog
MsgBox "Result: "+Str(AMVideoCompression.Lasterror)+": "+AMVideoCompression.LasterrorMessage
Else
MsgBox "No AMVideoCompression."
end if
```

Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.

66.4.12 Properties

66.4.13 Capabilities as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the compression capabilities, as a bitwise combination of zero or more CompressionCaps flags.
Notes:

Lasterror and LastErrorMessage are set.
(Read only property)

66.4.14 DefaultKeyFrameRate as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the default key-frame rate.
Notes:

Lasterror and LastErrorMessage are set.
(Read only property)

66.4.15 DefaultPFramesPerKey as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the default rate of predicted (P) frames per key frame.
Notes:

Lasterror and LastErrorMessage are set.
(Read only property)

66.4.16 DefaultQuality as Double

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the default quality.
Notes:

Lasterror and LastErrorMessage are set.
(Read only property)

66.4.17 Description as String

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives a description string, such as "My Video Compressor."
Notes:

Lasterror and LastErrorMessage are set.
(Read only property)

66.4.18 Handle as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

66.4.19 KeyFrameRate as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The key-frame rate.
Notes:

If the value is negative, the filter will use the default key-frame rate. If the value is zero, only the first frame will be a key frame.

To determine if the filter supports this method, call the Capabilities property and check for the CompressionCaps_CanKeyFrame flag.

Lasterror and LastErrorMessage are set.
(Read and Write property)

66.4.20 Lasterror as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.4.21 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.4.22 PFramesPerKeyFrame as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The rate of predicted (P) frames per key frame.
Notes:

If the value is negative, the filter will use the default rate.
To determine if the filter supports this method, check for the CompressionCaps_CanBFrame flag in the Capabilities property.

Lasterror and LastErrorMessage are set.
(Read and Write property)

66.4.23 Quality as Double

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The compression quality.
Notes:

Specifies the quality as a value between 0.0 and 1.0, where 1.0 indicates the best quality and 0.0 indicates the worst quality. If the value is negative, the filter will use the default quality.
To determine if the filter supports this method, check for the CompressionCaps_CanQuality flag in the Capabilities property.

Lasterror and LastErrorMessage are set.
(Read and Write property)

66.4.24 Version as String

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives a version string, such as "Version 2.1.0."
Notes:

Lasterror and LastErrorMessage are set.
(Read only property)

66.4.25 WindowSize as UInt64

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of frames over which the compressor must maintain an average data rate.
Notes:

For example, assuming a data rate of 100K/sec and a frame rate of 10 frames per second, if the window size

is 1, then every frame will be 10K or less. If the window size is 5, then every five consecutive frames must average 10K per frame, but individual frames may exceed this size.
The window size, expressed as a number of frames.

Lasterror and LastErrorMessage are set.
(Read and Write property)

66.4.26 Constants

66.4.27 CompressionCapsCanBFrame = & h08

MBS Win Plugin, Plugin Version: 19.1.

Function: One of the video compression capabilities constants.
Notes: Video compressor supports the PFramesPerKeyFrame properties.

66.4.28 CompressionCapsCanCrunch = & h02

MBS Win Plugin, Plugin Version: 19.1.

Function: One of the video compression capabilities constants.
Notes: Video compressor can compress video to a specified data rate. If the compressor has this capability then the output pins media type will contain the data rate in the VIDEOINFOHEADER structure's BitRate member. The only way to set the data rate is to set BitRate.

66.4.29 CompressionCapsCanKeyFrame = & h04

MBS Win Plugin, Plugin Version: 19.1.

Function: One of the video compression capabilities constants.
Notes: Video compressor supports the KeyFrameRate properties.

66.4.30 CompressionCapsCanQuality = & h01

MBS Win Plugin, Plugin Version: 19.1.

Function: One of the video compression capabilities constants.
Notes: Video compressor supports the Quality property.

66.4.31 CompressionCapsCanWindow = & h10

MBS Win Plugin, Plugin Version: 19.1.

Function: One of the video compression capabilities constants.
Notes: Video compressor supports the WindowSize properties.

66.5 class DirectShowAMVideoControlMBS

66.5.1 class DirectShowAMVideoControlMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IAMVideoControl interface controls certain video capture operations such as enumerating available frame rates and image orientation.
Notes:

For Windows Driver Model (WDM) devices, the WDM Video Capture Filter automatically exposes this interface if the WDM driver supports the PROPSETID_VIDCAP_VIDEOCONTROL property set. For more information, see the Windows Driver Kit (WDK) documentation.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.5.6 Methods

66.5.7 Caps(pin as DirectShowPinMBS) as Integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetCaps method retrieves the capabilities of the underlying hardware.
Notes:

Result is a combination of the flags from the VideoControl Flags, which specify the video control mode.

Possible capabilities include one or more of the following: flipping the picture horizontally, flipping the picture vertically, enabling external triggers, and simulating external triggers.

66.5.8 Constructor

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.5.9 CurrentActualFrameRate(pin as DirectShowPinMBS) as Int64

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetCurrentActualFrameRate method retrieves the actual frame rate, expressed as a frame duration in 100-nanosecond units. USB (Universal Serial Bus) and IEEE 1394 cameras may provide lower frame rates than requested because of bandwidth availability. This is only available during video streaming.
Notes:

Pin: the pin to retrieve the frame rate from.

Lasterror is set.

66.5.10 FrameRateList(pin as DirectShowPinMBS, Index as Integer, Width as Integer, Height as Integer) as Int64()

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetFrameRateList method retrieves a list of available frame rates.
Notes:

Pin: The pin to query for the list of frame rates.
Index: Index of the format to query for frame rates. This index corresponds to the order in which formats are enumerated by DirectShowVideoStreamConfigCapsMBS structures returned by DirectShowAMStreamConfigMBS.NumberOfCapabilities) minus one.
Width and Height: Frame image size (width and height) in pixels.

Returns an array of frame rates in 100-nanosecond units.

Lasterror is set.

66.5.11 MaxAvailableFrameRate(pin as DirectShowPinMBS, Index as Integer, Width as Integer, Height as Integer) as Int64

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMaxAvailableFrameRate method retrieves the maximum frame rate currently available, based on bus bandwidth usage for connections, such as USB and IEEE 1394, where the maximum frame rate may be limited by bandwidth availability.
Notes:

Pin: The pin to retrieve the maximum frame rate from.
Index: Index of the format to query for maximum frame rate. This index corresponds to the order in which formats are enumerated by GetStreamCaps. The value must range between zero and the number of supported DirectShowVideoStreamConfigCapsMBS returned by DirectShowAMStreamConfigMBS.NumberOfCapabilities) minus one.
Width and Height: Frame image size (width and height) in pixels.
MaxAvailableFrameRate: Pointer to the maximum available frame rate. The frame rate is expressed as frame duration in 100-nanosecond units.

Lasterror is set.

66.5.12 Mode(pin as DirectShowPinMBS) as Integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMode method retrieves the video control mode of operation.
Notes:

Possible modes of operation include one or more of the following: flipping the picture horizontally, flipping the picture vertically, enabling external triggers, and simulating external triggers.

Lasterror is set.

66.5.13 SetMode(pin as DirectShowPinMBS, mode as Integer)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetMode method sets the video control mode of operation.
Example:

```
dim pin as DirectShowPinMBS // your till image pin
dim filter as DirectShowBaseFilterMBS
```

```
dim vc as DirectShowAMVideoControlMBS = filter.AMVideoControl
vc.SetMode(pin, vc.FlagExternalTriggerEnable + vc.FlagTrigger)
```

Notes:

Value specifying a combination of the flags from the VideoControl Flags to set the video control mode.

Possible modes of operation include one or more of the following: flipping the picture horizontally, flipping the picture vertically, enabling external triggers, and simulating external triggers.

Lasterror is set.

66.5.14 Properties

66.5.15 Handle as Integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IAMVideoControl interface.
(Read and Write property)

66.5.16 Lasterror as Integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.5.17 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.

Notes: (Read and Write property)

66.5.18 Constants

66.5.19 FlagExternalTriggerEnable = 2

MBS Win Plugin, Plugin Version: 21.1.

Function: One of the flags.
Notes: Sets up a stream to capture a trigger from an external source, for example, a push button on a camera. Buffers can be queued to the driver but will not be passed up from the WDM capture driver (for compression, display, or writing to a file) until the external event happens.

66.5.20 FlagFlipHorizontal = 0

MBS Win Plugin, Plugin Version: 21.1.

Function: One of the flags.
Notes: Specifies that the picture is flipped horizontally.

66.5.21 FlagFlipVertical = 1

MBS Win Plugin, Plugin Version: 21.1.

Function: One of the flags.
Notes: Specifies that the picture is flipped vertically.

66.5.22 FlagTrigger = 3

MBS Win Plugin, Plugin Version: 21.1.

Function: One of the flags.
Notes: In software, simulates an external trigger when the stream has the VideoControlFlag_ExternalTriggerEnable flag set.

66.6 class DirectShowAMVideoProcAmpMBS

66.6.1 class DirectShowAMVideoProcAmpMBS

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The AMVideoProcAmp interface adjusts the qualities of an incoming video signal, such as brightness, contrast, hue, saturation, gamma, and sharpness.
Notes:

The WDM Video Capture filter exposes this interface if the hardware supports image adjustment.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.6.2 Blog Entries

- MBS Real Studio Plugins, version 12.4pr9

66.6.3 Blog Entries

- MBS Real Studio Plugins, version 12.4pr9

66.6.4 Methods

66.6.5 Constructor

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.6.6 Get(PropertySelector as Integer, byref Value as Integer, byref Flags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets video quality for a specified property.
Notes:

PropertySelector: Specifies the property to retrieve, as a value from the kProperty* constants.
Value: Receives the value of the property.
Flags: Receives the flags. The returned value indicates whether the setting is controlled manually or automatically.
Lasterror is set.

66.6.7 GetRange(PropertySelector as Integer, byref MinValue as Integer, byref MaxValue as Integer, byref SteppingDelta as Integer, byref DefaultValue as Integer, byref CapsFlags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum, maximum, and default values for setting properties.
Notes:

PropertySelector: Specifies the property to retrieve, as a value from the kProperty* constants.
MinValue: Receives the minimum value of the property.
MaxValue: Receives the maximum value of the property.
SteppingDelta: Receives the step size for the property. The step size is the smallest increment by which the property can change.
DefaultValue: Receives the default value of the property.
CapsFlags: Receives a member of the VideoProcAmpFlags enumeration, indicating whether the property is controlled automatically or manually.
Lasterror is set.

66.6.8 Set(PropertySelector as Integer, Value as Integer, Flags as Integer = 0)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets video quality for a specified property.
Notes:

PropertySelector: Specifies the property to retrieve, as a value from the kProperty* constants.
Value: The new value of the property.
Flags: The desired control setting. See kFlags* constants.

Lasterror is set.

66.6.9 Properties

66.6.10 Handle as Integer

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IAMVideoProcAmp interface.
(Read and Write property)

66.6.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.6.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.6.13 Constants

66.6.14 kFlagsAuto = 1

MBS Win Plugin, Plugin Version: 12.4.

Function: One of te flags for Get/Set.
Notes: The setting is controlled automatically.

66.6.15 kFlagsManual = 2

MBS Win Plugin, Plugin Version: 12.4.

Function: One of te flags for Get/Set.
Notes: The setting is controlled manually.

66.6.16 kPropertyBacklightCompensation = 8

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the backlight compensation setting. Possible values are 0 (off) and 1 (on).

66.6.17 kPropertyBrightness = 0

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the brightness, also called the black level. For NTSC, the value is expressed in IRE units * 100. For non-NTSC sources, the units are arbitrary, with zero representing blanking and 10,000 representing pure white. Values range from –10,000 to 10,000.

66.6.18 kPropertyColorEnable = 6

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the color enable setting. The possible values are 0 (off) and 1 (on).

66.6.19 kPropertyContrast = 1

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the contrast, expressed as gain factor * 100. Values range from zero to 10,000.

66.6.20 kPropertyGain = 9

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the gain adjustment. Zero is normal. Positive values are brighter and negative values are darker. The range of values depends on the device.

66.6.21 kPropertyGamma = 5

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the gamma, as gamma * 100. Values range from 1 to 500.

66.6.22 kPropertyHue = 2

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the hue, in degrees * 100. Values range from -180,000 to 180,000 (-180 to +180 degrees).

66.6.23 kPropertySaturation = 3

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the saturation. Values range from 0 to 10,000.

66.6.24 kPropertySharpness = 4

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the sharpness. Values range from 0 to 100.

66.6.25 kPropertyWhiteBalance = 7

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the white balance, as a color temperature in degrees Kelvin. The range of values depends on the device.

66.7 class DirectShowAudioStreamConfigCapsMBS

66.7.1 class DirectShowAudioStreamConfigCapsMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes a range of audio formats.
Notes:

Audio compression and capture filters use this structure to describe the formats they can produce.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.7.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

66.7.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

66.7.4 Methods

66.7.5 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.7.6 Properties

66.7.7 BitsPerSampleGranularity as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the bits per sample.
Notes:

For example, the filter might specify 8 bits per sample through 32 bits per sample, in steps of 8.
(Read only property)

66.7.8 ChannelsGranularity as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the channels.
Notes:

For example, the filter might specify channels 2 through 4, in steps of 2.
(Read only property)

66.7.9 MaximumBitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum sample frequency.
Notes: (Read only property)

66.7.10 MaximumChannels as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum number of channels.
Notes: (Read only property)

66.7.11 MaximumSampleFrequency as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum sample frequency.
Notes: (Read only property)

66.7.12 MinimumBitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum bits per sample.
Notes: (Read only property)

66.7.13 MinimumChannels as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum number of channels.
Notes: (Read only property)

66.7.14 MinimumSampleFrequency as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum sample frequency.
Notes: (Read only property)

66.7.15 SampleFrequencyGranularity as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the frequency.
Notes:

For example, the filter might specify 11025 Hz to 44100 Hz, in steps of 11025 Hz.
(Read only property)

66.8 class DirectShowBaseFilterMBS

66.8.1 class DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The BaseFilter interface is the primary interface for DirectShow filters.
Notes:

All DirectShow filters must expose this interface. The Filter Graph Manager uses this interface to control filters. Applications can use this interface to enumerate pins and query for filter information, but should not use it to change the state of a filter. Instead, use the MediaControl interface on the Filter Graph Manager.
Subclass of the DirectShowMediaFilterMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.8.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr4

66.8.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr4

66.8.4 Methods

66.8.5 AMCameraControl as DirectShowAMCameraControlMBS

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries camera control object.
Example:

```
dim srcfilter as DirectShowBaseFilterMBS // your basefilter
dim value, flags as Integer
dim c as DirectShowAMCameraControlMBS = srcfilter.AMCameraControl
if c<>nil then

c.Get(c.kPropertyZoom, value, flags)
if c.Lasterror = 0 then
MsgBox "Zoom: "+str(value)
else
MsgBox "Zoom: "+c.LasterrorMessage
end if

c.Get(c.kPropertyFocus, value, flags)
```

```
if c.Lasterror = 0 then
MsgBox "Focus: "+str(value)
else
MsgBox "Focus: "+c.LasterrorMessage
end if

c.Get(c.kPropertyExposure, value, flags)
if c.Lasterror = 0 then
MsgBox "Exposure: "+str(value)
else
MsgBox "Exposure: "+c.LasterrorMessage
end if

end if
```

Notes:

Returns object when this filter represents a device supporting this interface.
Else returns nil on any error.
Also sets lasterror property.

66.8.6 AMCrossbar as DirectShowAMCrossbarMBS

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the IAMCrossbar interface for this filter.
Notes: Returns nil if no such interface exists.

66.8.7 AMVideoCompression as DirectShowAMVideoCompressionMBS

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries video compression settings for the filter.

66.8.8 AMVideoControl as DirectShowAMVideoControlMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the video controls for this filter.
Notes:

Should work for capture filters.

Lasterror is set.

66.8.9 AMVideoProcAmp as DirectShowAMVideoProcAmpMBS

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries video properties object.
Example:

```
dim srcfilter as DirectShowBaseFilterMBS // your basefilter
dim value, flags as Integer
dim v as DirectShowAMVideoProcAmpMBS = srcfilter.AMVideoProcAmp
if v<>nil then
v.Get(v.kPropertyHue, value, flags)
if v.Lasterror = 0 then
MsgBox "Hue: "+str(value)
else
MsgBox "Hue: "+v.LasterrorMessage
end if

v.Get(v.kPropertyBrightness, value, flags)
if v.Lasterror = 0 then
MsgBox "Brightness: "+str(value)
else
MsgBox "Brightness: "+v.LasterrorMessage
end if

end if
```

Notes:

Returns object when this filter represents a device supporting this interface.
Else returns nil on any error.
Also sets lasterror property.

66.8.10 ConfigAviMux as DirectShowConfigAviMuxMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the config avimux object.
Notes:

Lasterorr is set.
Works only with filters which support this interface.

66.8.11 ConfigInterleaving as DirectShowConfigInterleavingMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the config interleaving object.
Notes:

Lasterorr is set.
Works only with filters which support this interface.

66.8.12 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.8.13 EnumPins as DirectShowEnumPinsMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The EnumPins method enumerates the pins on this filter.
Example:

```
dim filter as DirectShowBaseFilterMBS // your device filter

dim pn as DirectShowEnumPinsMBS = srcfilter.EnumPins

// loop over them and show names of pins
dim p as DirectShowPinMBS = pn.NextObject
while p <>nil
dim name as string = p.Name

MsgBox name

p = pn.NextObject
wend
```

Notes: Lasterror is set.

66.8.14 FindPin(name as string) as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FindPin method retrieves the pin with the specified identifier.
Notes:

name: string that identifies the pin.

Returns the pin object.
Lasterror is set.

This method supports graph persistence. Use the DirectShowPinMBS.QueryId method to save a pin's state, and use this method to restore the state. The pin's identifier string is defined by the filter implementation. The identifier must be unique within the filter.

66.8.15 Info as DirectShowFilterInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves information about the filter.
Notes:

Lasterror is set.
Returns nil on error.

66.8.16 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows properties dialog for the filter.
Example:

```
dim srcfilter as DirectShowBaseFilterMBS // your filter

srcfilter.ShowPropertyDialog
MsgBox "Result: "+Str(srcfilter.Lasterror)+": "+srcfilter.LasterrorMessage
```

Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.

Title: optional title for the dialog.

Sets lasterror property.

66.8.17 VendorInfo as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves a string containing vendor information.
Notes:

Lasterror is set.
This method is optional; filters are not required to support it.

66.9 class DirectShowBindContextMBS

66.9.1 class DirectShowBindContextMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides access to a bind context, which is an object that stores information about a particular moniker binding operation.

66.9.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr2

66.9.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr2

66.9.4 Methods

66.9.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to create a new bind context.

66.9.6 Properties

66.9.7 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IConfigAviMux interface.
(Read and Write property)

66.9.8 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.9.9 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.10 class DirectShowCaptureGraphBuilderMBS

66.10.1 class DirectShowCaptureGraphBuilderMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Builds capture graphs and other custom filter graphs.
Notes:

66.10.6 Methods

66.10.7 AllocCapFile(FilePath as string, Size as UInt64)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The AllocCapFile method preallocates a capture file to a specified size. For best results, always capture to a defragmented, preallocated capture file that is larger than the size of the capture data.
Notes:

FilePath: a string that contains the name of the file to create or resize.
Size: Size of the file to allocate, in bytes.

Lasterror is set.

This method fails if the file is read-only.
It is best to allocate as much space as possible—ideally, more than needed. However, this can result in a very large file that contains relatively little data. For example, a 1-gigabyte (GB) capture file might contain a few megabytes of captured video. Use the CopyCaptureFile method to copy the data into a new file. That method copies only the data and ignores the empty portion of the original file.
If you use this method to preallocate the file, call SetMode on the file-writer filter with the value zero. If the filter is set to AM_FILE_OVERWRITE, it will delete the preallocated file. Note that some file-writer filters do not support mode 0.

66.10.8 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

66.10.9 Crossbar(filter as DirectShowBaseFilterMBS) as DirectShowAMCrossbarMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds a crossbar in the graph.
Notes:

See also:
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390991(v=vs.85).aspx

This function implements the FindInterface call with LOOK_UPSTREAM_ONLY and the filter you provide.

66.10.10 FindPin(Source as DirectShowBaseFilterMBS, PinDirection as Integer, Category as DirectShowGUIDMBS = nil, Type as DirectShowGUIDMBS = nil, Unconnected as boolean = false, Num as Integer = 0) as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FindPin method retrieves a particular pin on a filter, or determines whether a given pin matches the specified criteria.
Notes:

Source: an interface on a filter, or to an interface on a pin.
PinDirection: Specifies the pin direction (input or output). See constants in DirectShowPinMBS class.
Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil.
Type: A major type GUID that specifies the media type. Use nil to match any media type.
Unconnected: Boolean value that specifies whether the pin must be unconnected. If true, the pin must be unconnected. If false, the pin can be connected or unconnected.
num: Zero-based index of the pin to retrieve, from the set of matching pins. If Source is a filter, and more than one pin matches the search criteria, this parameter specifies which pin to retrieve. If Source is a pin, this parameter is ignored.

Returns the pin object.
Lasterror is set.

If Source is a filter, the method searches for the nth pin on that filter that matches the search criteria, where n is given by the num parameter. If the method finds a matching pin, it returns the pin.
If Source is a pin, the method tests that pin against the search criteria. If the pin matches the criteria, the method returns the pin. Otherwise, it returns nil.

Typically, an application will not need to use this method. It is provided for unusually complex tasks, when the RenderStream method cannot build the filter graph. Use this method to retrieve a desired pin from a capture filter, and then build the rest of the graph manually.
See also:

- 66.10.11 FindPin(Source as DirectShowPinMBS, PinDirection as Integer, Category as DirectShowGUIDMBS = nil, Type as DirectShowGUIDMBS = nil, Unconnected as boolean = false, Num as Integer = 0) as DirectShowPinMBS 12939

66.10.11 FindPin(Source as DirectShowPinMBS, PinDirection as Integer, Category as DirectShowGUIDMBS = nil, Type as DirectShowGUIDMBS = nil, Unconnected as boolean = false, Num as Integer = 0) as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FindPin method retrieves a particular pin on a filter, or determines whether a given pin matches the specified criteria.
Notes:

Source: an interface on a filter, or to an interface on a pin.
PinDirection: Specifies the pin direction (input or output). See constants in DirectShowPinMBS class.
Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil.
Type: A major type GUID that specifies the media type. Use nil to match any media type.
Unconnected: Boolean value that specifies whether the pin must be unconnected. If true, the pin must be unconnected. If false, the pin can be connected or unconnected.
num: Zero-based index of the pin to retrieve, from the set of matching pins. If Source is a filter, and more than one pin matches the search criteria, this parameter specifies which pin to retrieve. If Source is a pin, this parameter is ignored.

Returns the pin object.
Lasterror is set.

If Source is a filter, the method searches for the nth pin on that filter that matches the search criteria, where n is given by the num parameter. If the method finds a matching pin, it returns the pin.
If Source is a pin, the method tests that pin against the search criteria. If the pin matches the criteria, the method returns the pin. Otherwise, it returns nil.

Typically, an application will not need to use this method. It is provided for unusually complex tasks, when the RenderStream method cannot build the filter graph. Use this method to retrieve a desired pin from a capture filter, and then build the rest of the graph manually.

- 66.10.10 FindPin(Source as DirectShowBaseFilterMBS, PinDirection as Integer, Category as DirectShowGUIDMBS = nil, Type as DirectShowGUIDMBS = nil, Unconnected as boolean = false, Num as Integer = 0) as DirectShowPinMBS 12939

66.10.12 GetFiltergraph as DirectShowGraphBuilderMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the filter graph that the builder is using.
Notes: Sets lasterror.

66.10.13 GetStreamConfig(Category as DirectShowGUIDMBS, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the stream config object for this graph.
Example:

```
dim graph as DirectShowCaptureGraphBuilderMBS // your graph
dim filter as DirectShowBaseFilterMBS // your filter

dim StreamConfig as DirectShowAMStreamConfigMBS
StreamConfig = g.GetStreamConfig(DirectShowPinMBS.PIN_CATEGORY_STILL, filter)
```

Notes:

Lasterror is set.
e.g. pass PIN_CATEGORY_CAPTURE or PIN_CATEGORY_PREVIEW for category, as defined in PinMBS class.
See also:

- 66.10.14 GetStreamConfig(preview as boolean, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS 12941

66.10.14 GetStreamConfig(preview as boolean, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the stream config object for this graph.
Notes:

Lasterror is set.

Preview: Pass true to get the preview pin or pass false for the capture pin instead.
See also:

- 66.10.13 GetStreamConfig(Category as DirectShowGUIDMBS, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS 12940

66.10.15 MEDIATYPE_Audio as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Audio.

66.10.16 MEDIATYPE_AUXLine21Data as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Line 21 data. Used by closed captions.

66.10.17 MEDIATYPE_Interleaved as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Interleaved audio and video. Used for Digital Video (DV).

66.10.18 MEDIATYPE_Midi as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: MIDI format.

66.10.19 MEDIATYPE_ScriptCommand as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Data is a script command, used by closed captions.

66.10.20 MEDIATYPE_Stream as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Byte stream with no time stamps.

66.10.21 MEDIATYPE_Text as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Text.

66.10.22 MEDIATYPE_Timecode as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Timecode data. Note: DirectShow does not provide any filters that support this media type.

66.10.23 MEDIATYPE_Video as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Video.

66.10.24 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowBaseFilterMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The RenderStream method connects an output pin on a source filter to a sink filter, optionally through an intermediate filter.
Notes:

Lasterror is set:

Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil. Typical values include the following. PIN_CATEGORY_CAPTURE, PIN_CATEGORY_PREVIEW, PIN_CATEGORY_CC.
Type: A major-type GUID that specifies the media type of the output pin; or nil to use any pin, regardless of media type.
Source: Specifies a pointer to the starting filter for the connection, or to an output pin.
Intermediate: BaseFilter interface of an intermediate filter, such as a compression filter. Can be nil.
Sink: BaseFilter interface of a sink filter, such as a renderer or mux filter. If the value is nil, the method uses a default renderer (see Remarks).

see also:
http://msdn.microsoft.com/en-us/library/windows/desktop/dd311924(v=vs.85).aspx

See also:

- 66.10.25 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowPinMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil) 12944

66.10.25 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowPinMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The RenderStream method connects an output pin on a source filter to a sink filter, optionally through an intermediate filter.
Notes:

Lasterror is set:

Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil. Typical values include the following. PIN_CATEGORY_CAPTURE, PIN_CATEGORY_PREVIEW, PIN_CATEGORY_CC.
Type: A major-type GUID that specifies the media type of the output pin; or nil to use any pin, regardless of media type.
Source: Specifies a pointer to the starting filter for the connection, or to an output pin.
Intermediate: BaseFilter interface of an intermediate filter, such as a compression filter. Can be nil.
Sink: BaseFilter interface of a sink filter, such as a renderer or mux filter. If the value is nil, the method uses a default renderer (see Remarks).

see also:
http://msdn.microsoft.com/en-us/library/windows/desktop/dd311924(v=vs.85).aspx
See also:

- 66.10.24 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowBaseFilterMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil) 12943

66.10.26 SetFiltergraph(graph as DirectShowGraphBuilderMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Tells the graph builder object which filter graph to use.
Notes:

Lasterror is set.

graph: specifies the filter graph to use for subsequent calls to the AddFilter method.

The graph builder will automatically create a filter graph if you don't call this method. If you call this method after the graph builder has created its own filter graph, the call will fail.

66.10.27 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates the rendering section of the filter graph, which will save bits to disk with the specified file name.
Notes:

Lasterror is set.

Type: GUID representing the media subtype. Must be MEDIASUBTYPE_Avi.
FilePath: string containing the output file name.
filter: Optional, a filter representing the multiplexer filter.
Sink: Optional, a FileSinkFilter object representing the file writer.

This method inserts the multiplexer and the file writer into the filter graph and calls SetFileName to set the output file name.
See also:

- 66.10.28 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string, byref filter as DirectShowBaseFilterMBS, byref sink as DirectShowFileSinkFilterMBS) 12945

66.10.28 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string, byref filter as DirectShowBaseFilterMBS, byref sink as DirectShowFileSinkFilterMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates the rendering section of the filter graph, which will save bits to disk with the specified file name.
Notes:

Lasterror is set.

Type: GUID representing the media subtype. Must be MEDIASUBTYPE_Avi.
FilePath: string containing the output file name.
filter: Optional, a filter representing the multiplexer filter.
Sink: Optional, a FileSinkFilter object representing the file writer.

This method inserts the multiplexer and the file writer into the filter graph and calls SetFileName to set the output file name.
See also:

- 66.10.27 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string) 12945

66.10.29 SetupHighestResolution(videoInputFilter as DirectShowBaseFilterMBS, preview as boolean = false)

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience function to query stream config and select the one with highest resolution.
Notes: Queries internally GetStreamConfig, walks over all VideoCaps, picks best and sets it as format.

66.10.30 Properties

66.10.31 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an ICaptureGraphBuilder interface.
(Read and Write property)

66.10.32 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.10.33 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.

Notes: (Read and Write property)

66.11 class DirectShowConfigAviMuxMBS

66.11.1 class DirectShowConfigAviMuxMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class configures the AVI Mux filter.
Notes:

Applications can use this class to set the master stream and to create an AVI 1.0 index.

DirectShowConfigAviMuxMBS provides backward compatibility with older Video for Windows (VFW) Audio-Video Interleaved (AVI) index formats (idx1) as well as extended AVI 2.0 index formats (indx) to allow for file sizes greater than 1 gigabyte (GB). Set and retrieve the compatibility indexes by using the OutputCompatibilityIndex property.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.11.2 Methods

66.11.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.11.4 Properties

66.11.5 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IConfigAviMux interface.
(Read and Write property)

66.11.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.11.7 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.11.8 MasterStream as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the master stream that will be used to synchronize the other streams in the file.
Notes:

Specifies the index of the stream, or –1 to indicate no master stream. The AVI Mux writes one stream for each connected input pin. Stream numbers are indexed from zero.
Lasterror is set.

If you are capturing audio and video from two different sources, use this method to synchronize the streams. Streams coming from separate capture sources may be captured at slightly different rates. If you specify a master stream, the AVI Mux adjusts the playback rates for the other streams, to compensate for any drift that might occur.
It is recommended to use the audio stream as the master stream, because minor adjustments to the video playback rate are less noticeable than changes to the audio playback rate. Also, modifying the audio playback rate will cause the audio to be resampled by the audio driver.
This method works by adjusting the dwScale and dwRate values in the AVISTREAMHEADER structure.
(Read and Write computed property)

66.11.9 OutputCompatibilityIndex as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set the AVI index format.
Notes:

Lasterror is set.
True: Create an AVI 1.0 index, as well as an AVI 2.0 index.

False: Create an AVI 2.0 index, but not an AVI 1.0 index.

The AVI Mux filter always creates an AVI 2.0 index ('indx' format). If the value given in fOldIndex is TRUE, the AVI Mux also creates an AVI 1.0 index ('idx1' format), for backward compatibility with Video for Windows.
The AVI 2.0 index format allows for larger files, incremental growth of files, and minimized disk seeks.
(Read and Write computed property)

66.12 class DirectShowConfigInterleavingMBS

66.12.1 class DirectShowConfigInterleavingMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ConfigInterleaving interface controls how the AVI Mux filter interleaves audio and video samples.
Notes:

Video-authoring applications that handle capturing should use this interface when they need to control how audio samples and video frames will be saved on a disk.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.12.2 Methods

66.12.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.12.4 Properties

66.12.5 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IConfigInterleaving interface.
(Read and Write property)

66.12.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.

(Read and Write property)

66.12.7 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.12.8 Mode as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The interleaving quality setting.
Notes:

Lasterror is set.
See kInterleaving* constants.
(Read and Write computed property)

66.12.9 Constants

66.12.10 kInterleaveBuffered = 3

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the interleaving mode constants.
Notes:

Noninterleaved.
This mode is equivalent to kInterleaveNone but uses less file space and system overhead.

66.12.11 kInterleaveCapture = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the interleaving mode constants.
Notes:

Approximate interleaving with less overhead than kInterleaveFull.
This mode is suitable for video capture. The AVI Mux attempts to use unbuffered, overlapped write operations. Unless the interleaving parameters are configured properly, however, frames may be dropped if one

stream blocks while it waits for data from another stream. In particular, audio buffers should be less than .5 second, or else the video stream will block for excessive periods of time.

66.12.12 kInterleaveFull = 2

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the interleaving mode constants.
Notes:

Full, precise interleaving of audio samples and video frames.
Streams will block indefinitely, waiting for equal amounts of data before interleaving. This mode is suitable for authoring and playback.

66.12.13 kInterleaveNone = 0

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the interleaving mode constants.
Notes:

Noninterleaved.
Frames are written in the order they arrive. Files must be interleaved for playback at a later time. In this mode, the AVI Mux filter attempts to use unbuffered, overlapped write operations, to increase throughput.

66.13 class DirectShowDVInfoMBS

66.13.1 class DirectShowDVInfoMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the format of a digital video (DV) stream.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.13.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

66.13.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

66.13.4 Methods

66.13.5 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.13.6 Properties

66.13.7 DVAAuxCtl as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the AAUX source control Pack for the first audio block.
Notes: (Read and Write property)

66.13.8 DVAAuxCtl1 as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the AAUX source control pack for the second audio block.
Notes: (Read and Write property)

66.13.9 DVAAuxSrc as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the audio auxiliary (AAUX) source pack for the first audio block.
Notes: (Read and Write property)

66.13.10 DVAAuxSrc1 as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the AAUX source pack for the second audio block.
Notes: (Read and Write property)

66.13.11 DVVAuxCtl as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the VAUX source control pack.
Notes: (Read and Write property)

66.13.12 DVVAuxSrc as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the video auxiliary (VAUX) source pack.
Notes: (Read and Write property)

66.14 class DirectShowEnumMonikerMBS

66.14.1 class DirectShowEnumMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates the monikers in a table of monikers.

66.14.2 Methods

66.14.3 Clone as DirectShowEnumMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new enumerator that contains the same enumeration state as the current one.
Notes:

This method makes it possible to record a particular point in the enumeration sequence and then return to that point at a later time. The caller must release this new enumerator separately from the first enumerator.

Returns nil on any error.
Lasterror is set.

66.14.4 CLSID_AudioCompressorCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Audio Compressors

66.14.5 CLSID_AudioInputDeviceCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Audio Capture Sources

66.14.6 CLSID_AudioRendererCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Audio Renderers

66.14.7 CLSID_DeviceControlCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Device Control Filters

66.14.8 CLSID_DVDHWDecodersCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes:

WDM Stream Decompression Devices
This category contains hardware DVD decoders.

66.14.9 CLSID_LegacyAmFilterCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: DirectShow Filters

66.14.10 CLSID_MidiRendererCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Midi Renderers

66.14.11 CLSID_TransmitCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: External Renderers

66.14.12 CLSID_VideoCompressorCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Video Compressors

66.14.13 CLSID_VideoInputDeviceCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Video Capture Sources

66.14.14 Constructor(clsidDeviceClass as DirectShowGUIDMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an enumerator for a specified device category.
Notes:

This method makes it possible to record a particular point in the enumeration sequence and then return to that point at a later time. The caller must release this new enumerator separately from the first enumerator.

Lasterror is set.

66.14.15 NextObject as DirectShowMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the next item in the enumeration sequence.
Notes:

Returns nil on any error.
Lasterror is set.

66.14.16 Reset

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resets the enumeration sequence to the beginning.
Notes:

Lasterror is set.
There is no guarantee that the same set of objects will be enumerated after the reset operation has completed. A static collection is reset to the beginning, but it can be too expensive for some collections, such as files in a directory, to guarantee this condition.

66.14.17 Skip(n as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Skips over the specified number of items in the enumeration sequence.
Notes: Lasterror is set.

66.14.18 Properties

66.14.19 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IEnumMoniker interface.
(Read and Write property)

66.14.20 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.14.21 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.15 class DirectShowEnumPinsMBS

66.15.1 class DirectShowEnumPinsMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates pins on a filter.
Notes:

The BaseFilterMBS.EnumPins method returns this interface. It is based on the standard Component Object Model (COM) enumerators.
The filter graph manager uses this interface when it connects filters. Applications can use it to retrieve pins on a filter. For more information, see Enumerating Objects in a Filter Graph.
If the number of pins on the filter changes, some methods on this interface return VFW_E_ENUM_OUT_OF_SYNC. Call the Reset method to resynchronize the enumerator.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.15.2 Methods

66.15.3 Clone as DirectShowEnumPinsMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Clone method makes a copy of the enumerator with the same enumeration state.
Notes:

Lasterror is set. Returns nil on any error.

If the number of pins changes, the enumerator is no longer consistent with the filter, and the method returns VFW_E_ENUM_OUT_OF_SYNC. Discard any data obtained from previous calls to the enumerator, because it might be invalid. Update the enumerator by calling the IEnumPins::Reset method. You can then call the Clone method safely.

66.15.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.15.5 NextObject as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Next method retrieves the next pin in the enumeration sequence.
Notes:

Lasterror is set. Returns nil on any error.

If the number of pins changes, the enumerator is no longer consistent with the filter, and the method returns VFW_E_ENUM_OUT_OF_SYNC. Discard any data obtained from previous calls to the enumerator, because it might be invalid. Update the enumerator by calling the IEnumPins::Reset method. You can then call the Next method safely.

66.15.6 Reset

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Reset method resets the enumeration sequence to the beginning.
Notes: Lasterror is set.

66.15.7 Skip(n as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Skip method skips over a specified number of pins.
Notes:

n: Number of pins to skip.

Lasterror is set.

If the number of pins changes, the enumerator is no longer consistent with the filter, and the method returns VFW_E_ENUM_OUT_OF_SYNC. Discard any data obtained from previous calls to the enumerator, because it might be invalid. Update the enumerator by calling the IEnumPins::Reset method. You can then call the Skip method safely.

66.15.8 Properties

66.15.9 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IEnumPins interface.
(Read and Write property)

66.15.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.15.11 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.16 class DirectShowFileSinkFilterMBS

66.16.1 class DirectShowFileSinkFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FileSinkFilter interface is implemented on filters that write media streams to a file.
Notes:

A file sink filter in a video capture filter graph, for instance, writes the output of the video compression filter to a file. Typically, the application running this filter graph should enable the user to enter the name of the file to be written to. This interface enables the communication of this information.
If a filter needs the name of an output file, it should expose this interface to allow an application to set the file name. Note that there is currently no base class implementation of this interface.
Any application that must set the name of the file into which the file sink filter will write should use this interface to get and set the file name.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.16.2 Methods

66.16.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.16.4 MEDIASUBTYPE_Asf as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The media sub type for ASF video files.

66.16.5 MEDIASUBTYPE_Avi as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The media sub type for AVI video files.

66.16.6 Properties

66.16.7 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IFileSinkFilter interface.
(Read and Write property)

66.16.8 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.16.9 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.17 class DirectShowFilterGraphMBS

66.17.1 class DirectShowFilterGraphMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class provides methods for building a filter graph.
Notes:

An application can use it to add filters to the graph, connect or disconnect filters, remove filters, and perform other basic operations. However, the DirectShowGraphBuilderMBS interface inherits from this interface and provides additional methods that are more sophisticated. Therefore, applications should use DirectShowGraphBuilderMBS rather than using DirectShowFilterGraphMBS directly.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.17.2 Methods

66.17.3 AddFilter(SourceFilter as DirectShowBaseFilterMBS, Name as string = "")

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a filter to the graph.
Notes:

Filter: The filter to add.
Name: name for filter.

Lasterror is set.

The name of the filter can be "", in which case the Filter Graph Manager generates a name. If the name is not "" and is not unique, this method will modify the name in an attempt to generate a new unique name. If this is successful, this method sets lasterror to VFW_S_DUPLICATE_NAME. If it cannot generate a unique name, it sets lasterror to VFW_E_DUPLICATE_NAME.
AddFilter calls the filter's JoinFilterGraph method to inform the filter that it has been added. AddFilter must be called before attempting to use the Connect, ConnectDirect, or Render method to connect or render pins belonging to the added filter.
The Filter Graph Manager holds a reference count on the filter until the filter is removed from the graph or the Filter Graph Manager is released.

66.17.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.17.5 SetDefaultSyncSource

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the reference clock to the default clock.
Notes:

Lasterror is set.

This method instructs the Filter Graph Manager to choose a reference clock using its default algorithm. For more information about the algorithm that it uses, see Reference Clocks.
Usually you do not need to call this method, because the Filter Graph Manager automatically selects a clock. However, if you call SetSyncSource to override the clock, you can use SetDefaultSyncSource to restore the default clock.
This method fails if the filter graph is running or paused.

66.17.6 Properties

66.17.7 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IFilterGraph interface.
(Read and Write property)

66.17.8 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.17.9 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.18 class DirectShowFilterInfoMBS

66.18.1 class DirectShowFilterInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for information about a filter.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.18.2 Methods

66.18.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.18.4 Properties

66.18.5 Graph as DirectShowFilterGraphMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns filter graph.
Notes:

If the filter is member of a filter graph, this is a reference to the filter graph's FilterGraph interface. If the filter is not a member of a filter graph, this value of this member is nil.
(Read and Write property)

66.18.6 Name as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the filter.
Notes: (Read and Write property)

66.19 class DirectShowGraphBuilderMBS

66.19.1 class DirectShowGraphBuilderMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class provides methods that enable an application to build a filter graph.
Notes:

The GraphBuilder interface inherits from the FilterGraph interface. FilterGraph provides basic operations, such as adding a filter to the graph or connecting two pins. GraphBuilder adds further methods that construct graphs from partial information. For example, the RenderFile method builds a graph for file playback, given the name of the file. The Render method renders data from an output pin by connecting new filters to the pin.

Using these methods, an application does not need to specify every filter and pin connection in the graph. Instead, the Filter Graph Manager selects filters that are registered on the user's system, adds them to the graph, and connects them.

http://msdn.microsoft.com/en-us/library/windows/desktop/dd390085(v=vs.85).aspx
Subclass of the DirectShowFilterGraphMBS class.

66.19.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr8

66.19.3 Blog Entries

- MBS Real Studio Plugins, version 12.3pr8

66.19.4 Methods

66.19.5 Abort

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Abort method requests the Filter Graph Manager to halt its current task as quickly as possible.
Notes:

The current task may or may not fail to complete. Possibly the fastest option for the Filter Graph Manager is to complete the task.

Lasterror is set.

66.19.6 AddSourceFilter(FileName as string, FilterName as string) as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a source filter for a specified file to the filter graph.
Notes:

FileName: the name of the file to load.
FilterName: name for the source filter.

Lasterror is set.

This method searches for an installed filter that can read the specified file. If it finds one, the method adds it to the filter graph and returns a pointer to the filter's IBaseFilter interface. To determine the media type and compression scheme of the file, the Filter Graph Manager reads the first few bytes of the file, looking for specific patterns of bytes, as documented in the article Registering a Custom File Type.

The application is responsible for building the rest of the filter graph. To do so, call EnumPins to enumerate the output pins on the source filter. Then use either the Connect method or the Render method.

If the method succeeds, the BaseFilter interface has an outstanding reference count. The caller must release the interface.

To render a file for default playback, use the RenderFile method.

The Filter Graph Manager holds a reference count on the filter until the filter is removed from the graph or the Filter Graph Manager is released.

66.19.7 Connect(pinOut as DirectShowPinMBS, pinIn as DirectShowPinMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Connects the two pins, using intermediates if necessary.
Notes:

pinOut: the output pin.
pinIn: the input pin.

Lasterror is set.

This method connects two pins directly or indirectly, adding intermediate filters if necessary. The method starts by attempting a direct connection. If that fails, it tries to use any filters that are already in the filter graph and have unconnected input pins. (It enumerates these in an arbitrary order.) If that fails, it searches for filters in the registry, and tries them in order of merit.

During the connection process, the Filter Graph Manager ignores pins on intermediate filters if the pin name begins with a tilde (
textasciitilde).

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390088(v=vs.85).aspx

66.19.8 ConnectFilters(pinOut as DirectShowPinMBS, dest as DirectShowBaseFilterMBS)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience function to connect an output pin to a filter.
Notes: Lasterror is set.
See also:

- 66.19.9 ConnectFilters(source as DirectShowBaseFilterMBS, dest as DirectShowBaseFilterMBS) 12972
- 66.19.10 ConnectFilters(source as DirectShowBaseFilterMBS, pinIn as DirectShowPinMBS) 12973

66.19.9 ConnectFilters(source as DirectShowBaseFilterMBS, dest as DirectShowBaseFilterMBS)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience function to connect two filters.
Notes: Lasterror is set.
See also:

- 66.19.8 ConnectFilters(pinOut as DirectShowPinMBS, dest as DirectShowBaseFilterMBS) 12972
- 66.19.10 ConnectFilters(source as DirectShowBaseFilterMBS, pinIn as DirectShowPinMBS) 12973

66.19.10 ConnectFilters(source as DirectShowBaseFilterMBS, pinIn as DirectShowPinMBS)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience function to connect a filter to an input pin.
Notes: Lasterror is set.
See also:

- 66.19.8 ConnectFilters(pinOut as DirectShowPinMBS, dest as DirectShowBaseFilterMBS) 12972
- 66.19.9 ConnectFilters(source as DirectShowBaseFilterMBS, dest as DirectShowBaseFilterMBS) 12972

66.19.11 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

66.19.12 MediaControl as DirectShowMediaControlMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries related media control object.
Notes: Lasterror is set.

66.19.13 MediaEventEx as DirectShowMediaEventExMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries related media event object.
Notes: Lasterror is set.

66.19.14 Render(pinOut as DirectShowPinMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Render method builds a filter graph that renders the data from a specified output pin.
Notes:

pinOut: an output pin.
Lasterror is set.

This method renders the data from a specified output pin, adding new filters to the graph as needed. Filters are tried in the same order as for the Connect method. For more information, see Intelligent Connect.
During the connection process, the Filter Graph Manager ignores pins on intermediate filters if the pin name begins with a tilde (
textasciitilde).

66.19.15 RenderFile(FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Builds a filter graph that renders the specified file.
Notes:

FilePath: string that contains the name of a media file.
Lasterror is set.

If the FilePath parameter specifies a media file, the method builds a filter graph for default playback. First it adds a source filter that can read the file, using the same process as the AddSourceFilter method. Then it renders the output pins on the source filter, adding intermediate filters if necessary. It tries filters in the same order as the Connect method.
During the connection process, the Filter Graph Manager ignores pins on intermediate filters if the pin name begins with a tilde (
textasciitilde).
Note that the RenderFile method does not remove any filters from the graph. If you call RenderFile twice, the second call simply adds more filters to the graph. When you run the graph, both sources will play at the same time.

66.19.16 SetLogFile(FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetLogFile method sets the file for logging actions taken when attempting to perform an operation.
Notes:

This method is for use in debugging; it is intended to help you determine the cause of any failure to automatically build a filter graph.
Lasterror is set.

66.19.17 VideoWindow as DirectShowVideoWindowMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the video window related tot this graph builder.
Notes: Lasterror is set.

66.20 class DirectShowGUIDMBS

66.20.1 class DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a Windows unique ID.
Notes: If you need to validate a GUID or UUID, please check the IsGUID function in our FAQ.

66.20.4 Methods

66.20.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a GUID with only zeros.
Example:

```
dim g as new DirectShowGUIDMBS

MsgBox g.DisplayString
```

See also:

- 66.20.6 Constructor(Value as String) 12977
- 66.20.7 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer) 12977

66.20.6 Constructor(Value as String)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates GUID based on a text string.
Notes: Raises exception if text has wrong format.
See also:

- 66.20.5 Constructor 12976
- 66.20.7 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer) 12977

66.20.7 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new GUID with the given byte values.
Example:

```
dim g as new DirectShowGUIDMBS(& h14, & h3e, & h4e, & h83, & h64, & h97, & h11, & hd2, & ha2, & h31, & h00, & hc0, & h4f, & ha3, & h18, & h09)

MsgBox g.DisplayString
```

See also:

- 66.20.5 Constructor 12976
- 66.20.6 Constructor(Value as String) 12977

66.20.8 Equal(other as DirectShowGUIDMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether two GUIDs are equal.
Notes: Returns true if both items are equals.

66.20.9 Operator_Convert as String

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Converts GUID to text.
Notes: Same as DisplayName.
See also:

- 66.20.10 Operator_Convert(text as String) 12978

66.20.10 Operator_Convert(text as String)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Converts text to GUID.
Notes:

Same as Constructor.
Raises exception if text has wrong format.
See also:

- 66.20.9 Operator_Convert as String 12978

66.20.11 Parse(GUID as String) as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 18.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parses GUID string into a GUID object.

66.20.12 Properties

66.20.13 Data as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The UID as binary string.
Notes: (Read and Write property)

66.20.14 DisplayString as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ID well formatted.
Notes: (Read only property)

66.20.15 Memory as MemoryBlock

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set GUID with memory block.
Notes: (Read and Write property)

66.20.16 Ptr as Ptr

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pointer to raw GUID data.
Notes: (Read only property)

66.20.17 Byte(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Read or write the byte value.
Example:

```
dim g as new DirectShowGUIDMBS

g.Byte(1) = 65

MsgBox str(g.Byte(1)) // shows 65
```

Notes: (Read and Write computed property)

66.21 class DirectShowMediaControlMBS

66.21.1 class DirectShowMediaControlMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides methods for controlling the flow of data through the filter graph.
Notes:

It includes methods for running, pausing, and stopping the graph. The Filter Graph Manager implements this interface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.21.2 Methods

66.21.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.21.4 GetState(msTimeout as Integer = -1) as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the state of the filter graph—paused, running, or stopped.
Notes:

msTimeout: Duration of the time-out, in milliseconds, or INFINITE (-1) to specify an infinite time-out.

State transitions are not necessarily synchronous. Therefore, when you call this method, the filter graph might be in transition to a new state. In that case, the method blocks until the transition completes or until the specified time-out elapses.

Lasterror is set.

Applications can use this method to determine whether playback has started after a call to Run. Generally, applications should have their own mechanism for tracking which state they have put the filter graph into. Applications typically use the current state to determine which user interface controls are enabled or disabled. For example, once the graph goes into the running state, the application might disable a "Play" button and enable "Stop" and "Pause" buttons.
If the filter graph is in a transition to a new state, the returned state is the new state, not the previous state. This method returns an error if there is a call on another thread to change the state while this method is

blocked.
Avoid specifying a time-out of INFINITE, because threads cannot process messages while waiting in GetState. If you call GetState from the thread that processes Windows messages, specify small wait times on the call in order to remain responsive to user input. This is especially important when the source is streaming over a network or from the Internet because state transitions in these environments can take significantly more time to complete.

66.21.5 Pause

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pauses all the filters in the filter graph.
Notes:

Lasterror is set.

Pausing the filter graph cues the graph for immediate rendering when the graph is next run. While the graph is paused, filters process data but do not render it. Data is pushed through the graph and processed by transform filters as far as buffering permits, but renderer filters do not render the data. However, video renderers display a static poster frame of the first sample.

If the method returns S_FALSE, call the GetState method to wait for the state transition to complete, or to check if the transition has completed. When you call Pause to display the first frame of a video file, always follow it immediately with a call to GetState to ensure that the state transition has completed. Failure to do this can result in the video rectangle being painted black.
If the method fails, it stops the graph before returning.

66.21.6 RenderFile(FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Builds a filter graph that renders the specified file.
Notes:

Lasterror is set.

filePath: Specifies the name of the file to load.

66.21.7 Run

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs all the filters in the filter graph.
Notes:

While the graph is running, data moves through the graph and is rendered.
Lasterror is set.

If the filter graph is stopped, this method pauses the graph before running. If the graph is already running, the method returns S_OK but has no effect.
The graph runs until the application calls the Pause or Stop method. When playback reaches the end of the stream, the graph continues to run, but the filters do not stream any more data. At that point, the application can pause or stop the graph. For information about the end-of-stream event, see Pause and EC_COMPLETE.
This method does not seek to the beginning of the stream. Therefore, if you run the graph, pause it, and then run it again, playback resumes from the paused position. If you run the graph after it has reached the end of the stream, nothing is rendered. To seek the graph, use the MediaSeeking interface.
If method returns S_FALSE, it means that the method returned before all of the filters switched to a running state. The filters will complete the transition after the method returns. Optionally, you can wait for the transition to complete by calling the GetState method with a timeout value. However, this is not required.
If the Run method returns an error code, it means that one or more filters failed to run. However, some filters might be in a running state. In a multistream graph, entire streams might be playing successfully. Typically the application would tear down the graph and report an error in this case.

66.21.8 Stop

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Stops all the filters in the graph.
Notes:

Lasterror is set.

If the graph is running, this method pauses the graph before stopping it. While paused, video renderers can copy the current frame to display as a poster frame.

This method does not seek to the beginning of the stream. If you call this method and then call the Run method, playback resumes from the stopped position. To seek, use the IMediaSeeking interface.

The Filter Graph Manager pauses all the filters in the graph, and then calls the Stop method on all filters, without waiting for the pause operations to complete. Therefore, some filters might have their Stop method called before they complete their pause operation. If you develop a custom rendering filter, you might need to handle this case by pausing the filter if it receives a stop command while in a running state. However, most filters do not need to take any special action in this regard.

66.21.9 StopWhenReady

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pauses the filter graph, allowing filters to queue data, and then stops the filter graph.
Notes:

Lasterror is set.

This method is useful if you want to seek the filter graph while the graph is stopped. As long as the filter graph is stopped, changes in the current position do not repaint the video window with a new frame. Therefore, calling SetPositions does not update the video window. To update the window after the seek operation, call StopWhenReady. This method transitions the graph to a paused state, waits for the pause operation to complete, and then transitions the graph back to stopped. The pause operation queues data in the graph, so that the video renderer receives and displays the new frame.

This method is asynchronous. It waits on a separate thread for the pause to complete. The calling thread does not block, which enables the application to respond to user input. When the method returns, the logical state of the graph is stopped, even before the pause operation completes. If you call the GetState method at this point, it returns State_Stopped.

If the application issues another state-change command (such as pause, run, or seek) before the pause operation completes, the new command cancels the pending stop command. The pause operation completes, but the graph does not stop.

66.21.10 Properties

66.21.11 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IMediaControl interface.
(Read and Write property)

66.21.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.21.13 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.21.14 Constants

66.21.15 kStatePaused = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the state constants.
Notes: Paused

66.21.16 kStateRunning = 2

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the state constants.
Notes: Running

66.21.17 kStateStopped = 0

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the state constants.
Notes: Stopped.

66.22 class DirectShowMediaEventExMBS

66.22.1 class DirectShowMediaEventExMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for extended options for media event handling.
Notes:

The DirectShowMediaEventExMBS interface inherits the DirectShowMediaEventMBS interface, which contains methods for retrieving event notifications and for overriding the filter graph's default handling of events. MediaEventEx adds methods that enable an application window to receive messages when events occur.
Subclass of the DirectShowMediaEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.22.2 Methods

66.22.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.22.4 Properties

66.22.5 NotifyFlags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enables or disables event notifications.
Notes:

Value indicating whether to enable or disable event notifications. Must be one of the following values: 0 = Enable event notifications or AM_MEDIAEVENT_NONOTIFY = Disable event notifications.

Lasterror is set.

By default, the Filter Graph Manager posts event notifications for the application. If the NotifyFlags parameter is AM_MEDIAEVENT_NONOTIFY, the Filter Graph Manager clears any pending event notifications from the queue, and does not post any new ones.
If event notifications are disabled, the handle returned by the GetEventHandle method is signaled at the end of each stream—that is, whenever the Filter Graph Manager receives an EC_COMPLETE event.
(Read and Write computed property)

66.22.6 Constants

66.22.7 AM_MEDIAEVENT_NONOTIFY = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the notify flags constant.
Notes: Pass this value to NotifyFlags to disable event notification.

66.23 class DirectShowMediaEventMBS

66.23.1 class DirectShowMediaEventMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for media event handling.
Notes:

The MediaEvent interface contains methods for retrieving event notifications and for overriding the Filter Graph Manager's default handling of events. The MediaEventEx interface inherits this interface and extends it.

The Filter Graph Manager implements this interface. Applications can use it to respond to events that occur in the filter graph, such as the end of a stream or a rendering error. Filters post events to the filter graph using the IMediaEventSink interface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.23.2 Methods

66.23.3 CancelDefaultHandling(eventCode as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Cancels the Filter Graph Manager's default handling for a specified event.
Notes:

The event notification is passed to the application.
Lasterror is set.

To restore the default handling for an event, call the RestoreDefaultHandling method with the event code.

66.23.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.23.5 FreeEventParams(eventCode as Integer, Param1 as Integer, Param2 as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Frees resources associated with the parameters of an event.
Notes:

EventCode: Event code.
Param1: First event parameter.
Param2: Second event parameter.

Lasterorr is set.
After you call the GetEvent method to retrieve an event notification, you must call FreeEventParams. This method frees any resources that were allocated for the event parameters. Pass in the same variables used for the GetEvent call.

66.23.6 RestoreDefaultHandling(eventCode as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Restores the Filter Graph Manager's default handling for a specified event.
Notes:

Lasterror is set.
By default, the Filter Graph Manager handles some events (such as EC_REPAINT) without passing them to the application. If you call the CancelDefaultHandling method to override the default handling for an event, you can restore the default behavior by calling RestoreDefaultHandling with the same event code.

66.23.7 Properties

66.23.8 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IMediaEvent interface.
(Read and Write property)

66.23.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.23.10 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.23.11 Constants

66.23.12 AM_MEDIAEVENT_NONOTIFY = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the notify flags constant.
Notes: Pass this value to NotifyFlags to disable event notification.

66.24 class DirectShowMediaFilterMBS

66.24.1 class DirectShowMediaFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The MediaFilter interface controls the streaming state of a filter.
Notes:

All DirectShow filters implement this interface. It provides methods for switching the filter between states (stopped, paused, and running); for retrieving the filter's current state; and for setting a reference clock. Applications should not call MediaFilter methods on filters.

The Filter Graph Manager also exposes this interface. Applications can use the SetSyncSource method to set the graph reference clock, and GetSyncSource to retrieve the clock. Applications should not call the other methods on this interface. Instead, use the corresponding methods on the MediaControl interface.
The BaseFilter interface inherits from MediaFilter.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.24.2 Methods

66.24.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.24.4 Pause

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Pause method pauses the filter.
Notes:

Lasterror is set.

When a filter is paused, it can receive, process, and deliver samples. However, a renderer filter will only accept one sample while paused. Therefore, when the filter graph is paused, samples move through the graph until the first sample reaches the renderer. At that point, streaming is paused until the Run method is called. Video renderers display the first sample as a still frame.

Live capture filters do not deliver any samples while paused, only while running.

The state transition might be asynchronous. If the method returns before the transition completes, the lasterror value is 1. A renderer filter does not complete the transition to paused until either (1) it receives one sample, or (2) it receives an end-of-stream notification. While the state transition is pending, State gives lasterror VFW_S_STATE_INTERMEDIATE.

66.24.5 Run(StartTime as Int64)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Run method runs the filter.
Notes:

StartTime: Reference time corresponding to stream time 0.
Lasterror is set.

When a filter is running, it can receive, process, and deliver samples. Source filters generate new samples, and renderer filters render them.
The state transition might be asynchronous. If the method returns before the transition completes, the lasterror value is 1.
Stream time is calculated as the current reference time minus StartTime. To calculate when a media sample should be rendered, the renderer compares the time stamp with the current stream time. Thus, a media sample with a time stamp of zero should be rendered at time StartTime. For more information, see Time and Clocks in DirectShow.
When an application calls the Run method, the Filter Graph Manager calls Run on each filter. It sets the value of StartTime slightly in the future, to account for graph latency.

66.24.6 Stop

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Stop method stops the filter.
Notes:

Lasterror is set.
When a filter is stopped, it does not process or deliver any samples, and it rejects samples from upstream filters.
The state transition might be asynchronous. If the method returns before the transition completes, the lasterror value is 1.
This method always sets the filter's state to kStateStopped, even if the method returns an error code.

66.24.7 Properties

66.24.8 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IMediaFilter interface.
(Read and Write property)

66.24.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.24.10 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.24.11 Constants

66.24.12 kStatePaused = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the filter state constants.
Notes: Paused. The filter is processing data, but not rendering it.

66.24.13 kStateRunning = 2

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the filter state constants.
Notes: Running. The filter is processing and rendering data.

66.24.14 kStateStopped = 0

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the filter state constants.
Notes: Stopped. The filter is not processing data.

66.25 class DirectShowMediaTypeMBS

66.25.1 class DirectShowMediaTypeMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the format of a media sample.
Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd373477(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.25.4 Methods

66.25.5 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.25.6 SetHeight(value as integer) as boolean

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets height of video info header.
Notes: Convenience function which works with VideoInfoHeader and VideoInfoHeader2 to set the value.

66.25.7 SetWidth(value as integer) as boolean

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets width of video info header.
Notes: Convenience function which works with VideoInfoHeader and VideoInfoHeader2 to set the value.

66.25.8 Properties

66.25.9 DVINFO as DirectShowDVInfoMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries format data as DVInfo.
Notes:

Returns nil if format is not a DVInfo.
(Read only property)

66.25.10 FixedSizeSamples as Boolean

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: If true, samples are of a fixed size.
Notes:

This field is informational only. For audio, it is generally set to true. For video, it is usually true for uncompressed video and false for compressed video.
(Read and Write property)

66.25.11 FormatType as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: GUID that specifies the structure used for the format block.
Notes: (Read and Write property)

66.25.12 Handle as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

66.25.13 Height as Integer

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries height of video info header.
Notes:

Convenience function which works with VideoInfoHeader and VideoInfoHeader2 to query the value.
(Read only property)

66.25.14 MajorType as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Globally unique identifier (GUID) that specifies the major type of the media sample. F
Notes:

or a list of possible major types, see Media Types.
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390670(v=vs.85).aspx
(Read and Write property)

66.25.15 SampleSize as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Size of the sample in bytes. For compressed data, the value can be zero.
Notes: (Read and Write property)

66.25.16 SubType as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: GUID that specifies the subtype of the media sample.
Notes:

For a list of possible subtypes, see Media Types. For some formats, the value might be MEDIASUBTYPE_None, which means the format does not require a subtype.
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390670(v=vs.85).aspx
(Read and Write property)

66.25.17 TemporalCompression as Boolean

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: If true, samples are compressed using temporal (interframe) compression.
Notes:

A value of true indicates that not all frames are key frames. This field is informational only.
(Read and Write property)

66.25.18 VideoInfoHeader as DirectShowVideoInfoHeaderMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries format data as VideoInfoHeader.
Notes:

Returns nil if format is not a VideoInfoHeader.
(Read only property)

66.25.19 VideoInfoHeader2 as DirectShowVideoInfoHeader2MBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries format data as VideoInfoHeader2.
Notes:

Returns nil if format is not a VideoInfoHeader2.
(Read only property)

66.25.20 WaveFormat as DirectShowWaveFormatMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries format data as WaveFormat.
Notes:

Returns nil if format is not a WaveFormat.
(Read only property)

66.25.21 Width as Integer

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries width of video info header.
Notes:

Convenience function which works with VideoInfoHeader and VideoInfoHeader2 to query the value.
(Read only property)

66.26 class DirectShowMonikerMBS

66.26.1 class DirectShowMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The moniker class to query information about devices.
Notes:

In this plugin we use monikers to enumerate filters and devices in order to connect with BindBaseFilter method.

Enables you to use a moniker object, which contains information that uniquely identifies a COM object. An object that has a pointer to the moniker object's IMoniker interface can locate, activate, and get access to the identified object without having any other specific information on where the object is actually located in a distributed system.
Monikers are used as the basis for linking in COM. A linked object contains a moniker that identifies its source. When the user activates the linked object to edit it, the moniker is bound; this loads the link source into memory.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms679705(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.26.4 Methods

66.26.5 BindBaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Binds moniker to a base filter.
Notes:

Lasterror is set.

This implements the primary function of a moniker, which is to locate the object identified by the moniker and return a pointer to one of its interfaces.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms691433(v=vs.85).aspx

66.26.6 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.26.7 DisplayName(BindContext as DirectShowBindContextMBS = nil) as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the display name for the moniker.
Notes:

BindContext: The DirectShowBindContextMBS interface on the bind context to be used in this operation. The bind context caches objects bound during the binding process, contains parameters that apply to all operations using the bind context, and provides the means by which the moniker implementation should retrieve information about its environment. If you provide nil, the plugin creates a temporary context.

GetDisplayName provides a string that is a displayable representation of the moniker. A display name is not a complete representation of a moniker's internal state; it is simply a form that can be read by users. As a result, it is possible (though rare) for two different monikers to have the same display name.

This is not a text to show to user.

66.26.8 EnumMonikers(forward as boolean) as DirectShowEnumMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves enumerator for the components of a composite moniker.
Notes: Lasterror is set.

66.26.9 Hash as UInt32

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a hash value using the internal state of the moniker.
Notes: Lasterror is set.

66.26.10 IsEqual(other as DirectShowMonikerMBS) as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines whether this moniker is identical to the specified moniker.
Notes:

Returns true if both are identical.
Lasterror is set.

66.26.11 Properties(BindContext as DirectShowBindContextMBS = nil) as DirectShowPropertyBagMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates property bag with properties of the moniker.
Notes: Lasterror is set.

66.26.12 Properties

66.26.13 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IMoniker interface.
(Read and Write property)

66.26.14 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.26.15 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.27 class DirectShowNullRendererMBS

66.27.1 class DirectShowNullRendererMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The null renderer filter.
Notes:

The Null Renderer filter is a renderer that discards every sample it receives, without displaying or rendering the sample data.

Use this filter when an output pin in the graph requires a downstream connection, but you do not wish to render the data from that pin. By connecting the output pin to the Null Renderer, you complete the connection without rendering the data.
Subclass of the DirectShowBaseFilterMBS class.

66.27.4 Methods

66.27.5 Constructor

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new Null filter.
Notes: On success the handle property is not zero.

66.28 class DirectShowPinMBS

66.28.1 class DirectShowPinMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This interface is exposed by all input and output pins.
Notes:

The filter graph manager uses this interface to connect pins and perform flushing operations. Applications can use this interface to query the pin for information.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.28.4 Methods

66.28.5 Accept(Type as DirectShowMediaTypeMBS) as Boolean

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Accept method determines whether the pin accepts a specified media type.
Notes:

Lasterror is set.

A return value of true indicates that the pin will accept the media type, either on the next sample, or after a pin reconnection. The implementation should take into account the current state of the filter, including connections on other pins, and any properties that can be set on the filter.

Any other return value, including false, means that the pin rejects the media type. Therefore, test for true explicitly.

If the filter is running, a return value of true is ambiguous. The pin might accept a format change on the next media sample, without reconnecting; or it might need to reconnect. If the pin supports the IPinConnection interface, call the IPinConnection::DynamicQueryAccept method, which specifically tests whether the pin can accept the new type without reconnecting.

66.28.6 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries base filter.
Notes: Lasterror is set.

66.28.7 ConnectedTo as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ConnectedTo method retrieves a pointer to the connected pin, if any.
Notes: Lasterror is set.

66.28.8 ConnectionMediaType as DirectShowMediaTypeMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ConnectionMediaType method retrieves the media type for the current pin connection, if any.
Notes:

Lasterror is set.
Returns nil if not connected.

66.28.9 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.28.10 Direction as Integer

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The QueryDirection method gets the direction of the pin (input or output).
Notes: Lasterror is set.

66.28.11 Disconnect

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Disconnect method breaks the current pin connection.
Notes:

The Filter Graph Manager calls this method when it disconnects two filters. Applications and filters should not call this method. Instead, call the DirectShowFilterGraphMBS.Disconnect method on the Filter Graph Manager.
Sets lasterror.

This method fails if the filter is paused or running. If the pin supports the PinConnection interface, call PinConnection DynamicDisconnect to disconnect the pin when the filter is paused or running.
This method does not disconnect the other pin in the pin connection.

66.28.12 Id as String

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Id method retrieves an identifier for the pin.
Notes:

Returns a string containing the pin identifier.
Lasterror is set.

66.28.13 MediaTypes as DirectShowMediaTypeMBS()

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates the pin's preferred media types.
Notes: Lasterror is set.

66.28.14 Name as String

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries name of the pin.

Notes: Lasterror is set.

66.28.15 PIN_CATEGORY_ANALOGVIDEOIN as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Input pin of the capture filter that takes analog and digitizes it.

66.28.16 PIN_CATEGORY_CAPTURE as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Capture pin.

66.28.17 PIN_CATEGORY_CC as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing closed captioning data from Line 21.

66.28.18 PIN_CATEGORY_EDS as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing Extended Data Services (Line 21, even fields).

66.28.19 PIN_CATEGORY_NABTS as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing North American Videotext Standard data.

66.28.20 PIN_CATEGORY_PREVIEW as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Preview pin.

66.28.21 PIN_CATEGORY_STILL as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin that provides a still image. The filter's capture pin must be connected before the still-image pin is connected.

66.28.22 PIN_CATEGORY_TELETEXT as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing teletext (a closed captioning variant).

66.28.23 PIN_CATEGORY_TIMECODE as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing timecode data.

66.28.24 PIN_CATEGORY_VBI as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin to be connected to the VBI Surface Allocator, the VBI surface allocator filter that is needed to allocate the correct video memory for things like closed captioning overlays in scenarios where a video port is being used. PCI, IEEE 1394, and USB scenarios do not use this filter.

66.28.25 PIN_CATEGORY_VIDEOPORT as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Video output pin to be connected to input pin zero on the Overlay Mixer.

66.28.26 PIN_CATEGORY_VIDEOPORT_VBI as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing vertical blanking interval data.

66.28.27 Properties

66.28.28 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IPin interface.
(Read and Write property)

66.28.29 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.28.30 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.28.31 Constants

66.28.32 kPinDirectionInput = 0

MBS Win Plugin, Plugin Version: 21.0.

Function: One of the pin direction constants.
Notes: Input

66.28.33 kPinDirectionOutput = 1

MBS Win Plugin, Plugin Version: 21.0.

Function: One of the pin direction constants.
Notes: Output

66.29 class DirectShowPropertyBagMBS

66.29.1 class DirectShowPropertyBagMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides an object with a property bag in which the object can save its properties persistently.
Notes:

used for Monikers to store properties like description and user friendly name.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.29.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr2

66.29.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr2

66.29.4 Methods

66.29.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.29.6 Description as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience method to read description.
Notes: Lasterror is set.

66.29.7 DevicePath as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience method to read device path.
Notes: Lasterror is set.

66.29.8 FriendlyName as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience method to read friendly name.
Notes: Lasterror is set.

66.29.9 Read(name as string) as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads one of the properties into a variant.
Notes:

As we only need 3 properties for DirectShowMonikerMBS.Properties, we have direct accessors.
Lasterror is set.

66.29.10 Properties

66.29.11 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IPropertyBag interface.
(Read and Write property)

66.29.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.

(Read and Write property)

66.29.13 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.30 class DirectShowSampleGrabberMBS

66.30.1 class DirectShowSampleGrabberMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a sample grabber.
Notes:

The Sample Grabber filter provides a way to retrieve samples as they pass through the filter graph. It is a transform filter with one input pin and one output pin. It passes all samples downstream unchanged, so you can insert it into a filter graph without altering the data stream. Your application can then retrieve individual samples from the filter by calling methods on the ISampleGrabber interface.
If you want to retrieve samples without rendering the data, connect the Sample Grabber filter to the Null Renderer filter.

66.30.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr8

66.30.3 Blog Entries

- MBS Real Studio Plugins, version 12.3pr8

66.30.4 Methods

66.30.5 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the filter for this grabber.
Notes: So you can add it to a graph builder.

66.30.6 ConnectedMediaType as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetConnectedMediaType method retrieves the media type for the connection on the input pin of the Sample Grabber.
Notes: Lasterror is set.

66.30.7 Constructor

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new instance of the sample grabber.

66.30.8 Current as Picture

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Queries current picture.
Notes:

This actually makes a copy of the internal buffer into a new picture object.
Lasterror is set.

66.30.9 Destructor

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

66.30.10 SetOneShot(OneShot as boolean)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetOneShot method specifies whether the Sample Grabber filter halts after the filter receives a sample.

66.30.11 Properties

66.30.12 Handle as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an ISampleGrabber interface.
(Read and Write property)

66.30.13 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.30.14 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.30.15 Events

66.30.16 NewFrame(Time as Double)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: .

Function: The event for a new video frame.
Notes:

time is the starting time of the sample, in seconds.
Use the Current method to get the picture.

66.31 class DirectShowVideoInfoHeader2MBS

66.31.1 class DirectShowVideoInfoHeader2MBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the bitmap and color information for a video image, including interlace, copy protection, and pixel aspect ratio information.
Notes:

66.31.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

66.31.4 Methods

66.31.5 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.31.6 Properties

66.31.7 AvgTimePerFrame as Int64

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The desired average display time of the video frames, in 100-nanosecond units.
Notes:

The actual time per frame may be longer.
see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx

(Read and Write property)

66.31.8 BitErrorRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Data error rate, in bit errors per second.
Notes: (Read and Write property)

66.31.9 BitRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Approximate data rate of the video stream, in bits per second.
Notes: (Read and Write property)

66.31.10 ControlFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Control flags.
Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx
(Read and Write property)

66.31.11 CopyProtectFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flag set with the AMCOPYPROTECT_RestrictDuplication value (0x00000001) to indicate that the duplication of the stream should be restricted.
Notes:

If undefined, specify zero or else the connection will be rejected.
(Read and Write property)

66.31.12 Height as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap height.
Notes: (Read and Write property)

66.31.13 InterlaceFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flags that specify how the video is interlaced.
Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx
(Read and Write property)

66.31.14 PictAspectRatioX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The X dimension of picture aspect ratio. For example, 16 for a 16-inch x 9-inch display.
Notes: (Read and Write property)

66.31.15 PictAspectRatioY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Y dimension of picture aspect ratio. For example, 9 for a 16-inch x 9-inch display.
Notes: (Read and Write property)

66.31.16 SourceBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

66.31.17 SourceLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

66.31.18 SourceRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

66.31.19 SourceTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

66.31.20 TargetBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

66.31.21 TargetLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

66.31.22 TargetRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

66.31.23 TargetTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

66.31.24 Width as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap width.
Notes: (Read and Write property)

66.32 class DirectShowVideoInfoHeaderMBS

66.32.1 class DirectShowVideoInfoHeaderMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the bitmap and color information for a video image.
Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407325(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

http://msdn.microsoft.com/en-us/library/windows/desktop/dd407325(v=vs.85).aspx
(Read and Write property)

66.32.8 BitCount as Integer

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap bit count value.
Notes:

The number of bits-per-pixel. Determines the number of bits that define each pixel and the maximum number of colors in the bitmap. This member must be one of the following values.
Can be 0 for PNG/JPEG images, 1 for B/W, 4 for 16 colors, 8 for 256 colors, 16 for thousands of colors, 24 for millions of colors or 32 for millions of colors with alpha.
(Read and Write property)

66.32.9 BitErrorRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Data error rate, in bit errors per second.
Notes: (Read and Write property)

66.32.10 BitRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Approximate data rate of the video stream, in bits per second.
Notes: (Read and Write property)

66.32.11 BMIHeaderPtr as Ptr

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns pointer to BITMAPINFOHEADER structure.
Notes:

You can use this to modify any field directly.
You need to know what you do and know the exact offset. (which can be different in 32-bit vs. 64-bit)
(Read only property)

66.32.12 Height as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap height.
Notes: (Read and Write property)

66.32.13 SourceBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

66.32.14 SourceLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

66.32.15 SourceRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

66.32.16 SourceTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

66.32.17 TargetBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

66.32.18 TargetLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

66.32.19 TargetRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

66.32.20 TargetTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

66.32.21 VideoInfoHeaderPtr as Ptr

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns pointer to VIDEOINFOHEADER structure.
Notes:

You can use this to modify any field directly.
You need to know what you do and know the exact offset. (which can be different in 32-bit vs. 64-bit)

(Read only property)

66.32.22 Width as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap width.
Notes: (Read and Write property)

66.33 class DirectShowVideoStreamConfigCapsMBS

66.33.1 class DirectShowVideoStreamConfigCapsMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes a range of video formats.
Notes:

Video compression and video capture filters use this structure to describe what formats they can produce.
Microsoft deprecated this strucutre some time ago in favor of DirectShowMediaTypeMBS class.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407352(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.33.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

66.33.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

66.33.4 Methods

66.33.5 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.33.6 Properties

66.33.7 CropAlignX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Required horizontal alignment of the source rectangle.
Notes:

Deprecated.
(Read only property)

66.33.8 CropAlignY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Required vertical alignment of the source rectangle.
Notes:

Deprecated.
(Read only property)

66.33.9 CropGranularityX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Horizontal granularity of the source rectangle.
Notes:

This value specifies the increments that are valid between MinCroppingSize and MaxCroppingSize.
Deprecated.
(Read only property)

66.33.10 CropGranularityY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Vertical granularity of the source rectangle.
Notes:

This value specifies the increments that are valid between MinCroppingSize and MaxCroppingSize.
Note Deprecated.
(Read only property)

66.33.11 InputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native size of the incoming video signal.
Notes:

For a compressor, the size is taken from the input pin. For a capture filter, the size is the largest signal the filter can digitize with every pixel remaining unique.
Deprecated.
(Read only property)

66.33.12 InputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native size of the incoming video signal.
Notes:

For a compressor, the size is taken from the input pin. For a capture filter, the size is the largest signal the filter can digitize with every pixel remaining unique.
Deprecated.
(Read only property)

66.33.13 MaxBitsPerSecond as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum data rate this pin can produce.
Notes:

Deprecated
(Read only property)

66.33.14 MaxCroppingSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Largest source rectangle allowed.
Notes:

Deprecated.
(Read only property)

66.33.15 MaxCroppingSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Largest source rectangle allowed.
Notes:

Deprecated.
(Read only property)

66.33.16 MaxFrameInterval as Int64

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum frame duration, in 100-nanosecond units.
Notes:

This value applies only to capture filters.
(Read and Write property)

66.33.17 MaxOutputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum output size.
Notes:

Deprecated.
(Read only property)

66.33.18 MaxOutputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum output size.
Notes:

Deprecated.
(Read only property)

66.33.19 MinBitsPerSecond as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum data rate this pin can produce.
Notes:

Deprecated.
(Read only property)

66.33.20 MinCroppingSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Smallest source rectangle allowed.
Notes:

The source rectangle is defined in the Source rectangle of the DirectShowVideoInfoHeader2MBS or DirectShowVideoInfoHeaderMBS classes.
Note Deprecated.
(Read only property)

66.33.21 MinCroppingSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Smallest source rectangle allowed.
Notes:

The source rectangle is defined in the Source rectangle of the DirectShowVideoInfoHeader2MBS or DirectShowVideoInfoHeaderMBS classes.
Note Deprecated.
(Read only property)

66.33.22 MinFrameInterval as Int64

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minimum frame duration, in 100-nanosecond units. This value applies only to capture filters.
Notes: (Read and Write property)

66.33.23 MinOutputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum output size.
Notes:

Deprecated.
(Read only property)

66.33.24 MinOutputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum output size.
Notes:

Deprecated.
(Read only property)

66.33.25 OutputGranularityX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the output width.
Notes:

This value specifies the increments that are valid between MinOutputSize and MaxOutputSize.
Deprecated.
(Read only property)

66.33.26 OutputGranularityY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of output height.
Notes:

This value specifies the increments that are valid between MinOutputSize and MaxOutputSize.
Deprecated.
(Read only property)

66.33.27 ShrinkTapsX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can shrink the image horizontally.
Notes:

Deprecated.

(Read only property)

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

66.33.28 ShrinkTapsY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can shrink the image vertically.
Notes:

Deprecated.

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

(Read only property)

66.33.29 StretchTapsX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can stretch the image horizontally.
Notes:

Deprecated.

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

(Read only property)

66.33.30 StretchTapsY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can stretch the image vertically.
Notes:

Deprecated.

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

(Read only property)

66.33.31 VideoStandard as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The analog video standard supported.
Notes:

The value is a bitwise combination of flags from the AnalogVideoStandard enumeration type, or zero.
(Read only property)

66.34 class DirectShowVideoWindowMBS

66.34.1 class DirectShowVideoWindowMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The direct show class for a video window.
Notes:

The DirectShowVideoWindowMBS interface sets properties on the video window. Applications can use it to set the window owner, the position and dimensions of the window, and other properties.

The Video Renderer filter and the Filter Graph Manager both expose this interface. The Filter Graph Manager forwards all method calls to the Video Renderer. It also forwards certain window messages that the Video Renderer needs to receive, such as WM_DISPLAYCHANGE. Because the video window is usually a child of an application window, the filter would not otherwise receive these messages. Therefore it relies on the Filter Graph Manager to forward them.

In most cases, an application should query the Filter Graph Manager for this interface, and not call the filter directly, because of the messaging issue just described. However, if the filter graph has more than one Video Renderer, the Filter Graph Manager only communicates with one of them, selected arbitrarily. Therefore, if your application uses multiple video windows, use the DirectShowVideoWindowMBS interface directly on the filters. In that case, you must forward window messages to each Video Renderer instance, using the NotifyOwnerMessage method.

Properties set on a video renderer persist between successive connections and disconnections.

Error codes: If the video renderer filter is not connected to another filter, all methods return the error code VFW_E_NOT_CONNECTED. For the Filter Graph Manager's implementation, if the graph does not contain a video renderer filter, all methods return E_NOINTERFACE. Note that the Filter Graph Manager exposes the interface even when the graph does not contain a video renderer, so an application can query for the interface before it builds the graph.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.34.2 Blog Entries

- MBS Xojo Plugins, version 21.0pr7

66.34.3 Blog Entries

- MBS Xojo Plugins, version 21.0pr7

66.34.4 Methods

66.34.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor to create a new video window.

66.34.6 GetMaxIdealImageSize(byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMaxIdealImageSize method retrieves the maximum ideal image size for the video image.
Notes:

Width: Receives the maximum ideal width, in pixels.
Height: Receives the maximum ideal height, in pixels.
Lasterror is set.

The maximum ideal size may differ from the native video size, because the video hardware might have specific stretching requirements.

66.34.7 GetMinIdealImageSize(byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMinIdealImageSize method retrieves the minimum ideal size for the video image.
Notes:

Width: Receives the minimum ideal width, in pixels.
Height: Receives the minimum ideal height, in pixels.
Lasterror is set.

The maximum ideal size may differ from the native video size, because the video hardware might have specific stretching requirements.

66.34.8 GetRestorePosition(byref left as Integer, byref top as Integer, byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetRestorePosition method retrieves the restored window position.

Notes:

Left: Receives the x-coordinate, in pixels.
Top: Receives the y-coordinate, in pixels.
Width: Receives the width of the window, in pixels.
Height: Receives the height of the window, in pixels.
Lasterror is set.

If the video window is minimized or maximized, you can use this method to get the window's restored position.

66.34.9 GetWindowPosition(byref left as Integer, byref top as Integer, byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetWindowPosition method retrieves the position of the video window.
Notes:

Left: Receives the x-coordinate, in pixels.
Top: Receives the y-coordinate, in pixels.
Width: Receives the width of the window, in pixels.
Height: Receives the height of the window, in pixels.

Lasterror is set.
This method has the same effect as querying left, top, width and height methods.

66.34.10 HideCursor(hide as boolean)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The HideCursor method shows or hides the cursor when the mouse is positioned over the video window.
Notes:

Hide: Whether to hide or show the cursor.
Lasterror is set.

66.34.11 IsCursorHidden as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IsCursorHidden method queries whether the cursor is hidden.
Notes: Lasterror is set.

66.34.12 SetWindowForeground(Focus as Boolean)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetWindowForeground method places the video window at the top of the Z order.
Notes:

Focus: whether to give the window focus.
Lasterror is set.

66.34.13 SetWindowPosition(left as Integer, top as Integer, width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetWindowPosition method sets the position of the video window.
Notes:

Left: The x-coordinate, in pixels.
Top: The y-coordinate, in pixels.
Width: The width, in pixels.
Height: The height, in pixels.
Lasterror is set.

This method has the same effect as setting the Left, Top, Width, and Height methods.
If resizing the window to the specified dimensions is impossible, this method modifies the window's size and location to make the window fit. Call the GetWindowPosition method to determine the result.

66.34.14 Properties

66.34.15 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IVideoWindow interface.
(Read and Write property)

66.34.16 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

66.34.17 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

66.34.18 MessageDrain as Window

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The window to receive mouse and keyboard messages from the video window.
Notes:

Lasterror is set.
This method enables an application to respond to mouse and keyboard events generated within the video window.
If Drain is non-nil, the video renderer forwards certain messages to the specified window, using the PostMessage function. Which messages are forwarded might depend on the video renderer in use.
(Read and Write property)

66.34.19 messageDrainControl as Control

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: The control to receive mouse and keyboard messages from the video window.
Notes:

Lasterror is set.
This method enables an application to respond to mouse and keyboard events generated within the video window.
If Drain is non-nil, the video renderer forwards certain messages to the specified window, using the PostMessage function. Which messages are forwarded might depend on the video renderer in use.

(Read and Write property)

66.34.20 Owner as Window

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The parent window for the video window.
Notes:

Lasterror is set.
Use this method to display videos in a compound document. This method changes the parent of the video window and sets the WS_CHILD style for the video window.
Reset the owner to nil before releasing the Filter Graph Manager. Otherwise, messages will continue to be sent to this window and errors will likely occur when the application is terminated.
(Read and Write property)

66.34.21 OwnerControl as Control

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: The parent control for the video window.
Notes:

Lasterror is set.
Use this method to display videos in a compound document. This method changes the parent of the video window and sets the WS_CHILD style for the video window.
Reset the owner to nil before releasing the Filter Graph Manager. Otherwise, messages will continue to be sent to this window and errors will likely occur when the application is terminated.
(Read and Write property)

66.34.22 AutoShow as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the video renderer automatically shows the video window when it receives video data.
Notes:

Lasterror is set.
By default, when the filter graph changes state to paused or running, the video renderer shows the video window and moves it to the foreground. If the user closes the window, it will not automatically reappear.
(Read and Write computed property)

66.34.23 BackgroundPalette as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the video window realizes its palette in the background.
Notes:

Lasterror is set.
If BackgroundPalette is true and the video image requires a palette, the video renderer will realize that palette in the background. Any colors that the palette uses will change to their closest match in the display palette prior to drawing. This ensures that an application will not have its palette disturbed. However, it imposes severe performance penalties on the video.
(Read and Write computed property)

66.34.24 BorderColor as color

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The color that appears around the edges of the destination rectangle.
Notes:

Lasterror is set.
If the destination rectangle is smaller than the client area of the video window, a border is exposed around the edges of the video. The default color is black. Use this method to override the default color. If a palette is in use, a nonsystem color is converted to its closest match.
(Read and Write computed property)

66.34.25 Caption as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The video window caption.
Notes:

Lasterror is set.
(Read and Write computed property)

66.34.26 FullScreenMode as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enables or disables full-screen video rendering.
Notes:

Set to true to switch to full-screen mode. Set to false to disable full-screen mode. (Default.)

Lasterror is set.

Depending on the video renderer, the switch to full-screen mode may not be visible until the application runs or pauses the graph. In full-screen mode, if the user switches away from the application (for example, using ALT + TAB), the Filter Graph Manager sends an EC_FULLSCREEN_LOST event.
The following remarks describe how the Filter Graph Manager implements full-screen mode. Application developers can probably ignore this information, but it may be useful if you are writing a custom video renderer.
When an application switches to full-screen mode, the Filter Graph Manager searches for a video renderer that will function most efficiently. In order of preference, these are:

- Any video renderer in the filter graph that natively supports full-screen mode.
- Any video renderer in the filter graph that can stretch the video to full-screen without a significant performance cost.
- The Full Screen Renderer filter.
- Any video renderer in the filter graph that supports DirectShowVideoWindowMBS.

For the first option, the Filter Graph Manager sets FullScreenMode on every video renderer in the graph. Most renderers return E_NOTIMPL, indicating the filter does not natively support full-screen mode. If any renderer returns a value not equal to E_NOTIMPL, the Filter Graph Manager uses that one.
For the second option, the Filter Graph Manager calls GetMaxIdealImageSize and GetMinIdealImageSize on every video renderer in the graph. If the size of the display falls within the filter's reported range, it indicates that the filter can stretch the video without a significant performance cost.
Note If the graph is stopped, the Filter Graph Manager pauses each renderer before calling these methods. This gives the renderer an opportunity to initialize any resources it needs, because many renderers cannot determine these values while they are stopped.
Except on older hardware, the second option will generally succeed. The third option is to use the Full Screen Renderer filter, adding it to the graph if necessary. The fourth option is simply to find the first renderer in the graph that supports DirectShowVideoWindowMBS, and stretch the video regardless of performance.
(Read and Write computed property)

66.34.27 Height as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the video window.
Notes:

Lasterror is set.
(Read and Write computed property)

66.34.28 Left as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The x-coordinate of the video window.
Notes:

Lasterror is set.
(Read and Write computed property)

66.34.29 Top as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The y-coordinate of the video window.
Notes:

Lasterror is set.
(Read and Write computed property)

66.34.30 Visible as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows or hides the video window.
Notes:

Set to true to show the window or set to false to hide the window.
Lasterror is set.
(Read and Write computed property)

66.34.31 Width as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the video window.
Notes: (Read and Write computed property)

66.34.32 WindowState as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows, hides, minimizes, or maximizes the video window.
Notes:

Lasterror is set.

See MSDN page for ShowWindow for SW_* constants:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms633548(v=vs.85).aspx
(Read and Write computed property)

66.34.33 WindowStyle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window styles on the video window.
Notes:

Lasterror is set.
See MSDN for SetWindowLong for details on the WS_* constants.
(Read and Write computed property)

66.34.34 WindowStyleEx as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window extended styles on the video window.
Notes:

Lasterror is set.
See MSDN for SetWindowLong for details on the WS_EX_* constants.
(Read and Write computed property)

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

66.34.77 WS_EX_RTLREADING = & h00002000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

66.34.78 WS_EX_STATICEDGE = & h00020000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

66.34.79 WS_EX_TOOLWINDOW = & h00000080

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

66.34.80 WS_EX_TOPMOST = & h00000008

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

66.34.81 WS_EX_TRANSPARENT = & h00000020

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

66.34.82 WS_EX_WINDOWEDGE = & h00000100

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

66.34.83 WS_GROUP = & h00020000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.84 WS_HSCROLL = & h00100000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.85 WS_ICONIC = & h20000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.86 WS_MAXIMIZE = & h01000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.87 WS_MAXIMIZEBOX = & h00010000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.88 WS_MINIMIZE = & h20000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.89 WS_MINIMIZEBOX = & h00020000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.90 WS_OVERLAPPED = & h00000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.91 WS_OVERLAPPEDWINDOW = & h00CF0000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.92 WS_POPUP = & h80000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.93 WS_POPUPWINDOW = & h80880000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.94 WS_SIZEBOX = & h00040000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.95 WS_SYSMENU = & h00080000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.96 WS_TABSTOP = & h00010000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.97 WS_THICKFRAME = & h00040000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.98 WS_TILED = & h00000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.99 WS_TILEDWINDOW = & h00CF0000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.100 WS_VISIBLE = & h10000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.34.101 WS_VSCROLL = & h00200000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

66.35 class DirectShowWaveFormatMBS

66.35.1 class DirectShowWaveFormatMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Defines the format of waveform-audio data.
Notes:

Only format information common to all waveform-audio data formats is included in this structure. For formats that require additional information, this structure is included as the first member in another structure, along with the additional information.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.35.2 Blog Entries

66.35.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

66.35.4 Methods

66.35.5 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

66.35.6 Properties

66.35.7 AvgBytesPerSec as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Required average data-transfer rate, in bytes per second, for the format tag.
Notes:

If wFormatTag is WAVE_FORMAT_PCM, nAvgBytesPerSec must equal nSamplesPerSec x nBlockAlign. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.

(Read and Write property)

66.35.8 BitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Bits per sample for the FormatTag format type.
Notes:

If wFormatTag is WAVE_FORMAT_PCM, then BitsPerSample should be equal to 8 or 16. For non-PCM formats, this member must be set according to the manufacturer's specification of the format tag. If FormatTag is WAVE_FORMAT_EXTENSIBLE, this value can be any integer multiple of 8.
Some compression schemes do not define a value for BitsPerSample, so this member can be zero.
(Read and Write property)

66.35.9 BlockAlign as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Block alignment, in bytes.
Notes:

The block alignment is the minimum atomic unit of data for the wFormatTag format type. If wFormatTag is WAVE_FORMAT_PCM, nBlockAlign must equal (nChannels × wBitsPerSample) / 8. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.
Software must process a multiple of nBlockAlign bytes of data at a time. Data written to and read from a device must always start at the beginning of a block. For example, it is illegal to start playback of PCM data in the middle of a sample (that is, on a non-block-aligned boundary).
(Read and Write property)

66.35.10 Channels as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of channels in the waveform-audio data.
Notes:

Monaural data uses one channel and stereo data uses two channels.
(Read and Write property)

66.35.11 Data as Ptr

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pointer to raw data of WAVEFORMATEX structure.
Notes: (Read only property)

66.35.12 FormatTag as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Waveform-audio format type.
Notes:

Format tags are registered with Microsoft Corporation for many compression algorithms. A complete list of format tags can be found in the Mmreg.h header file. For one- or two-channel Pulse Code Modulation (PCM) data, this value should be WAVE_FORMAT_PCM.

- If FormatTag equals WAVE_FORMAT_EXTENSIBLE, the structure is interpreted as a WAVEFORMATEXTENSIBLE structure.
- If FormatTag equals WAVE_FORMAT_MPEG, the structure is interpreted as an MPEG1WAVEFORMAT structure.
- If FormatTag equals WAVE_FORMAT_MPEGLAYER3, the structure is interpreted as an MPEGLAYER3WAVEFORMAT structure.

Before reinterpreting a WAVEFORMATEX structure as one of these extended structures, verify that the actual structure size is sufficiently large and that the cbSize member indicates a valid size.

Please contact MBS if you need the above structures as classes in Xojo.
(Read and Write property)

66.35.13 SamplesPerSec as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sample rate, in samples per second (hertz).
Notes:

If FormatTag is WAVE_FORMAT_PCM, then common values for SamplesPerSec are 8.0 kHz, 11.025 kHz, 22.05 kHz, and 44.1 kHz. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.
(Read and Write property)

66.35.14 Size as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Size, in bytes, of extra format information appended to the end of the WAVEFORMATEX structure.
Notes:

This information can be used by non-PCM formats to store extra attributes for the wFormatTag. If no extra information is required by the wFormatTag, this member must be set to zero. For WAVE_FORMAT_PCM formats (and only WAVE_FORMAT_PCM formats), this member is ignored. However it is still recommended to set the value.
(Read and Write property)

Chapter 67

Disassembler

67.1 Globals

67.1.1 DisAssembleMBS

MBS Util Plugin, Plugin Version: 3.4, Platform: Windows, Targets: All.

Function: Disassembles all further instructions from the current method following this command.
Deprecated: This item is deprecated and should no longer be used. **Notes:** The result is stored inside the plugin memory and you can get a copy using the GetDisAssembleMBS function.

67.1.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

67.1.3 DisAssembleObjectMethodMBS(target as object, Declaration as string)

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Disassembles all instructions from the given method inside the given object.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

The result is stored inside the plugin memory and you can get a copy using the GetDisAssembleMBS function.
Requires Xojo 5.5 or newer.

67.1.4 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

67.1.5 GetDisAssembleMBS as string

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with the disassembled text.
Deprecated: This item is deprecated and should no longer be used.

67.1.6 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

Chapter 68

DiscRecording

68.1 class DRBurnMBS

68.1.1 class DRBurnMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class to perform and monitor the burning of a CD or DVD disc.
Notes:

Each time you want to burn to a disc, an instance of DRBurnMBS needs to be created.

When an instance is created, you pass in an instance of DRDevice to let the DRBurn object know what device to use. This object is retained for the life of the DRBurn instance. Before burning, you can set several options that control the behavior of the burn and the handling of the disc once the burn completes.

A DRBurn object will send out notifications through the DRNotificationCenter mechanism to broadcast the burn state to any interested observers. However, if for some reason you don't want to use notifications, you can poll the burn object at any time for the current status using the status properties. This is not recommended in any application using a run loop, because it involves polling.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

68.1.4 Methods

68.1.5 abort

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Stops the burn.
Notes:

When this method returns the burn might not actually be fully stopped but it has been cancelled and only cleanup is going on. If a burn has not completed writing data to disc, you just made a coaster.

Typically this method is only used as a result of the user hitting a cancel/stop button somewhere in the user interface.

68.1.6 burnForDevice(device as DRDeviceMBS) as DRBurnMBS

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Creates an autoreleased burn object.
Notes: Once a burn is created with this method, the object is ready to write data to the disc.

68.1.7 Constructor(device as DRDeviceMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a burn object.
Notes: Once a burn is created with this method, the object is ready to write data to the disc.

68.1.8 device as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the device being used for the burn.
Notes: Returns nil on any error.

68.1.9 DRBurnAppendableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will still be appendable after the burn. If this key is not present, the burn will default to a value of false and the disc will be marked as not appendable.

68.1.10 DRBurnCompletionActionEject as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string value for the CompletionAction indicating that the burn object should eject the disc from the drive when the burn completes.

68.1.11 DRBurnCompletionActionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a String containing one of the completion actions possible for the disc handling. If this key is not present, the burn will default to a value of DRBurnCompletionActionEject and the disc will be ejected.

68.1.12 DRBurnCompletionActionMount as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string value for the CompletionAction property indicating that the burn object should mount the disc on the desktop when the burn completes.

68.1.13 DRBurnDoubleLayerL0DataZoneBlocksKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property key whose value is an double containing the number of blocks desired for the layer 0 data zone on a double layer writable disc.

The size of the layer 0 data zone dictates where the transition point is from layer 0 to layer 1. If this key is present, the data zone size will be set prior to the start of the burn using the value for this key. If it is not present, the default layer 0 data zone will be used (half the available blocks on an empty disc).

The transition point can be specified two ways. If the value specified in this key is greater than 1.0, then it will designate an absolute block number for the transition point. In this case, the block number should be a multiple of 16 and at least 40000h per specification. If the value is less than 1.0, it will specify the percentage of the burn that should reside on layer 0. A typical value is 0.5, designating half the burn for each layer. A value of 0.0 or 1.0 will not change the layer 0 transition point.

68.1.14 DRBurnFailureActionEject as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string constant for FailureAction indicating that the burn object should eject the disc from the drive if the burn fails.

68.1.15 DRBurnFailureActionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a string containing a one of the failure actions possible for the disc handling.

If this key is not present, the burn will default to a value of DRBurnFailureActionEject and the disc will be ejected.

68.1.16 DRBurnFailureActionNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string constant for FailureAction indicating that the burn object should do nothing with the disc if the burn fails.

68.1.17 DRBurnOverwriteDiscKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will be overwritten from block zero for the burn. If this key is not present, the burn will default to a value of false and the disc will be appended.

68.1.18 DRBurnRequestedSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a number containing the speed at which the burn should run, expressed as a float value of kilobytes per second. If this key is not present, the speed will default to DRDeviceBurnSpeedMax.

68.1.19 DRBurnStatusChangedNotification as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: The notification name for a status update on a burn operation.
Notes: See the "DataBurn with Events and Notification" example project.

68.1.20 DRBurnStrategyBDDAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An string value for DRBurnStrategyKey representing the DAO (disc-at-once) burn strategy for BD (Blu-ray). This strategy applies only to BDs.

68.1.21 DRBurnStrategyCDSAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the SAO (session-at-once) burn strategy for CD.

68.1.22 DRBurnStrategyCDTAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the TAO (track-at-once) burn strategy for CD.

68.1.23 DRBurnStrategyDVDDAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the DAO (disc-at-once) burn strategy for DVD. This strategy applies only to DVDs; it is invalid when burning to CD media.

68.1.24 DRBurnStrategyIsRequiredKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a BOOL indicating whether the burn strategy/strategies listed for DRBurnStrategyKey are the only strategies allowed. If this key is not present, the burn will default to a value of false.

If this value is set to true, and the device does not support the type(s) of burn requested, the burn will fail with kDRDeviceBurnStrategyNotAvailableErr .

If this value is set to false, and the device does not support the type(s) of burn requested, the engine will choose an alternate burn strategy automatically - one that will provide an equivalent disc.

68.1.25 DRBurnStrategyKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a string, or array of strings, indicating the burn strategy or strategies that are suggested. If this key is not present, the burn engine picks an appropriate burn strategy automatically. Most clients will not need to specify a specific burn strategy.

When more than one strategy is suggested, the burn engine will attempt to use the first strategy in the list which is available. A burn strategy will never be used if it cannot write the required data: for example, TAO cannot be used to write CD-Text.

The presence of this key by itself is just a suggestion, and if the burn engine cannot fulfill the request it will burn using whatever strategy is available. To make the suggestion into a requirement, add DRBurnStrategyIsRequiredKey with a value of true.

68.1.26 DRBurnTestingKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a boolean indicating if the burn will run as a test burn.

When this is set and the burn object is sent writeLayout, the entire burn process proceeds as if data would be written to the disc, but the laser is not turned on to full power, so the physical disc is not modified.

If this key is not present or the selected burning device does not support test burning, the burn will default to a value of false and a normal burn will occur.

68.1.27 DRBurnUnderrunProtectionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a boolean indicating if burn underrun protection will be on or off for devices which support it.

For those devices which support it, burn underrun protection is enabled by default.

If the device supports burn underrun protection and this key is not present, the burn will default to a value of true and burn underrun protection will be enabled.

68.1.28 DRBurnVerifyDiscKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will be verified after being burned. If this key is not present, the burn will default to a value of true and the disc will be verified.

68.1.29 DRCDTextKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

This key points to a DRCDTextBlockMBS, or array of DRCDTextBlockMBS objects containing the CD-Text information for the disc. If this key is not present, the burn will not write CD-Text.

Before using this key, you should to make sure that the device supports CD-Text by checking the value of DRDeviceCanWriteCDTextKey in the device's write capabilities dictionary.

If this value is set to true, and the device does not support writing CD-Text, the burn will fail with kDRDeviceCantWriteCDTextErr.

68.1.30 DRErrorStatusAdditionalSenseStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing the RBC additional sense code and additional sense code qualifier pair returned by the device. If no sense is reported, this key will not be present.

68.1.31 DRErrorStatusErrorInfoStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing extended error information in a user appropriate manner.

68.1.32 DRErrorStatusErrorKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number containing the OS error code for the error.

68.1.33 DRErrorStatusErrorStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing the error in a user appropriate manner.

68.1.34 DRErrorStatusKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: The key in the status dictionary for the error dictionary.

68.1.35 DRErrorStatusSenseCodeStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing the RBC sense code returned by the device. If no sense is reported, this key will not be present.

68.1.36 DRErrorStatusSenseKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String containing the raw RBC sense information structure reported by the device. If no sense is reported, this key will not be present.

68.1.37 DRMediaCatalogNumberKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a memoryblock containing exactly 13 bytes of data, which will be written to the disc as the Media Catalog Number. If this key is not present, it will default to all zeroes, indicating that a MCN is not supplied.

This value is the UPC/EAN product number, and should conform to the specifications of the UCC and EAN. See ean-int.org and uc-council.org for more details on the UPC/EAN standard.

http://www.ean-int.org/
http://www.uc-council.org/

68.1.38 DRStatusCurrentSessionKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current session being burned.

68.1.39 DRStatusCurrentSpeedKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current burn speed.

68.1.40 DRStatusCurrentTrackKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current track being burned.

68.1.41 DRStatusEraseTypeKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String indicating the type of erase operation.

68.1.42 DRStatusPercentCompleteKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes:

A key for the status dictionaries.
Number containing the percent complete of the operation expressed as a floating point number from 0 to 1.

68.1.43 DRStatusProgressCurrentKPS as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: The current burn speed in kilobytes per second.
Notes: This is an optional key within the DRStatusProgressInfoKey dictionary. The value of this key, if present, is a Number containing the write speed of the burn.

68.1.44 DRStatusProgressCurrentXFactor as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: The current burn speed in a media appropriate x-factor
Notes: This is an optional key within the DRStatusProgressInfoKey dictionary. The value of this key, if present, is a number containing the appropriate x-factor for the media.

68.1.45 DRStatusProgressInfoKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes:

A dictionary of extended progress information.
A key for the status dictionary. The value of this key is a reference to a Dictionary object containing extended progress information.

68.1.46 DRStatusStateDone as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is finished and it succeeded.

68.1.47 DRStatusStateErasing as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the erase status dictionary.
Notes: Indicates the erase is currently in progress.

68.1.48 DRStatusStateFailed as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is finished and it failed.

68.1.49 DRStatusStateFinishing as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is finishing up (closing the last session, writing the TOC, etc).

68.1.50 DRStatusStateKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes:

A key for the status dictionaries.
String indicating the current state of the operation.

68.1.51 DRStatusStateNone as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation has not yet begun.

68.1.52 DRStatusStatePreparing as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is preparing to begin.

68.1.53 DRStatusStateSessionClose as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is closing a session on disc. The exact session being closing is contained in DRStatusCurrentSessionKey.

68.1.54 DRStatusStateSessionOpen as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is opening a session on disc. The exact session being opened is contained in DRStatusCurrentSessionKey.

68.1.55 DRStatusStateTrackClose as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is closing a track on disc. The exact track being closed is contained in DRStatusCurrentTrackKey.

68.1.56 DRStatusStateTrackOpen as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is opening a track on disc. The exact track being opened is contained in DRStatusCurrentTrackKey.

68.1.57 DRStatusStateTrackWrite as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is writing a track on disc. The exact track being written is contained in DRStatusCurrentTrackKey.

68.1.58 DRStatusStateVerifying as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is verifying what it did.

68.1.59 DRStatusTotalSessionsKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the total number of sessions being burned.

68.1.60 DRStatusTotalTracksKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the total number of tracks in the current session being burned.

68.1.61 DRSynchronousBehaviorKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a BOOL indicating if burn operations will behave synchronously. If this key is not present, it will default to a value of false and burn operations will behave asynchronously.

Synchronous operations do not post status notifications, and will not return until they are completed. Status can still be queried at any time, and will remain valid even after the burn operation has finished.

68.1.62 status as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary describing the status of the burn.
Notes: The same dictionary is returned through the DRBurnStatusChangedNotification notification.

68.1.63 writeImageFile(ImageFile as FolderItem) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Writes the image tracks to the disc.
Notes:

Requires Mac OS X 10.4.

ImageFile: The path to the image file. This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.

Returns true on success and false on failure.
See also:

- 68.1.64 writeImageFile(ImagePath as String) as boolean 13077

68.1.64 writeImageFile(ImagePath as String) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Writes the image tracks to the disc.
Notes:

Requires Mac OS X 10.4.

ImageFile: The path to the image file. This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.

Returns true on success and false on failure.
See also:

- 68.1.63 writeImageFile(ImageFile as FolderItem) as boolean 13077

68.1.65 writeLayout(track as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Writes the track to the disc.
Notes: A single session disc will be created with the given track.
See also:

- 68.1.66 writeLayout(tracks() as DRTrackMBS) 13078

68.1.66 writeLayout(tracks() as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Writes the tracks to the disc.
Notes: A multi session disc will be created with the given tracks.
See also:

- 68.1.65 writeLayout(track as DRTrackMBS) 13078

68.1.67 Properties

68.1.68 appendable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the burn is appendable.
Example:

```
dim b as DRBurnMBS // get a burn object
b.appendable=true
```

Notes:

When a burn completes, it can mark the disc so that no more data can be written to it. This creates a closed or non-appendable disc (which is the most compatible with audio CD players). If this method returns false, then the disc will be marked as closed and no data can be appended to it. A return value of true indicates further burns can be appended to the disc.
(Read and Write computed property)

68.1.69 BurnFailureAction as string

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: What to do on a failure.
Notes:

The burn property whose value is a string containing a one of the failure actions possible for the disc handling.

If this key is not present, the burn will default to a value of DRBurnFailureActionEject and the disc will be ejected.
(Read and Write computed property)

68.1.70 completionAction as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The action to be performed at the end of the burn.
Notes:

Value must be DRBurnCompletionActionEject, DRBurnCompletionActionMount or empty for default.
(Read and Write computed property)

68.1.71 DoubleLayerL0DataZoneBlocks as Double

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: A double containing the number of blocks desired for the layer 0 data zone on a double layer writable disc.
Notes:

The size of the layer 0 data zone dictates where the transition point is from layer 0 to layer 1. If this key is present, the data zone size will be set prior to the start of the burn using the value for this key. If it is not present, the default layer 0 data zone will be used (half the available blocks on an empty disc).
The transition point can be specified two ways. If the value specified in this key is greater than 1.0, then it will designate an absolute block number for the transition point. In this case, the block number should be a multiple of 16 and at least & h40000 per specification. If the value is less than 1.0, it will specify the percentage of the burn that should reside on layer 0. A typical value is 0.5, designating half the burn for each layer. A value of 0.0 or 1.0 will not change the layer 0 transition point.
(Read and Write computed property)

68.1.72 MediaCatalogNumber as memoryblock

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The media catalog number as a binary data string.
Notes:

The burn property whose value is a memoryblock containing exactly 13 bytes of data, which will be written to the disc as the Media Catalog Number. If this key is not present, it will default to all zeroes, indicating that a MCN is not supplied.

This value is the UPC/EAN product number, and should conform to the specifications of the UCC and EAN. See
http://www.ean-int.org/
and
http://www.uc-council.org/
for more details on the UPC/EAN standard.
(Read and Write computed property)

68.1.73 Overwrite as boolean

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: The burn property whose value is a boolean indicating if the disc will be overwritten from block zero for the burn.
Notes:

If this key is not present, the burn will default to a value of false and the disc will be appended.
(Read and Write computed property)

68.1.74 properties as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The properties dictionary of the burn.
Notes: (Read and Write computed property)

68.1.75 requestedBurnSpeed as single

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The speed at which this burn will attempt to write data.
Notes:

The actual speed also depends on the capabilities of the bus the device is on, the maximum speed of the device itself, and the media used.

Value is a float indicating the speed the burn should run at in kilobytes per second.
(Read and Write computed property)

68.1.76 Testing as boolean

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Whether the burn will run as a test burn.
Notes:

When this is set and the burn starts, the entire burn process proceeds as if data would be written to the disc, but the laser is not turned on to full power, so the physical disc is not modified.

If this key is not present or the selected burning device does not support test burning, the burn will default to a value of false and a normal burn will occur.
(Read and Write computed property)

68.1.77 UnderrunProtection as boolean

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: A boolean indicating if burn underrun protection will be on or off for devices which support it.
Notes:

For those devices which support it, burn underrun protection is enabled by default.
If the device supports burn underrun protection and this key is not present, the burn will default to a value of trueand burn underrun protection will be enabled.
(Read and Write computed property)

68.1.78 verifyDisc as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the resulting disc will be verified.
Example:

```
dim b as DRBurnMBS // get a burn object
b.verifyDisc=true
```

Notes:

After data is written to disc, the data can be verified. The verification
process will read the data on the disc back into memory and compare it to the
data originally used to write to disc. The type of verification is determined
by a track property on a track-by-track basis. See the DRTrackMBS documentation for more information on verification types.
(Read and Write computed property)

68.2 class DRBurnProgressPanelMBS

68.2.1 class DRBurnProgressPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Run and display progress while burning data to media.
Example:

```
dim track as DRTrackMBS
dim bsp as DRBurnSetupPanelMBS
dim bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

// set a few options
bsp.setCanSelectAppendableMedia true
bsp.setCanSelectTestBurn true

if bsp.runSetupPanel=bsp.NSOKButton then
bpp=new DRBurnProgressPanelMBS

// And start off the burn itself. This will put up the progress dialog
// and do all the nice pretty things that a happy app does.
bpp.beginProgressPanelForBurn bsp.burnObject, track

else
MsgBox "You pressed cancel."
end if
end if
```

Notes:

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.

68.2.6 Methods

68.2.7 beginProgressPanelForBurn(burn as DRBurnMBS, track as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes:

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a single session disc with one track.
See also:

- 68.2.8 beginProgressPanelForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS) 13084

68.2.8 beginProgressPanelForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes:

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a multi session disc with several tracks.
See also:

- 68.2.7 beginProgressPanelForBurn(burn as DRBurnMBS, track as DRTrackMBS) 13084

68.2.9 beginProgressPanelForImageFile(burn as DRBurnMBS, file as folderitem) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes:

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 68.2.10 beginProgressPanelForImageFile(burn as DRBurnMBS, file as string) as boolean 13085

68.2.10 beginProgressPanelForImageFile(burn as DRBurnMBS, file as string) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes:

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 68.2.9 beginProgressPanelForImageFile(burn as DRBurnMBS, file as folderitem) as boolean 13085

68.2.11 beginProgressSheetForBurn(burn as DRBurnMBS, track as DRTrackMBS, docWindow as NSWindowMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes:

docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a single session disc with one track.
See also:

- 68.2.12 beginProgressSheetForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS, docWindow as NSWindowMBS) 13086

68.2.12 beginProgressSheetForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS, docWindow as NSWindowMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes:

docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a multi session disc with several tracks.
See also:

- 68.2.11 beginProgressSheetForBurn(burn as DRBurnMBS, track as DRTrackMBS, docWindow as NSWindowMBS) 13086

68.2.13 beginProgressSheetForImageFile(burn as DRBurnMBS, file as folderitem, docWindow as NSWindowMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes:

docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 68.2.14 beginProgressSheetForImageFile(burn as DRBurnMBS, file as string, docWindow as NSWindowMBS) as boolean 13087

68.2.14 beginProgressSheetForImageFile(burn as DRBurnMBS, file as string, docWindow as NSWindowMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes:

docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 68.2.13 beginProgressSheetForImageFile(burn as DRBurnMBS, file as folderitem, docWindow as NSWindowMBS) as boolean 13086

68.2.15 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new burn progress panel.

68.2.16 DRBurnProgressPanelDidFinishNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with a burn progress panel.
Notes:

Posted when the DRBurnProgressPanel has finished and is about to go away.
This notification contains a notification object but no userInfo dictionary. The notification object is the DRBurnProgressPanel that will be closed.

68.2.17 DRBurnProgressPanelWillBeginNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with a burn progress panel.
Notes:

Posted when the DRBurnProgressPanel is about to begin displaying progress.
This notification contains a notification object but no userInfo dictionary. The notification object is the DRBurnProgressPanel that will be displayed.

68.2.18 stopBurn

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's stop button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

68.2.19 Properties

68.2.20 Description as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The description string displayed in the panel.
Notes:

If no description is explicitly set, this method will return the standard text string.

The panel's description is typically a short text string that gives an indication to the user what operation is being performed. If no description is explicitly set, the progress panel uses a standard text string suitable to the burn.
(Read and Write computed property)

68.2.21 VerboseProgressStatus as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The vebosity of the progress feedback.
Notes:

If verbose is true, the panel will update status for every change. If verbose is false, the panel will filter some status messages and only update for major changes. The default for the panel is filter the status messages.
(Read and Write computed property)

68.2.22 Events

68.2.23 burnProgressPanelBurnDidFinish(burn as DRBurnMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Allows the delegate to handle the end-of-burn feedback.
Notes: This method allows the delegate to handle or modify the end-of-burn feedback performed by the progress panel. Return true to indicate the delegate handled the burn completion and the standard feedback should be supressed. If this method returns false, the normal end-of-burn handling is performed (displaying an error if appropriate, playing an "I'm done" sound, etc). The delegate is messaged before the progress panel is ordered out so a sheet may be displayed on a progress panel displayed as a window.

68.2.24 burnProgressPanelDidFinish

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Notification sent by the panel after ordering out.
Notes: If the delegate implements this method it will receive the message after the panel is removed from display.

68.2.25 burnProgressPanelWillBegin

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Notification sent by the panel before display.
Notes: If the delegate implements this method it will receive the message immediately before the panel is displayed.

68.2.26 Screenshots

68.2.27 DiscRecording2.jpg

Function: The burn progress panel running.

68.3 class DRBurnSetupPanelMBS

68.3.1 class DRBurnSetupPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Manages a panel that allows users to specify the parameters of an burn.
Example:

```
dim track as DRTrackMBS
dim bsp as DRBurnSetupPanelMBS
dim bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

// set a few options
bsp.setCanSelectAppendableMedia true
bsp.setCanSelectTestBurn true

if bsp.runSetupPanel=bsp.NSOKButton then
bpp=new DRBurnProgressPanelMBS

// And start off the burn itself. This will put up the progress dialog
// and do all the nice pretty things that a happy app does.
bpp.beginProgressPanelForBurn bsp.burnObject, track

else
MsgBox "You pressed cancel."
end if
end if
```

Notes:

This class supports choosing the the device to use, whether or not to verify the burned data and how to handle the burned disc when it completes.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DRSetupPanelMBS class.

68.3.6 Methods

68.3.7 appendable

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's appendable checkbox.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

68.3.8 burnObject as DRBurnMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates and returns a new DRBurn object that's configured to write data to the currently selected device.
Notes:

The new DRBurn object is configured based on the settings in the setup panel when the user clicks the OK button.

Do not invoke this method within a modal session because the burn object information is only updated just before the modal session ends.

Returns nil on any error.

68.3.9 burnSpeed

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's burn speed popup button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

68.3.10 completionAction

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks one of the panel's completion action radio buttons.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

68.3.11 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new burn setup panel.

68.3.12 DRBurnSetupPanelDefaultButtonDefaultTitle as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant to use for the build title so it is replaced by the real default title string.

68.3.13 expand

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's expand button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

68.3.14 setCanSelectAppendableMedia(flag as boolean)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the user can choose to leave the disc appendable.
Notes:

This method controls whether the appendable checkbox is enabled.

If the data being writen to disc does not lend itself to having more data appended on to it, you can disable the ability of the user to leave the disc open.

This method must be called before the panel is displayed.

Set to yes to enable the appendable checkbox, false to disable.

68.3.15 setCanSelectTestBurn(flag as boolean)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the user can choose to make a test burn.
Notes:

This method controls whether a checkbox should be added to the receiver that allows the user to set the burn to be a test burn. By default, the test burn button is not displayed.

This method must be called before the panel is displayed.

Set to yes to show the test burn checkbox, false to hide it.

68.3.16 setDefaultButtonTitle(title as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Sets the title for the receiver's default button to title.
Example:

```
dim panel as new DRBurnSetupPanelMBS

panel.setDefaultButtonTitle "Do Burn"
```

Notes: Normally, the default button is "Burn".

68.3.17 testBurn

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's test burn checkbox.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

68.3.18 verifyBurn

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's verify burn checkbox.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

68.3.19 Screenshots

68.3.20 DiscRecording1.jpg

Function: The burn setup panel running.

68.4 class DRCDTextBlockMBS

68.4.1 class DRCDTextBlockMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class for a Text block.
Notes:

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

68.4.2 Methods

68.4.3 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

68.4.4 encoding as Integer

MBS MacControls Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: The text encoding to use.

68.4.5 language as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The language of this text block.

68.5 class DRDeviceMBS

68.5.1 class DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Represents a physical CD/DVD drive connected to the computer.
Notes:

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

68.5.6 Methods

68.5.7 acquireExclusiveAccess as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Attempts to acquire an exclusive access session with the device.
Notes:

Acquiring exclusive access to the device prevents any process other than the one acquiring access from communicating with the device. So once exclusive access is granted, the device is unusable by any other process. Because of this all volumes mounted from media in the drive must be unmounted before exclusive access can be granted.

Exclusive access can be acquired multiple times. Each time this method is called, a call to releaseExclusiveAccess must be made at a later time, otherwise the process will never release its exclusive access.

Returns true if the exclusinve access is acquired and false if not.

68.5.8 acquireMediaReservation

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicate an interest in the blank media reservation.
Example:

```
dim d as DRDeviceMBS // get a device
d.AcquireMediaReservation
```

Notes: Blank media participates in a reservation system thats allows applications to express their claim on blank media to other applications. Indicating an interest in the reservation isn't enough to assume its been acquired, as there are likely to be other applications in the system whom have also indicated an interest in the blank media reservation.

68.5.9 bsdName as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the bsd /dev node name.

68.5.10 closeTray as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Commands the device to close its tray.
Notes:

Does nothing if the device does not have a tray (slotload).
Returns true if the tray could be closed and false if not.

68.5.11 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

68.5.12 device(index as UInt32) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Queries the device with the given index.
Notes:

Index from 0 to deviceCount-1.

Same as devices(), but if you only need one, this method is more efficient.

68.5.13 deviceCount as UInt32

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Queries the number of devices on this computer.

68.5.14 deviceForBSDName(bsdName as string) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Obtains a DRDevice for the device corresponding to the bsd /dev node.
Notes: If the device is not an authoring device (i.e., CDR, CDRW, DVR-R, etc), returns nil.

68.5.15 deviceForIORegistryEntryPath(path as string) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Obtains a DRDevice for the device at the path.
Notes: If the device is not an authoring device (i.e., CDR, CDRW, DVR-R, etc), returns nil.

68.5.16 devices as DRDeviceMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Obtains a static list of devices connected to the computer.
Example:

```
// shows all devices with their product names:
dim devices() as DRDeviceMBS = DRDeviceMBS.devices

for each dd as DRDeviceMBS in devices
MsgBox dd.info.lookup(DRDeviceMBS.DRDeviceProductNameKey, "?")
next
```

Notes: Returns all CD/DVD devices connected to the computer at the time this method is called. Since devices can come and go at any time, the output of this method is simply a snapshot of the set of devices connected.

68.5.17 displayName as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a string suitable for display in the user interface.

68.5.18 DRDeviceAppearedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with a DRBurn object.
Notes:

Posted by a DRNotificationCenter when a device is added to the system.

This notification is registered for only by name.

The object associated with this notification is the the device that has appeared. The userInfo is the same dictionary returned by info for that device.

68.5.19 DRDeviceBurnSpeedBD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 4496.0 KB/sec.

68.5.20 DRDeviceBurnSpeedCD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 176.4 KB/sec.

68.5.21 DRDeviceBurnSpeedDVD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 1385.0 KB/sec.

68.5.22 DRDeviceBurnSpeedHDDVD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 4568.0 KB/sec.

68.5.23 DRDeviceBurnSpeedMax as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: A value representing the maximum speed at which a device can burn. The actual speed will vary from device to device.

68.5.24 DRDeviceBurnSpeedsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: An array containing the possible burn speeds available to use. This key may not be present if no media is inserted.

68.5.25 DRDeviceCanTestWriteCDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Value for this key is a boolean value indicating whether the device can perform a test burn to CD media.

68.5.26 DRDeviceCanTestWriteDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: A boolean value indicating whether the device can perform a test burn to DVD media.

68.5.27 DRDeviceCanUnderrunProtectCDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports burn underrun protection when writing to CD media.

68.5.28 DRDeviceCanUnderrunProtectDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports burn underrun protection when writing to DVD media.

68.5.29 DRDeviceCanWriteBDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of BD (Blu-ray) based media.

68.5.30 DRDeviceCanWriteBDREKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to BD-RE media.

68.5.31 DRDeviceCanWriteBDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to BD-R media.

68.5.32 DRDeviceCanWriteCDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of CD based media.

68.5.33 DRDeviceCanWriteCDRawKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a raw mode burn strategy for CD. Raw mode is sometimes incorrectly referred to as DAO (disc-at-once).

68.5.34 DRDeviceCanWriteCDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to CD-R media.

68.5.35 DRDeviceCanWriteCDRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to CD-RW media.

68.5.36 DRDeviceCanWriteCDSAOKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a SAO (session-at-once) burn strategy for CD.

68.5.37 DRDeviceCanWriteCDTAOKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a TAO (track-at-once) burn strategy for CD.

68.5.38 DRDeviceCanWriteCDTextKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write CD-Text information to media.

68.5.39 DRDeviceCanWriteDVDDAOKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a DAO (disc-at-once) burn strategy on DVD media.

68.5.40 DRDeviceCanWriteDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of DVD based media.

68.5.41 DRDeviceCanWriteDVDPlusRDoubleLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+R DL media.

68.5.42 DRDeviceCanWriteDVDPlusRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+R media.

68.5.43 DRDeviceCanWriteDVDPlusRWDoubleLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+RW DL media.

68.5.44 DRDeviceCanWriteDVDPlusRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+RW media.

68.5.45 DRDeviceCanWriteDVDRAMKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RAM media.

68.5.46 DRDeviceCanWriteDVDRDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-R DL media.

68.5.47 DRDeviceCanWriteDVDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-R media.

68.5.48 DRDeviceCanWriteDVDRWDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RW DL media.

68.5.49 DRDeviceCanWriteDVDRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RW media.

68.5.50 DRDeviceCanWriteHDDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of HDDVD based media.

68.5.51 DRDeviceCanWriteHDDVDRAMKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-RAM media.

68.5.52 DRDeviceCanWriteHDDVDRDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-R DL media.

68.5.53 DRDeviceCanWriteHDDVDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-R media.

68.5.54 DRDeviceCanWriteHDDVDRWDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-RW DL media.

68.5.55 DRDeviceCanWriteHDDVDRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-RW media.

68.5.56 DRDeviceCanWriteIndexPointsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write index points to CD media.

68.5.57 DRDeviceCanWriteISRCKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write ISRC to CD media.

68.5.58 DRDeviceCanWriteKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of media.

68.5.59 DRDeviceCurrentWriteSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing the current burning speed of this device.

68.5.60 DRDeviceDisappearedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with a DRBurn object.
Notes:

Posted by a DRNotificationCenter when a device is removed from the system.

The object associated with this notification is the the device that has disappeared. The userInfo is the same dictionary returned by info for that device.

68.5.61 DRDeviceFirmwareRevisionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String containing the firmeware revision extracted from the device.

68.5.62 DRDeviceIORegistryEntryPathKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: String containing the path of the device in the IO Registry.
Notes: One of the keys in the dictionary returned by the info method.

68.5.63 DRDeviceIsBusyKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing a boolean value indicating whether the device is busy or not.

68.5.64 DRDeviceIsTrayOpenKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing a boolean value indicating whether the device's tray is open or not.

68.5.65 DRDeviceLoadingMechanismCanEjectKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number describing if the loading mechanism of the drive can eject.

68.5.66 DRDeviceLoadingMechanismCanInjectKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number describing if the loading mechanism of the drive can inject.

68.5.67 DRDeviceLoadingMechanismCanOpenKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number describing if the loading mechanism of the drive can open.

68.5.68 DRDeviceMaximumWriteSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing the maximum burning speed of this device.

68.5.69 DRDeviceMediaBlocksFreeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space available (in blocks) on the media to be written to. If the media already contains data and this value will be less than the normal maximum size of the disc. This value will normally only be used if the intent is to append data onto an open disc.

68.5.70 DRDeviceMediaBlocksOverwritableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes:

Number containing the total amount of writable space available (in blocks) on the media to be written to - if that media can be overwritten. Media that can be overwitten is designated through the DRDeviceMediaIsOverwritableKey .

The overwritable space is the amount of space on the disc that would be available if any data currently on the disc is first erased.

68.5.71 DRDeviceMediaBlocksUsedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space currently used (in blocks) for exising data.

68.5.72 DRDeviceMediaBSDNameKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the BSD /dev node name assigned to the media in the device.

68.5.73 DRDeviceMediaClassBD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of BD (Blu-ray) based media.

68.5.74 DRDeviceMediaClassCD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of CD based media.

68.5.75 DRDeviceMediaClassDVD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of DVD based media.

68.5.76 DRDeviceMediaClassHDDVD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of HD DVD based media.

68.5.77 DRDeviceMediaClassKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the class of media present in the drive.

68.5.78 DRDeviceMediaClassUnknown as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media class is unknown.

68.5.79 DRDeviceMediaDoubleLayerL0DataZoneBlocksKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space available (in blocks) on layer 0 of a double layer piece of media.

68.5.80 DRDeviceMediaFreeSpaceKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: MSF value of the amount of space available on the media to be written to. If the media already contains data and this value will be less than the normal maximum size of the disc. This value will normally only be used if the intent is to append data onto an open disc.

68.5.81 DRDeviceMediaInfoKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Dictionary of information describing the media currently in the device. This key may not be present if no media is inserted.

68.5.82 DRDeviceMediaIsAppendableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating that data can be appended to the exisiting data (if any).

68.5.83 DRDeviceMediaIsBlankKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether data has previously been written to the media.

68.5.84 DRDeviceMediaIsErasableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether this media can be erased.

68.5.85 DRDeviceMediaIsOverwritableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes:

Number containing a boolean value indicating that the data on the disc (if any) can be overwritten. Rewritable media can always be erased, and then rewritten in its entirety, so it is always considered overwritable.

Write-once media, if its blank, can also be written in its entirety and is also considered overwritable.

Write-once media, that has been partially written, can never again enter a state where it is entirely writable and will have lost its overwritable designation.

68.5.86 DRDeviceMediaIsReservedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether the media is reserved for exclusive use by the current process.

68.5.87 DRDeviceMediaOverwritableSpaceKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes:

MSF value of the amount of writable space available on the media to be written to - if that media can be overwritten. Media that can be overwitten is designated through the DRDeviceMediaIsOverwritableKey .

The overwritable space is the amount of space on the disc that would be available if any data currently on the disc is first erased.

68.5.88 DRDeviceMediaSessionCountKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the current number of sessions present on the media.

68.5.89 DRDeviceMediaStateInTransition as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values for the DRDeviceMediaStateKey.
Notes: The media is transitioning from one state to another (i.e., being spun up/down).

68.5.90 DRDeviceMediaStateKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: String describing the state of the media.

68.5.91 DRDeviceMediaStateMediaPresent as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values for the DRDeviceMediaStateKey.
Notes: Device contains media of some type.

68.5.92 DRDeviceMediaStateNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values for the DRDeviceMediaStateKey.
Notes: No media is present in the device.

68.5.93 DRDeviceMediaTrackCountKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the number of tracks present on the media.

68.5.94 DRDeviceMediaTypeBDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a BD-R.

68.5.95 DRDeviceMediaTypeBDRE as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a BD-RE.

68.5.96 DRDeviceMediaTypeBDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a BD-ROM.

68.5.97 DRDeviceMediaTypeCDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a CD-R.

68.5.98 DRDeviceMediaTypeCDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a CD-ROM.

68.5.99 DRDeviceMediaTypeCDRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a CD-RW.

68.5.100 DRDeviceMediaTypeDVDPlusR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+R.

68.5.101 DRDeviceMediaTypeDVDPlusRDoubleLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+R Double Layer.

68.5.102 DRDeviceMediaTypeDVDPlusRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+RW.

68.5.103 DRDeviceMediaTypeDVDPlusRWDoubleLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+RW Double Layer.

68.5.104 DRDeviceMediaTypeDVDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+RW.

68.5.105 DRDeviceMediaTypeDVDRAM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-RAM.

68.5.106 DRDeviceMediaTypeDVDRDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-R DL.

68.5.107 DRDeviceMediaTypeDVDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-ROM.

68.5.108 DRDeviceMediaTypeDVDRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-RW.

68.5.109 DRDeviceMediaTypeDVDRWDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-RW DL.

68.5.110 DRDeviceMediaTypeHDDVDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-R.

68.5.111 DRDeviceMediaTypeHDDVDRAM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RAM.

68.5.112 DRDeviceMediaTypeHDDVDRDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-R DL.

68.5.113 DRDeviceMediaTypeHDDVDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-ROM.

68.5.114 DRDeviceMediaTypeHDDVDRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RW.

68.5.115 DRDeviceMediaTypeHDDVDRWDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RW DL.

68.5.116 DRDeviceMediaTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the type of media inserted in the device.

68.5.117 DRDeviceMediaTypeUnknown as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: The type of the media cannot be determined.

68.5.118 DRDeviceMediaUsedSpaceKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: MSF value of the amount of space currently used for exising data.

68.5.119 DRDevicePhysicalInterconnectATAPI as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected on an ATAPI interface.

68.5.120 DRDevicePhysicalInterconnectFibreChannel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a Fibre Channel interface.

68.5.121 DRDevicePhysicalInterconnectFireWire as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a Firewire interface.

68.5.122 DRDevicePhysicalInterconnectKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the connection of the device to the computer.

68.5.123 DRDevicePhysicalInterconnectLocationExternal as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: Device is connected to the machine externally.

68.5.124 DRDevicePhysicalInterconnectLocationInternal as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: Device is connected to the machine internally.

68.5.125 DRDevicePhysicalInterconnectLocationKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the location of the device (e.g. internal/external).

68.5.126 DRDevicePhysicalInterconnectLocationUnknown as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: It's not known how the device is connected.

68.5.127 DRDevicePhysicalInterconnectSCSI as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected on a SCSI interface.

68.5.128 DRDevicePhysicalInterconnectUSB as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a USB interface.

68.5.129 DRDeviceProductNameKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Example:

```
// shows all devices with their product names:
dim devices() as DRDeviceMBS = DRDeviceMBS.devices

for each dd as DRDeviceMBS in devices
MsgBox dd.info.lookup(DRDeviceMBS.DRDeviceProductNameKey, "?")
next
```

Notes: String containing the product name extracted from the device.

68.5.130 DRDeviceStatusChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with a DRBurn object.
Notes:

Posted by a DRNotificationCenter when the media in a device changes state. This can include being ejected, inserted, becoming busy, etc.

The object for this notification is the device who's media is changing state. The userInfo for this notification is the same dictionary returned by status for that device.

68.5.131 DRDeviceSupportLevelAppleShipping as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device is shipping in some Apple machine.

68.5.132 DRDeviceSupportLevelAppleSupported as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device has been tested by Apple for support.

68.5.133 DRDeviceSupportLevelKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the support level the device enjoys from the engine.

68.5.134 DRDeviceSupportLevelNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device is not supported.

68.5.135 DRDeviceSupportLevelUnsupported as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates the device is unsupported, but the engine will try to use it anyway.

68.5.136 DRDeviceSupportLevelVendorSupported as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device has been tested by a third party for support.

68.5.137 DRDeviceTrackInfoKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Dictionary containing dictionaries describing the tracks. DRTracks from the DRDeviceTrackRefsKey are used as keys into this dictionary.

68.5.138 DRDeviceTrackRefsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: An array containing a list of DRTrack objects describing any tracks that are already on the disc.

68.5.139 DRDeviceVendorNameKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String containing the vendor name extracted from the device.

68.5.140 DRDeviceWriteBufferSizeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number containing the size of the write buffer of the device.

68.5.141 DRDeviceWriteCapabilitiesKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Dictionary containing the capabilities of the device for writing different kinds of media.

68.5.142 ejectMedia as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Commands the device to eject the media.
Notes:

This command first unmounts any volumes associated with the media and then eject the media from the drive. If the media could not be ejected, most likely this is because a volume associated with the media could not be unmounted.

Returns true if the media could be ejected and false if not.

68.5.143 info as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary of information describing the device.
Notes: The information returned include the types of media the device can write to, how it's connected and its identifying information such as the vendor and product name.

68.5.144 ioRegistryEntryPath as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the path to the device in the IO Registry.

68.5.145 isEqualToDevice(value as DRDeviceMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Compares the receiver to another device.
Notes: Returns true if the receiver is equal to otherDevice.

68.5.146 isValid as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns whether or not the device represented by the receiver is still attached to the computer.
Notes:

Because of the way some physical interconnects work, a device which is unplugged and replugged in does not necessarily look like the same device to the computer and would be invalid in that instance.

Returns true if the device is valid and false if not.

68.5.147 mediaIsAppendable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media in the device can have more data appended to any existing data.

68.5.148 mediaIsBlank as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true the media in the device is blank.

68.5.149 mediaIsBusy as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media is in use by some process - even the one making this call.

68.5.150 mediaIsErasable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media can be erased (i.e., CD-RW, DVD-RW, etc).

68.5.151 mediaIsOverwritable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media in the device can be fully (re)written.

68.5.152 mediaIsPresent as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the presence of the media.

68.5.153 mediaIsReserved as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the application calling this method currently holds the reservation on the media.

68.5.154 mediaIsTransitioning as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media is in transition (spinning up or down for example).

68.5.155 mediaSpaceFree as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the amount of free space on the media.

68.5.156 mediaSpaceOverwritable as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the amount of writable space on the media.

68.5.157 mediaSpaceUsed as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the amount of used space on the media.

68.5.158 mediaType as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the type of media currently inserted into the device.

68.5.159 openTray as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Commands the device to open it's tray.
Notes:

Does nothing if the device does not have a tray (slotload). If there is media in the drive this method will do nothing and return false. In this case use ejectMedia to eject the media and open the tray.

Returns true if the tray could be opened and false if not.

68.5.160 PhysicalInterconnect as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The connection of the device to the computer.

68.5.161 PhysicalInterconnectLocation as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The location of the device (internal/external/unknown).
Notes: Use the DRDevicePhysicalInterconnectLocation* constants.

68.5.162 releaseExclusiveAccess

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Releases the latest exclusive access request for the device.
Notes: A call to this method must be made for every call to acquireExclusiveAccess, otherwise the process will never release its exclusive access.

68.5.163 releaseMediaReservation

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Releases any media reservation that might be in place for the device.
Notes: If media is inserted and reserved, then the reservation will be passed on to the next process with a reservation request.

68.5.164 status as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary of information describing the media in the device.
Notes: In addition to information about the media (type, space available/used, etc), the dictionary returned includes those pieces of information about the device itself which are in part determined by the media (i.e., maximum burn speed).

68.5.165 trayIsOpen as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the tray state of the device.
Notes: Returns true if the device has a tray and it is open.

68.5.166 writesCD as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the device's ability to burn to CD-type media.
Notes: Returns true if the device has the ability to write to CD-R media.

68.5.167 writesDVD as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the device's ability to burn to DVD-type media.
Notes: Returns true if the device has the ability to write to DVD-R media.

68.6 class DREraseMBS

68.6.1 class DREraseMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Perform and monitor the erasing a rewritable CD or DVD disc.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

68.6.2 Blog Entries

68.6.4 Methods

68.6.5 Constructor(device as DRDeviceMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Initializes an erase object.

68.6.6 device as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the device being used for the erase.

68.6.7 DREraseStatusChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names you can use to register notifications on the erase status.

68.6.8 DREraseTypeComplete as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: A constant to be used for the eraseType property.
Notes: Configures the erase object to perform a complete erase, erasing every byte on the disk. This operation is slow (on the order of 30 minutes) to complete.

68.6.9 DREraseTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property names in the properties dictionary of the erase object.

68.6.10 DREraseTypeQuick as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: A constant to be used for the eraseType property.
Notes: Configures the erase object to perform a quick erase, doing the minimal amount of work to make the disc appear blank. This operation typically takes only a minute or two.

68.6.11 eraseForDevice(device as DRDeviceMBS) as DREraseMBS

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Creates and returns an erase object.
Notes: Returns nil on any error.

68.6.12 start

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Begin the process of erasing media.
Notes: This method only kicks off the erase. Once the erasure starts, control returns to the caller.

68.6.13 status as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary containing the status of the erase.
Notes: The same dictionary is returned through the DREraseStatusChangedNotification notification.

68.6.14 Properties

68.6.15 eraseType as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The type of erase to be performed.
Notes: (Read and Write computed property)

68.6.16 properties as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The properties dictionary of the erase.
Notes: (Read and Write computed property)

68.7 class DREraseProgressPanelMBS

68.7.1 class DREraseProgressPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Panel to display progress while erasing media.
Notes:

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.

68.7.4 Methods

68.7.5 beginProgressPanelForErase(erase as DREraseMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the erase process.
Notes: This method returns control to the caller after it has displayed the progress sheet and begun the erase. Once the method has returned the caller can perform other operations while the erase continues.

68.7.6 beginProgressSheetForErase(erase as DREraseMBS, docWindow as NSWindowMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the erase process.
Notes:

erase: The object performing the erase.
docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the erase. Once the method has returned the caller can perform other operations while the erase continues.

68.7.7 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor which creates the erase progress panel.

68.7.8 DREraseProgressPanelDidFinishNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with an erase progress panel.
Notes:

Posted when the DREraseProgressPanel has finished and is about to go away.

This notification contains a notification object but no userInfo dictionary. The notification object is the DREraseProgressPanel that will be closed.

68.7.9 DREraseProgressPanelWillBeginNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with an erase progress panel.
Notes:

Posted when the DREraseProgressPanel is about to begin displaying progress.

This notification contains a notification object but no userInfo dictionary. The notification object is the DREraseProgressPanel thatwill be displayed.

68.7.10 Properties

68.7.11 Description as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The description string displayed in the panel.
Notes:

If no description is explicitly set, this method will return the standard text string.

The panel's description is typically a short text string that gives an indication to the user what operation is being performed. If no description is explicitly set, the progress panel uses a standard text string suitable to the erase.
(Read and Write computed property)

68.7.12 Events

68.7.13 eraseProgressPanelDidFinish

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Notification sent by the panel after ordering out.

68.7.14 eraseProgressPanelEraseDidFinish(erase as DREraseMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Allows the delegate to handle the end-of-erase feedback.
Notes: This method allows the delegate to handle or modify the end-of-erase feedback performed by the progress panel. Return true to indicate the delegate handled the erase completion and the standard feedback should be supressed. If this method returns false, the normal end-of-erase handling is performed (displaying an error if appropriate, playing an "I'm done" sound, etc). The delegate is messaged before the progress panel is ordered out so a sheet may be displayed on a progress panel displayed as a window.

68.7.15 eraseProgressPanelWillBegin

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Notification sent by the panel before display.

68.8 class DREraseSetupPanelMBS

68.8.1 class DREraseSetupPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Manages a panel that allows users to specify the parameters of an erase.
Notes:

This class supports choosing the device to use and what sort of erase to perform. When the panel is closed by the user choosing to erase the media in the device, the device is exclusively held by the application for its own use to prevent possible bad or corrupt media from causing problem for the rest of the system. This means that if the erase object obtained from the panel is not used to do an erase, the device will remain unavailable to other applications until the exclusive access is released.
Subclass of the DRSetupPanelMBS class.

68.8.2 Methods

68.8.3 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create the erase setup panel.
Example:

```
dim d as DREraseSetupPanelMBS

d=new DREraseSetupPanelMBS
call d.runSetupPanel
```

68.8.4 eraseObject as DREraseMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates and returns a new DRErase object that's configured to erase the disc in the currently selected device.
Notes:

The new DRErase object is configured based on the settings in the setup panel when the user clicks the OK button.

Do not invoke this method within a modal session runSetupPanel because the erase object information is only updated just before the modal session ends.

Returns a new DRErase object.

68.9 class DRFileMBS

68.9.1 class DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Represents a file to be created on the disc.
Notes:

A file can be either a pointer to an exiting file (residing on a hard drive for example) or can be created at burn time from data passed into the file object as requested. DRFiles can only exist inside of DRFolder objects.
