68.9.6 Methods

68.9.7 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Dummy constructor.
See also:

- 68.9.8 Constructor(name as string) 13140
- 68.9.9 Constructor(name as string, data as memoryblock) 13140
- 68.9.10 Constructor(path as folderitem) 13141

68.9.8 Constructor(name as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" file object.
Notes:

This type of DRFile burns the data produced to the output disc, creating a file with the passed in name.

You need to subclass the DRFileMBS class and handle the events.
See also:

- 68.9.7 Constructor 13140
- 68.9.9 Constructor(name as string, data as memoryblock) 13140
- 68.9.10 Constructor(path as folderitem) 13141

68.9.9 Constructor(name as string, data as memoryblock)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" file object.
Notes: This type of DRFile burns the data passed in to disc, creating a file with the passed in name.
See also:

- 68.9.7 Constructor 13140
- 68.9.8 Constructor(name as string) 13140
- 68.9.10 Constructor(path as folderitem) 13141

68.9.10 Constructor(path as folderitem)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a "real" file object
Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 68.9.7 Constructor 13140
- 68.9.8 Constructor(name as string) 13140
- 68.9.9 Constructor(name as string, data as memoryblock) 13140

68.9.11 DRLinkTypeFinderAlias as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant used with linkWithLinkType to create a Finder alias.

68.9.12 DRLinkTypeHardLink as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant used with linkWithLinkType to create a hard link.

68.9.13 DRLinkTypeSymbolicLink as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant used with linkWithLinkType to create a symbolic link.

68.9.14 fileWithPath(path as folderitem) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "real" file object.
Example:

```
dim file as FolderItem = GetFolderItem("/System/Library/Fonts/Helvetica.dfont", FolderItem.PathTypeShell)
dim f as DRFileMBS = DRFileMBS.fileWithPath(file)
```

MsgBox f.baseName

Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 68.9.15 fileWithPath(path as string) as DRFileMBS 13142

68.9.15 fileWithPath(path as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "real" file object.
Example:

```
dim f as DRFileMBS = DRFileMBS.fileWithPath("/System/Library/Fonts/Helvetica.dfont")

MsgBox f.baseName
```

Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 68.9.14 fileWithPath(path as folderitem) as DRFileMBS 13141

68.9.16 finderAliasPointingTo(original as DRFSObjectMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a Finder alias to another file on the output disc.
Notes:

original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to create an empty file only (no alias).

68.9.17 hardLinkPointingTo(original as DRFileMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a hard link to another file on the output disc.
Notes:

original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to crash always.

68.9.18 linkWithLinkType(linkType as string, original as DRFSObjectMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a file object to point to another file on the output disc.
Example:

```
dim SomeFolder as new DRFolderMBS("Some new folder")

// Let's have a file to test

dim data as string = "Hello World" // file content
dim name as string = "test.txt" // file name
dim testfile as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

// and create a sym link for it
dim SymLink as DRFileMBS = DRFileMBS.linkWithLinkType(DRFileMBS.DRLinkTypeSymbolicLink, testfile, DRFileMBS.DRHFSPlus)
if SymLink = nil then
MsgBox "SymLink is nil!?"
else
SomeFolder.addChild SymLink
end if
```

Notes:

linkType: The type of link that will be created.
original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

68.9.19 symLinkPointingTo(original as DRFSObjectMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a symbolic link to another file on the output disc.
Example:

```
dim SomeFolder as new DRFolderMBS("Some new folder")

// Let's have a file to test

dim data as string = "Hello World" // file content
dim name as string = "test.txt" // file name
dim testfile as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

// and create a sym link for it
dim SymLink as DRFileMBS = DRFileMBS.symLinkPointingTo(testfile, DRFileMBS.DRHFSPlus)
if SymLink = nil then
MsgBox "SymLink is nil!?"
else
SomeFolder.addChild SymLink
end if
```

Notes:

original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to work just fine.

68.9.20 virtualFileWithName(name as string, data as memoryblock) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" file object.
Example:

```
dim data as string = "Hello World" // file content
dim name as string = "test.txt" // file name

dim f as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

MsgBox f.baseName
```

Notes: This type of DRFile burns the data passed in to disc, creating a file with the passed in name.

68.9.21 Events

68.9.22 calculateSizeOfFile(fork as Integer, estimating as boolean) as uint64

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Calculates the size of a file's fork.
Notes:

This method may be sent at any time after the file object has been instantiated. Requests that the recevier calculate the file size of file fork (for instance data or resource).

If estimate is true, you are being asked for an estimate of the final fork size, perhaps to provide an estimate of the track size, and do not have to be exact. Estimates should err on the high side; it's better to overestimate than underestimate.

An estimate call may be made at any time.

If estimate is false, you are being asked for the actual fork size, to be used in the burn. This call is only made in the burn phase.

fork: The fork of the file whose size is to be calculated.
estimate: If the file size should be estimated or exact.

Return the length of the file's fork.

68.9.23 cleanupFileAfterBurn

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Cleanup the file once the burn is complete.
Notes: Sent to the receiver after the burn completes. This would be an appropriate place to close files, or do any other teardown work needed. This message will always be sent regardless of whether the burn succeeded or failed.

68.9.24 prepareFileForBurn as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Prepare the file object for burning.
Notes:

Sent to the recevier before the burn begins. This would be an appropriate method to open files, or do any other prep work needed. The disc's entire hierarchy is completely in place and can be queried if needed.

After this call, the burn's content is locked down, and you should be able to respond to the calculateSizeOfFile messages with exact values.

68.9.25 prepareFileForVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Prepare the file object for verification.
Notes: Called during the burn (after production, before the cleanupFileAfterBurn event is called) to indicate that verification is about to begin. Now would be a good time to rewind to the start of the file, reset state machines, or do whatever else is needed to prepare to produce again.

68.9.26 produceFile(fork as Integer, buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Calculates the size of a file's fork.
Notes:

Sent during the burn (after the prepareFileForBurn message) requesting that the receiver produce the data fork contents.

The recevier should fill up the buffer passed in as full as possible and then return control to the caller. Since while burning, keeping the drive's buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data.

You may be asked to produce twice, once during the actual burn and once during verification.

fork: The fork of the file to produce.
buffer: The buffer to produce data into.

bufferLength: The length of the buffer to produce data into
blockSize: The size of the track blocks

Return the number of bytes produced.

68.9.27 Constants

68.9.28 DRFileForkData = 0

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The constant which specifies which fork is currently needed.
Notes:

The data fork contains the primary information for the file and is the fork used for files such as JPEGs, text files, etc.

The resource fork contains secondary meta-data, which is not important to the primary content of the file and may safely be ignored when the file is sent to a filesystem or OS which does not support multiple forks.

68.9.29 DRFileForkResource = 1

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The constant which specifies which fork is currently needed.
Notes:

The data fork contains the primary information for the file and is the fork used for files such as JPEGs, text files, etc.

The resource fork contains secondary meta-data, which is not important to the primary content of the file and may safely be ignored when the file is sent to a filesystem or OS which does not support multiple forks.

68.10 class DRFolderMBS

68.10.1 class DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class for folder objects used in filesystem creation.
Notes:

A DRFile object is a subclass of DRFSObject and represents a folder on the finished disc. DRFolders can be either a pointer to an existing folder (residing on a hard drive for example) or can be a "virtual" folder which existsonly on the resulting burned disc. A DRFolder pointing to an existing folder ("real" folder) cannot have it's contents changed - only those files/folders which are children of the actual folder on disk will be included on the resulting disc. "Virtual" folders are entirely created programatically and any virtual folder structure can exist and be burned to disc. It is possible to convert a "real" folder to a "virtual" folder using the makeVirtual method.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DRFSObjectMBS class.

68.10.2 Xojo Developer Magazine

- 6.1, page 29: DiscRecording, How to burn a CD from REALbasic on Mac OS X by Christian Schmitz

68.10.3 Xojo Developer Magazine

- 6.1, page 29: DiscRecording, How to burn a CD from REALbasic on Mac OS X by Christian Schmitz

68.10.4 Methods

68.10.5 addChild(child as DRFSObjectMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Adds an object reference (either a file or folder) as a child of a virtual folder object.
Notes: This method only applies to virtual folders. Real folders are considered "leaf nodes" and cannot have children.

68.10.6 children as DRFSObjectMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns an array containing the children of a virtual folder.
Notes: The order of children in the array is arbitrary – since the various filesystems being generated may have different sorting requirements, there is no one true way to sort the children. The ordering will change only when children are added or removed. You should sort the children according to the needs of your display, and in a consistent manner. This function only applies to virtual folders. Real folders are considered "leaf nodes" and should not be passed into this call.

68.10.7 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The dummy constructor.
See also:

- 68.10.8 Constructor(name as string) 13149
- 68.10.9 Constructor(path as folderitem) 13149

68.10.8 Constructor(name as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" folder object with a name.
See also:

- 68.10.7 Constructor 13149
- 68.10.9 Constructor(path as folderitem) 13149

68.10.9 Constructor(path as folderitem)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.
See also:

- 68.10.7 Constructor 13149
- 68.10.8 Constructor(name as string) 13149

68.10.10 count as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of children of a virtual folder.
Notes: This method returns a "shallow" count of only those children that are immediately contained within the virtual folder. This method only applies to virtual folders. Real folders are considered "leaf nodes" and should not be passed into this call.

68.10.11 folderWithPath(path as folderitem) as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.
See also:

- 68.10.12 folderWithPath(path as string) as DRFolderMBS 13150

68.10.12 folderWithPath(path as string) as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.
See also:

- 68.10.11 folderWithPath(path as folderitem) as DRFolderMBS 13150

68.10.13 makeVirtual

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Changes the real DRFolder object into a "virtual" DRFolder object.
Notes: The virtual folder created in this way is a snapshot of the on-disk folder at the moment of the call. The newly created virtual folder will contain real folder and file objects corresponding to the on-disk children of the original on-disk folder. If the on-disk folder is modified (eg, if the folder attributes change, or if children are added to or removed from the on-disk tree): during this call, the virtual folder may or may not reflect the changes. If modified after this call, the virtual folder will not reflect the changes.

68.10.14 removeChild(child as DRFSObjectMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Removes an object reference (either a file or folder) as a child of a virtual folder object.
Notes: This method only applies to virtual folders. Real folders are considered "leaf nodes" and cannot have children.

68.10.15 virtualFolderWithName(name as string) as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" folder object with a name.

68.11 class DRFSObjectMBS

68.11.1 class DRFSObjectMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class which defines common features of all filesystem content objects.
Notes:

Please read Apples documentation for more details.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

68.11.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr7

68.11.3 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr7

68.11.4 Methods

68.11.5 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

68.11.6 DRAccessDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's last-accessed date.

68.11.7 DRAllFilesystems as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the name or properties for the file in all filesystems together.
Notes: When this key is used to refer to a name, it refers to the base name (which has no naming restrictions).

68.11.8 DRAttributeModificationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's attribute modification date.

68.11.9 DRBackupDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's backup date.

68.11.10 DRContentModificationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's content modification date.

68.11.11 DRCreationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's creation date.

68.11.12 DREffectiveDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's effective date.

68.11.13 DRExpirationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's expiration date.

68.11.14 DRHFSPlus as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the HFS+ name/properties for the file.
Notes: HFS+ names can be up to 255 decomposed unicode characters long.

68.11.15 DRHFSPlusCatalogNodeID as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing item's catalog node ID (HFS+ only). Currently, this value if set is only a suggestion. The burn engine will attempt to use this node ID, but may use another value if it needs to resolve conflicts. Default behavior is to allocate node IDs incrementally from kHFSFirstUserCatalogNodeID.

68.11.16 DRHFSPlusTextEncodingHint as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes:

Number containing the item's text encoding hint (HFS+ only).

This value is used by the MacOS to help when converting the natively UTF-16 filename into an 8-bit-per-character representation (such as MacRoman, Shift-JIS, or UTF8). If not set, default behavior is to call CFStringGetMostCompatibleMacStringEncoding (CFStringGetSmallestEncoding()).

68.11.17 DRInvisible as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Boolean indicating whether the item is invisibile or not.

68.11.18 DRISO9660 as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the ISO-9660 properties for the file.
Notes: This key cannot be used to refer to the name of the file; it is ambiguous, since the name may be in either level 1 or level 2 format.

68.11.19 DRISO9660LevelOne as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the ISO-9660 level 1 name for the file.
Notes:

This key is used to refer specifically to the name generated for ISO-9660 if the ISO level is set to 1. When used for a property, it is equivalent in use to the DRISO9660 key and acts as a synonym for that key.

ISO9660 level 1 names are in the form typically known as 8.3 - eight characters of name and three characters of extension (if it's a file; directories can't have extensions). Character set is limited to A-Z, 0-9, and _.

68.11.20 DRISO9660LevelTwo as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the ISO-9660 level 2 name for the file.
Notes:

This key is used to refer specifically to the name generated for ISO-9660 if the ISO level is set to 2. When used for a property, it is equivalent in use to the DRISO9660 key and acts as a synonym for that key.

ISO9660 level 2 names can be 32 chars long, are limited to a subset of the 7-bit ASCII chars (capital letters, numbers, space, punctuation), and are only allowed one "." character.

68.11.21 DRISO9660VersionNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the ISO9660 version number for the object. Default value is 1.

68.11.22 DRJoliet as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the Joliet name/properties for the file.
Notes: Joliet names can be 64 precomposed unicode characters long, but are only allowed one "." character and many punctuation characters are illegal.

68.11.23 DRMacExtendedFinderFlags as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's extended Finder flags (MacOS only).

68.11.24 DRMacFileCreator as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A binary string containing the OSType for the file creator (MacOS only).

68.11.25 DRMacFileType as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A binary string containing the OSType for the file type (MacOS only).

68.11.26 DRMacFinderFlags as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's Finder flags (MacOS only). The invisible bit is ignored - use DRInvisible instead.

68.11.27 DRMacFinderHideExtension as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A boolean indicating whether the extension should be hidden in the Finder or not. The default is false and only applies to files.

68.11.28 DRMacIconLocation as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A binary string containing a Point (not NSPoint) for the item's icon location in its parent folder (MacOS only).

68.11.29 DRMacScrollPosition as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Binary string containing a Point (not NSPoint) for the folder's scroll position (MacOS only).

68.11.30 DRMacWindowBounds as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Binary string containing a Rect (not NSRect) for the window bounds for a folder (MacOS only).

68.11.31 DRMacWindowView as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the folder's window view type (MacOS only).

68.11.32 DRPosixFileMode as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's POSIX file mode.

68.11.33 DRPosixGID as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's POSIX GID.

68.11.34 DRPosixUID as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's POSIX UID.

68.11.35 DRRecordingDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's recording date.

68.11.36 DRUDF as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the UDF name/properties for the file.

68.11.37 DRUDFApplicationIdentifierSuffix as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Binary string of up to 8 bytes in length, for application use. The presence of this key requires the DRApplicationIdentifier key.

68.11.38 DRUDFExtendedFilePermissions as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes:

Number indicating the extended UDF file permissions of this file.

Bit 0: Change attributes for others (low order bit) Bit 1: Delete permissions for others Bit 2: Change attributes for group Bit 3: Delete permissions for group Bit 4: Change attributes for owner Bit 5: Delete permissions for owner Bit 6 & 7: Reserved If this key is not present, DRPosixFileMode will be used with the above bits being set to the corresponding write bit for owner, group, and others. If DRPosixFileMode is not present, the file mode from the file on disc will be used, again using the write bit for these permissions.

68.11.39 DRUDFInterchangeLevel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the volume interchange level. See the UDF specs for details.

68.11.40 DRUDFMaxInterchangeLevel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the maximum volume interchange level number. See the UDF specs for details.

68.11.41 DRUDFMaxVolumeSequenceNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the maximum volume sequence number. See the UDF specs for

details.

68.11.42 DRUDFPrimaryVolumeDescriptorNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the primary volume sequence number. See the UDF specs for details.

68.11.43 DRUDFRealTimeFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number indicating whether the file is a UDF Real-Time file.

68.11.44 DRUDFVersion102 as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: This value is used in DRUDFWriteVersion.

68.11.45 DRUDFVersion150 as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: This value is used in DRUDFWriteVersion.

68.11.46 DRUDFVolumeSequenceNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the volume sequence number. See the UDF specs for details.

68.11.47 DRUDFVolumeSetIdentifier as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. The Volume Set Identifier for the UDF volume set. If this key is not present, DRVolumeSet will be used if present. The Volume Set Identifier is composed of the Volume Set Timestamp, the Implementation Use, and a the string contained in this property.

68.11.48 DRUDFVolumeSetImplementationUse as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. A binary string (8 bytes in length) for implementation use data. See the UDF specs for details.

68.11.49 DRUDFVolumeSetTimestamp as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. A date object for the volume set timestamp. See the UDF specs for details.

68.11.50 DRUDFWriteVersion as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. This property key defines the version for the UDF structures written to disk. Values are definde in UDF Version types.

68.11.51 effectiveFilesystemMask as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The effective filesystem mask set for the reciever.

68.11.52 isVirtual as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the receiver is real or virtual.
Notes:

True if the receiver is virtual and false if real.

68.11.53 mangledNameForFilesystem(filesystem as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A single mangled filesystem-specific name for this fsobject.
Notes: Use DRISO9660LevelOne, DRISO9660, DRHFSPlus, DRUDF, DRJoliet, DRISO9660LevelTwo or DRAllFilesystems for the filesystem parameter.

68.11.54 mangledNames as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary containing all of the filesystem-specific names for the receiver, each one mangled for uniqueness.
Notes: The dictionary will return only the names which are indicated by the receiver's effective mask. If the receiver's effective mask is zero, an empty dictionary is returned.

68.11.55 parent as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The parent object.

68.11.56 propertiesForFilesystem(filesystem as string, mergeWithOtherFilesystems as boolean) as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns all the filesystem properties set for the specified filesystem.
Notes:

filesystem: The filesystem to look in.
merge: If true, also look for properties in the umbrella DRAllFilesystems .

Normally you would call this method with merge set to true since you are interested in the set of properties that will be used when writing the object to disc. But if you have a need to determine what properties are set just for a specific filesystem, then pass in false for merge. In this case only the specific filesystem is checked. So if filesystem is set to DRHFSPlus and merge is false then the properties dictionary contains the values set for the HFS+ filesytem only. If no properties have been directly set for HFS+ yet, then this properties dictionary will be empty.

68.11.57 propertyForKey(key as string, filesystem as string, mergeWithOther-Filesystems as boolean) as Variant

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a file/folder property specified by key for the specified filesystem.
Notes:

key: The property to return.
filesystem: The filesystem to look in.
merge: If true, also look for the property in the umbrella DRAllFilesystems .

Returs the value associated with the property.

Normally you would call this method with merge set to true since you are interested in the property that will be used when writing the object to disc. But if you have a need to determine what property is set just for a specific filesystem, then pass in false for merge. In this case only the specific filesystem is checked. So if DRHFSPlus is passed in for filesystem and merge is false then the property returned is the value set for the HFS+ filesytem only. If that property has not been directly set for HFS+ yet, then the returned value will be nil.

68.11.58 setProperties(Value as dictionary, filesystem as string)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Sets the value of all the receiver's properties specified by the keys in properties for the specific filesystem.
Notes:

properties: The value of the property.
filesystem: The filesystem to set the property in.

The properties are set only in the filesystem dictionary specified by filesystem. DRAllFilesystems may be specified as the filesystem in which case he umbrella property affecting all filesystems at once will be set. Setting properties for DRAllFilesystems does not preclude setting a filesystem specific property.

68.11.59 setProperty(Value as Variant, key as string, filesystem as string)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Sets the value of the receiver's property specified by key for the specific filesystem.
Notes:

property: The value of the property.
key: The property key.
filesystem: The filesystem to set the property in.

The property is set only in the filesystem dictionary specified by filesystem. DRAllFilesystems may be specified as the filesystem in which case the umbrella property affecting all filesystems at once will be set. Setting a property for DRAllFilesystems does not preclude setting a filesystem specific property.

68.11.60 sourcePath as string

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The source path.

68.11.61 Properties

68.11.62 baseName as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the base name for the receiver.
Notes:

The base name is the name from which any necessary filesystem-specific names are automatically generated.

Because the content creation API is able to generate multiple filesystems which require multiple varied naming conventions, a sensible system for naming is required. Thus each file has a "base name" which corresponds to its default name in any filesystem.

Whenever possible, the "base name" will be used in the generated filesystem without modification. If the name cannot be used as-is (if, for example, it contains illegal characters, exceeds the length requirements, doesn't meet the required format, or a name collision is detected) then an acceptable name that meets the filesystem's criteria will be generated automatically from the base name.

The default base name for a real file or folder is the actual on-disk name of the item.
(Read and Write computed property)

68.11.63 explicitFilesystemMask as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The explicit filesystem mask set for the reciever.
Notes: (Read and Write computed property)

68.11.64 specificNameForFilesystem(filesystem as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A single filesystem-specific name for this fsobject.
Notes:

Use DRISO9660LevelOne, DRISO9660, DRHFSPlus, DRUDF, DRJoliet, DRISO9660LevelTwo or DRAllFilesystems for the filesystem parameter.
(Read and Write computed property)

68.11.65 specificNames as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The names used for the receiver in the different filesystems all at once.
Notes:

An Dictionary of filesystem keys with corresponding name strings as their values for each specific filesystem name that should be set.

Every effort will be made to use the names passed in. However, if a name is illegal, it will be modified to fit the rules for that filesystem's names. Because of this, you should always call specificNames after setSpecificNames: to ensure that you are always displaying the most current names to the user.
(Read and Write computed property)

68.11.66 Constants

68.11.67 DRFilesystemInclusionMaskHFSPlus = 8

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The value which indicates the object should be included in the HFS+ filesytem.

68.11.68 DRFilesystemInclusionMaskISO9660 = 1

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The value which indicates the object should be included in the ISO9660 filesytem.

68.11.69 DRFilesystemInclusionMaskJoliet = 2

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The value which indicates the object should be included in the Joliet filesytem.

68.11.70 DRFilesystemInclusionMaskUDF = 4

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The value which indicates the object should be included in the UDF filesytem.

68.12 class DRMSFMBS

68.12.1 class DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Minutes/Seconds/Frames handling.
Notes:

On CDs, minutes/seconds/frames are used to identify positioning on a disc (which is most useful on an audio disc), but applies to any position on a disc no matter what type of data is present.

A frame is equivalent to a sector or block in normal disk parlance. 75 frames make up one second, so a 2 second pause (typical pregap size) is 150 frames.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

68.12.2 Methods

68.12.3 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The dummy constructor.
See also:

- 68.12.4 Constructor(frames as Integer) 13167
- 68.12.5 Constructor(s as string) 13168

68.12.4 Constructor(frames as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object whose length is frames.
See also:

- 68.12.3 Constructor 13167
- 68.12.5 Constructor(s as string) 13168

68.12.5 Constructor(s as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object initialized to the value represented by string
See also:

- 68.12.3 Constructor 13167
- 68.12.4 Constructor(frames as Integer) 13167

68.12.6 description as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a textual representation.

68.12.7 descriptionWithFormat(format as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a textual representation of the receiver.
Notes:

The format string is very similar to
A printf-style format string with % -escaped formatting characters.

% %	A "% " character
% m	Minutes as a decimal number
% s	Seconds as a decimal number
% f	Frames as a decimal number

In addition to these formatting characters an optional length specifier can come between then % and the formatting character. This length specifier will force the field in question to be at least that wide. For example a format specifier of "% 02m:% 02s" will cause a DRMSF object representing 3 minutes 9 seconds to be formatted as "03:09".

A formatter is aware of and respects rounding. If a bit of the msf is no zero, but the format does not display that value, the next higher value will be increased by one to reflect that. Extending our example above, an DRMSF with a value of 3 minutes, 9 seconds, 15 frames using a format specfier of "% 02m:% 02s", will be formatted as "03:10" since the 15 frames rounds up the seconds to the next value

Returns a string containing a textual representation of the object utilizing the specified format.

68.12.8 frames as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of frames represented by the receiver.
Notes: This method differs from sectors in that it returns to the caller the number of frames remaining in the current second. For example an DRMSF value of 5:30:72 will return 72 from frames.

68.12.9 isEqualToMSF(value as DRMSFMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Compares on emsf to another.
Notes: True if the two object are equal, false otherwise.

68.12.10 minutes as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of minutes represented by the receiver.
Notes: If the receiver represents a non integral number of minutes, only the whole minute value is returned. For example an DRMSF value of 5:30:72 will return 5 from a minutes.

68.12.11 msf as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object with no length/time.
Notes: Returns nil on any error.

68.12.12 msfByAdding(value as DRMSFMBS) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Adds an msf to the receiver.
Notes: Returns nil on any error.

68.12.13 msfBySubtracting(value as DRMSFMBS) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Subtracts an msf to the receiver.
Notes: Returns nil on any error.

68.12.14 msfWithFrames(frames as Integer) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object whose length is frames.
Notes: Returns nil on any error.

68.12.15 msfWithString(s as string) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object initialized to the value represented by string.
Notes: Returns nil on any error.

68.12.16 seconds as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of seconds represented by the receiver.
Notes: If the receiver represents a non integral number of seconds, only the whole second value is returned. For example an DRMSF value of 5:30:72 will return 30 from seconds.

68.12.17 sectors as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the total number of frames/sectors represented by the receiver.
Notes:

This method differs from frames in that it returns to the caller the total number of frames/sectors represented by the object.
For example an DRMSF value of 5:30:72 will return 24822 from sectors.

68.13 class DRNotificationCenterMBS

68.13.1 class DRNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class for notifications.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

68.13.2 Methods

68.13.3 addObserver(observer as NSNotificationObserverMBS, name as string="", theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Adds an entry to the receiver's dispatch table with an observer and optional criteria: notification name and sender.
Notes:

observer: Object registering as an observer. This value must not be nil.
name: The name of the notification for which to register the observer; that is, only notifications with this name are delivered to the observer. If you pass nil, the notification center doesn't use a notification's name to decide whether to deliver it to the observer.
theObject: The object whose notifications the observer wants to receive; that is, only notifications sent by this sender are delivered to the observer. If you pass nil, the notification center doesn't use a notification's sender to decide whether to deliver it to the observer.

68.13.4 Constructor

MBS MacBase Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new instance of notification center pointing to the default notification center.
Notes:

A DRNotificationCenter object (or simply, notification center) is essentially a notification dispatch table. It notifies all observers of notifications meeting specific criteria. This information is encapsulated in NSNotification objects, also known as notifications. Client objects register themselves with the notification center as observers of specific notifications posted by DiscRecording. When an event occurs, DiscRecording posts an appropriate notification to the notification center. The notification center dispatches a message to each registered observer, passing the notification as the sole argument.

There are two main differences between a DRNotificationCenter and the NSNotificationCenter from Foundation. First is that only Disc Recording posts notifications received through this mechanism. You use this to obtain device plug/unplug events, burn status, etc. Second, there can be multple notification centers active at once. Each run loop of your application will have it's own notification center and notifications from that notification center will be posted to the runloop it was created on.

68.13.5 removeObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Removes matching entries from the receiver's dispatch table.
Notes:

notificationObserver: Observer to remove from the dispatch table. Specify an observer to remove only entries for this observer. Must not be nil, or message will have no effect.
notificationName: Name of the notification to remove from dispatch table. Specify a notification name to remove only entries that specify this notification name. When nil, the receiver does not use notification names as criteria for removal.
notificationSender: Sender to remove from the dispatch table. Specify a notification sender to remove only entries that specify this sender. When nil, the receiver does not use notification senders as criteria for removal.

Be sure to invoke this method before the observer object or any object specified in addObserver is deallocated.

68.14 class DRSetupPanelMBS

68.14.1 class DRSetupPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Base class for the DiscRecordingUI setup panels.
Notes:

Provides a base framework for handling device selection, media ejection and confirming or cancelling the panel.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

68.14.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes

68.14.4 Methods

68.14.5 cancel

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's cancel button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

68.14.6 close

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's close button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

68.14.7 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

68.14.8 eject

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's eject button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

68.14.9 ok

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's default button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

68.14.10 open

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's open button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

68.14.11 runSetupPanel as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Displays the panel and begins its event loop.
Notes: Returns NSOKButton (if the user clicks the default button) or NSCancelButton (if the user clicks

the Cancel button).

68.14.12 Events

68.14.13 determineBestDevice(deviceA as DRDeviceMBS, deviceB as DRDeviceMBS) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: .

Function: Called to let you decide which device is better to use.
Notes: Default returns device A.

68.14.14 DeviceContainsSuitableMedia(device as DRDeviceMBS, byref prompt as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: This delegate method allows the delegate to determine if the media inserted in the device is suitable for whatever operation is to be performed.
Notes:

device:	The device that contains the media being asked about.
prompt:	Pass back a string object describing the media state.

Return false to disable the default button.

68.14.15 DeviceCouldBeTarget(device as DRDeviceMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Allows the delegate to determine if device can be used as a target.
Notes:

This method is used to limit the menu to only those devices that you want to appear. For example, a DVD burning application might use this to limit the menu to only devices that are capable of writing DVD-Rs.

device: The candidate device.
Returns true if the device is acceptable, false if not.

68.14.16 DeviceSelectionChanged(device as DRDeviceMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Sent by the default notification center when the device selection in the panel has changed.

68.14.17 SetupPanelShouldHandleMediaReservations as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: This event allows the delegate to control how media reservations are handled.
Notes: Return false to indicate the delegate will handle media reservations. Return true to indicate the setupPanel should handle media reservations itself.

68.14.18 Constants

68.14.19 NSCancelButton = 0

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The value runSetupPanel returns if the Cancel button is clicked.

68.14.20 NSOKButton = 1

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The value runSetupPanel returns if the OK button is clicked.

68.15 class DRTrackMBS

68.15.1 class DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The DRTrack class represents a track on the burned disc.
Example:

```
dim track as DRTrackMBS
dim bsp as DRBurnSetupPanelMBS
dim bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

// set a few options
bsp.setCanSelectAppendableMedia true
bsp.setCanSelectTestBurn true

if bsp.runSetupPanel=bsp.NSOKButton then
bpp=new DRBurnProgressPanelMBS

// And start off the burn itself. This will put up the progress dialog
// and do all the nice pretty things that a happy app does.
bpp.beginProgressPanelForBurn bsp.burnObject, track

else
MsgBox "You pressed cancel."
end if
end if
```

Notes:

A DRTrack provides data to the for the burn and contains a description of the track on disc (length, block type, data format, etc). Data is provided for the burn in a real-time thread. It is up to the track to provide this data in a timely manner, otherwise a burn underrun can occur and ruin a disc.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

68.15.6 Methods

68.15.7 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Dummy constructor.

68.15.8 DRAbstractFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: DRFileMBS object pointing to the abstract file for ISO and Joliet volumes. The file must be in the root directory.

68.15.9 DRApplicationIdentifier as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the application identifier for ISO, Joliet and UDF volumes.

68.15.10 DRAudioFourChannelKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes:

For CD-DA audio tracks only. This key points to a boolean value indicating whether the track data has four channels, as opposed to the two channels of normal stereo. If this key is not present, the engine will use a default value of false and standard two-channel stereo is assumed.

Note that while four-channel is technically allowed in the Red Book, it never caught on and is probably being replaced by SACD, so you probably shouldn't attempt to use it.

On the media, this key corresponds to bit 3 of the control field in sub-channel Q.

68.15.11 DRAudioPreEmphasisKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD-DA audio tracks only. This key points to a boolean value indicating whether the track includes pre-emphasis of 50/15us. If this key is not present, the engine will use a default value of false. On the media, this key corresponds to bit 0 of the control field in sub-channel Q.

68.15.12 DRBibliographicFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: DRFile pointing to the bibliographic file for ISO and Joliet volumes. The file must be in the root directory.

68.15.13 DRBlockSize as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number indicating the block size of the track. Currently always 2048. Do not change.

68.15.14 DRBlockSizeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the size in bytes of each track block. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

68.15.15 DRBlockTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the type of each track block. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

68.15.16 DRCopyrightFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: DRFileMBS pointing to the copyright file for ISO and Joliet volumes. The file must be in the root directory.

68.15.17 DRDataFormKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the data form of each block in the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

68.15.18 DRDataPreparer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the data preparer for ISO and Joliet volumes.

68.15.19 DRDefaultDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the default date to use for any unspecified dates in the filesystem. The current date and time is used if unspecified.

68.15.20 DRDVDCopyrightInfoKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For DVD tracks only. A binary string containing the DVD copyright info structure sent through the SEND DVD STRUCTURE command. The contents of this will be sent directly to the drive.

68.15.21 DRDVDTimestampKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For DVD tracks only. Binary string containing the DVD timestamp structure sent through the SEND DVD STRUCTURE command. The contents of this will be sent directly to the drive.

68.15.22 DRFreeBlocksKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the length, in blocks, which is still available in a writable track.

68.15.23 DRIndexPointsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes:

For CD tracks only. This key points to an NSArray of NSNumbers, indicating the index points inside the track. Each index point is specified as a number of blocks (frames) relative to the start of the track. There are 75 blocks in one second of CD audio. No more than 98 index points may be specified for a track.

Not all drives are capable of writing index points, and not all consumer CD players report or use them. If this key is present in any track and the drive cannot write index points, the burn will fail with kDRDeviceCantWriteIndexPointsErr.

68.15.24 DRISOLevel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the ISO level of the ISO-9660 filesystem on the track. Currently should be 1 or 2.

68.15.25 DRISOMacExtensions as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should have Mac extensions.

68.15.26 DRISORockRidgeExtensions as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should have RockRidge (POSIX) extensions.

68.15.27 DRMaxBurnSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.

Notes: Number containing the maximum burn speed at which data can be produced. The speed is represented in KB/s (1 KB = 1000 bytes). This key can only be used to limit the speed at which the burn runs.

68.15.28 DRNextWritableAddressKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the LBA of the next writable address in the track. This key is not present in closed tracks.

68.15.29 DRPreGapIsRequiredKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes:

For CD tracks only. Number indicating whether the pregap listed for the track is required. If this key is not present, the track will behave as though the key were false.

If this key's value is set to true and the device does not support the exact pregap length, the burn will fail with a return value of kDRDevicePregapLengthNotAvailableErr .

If this key's value is set to true and the device does not support any of the suggested pregap length, the engine will choose an alternate pregap length.

68.15.30 DRPreGapLengthKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD tracks only. Number containing the length of silence or data at the beginning of the track. This defaults to 2 seconds of silence. If this key is present, the track producer will be asked for the pregap data first. If the producer implements the proper selector, then it's the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by Disc Recording.

68.15.31 DRPublisher as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the publisher for ISO and Joliet volumes.

68.15.32 DRSCMSCopyrightFree as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track has no copying restrictions. Copies of this track should also be copyright free.

68.15.33 DRSCMSCopyrightProtectedCopy as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track is a first-generation copy of an original that was subject to copy protection. No further digital copying should be allowed.

68.15.34 DRSCMSCopyrightProtectedOriginal as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track is an original subject to copyright protection. Digital copying of this track should be allowed, but copies should be marked with SCMS.

68.15.35 DRSerialCopyManagementStateKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes:

For CD tracks only. This key points to a string value indicating the SCMS state of the track. If this key is not present, no SCMS data is written.

Not all drives are capable of writing SCMS. If this key is present in any track and the drive cannot write SCMS, the burn will fail with kDRDeviceCantWriteSCMSErr.

68.15.36 DRSessionFormatKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the session format of the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

68.15.37 DRSessionNumberKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the physical session number of a track.

68.15.38 DRSubchannelDataFormKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes:

The property whose value is the data mode of the subchannel data sent to the drive. If this key is not present, the track will default to a value of DRSubchannelDataFormNone and no subchannel information will be requested from the producer.

Subchannel data is returned from the producer in the same production method that produces normal user data. Normally a producer returns user data in chunks of DRBlockSizeKey size. When subchannel data is also produced, the producer is expected to return user data of DRBlockSizeKey in length with an additonal 96 bytes of subchannel data. Depending on the data form specified in this key, the format of this 96 bytes is either in raw or pack format. When subchannel data is requested from the producer, the DRFlagSubchannelDataRequested flag is set in the flags parameter of producePreGapForTrack or produceDataForTrack and blockSize is increased by 96 bytes.

68.15.39 DRSubchannelDataFormNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: A value for DRSubchannelDataFormKey indicating that the subchannel data will not be provided by the producer.

68.15.40 DRSubchannelDataFormPack as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: A value for DRSubchannelDataFormKey indicating that the producer will be asked to provide pack format subchannel data for the track. If this form is selected, the drive will perform P and Q parity calculations on each pack and interleave the packs before writing them to disc. This corresponds to a subchannel data form of 0xC0.

68.15.41 DRSubchannelDataFormRaw as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: A value for DRSubchannelDataFormKey indicating that the producer will be asked to provide raw format subchannel data for the track. If this form is selected, the producer must have performed P and Q parity calculations for each pack and done proper interleaving of the subchannel data. The drive will fill in the P-Q subchannel information and write the R-W subchannel data as is to the disc. This corresponds to a subchannel data form of & h40.

68.15.42 DRSuppressMacSpecificFiles as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should suppress Mac-specific files from non-HFS filesystems.

68.15.43 DRSystemIdentifier as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the system identifier for ISO and Joliet volumes.

68.15.44 DRTrackIsEmptyKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing a boolean value and indicates whether the track is empty.

68.15.45 DRTrackISRCKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes:

For CD-DA audio tracks only. This key points to an memoryblock containing exactly 12 bytes, which will be written to the disc as the International Standard Recording Code (ISRC). If this key is not present, no ISRC is written.

The use of this value should conform to the specifications of the IFPI. More details:
http://www.ifpi.org/isrc/

Not all drives are capable of the write modes necessary to write the ISRC. If this key is present in any track and the drive cannot write the ISRC, the burn will fail with kDRDeviceCantWriteISRCErr.

68.15.46 DRTrackLengthKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number representing the length of the track.

68.15.47 DRTrackModeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the track mode of the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

68.15.48 DRTrackNumberKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.

Notes: Number containing the physical track number of a track.

68.15.49 DRTrackPacketSizeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the number of blocks per packet for the disc. It will only be present if the disc contains fixed packets. This key will contain 16 for DVD media, and typically contains either 16 or 32 for CD media.

68.15.50 DRTrackPacketTypeFixed as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackPacketTypeKey then the disc is writen with fixed sized packets. When this value is present the DRPacketSizeKey will also be present.

68.15.51 DRTrackPacketTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the kind of packets being written.

68.15.52 DRTrackPacketTypeVariable as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackPacketTypeKey then the disc is written with sequential variable sized packets. The presence of this value indicates the lack of the DRPacketSizeKey.

68.15.53 DRTrackStartAddressKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the LBA of the start address for the track.

68.15.54 DRTrackTypeClosed as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackTypeKey then the track has been written and is closed.

68.15.55 DRTrackTypeIncomplete as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackTypeKey then the track is not invisible or reserved and is available for writing.

68.15.56 DRTrackTypeInvisible as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: If this is the value of the DRTrackTypeKey then the track is invisible and available to writing. If it is packet written and not closed, DRPacketTypeKey will be present, along with DRTrackPacketType and DRTrackPacketSize keys.

68.15.57 DRTrackTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the type of track. Possible values are: DRTrackTypeInvisible , DRTrackTypeIncomplete , DRTrackTypeReserved or DRTrackTypeClosed.

68.15.58 DRTrackTypeReserved as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: If this is the value of the DRTrackTypeKey then the track is reserved for writing.

68.15.59 DRVerificationTypeChecksum as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType.
Notes: The engine will verify the track data with an internally calculated checksum.

68.15.60 DRVerificationTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the type of verification to be performed. If this is not present, the track will not be verified.

68.15.61 DRVerificationTypeNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType property.
Notes: No verification is desired, so verification will be skipped.

68.15.62 DRVerificationTypeProduceAgain as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType property.
Notes: The engine will simply begin another production cycle and start calling produceDataForTrack again.

68.15.63 DRVerificationTypeReceiveData as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType property.
Notes: The engine will begin reading data from the disc and calling verifyDataForTrack.

68.15.64 DRVolumeCheckedDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume-checked date for HFS+ volumes. DRDefaultDate is used if unspecified.

68.15.65 DRVolumeCreationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume creation date. DRDefaultDate is used if unspecified.

68.15.66 DRVolumeEffectiveDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the date and time at which the volume is effective for ISO and Joliet volumes.

68.15.67 DRVolumeExpirationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume expiration date for ISO and Joliet volumes.

68.15.68 DRVolumeModificationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume modification date. DRDefaultDate is used if unspecified.

68.15.69 DRVolumeSet as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the volume set name for ISO and Joliet volumes.

68.15.70 estimateLength as UInt64

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Asks the track producer for a size estimate.
Notes:

This method calls the track producer to ask it to estimate the size needed for its data.

For some types of track, this call may be very expensive. For example, a DRFilesystemTrack may need to iterate folders on disk to provide an accurate estimate, which (if a large number of files and folders are involved) can cause this call to take 30 seconds or more. Since your main thread should not be allowed to block for this long, you may wish to call this function on a separate thread.

Requires Mac OS X 10.3.

68.15.71 testProductionSpeedForInterval(seconds as Double) as Double

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Tests the production speed for a specified interval.
Notes:

Runs a fake "production" cycle, repeatedly asking the receiver for data by calling it's producer's produceDataIntoBuffer for the specified time interval.

Use this function to verify that the the production code can produce data fast enough to satisfy the data throughput requirements of the burn.

Returns the calculated maximum speed the at which the receiver can produce data. This value should be used when setting up a burn to limit the burn speed

68.15.72 testProductionSpeedForLength(length as Integer) as Double

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Tests the production speed for a specified byte count.
Notes:

Runs a fake "production" cycle, repeatedly asking the receiver for data by calling it's producer's produceDataIntoBuffer:length:atAddress:blockSize:ioFlags: until the specified length number of bytes have been produced.

Use this function to verify that the the production code can produce data fast enough to satisfy the data throughput requirements of the burn.

Returns the calculated maximum speed the at which the receiver can produce data. This value should be

used when setting up a burn to limit the burn speed

Length: length of test in seconds.

68.15.73 trackForAudioFile(path as folderitem) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an audio track capable of burning RedBook CD audio from a file.
Example:

```
dim f as FolderItem
f=SelectFolder
if f<>nil then
// Create tracks for the audio files
dim tracks(-1) as DRTrackMBS
dim c as Integer=f.Count
for i as Integer=1 to c
dim g as FolderItem=f.Item(i)
if g<>nil and g.visible then
dim track as DRTrackMBS=DRTrackMBS.trackForAudioFile(g)
if track<>nil then
tracks.Append track
end if
end if
next

// display gui
if UBound(tracks)>=0 then
dim bsp as DRBurnSetupPanelMBS=new DRBurnSetupPanelMBS // you may want to use your own sub-
class to catch events
if bsp.runSetupPanel=bsp.NSOKButton then
dim bpp as new DRBurnProgressPanelMBS // you may want to use your own subclass to catch events
bpp.beginProgressPanelForBurn(bsp.burnObject, tracks)
end if
end if
end if
```

Notes:

This function creates a track object configured and primed to output RedBook audio CD data. It accepts any file readable by QuickTime and extracts the audio data (if any) from the file, translating that into the correct format for output to the disc.

Returns nil on any error. Requires Mac OS X 10.3.
See also:

- 68.15.74 trackForAudioFile(path as string) as DRTrackMBS 13194

68.15.74 trackForAudioFile(path as string) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an audio track capable of burning RedBook CD audio from a file.
Notes:

This function creates a track object configured and primed to output RedBook audio CD data. It accepts any file readable by QuickTime and extracts the audio data (if any) from the file, translating that into the correct format for output to the disc.

Returns nil on any error. Requires Mac OS X 10.3.
See also:

- 68.15.73 trackForAudioFile(path as folderitem) as DRTrackMBS 13193

68.15.75 trackForRootFolder(folder as DRFolderMBS) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a filesystem track capable of burning a folder.
Notes: Returns a track which contains the given folder as root.
See also:

- 68.15.76 trackForRootFolder(folder as folderitem) as DRTrackMBS 13194

68.15.76 trackForRootFolder(folder as folderitem) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a filesystem track capable of burning a folder.
Notes: Returns a track which contains the given folder as root.
See also:

- 68.15.75 trackForRootFolder(folder as DRFolderMBS) as DRTrackMBS 13194

68.15.77 Properties

68.15.78 BlockSize as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The size in bytes of each track block.
Notes: (Read and Write computed property)

68.15.79 BlockType as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The type of each track block.
Notes: (Read and Write computed property)

68.15.80 DataForm as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The data form of each block in the track.
Notes: (Read and Write computed property)

68.15.81 length as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the length of the track data.
Notes:

The length returned does not include the length of the pregap. Only the length of the track data itself is returned.
(Read and Write computed property)

68.15.82 MaxBurnSpeed as Double

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: A number containing the maximum burn speed at which data can be produced.
Notes:

The speed is represented in KB/s (1 KB = 1000 bytes). This value can only be used to limit the speed at which the burn runs.
(Read and Write computed property)

68.15.83 preGap as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The length of the pre gap.
Notes: (Read and Write computed property)

68.15.84 PreGapIsRequired as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: A boolean indicating whether the pregap listed for the track is required.
Notes:

For CD tracks only.
If this value is not set, the track will behave as though the value were false.

If this value is set to true and the device does not support the exact pregap length, the burn will fail with a return value of kDRDevicePregapLengthNotAvailableErr.

If this value is set to true and the device does not support any of the suggested pregap length, the engine will choose an alternate pregap length.

(Read and Write computed property)

68.15.85 PreGapLength as Double

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: A number containing the length of silence or data at the beginning of the track.
Notes:

For CD tracks only.
This defaults to 2 seconds of silence. If this value is set, the track producer will be asked for the pregap data first.
If the producer implements the proper event, then it's the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by Disc Recording.
(Read and Write computed property)

68.15.86 properties as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The properties dictionary of the track
Notes: (Read and Write computed property)

68.15.87 SessionFormat as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The session format of the track.
Notes: (Read and Write computed property)

68.15.88 TrackISRC as memoryblock

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The property for the tracks ISRC data.
Notes:

For CD-DA audio tracks only. This key points to a memoryblock containing exactly 12 bytes, which will be written to the disc as the International Standard Recording Code (ISRC). If this key is not present, no ISRC is written.

The use of this value should conform to the specifications of the IFPI. See http://www.ifpi.org/isrc/ for more details on the ISRC standard.

Not all drives are capable of the write modes necessary to write the ISRC.
If this key is present in any track and the drive cannot write the ISRC, the burn will fail with kDRDeviceCantWriteISRCErr.
(Read and Write computed property)

68.15.89 TrackMode as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The track mode of the track.
Notes: (Read and Write computed property)

68.15.90 VerificationType as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The type of verification requested.
Notes:

Value should be DRVerificationTypeReceiveData, DRVerificationTypeProduceAgain, DRVerificationTypeNone or DRVerificationTypeChecksum.
(Read and Write computed property)

68.15.91 Events

68.15.92 cleanupTrackAfterBurn

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Cleans up the track after the burn completes.
Notes:

Called after burning is complete. Typically you'll clean up what was setup is prepareTrackForBurn. Since this method is called after the laser is turned off and the burn is finished, this method can perform time consuming tasks.

True to indicate that the burn should proceed and false to indicate a failure occurred.

68.15.93 cleanupTrackAfterVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Cleans up the track after the verification completes.
Notes:

Once the verification phase is complete, this method is called. The class implementing the method has a chance to do anything up to and including failing the verification.

Return true to indicate success, false to indicate failure.

68.15.94 estimateLengthOfTrack as uint64

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Estimates the size of the track to be burned.
Notes:

This message is sent outside of a burn cycle in response to a -estimateLength message sent to the track.

Returns the number of blocks of data that the track will occupy. The estimate should be reasonably accurate, and no smaller than the actual size that will be needed.

Only on Mac OS X 10.3 and newer.

68.15.95 prepareTrack(burn as DRBurnMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Prepares the track for burning.
Notes:

Called before any burning starts. Do any sort of setup that needs to be performed (such as opening files). This method can calculate and update the exact track length that will be burned.

Since this method is called before the laser is turned on, this method can perform time consuming tasks.

burn: The burn object controlling the burn

Return true to indicate that the burn should proceed and false to indicate a failure occurred.

68.15.96 prepareTrackForVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Prepare the track to be verified.
Notes:

This method is called after the burn complets writing data to disc and before verification phase starts. Now would be a good time to prepare to produce data again by rewinding to the start of files, etc.

Return true to indicate that the verification should proceed and false to indicate a failure occurred.

68.15.97 produceDataForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Produces the track data.
Notes:

This method is called many times over the course of a burn to obtain data for the track. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N >1) and should be filled as full as possible with data. address is the sector address on the disc from the start of the track that is the buffer will be written to.

Since while burning, keeping the drive's buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data..

buffer: The buffer to place data into
bufferLength: The length of buffer
address: The on-disc address of where data will be written
blockSize: the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags. Not yet used.

Return the number of bytes produced.

68.15.98 producePreGapForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Produces the pregap data.
Notes:

This method is called to obtain data for the track's pregap. If the DRPreGapLengthKey key is present in the track properties, the track producer will be asked for the pregap data first. If the producer implements this selector, then it's the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by DiscRecording.

The buffer passed in will be a multiple of blockSize (bufferLength = blockSize * N, where N >1) and should be filled as full as possible with data. address is the sector address on the disc from the start of the track that is the buffer will be written to.

Since while burning, keeping the drive's buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the

buffer or 0 to indicate that there was an error producing the data..

buffer: The buffer to place data into
bufferLength: The length of buffer
address: The on-disc address of where data will be written
blockSize the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags (not used).

Return the number of bytes produced.

68.15.99 verifyDataForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Cleans up the track after the burn completes.
Notes:

If the class implementing this method asks for a verification type of DRVerificationTypeReceiveData, then a series of calls to this method will start. It's up to the class to reproduce the data again and compare it to the data passed in buffer. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N >1). address is the sector address on the disc from the start of the track that is the buffer was written to.

buffer: The data read in from the track to compare with
bufferLength: The length of buffer
address: The on-disc address of where data will was read from.
blockSize: the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags. Not used.

Return true to indicate that the data compared successfully and false to indicate a failure occurred.

68.15.100 verifyPreGapForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Checks the integrity track pregap after a burn.
Notes:

If the class implementing this method asks for a verification type of DRVerificationTypeReceiveData, then a series of calls to this method will start. It's up to the class to reproduce the pregap again and compare it to the data passed in buffer. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize *

N, where N >1). address is the sector address on the disc from the start of the track that is the buffer was written to.

buffer: The data read in from the track to compare with
bufferLength: The length of buffer
address: The on-disc address of where data will was read from.
blockSize: the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags. (not used)

Return true to indicate that the data compared successfully and false to indicate a failure occurred.

68.15.101 Constants

68.15.102 DRFlagSubchannelDataRequested = 2

MBS MacControls Plugin, Plugin Version: 10.4.

Function: A flag passed to producePreGapForTrack or produceDataForTrack.
Notes:

Indicates that the blockSize passed in includes room for subchannel data.
Data producers should check this flag and perform subchannel data production in addition to user fata production. Each block requested from the producer in this case will be formatted as [user data (as specified in track properties)] [subchannel data(96 bytes)] .

For example an audio producer callback should repeatedly produce 2352 bytes of audio data into bytes 0-2351 of the block and an additional 96 bytes of subchannel data into bytes 2352-2447.

68.15.103 kDRBlockSizeAudio = 2352

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block size constants.
Notes: Audio data.

68.15.104 kDRBlockSizeDVDData = 2048

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block size constants.
Notes: DVD data.

68.15.105 kDRBlockSizeMode1Data = 2048

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block size constants.
Notes: Mode 1 data.

68.15.106 kDRBlockSizeMode2Data = 2332

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block size constants.
Notes: Mode 2 data. Photo CD and CD-i use this.

68.15.107 kDRBlockSizeMode2Form1Data = 2048

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block size constants.
Notes: Mode 2 Form 1 data.

68.15.108 kDRBlockSizeMode2Form2Data = 2324

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block size constants.
Notes: Mode 2 Form 2 data.

68.15.109 kDRBlockTypeAudio = 0

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block type constants.
Notes: Audio data.

68.15.110 kDRBlockTypeDVDData = 8

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block type constants.
Notes: DVD data.

68.15.111 kDRBlockTypeMode1Data = 8

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block type constants.
Notes: Mode 1 data.

68.15.112 kDRBlockTypeMode2Data = 13

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block type constants.
Notes: Mode 2 data. Photo CD and CD-i use this.

68.15.113 kDRBlockTypeMode2Form1Data = 10

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block type constants.
Notes: Mode 2 Form 1 data.

68.15.114 kDRBlockTypeMode2Form2Data = 12

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block type constants.
Notes: Mode 2 Form 2 data.

68.15.115 kDRDataFormAudio = 0

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the data form constants.
Notes: Audio data.

68.15.116 kDRDataFormDVDData = 16

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the data form constants.
Notes: DVD data.

68.15.117 kDRDataFormMode1Data = 16

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the data form constants.
Notes: Mode 1 data.

68.15.118 kDRDataFormMode2Data = 32

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the data form constants.
Notes: Mode 2 data. Photo CD and CD-i use this.

68.15.119 kDRDataFormMode2Form1Data = 32

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the data form constants.
Notes: Mode 2 Form 1 data.

68.15.120 kDRDataFormMode2Form2Data = 32

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the data form constants.
Notes: Mode 2 Form 2 data.

68.15.121 kDRSessionFormatAudio = 0

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the constants for the session format.
Notes: Audio data.

68.15.122 kDRSessionFormatCDI = 16

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the constants for the session format.
Notes: CD-I disc.

68.15.123 kDRSessionFormatCDXA = 32

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the constants for the session format.
Notes: CD-ROM XA disc.

68.15.124 kDRSessionFormatDVDData = 0

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the constants for the session format.
Notes: DVD data.

68.15.125 kDRSessionFormatMode1Data = 0

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the constants for the session format.
Notes: Mode 1 data.

68.15.126 kDRTrackMode1Data = 4

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the track mode constants.
Notes: Mode 1 data.

68.15.127 kDRTrackMode2Data = 4

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the track mode constants.
Notes: Mode 2 data. Photo CD and CD-i use this.

68.15.128 kDRTrackMode2Form1Data = 4

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the track mode constants.
Notes: Mode 2 Form 1 data.

68.15.129 kDRTrackMode2Form2Data = 4

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the track mode constants.
Notes: Mode 2 Form 2 data.

68.15.130 kDRTrackModeAudio = 0

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the track mode constants.
Notes: Audio data.

68.15.131 kDRTrackModeDVDData = 5

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the track mode constants.
Notes: DVD data.

68.16 class WindowsBurnMBS

68.16.1 class WindowsBurnMBS

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Exposes methods that determine whether a system has hardware for writing to CD, the drive letter of a CD writer device, and programmatically initiate a CD writing session.

68.16.2 Methods

68.16.3 CDBurn

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Instructs data to be copied from the staging area to a writable CD.
Notes:

The staging area has a default location of % userprofile% \Local Settings\Application Data\Microsoft\CD Burning. Its actual path can be retrieved through WindowsBurnAreaFolderMBS.

This method returns when the CD is done or thre user cancelled.
See also:

- 68.16.4 CDBurn(hostwindow as window) 13208

68.16.4 CDBurn(hostwindow as window)

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop only.

Function: Instructs data to be copied from the staging area to a writable CD.
Notes:

Hostwindow: parent window of the user interface (UI)

The staging area has a default location of % userprofile% \Local Settings\Application Data\Microsoft\CD Burning. Its actual path can be retrieved through WindowsBurnAreaFolderMBS.

This method returns when the CD is done or thre user cancelled.
See also:

- 68.16.3 CDBurn 13208

68.16.5 HasRecordableDrive as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Scans the system for a CD drive with write-capability, returning true if one is found.
Notes: This search does not rely on the state of the Enable cd writing on this drive option found on the drive's property sheet. Instead, the determination is based on IMAPI.

68.16.6 RecorderDriveLetter as string

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the drive letter of a CD drive that has been marked as write-enabled.
Notes:

The drive whose letter designation is returned by this method is the drive that has the Enable cd writing on this drive option selected. This option is found on the drive's property sheet. Only one drive on a system can have this option selected.

If a recordable CD drive is present but that option has been deselected, the method will return ane empty string.

68.16.7 Properties

68.16.8 Available as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the Shell extension on Windows for CD Burning is available.
Notes:

Available should be true on Windows XP and newer.
(Read only property)

68.16.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code reported by one of the methods.
Notes: (Read and Write property)

Chapter 69

DNS

69.1 class DNSAddressRecordMBS

69.1.1 class DNSAddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an address record.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.A<>Nil then
MsgBox d.A.address
end if
next
end if
```

69.1.2 Properties

69.1.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The IPv4 address.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.A<>Nil then
MsgBox d.A.address
end if
next
end if
```

Notes: (Read and Write property)

69.2 class DNSAFSDBRecordMBS

69.2.1 class DNSAFSDBRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an AFSDB record.

69.2.2 Properties

69.2.3 hostname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The hostname.
Notes: (Read and Write property)

69.2.4 subtype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The sub type.
Notes: (Read and Write property)

69.3 class DNSDomainNameRecordMBS

69.3.1 class DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a domain name record.

69.3.2 Properties

69.3.3 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The queried name.
Notes: (Read and Write property)

69.4 class DNSHeaderMBS

69.4.1 class DNSHeaderMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a header of a DNS query.

69.4.2 Properties

69.4.3 AdditionalCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of additional items.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "AdditionalCount: "+str(r.Header.AdditionalCount)
end if
```

Notes: (Read and Write property)

69.4.4 AnswerCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of answers in this query.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "AnswerCount: "+str(r.Header.AnswerCount)
end if
```

Notes: (Read and Write property)

69.4.5 AuthorityCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of authority records.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "AuthorityCount: "+str(r.Header.AuthorityCount)
end if
```

Notes: (Read and Write property)

69.4.6 Flags as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The flags.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Flags: "+str(r.Header.Flags)
end if
```

Notes: (Read and Write property)

69.4.7 QuestionCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of questions in this query.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
```

```
MsgBox "QuestionCount: "+str(r.Header.QuestionCount)
end if
```

Notes: (Read and Write property)

69.4.8 xid as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The xid value.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "xid: "+str(r.Header.xid)
end if
```

Notes: (Read and Write property)

69.5 class DNSHINFORecordMBS

69.5.1 class DNSHINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for the host information record.

69.5.2 Properties

69.5.3 CPU as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The CPU information string.
Notes: (Read and Write property)

69.5.4 OS as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The operation system name.
Notes: (Read and Write property)

69.6 class DNSIN6AddressRecordMBS

69.6.1 class DNSIN6AddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an IPv6 address record.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeAAAA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.AAAA<>Nil then
MsgBox d.AAAA.address
end if
next
end if
```

69.6.2 Properties

69.6.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The IPv6 address.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeAAAA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.AAAA<>Nil then
MsgBox d.AAAA.address
end if
next
end if
```

Notes: (Read and Write property)

69.6.4 rawaddress as Memoryblock

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The raw address as a memoryblock.
Notes: (Read and Write property)

69.7 class DNSISDNRecordMBS

69.7.1 class DNSISDNRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an ISDN record.

69.7.2 Properties

69.7.3 isdnAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The ISDN address.
Notes: (Read and Write property)

69.7.4 subAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The subaddress.
Notes: (Read and Write property)

69.8 class DNSLocRecordMBS

69.8.1 class DNSLocRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The location record class.

69.8.2 Properties

69.8.3 altitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The altitude value.
Notes: (Read and Write property)

69.8.4 horizontalPrecision as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The horizontal precision value.
Notes: (Read and Write property)

69.8.5 latitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The latitude value.
Notes: (Read and Write property)

69.8.6 longitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The longitude value.
Notes: (Read and Write property)

69.8.7 size as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The size value.
Notes: (Read and Write property)

69.8.8 version as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The version value.
Notes: (Read and Write property)

69.8.9 verticalPrecision as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The vertical precision value.
Notes: (Read and Write property)

69.9 class DNSMINFORecordMBS

69.9.1 class DNSMINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The MINFO record class.

69.9.2 Properties

69.9.3 emailbx as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The emailbx value.
Notes: (Read and Write property)

69.9.4 rmailbx as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The rmailbx value.
Notes: (Read and Write property)

69.10 class DNSMXRecordMBS

69.10.1 class DNSMXRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a mx (mailbox) record.

69.10.2 Properties

69.10.3 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The name of this email server.
Notes: (Read and Write property)

69.10.4 preference as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The preference value for this email server.
Notes: (Read and Write property)

69.11 class DNSQuestionMBS

69.11.1 class DNSQuestionMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a DNS query question.

69.11.2 Properties

69.11.3 dnsclass as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS class value.
Notes:

See the Class* constants in DNSUtilMBS module.
(Read and Write property)

69.11.4 dnstype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS type value.
Notes:

See the Type* constants in DNSUtilMBS module.
(Read and Write property)

69.11.5 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The query in the question.
Notes: (Read and Write property)

69.12 class DNSRawResourceRecordMBS

69.12.1 class DNSRawResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a raw resource record.

69.12.2 Properties

69.12.3 data as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The data as a string with no encoding set.
Notes:

Just the raw bytes as string.
(Read and Write property)

69.12.4 length as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The length of the data.
Notes: (Read and Write property)

69.13 class DNSReplyMBS

69.13.1 class DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a DNS query reply.

69.13.2 Methods

69.13.3 Additional(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the additional record with the given index.
Notes: index is zero based.

69.13.4 Additionals as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the additional records.

69.13.5 Answer(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the answer with the given index.
Notes: index is zero based.

69.13.6 Answers as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the answer records.

69.13.7 Authority(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the authority with the given index.
Notes: index is zero based.

69.13.8 Authoritys as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the authority records.

69.13.9 Question(index as Integer) as DNSQuestionMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The question with the given index.
Notes: index is zero based.

69.13.10 Questions as DNSQuestionMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the question records.

69.13.11 Properties

69.13.12 additionalCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of additional records.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "additionalCount: "+str(r.additionalCount)
end if
```

Notes: (Read and Write property)

69.13.13 answerCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of answer records.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "answerCount: "+str(r.answerCount)
end if
```

Notes: (Read and Write property)

69.13.14 authorityCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of authority records.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "authorityCount: "+str(r.authorityCount)
end if
```

Notes: (Read and Write property)

69.13.15 Header as DNSHeaderMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The header values for this query.
Notes: (Read and Write property)

69.13.16 questionCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of questions.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "questionCount: "+str(r.questionCount)
end if
```

Notes: (Read and Write property)

69.13.17 Server as DNSSocketAddressMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The server details from this query.
Notes: (Read and Write property)

69.13.18 Status as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The status of this query.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Status: "+str(r.Status)
end if
```

Notes:

See the Status* constants.
(Read and Write property)

69.13.19 Constants

69.13.20 StatusBadHandle = 1

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

69.13.21 StatusConnectionFailed = 6

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

69.13.22 StatusMalformedQuery = 2

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

69.13.23 StatusOK = 0

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

69.13.24 StatusReceiveFailed = 5

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

69.13.25 StatusSendFailed = 4

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

69.13.26 StatusTimeout = 3

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

69.13.27 StatusWrongQuestion = 9

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

69.13.28 StatusWrongServer = 7

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

69.13.29 StatusWrongXID = 8

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

69.14 class DNSResourceRecordMBS

69.14.1 class DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a resource record.
Notes: Data contained in unsupported or obsolete Resource Record types may be accessed via RAW as a DNSRawResourceRecordMBS.

69.14.2 Properties

69.14.3 A as DNSAddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.4 AAAA as DNSIN6AddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.5 AFSDB as DNSAFSDBRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.6 CNAME as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.7 dnsclass as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS class value.
Notes:

See the Class* constants in DNSUtilMBS module.
(Read and Write property)

69.14.8 dnstype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS type value.
Notes:

See the Type* constants in DNSUtilMBS module.
(Read and Write property)

69.14.9 HINFO as DNSHINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.10 ISDN as DNSISDNRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.11 LOC as DNSLocRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.12 MB as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.13 MD as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.14 MF as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.15 MG as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.16 MINFO as DNSMINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.17 MR as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.18 MX as DNSMXRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.19 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The name.
Notes: (Read and Write property)

69.14.20 NS as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.21 PTR as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.22 RAW as DNSRawResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes:

Data contained in unsupported or obsolete Resource Record types may be accessed via RAW as a DNSRawResourceRecordMBS.

(Read and Write property)

69.14.23 Record as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content as a variant.
Notes:

Each resource record contains only one subrecord. So this record property has a reference to it and the corresponding property.
(Read and Write property)

69.14.24 RP as DNSRPRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.25 RT as DNSRTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.26 SOA as DNSSOARecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.27 SRV as DNSSRVRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.28 ttl as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The time to live value.
Notes: (Read and Write property)

69.14.29 TXT as DNSTXTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.30 WKS as DNSWKSRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.14.31 X25 as DNSX25RecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

69.15 class DNSRPRecordMBS

69.15.1 class DNSRPRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a RP record.

69.15.2 Properties

69.15.3 mailbox as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The mailbox value.
Notes: (Read and Write property)

69.15.4 txtdname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The txtdname value.
Notes: (Read and Write property)

69.16 class DNSRTRecordMBS

69.16.1 class DNSRTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a RT record.

69.16.2 Properties

69.16.3 intermediate as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The intermediate value.
Notes: (Read and Write property)

69.16.4 preference as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The preference value.
Notes: (Read and Write property)

69.17 class DNSServiceQueryRecordMBS

69.17.1 class DNSServiceQueryRecordMBS

MBS Network Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: All.

Function: The class to query for an arbitrary DNS record.
Notes: Subclass of the DNSServiceBaseMBS class.

69.17.2 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.1

69.17.3 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.1

69.17.4 Methods

69.17.5 QueryRecord(InterfaceIndex as Integer, FullName as string, rrType as Integer, rrClass as Integer, Flags as Integer = 0) as boolean

MBS Network Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: All.

Function: Query for an arbitrary DNS record.
Notes:

Flags: kFlagsForceMulticast or kFlagsLongLivedQuery. Pass kFlagsLongLivedQuery to create a "long-lived" unicast query to a unicast DNS server that implements the protocol. This flag has no effect on link-local multicast queries.
interfaceIndex: If non-zero, specifies the interface on which to issue the query (the index for a given interface is determined via the if_nametoindex() family of calls.) Passing 0 causes the name to be queried for on all interfaces. See "Constants for specifying an interface index" for more details.
fullname: The full domain name of the resource record to be queried for.
rrtype: The numerical type of the resource record to be queried for (e.g. kType_PTR, kType_SRV, etc)
rrclass: The class of the resource record (usually kClass_IN).

Lasterror is set: Returns kErr_NoError on success (any subsequent, asynchronous errors are delivered to the event), otherwise returns an error code indicating the error that occurred.
Returns false in case of error or true in case of success.

You can use DNSServiceBaseMBS.ConstructFullName to build the full name.

69.17.6 Events

69.17.7 ServiceQueryRecord(flags as Integer, InterfaceIndex as Integer, ErrorCode as Integer, Fullname as string, rrType as Integer, rrClass as Integer, Length as Integer, Data as string, ttl as Integer)

MBS Network Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: .

Function: The event called when data is received for DNS query.
Notes:

flags: Possible values are kFlagsMoreComing and kFlagsAdd. The Add flag is NOT set for PTR records with a ttl of 0, i.e. "Remove" events.
InterfaceIndex: The interface on which the query was resolved.
errorCode: Will be kErr_NoError on success, otherwise will indicate the failure that occurred. Other parameters are undefined if errorCode is nonzero.
fullname: The resource record's full domain name.
rrtype: The resource record's type (e.g. kType_PTR, kType_SRV, etc)
rrclass: The class of the resource record (usually kClass_IN).
Length: The length, in bytes, of the resource record rdata.
Data: The raw record data of the resource record.
ttl: If the client wishes to cache the result for performance reasons, the TTL indicates how long the client may legitimately hold onto this result, in seconds. After the TTL expires, the client should consider the result no longer valid, and if it requires this data again, it should be re-fetched with a new query. Of course, this only applies to clients that cancel the asynchronous operation when they get a result. Clients that leave the asynchronous operation running can safely assume that the data remains valid until they get another callback telling them otherwise.

69.18 class DNSSOARecordMBS

69.18.1 class DNSSOARecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The SOA record class.
Notes: The Start of Authority (SOA) record contains information about the zone.

69.18.2 Properties

69.18.3 expire as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The expire value.
Notes: (Read and Write property)

69.18.4 minimum as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The minimum value.
Notes: (Read and Write property)

69.18.5 mname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The mname value.
Notes: (Read and Write property)

69.18.6 refresh as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The refresh delay in seconds before the slave contacts the master.
Notes: (Read and Write property)

69.18.7 retry as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The retry delay in seconds before the slave contacts the master again.
Notes: (Read and Write property)

69.18.8 rname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The name value.
Notes: (Read and Write property)

69.18.9 serial as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The serial value.
Notes: (Read and Write property)

69.19 class DNSSocketAddressMBS

69.19.1 class DNSSocketAddressMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS socket address class.

69.19.2 Properties

69.19.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The address value.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Server.address: "+r.Server.address
end if
```

Notes:

This is IPv4 or IPv6.
(Read and Write property)

69.19.4 data as Memoryblock

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The raw data of this socket address.
Notes: (Read and Write property)

69.19.5 Family as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The family value.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Server.Family: "+str(r.Server.Family)
end if
```

Notes: (Read and Write property)

69.19.6 Port as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The port for this socket address.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Server.Port: "+str(r.Server.Port)
end if
```

Notes: (Read and Write property)

69.20 class DNSSRVRecordMBS

69.20.1 class DNSSRVRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a RV record.

69.20.2 Properties

69.20.3 port as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The port value.
Notes: (Read and Write property)

69.20.4 priority as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The priority value.
Notes: (Read and Write property)

69.20.5 target as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The target value.
Notes: (Read and Write property)

69.20.6 weight as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The weight value.
Notes: (Read and Write property)

69.21 class DNSTXTRecordMBS

69.21.1 class DNSTXTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a text record.

69.21.2 Methods

69.21.3 Strings(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The strings by index.
Notes: Index is zero based.

69.21.4 Properties

69.21.5 Count as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of strings in this text record.
Notes: (Read only property)

69.22 module DNSUtilMBS

69.22.1 module DNSUtilMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The module for DNS queries.

69.22.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr1

69.22.4 Methods

69.22.5 ClassNumber(dnsClass as string, byref n as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: One of the DNS class constants.
Example:

```
dim n as Integer

if DNSUtilMBS.ClassNumber("CH", n) then
```

```
MsgBox str(n) // shows 3
end if
```

Notes: Returns true on success.

69.22.6 ClassString(dnsclass as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the string name of this class value.
Example:

```
MsgBox DNSUtilMBS.ClassString(DNSUtilMBS.ClassCHAOS) // shows "CH"
```

69.22.7 Lookup(name as string, dnsclass as Integer, dnsType as Integer) as DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Performs a DNS query.
Example:

```
// lookup MX record for email sending
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("macsw.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeMX)
if r <>nil then
MsgBox "macsw.de ->"+r.Answer(0).MX.name
end if
```

Notes: Use the Class* constants for the dnsclass parameter. And use the Type* constants for the dnsType parameter.

69.22.8 LookupMT(name as string, dnsclass as Integer, dnsType as Integer) as DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Performs a DNS query.
Notes:

Use the Class* constants for the dnsclass parameter. And use the Type* constants for the dnsType parameter.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

69.22.9 TypeNumber(dnsType as string, byref n as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: One of the DNS type constants.
Example:

```
dim n as Integer

if DNSUtilMBS.TypeNumber("AAAA", n) then
MsgBox str(n) // shows 28
end if
```

Notes: Returns true on success.

69.22.10 TypeString(dnstype as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the string name of this type value.
Example:

```
MsgBox DNSUtilMBS.TypeString(DNSUtilMBS.TypeMD) // shows "MD"
```

69.22.11 Constants

69.22.12 ClassALL = & hff

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

69.22.13 ClassANY = & hff

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

69.22.14 ClassCHAOS = 3

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

69.22.15 ClassCSNET = 2

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

69.22.16 ClassHESIOD = 4

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

69.22.17 ClassINTERNET = 1

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

69.22.18 ClassNONE = & hfe

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

69.22.19 TypeA = 1

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.20 TypeAAAA = & h1c

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.21 TypeAFSDB = & h12

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.22 TypeALL = & hff

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.23 TypeANY = & hff

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.24 TypeATMA = & h22

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.25 TypeAXFR = & hfc

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.26 TypeCNAME = 5

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.27 TypeGPOS = & h1b

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.28 TypeHINFO = & h0d

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.29 TypeISDN = & h14

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.30 TypeIXFR = & hfb

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.31 TypeKEY = & h19

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.32 TypeLOC = & h1d

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.33 TypeMAILA = & hfe

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.34 TypeMAILB = & hfd

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.35 TypeMB = 7

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.36 TypeMD = 3

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.37 TypeMF = 4

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.38 TypeMG = 8

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.39 TypeMINFO = & h0e

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.40 TypeMR = 9

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.41 TypeMX = & h0f

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.
Example:

```
// lookup MX record for email sending
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("macsw.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeMX)
if r <>nil then
MsgBox "macsw.de ->"+r.Answer(0).MX.name
end if
```

69.22.42 TypeNS = 2

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.43 TypeNSAP = & h16

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.44 TypeNSAPPTR = & h17

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.45 TypeNULL = & h0a

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.46 TypeNXT = & h1e

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.47 TypePTR = & h0c

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.48 TypePX = & h1a

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.49 TypeRP = & h11

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.50 TypeRT = & h15

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.51 TypeSIG = & h18

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.52 TypeSOA = 6

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.53 TypeSRV = & h21

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.54 TypeTEXT = & h10

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.55 TypeTKEY = & hf9

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.56 TypeTSIG = & hfa

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.57 TypeWKS = & h0b

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.22.58 TypeX25 = & h13

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

69.23 class DNSWKSRecordMBS

69.23.1 class DNSWKSRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a WKS record.

69.23.2 Methods

69.23.3 Map(index as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The map values.
Notes: Index is zero based.

69.23.4 Properties

69.23.5 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The address.
Notes: (Read and Write property)

69.23.6 maplength as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of items in the map array.
Notes: (Read and Write property)

69.23.7 protocol as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The protocol.
Notes: (Read and Write property)

69.24 class DNSX25RecordMBS

69.24.1 class DNSX25RecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a X25 record.

69.24.2 Properties

69.24.3 psdnAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The psdn address.
Notes: (Read and Write property)

Chapter 70

Dongle

70.1 Globals

70.1.1 CallHASPMBS(service as Integer, seed as Integer, lptnum as Integer, pass1 as Integer, pass2 as Integer, byref p1 as Integer, byref p2 as Integer, byref p3 as Integer, byref p4 as Integer)

MBS Dongle Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls the HASP API.
Deprecated: This item is deprecated and should no longer be used. You can use HASPHLDMBS instead.
Notes:

You may need drivers from Aladdin Knowledge Systems for your HASP keys, but the plugin should run and compile even without.

Linux added for plugin v7.0
Please check the HASP documentation from Aladdin for the list of error codes.
If you need a plugin for HASP SRM, please contact us.

With plugin version 14.2 we see problems on Windows with Xojo, but works with Xojo.

Please use HASPHLDMBS for newer projects.

70.1.2 CallHASPMemMBS(service as Integer, seed as Integer, lptnum as Integer, pass1 as Integer, pass2 as Integer, byref p1 as Integer, byref p2 as Integer, byref p3 as Integer, byref p4 as Integer, mem as memoryblock)

MBS Dongle Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls the HASP API.
Deprecated: This item is deprecated and should no longer be used. You can use HASPHLDMBS instead.
Notes:

This version of the Call will pass in the p3 and p4 parameters the address of the memoryblock to the function.

Linux added for plugin v7.0

Please check the HASP documentation from Aladdin for the list of error codes.

70.1.3 GetHASPErrorStrMBS(error as Integer) as string

MBS Dongle Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a human readable error string for the given error code.
Deprecated: This item is deprecated and should no longer be used. You can use HASPHLDMBS instead.
Notes:

May return "" on low memory.

Please check the HASP documentation from Aladdin for the list of error codes.

70.1.4 GetNetHaspWarningStrMBS(error as Integer) as string

MBS Dongle Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a human readable string for the given error code.
Deprecated: This item is deprecated and should no longer be used. You can use HASPHLDMBS instead.
Notes:

May return nil on low memory.

Please check the HASP documentation from Aladdin for the list of error codes.

70.2 class HASPHLDMBS

70.2.1 class HASPHLDMBS

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for accessing HASP HL or Sentinel dongles.
Example:

```
// Load your vendor library or the demo one
dim LibFile as FolderItem = GetFolderItem("hasp_darwin_12345.dylib")

if HASPHLDMBS.LoadLibrary(LibFile) then
'MsgBox "OK"
else
MsgBox "Failed to load library."
Return
end if

// init dongle
' This method runs the actual tests on the given program number
dim blob as MemoryBlock // container for data for en-/decryption

dim FeatureID = HASPHLDMBS.HASP_DEFAULT_FID
dim VendorCode = "123456" // your vendor code here, some big Base64 encoded block

dim hasp as new HASPHLDMBS(FeatureID, VendorCode)
Select case hasp.Lasterror
case HASPHLDMBS.HASP_STATUS_OK
// ok
case HASPHLDMBS.HASP_HASP_NOT_FOUND
MsgBox "Dongle not found."
return
case HASPHLDMBS.HASP_INV_VCODE
MsgBox "Invalid vendor code"
Return
else
MsgBox "Error: "+str(hasp.Lasterror)
return
end Select

// read a file ID
dim fileid as Integer = 65524
dim size as Integer = hasp.GetSize( fileid )

if hasp.Lasterror = HASPHLDMBS.HASP_STATUS_OK then // ONLY IF FILE IS SUPPORTED
```

```
// read to memoryblock
blob = hasp.ReadMemory( fileid, 0, size )
if hasp.Lasterror = HASPHLDMBS.HASP_STATUS_OK then
// show in MsgBox
s = Blob.stringvalue(0,blob.size)
MsgBox DefineEncoding(s,Encodings.UTF8)
end if
end if
```

Notes:

Please use HASP Master Wizard Suite to generate your own runtime libraries. Than you get a couple of DLLs which you can load with this class. For the demo keys, you can use the demo DLLs.
The demo DLL for example is named "hasp_windows_x64_demo.dll" or including your vendor code "hasp_windows_x64_12345.dll" (64bit). 32bit Windows DLL is named hasp_windows_12345.dll, hasp_windows_demo.dll or haspvlib_12345.dll.

Now when you have the platform dependent libraries, you can use LoadLibrary() function in this class to load the right one.

HASPHLMBS uses a linked in library. This is okay for older HASP HL versions. But newer versions require you to create your own signed libraries. For them use the HASPHLDMBS class.

70.2.6 Methods

70.2.7 Available as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether library was loaded.
Notes: Returns true if library was loaded successfully or we use internal library.

70.2.8 Close

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs out from a context or session.
Notes:

Called automatically for you by the destructor.

Use this function to end a connection to an API session object. Once logged out from a session, all memory allocated for the session is released.

Lasterror is set.

70.2.9 Constructor(FeatureID as Integer, scope as string, VendorCode as string)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs into a Feature to establish a session, according to predefined search parameters.
Notes:

This function is used to specify conditions that describe where login information is to searched for.

The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

You can open up to 512 simultaneous login sessions.

This function does not work with legacy HASP Features.

FeatureID: Unique identifier for a specific Feature stored in a Sentinel HASP protection key
Scope: Definition of the search parameters for this Feature ID. See the additional HASP API Reference documentation for more information about Scope XML Tags.
VendorCode: the vendor code

Lasterror is set. This calls SDK function hasp_login_scope.
See also:

- 70.2.10 Constructor(FeatureID as Integer, VendorCode as string) 13268

70.2.10 Constructor(FeatureID as Integer, VendorCode as string)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs into a Feature and thereby establishes a session context.
Notes:

This function establishes a context to a Sentinel HASP protection key containing a license for the requested Feature ID.
The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

You can open up to 512 simultaneous login sessions.

Legacy HASP Remarks
For local prognum Features, concurrency is not handled and each login performs a decrement if it is a counting license.

Network "prognum" features continue to use the old HASP LM login logic, with its inherent limitations.

There is only support for concurrent usage of one server (global server address).

With "Program Number" features (see HASP_FEATURETYPE_MASK), 8 bits are reserved for legacy options (see HASP_PROGNUM_OPT_MASK, currently 5 bits are used):

- only local
- only remote
- login is counted per process ID
- disable terminal server check
- enable access to old (HASP3/HASP4) keys

FeatureID: Unique identifier for a specific Feature stored in a Sentinel HASP protection key
VendorCode: the Vendor Code

Lasterror is set. This calls SDK function hasp_login.
See also:

- 70.2.9 Constructor(FeatureID as Integer, scope as string, VendorCode as string) 13267

70.2.11 DateTimeToHaspTime(day as Integer, month as Integer, year as Integer, hour as Integer, minute as Integer, second as Integer) as memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts a date and time value to hasptime (the number of elapsed seconds since January 1 1970).
Notes:

Time values are in UTC.
Memoryblock has 8 bytes.

70.2.12 DecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypts a buffer.
Notes:

Decrypts data using the decryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID decrypts the data buffer. The decryption key remains in the Sentinel HASP protection key. If the decryption fails,

the buffer is not modified. To encrypt the data buffer, use the Encrypt function.

Data: The data to decrypt.
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock. (16 bytes minimum)

Lasterror is set. This calls SDK function hasp_decrypt.

70.2.13 DecryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypts a buffer.
Notes:

Decrypts data using the decryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID decrypts the data buffer. The decryption key remains in the Sentinel HASP protection key. If the decryption fails, the buffer is not modified. To encrypt the data buffer, use the Encrypt function.

Data: The data to decrypt.
Returns the decrypted data.
Lasterror is set. This calls SDK function hasp_decrypt.

70.2.14 Detach(detachAction as string, scope as string, VendorCode as string, recipient as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Detaches or cancels an attached license, according to customizable parameters
Notes:

You do not need to be logged in to a Sentinel HASP Feature in order to use this function.
This function is used to detach a license for a Product (i.e. all Sentinel HASP Features and Memory files which belong to this Product) from a HASP SL Protection key. The function returns a H2R file which must then be applied on the recipient machine using hasp_update() or the ACC.
This function only works with HASP SL Protection Keys; HASP HL Protection Keys are ignored.
This function can also be used on the recipient machine to cancel an attached license. In this case, the recipient parameter is ignored and should be set to NULL. For cancelling, the function returns a R2H file which must be applied on the host machine using hasp_update() or the ACC. If the detached Product is already expired, no R2H file will be returned.

The required Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

Parameter	Description
detachAction:	Parameters for the operation, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation.
scope:	Search parameters for the Product that is to be detached
VendorCode:	The Vendor Code.
recipient:	Definition in XML format of the recipient computer, on which the detached Product will be installed. This information can be retrieved using either GetInfo or GetSessionInfo together with the format specifier HASP_RECIPIENT. Set to "" if an attached protection key is cancelled.
info:	The information that is retrieved, in XML format. This information is a V2C, which can then be installed on the recipient computer via Update.

Return code	Description
HASP_STATUS_OK	Request was successfully completed
HASP_INV_DETACH_ACTION	Invalid XML "detach_action" parameter
HASP_INV_RECIPIENT	Invalid XML "recipient" parameter
HASP_TOO_MANY_PRODUCTS	Scope for Detach does not specify a unique Parameter
HASP_TOO_MANY_USERS	Too many users currently connected, or: at least one detachable Feature does not have enough network seats available
HASP_ACCESS_DENIED	Request cannot be processed due to ACC restrictions
HASP_FEATURE_EXPIRED	All detachable Features are expired
HASP_INV_PRODUCT	Invalid Product information
HASP_INV_DURATION	In the case of a new detachable license, duration exceeds maximum allowed OR, in the case of a detachable license extension, expiration date earlier than original date or too short (if an existing detached Product is extended, and the new expiration date is earlier than the original expiration date)
HASP_INSUF_MEM	Out of memory
HASP_DEVICE_ERR	Input/Output error in HASP SL secure storage, OR in case of a HASP HL key,USB communication error
HASP_LOCAL_COMM_ERR	Communication error between API and local HASP License Manager
HASP_REMOTE_COMM_ERR	Communication error between local and remote HASP License Manager

70.2.15 EncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts a buffer.
Notes:

Encrypts data using the encryption engine in the Sentinel HASP protection key.

The specific session handle determines which Sentinel HASP protection key and which Feature ID encrypts the data buffer. The encryption key remains in the Sentinel HASP protection key. If the encryption fails, the buffer is not modified. To decrypt the data buffer, use the Decrypt function.

Data: The data to encrypt.
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock. (16 bytes minimum)

Lasterror is set. This calls SDK function hasp_encrypt.

70.2.16 EncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts a buffer.
Notes:

Encrypts data using the encryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID encrypts the data buffer. The encryption key remains in the Sentinel HASP protection key. If the encryption fails, the buffer is not modified. To decrypt the data buffer, use the Decrypt function.

Data: The data to encrypt. (16 bytes minimum)

Returns encrypted string.

Lasterror is set. This calls SDK function hasp_encrypt.

70.2.17 GetInfo(scope as string, format as string, VendorCode as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves information about system components, according to customizable search parameters, and presents it according to customizable formats.
Notes:

You do not need to be logged in to a Sentinel HASP Feature in order to use this function.

This function is used to specify conditions about where to search for information. In addition, it enables

you to specify conditions about the format in which the retrieved information is presented. If retrieved information is appropriately formatted, it can be used as a template in the Constructor.

The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

This function cannot be used to retrieve legacy HASP Features.

scope: Definition of the data that is to be searched, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation
format: Definition of the format in which the data is to be displayed, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation.
VendorCode: the Vendor Code
info: The information that is retrieved, in XML format

Return Code	Description
HASP_STATUS_OK	Request was successfully completed
HASP_SCOPE_RESULTS_EMPTY	Unable to locate a Feature matching the scope
HASP_INSUF_MEM	Out of memory
HASP_INV_VCODE	Invalid Vendor Code
HASP_UNKNOWN_VCODE	Vendor Code not recognized
HASP_INVALID_PARAMETER	Scope or format string too long (max. length 32 kb)
HASP_DEVICE_ERR	Input/Output error in HASP SL secure storage, OR in case of a HASP HL key, USB communication error
HASP_LOCAL_COMM_ERR	Communication error between API and local HASP License Manager
HASP_REMOTE_COMM_ERR	Communication error between local and remote HASP License Manager
HASP_INV_FORMAT	Unrecognized format string
HASP_INV_SCOPE	Unrecognized scope string
HASP_BROKEN_SESSION	Session has been interrupted

70.2.18 GetRTC as memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the current time.
Notes:

Only HASP HL keys with a Real-time clock (rtc) and HASP SL keys can provide the current time.
Primarily used to obtain reliable timestamps that are independent from the system clock.
Time values are returned as the number of seconds that have elapsed since Jan-01-1970 0:00:00 UTC.
This request is only supported on locally accessed keys. Trying to get the time from a remotely accessed key will return HASP_NO_TIME.
Returns time as a 8 byte memoryblock.
Lasterror is set.

70.2.19 GetSessionInfo(format as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves information regarding a session context.
Notes:

format: Definition for the type of output data structure, in XML format.
There are three format options:

- HASP_KEYINFO For retrieving information on the Sentinel HASP protection key
- HASP_SESSIONINFO For retrieving information on the login session
- HASP_UPDATEINFO For retrieving information on a license update usually contained in a C2V file. The retrieved information includes the current state of the key, including update counters, license availability and memory images

Returns answer. Lasterror is set.

HASP_KEYINFO is ”<haspformat format=””keyinfo””/>”
HASP_SESSIONINFO is ”<haspformat format=””sessioninfo””/>”
HASP_UPDATEINFO is ”<haspformat format=””updateinfo””/>”

70.2.20 GetSize(FileID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the byte size of a memory file from a HASP protection key.
Notes:

This function is used to determine the file size of a HASP memory file.
FileID: Identifier for the file that is to be queried.
Returns file size. Lasterror is set.

Possible File ID constants: HASP_FILEID_LICENSE, HASP_FILEID_MAIN, HASP_FILEID_RO or HASP_FILEID_RW.

70.2.21 GetVersion(byref MajorVersion as Integer, byref MinorVersion as Integer, byref BuildServer as Integer, byref BuildNumber as Integer, VendorCode as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves version and build number of the HASP library.
Notes: Returns error code.

70.2.22 HaspTimeToDateTime(time as memoryblock, byref day as Integer, byref month as Integer, byref year as Integer, byref hour as Integer, byref minute as Integer, byref second as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts a time value (elapsed seconds since January 1 1970) into a date and time
Notes:

Memoryblock has 8 bytes.
Time values are in UTC.

70.2.23 LegacyDecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible decryption function.
Notes:

This object must have been created by calling Constructor() with a "prognum" Feature ID.

Data: The memoryblock where bytes are decrypted.
DataOffset is the start position in Bytes in the memoryblock and size the length of the data block to decrypt.
Size: Size of the data in the memoryblock to decrypt.

Lasterror is set.

70.2.24 LegacyDecryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible decryption function.
Notes:

This object must have been created by calling Constructor() with a "prognum" Feature ID.

Lasterror is set.

70.2.25 LegacyEncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible encryption function.
Notes:

This object must have been created by calling Constructor() with a "prognum" Feature ID.

Data: The memoryblock where bytes are encrypted.
DataOffset is the start position in Bytes in the memoryblock and size the length of the data block to encrypt.
Size: Size of the data in the memoryblock to encrypt.

Lasterror is set.

70.2.26 LegacyEncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible encryption function.
Notes:

This object must have been created by calling Constructor() with a "prognum" Feature ID.

Lasterror is set.

70.2.27 LegacySetIdleTime(idletime as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the LM idle time.
Notes:

This object must have been created by calling Constructor() with a "prognum" Feature ID.

time: The idle time in minutes.

Lasterror is set.

70.2.28 LegacySetRTC(time as memoryblock)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes to HASP4-compatible real-time clock.
Notes:

This object must have been created by calling Constructor() with a "prognum" Feature ID.

This request is only supported on locally accessed keys. Attempting to set the time on a remotely accessed key will return HASP_NO_TIME.

time: The new time value (8 byte Memoryblock)

Lasterror is set.

70.2.29 LoadLibrary(file as folderitem) as boolean

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the HASPHL shared library.
Notes:

Returns true on success and false on failure.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from

the given path.
See also:

- 70.2.30 LoadLibrary(path as string) as boolean 13278

70.2.30 LoadLibrary(path as string) as boolean

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the HASPHL shared library.
Notes:

Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.
See also:

- 70.2.29 LoadLibrary(file as folderitem) as boolean 13277

70.2.31 ReadMemory(FileID as Integer, Offset as Integer, Size as Integer) as Memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the memory of a Sentinel HASP protection key.
Notes:

Valid File IDs are HASP_FILEID_RW and HASP_FILEID_RO.

Legacy HASP Remarks
Valid File IDs are HASP_FILEID_LICENSE and HASP_FILEID_MAIN.

FileID: Identifier for the file that is to be read
Offset: Byte offset in the file
Size: Number of bytes to read.

Lasterror is set.

70.2.32 ReadString(FileID as Integer, Offset as Integer, Size as Integer) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the memory of a Sentinel HASP protection key.
Notes:

Valid File IDs are HASP_FILEID_RW and HASP_FILEID_RO.

Legacy HASP Remarks
Valid File IDs are HASP_FILEID_LICENSE and HASP_FILEID_MAIN.

FileID: Identifier for the file that is to be read
Offset: Byte offset in the file
Size: Number of bytes to read.

Lasterror is set.

70.2.33 Transfer(action as string, scope as string, VendorCode as string, recipient as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Performs a transfer operation.
Notes:

Sentinel Licensing API Usage Notes
You do not need to be logged in to a Sentinel Feature in order to use this function.

This function is used to perform the following task as per its
"action" parameter.
for "detach" action: detach a license for a Product (i.e. all Sentinel Features and Memory files which belong to this Product) from a Sentinel SL/SL-AdminMode/SL-UserMode key. The function returns a bufferwhich should be saved as H2R file.

for "cancel" action: This action runs on the recipient machine to cancel an attached license. In this case, the
recipient parameter is ignored and should be set to "". For cancelling, the function returns a buffer which must be applied on the host machine using Update() or ACC If the detached Product is already expired, no buffer will be returned.

for "rehost" action: create a tranferable a license for given container (i.e. all Sentinel Features and Memory files
which belong to this container) from SL-AdminMode/SL-UserMode Protection key. The function returns buffer on success which must be saved as V2C file. Update() or ACC is used to apply this on destination machine.

This function only works with Sentinel SL/SL-AdminMode/SL-UserMode Protection Keys; Sentinel HL Protection Keys are ignored.

The required Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

action: Parameters for the operation, in XML format. For more information, see the accompanying Sentinel Licensing API help documentation.
scope: Search parameters for the conatiner-id that is to be re-hosted. For more information, see the accompanying
Sentinel Licensing API help documentation.
VendorCode: The Vendor Code
recipient: Definition in XML format of the recipient computer, on which the detached Product will be installed.

This information can be retrieved using either GetInfo or GetSessionInfo together with the format specifier

info: String for the information that is retrieved, in XML format. This information is a V2C, which can then be installed on the destination computer via Update.

70.2.34 Update(data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates a Sentinel HASP protection key.
Notes:

This function writes update information. Note that the Sentinel HASP protection key must be locally connected.

The update code contains all necessary data to perform the update on a deployed Sentinel HASP protection key including:

- The Sentinel HASP protection key on which the updated information is to be written
- The necessary Vendor Code that is required to access the Sentinel HASP key

- The actual update information

Depending on the update data, the function returns an acknowledgement code that is signed/encrypted by the key. The code is evidence that an update has been applied to a license.

data: The update data.
Returns the acknowledge data.

Lasterror is set.

70.2.35 WriteMemory(FileID as Integer, FileOffset as Integer, Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes to the memory of a Sentinel HASP protection key.
Notes:

Valid File ID is HASP_FILEID_RW.

Depending on the provided session handle (either logged into the default Feature or any other Feature), write access to the FAS memory (HASP_FILEID_LICENSE) is not permitted.

FileID: Identifier for the file that is to be written
FileOffset: Byte offset in the file
Data: the data
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock.

Lasterror is set.

70.2.36 WriteString(FileID as Integer, FileOffset as Integer, Data as String)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes to the memory of a Sentinel HASP protection key.
Notes:

alid File ID is HASP_FILEID_RW.

Depending on the provided session handle (either logged into the default Feature or any other Feature), write access to the FAS memory (HASP_FILEID_LICENSE) is not permitted.

FileID: Identifier for the file that is to be written
FileOffset: Byte offset in the file
Data: the data

Lasterror is set.

70.2.37 Properties

70.2.38 Handle as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal handle for the session.
Notes: (Read and Write property)

70.2.39 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error value.
Notes: (Read and Write property)

70.2.40 Constants

70.2.41 HASP_ACCESS_DENIED = 5

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Access to Feature, HASP protection key or functionality denied.

70.2.42 HASP_ALREADY_LOGGED_IN = 502

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: C++ API: Logging in twice to the same object.

70.2.43 HASP_ALREADY_LOGGED_OUT = 503

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: C++ API: Logging out twice of the same object

70.2.44 HASP_BROKEN_SESSION = 39

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Session been interrupted.

70.2.45 HASP_CANNOT_READ_FILE = 72

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: File not found or access denied.

70.2.46 HASP_CLONE_DETECTED = 64

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Cloned HASP SL secure storage detected.

70.2.47 HASP_CONTAINER_NOT_FOUND = 7

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Deprecated - use HASP_HASP_NOT_FOUND.

70.2.48 HASP_DEFAULT_FID = 0

MBS Dongle Plugin, Plugin Version: 11.1.

Function: The HASP default Feature ID.
Notes: Available in every HASP key.

70.2.49 HASP_DETACHED_LICENSE_FOUND = 76

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes:

Format SL-AdminMode or migrate SL-Legacy to SL-AdminMode not allowed
as container has detached license.

70.2.50 HASP_DETACH_DISABLED = 74

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes:

Detach of license not allowed as product.
contains VM disabled feature and host machine is a virtual machine.

70.2.51 HASP_DEVICE_ERR = 43

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Input/Output error occurred in secure storage area of HASP SL key OR a USB error occurred when communicating with a HASP HL key

70.2.52 HASP_DUPLICATE_HOSTNAME = 79

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Duplicate Hostname found while key contains Hostname Fingerprinting.

70.2.53 HASP_ENC_NOT_SUPP = 23

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Sentinel HASP protection key does not support encryption type.

70.2.54 HASP_EXTENSION_NOT_ALLOWED = 73

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes:

Extension of license not allowed as number of detached.
licenses is greater than current concurrency count.

70.2.55 HASP_FEATURETYPE_MASK = & hffff0000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Feature Type" mask.
Notes: AND-mask used to identify Feature type.

70.2.56 HASP_FEATURE_EXPIRED = 41

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Feature expired.

70.2.57 HASP_FEATURE_NOT_FOUND = 31

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Requested Feature not available.

70.2.58 HASP_FEATURE_TYPE_NOT_IMPL = 28

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Requested Feature type not implemented.

70.2.59 HASP_FILEID_DYNAMIC_FIRST = 1

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes:

Sentinel dynamic memory file ID avaliable range
File ID lower limit for Sentinel dynamic memory file.

70.2.60 HASP_FILEID_DYNAMIC_LAST = & hffbf

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes:

Sentinel dynamic memory file ID avaliable range
File ID upper limit for Sentinel dynamic memory file.

70.2.61 HASP_FILEID_LICENSE = & hfff2

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the Memory File ID constants
Notes:

Legacy HASP HL Run-time API: HASP4 FAS memory file
(Dummy) File ID for the license data area of memory contents.

70.2.62 HASP_FILEID_MAIN = & hfff0

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the Memory File ID constants
Notes:

Legacy HASP HL Run-time API: HASP4 memory file
File ID for HASP4-compatible memory contents w/o FAS.

70.2.63 HASP_FILEID_RO = & hfff5

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the Memory File ID constants
Notes:

Sentinel HASP secure read only memory file.
File ID for HASP Sentinel HASP read only memory.

70.2.64 HASP_FILEID_RW = & hfff4

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the Memory File ID constants
Notes:

Sentinel HASP secure writable memory file
File ID for Sentinel HASP secure writable memory.

70.2.65 HASP_FIRST_HASP_ACT = 3001

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Reserved for HASP Activation API

70.2.66 HASP_FIRST_HELPER = 2001

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Reserved for HASP helper libraries.

70.2.67 HASP_HARDWARE_MODIFIED = 52

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: HASP SL key incompatible with machine hardware; HASP SL key is locked to different hardware. OR: In the case of a V2C file, conflict between HASP SL key data and machine hardware data; HASP SL key locked to different hardware

70.2.68 HASP_HASP_INACTIVE = 66

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Specified Hasp Id is in Inactive state

70.2.69 HASP_HASP_NOT_FOUND = 7

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Sentinel HASP protection key not available.

70.2.70 HASP_INCOMPAT_FEATURE = 6

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Legacy decryption function cannot work on Feature.

70.2.71 HASP_INSUF_MEM = 3

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: System is out of memory.

70.2.72 HASP_INT_ERR = 699

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Internal error occurred in API.

70.2.73 HASP_INVALID_HANDLE_VALUE = 0

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Invalid handle value for Handle property.

70.2.74 HASP_INVALID_OBJECT = 500

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: C++ API: Object incorrectly initialized.

70.2.75 HASP_INVALID_PARAMETER = 501

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid function parameter.

70.2.76 HASP_INV_ACTION = 59

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Invalid XML "action" parameter

70.2.77 HASP_INV_API_DYLIB = 401

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: API dispatcher: Unable to load API; DLL possibly corrupt?

70.2.78 HASP_INV_DETACH_ACTION = 59

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid XML "action" parameter.

70.2.79 HASP_INV_DURATION = 63

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid duration.

70.2.80 HASP_INV_FILEID = 10

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Specified File ID not recognized by API.

70.2.81 HASP_INV_FORMAT = 15

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid XML format.

70.2.82 HASP_INV_HND = 9

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid login handle passed to function.

70.2.83 HASP_INV_PORT = 651

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Internal use: invalid port value.

70.2.84 HASP_INV_PORT_TYPE = 650

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Internal use: invalid port type.

70.2.85 HASP_INV_PRODUCT = 61

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid Product information.

70.2.86 HASP_INV_PROGNUM_OPT = 2

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Legacy HASP HL Run-time API: Unknown/Invalid Feature ID option.

70.2.87 HASP_INV_RECIPIENT = 58

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid XML ”recipient” parameter.

70.2.88 HASP_INV_SCOPE = 36

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid XML scope.

70.2.89 HASP_INV_SIG = 30

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Signature verification operation failed.

70.2.90 HASP_INV_SPEC = 35

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid XML specification.

70.2.91 HASP_INV_TIME = 24

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Passed time value outside supported value range.

70.2.92 HASP_INV_UPDATE_CNTR = 21

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Update counter set incorrectly.

70.2.93 HASP_INV_UPDATE_DATA = 19

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Required XML tags not found; Contents in binary data are missing or invalid

70.2.94 HASP_INV_UPDATE_NOTSUPP = 20

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Update request not supported by Sentinel HASP protection key.

70.2.95 HASP_INV_UPDATE_OBJ = 17

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Binary data passed to function does not contain valid update.

70.2.96 HASP_INV_VCODE = 22

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid Vendor Code passed.

70.2.97 HASP_INV_VLIB = 49

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Unable to load Vendor library.

70.2.98 HASP_KEYID_NOT_FOUND = 18

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: HASP protection key not found.

70.2.99 HASP_LICENSE_REHOSTED = 70

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: License is rehosted to other machine

70.2.100 HASP_LOCAL_COMM_ERR = 33

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Communication error between API and local Sentinel HASP License Manager.

70.2.101 HASP_MEM_RANGE = 1

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Request exceeds memory range of a HASP file.

70.2.102 HASP_MIN_BLOCK_SIZE = 16

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Minimum block size for encrypt and decrypt functions.

70.2.103 HASP_MIN_BLOCK_SIZE_LEGACY = 8

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Minimum block size for legacy encrypt and legacy decrypt functions.

70.2.104 HASP_MISSING_LM = 80

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: The Sentinel License Manager is required for this operation

70.2.105 HASP_NET_DLL_BROKEN = 652

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Dot-Net DLL found broken

70.2.106 HASP_NEXT_FREE_VALUES = 5001

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Next free error code.

70.2.107 HASP_NOT_IMPL = 698

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Requested function not implemented.

70.2.108 HASP_NO_ACK_SPACE = 26

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Acknowledge data requested by update, but ack_data parameter is NULL.

70.2.109 HASP_NO_API_DYLIB = 400

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: API dispatcher: API for this Vendor Code was not found.

70.2.110 HASP_NO_BATTERY_POWER = 25

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Real-time clock battery out of power.

70.2.111 HASP_NO_DETACHABLE_FEATURE = 67

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: No detachable feature exists.

70.2.112 HASP_NO_DRIVER = 14

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Required driver not installed.

70.2.113 HASP_NO_EXTBLOCK = 600

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Internal use: no classic memory extension block available.

70.2.114 HASP_NO_LOG = 32

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Access log not enabled.

70.2.115 HASP_NO_TIME = 12

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Real-time clock (rtc) not available.

70.2.116 HASP_NO_VLIB = 48

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Unable to find Vendor library.

70.2.117 HASP_OLD_DRIVER = 11

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Installed driver or daemon too old to execute function.

70.2.118 HASP_OLD_LM = 42

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Sentinel HASP License Manager version too old.

70.2.119 HASP_OLD_VLIB = 56

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Vendor library version too old.

70.2.120 HASP_OPERATION_FAILED = 525

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: .NET API: Incorrect use of system or platform

70.2.121 HASP_PROGNUM_DEFAULT_FID = & hffff0000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: The HASP default Feature ID
Notes: Available in every legacy HASP hardware key.

70.2.122 HASP_PROGNUM_FEATURETYPE = & hffff0000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number Feature" type
Notes: After AND-ing with HASP_FEATURETYPE_MASK the Feature type contain this value.

70.2.123 HASP_PROGNUM_MASK = & h000000ff

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number Mask"
Notes: AND-mask used to extract the Program Number from a "prognum" Feature ID.

70.2.124 HASP_PROGNUM_OPT_CLASSIC = & h00001000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number" option
Notes: Enables the API to access "classic" (HASP4 or earlier) keys.

70.2.125 HASP_PROGNUM_OPT_MASK = & h0000ff00

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number Options" mask.
Notes:

AND-mask used to identify Program Number options:

- HASP_PROGNUM_OPT_NO_LOCAL
- HASP_PROGNUM_OPT_NO_REMOTE
- HASP_PROGNUM_OPT_PROCESS
- HASP_PROGNUM_OPT_CLASSIC
- HASP_PROGNUM_OPT_TS

3 bits of the mask are reserved for future extensions and currently unused.
Initialize them with zero.

70.2.126 HASP_PROGNUM_OPT_NO_LOCAL = & h00008000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number" option
Notes: Disables the search for local licenses.

70.2.127 HASP_PROGNUM_OPT_NO_REMOTE = & h00004000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number" option
Notes: Disables the search for network licenses.

70.2.128 HASP_PROGNUM_OPT_PROCESS = & h00002000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number" option
Notes: Sets session count of network licenses to "per-process".

70.2.129 HASP_PROGNUM_OPT_TS = & h00000800

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number" option
Notes: Ignores the presence of terminal servers.

70.2.130 HASP_RDP_DETECTED = 27

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Program running on a Remote Desktop

70.2.131 HASP_RECIPIENT_OLD_LM = 77

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Recipient of the requested operation is older than expected.

70.2.132 HASP_REHOST_ALREADY_APPLIED = 71

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Old rehost license try to apply

70.2.133 HASP_REHOST_DISABLED = 75

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes:

Rehost of license not allowed as container
contains VM disabled feature and host machine is a virtual machine

70.2.134 HASP_REHOST_NOT_ALLOWED = 69

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Rehost is not allowed for any license

70.2.135 HASP_REMOTE_COMM_ERR = 40

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Communication error between local and remote Sentinel HASP License Managers.

70.2.136 HASP_REQ_NOT_SUPP = 16

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Unable to execute function in this context; the requested functionality is not implemented.

70.2.137 HASP_SCHAN_ERR = 46

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Communication error occurred in secure channel.

70.2.138 HASP_SCOPE_RESULTS_EMPTY = 50

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Unable to locate any Feature matching scope.

70.2.139 HASP_SECURE_STORE_ID_MISMATCH = 78

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Secure storage ID mismatch

70.2.140 HASP_STATUS_OK = 0

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Request successfully completed

70.2.141 HASP_STORAGE_CORRUPT = 47

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Corrupt data exists in secure storage area of HASP SL protection key.

70.2.142 HASP_SYS_ERR = 13

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Generic error from host system call.

70.2.143 HASP_TIME_ERR = 45

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: System time has been tampered with.

70.2.144 HASP_TMOF = 4

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Too many open Features/login sessions.

70.2.145 HASP_TOO_MANY_HOSTS = 68

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Scope does not specify a unique host

70.2.146 HASP_TOO_MANY_KEYS = 37

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Too many Sentinel HASP protection keys currently connected.

70.2.147 HASP_TOO_MANY_PRODUCTS = 60

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Scope does not specify a unique Product.

70.2.148 HASP_TOO_MANY_USERS = 38

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Too many concurrent user sessions currently connected.

70.2.149 HASP_TOO_SHORT = 8

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Encrypted/decrypted data length too short to execute function call.

70.2.150 HASP_TS_DETECTED = 27

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Program running on a terminal server.

70.2.151 HASP_UNKNOWN_ALG = 29

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Unknown algorithm used in H2R/V2C file.

70.2.152 HASP_UNKNOWN_RECIPIENT = 62

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Unknown Recipient; update can only be applied to the Recipient specified in hasp_detach(), and not to this computer.

70.2.153 HASP_UNKNOWN_VCODE = 34

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Vendor Code not recognized by API.

70.2.154 HASP_UPDATE_ALREADY_ADDED = 65

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Specified V2C update already installed in the LLM

70.2.155 HASP_UPDATE_BLOCKED = 44

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Update installation not permitted; This update was already applied.

70.2.156 HASP_UPDATE_TOO_NEW = 55

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Trying to install a V2C file with an update counter that is out of sequence with update counter in the Sentinel HASP protection key. The first value in the V2C file is greater than the value in the Sentinel HASP protection key.

70.2.157 HASP_UPDATE_TOO_OLD = 54

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Trying to install a V2C file with an update counter that is out of sequence with the update counter on the Sentinel HASP protection key. The update counter value in the V2C file is lower than the value in sentinel HASP protection key.

70.2.158 HASP_UPLOAD_ERROR = 57

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Upload via ACC failed, e.g. because of illegal format.

70.2.159 HASP_USER_DENIED = 53

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Login denied because of user restrictions.

70.2.160 HASP_VM_DETECTED = 51

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Program running on a virtual machine

70.3 class HASPHLMBS

70.3.1 class HASPHLMBS

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: A class for accessing HASP HL dongles.
Deprecated: This item is deprecated and should no longer be used. You can use HASPHLDMBS instead.
Notes:

HASPHLMBS uses a linked in library. This is okay for older HASP HL versions. But newer versions require you to create your own signed libraries. For them use the HASPHLDMBS class.

Please use HASPHLDMBS for newer projects.

70.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.5pr3

70.3.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.5pr3

70.3.4 Methods

70.3.5 Close

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The destructor.
Notes:

If you logged in successful before, it logs out from a session and frees all allocated resources for the session. Lasterror is set.

70.3.6 Constructor(FeatureID as Integer, VendorCode as string)

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Login into a feature.
Notes:

This function establishes a context (logs into a feature).

feature_id: Unique identifier of the feature. Combinations of constants below.
vendor_code: string with the vendor code

For local prognum features, concurrency is not handled and each login performs a decrement if it is a counting license.

Network prognum features just use the old HASPLM login logic with all drawbacks.
There is only support for concurrent usage of \b one server (global server address).

Lasterror is set.

const HASP_PROGNUM_OPT_NO_LOCAL	=& h00008000	Disable local license search
const HASP_PROGNUM_OPT_NO_REMOTE	=& h00004000	Disable network license search
const HASP_PROGNUM_OPT_PROCESS	=& h00002000	Sets session count of network licenses to per-process
const HASP_PROGNUM_OPT_CLASSIC	=& h00001000	Enables the API to access "classic" (HASP4 or earlier) keys
const HASP_PROGNUM_OPT_TS	=& h00000800	Presence of Terminal Services gets ignored

70.3.7 DateTimeToHaspTime(day as Integer, month as Integer, year as Integer, hour as Integer, minute as Integer, second as Integer) as memoryblock

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Convert broken up time into a time type.
Notes:

Lasterror is set.
Times are in UTC.

70.3.8 DecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: This function decrypts a buffer.
Notes:

This is the reverse operation of the hasp_encrypt() function.
Lasterror is set.

Data: Buffer
DataOffset: Start offset in the buffer.

Size: size in bytes of the buffer to be decrypted (16 bytes minimum)

If the decryption fails (e.g. key removed in-between) the data pointed to by buffer is unmodified.

70.3.9 DecryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: This function decrypts a buffer.
Notes:

This is the reverse operation of the hasp_encrypt() function.
This function encrypts a buffer.
Lasterror is set.

If the decryption fails (e.g. key removed in-between) an empty string is returned.

70.3.10 EncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Encrypt a buffer.
Example:

```
dim h as HASPHLMBS // your hasp object
dim mem as MemoryBlock // your data

h.EncryptMemory(mem,0,mem.size) // Whole block
```

Notes:

This function encrypts a buffer.
Lasterror is set.

Data: Buffer
DataOffset: Start offset in the buffer.
Size: size in bytes of the buffer to be encrypted (16 bytes minimum)

If the encryption fails (e.g. key removed in-between) the data pointed to by buffer is unmodified.

70.3.11 EncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Encrypt a buffer.
Notes:

This function encrypts a buffer.
Lasterror is set.

If the encryption fails (e.g. key removed in-between) an empty string is returned.

70.3.12 GetRTC as memoryblock

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Read current time from a time key.
Notes:

This function reads the current time from a time key.
The time will be returned in seconds since Jan-01-1970 0:00:00 GMT.

The general purpose of this function is not related to licensing, but to get reliable timestamps which are independent from the system clock.
This request is only supported on locally accessed keys. Trying to get the time from a remotely accessed key will return HASP_NO_TIME.

Returns a 64bit integer inside an eight byte memoryblock.

70.3.13 GetSessionInfo(format as string) as string

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Get information in a session context.
Notes:

format: XML definition of the output data structure

const HASP_UPDATEINFO	= <haspformat format="updateinfo"/>	hasp_get_sessioninfo() format to get update info (C2V)
const HASP_SESSIONINFO	= <haspformat format="sessioninfo"/>	hasp_get_sessioninfo() format to get session info
const HASP_KEYINFO	= <haspformat format="keyinfo"/>	hasp_get_sessioninfo() format to get key/hardware info

Returns XML data with the requested information.

Calling GetSessionInfo with HASP_UPDATEINFO format will return something like this:

```
<?xml version="1.0" encoding="UTF-8"?>
<hasp_info>
<c2v>
YYIBlIADY3R2oQaABEAwulCiCYABaoEBBIIBAKOBxoABAIGBwD2sfFj8UKuDvNWH9
LhfRKDzUbLCAi6E9mN8ea7EclwOl9VeLMDuLvfsEvkor2igmwxg/wWs6HCuypEFi6
V/FkI4EUmQNmcKSIY302s9CzHP7aCrG7QKvzArVq25Nc7UxIQJ4kZJm1oWiw3zZJq
UY+G0EleETkPZ8n2uDfMauBpdWhW0R35rHlRM4wiYCZzaelpRtDX36HDh1caqfpaL
mUnwWXRz0+tLs+Dvd+kLmvcQ6jWJJb4r2rxywG2IW1WTjIWBsI+h0/UgaIhG1J+9R
EQ1SrMx3YQ2bpdlK3FluZVDayW9okv7idxKJS4zGG+4UOccpKT4aWJi9cR0vdm4s/
J6fUNbhK522x/gdvR51a6ll46GpVn2HjD0ZpAgCeu6xAIwHJ7Kc6tjeRfxYX9YksE
aB9JoV/uaPTHnbu2AgQmd0r09p0zmXgD4Kuk8EtTs1GoBbY7WF3qHJsj1Iz1ZeAdA
rdNOYKsOgA/q1tuLLR7O0dag
</c2v>
</hasp_info>
```

Calling GetSessionInfo with HASP_SESSIONINFO format will return something like this:

```
<hasp_info>
<feature>
<featureid>4294905856</featureid>
<maxlogins>5</maxlogins>
<currentlogins>1</currentlogins>
<activations>unlimited</activations>
</feature>
</hasp_info>
```

In case of a expiring license on a time enabled key (prognum <= 8), instead of the remaining activations the expiration date will be returned:

```
<hasp_info>
<feature>
<featureid>4294905857</featureid>
<expirationdate>1052919239</expirationdate>
</feature>
</hasp_info>
```

For locally accessed keys there is no maxlogins and currentlogins field.

Calling GetSessionInfo with HASP_KEYINFO format will return something like this for a locally accessed key:

```
<?xml version="1.0" encoding="UTF-8"?>
<hasp_info>
<keyspec>
<keycaps>
<hasp4/>
<aes/>
<newintf/>
</keycaps>
<hasp>
<haspid>12345</haspid>
<nethasptype>0</nethasptype>
<memoryinfo>
<name>"Main"</name>
<fileid>65520</fileid>
<size>48</size>
</memoryinfo>
<memoryinfo>
<name>"FAS"</name>
<fileid>65522</fileid>
<size>80</size>
</memoryinfo>
</hasp>
<port>
<type>"USB"</type>
<address>1</address>
</port>
</keyspec>
</hasp_info>
```

Calling GetSessionInfo with HASP_KEYINFO format will return something like this for a remotely accessed key:

```
<?xml version="1.0" encoding="UTF-8"?>
<hasp_info>
<keyspec>
<keycaps>
<hasp4/>
</keycaps>
<hasp>
<haspid>782062012</haspid>
<nethasptype>5</nethasptype>
<memoryinfo>
<name>"Main"</name>
<fileid>65520</fileid>
<size>432</size>
</memoryinfo>
<memoryinfo>
```

<name>"FAS"</name>
<fileid>65522</fileid>
<size>448</size>
</memoryinfo>
</hasp>
<serveraddress>
<protocol>"IP"</protocol>
<address>"10.20.3.10"</address>
</serveraddress>
</keyspec>
</hasp_info>

keycaps flags:

hasp4	support HASP4 compatible encryption
aes	support AES encryption
rtc	key has real time clock chip
newintf	supports new access interface

70.3.14 GetSize(FileID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Get memory size.
Notes:

This function is used to determine the memory size.
Returns the number of bytes inside the file.
Lasterror is set.

const HASP_FILEID_MAIN	= & hfff0	File id for HASP4 compatible memory contents w/o FAS
const HASP_FILEID_LICENSE	= & hfff2	(Dummy) file id for license data area of memory contents

70.3.15 HaspTimeToDateTime(time as memoryblock, byref day as Integer, byref month as Integer, byref year as Integer, byref hour as Integer, byref minute as Integer, byref second as Integer)

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Convert time type into broken up time
Notes:

Lasterror is set.
Times are in UTC.

70.3.16 LegacyDecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: This function decrypts a buffer.
Notes:

This is the reverse operation of the hasp_encrypt() function.
Lasterror is set.

Data: Buffer
DataOffset: Start offset in the buffer.
Size: size in bytes of the buffer to be decrypted (16 bytes minimum)

If the decryption fails (e.g. key removed in-between) the data pointed to by buffer is unmodified.

Legacy HASP functionality for backward compatibility.

70.3.17 LegacyDecryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: This function decrypts a buffer.
Notes:

This is the reverse operation of the hasp_encrypt() function.
This function encrypts a buffer.
Lasterror is set.

If the decryption fails (e.g. key removed in-between) an empty string is returned.

Legacy HASP functionality for backward compatibility.

70.3.18 LegacyEncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Encrypt a buffer.
Example:

```
dim h as HASPHLMBS // your hasp object
dim mem as MemoryBlock // your data

h.LegacyEncryptMemory(mem,0,mem.size) // Whole block
```

Notes:

This function encrypts a buffer.
Lasterror is set.

Data: Buffer
DataOffset: Start offset in the buffer.
Size: size in bytes of the buffer to be encrypted (16 bytes minimum)

If the encryption fails (e.g. key removed in-between) the data pointed to by buffer is unmodified.

Legacy HASP functionality for backward compatibility.

70.3.19 LegacyEncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Encrypt a buffer.
Notes:

This function encrypts a buffer.
Lasterror is set.

If the encryption fails (e.g. key removed in-between) an empty string is returned.

Legacy HASP functionality for backward compatibility.

70.3.20 LegacySetIdleTime(idletime as Integer)

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Set the LM idle time.
Notes:

idletime: the idle time in minutes

Legacy HASP functionality for backward compatibility.

70.3.21 LegacySetRTC(time as memoryblock)

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Write to HASP4 compatible real time clock
Notes:

This request is only supported on locally accessed keys. Trying to set the time on a remotely accessed key will return HASP_NO_TIME.

Legacy HASP functionality for backward compatibility.

70.3.22 ReadMemory(FileID as Integer, Offset as Integer, Size as Integer) as Memoryblock

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: This function is used to read from the key memory.
Notes:

Lasterror is set.
Offset: Byte start in the file.
Size: Number of bytes in the file.
Result: The data read from the file.

const HASP_FILEID_MAIN	= & hfff0	File id for HASP4 compatible memory contents w/o FAS
const HASP_FILEID_LICENSE	= & hfff2	(Dummy) file id for license data area of memory contents

70.3.23 ReadString(FileID as Integer, Offset as Integer, Size as Integer) as string

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: This function is used to read from the key memory.
Notes:

Lasterror is set.
Offset: Byte start in the file.
Size: Number of bytes in the file.
Result: The data read from the file.

const HASP_FILEID_MAIN	= & hfff0	File id for HASP4 compatible memory contents w/o FAS
const HASP_FILEID_LICENSE	= & hfff2	(Dummy) file id for license data area of memory contents

70.3.24 Update(data as string) as string

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Write an update.
Notes:

This function writes update information. The update blob contains all necessary data to perform the update: Where to write (in which "container", e.g. dongle), the necessary access data (vendor code) and of course the update itself.
If the update blob requested it, the function returns in an acknowledge blob, which is signed/encrypted by the updated instance and contains a proof that this update was successfully installed.

data: string with the complete update data.

Update via LM is not supported.

Lasterror is set.

70.3.25 WriteMemory(FileID as Integer, FileOffset as Integer, Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Write to key memory.
Notes:

Lasterror is set.
FileOffset: Byte start in the file.
Data: The data to be written to the file.
DataOffset: The byte offset inside the memoryblock.
Size: The number of bytes to be written.

const HASP_FILEID_MAIN	= & hfff0	File id for HASP4 compatible memory contents w/o FAS
const HASP_FILEID_LICENSE	= & hfff2	(Dummy) file id for license data area of memory contents

70.3.26 WriteString(FileID as Integer, FileOffset as Integer, Data as String)

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Write to key memory.
Notes:

Lasterror is set.
FileOffset: Byte start in the file.
Data: The data to be written to the file.

const HASP_FILEID_MAIN	= & hfff0	File id for HASP4 compatible memory contents w/o FAS
const HASP_FILEID_LICENSE	= & hfff2	(Dummy) file id for license data area of memory contents

70.3.27 Properties

70.3.28 Handle as Integer

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The handle of the current session.
Notes: (Read and Write property)

70.3.29 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Last error code reported from one of the functions.
Notes:

(Read and Write property)

HASP_STATUS_OK = 0	no error occurred
HASP_MEM_RANGE = 1	invalid memory address
HASP_INV_PROGNUM_OPT = 2	unknown/invalid feature id option
HASP_INSUF_MEM = 3	memory allocation failed
HASP_TMOF = 4	too many open features
HASP_ACCESS_DENIED = 5	feature access denied
HASP_INCOMPAT_FEATURE = 6	incompatible feature
HASP_CONTAINER_NOT_FOUND = 7	license container not found
HASP_TOO_SHORT = 8	en-/decryption length too short
HASP_INV_HND = 9	invalid handle
HASP_INV_FILEID = 10	invalid file id / memory descriptor
HASP_OLD_DRIVER = 11	driver or support daemon version too old
HASP_NO_TIME = 12	real time support not available
HASP_SYS_ERR = 13	generic error from host system call
HASP_NO_DRIVER = 14	hardware key driver not found
HASP_INV_FORMAT = 15	unrecognized info format
HASP_REQ_NOT_SUPP = 16	request not supported
HASP_INV_UPDATE_OBJ = 17	invalid update object
HASP_KEYID_NOT_FOUND = 18	key with requested id was not found
HASP_INV_UPDATE_DATA = 19	update data consistency check failed
HASP_INV_UPDATE_NOTSUPP = 20	update not supported by this key
HASP_INV_UPDATE_CNTR = 21	update counter mismatch
HASP_INV_VCODE = 22	invalid vendor code
HASP_ENC_NOT_SUPP = 23	requested encryption algorithm not supported
HASP_INV_TIME = 24	invalid date / time
HASP_NO_BATTERY_POWER = 25	clock has no power
HASP_NO_ACK_SPACE = 26	update requested acknowledgement, but no area to return it
HASP_TS_DETECTED = 27	terminal services (remote terminal) detected
HASP_FEATURE_TYPE_NOT_IMPL = 28	feature type not implemented
HASP_UNKNOWN_ALG = 29	unknown algorithm
HASP_INV_SIG = 30	signature check failed
HASP_FEATURE_NOT_FOUND = 31	feature not found
HASP_NO_LOG = 32	trace log is not enabled

70.4 module MatrixDongleMBS

70.4.1 module MatrixDongleMBS

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This module implements methods to access the matrix lock dongles from Technodata Interware. **Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Note: You will find the newest versions of the API and tools available for download at www.tdi-matrix.com

The plugin is from MBS. The library code it is using is based on work from tdi, so if you have trouble, ask both of us.

70.4.2 Blog Entries

- MBS Xojo Plugins, version 20.4pr2

70.4.4 Methods

70.4.5 DongleCount(PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the number of dongles available at the specified LPT or USB interface.
Notes: Please check the documentation of the dongle API for more details.

70.4.6 DongleDecryptData(UserCode as Integer, Data as memoryblock, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmit a 8 bytes encrypted data block to the dongle. This is returned decrypted as clear data.
Notes: Please check the documentation of the dongle API for more details.

70.4.7 DongleEncryptData(UserCode as Integer, Data as memoryblock, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmit a 8 bytes clear data block to the dongle. This is returned in XTEA-encrypted form.
Notes: Please check the documentation of the dongle API for more details.

70.4.8 DongleExit as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Exits the dongle.
Notes: Please check the documentation of the dongle API for more details.

70.4.9 DongleFind as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searches for the dongle and returns the LPT/USB interface at which it was found.
Notes: Please check the documentation of the dongle API for more details.

70.4.10 DongleFindEx(byref LPTNr1 as Integer, byref LPTAdr1 as Integer, byref DNGCnt1 as Integer, byref LPTNr2 as Integer, byref LPTAdr2 as Integer, byref DNGCnt2 as Integer, byref LPTNr3 as Integer, byref LPTAdr3 as Integer, byref DNGCnt3 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searches for all LPT ports and dongles and stores this information in a data buffer.
Notes: Please check the documentation of the dongle API for more details.

70.4.11 DongleGetKeyFlag(UserCode as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks whether a 128-bit XTEA key different to zero is available in the dongle.
Notes: Please check the documentation of the dongle API for more details.

70.4.12 DongleMemSize(DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the memory size of the dongle in Bytes.
Notes: Please check the documentation of the dongle API for more details.

70.4.13 DongleModel(DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the model n umber of the hardware from the dongle.
Notes: Please check the documentation of the dongle API for more details.

70.4.14 DongleReadData(UserCode as Integer, Data as memoryblock, count as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the data from the Matrix-dongle beginning from the first memory field.
Notes: Please check the documentation of the dongle API for more details.

70.4.15 DongleReadDataEx(UserCode as Integer, Data as memoryblock, FPos as Integer, count as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the data from the Matrix-dongle beginning from the specifyed memory field.
Notes: Please check the documentation of the dongle API for more details.

70.4.16 DongleReadSerNr(UserCode as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the unique serial number which is assigned to each Matrix-dongle.
Notes: Please check the documentation of the dongle API for more details.

70.4.17 DongleSetLedFlag(a as Integer, b as Integer, c as Integer, d as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Sets the LED flag.
Notes: Please check the documentation of the dongle API for more details.

70.4.18 DongleVersion(DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the version number of the dongle.
Notes: Please check the documentation of the dongle API for more details.

70.4.19 DongleWriteData(UserCode as Integer, Data as memoryblock, count as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes data into the Matrix-dongle beginning from the first memory field.
Notes: Please check the documentation of the dongle API for more details.

70.4.20 DongleWriteDataEx(UserCode as Integer, Data as memoryblock, FPos as Integer, count as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes data into the Matrix-dongle beginning from the specifyed memory field.
Notes: Please check the documentation of the dongle API for more details.

70.4.21 DongleWriteKey(UserCode as Integer, KeyData as memoryblock, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Saves the 128-bit XTEA key in the dongle.
Notes: Please check the documentation of the dongle API for more details.

70.4.22 GetConfigMatrixNet(Category as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns from Server-File parameters configured with the MxNet server program.
Notes: Please check the documentation of the dongle API for more details.

70.4.23 GetDriverFlag(UserCode as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the current USB operating mode of the dongle "HID-Mode" or "Driver-Mode".
Notes: Please check the documentation of the dongle API for more details.

70.4.24 GetPortAdr(LptNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the address of the LPT port.
Notes: Please check the documentation of the dongle API for more details.

70.4.25 GetVersionAPI as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the version number of the Matrix-API.
Notes: Please check the documentation of the dongle API for more details.

70.4.26 GetVersionDRV as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the version number of the LPT driver.
Notes: Please check the documentation of the dongle API for more details.

70.4.27 GetVersionDRV_USB as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the version number of the USB driver.
Notes: Please check the documentation of the dongle API for more details.

70.4.28 InitMatrixAPI as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Starts the Matrix API.
Notes: Please check the documentation of the dongle API for more details.

70.4.29 LogInMatrixNet(UserCode as Integer, AppSlot as Integer, DongleNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs on the network client and acquires/ refreshes the user slot in the server file.
Notes: Please check the documentation of the dongle API for more details.

70.4.30 LogOutMatrixNet(UserCode as Integer, AppSlot as Integer, DongleNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs off the network client and releases the UserSlot in the server file again.
Notes: Please check the documentation of the dongle API for more details.

70.4.31 PausePrinterActivity as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Stops the Windows print-spooler. (under Win9.x / Win-NT / 2000 only)
Notes: Please check the documentation of the dongle API for more details.

70.4.32 ReleaseMatrixAPI as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Close the Matrix API.
Notes: Please check the documentation of the dongle API for more details.

70.4.33 ResumePrinterActivity as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Releases the Windows print-spooler again. (under Win9.x / Win-NT / 2000 only)
Notes: Please check the documentation of the dongle API for more details.

70.4.34 SetConfigMatrixNet(Access as Integer, File as string) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Activates or deactivates network access.
Notes: Please check the documentation of the dongle API for more details.

70.4.35 SetDriverFlag(UserCode as Integer, DriverFlag as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the dongle to the desired USB operating mode "HID-Mode" or "Driver-Mode".
Notes: Please check the documentation of the dongle API for more details.

70.4.36 SetW95Access(mode as Integer)

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Win95/98 with or without VXD driver.
Notes:

Can have the value 1 or 2 or the predefined values: IW_DRIVER / IW_NODRIVER

1 Communication takes place via the VXD driver.
2 Communication takes place without the VXD driver.

Please check the documentation of the dongle API for more details.

70.5 class Rockey2MBS

70.5.1 class Rockey2MBS

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class to use Rockey 2 dongles in Xojo.
Deprecated: This item is deprecated and should no longer be used. You can use Rockey4NDMBS instead.

70.5.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr4
- MBS Xojo Plugins, version 17.2pr1
- MBS Xojo / Real Studio Plugins, version 15.4pr5
- MBS REALbasic plug-in 9.6

70.5.3 Blog Entries

- MBS Xojo Plugins, version 20.6pr4
- MBS Xojo Plugins, version 17.2pr1
- MBS Xojo / Real Studio Plugins, version 15.4pr5
- MBS REALbasic plug-in 9.6

70.5.4 Methods

70.5.5 Available as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether library was loaded.
Notes: Returns true if library was loaded successfully or we use internal library.

70.5.6 Close

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the dongle.
Notes:

Lasterror is set.
This is called automatically by the destructor.

70.5.7 Find as Int32

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searches for Rockey 2 dongles on the computer.
Notes:

Lasterror is set.
Returns the number of attached Rockey 2 dongles.

70.5.8 GenUID(byref uid as UInt32, seed as string, isProtect as boolean) as Int32

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generates an user ID.
Notes:

UID: the generated user id.
seed: Seed to generate UID. It is a character string with the maximum length of 64 bytes.
isProtect: Sets write protection. 0=dongle not write protected, 1=dongle write protected.

Lasterror is set.

70.5.9 LoadLibrary(file as folderitem) as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the Rockey2 shared library.
Notes:

Returns true on success and false on failure.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path.

See also:

- 70.5.10 LoadLibrary(path as string) as boolean 13329

70.5.10 LoadLibrary(path as string) as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the Rockey2 shared library.
Notes:

Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path.
See also:

- 70.5.9 LoadLibrary(file as folderitem) as boolean 13328

70.5.11 Open(mode as Int32, uid as UInt32, byref hid as UInt32)

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a specific rockey 2 dongle.
Notes:

mode:
This parameter indicates the way to open the dongle
mode = 0, open the first found ROCKEY2 dongle
mode >0, open the dongle according to the UID. The mode value is thedongle number, for example: uid=12345678, mode=2, this means it willopen the second dongle with UID 12345678
mode = -1, open the dongle according to the HID, and *hid can not be 0We defined two constants: AUTO_MODE=0 and HID_MODE=-1

uid(UserID): You need to specify the dongle UID and this UID is generated withRY2_GenUID
hid(HardwareID): Open dongle with HID of hid. The dongle HID will be returned to hid regardless of how the dongle was opened.

Sets the handle and lasterror properties.

70.5.12 Read(BlockIndex as Int32) as string

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read dongle content.
Notes:

BlockIndex: Block index. Specify the block to write. The value range is 0-4
Returns 512 bytes on success.
Lasterror is set.

70.5.13 Transform(data as string) as string

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Transforms data.

70.5.14 Write(BlockIndex as Int32, data as string)

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes data to the dongle.
Notes:

Blockindex: Specify the block to write. The value range is 0-4.
Lasterror is set.
If you pass less than 512 bytes, the remaining space is filled with zeros.

70.5.15 Properties

70.5.16 Handle as Integer

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal handle for dongle communication.
Notes: (Read and Write property)

70.5.17 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

70.5.18 Constants

70.5.19 AUTO_MODE = 0

MBS Dongle Plugin, Plugin Version: 9.6.

Function: A constant for use in the Open method.

70.5.20 HID_MODE = -1

MBS Dongle Plugin, Plugin Version: 9.6.

Function: A constant for use in the Open method.

70.5.21 R2_MINOR = 16

MBS Dongle Plugin, Plugin Version: 9.6.

Function: The maximum number of dongles the plugin can handle.

70.5.22 ROCKEY2_DISABLE_WRITE_PROTECT = false

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the constants for the GenUID function.

70.5.23 ROCKEY2_ENSABLE_WRITE_PROTECT = true

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the constants for the GenUID function.

70.5.24 RY2ERR_FLUSH_QUEUE = & hA010000F

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Internal error (Windows error)

70.5.25 RY2ERR_FREE_PREPARSED_DATA = & hA010000E

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Internal error (Windows error)

70.5.26 RY2ERR_GETCAPS = & hA010000D

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Internal error (Windows error)

70.5.27 RY2ERR_GET_ATTRIBUTES = & hA010000B

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Internal error (Windows error)

70.5.28 RY2ERR_GET_PREPARSED_DATA = & hA010000C

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Internal error (Windows error)

70.5.29 RY2ERR_GET_SERIAL = & hA0100011

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Internal error (Windows error)

70.5.30 RY2ERR_NOT_OPENED_DEVICE = & hA0100002

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Need to call RY2_Open first to open the dongle, then call this function (operation error)

70.5.31 RY2ERR_NO_SUCH_DEVICE = & hA0100001

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Specified dongle is not found (parameter error)

70.5.32 RY2ERR_OPEN_DEVICE = & hA0100007

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Open device error (Windows error)

70.5.33 RY2ERR_READ_REPORT = & hA0100008

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Read record error(Windows error)

70.5.34 RY2ERR_SETUP_DI_CLASS_DEVS = & hA0100010

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Internal error (Windows error)

70.5.35 RY2ERR_SETUP_DI_GET_DEVICE_INTERFACE_DETAIL = & hA010000A

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Internal error (Windows error)

70.5.36 RY2ERR_SUCCESS = 0

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Success

70.5.37 RY2ERR_TOO_LONG_DEVICE_DETAIL = & hA0100012

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Internal error

70.5.38 RY2ERR_TOO_LONG_SEED = & hA0100005

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Seed character string is longer than 64 bytes when calling GenUID (parameter error)

70.5.39 RY2ERR_UNKNOWN_DEVICE = & hA0100020

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Unknown device.

70.5.40 RY2ERR_UNKNOWN_ERROR = & hA010FFFF

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Unknown error(hardware error)

70.5.41 RY2ERR_VERIFY = & hA0100014

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Verification error(hardware error)

70.5.42 RY2ERR_WRITE_PROTECT = & hA0100006

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Tried to write to write-protected dongle(operation error)

70.5.43 RY2ERR_WRITE_REPORT = & hA0100009

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Write record error(Windows error)

70.5.44 RY2ERR_WRONG_INDEX = & hA0100004

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Block index error (parameter error)

70.5.45 RY2ERR_WRONG_REPORT_LENGTH = & hA0100013

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Wrong report length.

70.5.46 RY2ERR_WRONG_UID = & hA0100003

MBS Dongle Plugin, Plugin Version: 9.6.

Function: One of the error constants.
Notes: Wrong UID(parameter error)

70.6 class Rockey4NDMBS

70.6.1 class Rockey4NDMBS

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to handle calls to the Rockey4ND Dongle API.

70.6.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr4
- MBS Xojo Plugins 18.3
- MBS Xojo Plugins, version 18.3pr2
- MBS Xojo Plugins, version 18.3pr1

70.6.3 Blog Entries

- MBS Xojo Plugins, version 20.6pr4
- MBS Xojo Plugins 18.3
- MBS Xojo Plugins, version 18.3pr2
- MBS Xojo Plugins, version 18.3pr1

70.6.4 Methods

70.6.5 Rockey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls the Rockey Dongle API.
Example:

```
dim r as RockeyMBS
dim e as Integer

r=new RockeyMBS
r.p1=& HC44C
r.p2=& HC8F8
r.p3=0
r.p4=0
```

```
e=r.Rockey(1)

if e=0 then
MsgBox "Found dongle: "+hex(r.lp1)
else
MsgBox "Error: "+str(e)
end if
```

Notes:

See the Rockey dongle documentation for more details.

Be aware that no endian correction is done!

Error codes from the plugin:
-1 = memoryblock is nil
-2 = library not present

70.6.6 RockeyCall(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Same as Rockey but a different name for compatibility.
Notes: The original Rockey dongle calls the function RockeyCall.

70.6.7 Properties

70.6.8 Buffer as MemoryBlock

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A one KB big buffer.
Notes: (Read and Write property)

70.6.9 Handle as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The 16bit handle value.
Notes: (Read and Write property)

70.6.10 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The first 32bit parameter for the rockey function.
Notes: (Read and Write property)

70.6.11 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The second 32bit parameter for the rockey function.
Notes: (Read and Write property)

70.6.12 P1 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The first 16bit parameter for the rockey function.
Notes: (Read and Write property)

70.6.13 P2 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The second 16bit parameter for the rockey function.
Notes: (Read and Write property)

70.6.14 P3 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The third 16bit parameter for the rockey function.
Notes: (Read and Write property)

70.6.15 P4 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The forth 16bit parameter for the rockey function.
Notes: (Read and Write property)

70.7 class RockeyMBS

70.7.1 class RockeyMBS

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to handle calls to the Rockey Dongle API.
Deprecated: This item is deprecated and should no longer be used. You can use Rockey4NDMBS instead.

70.7.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

70.7.3 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

70.7.4 Methods

70.7.5 Rockey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls the Rockey Dongle API.
Example:

```
dim r as RockeyMBS
dim e as Integer

r=new RockeyMBS
r.p1=& HC44C
r.p2=& HC8F8
r.p3=0
r.p4=0

e=r.Rockey(1)

if e=0 then
MsgBox "Found dongle: "+hex(r.lp1)
else
MsgBox "Error: "+str(e)
end if
```

Notes:

See the Rockey dongle documentation for more details.

Be aware that no endian correction is done!

Error codes from the plugin:
-1 = memoryblock is nil
-2 = library not present (always on Linux)

70.7.6 RockeyCall(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Same as Rockey but a different name for compatibility.
Notes: The original Rockey dongle calls the function RockeyCall.

70.7.7 Properties

70.7.8 Buffer as memoryblock

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A one KB big buffer.
Notes: (Read and Write property)

70.7.9 Handle as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The 16bit handle value.
Notes: (Read and Write property)

70.7.10 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The first 32bit parameter for the rockey function.
Notes: (Read and Write property)

70.7.11 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The second 32bit parameter for the rockey function.
Notes: (Read and Write property)

70.7.12 P1 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The first 16bit parameter for the rockey function.
Notes: (Read and Write property)

70.7.13 P2 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The second 16bit parameter for the rockey function.
Notes: (Read and Write property)

70.7.14 P3 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The third 16bit parameter for the rockey function.
Notes: (Read and Write property)

70.7.15 P4 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The forth 16bit parameter for the rockey function.
Notes: (Read and Write property)

70.8 module SecureDongleXMBS

70.8.1 module SecureDongleXMBS

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This module implements an interface to the SecureDongleX products from SecureMetric Technology Sdn. Bhd.
Notes:

For more details see the website:
http://www.securemetric.com/

Please order there your evaluation SDK as well as further dongles.

70.8.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr3

70.8.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr3

70.8.4 Methods

70.8.5 Close(handle as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Close specified SecureDongle X
Notes: Pass the handle you got returned from Open method.

70.8.6 Find as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Find dongles attached to the computer
Notes:

See SDK Developer Guide for details.
Returns number of dongles or negative error code.

70.8.7 GetVersion(handle as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get SecureDongle X hardware version
Notes:

See SDK Developer Guide for details.
Returns positive version number or nega

70.8.8 Open(mode as Integer, uid as UInt32) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Open specified SecureDongle X
Notes:

Convenience method where hid parameter is left away.
The default UID is 715400947 for demo dongles.
See SDK Developer Guide for details.
See also:

- 70.8.9 Open(mode as Integer, uid as UInt32, byref hid as UInt32) as Integer 13346

70.8.9 Open(mode as Integer, uid as UInt32, byref hid as UInt32) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Open specified SecureDongle X
Notes:

The default UID is 715400947 for demo dongles.
See SDK Developer Guide for details.
See also:

- 70.8.8 Open(mode as Integer, uid as UInt32) as Integer 13346

70.8.10 Read(handle as Integer, BlockIndex as Integer, byref data as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read SecureDongle X content
Notes:

handle: SDX handle. It is the handle returned from Open
block_index: The block index. Specify the block to read. The value range is 0-4
data: Read buffer. Here you receive a string with 512 bytes.

Returns an error code.

See SDK Developer Guide for details.

70.8.11 RSADecrypt(handle as Integer, startIndex as Integer, byref buf as string, byref key as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read SecureDongle X content and Decrypt with RSA.
Notes: See SDK Developer Guide for details.

70.8.12 RSAEncrypt(handle as Integer, startIndex as Integer, byref buf as string, byref key as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypt with RSA and write to SecureDongle X.
Notes: See SDK Developer Guide for details.

70.8.13 Transform(handle as Integer, byref data as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Data hashing function.
Notes:

On input data contains a string to transform (maximum 32 bytes) and on return the hash value.

See SDK Developer Guide for details.

70.8.14 Write(handle as Integer, BlockIndex as Integer, data as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write to SecureDongle X
Notes:

handle: SDX handle. It is the handle returned from Open
block_index: The Block index. Specify the block to write. The value range is 0-4
data: Write buffer. The buffer can be at maximum 512 bytes to accommodate the 512-byte block size. The plugin will fill the rest with zeros.

Returns error code.

See SDK Developer Guide for details.

70.8.15 Constants

70.8.16 HID_MODE = -1

MBS Dongle Plugin, Plugin Version: 11.1.

Function: The constant for default HID mode.

70.8.17 SDXERR_FAILED_DECRYPTION = & hA010000E

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Failed Decrypt string (Cryptography error)

70.8.18 SDXERR_FAILED_ENCRYPTION = & hA010000C

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Failed encrypt string (cryptography error)

70.8.19 SDXERR_FAILED_WRITE_KEY = & hA010000D

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Failed write key (cryptography error)

70.8.20 SDXERR_FLUSH_QUEUE = & hA0100017

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Internal error (Windows error)

70.8.21 SDXERR_FREE_PREPARSED_DATA = & hA0100016

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Internal error (Windows error)

70.8.22 SDXERR_GENERATE_KEY = & hA010000A

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Generate key error (cryptography error)

70.8.23 SDXERR_GETCAPS = & hA0100015

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Internal error (Windows error)

70.8.24 SDXERR_GET_ATTRIBUTES = & hA0100013

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Internal error (Windows error)

70.8.25 SDXERR_GET_PREPARSED_DATA = & hA0100014

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Internal error (Windows error)

70.8.26 SDXERR_GET_SERIAL = & hA0100019

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Internal error (Windows error)

70.8.27 SDXERR_INVALID_KEY = & hA010000B

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Invalid key (cryptography error)

70.8.28 SDXERR_INVALID_LEN = & hA0100008

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Invalid length (parameter error)

70.8.29 SDXERR_NOT_OPENED_DEVICE = & hA0100002

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Need to call SDX_Open first to open the SDX, then call this function (operation error)

70.8.30 SDXERR_NO_SUCH_DEVICE = & hA0100001

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Specified SDX is not found (parameter error)

70.8.31 SDXERR_OPEN_DEVICE = & hA010000F

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Open device error (Windows error)

70.8.32 SDXERR_READ_REPORT = & hA0100010

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Read record error (Windows error)

70.8.33 SDXERR_SETUP_DI_CLASS_DEVS = & hA0100018

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Internal error (Windows error)

70.8.34 SDXERR_SETUP_DI_GET_DEVICE_INTERFACE_DETAIL = & hA0100012

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Internal error (Windows error)

70.8.35 SDXERR_SUCCESS = 0

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Success

70.8.36 SDXERR_TOO_LONG_DEVICE_DETAIL = & hA010001B

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Internal error

70.8.37 SDXERR_TOO_LONG_ENCRYPTION_DATA = & hA0100009

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Cipher text length is to long (cryptography error)

70.8.38 SDXERR_TOO_LONG_SEED = & hA0100005

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Seed character string is longer than 64 bytes when calling GenUID (parameter error)

70.8.39 SDXERR_UNKNOWN_DEVICE = & hA0100020

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Unknown device.

70.8.40 SDXERR_UNKNOWN_ERROR = & hA010FFFF

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Unknown error (hardware error)

70.8.41 SDXERR_VERIFY = & hA0100021

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Verification error (hardware error)

70.8.42 SDXERR_WRITE_PROTECT = & hA0100006

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Tried to write to write-protected SDX (operation error)

70.8.43 SDXERR_WRITE_REPORT = & hA0100011

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Write record error (Windows error)

70.8.44 SDXERR_WRONG_INDEX = & hA0100004

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Block index error (parameter error)

70.8.45 SDXERR_WRONG_REPORT_LENGTH = & hA010001A

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Unknown device (hardware error)

70.8.46 SDXERR_WRONG_START_INDEX = & hA0100007

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Start index error (parameter error)

70.8.47 SDXERR_WRONG_UID = & hA0100003

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the possible error codes for functions in this module.
Notes: Wrong UID (parameter error)

70.8.48 SDX_MINOR = 16

MBS Dongle Plugin, Plugin Version: 11.1.

Function: The maximum number of sdx devices.

70.9 module SGLockMBS

70.9.1 module SGLockMBS

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The MBS Module for using SG-Lock dongles in Xojo.
Notes:

See website:
https://www.sg-lock.com

Please read manual from SG Intec for details.

70.9.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.5
- MBS Xojo Plugins, version 18.5pr8

70.9.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.5
- MBS Xojo Plugins, version 18.5pr8

70.9.4 Methods

70.9.5 Authenticate(AuthentCode as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Authentication of SG-Lock library to the protected application and vice versa.
Notes:

This function of the SG-Lock API has to be called once first and successfully to enable all other API functions. In the case of dynamic linking the authentication is required after every link procedure (LoadLibrary call).

Every customer get his unique Authentcode when purchasing SG-Lock (non Demo) the first time. Demo kits have an own authentication code (see example source code files).

AuthentCode: 48 byte sequence, that is unique to every SG-Lock customer. As array, it's 12 values in the array.

Lasterror is set to kErrorSuccess on success and an error code otherwise.
See also:

- 70.9.6 Authenticate(AuthentCode() as UInt32) 13356

70.9.6 Authenticate(AuthentCode() as UInt32)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Authentication of SG-Lock library to the protected application and vice versa.
Notes:

This function of the SG-Lock API has to be called once first and successfully to enable all other API functions. In the case of dynamic linking the authentication is required after every link procedure (LoadLibrary call).

Every customer get his unique Authentcode when purchasing SG-Lock (non Demo) the first time. Demo kits have an own authentication code (see example source code files).

AuthentCode: 48 byte sequence, that is unique to every SG-Lock customer. As array, it's 12 values in the array.

Lasterror is set to kErrorSuccess on success and an error code otherwise.
See also:

- 70.9.5 Authenticate(AuthentCode as MemoryBlock) 13355

70.9.7 CloseLibrary

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unloads and closes DLL.

70.9.8 CryptLock(ProductId as UInt32, KeyNum as UInt32, CryptMode as UInt32, Data as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts or decrypts data on the dongle.
Notes:

En- or decrypts one or more 64-bit data blocks with 128-bit key. The crypto- graphic algorithm is TEA.

ProductId: Indicates the ProductId of the SG-Lock
KeyNum: Number of key to use 0 to 1 - SG-Lock U3 0 to 15 - SG-Lock U4
CryptMode: Working mode. kCryptModeEncrypt = 0 for Encrypt, kCryptModeDecrypt = 1 for Decrypt.
Data: Input data. Should be multiply of 4 in length.

Returns the output data.

Lasterror property is set.

70.9.9 LoadLibraryFile(File as folderItem) as boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the dll/dylib/so file at the give path.
Notes:

Returns true on success or false on failure.
Please call once on app startup to load library.
Sets LibraryError property in case of error.

70.9.10 LoadLibraryPath(Path as String) as boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the dll/dylib/so file at the give path.
Notes:

Returns true on success or false on failure.
Please call once on app startup to load library.
Sets LibraryError property in case of error.

70.9.11 ReadConfig(ProductId as UInt32, Category as UInt32 = 0) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads configuration information about SG-Lock.
Notes:

ProductId: Indicates the ProductId of the SG-Lock
Category: Type of requested information. currently only 0 for Information about SG-Lock modul.

Returns memoryblock with an array of 8 integers of 32-bit. The meaning of the single values are:

Index 0: Type
Index 1: Interface
Index 2: Software Version
Index 3: Hardware Version
Index 4: Serial number
Index 5: Memory size in Dwords
Index 6: Number of counters
Index 7: Number of 128-Bit Keys

Updates HardwareVersion, CounterCount, KeyCount, MemorySize, MemorySizeBytes, SerialNumber, SoftwareVersion, Type and InterfaceType properties.

Lasterror is set.

70.9.12 ReadCounter(ProductId as UInt32, CntNum as UInt32) as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads a 32-bit count value from the SG-Lock memory.
Notes:

ProductId: Indicates the ProductId of the SG-Lock
CntNum: Number of counter, 0 to 15 - SG-Lock U3 0 to 63 - SG-Lock U4

Returns the value read.
Lasterror property is set.

Counters are simple 32 bit data values in the SG-Lock memory. If desired, they can also be used for everything a 32 bit read/write variable is suitable for. By doing so you can extend the general purpose memory

over the indicated size.

70.9.13 ReadData(ProductId as UInt32, Address as UInt32, LongCount as UInt32) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read 32-bit data from the SG-Lock memory.
Notes:

ProductId: Indicates the ProductId of the SG-Lock
Address: Startadress of data value block 0 to 63 - SG-Lock U3 or 0 to 255 - SG-Lock U4
Count: Number of data values to read, each 4 bytes.

Returns memoryblock with data values.
Lasterror property is set.

70.9.14 ReadProductId as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the 16-bit ProductId from the SG-Lock.
Notes:

Lasterror property is set.

The ProductId is an identifier that eases to distinguish between different protected applications of SG-Lock users. For example company X protects its application A and B with SG-Lock and gives all keys for application A the ProductId 1 and the keys for application B the ProductId 2, then all keys of application B are ”hidden“ for application A and vice versa. This simple mechanism offers an effective way to prevent confusion between keys of different applications. Setting of the ProductId should be integrated into the initial- ization process of the SG-Locks before distributing with the protected software.

Returns the ProductId assigned to dongle.
Lasterror is set.

70.9.15 ReadSerialNumber(ProductId as UInt32) as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the for every SG-Lock unique serial number.
Notes:

ProductId: Indicates the ProductId of the SG-Lock

Returns the serial number will be given back to the calling application

Lasterror property is set.

Every SG-Lock has a serial number that is unique, which is also not depending on type and interface.

70.9.16 SearchLock(ProductId as UInt32) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searches for a SG-Lock device.
Notes:

ProductId: Indicates the ProductId of the SG-Lock looked for

Updates HardwareVersion, CounterCount, KeyCount, MemorySize, MemorySizeBytes, SerialNumber, SoftwareVersion, Type and InterfaceType properties.

70.9.17 SignData(ProductId as UInt32, AppSignKey as MemoryBlock, LockSignKeyNum as UInt32, LockSignInterval as UInt32 = 0, Data as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Signs the data.
Notes:

The task will will be processed by the SG-Lock and if desired also by the application (PC-CPU) to accelerate the signing process (combined mode). Important condition for combined mode: Both keys (application and SG-Lock internal) have to be different, to ensure highest security! The signature is 64-bit long.

ProductId: Indicates the ProductId of the SG-Lock
AppSignKey: The 128-bit key used by the application for sign- ing and verification. Pointer to an array of 4 in- teger values of 32-bit. Only needed in combined mode otherwise set 0.
LockSignKeyNum: Number of 128-bit key in SG-Lock for signing and verification.
LockSignInterval: Indicates the partitioning of computing power between SG-Lock and application (PC-CPU). 0 is SG-Lock only. If >0 the value is used as the power of 2, where the result of that determines which block index is signed or verified by the SG-Lock. E.g. value= 8, 28ˆ=256, that means the first and after that every 256th block is processed by the SG-Lock and all others by the application (PC-CPU). That means 1/256= 0.4% of the task is done by the SG-Lock and 99.6% by the PC- CPU. The result is a very high acceleration of the process.
Data: Pointer to the memoryblock with of 32-bit values to sign or verify.

Returns signature as memoryblock.

Lasterror property is set.

The same value for the parameter LockSignInterval has to be used for signing and verifying a certain data block, when using different 128-bit keys in the SG-Lock and application (highly recommended for highest security). The reasons is, that the 128-bit key in the application is less safe than the 128-bit key in the SG-Lock. When a hacker succeeds to investigate the 128-bit key in the application (which is in principle possible), then he will try that also first for the SG-Lock. That will fail, if a differnt 128-bit key is used in the SG-Lock. For a deeper understanding of the function, please take a look into the SG-Lock include/header file for your programming language. You will find the source code of the function in it.

70.9.18 TeaDecipher(data as MemoryBlock, Key as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypt data.
Notes:

Encryption happens in plugin using sample code from SG.
Data is memoryblock with 8 bytes of data.
Key is memoryblock with 16 bytes in size.

Lasterror property is set.

70.9.19 TeaEncipher(data as MemoryBlock, Key as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypt data.
Notes:

Encryption happens in plugin using sample code from SG.
Data is memoryblock with 8 bytes of data.
Key is memoryblock with 16 bytes in size.

Lasterror property is set.

70.9.20 VerifyData(ProductId as UInt32, AppSignKey as MemoryBlock, LockSignKeyNum as UInt32, LockSignInterval as UInt32 = 0, Data as MemoryBlock, Signature as MemoryBlock) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Verifies the signature with the data.
Notes:

The task will will be processed by the SG-Lock and if desired also by the application (PC-CPU) to accelerate the signing process (combined mode). Important condition for combined mode: Both keys (application and SG-Lock internal) have to be different, to ensure highest security! The signature is 64-bit long.

ProductId: Indicates the ProductId of the SG-Lock
AppSignKey: The 128-bit key used by the application for sign- ing and verification. Pointer to an array of 4 in- teger values of 32-bit. Only needed in combined mode otherwise set 0.
LockSignKeyNum: Number of 128-bit key in SG-Lock for signing and verification.
LockSignInterval: Indicates the partitioning of computing power between SG-Lock and application (PC-CPU). 0 is SG-Lock only. If >0 the value is used as the power of 2, where the result of that determines which block index is signed or verified by the SG-Lock. E.g. value= 8, 28ˆ=256, that means the first and after that every 256th block is processed by the SG-Lock and all others by the application (PC-CPU). That means 1/256= 0.4% of the task is done by the SG-Lock and 99.6% by the PC- CPU. The result is a very high acceleration of the process.
Data: Pointer to the memoryblock with of 32-bit values to sign or verify.
Signature: The signature as memory block.

Lasterror property is set.

The same value for the parameter LockSignInterval has to be used for signing and verifying a certain data block, when using different 128-bit keys in the SG-Lock and application (highly recommended for highest security). The reasons is, that the 128-bit key in the application is less safe than the 128-bit key in the SG-Lock. When a hacker succeeds to investigate the 128-bit key in the application (which is in principle possible), then he will try that also first for the SG-Lock. That will fail, if a differnt 128-bit key is used in the SG-Lock. For a deeper understanding of the function, please take a look into the SG-Lock include/header file for your programming language. You will find the source code of the function in it.

70.9.21 WriteCounter(ProductId as UInt32, CntNum as UInt32, Data as UInt32)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a 32-bit count value to the SG-Lock memory.
Notes:

ProductId: Indicates the ProductId of the SG-Lock
CntNum: Number of counter, 0 to 63 - SG-Lock U3 0 to 255 - SG-Lock U4
Data: Counter value to be written

Lasterror property is set.

70.9.22 WriteData(ProductId as UInt32, Address as UInt32, Data as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes 32-bit data values to SG-Lock memory.
Notes:

ProductId: Indicates the ProductId of the SG-Lock
Address: Startaddress of data value block 0 to 63 - SG-Lock U3, 0 to 255 - SG-Lock U4
Count: Number of data values
Data: Memoryblock, where data values be copied from. (size is multiply of 4)

Lasterror property is set.

70.9.23 WriteKey(ProductId as UInt32, Address as UInt32, Key as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a 128-bit key to the SG-Lock key memory.
Notes:

ProductId: Indicates the ProductId of the SG-Lock
KeyNum: Number of the key to be written 0 to 1 - SG-Lock U3, 0 to 15 - SG-Lock U4
Key: 128-bit Key to be written. Pointer to data array of 4 integer values of 32-bit, that form the 128-bit key

Lasterror property is set.
The 128-bit key of the U2 is read only and not changeable.

70.9.24 WriteProductId(OldProductId as UInt32, NewProductId as UInt32) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a new 16-bit ProductId to the SG-Lock.
Notes:

OldProductId: Indicates the actual ProductId of the SG-Lock
NewProductId: Indicates the new ProductId of the SG-Lock

Returns true on success or false on failure.

Lasterror property is set.

70.9.25 Properties

70.9.26 Available as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether library has been loaded and functions are available.
Notes:

Returns true if you can call functions without getting a FunctionNotFoundException.
(Read only property)

70.9.27 CounterCount as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of counters.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

70.9.28 HardwareVersion as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hardware version number.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

70.9.29 InterfaceType as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The type of interface.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

70.9.30 KeyCount as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of 128-bit keys.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

70.9.31 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code returned by a function.
Notes: (Read and Write property)

70.9.32 LibraryError as String

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The error message from loading the library.
Notes: (Read only property)

70.9.33 MemorySize as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memory size in data words.
Notes:

MemorySizeBytes = 4 * MemorySize
Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

70.9.34 MemorySizeBytes as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memory size in bytes.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

70.9.35 SerialNumber as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The serial number of the dongle.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

70.9.36 SoftwareVersion as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The software version.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

70.9.37 Type as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The type of dongle.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

70.9.38 Constants

70.9.39 kConfigLockSeries2 = 1

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the device types.
Notes: Series 2

70.9.40 kConfigLockSeries3 = 2

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the device types.
Notes: Series 3

70.9.41 kConfigLockSeries4 = 3

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the device types.
Notes: Series 4

70.9.42 kCryptModeDecrypt = 1

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the crypto modes.
Notes: Decrypt it

70.9.43 kCryptModeEncrypt = 0

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the crypto modes.
Notes: Encrypt it

70.9.44 kErrorAuthenticationFailed = 6

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Authentification with Authenticate failed.

70.9.45 kErrorAuthenticationRequired = 5

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Authentication with Authenticate function not or not error free processed.

70.9.46 kErrorDongleNotFound = 1

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Dongle not found.

70.9.47 kErrorFunctionNotSupported = 7

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: The called function is not supported by the found SG-Lock.

70.9.48 kErrorLPTBusy = 2

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: The LPT (printer port) is busy.

70.9.49 kErrorLPTOpenError = 3

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: The LPT (printer port) could not be opened.

70.9.50 kErrorNoLPTPortFound = 4

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

The LPT (printer port) was not found.

70.9.51 kErrorParameterInvalid = 8

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Parameter of the called function is out of the vaild value range.

70.9.52 kErrorSignatureInvalid = 9

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Signature invalid.

70.9.53 kErrorSuccess = 0

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: All okay.

70.9.54 kErrorUSBBusy = 10

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Another application is claming the SG-Lock for more than 5 seconds.

70.9.55 kInterfaceLPT = 1

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the interface types.
Notes: Printer port connection.

70.9.56 kInterfaceUSB = 0

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the interface types.
Notes: USB connection.

70.9.57 kSignModeSign = 0

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the sign modes.
Notes: Sign the data.

70.9.58 kSignModeVerify = 1

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the sign modes.
Notes: Verify the signature.

70.10 class UnikeyMBS

70.10.1 class UnikeyMBS

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to enable Xojo to use Unikey dongles.
Notes:

Website:
http://www.esecutech.com

70.10.2 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

70.10.3 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

70.10.4 Methods

70.10.5 Calculate1(StartAddress as Integer, Module as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE1 function.
Notes:

See Unikey API Reference for details on UniKey_Calculate1 function.
Returns error code.

70.10.6 Calculate2(StartAddress as Integer, Seed as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE2 function.
Notes:

See Unikey API Reference for details on UniKey_Calculate2 function.
Returns error code.

70.10.7 Calculate3(StartAddress as Integer, Module as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE3 function.
Notes:

See Unikey API Reference for details on UniKey_Calculate3 function.
Returns error code.

70.10.8 CheckModule(Module as Integer, byref Value as Integer, byref Decrease as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey license module.
Notes:

See Unikey API Reference for details on UniKey_Check_Module function.
Returns error code.

70.10.9 CheckTimeModule(Module as Integer, byref RemainDays as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey Time license module.
Notes:

See Unikey API Reference for details on UniKey_Check_Time_Module function.
Returns error code.

70.10.10 CheckTimeModuleNow(Module as Integer, byref RemainDays as Integer, byref RemainHours as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey Time license module now.
Notes:

See Unikey API Reference for details on UniKey_Check_Time_Module_Now function.
Returns error code.

70.10.11 CheckTimeModuleNowPC(Module as Integer, byref RemainDays as Integer, byref RemainHours as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey Time license module Now PC.
Notes:

See Unikey API Reference for details on UniKey_Check_Time_Module_Now_PC function.
Returns error code.

70.10.12 Decrypt(BufferLength as Integer, KeyNumber as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypt an amount of memory with a key.
Notes:

The length of data must be a multiple of 8.
See Unikey API Reference for details on UniKey_Decrypt function.
Returns error code.

70.10.13 Encrypt(BufferLength as Integer, KeyNumber as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypt an amount of memory with a key.
Notes:

The length of data must be a multiple of 8.
See Unikey API Reference for details on UniKey_Encrypt function.
Returns error code.

70.10.14 EraseTimeModule(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Erase/Reset a real time module, and all the info in the module will be erased including start, end or duration.
Notes:

See Unikey API Reference for details on UniKey_Erase_Time_Module function.
Returns error code.

70.10.15 Find(byref Setting1 as Integer, byref Setting2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check if a specific UniKey is attached to the USB port.
Notes:

This is the first API to start a UniKey session.
Sets handle property.

See Unikey API Reference for details on UniKey_Find function.

70.10.16 FindNext(byref Setting1 as Integer, byref Setting2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check if another UniKey is attached to the USB port.
Notes:

Sets the handle property.
Returns error code.
See Unikey API Reference for details on UniKey_Find_Next function.

70.10.17 GenerateKey(KeyNumber as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a new key in the specific key storage.
Notes:

See Unikey API Reference for details on UniKey_Generate_Key function.
Returns error code.

70.10.18 GenerateKeyViaSeed(KeyNumber as Integer, byref Seed1 as Integer, byref Seed2 as Integer, byref Seed3 as Integer, byref Seed4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a new key in the specific key storage via seed.
Notes:

See Unikey API Reference for details on UniKey_Generate_Key_Via_Seed function.
Returns error code.

70.10.19 GenerateNewPassword(Seed as Integer, byref Password1 as Integer, byref Password2 as Integer, byref Password3 as Integer, byref Password4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a new password via a seed code; the mapping from the seed code to the password is only one way. Without the seed, you cannot generate the same password.
Notes:

See Unikey API Reference for details on UniKey_Generate_New_Password function.
Returns error code.

70.10.20 GetCliNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the UniKey client number.
Notes:

See Unikey API Reference for details on UniKey_Get_Cli_Num function.
Returns error code.

70.10.21 GetDongleLocation(byref IP as String) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the Server IP, if it is local, return 127.0.0.1.
Notes:

See Unikey API Reference for details on UniKey_Get_Dongle_Location function.
Returns error code.

70.10.22 GetMaxNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the maximum client number.
Notes:

See Unikey API Reference for details on UniKey_Get_Max_Num function.
Returns error code.

70.10.23 GetModule(Module as Integer, byref Value as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a value from a specific UniKey license module.
Notes:

See Unikey API Reference for details on UniKey_Get_Module function.
Returns error code.

70.10.24 GetModuleEndTime(Module as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the end time of a specific UniKey Time license module.
Notes:

See Unikey API Reference for details on UniKey_Get_Module_End_Time function.
Returns error code.

Not supported for 64-bit Linux and Mac PPC.

70.10.25 GetModuleStartTime(Module as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the start time of a specific UniKey Time license module.
Notes:

See Unikey API Reference for details on UniKey_Get_Module_Start_Time function.
Returns error code.

Not supported for 64-bit Linux and Mac PPC.

70.10.26 GetTime(byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer, byref Minute as Integer, byref Second as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get UniKey Time's real time clock's time.
Notes:

See Unikey API Reference for details on UniKey_Get_Time function.
Returns error code.
Year is 10 for 2010.

70.10.27 GetType(byref type as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GetType can help you get the type of the UniKey dongle.
Notes:

The return value of type will indicate the type of the UniKey dongle.
UNIKEY_TYPE_TIME 101
UNIKEY_TYPE_PRO 102
UNIKEY_TYPE_STD 103

See Unikey API Reference for details on UniKey_Get_Type function.

70.10.28 GetVersion(byref Version as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the current UniKey library version.
Notes:

See Unikey API Reference for details on UniKey_Get_Version function.
Returns error code.

70.10.29 Lock as integer

MBS Dongle Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Locks the unikey.

70.10.30 Logoff as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logoff a UniKey dongle with a specific handle.
Notes:

This API should be called at the end of UniKey session.
See Unikey API Reference for details on UniKey_Logoff function.
Returns error code.

70.10.31 MD5(BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Make an MD5 digest for a mount of content or data.
Notes:

See Unikey API Reference for details on UniKey_MD5 function.
Returns error code.

70.10.32 ModuleDecrease(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrease the value in a specified UniKey license module by “1”.
Notes:

See Unikey API Reference for details on UniKey_Module_Decrease function.
Returns error code.

For Linux, does not work on Linux ARM or 32-bit Linux. Works on 64-bit Linux.

70.10.33 Random(byref Return1 as Integer, byref Return2 as Integer, byref Return3 as Integer, byref Return4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a random number from the dongle.
Notes:

See Unikey API Reference for details on UniKey_Random function.
Returns error code.

70.10.34 ReadMemory(StartAddress as Integer, BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the contents of the Memory.
Notes:

This API needs to be called after logon of a UniKey dongle.
See Unikey API Reference for details on UniKey_Read_Memory function.
Returns error code.

70.10.35 ReadSoftID(byref SoftID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the user defined SoftID.
Notes:

See Unikey API Reference for details on UniKey_Read_SoftID function.
Returns error code.

70.10.36 ReadUpdateTag(byref UpdateTag as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read UpdateTag from a specific dongle.
Notes:

See Unikey API Reference for details on UniKey_Read_UpdateTag function.
Returns error code.

70.10.37 Seed(Seed as Integer, byref Return1 as Integer, byref Return2 as Integer, byref Return3 as Integer, byref Return4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get return codes from the input of a seed code.
Notes:

This API return for values which are related to Seed and UniKey dongle's password.
See Unikey API Reference for details on UniKey_Seed function.
Returns error code.

70.10.38 SetMaxNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the maximum client number.
Notes:

See Unikey API Reference for details on UniKey_Set_Max_Num function.
Returns error code.

Not supported for Mac PPC.

70.10.39 SetModule(Module as Integer, Value as Integer, Decrease as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: To write a value to a specific UniKey license module and set the Decrement attribute.
Notes:

See Unikey API Reference for details on UniKey_Set_Module function.
Returns error code.

70.10.40 SetNETINILocation(byref Setting1 as Integer, byref Setting2 as Integer, IniFile as String) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets ini location.
Notes:

See Unikey API Reference for details on UniKey_SetNETINILocation function.
Returns error code.

70.10.41 SetTime(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set UniKey Time's real time clock's time.
Notes:

See Unikey API Reference for details on UniKey_Set_Time function.
Returns error code.
Year is 10 for 2010.

70.10.42 SetTimeModuleDuration(Module as Integer, Year as Integer, Day as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the duration time for a specific real time module. The total duration is (Day)*24 + (Hour) in hours.
Notes:

See Unikey API Reference for details on UniKey_Set_Time_Module_Duration function.
Returns error code.

70.10.43 SetTimeModuleEndTime(Module as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module's end time.
Notes:

See Unikey API Reference for details on UniKey_Set_Time_Module_End_Time function.
Returns error code.

70.10.44 SetTimeModuleStartTime(Module as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module's start time.
Notes:

See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time function.
Returns error code.

70.10.45 SetTimeModuleStartTimeNow(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module's start time as the now time in UniKey dongle's clock.
Notes:

See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time_Now function.
Returns error code.

70.10.46 SetTimeModuleStartTimeNowPC(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module's start time as the now time in host computer.
Notes:

See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time_Now_PC function.
Returns error code.

70.10.47 SetTimeNow as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set UniKey Time's real time clock's time by the host computer's clock.
Notes:

See Unikey API Reference for details on UniKey_Set_Time_Now function.
Returns error code.

70.10.48 Unikey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls the unikey function with the values from this object.
Notes: See the unikey documentation for what values to use.

70.10.49 UnLock as integer

MBS Dongle Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unlocks the unikey.

70.10.50 UserLogon(Password1 as Integer, Password2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logon a UniKey dongle with specified passwords.
Notes:

This API should be called in the released software in order to improve security.
See Unikey API Reference for details on UniKey_User_Logon function.
Returns error code.
Sets handle property.

70.10.51 VendorLogon(Password1 as Integer, Password2 as Integer, Password3 as Integer, Password4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Logon a UniKey dongle in vendor mode with specified passwords.
Notes:

This API helps software vendors to logon the UniKey dongle in vendor mode, and get the full permission to UniKey dongle.
We do NOT advise you to enclose this API in the final released software. This API is only for software vendor's usage.
If password3 or password4 is wrong while password1 and password2 is correct, the dongle is also logged on in user mode automatically.

Sets handle property.
See Unikey API Reference for details on UniKey_Vender_Logon function.
Returns error code.

Not supported on Linux.

70.10.52 WriteArithmetic(StartAddress as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write user-defined mathematical algorithms.
Notes:

See Unikey API Reference for details on UniKey_Write_Arithmetic function.
Returns error code.

70.10.53 WriteMemory(StartAddress as Integer, BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write data into the memory.
Notes:

This API needs to be called after logging on to a UniKey dongle.
See Unikey API Reference for details on UniKey_Write_Memory function.
Returns error code.

70.10.54 WriteSoftID(SoftID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write the vendor defined SoftID.
Notes:

See Unikey API Reference for details on UniKey_Write_SoftID function.
Returns error code.

70.10.55 WriteUpdateTag(UpdateTag as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write UpdateTag into a specific dongle.
Notes:

See Unikey API Reference for details on UniKey_Write_UpdateTag function.
Returns error code.

70.10.56 Properties

70.10.57 Buffer as MemoryBlock

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memoryblock to use when calling the unikey function.
Notes: (Read and Write property)

70.10.58 Handle as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The handle to the dongle.
Notes: (Read and Write property)

70.10.59 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parameter LP1.
Notes: (Read and Write property)

70.10.60 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parameter LP2.
Notes: (Read and Write property)

70.10.61 P1 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p1.
Notes: (Read and Write property)

70.10.62 P2 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p2.
Notes: (Read and Write property)

70.10.63 P3 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p3.
Notes: (Read and Write property)

70.10.64 P4 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p4.
Notes: (Read and Write property)

70.10.65 Result as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The result of the last function call.
Notes: (Read and Write property)

70.10.66 Constants

70.10.67 CBC_MODE = 2

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: CBC Mode

70.10.68 DES1 1

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: DES1

70.10.69 DES2 2

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: DES2

70.10.70 DES3 3

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: DES3

70.10.71 DES_KEY = 2

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: DES Key

70.10.72 DES_KEY_LEN = 24

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: DES Key Len

70.10.73 ECB_MODE = 1

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: ECB Mode

70.10.74 ERROR_KEY_INDEX = 259

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Error with key index.

70.10.75 ERROR_MAX_KEYS = 258

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Error with max keys.

70.10.76 ERROR_MAX_USERS = 257

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Error with max users.

70.10.77 ERROR_UNIKEY_ALREADY_LOCKED = 236

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Dongle Already Locked (When Lock Twice Or Open After Lock)

70.10.78 ERROR_UNIKEY_AR_BAD_COMMAND = 217

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Arithmetic Instruction Error

70.10.79 ERROR_UNIKEY_AR_UNKNOWN_OPCODE = 218

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Arithmetic Operator Error

70.10.80 ERROR_UNIKEY_AR_VALUE_OVERFLOW = 221

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Const Number >63

70.10.81 ERROR_UNIKEY_AR_WRONG_BEGIN = 219

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Const Number Can't Use On First Arithmetic Instruction

70.10.82 ERROR_UNIKEY_AR_WRONG_END = 220

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Const Number Can't Use On Last Arithmetic Instruction

70.10.83 ERROR_UNIKEY_CALCULATE = 211

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Calculate Failed

70.10.84 ERROR_UNIKEY_COMPARE_TIME_MODULE = 233

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: The Specific Time Is Before The Module's Start Time

70.10.85 ERROR_UNIKEY_DECRYPT_FAILED = 229

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Decrypt Data Failed

70.10.86 ERROR_UNIKEY_ENCRYPT_FAILED = 228

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Encrypt Data Failed

70.10.87 ERROR_UNIKEY_FILE_LOCK_CLOSE = 261

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: close lock file error

70.10.88 ERROR_UNIKEY_FILE_LOCK_OPEN = 260

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: open lock file error

70.10.89 ERROR_UNIKEY_FS_ERR_OPEN_FILE = 247

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Can't Open File

70.10.90 ERROR_UNIKEY_FS_ERR_SYS_UNINIT = 246

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: File Sys Is Not Initialized

70.10.91 ERROR_UNIKEY_FS_FILE_EXIST = 245

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: File Already Existed

70.10.92 ERROR_UNIKEY_FS_FILE_NAME = 240

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Wrong Or Invalid File Name

70.10.93 ERROR_UNIKEY_FS_FILE_OFFSET = 242

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Offset Of File Error

70.10.94 ERROR_UNIKEY_FS_NO_FILE = 241

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: No Such File Name

70.10.95 ERROR_UNIKEY_FS_NO_MEMORY = 244

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Not Enough Free Memory

70.10.96 ERROR_UNIKEY_FS_UNKONW = 243

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Unknown Error

70.10.97 ERROR_UNIKEY_GENERATE_NEW_PASSWORD = 225

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Generate New Password Failed

70.10.98 ERROR_UNIKEY_GET_TYPE = 256

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Failed to get type of dongle.

70.10.99 ERROR_UNIKEY_INVALID_ADDR_OR_SIZE = 204

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Read/Write Address Or Length Is Wrong

70.10.100 ERROR_UNIKEY_INVALID_KEY = 222

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: The Key In The Key Storage Is Wrong

70.10.101 ERROR_UNIKEY_INVALID_KEY_STORE = 224

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Wrong Key Storage Number

70.10.102 ERROR_UNIKEY_INVALID_PASSWORD = 201

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Found UniKey Dongle, But Basic Password Is Wrong

70.10.103 ERROR_UNIKEY_INVALID_PASSWORD_OR_ID = 202

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Wrong Password Or UniKey HID

70.10.104 ERROR_UNIKEY_KEY_INDEX = 239

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Dongle Over Keyindex, No Key To Delete

70.10.105 ERROR_UNIKEY_LOGOUT = 251

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Logout error?

70.10.106 ERROR_UNIKEY_MAX_KEYS = 238

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Dongle Already Max Keys, Need To Delete And The Regenerate

70.10.107 ERROR_UNIKEY_MAX_USERS = 237

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Dongle Already Max Users Logoned

70.10.108 ERROR_UNIKEY_MODULE = 216

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: License Module Error

70.10.109 ERROR_UNIKEY_NEED_FIND = 215

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: No Find Before FindNext

70.10.110 ERROR_UNIKEY_NEED_OPEN = 212

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Need Open Dongle Before Operating Dongle

70.10.111 ERROR_UNIKEY_NOMORE = 214

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: No More Dongle

70.10.112 ERROR_UNIKEY_NOTBELEVEL3 206

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Internal Error

70.10.113 ERROR_UNIKEY_NOT_FOUND = 200

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: No UniKey Dongle

70.10.114 ERROR_UNIKEY_NO_ENCYYPT = 248

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: No Secure Drive

70.10.115 ERROR_UNIKEY_OPEN_OVERFLOW = 213

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Too Many Open Dongles (>16)

70.10.116 ERROR_UNIKEY_PARAMETER = 254

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Some parameter is wrong.

70.10.117 ERROR_UNIKEY_PASSWORD = 249

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Password Error

70.10.118 ERROR_UNIKEY_RANDOM = 209

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Random Number Failed

70.10.119 ERROR_UNIKEY_READ_MEMORY = 207

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Read Memory Failed

70.10.120 ERROR_UNIKEY_READ_TIME = 230

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Get UniKey Time Failed

70.10.121 ERROR_UNIKEY_READ_UPDATETAG = 226

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Read UpdateTag Failed

70.10.122 ERROR_UNIKEY_SEED = 210

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Get Seed Code Failed

70.10.123 ERROR_UNIKEY_SET_SOFTID_FAILED = 203

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Set UniKey ID Failed

70.10.124 ERROR_UNIKEY_TIME_MODULE_NOT_NULL = 234

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: The Real Time Module Is Not Null, This Error is returned when write once flag is set

70.10.125 ERROR_UNIKEY_TIME_MODULE_OVERDUR = 235

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: The Specific Time Is Later Than The Module's End Time, Or The Module Is Expired

70.10.126 ERROR_UNIKEY_TOO_MUCH_THREAD = 255

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Too many (>100) threads in the single process open the dongle

70.10.127 ERROR_UNIKEY_UNKNOW = 252

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Unknown error

70.10.128 ERROR_UNIKEY_UNKNOWN_COMMAND = 205

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: No Such Command

70.10.129 ERROR_UNIKEY_USERLOCK = 250

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: User Has Been Locked

70.10.130 ERROR_UNIKEY_VERIFY_ADV_PASSWORD = 223

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Advanced Passwords (Password3 and Passowrd4) Not Verified

70.10.131 ERROR_UNIKEY_WRITE_ARITHMETIC = 253

MBS Dongle Plugin, Plugin Version: 16.4.

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: get module end time (lp1 = module index)

70.10.180 UNIKEY_GET_MODULE_START_TIME = 38

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: get module start time (lp1 = module index)

70.10.181 UNIKEY_GET_TIME = 26

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: read rtc time (lp1,lp2,p1,p2,p3,p4 = year,month,day,hour,minute,second)

70.10.182 UNIKEY_GET_TYPE = 100

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: get the Unikey type

70.10.183 UNIKEY_LOCK = 41

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey functions codes.
Notes: Lock

70.10.184 UNIKEY_LOGOFF = 4

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Close UniKey

70.10.185 UNIKEY_LOGON = 3

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Open UniKey

70.10.186 UNIKEY_MD5 = 22

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Make an MD5 Digest for a Certain Content

70.10.187 UNIKEY_MODULE_DECREASE = 17

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Decrease Module Unit

70.10.188 UNIKEY_RANDOM = 7

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Generate Random Number

70.10.189 UNIKEY_READ_MEMORY = 5

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Read UniKey

70.10.190 UNIKEY_READ_SOFTID = 10

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Read Software ID

70.10.191 UNIKEY_READ_UPDATETAG = 23

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Read UpdateTag from a Specific Key

70.10.192 UNIKEY_SEED = 8

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Generate Seed Code

70.10.193 UNIKEY_SET_KEY = 222

MBS Dongle Plugin, Plugin Version: 19.0.

Function: One of the unikey functions codes.

70.10.194 UNIKEY_SET_MODULE = 11

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Set Module

70.10.195 UNIKEY_SET_NEW_PASSWORD = 18

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Set New Password via a New Seed

70.10.196 UNIKEY_SET_TIME = 27

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time (lp1,lp2,p1,p2,p3,p4 = year,month,day,hour,minute,second)

70.10.197 UNIKEY_SET_TIME_MODULE_DURATION = 34

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time module duration (lp2,p1 = day,hour)=24*day+hour

70.10.198 UNIKEY_SET_TIME_MODULE_END_TIME = 33

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time module end time (p1,p2,p3,p4 = year,month,day,hour)

70.10.199 UNIKEY_SET_TIME_MODULE_START_TIME = 30

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time module start time(p1,p2,p3,p4 = year,month,day,hour)

70.10.200 UNIKEY_SET_TIME_MODULE_START_TIME_NOW = 31

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time module start time use dongle time (lp1 = module index)

70.10.201 UNIKEY_SET_TIME_MODULE_START_TIME_NOW_PC = 32

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time module start time use host time (lp1 = module index)

70.10.202 UNIKEY_SET_TIME_NOW = 28

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time use host time (lp1 = module index)

70.10.203 UNIKEY_TYPE_PRO = 102

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the dongle types.
Notes: Pro Unikey

70.10.204 UNIKEY_TYPE_STD = 103

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the dongle types.
Notes: Standard Unikey

70.10.205 UNIKEY_TYPE_TIME = 101

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the dongle types.
Notes: Time Unikey

70.10.206 UNIKEY_UNLOCK = 42

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey functions codes.
Notes: Unlock

70.10.207 UNIKEY_WRITE_ARITHMETIC = 13

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Write Arithmetic

70.10.208 UNIKEY_WRITE_MEMORY = 6

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Write UniKey

70.10.209 UNIKEY_WRITE_SOFTID = 9

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Write Software ID

70.10.210 UNIKEY_WRITE_UPDATETAG = 24

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Write UpdateTag to a Specific Key

70.10.211 UNKEY_GET_CLI_NUM = 101

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Get client number now.

70.10.212 UNKEY_GET_MAX_NUM = 226

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Get Max number.

Chapter 71

Drag & Drop

71.1 class DragItem

71.1.1 class DragItem

Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The dragitem class from Xojo framework.

71.1.2 Methods

71.1.3 NSDraggingInfoMBS as NSDraggingInfoMBS

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Provides the NSDraggingInfo object for the DragItem.

71.2 class NSDraggingImageComponentMBS

71.2.1 class NSDraggingImageComponentMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingImageComponent class represents a single object in a dragging item.
Notes: An array of NSDraggingImageComponent instances are composited together to create the dragging image for an NSDraggingItem. NSDraggingImageComponent instances can simply be considered as named images with a location used by an NSDraggingItem instance.

71.2.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

71.2.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

71.2.4 Methods

71.2.5 Constructor(key as string)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Initializes a dragging image component with the specified key.
Notes:

key: The key.
Available in OS X v10.7 and later.

71.2.6 draggingImageComponentWithKey(key as string) as NSDraggingImageComponentMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates and returns a dragging image component with the specified key.
Notes: Available in OS X v10.7 and later.

71.2.7 NSDraggingImageComponentIconKey as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for Constructor.
Notes:

Key with a corresponding value that is an image of the item being dragged.
Available in OS X v10.7 and later.

71.2.8 NSDraggingImageComponentLabelKey as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for Constructor.
Notes:

Key with a corresponding value that represents a textual label associate with the item, for example, a file name.
Available in OS X v10.7 and later.

71.2.9 Properties

71.2.10 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object handle.
Notes: (Read and Write property)

71.2.11 contents as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: An object providing the image contents of the component.
Notes:

Typically you set an NSImage instance as content.
Available in OS X v10.7 and later.
(Read and Write computed property)

71.2.12 frame as NSRectMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The coordinate space is the bounds of the parent dragging item.
Notes:

The frame is { { 0,0 } , { draggingFrame.size.width, draggingFrame.size.height } } .

The coordinate space is the bounds of the parent NSDraggingItem instance's draggingFrame.
Available in OS X v10.7 and later.
(Read and Write computed property)

71.2.13 key as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The unique name of this image component instance.
Notes:

The key must be unique for each component in an NSDraggingItem instance. You can create your own named components, however the keys described in NSDragImage Component Keys have special meanings.

When an NSDraggingItem instances imageComponents are changed by one of the enumerateDraggingItemsWithOptions methods the image associated with this key is morphed into the new image component's image associated with the same key.

Available in OS X v10.7 and later.
(Read and Write computed property)

71.3 class NSDraggingInfoMBS

71.3.1 class NSDraggingInfoMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingInfo protocol declares methods that supply information about a dragging session.
Notes: NSDraggingInfo protocol methods are designed to be invoked from within a class's implementation of NSDraggingDestination protocol methods. The Application Kit automatically passes an object that conforms to the NSDraggingInfo protocol as the argument to each of the methods defined by NSDraggingDestination. NSDraggingInfo messages should be sent to this object; you never need to create a class that implements the NSDraggingInfo protocol.

71.3.2 Blog Entries

71.3.4 Methods

71.3.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.
See also:

- 71.3.6 Constructor(Handle as Integer) 13421

71.3.6 Constructor(Handle as Integer)

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The constructor to build an NSDraggingInfo object with a handle.
Notes: Handle should be a Cocoa object reference implementing the NSDraggingInfo protocol.
See also:

• 71.3.5 Constructor 13421

71.3.7 namesOfPromisedFilesDroppedAtDestination(dropDestination as FolderItem) as string()

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Sets the drop location for promised files and returns the names of the files that the receiver promises to create there.
Notes:

dropDestination: A folderitem specifying the drop location for promised files.

Return an array of file names, which are not full paths.

Drag destinations should invoke this method within their performDragOperation method. The source may or may not have created the files by the time this method returns.

71.3.8 promisedFilesDroppedAtDestination(dropDestination as FolderItem) as FolderItem()

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Sets the drop location for promised files and returns the files that the receiver promises to create there.
Notes:

dropDestination: A folderitem specifying the drop location for promised files.

Return an array of folderitems for the files.
The files may not yet exist.

Drag destinations should invoke this method within their performDragOperation method. The source may or may not have created the files by the time this method returns.

71.3.9 slideDraggedImageTo(screenPoint as NSPointMBS)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Slides the image to a specified location.
Notes:

screenPoint: A point that specifies a location in the screen coordinate system.

This method can be used to adjust the location to which the dragged image will slide back if the drag is rejected.
It should only be invoked from within the destination's implementation of prepareForDragOperation, and will only have effect if the destination rejects the drag.
This method is invoked after the user has released the image but before it is removed from the screen.

71.3.10 Properties

71.3.11 animatesToDestination as boolean

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Whether the dragging formation animates while the drag is over this destination.
Notes:

During the conclusion of an accepted drag, if this property is set to true, the drag manager will animate each dragging image to their NSDraggingFormationNone locations. Otherwise, the drag images are removed without any animation.

This property is inspected between prepareForDragOperation and performDragOperation. You should enumerate through the dragging items during performDragOperation to set the item's draggingFrame to the correct destinations.

Available in OS X v10.7 and later.
(Read and Write property)

71.3.12 draggedImage as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the image being dragged.
Notes:

Value is a NSImageMBS object. Returned as Variant to reduce plugin dependencies.

This image object visually represents the data put on the pasteboard during the drag operation; however, it is the pasteboard data and not this image that is ultimately utilized in the dragging operation.

This method returns non-nil for a local drag, but nil for a cross-process drag. With the new multi-image dragging capabilities, a cross-process destination may participate and change the drag image. But it still

cannot get the current drag image.
(Read only property)

71.3.13 draggedImageLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the current location of the dragged image's origin.
Notes:

Returns the dragged image's origin, in the base coordinate system of the destination object's window.
The image moves along with the mouse pointer (the position of which is given by draggingLocation) but may be positioned at some offset.
(Read only property)

71.3.14 draggingDestinationWindow as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the destination window for the dragging operation.
Notes:

Value is a NSWindowMBS object. Returned as Variant to reduce plugin dependencies.

Either this window is the destination itself, or it contains the view object that is the destination.
(Read only property)

71.3.15 draggingFormation as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the dragging formation while the drag is over this destination.
Notes:

Set this property to change the formation of the drag items. This is generally done during the updateDraggingItemsForDrag method or whenever you enumerate the dragging items.

The default value is the current drag formation.

Note: Set this property before or after the NSDraggingInfo or NSDraggingSession class's method enumerateDraggingItemsWithOptions not inside the enumeration Block.

Available in OS X v10.7 and later.
(Read and Write property)

71.3.16 draggingLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the current location of the mouse pointer in the base coordinate system of the destination object's window.
Notes: (Read only property)

71.3.17 draggingPasteboard as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the pasteboard object that holds the data being dragged.
Notes:

Value is a NSPasteboardMBS object. Returned as Variant to reduce plugin dependencies.

The dragging operation that is ultimately performed utilizes this pasteboard data and not the image returned by the draggedImage method.
(Read only property)

71.3.18 draggingSequenceNumber as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns a number that uniquely identifies the dragging session.
Notes: (Read only property)

71.3.19 draggingSource as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the source, or owner, of the dragged data.
Notes:

This method returns nil if the source is not in the same application as the destination. The dragging source implements methods from the NSDraggingSource protocol.
(Read only property)

71.3.20 draggingSourceOperationMask as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the dragging operation mask of the dragging source.
Notes:

The dragging operation mask, which is declared by the dragging source through the NSDraggingSource sourceOperationMaskForDraggingContext method (preferred) or the NSDraggingSource draggingSourceOperationMaskForLocal method. If the source does not permit any dragging operations, this method should return NSDragOperationNone.

If the source permits dragging operations, the elements in the mask are one or more of the constants described in "Obtaining Information About the Dragging Session", combined using the C bitwise OR operator.

If the user is holding down a modifier key during the dragging session and the source does not prohibit modifier keys from affecting the drag operation (through its ignoreModifierKeysWhileDragging method), then the operating system combines the dragging operation value that corresponds to the modifier key (see the descriptions below) with the source's mask using the C bitwise AND operator.

The modifier keys are associated with the dragging operation options shown below:

Modifier Key	Dragging Operation
Control	NSDragOperationLink
Option	NSDragOperationCopy
Command	NSDragOperationGeneric

(Read only property)

71.3.21 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

71.3.22 numberOfValidItemsForDrop as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the number of valid items for a drop operation.

Notes:

During draggingEntered or draggingUpdated, you are responsible for returning the drag operation. In some cases, you may accept some, but not all items on the dragging pasteboard. (For example, your application may only accept image files.)

If you only accept some of the items, set this property to the number of items accepted so the drag manager can update the drag count badge.

When updateDraggingItemsForDrag is called, you should set the image of non-valid dragging items to nil. If none of the drag items are valid then you should not updateItems, simply return NSDragOperationNone from your implementation of draggingEntered and, or draggingUpdated and do not modify any drag item properties.

Available in OS X v10.7 and later.
(Read and Write property)

71.3.23 Constants

71.3.24 NSDraggingFormationDefault = 0

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

The system determined formation.
Available in OS X v10.7 and later.

71.3.25 NSDraggingFormationList = 3

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images are laid out vertically, non-overlapping with the left edges aligned.
Available in OS X v10.7 and later.

71.3.26 NSDraggingFormationNone = 1

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images maintain their set positions relative to each other/
Available in OS X v10.7 and later.

71.3.27 NSDraggingFormationPile = 2

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images are placed on top of each other with random rotations.
Available in OS X v10.7 and later.

71.3.28 NSDraggingFormationStack = 4

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images are laid out overlapping diagonally.
Available in OS X v10.7 and later.

71.3.29 NSDragOperationAll_Obsolete = 15

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: The NSDragOperationAll constant is deprecated. Use NSDragOperationEvery instead.

71.3.30 NSDragOperationCopy = 1

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: The data represented by the image can be copied.

71.3.31 NSDragOperationDelete = 32

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: The data can be deleted.

71.3.32 NSDragOperationEvery = -1

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: All of the above.

71.3.33 NSDragOperationGeneric = 4

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: The operation can be defined by the destination.

71.3.34 NSDragOperationLink = 2

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.

71.3.35 NSDragOperationMove = 16

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: The data can be moved.

71.3.36 NSDragOperationNone = 0

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: No drag operations are allowed.

71.3.37 NSDragOperationPrivate = 8

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: The operation is negotiated privately between the source and the destination.

71.4 class NSDraggingItemMBS

71.4.1 class NSDraggingItemMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingItem class encompasses a single dragged item within an NSDraggingSession instance.
Notes:

See NSDraggingSessionMBS Class Reference for more information

When the NSDraggingSession method beginDraggingSessionWithItems is called, the dragging items passed to the method are consumed immediately and are not retained.

71.4.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

71.4.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

71.4.4 Methods

71.4.5 Constructor(item as NSPasteboardItemMBS)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Initializes a dragging item using the specified content.
Notes:

item: The object that provides the dragging content.

When the developer creates an NSDraggingItem instance, it is for use with the view method beginDraggingSessionWithItems. During the invocation of that method, the item is placed onto the dragging pasteboard for the NSDraggingSession that contains the dragging item instance.

Available in OS X v10.7 and later.

71.4.6 item as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the pasteboard reader or writer object dependent on the context of where this dragging item is used. (read-only)
Notes: When you create an NSDraggingItem instance, item is the pasteboardWriter passed to Constructor.

71.4.7 setDraggingFrame(frame as NSRectMBS, contents as Variant)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Sets the item's dragging frame and contents.
Notes:

frame: The item content frame in the same coordinate space that the draggingFrame.
contents: The item contents to display when dragging. Typically this is an NSImage, but a CGImageRef will also work.

Alternate single image component setter.

This method simplifies modifying the components of an NSDraggingItem when there is only one component.

This is a convenience method. This method sets the draggingFrame and creates a single NSDraggingImageComponent instance with one image corresponding to the NSDraggingImageComponentIconKey key. You should only use this method under the following conditions: the drag image for this item is composed of a single image., or there are a reasonable number of dragging item instances being created or enumerated.

This method will set the draggingFrame and imageComponents properties.
Available in OS X v10.7 and later.

71.4.8 Properties

71.4.9 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

71.4.10 draggingFrame as NSRectMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The frame of the dragging item.
Notes:

The dragging frame provides the spatial relationship between NSDraggingItem instances when the dragging formation is set to NSDraggingFormationNone.

The exact coordinate space of this rectangle is dependent on where it is used. The view that initiated the drag using beginDraggingSessionWithItems or the view your pass to the NSDraggingSession instance implantation of enumerateDraggingItemsWithOptions.

Available in OS X v10.7 and later.
(Read and Write computed property)

71.5 class NSDraggingSessionMBS

71.5.1 class NSDraggingSessionMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingSession class encompases a drag and drop action and allows modification of the drag while in progress.
Notes:

You start a new dragging session by calling the NSView method beginDraggingSessionWithItems method. This method immediately returns and you can further modify the properties of the dragging session. The actual drag begins at the next turn of the run loop.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.5.4 Methods

71.5.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

71.5.6 draggingLeaderIndex as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The index of the dragging item under the cursor.
Notes:

The index is to an element in the array passed as the first parameter to the NSView method beginDraggingSessionWithItem.

The default is the NSDraggingItem closest to the location field in the event parameter that was passed to the beginDraggingSessionWithItems method.

Available in OS X v10.7 and later.

71.5.7 draggingLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The current cursor location of the drag in screen coordinates. (read-only)
Notes: Available in OS X v10.7 and later.

71.5.8 draggingPasteboard as NSPasteboardMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the pasteboard object that contains the data being dragged. (read-only)
Notes: Available in OS X v10.7 and later.

71.5.9 draggingSequenceNumber as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns a number that uniquely identifies the dragging session. (read-only)
Notes: Available in OS X v10.7 and later.

71.5.10 Properties

71.5.11 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

71.5.12 animatesToStartingPositionsOnCancelOrFail as boolean

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Controls whether the dragging image animates back to its starting point on a cancelled or failed drag.
Notes:

This property should be set immediately after creating the dragging session.

The default value is true.
Available in OS X v10.7 and later.
(Read and Write computed property)

71.5.13 draggingFormation as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Controls the dragging formation when the drag is not over the source or a valid destination.
Notes:

Setting this value causes the dragging formation to change immediately, provided a valid destination has not overriden the behavior. If the dragging session hasn't started yet, the dragging items will animate into formation immediately upon start. It is highly recommended to never change the formation when starting a drag.

The default value is NSDraggingFormationNone.
Available in OS X v10.7 and later.
(Read and Write computed property)

71.5.14 Constants

71.5.15 NSDraggingContextOutsideApplication = 0

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: Whether a drag terminates within or outside the application.
Notes:

The dragging terminates outside the application.
Available in OS X v10.7 and later.

71.5.16 NSDraggingContextWithinApplication = 1

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: Whether a drag terminates within or outside the application.
Notes:

The dragging terminates within the application.
Available in OS X v10.7 and later.

71.5.17 NSDraggingFormationDefault = 0

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

The system determined formation.
Available in OS X v10.7 and later.

71.5.18 NSDraggingFormationList = 3

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images are laid out vertically, non-overlapping with the left edges aligned.
Available in OS X v10.7 and later.

71.5.19 NSDraggingFormationNone = 1

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images maintain their set positions relative to each other/
Available in OS X v10.7 and later.

71.5.20 NSDraggingFormationPile = 2

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images are placed on top of each other with random rotations.
Available in OS X v10.7 and later.

71.5.21 NSDraggingFormationStack = 4

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images are laid out overlapping diagonally.
Available in OS X v10.7 and later.

71.6 Globals

71.6.1 InstallDragImageMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Install drag image patch.
Notes:

This allows you to use retina NSImage for drag image with using Xojo's built in drag and drop classes.
So call InstallDragImageMBS once in app.open to initialize.

Than before call DragItem.Drag, call SetNextDragImageMBS and provide a 2x image as NSImageMBS object.
See example project for details.

71.6.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.1
- MBS Xojo Plugins, version 21.1pr5

71.6.3 SetNextDragImageMBS(Img as NSImageMBS)

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Sets which image to use for next drag.
Notes:

Once image has been replaced for Xojo's drag, the image reference is freed by plugin.

Please call setSize on the NSImageMBS to set the size to use.
e.g. half the pixels, so the picture is sharp on a retina screen.

71.7 class WinDataObjectMBS

71.7.1 class WinDataObjectMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a data object for Drag and Drop.
Example:

```
// take some picture
dim p as Picture = LogoMBS(500)

// create data object
dim w as new WinDataObjectMBS(p)
```

Notes: While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

71.7.6 Methods

71.7.7 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer)

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

Function: Adds a drag image to the data object.
Notes:

pic: the picture to use.
width and height: The size of the picture.
x and y: The location of the cursor within the drag image. The point should contain the offset from the upper-left corner of the drag image to the location of the cursor.

Requires Windows 2000 Professional with SP3, Windows XP.
On success the HelperHandle property is not zero.

Turn off antialiasing when drawing text. Otherwise, artifacts could occur at the edges, between the text color and the color key.

This function takes the picture (and it's mask) and turns it in a nice drag picture. This includes applying the mask and passing black for the background color. Dark colors which should be transparent will be made lighter.
See also:

- 71.7.8 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer, ImageBackgroundColor as color) 13441

71.7.8 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer, ImageBackgroundColor as color)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Adds a drag image to the data object.
Notes:

pic: the picture to use.
width and height: The size of the picture.
x and y: The location of the cursor within the drag image. The point should contain the offset from the upper-left corner of the drag image to the location of the cursor.
ImageBackgroundColor: The color used by the control to fill the background of the drag image.

Requires Windows 2000 Professional with SP3, Windows XP.
On success the HelperHandle property is not zero.

Turn off antialiasing when drawing text. Otherwise, artifacts could occur at the edges, between the text color and the color key.
See also:

- 71.7.7 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer) 13441

71.7.9 AddFiles(files() as folderitem)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds file references in the format the explorer can understand them.
See also:

- 71.7.10 AddFiles(pathes() as string) 13442

71.7.10 AddFiles(pathes() as string)

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds file pathes in the format the explorer can understand them.
Notes: Folder pathes should have no backslash on the end.
See also:

- 71.7.9 AddFiles(files() as folderitem) 13442

71.7.11 AddPicture(pic as picture)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Adds a picture to the data object.

71.7.12 AddRaw(format as Integer, data as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds raw data to the data object.
Notes: Depending of the format you may need to add chr(0) on the end.

71.7.13 AddText(text as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds the text to the data object.

71.7.14 Constructor

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an empty data object.
See also:

- 71.7.15 Constructor(files() as folderitem) 13443
- 71.7.16 Constructor(pic as picture) 13443
- 71.7.17 Constructor(text as string) 13444

71.7.15 Constructor(files() as folderitem)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a data object and adds the files.
See also:

- 71.7.14 Constructor 13443
- 71.7.16 Constructor(pic as picture) 13443
- 71.7.17 Constructor(text as string) 13444

71.7.16 Constructor(pic as picture)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Creates a new data object and adds the given picture.
Example:

```
// take some picture
dim p as Picture = LogoMBS(500)

// create data object
dim w as new WinDataObjectMBS(p)
```

See also:

- 71.7.14 Constructor 13443
- 71.7.15 Constructor(files() as folderitem) 13443
- 71.7.17 Constructor(text as string) 13444

71.7.17 Constructor(text as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new data object and adds the given text.
Example:

```
// create data object with text
dim w as new WinDataObjectMBS("Hello World")
```

See also:

- 71.7.14 Constructor 13443
- 71.7.15 Constructor(files() as folderitem) 13443
- 71.7.16 Constructor(pic as picture) 13443

71.7.18 Formats as String()

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries list of formats in the data object.
Notes: Helps for debugging to see what is inside.

71.7.19 GetFileContents(index as Integer) as string

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries file content for the file with the given index.
Notes:

Use index from WindowsFileDescriptorMBS.index property.

This works for files up to a few hundred megabytes in size. For larger files we will have to change plugin if you want to receive those.

Only accepts data provided as blob.
See also:

- 71.7.20 GetFileContents(index as integer, byref IsPath as boolean) as string 13445

71.7.20 GetFileContents(index as integer, byref IsPath as boolean) as string

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries file content for the file with the given index.
Notes:

Use index from WindowsFileDescriptorMBS.index property.

This works for files up to a few hundred megabytes in size. For larger files we will have to change plugin if you want to receive those.

IsPath is set to true, when the returned data is a file path instead of data itself.
See also:

- 71.7.19 GetFileContents(index as Integer) as string 13444

71.7.21 GetFileDescriptors as WindowsFileDescriptorMBS()

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries file descriptors.
Example:

```
dim dataObject as WinDataObjectMBS // your data object

dim des(-1) as WindowsFileDescriptorMBS = dataObject.GetFileDescriptors

for each d as WindowsFileDescriptorMBS in des
// we got file descriptions. Some metadata and the data. No path.
dim data as string = dataObject.GetFileContents(0)
msgbox "File """+d.FileName+""" with "+str(lenb(data))+" bytes data."
```

```
next
```

Notes: Result array is empty on any error.

71.7.22 GetFileName as string

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries filename from data object.
Notes:

Depending on how the other application works, the drag data object may have either file descriptors, a file path or path strings.

The file name is valid at least as long as this object is alive.

71.7.23 GetPaths as folderitem()

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the paths in the data object.
Example:

```
dim dataObject as WinDataObjectMBS // your data object

dim files(-1) as FolderItem = dataObject.GetPaths

for each f as FolderItem in files
// we got a file you can use like any other file (e.g. copy)
listbox1.AddRow "Path """+f.NativePath+""""
next
```

Notes: Checks for a CF_HDROP type. May return one or more folderitems.

71.7.24 GetPathStrings as string()

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the paths in the data object.
Notes: Checks for a CF_HDROP type. May return one or more folderitems.

71.7.25 GetPicture as picture

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Queries the picture from the data object.
Notes: Supports CF_BITMAP/TYMED_GDI.

71.7.26 GetRaw(format as Integer) as string

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the raw data for the given type.

71.7.27 GetText as string

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the text from the data object.
Notes: Returns unicode or ANSI text depending on what is available. Unicode is preferred.

71.7.28 HasFileDescriptors as boolean

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains file descriptors.
Notes:

Returns true if a path is found.
Checks for CF_FILEGROUPDESCRIPTOR.

Windows uses File Descriptors and FileContents for drag and drop operations where the data is not stored in a file. You get the descriptors and if you need you can get the data which is delivered just in time.

71.7.29 HasFileName as boolean

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks to see if a filename entry is in the data object.

71.7.30 HasPaths as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains file paths.
Notes:

Returns true if a path is found.
Checks for CF_HDROP.

71.7.31 HasPicture as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks if a picture is part of this data object.
Notes:

Returns true if a picture is found.
Checks for CF_BITMAP.

71.7.32 HasRaw(format as Integer) as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains data in the given format.

71.7.33 HasText as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains Text or UnicodeText.
Notes:

Returns true if text is found.
Checks for CF_UNICODETEXT and CF_TEXT.

71.7.34 Properties

71.7.35 DragImage as Picture

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The drag image.
Notes:

Used to show user what he is dragging.
(Read only property)

71.7.36 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

71.7.37 HelperHandle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal helper object to handle the drag image.
Notes:

This value is not zero if the AddDragImage call was successful.
(Read and Write property)

71.7.38 Lasterror as Integer

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

71.7.39 Constants

71.7.40 CF_BITMAP = 2

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.41 CF_DIB = 8

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.42 CF_DIBV5 = 17

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.43 CF_DIF = 5

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.44 CF_ENHMETAFILE = 14

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.45 CF_HDROP = 15

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.46 CF_LOCALE = 16

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.47 CF_METAFILEPICT = 3

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.48 CF_OEMTEXT = 7

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.49 CF_PALETTE = 9

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.50 CF_PENDATA = 10

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.51 CF_RIFF = 11

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.52 CF_SYLK = 4

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.53 CF_TEXT = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.54 CF_TIFF = 6

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.55 CF_UNICODETEXT = 13

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.7.56 CF_WAVE = 12

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

71.8 class WindowsDragSourceMBS

71.8.1 class WindowsDragSourceMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for Drag and Drop on Windows to create a drag source.
Notes:

The WindowsDragSourceMBS class is one of the class you implement to provide drag-and-drop operations in your application. It contains methods used in any application used as a data source in a drag-and-drop operation. The data source application in a drag-and-drop operation is responsible for:

- Determining the data being dragged based on the user's selection.
- Initiating the drag-and-drop operation based on the user's mouse actions.
- Generating some of the visual feedback during the drag-and-drop operation, such as setting the cursor and highlighting the data selected for the drag-and-drop operation.
- Canceling or completing the drag-and-drop operation based on the user's mouse actions.
- Performing any action on the original data caused by the drop operation, such as deleting the data on a drag move.

WindowsDragSourceMBS contains the events for generating visual feedback to the end user and for canceling or completing the drag-and-drop operation.

When To Implement

Implement WindowsDragSourceMBS if you are developing a container or server application that can act as a data source for a drag-and-drop operation. The WindowsDragSourceMBS interface is only required during the drag-and-drop operation.

If you implement the WindowsDragSourceMBS class, you must also implement the DataObjectMBS class on the same object to represent the data being transferred.

You can use the same implementation of DataObjectMBS for drag-and-drop data as for the data object offered to the clipboard. After you have implemented clipboard operations in your application, you can add drag-and-drop operations with only a little extra work.

When To Use

You do not usually call the WindowsDragSourceMBS methods directly. Instead, your data source calls the DoDragDrop function when it detects that the user has initiated a drag-and-drop operation. Then, DoDragDrop calls the WindowsDragSourceMBS methods during the drag-and-drop operation.

For example, DoDragDrop calls WindowsDragSourceMBS.GiveFeedback when you need to change the cursor shape or when you need to provide some other visual feedback. DoDragDrop calls WindowsDragSourceMBS.QueryContinueDrag when there is a change in the mouse button state to determine if the drag-and-drop operation was canceled or completed.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

71.8.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

71.8.3 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

71.8.4 Methods

71.8.5 DoDragDrop(dataObject as WinDataObjectMBS, OKEffect as Integer, byref Effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Carries out an OLE drag and drop operation.
Notes:

Parameters:

dataObject: The WinDataObjectMBS data object that contains the data being dragged.
OKEffects: Effects the source allows in the OLE drag-and-drop operation. Most significant is whether it permits a move. The OKEffect and Effect parameters obtain values from the DROPEFFECT* constants.
Effect: Pointer to a value that indicates how the OLE drag-and-drop operation affected the source data. The pdwEffect parameter is set only if the operation is not canceled.

This function returns S_OK on success. Other possible values include the following.

Remarks

Return code	Description
DRAGDROP_S_DROP	The OLE drag-and-drop operation was successful.
DRAGDROP_S_CANCEL	The OLE drag-and-drop operation was canceled.
E_UNSPEC	Unexpected error occurred.

If you are developing an application that can act as a data source for an OLE drag-and-drop operation, you must call DoDragDrop when you detect that the user has started an OLE drag-and-drop operation.

The DoDragDrop function enters a loop in which it calls various methods in the WindowsDragSourceMBS and WindowsDropTargetMBS interfaces. (For a successful drag-and-drop operation, the application acting as the data source must also implement WindowsDragSourceMBS, while the target application must implement WindowsDropTargetMBS.)

The DoDragDrop function determines the window under the current cursor location. It then checks to see if this window is a valid drop target.

If the window is a valid drop target, DoDragDrop calls WindowsDropTargetMBS.DragEnter. This method supplies an effect code indicating what would happen if the drop actually occurred. For a list of valid drop effects, see the DROPEFFECT* constants.

DoDragDrop calls WindowsDragSourceMBS.GiveFeedback with the effect code so that the drop source interface can provide appropriate visual feedback to the user.

DoDragDrop tracks mouse cursor movements and changes in the keyboard or mouse button state.

If the user moves out of a window, DoDragDrop calls WindowsDropTargetMBS.DragLeave.

If the mouse enters another window, DoDragDrop determines if that window is a valid drop target and then calls WindowsDropTargetMBS.DragEnter for that window.

If the mouse moves but stays within the same window, DoDragDrop calls WindowsDropTargetMBS.DragOver.

If there is a change in the keyboard or mouse button state, DoDragDrop calls WindowsDragSourceMBS.QueryContinueDrag and determines whether to continue the drag, to drop the data, or to cancel the operation based on the return value.

If the return value is S_OK, DoDragDrop first calls WindowsDropTargetMBS.DragOver to continue the operation. This method returns a new effect value and DoDragDrop then calls WindowsDragSourceMBS.GiveFeedback with the new effect so appropriate visual feedback can be set. For a list of valid drop effects, see the DROPEFFECT constants. WindowsDropTargetMBS.DragOver and WindowsDragSourceMBS.Give-

Feedback are paired so that as the mouse moves across the drop target, the user is given the most up-to-date feedback on the mouse's position.

If the return value is DRAGDROP_S_DROP, DoDragDrop calls WindowsDropTargetMBS.Drop. The DoDragDrop function returns the last effect code to the source, so the source application can perform the appropriate operation on the source data, for example, cut the data if the operation was a move.

If the return value is DRAGDROP_S_CANCEL, the DoDragDrop function calls WindowsDropTargetMBS.DragLeave.

71.8.6 Properties

71.8.7 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

71.8.8 Events

71.8.9 GiveFeedback(Effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

Function: Enables a source application to give visual feedback to the end user during a drag-and-drop operation by providing the DoDragDrop function with an enumeration value specifying the visual effect.
Notes:

Effect: The drop effect value returned by the most recent call to WindowsDropTargetMBS.DragEnter, WindowsDropTargetMBS.DragOver, or WindowsDropTargetMBS.DragLeave.

Return S_OK on success. Return DRAGDROP_S_USEDEFAULTCURSORS to indicate successful completion of the method, and requests OLE to update the cursor using the OLE-provided default cursors.

When your application detects that the user has started a drag-and-drop operation, it should call the DoDragDrop function. DoDragDrop enters a loop, calling WindowsDropTargetMBS.DragEnter when the mouse first enters a drop target window, WindowsDropTargetMBS.DragOver when the mouse changes its position within the target window, and WindowsDropTargetMBS.DragLeave when the mouse leaves the target window.

For every call to either WindowsDropTargetMBS.DragEnter or WindowsDropTargetMBS.DragOver, DoDragDrop calls WindowsDropTargetMBS.GiveFeedback, passing it the drop effect value returned from the drop target call.

DoDragDrop calls WindowsDropTargetMBS.DragLeave when the mouse has left the target window. Then, DoDragDrop calls WindowsDropTargetMBS.GiveFeedback and passes the DROPEFFECT_NONE value in the dwEffect parameter.

The Effect parameter can include DROPEFFECT_SCROLL, indicating that the source should put up the drag-scrolling variation of the appropriate pointer.

Notes to Implementers

This function is called frequently during the DoDragDrop loop, so you can gain performance advantages if you optimize your implementation as much as possible.

GiveFeedback is responsible for changing the cursor shape or for changing the highlighted source based on the value of the dwEffect parameter. If you are using default cursors, you can return DRAGDROP_S_USEDEFAULTCURSORS, which causes OLE to update the cursor for you, using its defaults.

71.8.10 QueryContinueDrag(EscapePressed as boolean, KeyState as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

Function: Determines whether a drag-and-drop operation should be continued, canceled, or completed. You do not call this method directly.
Notes:

The OLE DoDragDrop function calls this method during a drag-and-drop operation.

EscapePressed: Indicates whether the Esc key has been pressed since the previous call to QueryContinueDrag or to DoDragDrop if this is the first call to QueryContinueDrag. A true value indicates the end user has pressed the escape key; a false value indicates it has not been pressed.

KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.

This event can return the following values.

Return code	Description
S_OK	The drag operation should continue. This result occurs if no errors are detected, the mouse button starting the drag-and-drop operation has not been released, and the Esc key has not been detected.
DRAGDROP_S_DROP	The drop operation should occur completing the drag operation. This result occurs if KeyState indicates that the key that started the drag-and-drop operation has been released.
DRAGDROP_S_CANCEL	The drag operation should be canceled with no drop operation occurring. This result occurs if EscapePressed is true, indicating the Esc key has been pressed.

The DoDragDrop function calls QueryContinueDrag whenever it detects a change in the keyboard or mouse button state during a drag-and-drop operation. QueryContinueDrag must determine whether the drag-and-drop operation should be continued, canceled, or completed based on the contents of the parameters KeyState and EscapePressed.

71.8.11 Constants

71.8.12 DRAGDROP_S_CANCEL = & H00040101

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.
Notes: Drag and Drop was cancelled.

71.8.13 DRAGDROP_S_DROP = & h00040100

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.
Notes: Do the drop operation.

71.8.14 DRAGDROP_S_USEDEFAULTCURSORS = & h00040102

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.

71.8.15 DROPEFFECT_COPY = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes:

Drop results in a copy. The original data is untouched by the drag source.

Your application should always mask drop effect constants to ensure compatibility with future implementations. Presently, only some of the bit positions in a drop effect value have meaning. In the future, more interpretations for the bits will be added. Drag sources and drop targets should carefully mask these values appropriately before comparing. They should never compare a drop effect value against, say, DROPEFFECT_COPY by doing the following:

if DropEffect = DROPEFFECT_COPY then

Instead, the application should always mask for the value or values being sought as using one of the following techniques:

if bitwiseAnd(DropEffect, DROPEFFECT_COPY) = DROPEFFECT_COPY then

This allows for the definition of new drop effects, while preserving backwards compatibility with existing code.

71.8.16 DROPEFFECT_LINK = 4

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Drag source should create a link to the original data.

71.8.17 DROPEFFECT_MOVE = 2

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Drag source should remove the data.

71.8.18 DROPEFFECT_NONE = 0

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Drop target cannot accept the data.

71.8.19 DROPEFFECT_SCROLL = & h80000000

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Scrolling is about to start or is currently occurring in the target. This value is used in addition to the other values.

71.8.20 MK_CONTROL = 8

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The CTRL key is down.

71.8.21 MK_LBUTTON = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The left mouse button is down.

71.8.22 MK_MBUTTON = & h10

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The middle mouse button is down.

71.8.23 MK_RBUTTON = 2

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The right mouse button is down.

71.8.24 MK_SHIFT = 4

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The SHIFT key is down.

71.8.25 MK_XBUTTON1 = & h20

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The first X button is down.

71.8.26 MK_XBUTTON2 = & h40

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The second X button is down.

71.8.27 S_FALSE = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.

71.8.28 S_OK = 0

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.

71.9 class WindowsDropTargetMBS

71.9.1 class WindowsDropTargetMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WindowsDropTargetMBS interface is one of the interfaces you implement to provide drag-and-drop operations in your application.
Notes:

It contains methods used in any application that can be a target for data during a drag-and-drop operation. A drop-target application is responsible for:

- Determining the effect of the drop on the target application.
- Incorporating any valid dropped data when the drop occurs.
- Communicating target feedback to the source so the source application can provide appropriate visual feedback such as setting the cursor.
- Implementing drag scrolling.
- Registering and revoking its application windows as drop targets.

The WindowsDropTargetMBS class contains methods that handle all these responsibilities except registering and revoking the application window as a drop target, for which you must call the AttachToWindow functions.

When To Implement

Implement the WindowsDropTargetMBS interface if you are developing an application that can act as a target for a drag-and-drop operation. The WindowsDropTargetMBS interface is associated with your application windows and is implemented on your window objects. Call the AttachToWindow function to register your window objects as drop targets.

When To Use

You do not call the methods of WindowsDropTargetMBS directly. The DoDragDrop function calls the WindowsDropTargetMBS methods during the drag-and-drop operation.

For example, DoDragDrop calls WindowsDropTargetMBS.DragEnter when it detects the mouse has moved over a window that is registered as a drag target. After the mouse has entered a drag-target window, DoDragDrop calls WindowsDropTargetMBS.DragOver as the mouse moves through the window and calls WindowsDropTargetMBS.DragLeave if the mouse leaves the target window or if the user cancels or completes the drag-and-drop operation. DoDragDrop calls WindowsDropTargetMBS.Drop if the drop finally

occurs.

To see the ghost picture of the drag, please register a WindowsDragSourceMBS for the same window.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

71.9.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr5

71.9.4 Methods

71.9.5 AttachToControl(ctl as control, showDragImage as boolean = true) as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop only.

Function: Attached the drop target to the control.
Notes:

This method unregistered any existing drop target on the control (including the one from Xojo).

Registers the specified control as one that can be the target of an OLE drag-and-drop operation and specifies the WindowsDropTargetMBS instance to use for drop operations.

ctl: The control that can be a target for an OLE drag-and-drop operation.
showDragImage: Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToControl function. Do this whenever one of your application windows is available as a potential

Return code	Description
DRAGDROP_E_INVALIDHWND	Invalid handle returned in the hwnd parameter.
DRAGDROP_E_ALREADYREGISTERED	The specified window has already been registered as a drop target.
E_OUTOFMEMORY	Insufficient memory for the operation.

drop target, i.e., when the window appears unobscured on the screen.

AttachToControl must be called on the main thread of your application.

The AttachToControl function only registers one control at a time, so you must call it for each application control capable of accepting dropped objects. For each control, you need your own instance of the WindowsDropTargetMBS class.

As the mouse passes over unobscured portions of the target control during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current control. When a drop operation actually occurs in a given control, the DoDragDrop function calls WindowsDropTargetMBS.Drop.

71.9.6 AttachToWindow(win as window, showDragImage as boolean = true) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Attached the drop target to the window.
Notes:

This method unregistered any existing drop target on the window (including the one from Xojo).

Registers the specified window as one that can be the target of an OLE drag-and-drop operation and specifies the WindowsDropTargetMBS instance to use for drop operations.

Win: The window that can be a target for an OLE drag-and-drop operation.
showDragImage: Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

Return code	Description
DRAGDROP_E_INVALIDHWND	Invalid handle returned in the hwnd parameter.
DRAGDROP_E_ALREADYREGISTERED	The specified window has already been registered as a drop target.
E_OUTOFMEMORY	Insufficient memory for the operation.

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToWindow function. Do this whenever one of your application windows is available as a potential drop target, i.e., when the window appears unobscured on the screen.

AttachToWindow must be called on the main thread of your application.

The AttachToWindow function only registers one window at a time, so you must call it for each application window capable of accepting dropped objects. For each window, you need your own instance of the WindowsDropTargetMBS class.

As the mouse passes over unobscured portions of the target window during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current window. When a drop operation actually occurs in a given window, the DoDragDrop function calls WindowsDropTargetMBS.Drop.

71.9.7 Properties

71.9.8 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

71.9.9 Helper as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the helper object.
Notes: (Read and Write property)

71.9.10 Events

71.9.11 DragEnter(dataObject as WinDataObjectMBS, keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

Function: Indicates whether a drop can be accepted, and, if so, the effect of the drop.
Notes:

dataObject: This data object contains the data being transferred in the drag-and-drop operation. If the drop occurs, this data object will be incorporated into the target.

KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.

x and y: A point containing the current cursor coordinates in screen coordinates.

effect: The value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

Return code	Description
E_UNEXPECTED	An unexpected error has occurred.
E_INVALIDARG	The Effect parameter is NULL on input.
E_OUTOFMEMORY	There was insufficient memory available for this operation.

You do not call DragEnter directly; instead the DoDragDrop function calls it to determine the effect of a drop the first time the user drags the mouse into the registered window of a drop target.

To implement DragEnter, you must determine whether the target can use the data in the source data object by checking three things:

- The format and medium specified by the data object
- The input value of Effect
- The state of the modifier keys

To check the format and medium, use the WinDataObjectMBS object.

On entry to WindowsDropTargetMBS.DragEnter, the Effect parameter is set to the effects given to the OkEffect parameter of the DoDragDrop function. The WindowsDropTargetMBS.DragEnter method must choose one of these effects or disable the drop.

The following modifier keys affect the result of the drop.

On return, the method must write the effect, one of the DROPEFFECT flags, to the Effect parameter. DoDragDrop then takes this parameter and writes it to its Effect parameter. You communicate the effect

Key Combination	User-Visible Feedback	Drop Effect
CTRL + SHIFT	=	DROPEFFECT_LINK
CTRL	+	DROPEFFECT_COPY
No keys or SHIFT	None	DROPEFFECT_MOVE

of the drop back to the source through DoDragDrop in the Effect parameter. The DoDragDrop function then calls WindowsDragSourceMBS.GiveFeedback so that the source application can display the appropriate visual feedback to the user through the target window.

71.9.12 DragLeave as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

Function: Removes target feedback and releases the data object.
Notes:

Return S_OK on success. Other possible values include the following.

Return code	Description
E_OUTOFMEMORY	There is insufficient memory available for this operation.

You do not call this method directly. The DoDragDrop function calls this method in either of the following cases:

- When the user drags the cursor out of a given target window.
- When the user cancels the current drag-and-drop operation.

To implement WindowsDropTargetMBS.DragLeave, you must remove any target feedback that is currently displayed. You must also release any references you hold to the data transfer object.

71.9.13 DragOver(keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

Function: Provides target feedback to the user and communicates the drop's effect to the DoDragDrop function so it can communicate the effect of the drop back to the source.
Notes:

KeyState: The current state of the keyboard modifier keys on the keyboard. Valid values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON,

MK_MBUTTON, and MK_RBUTTON.
x and y: The point containing the current cursor coordinates in screen coordinates.
Effect: On input, pointer to the value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

Return code	Description
E_UNEXPECTED	An unexpected error has occurred.
E_INVALIDARG	The Effect value is not valid.
E_OUTOFMEMORY	There was insufficient memory available for this operation.

You do not call DragOver directly. The DoDragDrop function calls this method each time the user moves the mouse across a given target window. DoDragDrop exits the loop if the drag-and-drop operation is canceled, if the user drags the mouse out of the target window, or if the drop is completed.

In implementing WindowsDropTargetMBS.DragOver, you must provide features similar to those in WindowsDropTargetMBS.DragEnter. You must determine the effect of dropping the data on the target by examining the FORMATETC defining the data object's formats and medium, along with the state of the modifier keys. The mouse position may also play a role in determining the effect of a drop. The following modifier keys affect the result of the drop.

Key Combination	User-Visible Feedback	Drop Effect
CTRL + SHIFT	=	DROPEFFECT_LINK
CTRL	+	DROPEFFECT_COPY
No keys or SHIFT	None	DROPEFFECT_MOVE

You communicate the effect of the drop back to the source through DoDragDrop in Effect. The DoDragDrop function then calls WindowsDragSourceMBS.GiveFeedback so the source application can display the appropriate visual feedback to the user.

On entry to WindowsDropTargetMBS.DragOver, the Effect parameter must be set to the allowed effects passed to the OkEffect parameter of the DoDragDrop function. The WindowsDropTargetMBS.DragOver method must be able to choose one of these effects or disable the drop.

Upon return, Effect is set to one of the DROPEFFECT flags. This value is then passed to the Effect parameter of DoDragDrop. Reasonable values are DROPEFFECT_COPY to copy the dragged data to the target, DROPEFFECT_LINK to create a link to the source data, or DROPEFFECT_MOVE to allow the dragged data to be permanently moved from the source application to the target.

You may also wish to provide appropriate visual feedback in the target window. There may be some target feedback already displayed from a previous call to WindowsDropTargetMBS.DragOver or from the initial

WindowsDropTargetMBS.DragEnter. If this feedback is no longer appropriate, you should remove it.

For efficiency reasons, a data object is not passed in WindowsDropTargetMBS.DragOver. The data object passed in the most recent call to WindowsDropTargetMBS.DragEnter is available and can be used.

When WindowsDropTargetMBS.DragOver has completed its operation, the DoDragDrop function calls WindowsDragSourceMBS.GiveFeedback so the source application can display the appropriate visual feedback to the user.

Notes to Implementers

This function is called frequently during the DoDragDrop loop so it makes sense to optimize your implementation of the DragOver method as much as possible.

71.9.14 Drop(dataObject as WinDataObjectMBS, keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

Function: Incorporates the source data into the target window, removes target feedback, and releases the data object.
Notes:

dataObject: The data object being transferred in the drag-and-drop operation.
KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.
x and y: The point containing the current cursor coordinates in screen coordinates.
Effect: On input, the value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

Return code	Description
E_UNEXPECTED	An unexpected error has occurred.
E_INVALIDARG	The pdwEffect parameter is not valid.
E_OUTOFMEMORY	There is insufficient memory available for this operation.

You do not call this method directly. The DoDragDrop function calls this method when the user completes the drag-and-drop operation.

In implementing Drop, you must incorporate the data object into the target. Use the formats available in WinDataObjectMBS, available through dataObject, along with the current state of the modifier keys to determine how the data is to be incorporated, such as linking or embedding.

In addition to incorporating the data, you must also clean up as you do in the WindowsDropTargetMBS.DragLeave method:

Remove any target feedback that is currently displayed.
Release any references to the data object.
You also pass the effect of this operation back to the source application through DoDragDrop, so the source application can clean up after the drag-and-drop operation is complete:

Remove any source feedback that is being displayed.
Make any necessary changes to the data, such as removing the data if the operation was a move.

71.9.15 Constants

71.9.16 DROPEFFECT_COPY = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes:

Drop results in a copy. The original data is untouched by the drag source.

Your application should always mask drop effect constants to ensure compatibility with future implementations. Presently, only some of the bit positions in a drop effect value have meaning. In the future, more interpretations for the bits will be added. Drag sources and drop targets should carefully mask these values appropriately before comparing. They should never compare a drop effect value against, say, DROPEFFECT_COPY by doing the following:

if DropEffect = DROPEFFECT_COPY then

Instead, the application should always mask for the value or values being sought as using one of the following techniques:

if bitwiseAnd(DropEffect, DROPEFFECT_COPY) = DROPEFFECT_COPY then

This allows for the definition of new drop effects, while preserving backwards compatibility with existing code.

71.9.17 DROPEFFECT_LINK = 4

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Drag source should create a link to the original data.

71.9.18 DROPEFFECT_MOVE = 2

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Drag source should remove the data.

71.9.19 DROPEFFECT_NONE = 0

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Drop target cannot accept the data.

71.9.20 DROPEFFECT_SCROLL = & h80000000

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Scrolling is about to start or is currently occurring in the target. This value is used in addition to the other values.

71.9.21 E_INVALIDARG = & h80070057

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.
Notes: An invalid argument was passed.

71.9.22 E_OUTOFMEMORY = & h80000002

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.
Notes: There was insufficient memory available for this operation.

71.9.23 E_UNEXPECTED = & h8000FFFF

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.
Notes: An unexpected error has occurred.

71.9.24 MK_CONTROL = 8

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The CTRL key is down.

71.9.25 MK_LBUTTON = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The left mouse button is down.

71.9.26 MK_MBUTTON = & h10

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The middle mouse button is down.

71.9.27 MK_RBUTTON = 2

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The right mouse button is down.

71.9.28 MK_SHIFT = 4

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The SHIFT key is down.

71.9.29 MK_XBUTTON1 = & h20

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The first X button is down.

71.9.30 MK_XBUTTON2 = & h40

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The second X button is down.

71.9.31 S_FALSE = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.

71.9.32 S_OK = 0

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.

71.10 class WindowsFileDescriptorMBS

71.10.1 class WindowsFileDescriptorMBS

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a file description.s

71.10.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr4

71.10.3 Blog Entries

- MBS Real Studio Plugins, version 11.2pr4

71.10.4 Properties

71.10.5 ClassID as String

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file type identifier.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CLSID) <>0 then
MsgBox d.ClassID
end if
```

Notes:

Only valid if FD_CLSID is set in the flags.
(Read and Write property)

71.10.6 CreationTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time of file creation.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CREATETIME) <>0 then
dim da as new date
da.TotalSeconds = d.CreationTime
MsgBox da.LongDate
end if
```

Notes:

Only valid if FD_CREATETIME is set in the flags.
(Read and Write property)

71.10.7 FileAttributes as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: File attribute flags.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ATTRIBUTES) <>0 then
if BitwiseAnd(d.FileAttributes, d.FILE_ATTRIBUTE_TEMPORARY) = d.FILE_ATTRIBUTE_TEM-
PORARY then
MsgBox "temp file"
else
MsgBox "no temp file"
end if
end if
```

Notes:

This will be a combination of the FILE_ATTRIBUTE_* constants.
Only valid if FD_ATTRIBUTES is set in the flags.
(Read and Write property)

71.10.8 FileName as String

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that contains the name of the file.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

MsgBox d.FileName
```

Notes: (Read and Write property)

71.10.9 FileSize as Int64

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file size, in bytes.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_FILESIZE) <>0 then
MsgBox str(d.FileSize)
end if
```

Notes:

Only valid if FD_FILESIZE is set in flags.
(Read and Write property)

71.10.10 Flags as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: An array of flags that indicate which of the other structure members contain valid data.
Notes:

A combination of the FD_* constants.
(Read and Write property)

71.10.11 IconHeight as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the file icon.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

Notes:

Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

71.10.12 IconWidth as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the file icon.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

Notes:

Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

71.10.13 Index as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index of the file descriptor.
Notes:

Use this entry for GetFileContent call.
(Read and Write property)

71.10.14 LastAccessTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time that the file was last accessed.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ACCESSTIME) <>0 then
dim da as new date
da.TotalSeconds = d.LastAccessTime
MsgBox da.LongDate
end if
```

Notes:

Only valid if FD_ACCESSTIME is set in the flags.
(Read and Write property)

71.10.15 LastWriteTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time of the last write operation.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_WRITESTIME) <>0 then
dim da as new date
da.TotalSeconds = d.LastWriteTime
MsgBox da.LongDate
end if
```

Notes:

Only valid if FD_WRITESTIME is set in the flags.
(Read and Write property)

71.10.16 PointX as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The x screen coordinate of the file object.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.Icon-
Height)
end if
```

Notes:

Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

71.10.17 PointY as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The y screen coordinate of the file object.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.Icon-
Height)
end if
```

Notes:

Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

71.10.18 Constants

71.10.19 FD_ACCESSTIME = & h0010

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ACCESSTIME) <>0 then
dim da as new date
da.TotalSeconds = d.LastAccessTime
MsgBox da.LongDate
end if
```

Notes: The LastAccessTime member is valid.

71.10.20 FD_ATTRIBUTES = 4

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ATTRIBUTES) <>0 then
if BitwiseAnd(d.FileAttributes, d.FILE_ATTRIBUTE_TEMPORARY)<>0 then
MsgBox "temp file"
else
MsgBox "no temp file"
end if
end if
```

Notes: The FileAttributes member is valid.

71.10.21 FD_CLSID = 1

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CLSID) <>0 then
MsgBox d.ClassID
end if
```

Notes: The ClassID member is valid.

71.10.22 FD_CREATETIME = 8

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CREATETIME) <>0 then
dim da as new date
da.TotalSeconds = d.CreationTime
MsgBox da.LongDate
end if
```

Notes: The CreationTime member is valid.

71.10.23 FD_FILESIZE = & h0040

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_FILESIZE) <>0 then
MsgBox str(d.FileSize)
end if
```

Notes: Whether the FileSize member is valid.

71.10.24 FD_LINKUI = & h8000

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.

Notes: Treat the operation as a shortcut.

71.10.25 FD_PROGRESSUI = & h4000

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Notes: A progress indicator is shown with drag-and-drop operations.

71.10.26 FD_SIZEPOINT = 2

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+strR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.Icon-
Height)
end if
```

Notes: The Icon* and point* members are valid.

71.10.27 FD_WRITESTIME = & h0020

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_WRITESTIME) <>0 then
dim da as new date
da.TotalSeconds = d.LastWriteTime
MsgBox da.LongDate
end if
```

Notes: Whether the LastWriteTime property is valid.

71.10.28 FILE_ATTRIBUTE_ARCHIVE = & h00000020

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: A file or directory that is an archive file or directory. Applications typically use this attribute to mark files for backup or removal .

71.10.29 FILE_ATTRIBUTE_ATOMIC_WRITE = & h00000200

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.

71.10.30 FILE_ATTRIBUTE_COMPRESSED = & h00000800

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: A file or directory that is compressed. For a file, all of the data in the file is compressed. For a directory, compression is the default for newly created files and subdirectories.

71.10.31 FILE_ATTRIBUTE_DIRECTORY = & h00000010

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: The handle that identifies a directory.

71.10.32 FILE_ATTRIBUTE_HIDDEN = & h00000002

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: The file or directory is hidden. It is not included in an ordinary directory listing.

71.10.33 FILE_ATTRIBUTE_NORMAL = & h00000080

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: A file that does not have other attributes set. This attribute is valid only when used alone.

71.10.34 FILE_ATTRIBUTE_OFFLINE = & h00001000

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: The data of a file is not available immediately. This attribute indicates that the file data is physically moved to offline storage. This attribute is used by Remote Storage, which is the hierarchical storage management software. Applications should not arbitrarily change this attribute.

71.10.35 FILE_ATTRIBUTE_READONLY = & h00000001

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: A file that is read-only. Applications can read the file, but cannot write to it or delete it.

71.10.36 FILE_ATTRIBUTE_SYSTEM = & h00000004

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: A file or directory that the operating system uses a part of, or uses exclusively.

71.10.37 FILE_ATTRIBUTE_TEMPORARY = & h00000100

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: A file that is being used for temporary storage. File systems avoid writing data back to mass storage if sufficient cache memory is available, because typically, an application deletes a temporary file after the handle is closed. In that scenario, the system can entirely avoid writing the data. Otherwise, the data is written after the handle is closed.

71.10.38 FILE_ATTRIBUTE_XACTION_WRITE = & h00000400

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.

Chapter 72

DuckDB

72.1 class DuckConnectionMBS

72.1.1 class DuckConnectionMBS

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a DuckDB database connection.
Example:

```
// no path, so in memory
Dim db As New DuckDatabaseMBS

Dim con As DuckConnectionMBS = db.Connect
```

Notes:

see also
https://duckdb.org/docs/

72.1.2 Blog Entries

- MBS Xojo Plugins, version 21.1pr2
- DuckDB

72.1.3 Blog Entries

- MBS Xojo Plugins, version 21.1pr2

- DuckDB

72.1.4 Methods

72.1.5 BeginTransaction as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Starts a transaction.
Notes:

Returns true on success and false on failure.
Calls SQLExecute internally, but more efficiently.
ErrorMessage property is set in case of error.

72.1.6 Commit as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Commits current transaction.
Notes:

Returns true on success and false on failure.
Calls SQLExecute internally, but more efficiently.
ErrorMessage property is set in case of error.

72.1.7 Constructor

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
Example:

```
dim d as new DuckConnectionMBS
```

Notes: Creates a new in-memory database and connects to it.

72.1.8 Destructor

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.
Notes: Closes connection.

72.1.9 Prepare(SQL as String) as DuckPreparedStatementMBS

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Prepares the specified SQL query in the specified connection handle.

72.1.10 Rollback as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Rolls back current transaction.
Notes:

Returns true on success and false on failure.
Calls SQLExecute internally, but more efficiently.
ErrorMessage property is set in case of error.

72.1.11 SQLExecute(SQL as String) as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Executes the specified SQL query in the specified connection handle.
Example:

```
Dim con As New DuckConnectionMBS // new in memory database

// create a table
Call con.SQLExecute("CREATE TABLE integers(i INTEGER, j INTEGER);")

// insert three rows into the table
Call con.SQLExecute("INSERT INTO integers VALUES (3, 4), (5, 6), (7, NULL);")

Dim result As DuckResultMBS = con.SQLSelect("SELECT * FROM integers")
Break // inspect in debugger
```

Notes:

No result is provided, but true on success and false on failure.
ErrorMessage property is set in case of error.

72.1.12 SQLSelect(SQL as String) as DuckResultMBS

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Executes the specified SQL query in the specified connection handle.
Example:

```
// no path, so in memory
Dim db As New DuckDatabaseMBS

Dim con As DuckConnectionMBS = db.Connect

// create a table
Call con.SQLSelect("CREATE TABLE integers(i INTEGER, j INTEGER);")
```

Notes: ErrorMessage property is set in case of error.

72.1.13 Properties

72.1.14 Database as DuckDatabaseMBS

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: The reference to the database.
Notes: (Read only property)

72.1.15 ErrorMessage as String

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: The last error message from SQLSelect or SQLExecute.
Notes: (Read only property)

72.1.16 Handle as Integer

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

72.2 class DuckDatabaseMBS

72.2.1 class DuckDatabaseMBS

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a DuckDB database connection.
Notes:

We built-in libraries for macOS, iOS, Windows and Linux32ARM.
For Linux on Intel, please use LoadLibrary and the version included with your distribution.

72.2.6 Methods

72.2.7 Connect as DuckConnectionMBS

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a connection to the specified database.

72.2.8 Constructor(file as FolderItem)

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor passing a file.
Notes: If file is nil, an in-memory database is created.
See also:

- 72.2.9 Constructor(path as String = "") 13493

72.2.9 Constructor(path as String = "")

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor passing a file path.
Example:

```
// no path, so in memory
Dim db As New DuckDatabaseMBS
```

Notes: If path is empty, an in-memory database is created.
See also:

- 72.2.8 Constructor(file as FolderItem) 13493

72.2.10 Destructor

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.
Notes: Closes database connection.

72.2.11 LibraryLoaded as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether library is loaded.

72.2.12 LibraryLoadError as Integer

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The last error code from loading library.

72.2.13 LibraryLoadErrorMessage as String

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The last error message from loading library.

72.2.14 LoadLibrary(file as folderitem) as boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the duckdb library.
Notes:

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 72.2.15 LoadLibrary(path as string) as boolean 13494

72.2.15 LoadLibrary(path as string) as boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the duckdb library.
Notes:

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 72.2.14 LoadLibrary(file as folderitem) as boolean 13494

72.2.16 Properties

72.2.17 Handle as Integer

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

72.2.18 HasBuiltInLibrary as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the built-in library is available.
Notes:

We built-in libraries for macOS, iOS, Windows and Linux32ARM.
For Linux on Intel, please use LoadLibrary and the version included with your distribution.
(Read only property)

72.2.19 Constants

72.2.20 Version = "0.2.3"

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: The version of the DuckDB library built-in.

72.3 class DuckPreparedStatementMBS

72.3.1 class DuckPreparedStatementMBS

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a DuckDB prepared statement.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

72.3.2 Blog Entries

- DuckDB

72.3.3 Blog Entries

- DuckDB

72.3.4 Methods

72.3.5 BindBlob(index as Integer, value as MemoryBlock)

MBS DuckDB Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds a value to a BLOB field.
Notes: Index is one based.
See also:

- 72.3.6 BindBlob(index as Integer, value as String) 13496

72.3.6 BindBlob(index as Integer, value as String)

MBS DuckDB Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds a value to a BLOB field.
Notes: Index is one based.
See also:

- 72.3.5 BindBlob(index as Integer, value as MemoryBlock) 13496

72.3.7 BindBoolean(index as Integer, value as Boolean)

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds boolean value to given parameter.
Notes: Index is one based.

72.3.8 BindDouble(index as Integer, value as Double)

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds double value to given parameter.
Notes: Index is one based.

72.3.9 BindFloat(index as Integer, value as Single)

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds single value to given parameter.
Notes: Index is one based.

72.3.10 BindInt16(index as Integer, value as Int16)

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds Int16 value to given parameter.
Notes: Index is one based.

72.3.11 BindInt32(index as Integer, value as Int32)

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds Int32 value to given parameter.
Notes: Index is one based.

72.3.12 BindInt64(index as Integer, value as Int64)

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds Int64 value to given parameter.
Notes: Index is one based.

72.3.13 BindInt8(index as Integer, value as Int8)

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds Int8 value to given parameter.
Notes: Index is one based.

72.3.14 BindNull(index as Integer)

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds NULL value to given parameter.
Notes: Index is one based.

72.3.15 BindString(index as Integer, value as String)

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds String value to given parameter.
Notes: Index is one based.

72.3.16 BindValue(index as Integer, value as Variant)

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds variant value to given parameter.
Notes:

Depending on variant type, invokes bind for Null, string, integer, Int64, double, single or boolean.
Index is one based.
If value is a Memoryblock, we bind as BLOB.

72.3.17 BindValues(values() as Variant)

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds all values with the given array.
Notes:

Please make sure that ubound and parameter count matches.
If value is a Memoryblock, we bind as BLOB.

72.3.18 Constructor

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

72.3.19 Destructor

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

72.3.20 SQLExecute as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Executes the prepared statements with currently bound parameters.
Notes:

No result is provided, but true on success and false on failure.
ErrorMessage property is set in case of error.

72.3.21 SQLSelect as DuckResultMBS

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Executes the prepared statements with currently bound parameters.
Notes: ErrorMessage property is set in case of error.

72.3.22 Properties

72.3.23 Connection as DuckConnectionMBS

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: The reference to the connection.
Notes: (Read only property)

72.3.24 ErrorMessage as String

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: The last error message from SQLSelect or SQLExecute.
Notes: (Read only property)

72.3.25 Handle as Integer

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

72.3.26 ParamCount as Integer

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: Number of parameters.
Notes: (Read only property)

72.4 class DuckResultMBS

72.4.1 class DuckResultMBS

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a DuckDB result.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

72.4.2 Blog Entries

- DuckDB

72.4.3 Blog Entries

- DuckDB

72.4.4 Methods

72.4.5 ColumnIndex(ColumnName as String) as Integer

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Looks up the column index.
Example:

```
Dim con As New DuckConnectionMBS // new in memory database

// make query with constant values
Dim result As DuckResultMBS = con.SQLSelect("SELECT 3 as Zahl")

// and show first one
MsgBox Str(result.ColumnIndex("Zahl")) // shows 0 for first column
```

Notes:

For best speed, please lookup column indexes once and cache it in a local variable.
Returns -1 if the column is not found with given name.

72.4.6 ColumnName(Column as Integer) as String

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the column name of the specified column.

72.4.7 ColumnType(Column as Integer) as Integer

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries column type for a cell.
Example:

```
Dim con As New DuckConnectionMBS // new in memory database

// make query with constant values
Dim result As DuckResultMBS = con.SQLSelect("SELECT 3, 4")

// and show first one
MsgBox Str(result.ColumnType(0)) // shows 4 for Int32
```

Notes: See Type* constants.

72.4.8 ColumnValues(Column as Integer) as Variant()

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries values for a whole column.
Notes: Same as looping and gathering values with Value() function.

72.4.9 Constructor

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

72.4.10 Destructor

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

72.4.11 IsNull(Column as Integer, Row as Integer) as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks whether a cell is NULL.

72.4.12 RowValues(Row as Integer) as Variant()

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries values for a whole row.
Notes: Same as looping and gathering values with Value() function.

72.4.13 Value(Column as Integer, Row as Integer) as Variant

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value for cell.
Notes: Depending on cell type, returns value as nil, boolean, Int32, Int64, Single, Double, or String.

72.4.14 ValueBoolean(Column as Integer, Row as Integer) as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as boolean.
Notes: Converts value if needed.

72.4.15 ValueDate(Column as Integer, Row as Integer) as Date

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop, Console & Web.

Function: Queries value as Date object.
Example:

```
Dim con As New DuckConnectionMBS // new in memory database

// make query with constant value as date using CAST function
```

```
Dim result As DuckResultMBS = con.SQLSelect("SELECT CAST('2012-05-20' AS date)")

// and show first one
Dim d As date = result.ValueDate(0,0)
MsgBox d.AbbreviatedDate
```

Notes:

Returns object on success and nil on failure.
Works for TypeDate and TypeTimestamp.
See also:

- 72.4.16 ValueDate(Column as Integer, Row as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer) as Boolean 13504

72.4.16 ValueDate(Column as Integer, Row as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer) as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as date.
Notes:

Returns true on success and false on failure.
Works for TypeDate and TypeTimestamp.
See also:

- 72.4.15 ValueDate(Column as Integer, Row as Integer) as Date 13503

72.4.17 ValueDateTime(Column as Integer, Row as Integer) as DateTime

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as DateTime object.
Notes:

Returns object on success and nil on failure.
Works for TypeDate and TypeTimestamp.

72.4.18 ValueDouble(Column as Integer, Row as Integer) as Double

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as double.
Notes: Converts value if needed.

72.4.19 ValueHugeInt(Column as Integer, Row as Integer, byref lower as UInt64, byref upper as Int64) as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as huge int.
Notes:

For 128 bit integers.
Returns true on success and false on failure.

72.4.20 ValueInt16(Column as Integer, Row as Integer) as Int16

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as Int16.
Notes: Converts value if needed.

72.4.21 ValueInt32(Column as Integer, Row as Integer) as Int32

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as Int32.
Notes: Converts value if needed.

72.4.22 ValueInt64(Column as Integer, Row as Integer) as Int64

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as Int64.
Notes: Converts value if needed.

72.4.23 ValueInt8(Column as Integer, Row as Integer) as Int8

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as Int8.
Notes: Converts value if needed.

72.4.24 ValueInterval(Column as Integer, Row as Integer, byref Months as Integer, byref Days as Integer, byref MilliSeconds as Int64) as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as interval.
Notes: Returns true on success and false on failure.

72.4.25 ValueSingle(Column as Integer, Row as Integer) as Single

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as Single.
Notes: Converts value if needed.

72.4.26 ValueString(Column as Integer, Row as Integer) as String

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as string.
Example:

```
Dim con As New DuckConnectionMBS // new in memory database

// make query with constant values
Dim result As DuckResultMBS = con.SQLSelect("SELECT 3, 4")

// and show first one
MsgBox result.ValueString(0,0)
```

Notes: Converts value if needed.

72.4.27 ValueTime(Column as Integer, Row as Integer, byref Hour as Integer, byref Minute as Integer, byref Second as Integer, byref MilliSeconds as Integer) as Boolean

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries value as time.
Notes:

Returns true on success and false on failure.
Works for TypeTime and TypeTimestamp.

72.4.28 Properties

72.4.29 ColumnCount as Integer

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: The number of columns in the result.
Notes: (Read only property)

72.4.30 Connection as DuckConnectionMBS

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: The reference to the connection.
Notes: (Read only property)

72.4.31 Handle as Integer

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

72.4.32 RowCount as Integer

MBS DuckDB Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: The number of rows in the result.
Notes: (Read only property)

72.4.33 Constants

72.4.34 TypeBoolean = 1

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: Boolean

72.4.35 TypeDate = 9

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: Date

72.4.36 TypeDouble = 7

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: 64-bit Double precision floating point

72.4.37 TypeHugeInt = 12

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: 128-bit Integer

72.4.38 TypeInt16 = 3

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: 16-bit Integer

72.4.39 TypeInt32 = 4

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: 32-bit Integer

72.4.40 TypeInt64 = 5

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: 64-bit Integer

72.4.41 TypeInt8 = 2

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: 8-bit Integer

72.4.42 TypeInterval = 11

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: Interval

72.4.43 TypeInvalid = 0

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: No value

72.4.44 TypeSingle = 6

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: 32-bit Single precision floating point

72.4.45 TypeString = 13

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: Varchar

72.4.46 TypeTime = 10

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: Time

72.4.47 TypeTimestamp = 8

MBS DuckDB Plugin, Plugin Version: 21.1.

Function: One of the column type constants.
Notes: Date and Time

Chapter 73

DVD Playback

73.1 class DVDPlaybackMBS

73.1.1 class DVDPlaybackMBS

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: A class for DVD Playback on Mac OS X 10.3
Notes:

Requires Mac OS X 10.3 or newer.

The DVD Playback application programming interface (API) gives you access to the DVDPlayback framework, allowing you to offer DVD playback functionality from within your application.

During a playback "session," the application must perform specific minimum operations, as follows:

1. Initialize the playback framework with calling Open. The DVDPlayback framework can only be opened by one process at a time. If a second process attempts to initialize it, an error will be returned.

2. Set the playback window with SetPlayWindow.
4. Set the video bounds with SetVideoBounds. This is the bounds within the window and is in port coordinates.
5. Open the media with OpenMediaVolume (DVD disc) or OpenMediaFile (VIDEO_TS folder).
6. Play the media.
7. When finished or switching media, close with the appropriate call (CloseMediaVolume or CloseMediaFile)
8. When quitting or finishing session, tear down the DVDPlayback framework with calling close.

73.1.2 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- Removing 32-bit Carbon GUI classes

73.1.3 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- Removing 32-bit Carbon GUI classes

73.1.4 Methods

73.1.5 Available as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: True if the DVD playback is installed on this Mac.
Notes: Requires Mac OS X 10.3 or newer.

73.1.6 ClearLastPlayBookmark

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the video playback position to the beginning of the disc.
Notes:

This function sets the video playback position to the beginning of the disc, but does not begin playing the media. Calling this function is equivalent to calling the function DVDStop twice in succession. Before calling this function, media needs to be open.
Available in Mac OS X v10.4 and later.
Lasterror is set.

73.1.7 close

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: Call when completely done with playback. Usually when the application is quitting.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.8 CloseMediaFile

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Closes a previously opened VIDEO_TS folder.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.9 CloseMediaVolume

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Closes a previously opened DVD disc.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.10 DisplaySubPicture(value as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Turns the display of subpictures on or off.
Notes:

value: A Boolean value that specifies whether to display subpictures in the current title. To display subpictures, specify TRUE. To hide subpictures, specify FALSE.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started. You can use this function to display or hide additional bitmap graphic elements such as subtitles.

Available in Mac OS X v10.3 and later.

73.1.11 DoButtonActivate(inIndex as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Selects and activates a menu button by index.
Notes:

InIndex: The 1-based index of the menu button the user has selected.

If the index coincides with an active button, this function executes the action corresponding to the button.

Available in Mac OS X v10.4 and later.

73.1.12 DoMenuCGClick(x as Double, y as Double) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the point (in window root view coordinates) coincides with a menu button, it will be selected.
Notes:

Requires Mac OS X 10.5.
Lasterror is set.

73.1.13 DoMenuCGMouseOver(x as Double, y as Double) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the point (in window root view coordinates) coincides with a menu button, it will be hightlighted.
Notes:

Requires Mac OS X 10.5.
Lasterror is set.

73.1.14 DoMenuClick(x as Integer, y as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the point (in port coordinates) coincides with a menu button, it will be selected.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.15 DoMenuMouseOver(x as Integer, y as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the point (in port coordinates) coincides with a menu button, it will be hightlighted and it's index returned in outIndex.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.16 DoUserNavigation(navigation as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Allows the user to navigate between menu buttons.
Notes:

This is usually done using keyboard keys (arrow keys to move and Enter key to choose a menu item).
Requires Mac OS X 10.3 or newer.
Lasterror is set.

Constants:

kDVDUserNavigationMoveUp	1
kDVDUserNavigationMoveDown	2
kDVDUserNavigationMoveLeft	3
kDVDUserNavigationMoveRight	4
kDVDUserNavigationEnter	5

73.1.17 EnableWebAccess(enable as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Turns DVD@ccess support on or off.
Notes:

Lasterror is set.
Requires Mac OS X 10.3 or newer.

73.1.18 GetAngle as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the camera angle displayed.
Notes:

Returnsthe integer contains the 1-based index of the current camera angle.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

73.1.19 GetAspectRatio as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the aspect ratio of the current title or menu.
Notes:

Returns the variable specifies the aspect ratio of the current title. For a list of possible aspect ratios see the aspect ration constants.

Lasterror is set.

The aspect ratio of the video can change whenever a different title or menu is displayed. You can use this function together with GetNativeVideoSize to calculate the bounds of the video area in a window.

Available in Mac OS X v10.3 and later.

73.1.20 GetAudioLanguageCode(byref DVDLanguageCode as string, byref DVD-SubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current audio language code and extension.
Notes:

DVDLanguageCode: On return, the variable contains the language code for the current audio stream. For a list of possible values, see the Language Codes constants.

DVDSubpictureExtensionCode: On return, the variable contains the audio extension code for the current audio stream. For a list of possible values, see Audio Extension Codes constants.

Lasterror is set.

Available in Mac OS X v10.3 and later.

73.1.21 GetAudioLanguageCodeByStream(StreamIndex as Integer, byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the audio language code and extension for a specified stream.
Notes:

StreamIndex: An integer in the range 1 to 8 that specifies an audio stream in the current title.

DVDLanguageCode: On return, the variable contains the language code for the specified audio stream. For a list of possible values, see Language Codes.

DVDSubpictureExtensionCode: On return, the variable contains the audio extension code for the specified audio stream. For a list of possible values, see Audio Extension Codes.

Lasterror is set.

Available in Mac OS X v10.3 and later.

73.1.22 GetAudioOutputMode as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current audio mode setting.
Notes: Lasterror is set.

73.1.23 GetAudioOutputModeCapabilities as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current possible audio output mode possibilities.
Notes: Lasterror is set.

73.1.24 GetAudioStream as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the audio stream currently being used.
Notes:

Returns the number of the current audio stream, or 0 if the current title has no audio streams.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

73.1.25 GetAudioStreamFormat(byref outFormat as Integer, byref outBitsPerSample as Integer, byref outSamplesPerSecond as Integer, byref outChannels as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current audio format (AC3,for example).
Notes:

Lasterror is set.
Requires Mac OS X 10.3.

DVDAudioStreamFormat constants - The different possible audio stream formats.

kDVDAudioUnknownFormat	0
kDVDAudioAC3Format	1
kDVDAudioMPEG1Format	2
kDVDAudioMPEG2Format	3
kDVDAudioPCMFormat	4
kDVDAudioDTSFormat	5
kDVDAudioSDDSFormat	6

73.1.26 GetAudioStreamFormatByStream(index as Integer, byref outFormat as Integer, byref outBitsPerSample as Integer, byref outSamplesPerSecond as Integer, byref outChannels as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the audio format for a specified stream.
Notes:

index: An integer that specifies an audio stream in the current title.

outFormat: On return, the variable contains the audio format of the audio stream for the current title. For a list of possible formats, see "Audio Stream Formats."

outBitsPerSample: On return, the integer contains the number of bits per sample in the current audio stream.

outSamplesPerSecond: On return, the integer contains the number of samples per second in the current audio stream.

outChannels: On return, the integer contains the number of audio channels in the current audio stream.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.4 and later.

73.1.27 GetAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current playback audio volume setting (0 - 255).
Notes:

Returns the current playback volume in the range 0 to 255.

Lasterror is set.

This function passes back the current playback audio volume setting. For more information, see DVDSetAudioVolume.

Available in Mac OS X v10.3 and later.

73.1.28 GetBookmark as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Requests a bookmark to the current play position.

Notes:

This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open and playing. This function passes back a bookmark to the current play position in the current DVD-Video playback session.

For information about requesting a bookmark when the media is not playing, see GetLastPlayBookmark.

The result is a binary string!

Available in Mac OS X v10.4 and later.

73.1.29 GetButtoninfo(byref numberOfButtons as Integer, byref selectedButton as Integer, byref forcedActivateButton as Integer, byref userButtonOffset as Integer, byref numberOfUserButtons as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets information about all available menu buttons in the current title, domain, or content.
Notes:

numberOfButtons: On return, the integer contains the number of buttons in the current menu.

selectedButton: On return, the integer contains the 1-based index of the selected button.

forcedActivateButton: On return, the integer contains the index of the button whose action is performed when a specified period of time elapses after the menu is first displayed.

userButtonOffset: On return, the integer contains the index of the first user-selectable button. If the number of user-selectable buttons in a menu is smaller than the total number of buttons, this index may be greater than zero.

numberOfUserButtons: On return, the integer contains the number of user-selectable buttons in the current menu.

Lasterror is set.

Available in Mac OS X v10.4 and later.

73.1.30 GetButtonPosition(index as Integer, byref x as Double, byref y as Double, byref w as Double, byref h as Double, byref autoAction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the position and default action of a menu button.
Notes:

index: The zero-based index of a menu button. If your button index is 1-based, you should decrement the index before you pass it to this function.

x,y,w,h: On return, the rectangle contains the position and dimensions of the specified button in window local coordinates.

autoAction: On return, a value of 1 indicates the button is a forced activate button—that is, the button's action is executed immediately when the button is selected. A value of 0 indicates the button is not a forced activate button.

Lasterror is set.

Available in Mac OS X v10.4 and later.

73.1.31 GetChapter as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current chapter.
Notes: Lasterror is set.

73.1.32 GetCurrentAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current video playback volume.
Notes:

Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

73.1.33 GetDiscRegionCode as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the region codes available on a DVD-Video disc.
Notes:

Returns a bitfield that specifies one or more region codes. For more information about region codes, see Region Codes.

Lasterror is set.

This function passes back the region codes assigned to the DVD-Video disc that's currently in use. Before calling this function, you need to call the function DVDOpenMediaVolume to open the media folder on the disc.

To test whether a disc is authorized for playback in region n, you need to compute the bitwise AND of outCode with region code n. If the result is equal to region code n, the disc is authorized for playback in region n.

Available in Mac OS X v10.3 and later.

73.1.34 GetDriveRegionCode(byref regioncode as Integer, byref NumberChangesLeft as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the region code the drive is set to and how many changes are left.
Notes:

Lasterror is set.
Requires Mac OS X 10.3.

Region Codes:
The drive region code must match the DVD disc region code. These calls allow getting the disc region code and getting or setting the drive region code.

NOTE: The drive region code is stored in the drive and can only be set a total of 5 times.

On the last time, the drive will be permanently locked to that region code.

73.1.35 GetFormatStandard as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the video broadcast format of current DVD-Video media.
Notes:

Returns the video broadcast format of the current media. For a list of possible values, see Video Broadcast Formats.

Lasterror is set.

This function determines which video broadcast format (NTSC or PAL) is used in the current media. Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.

73.1.36 GetGPRMValue(index as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current value of a general parameter (GPRM) register.
Notes:

index: An integer index that specifies the desired GPRM register. The valid range is 1 to 16.

Returns the current value of the specified GPRM register.

Lasterror is set.

Available in Mac OS X v10.4 and later.

73.1.37 GetLastPlayBookmark as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Requests a bookmark to the last play position.
Notes:

Returnns a binary string!

Lasterror is set.

Available in Mac OS X v10.4 and later.

73.1.38 GetMaxAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the maximum video playback volume
Notes:

Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

73.1.39 GetMediaUniqueID as memoryblock

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets a unique identifier for a media folder.
Notes:

Returns the unique identifier of the current media.

This function passes back a 64-bit identifier that can help you distinguish between different media folders. While the identifiers generated by this function are not guaranteed to be unique (see below), duplicate identifiers are extremely rare.

There are two known limitations of this function:

Two copies of the same DVD that are produced at different times do not necessarily have the same identifier. This can happen when the two media folders have minor differences.
Two different DVDs with similar content—collections of episodes from a television series, for example—do not always have different identifiers. This can happen when the two media folders are identical.

Available in Mac OS X v10.4 and later.

73.1.40 GetMediaVolumeName as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the volume name of the current media.
Notes:

This function passes back the media volume name as a string. This is the name seen on the desktop when Mac OS X mounts a DVD-Video disc.

Available in Mac OS X v10.4 and later.

73.1.41 GetMenuLanguageCode as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the menu language code for the current title.
Notes:

Returns the menu language code for the current title. For a list of possible values, see Language Codes.

Lasterror is set.

Available in Mac OS X v10.3 and later.

73.1.42 GetMinAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the minimum video playback volume.
Notes:

Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

73.1.43 GetNativeVideoHeight as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the native height of the current title.
Notes:

Available in Mac OS X v10.3 and later.
Lasterror is set.

73.1.44 GetNativeVideoSize(byref w as Integer, byref h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: The native video size.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.45 GetNativeVideoWidth as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the native width of the current title.
Notes:

Available in Mac OS X v10.3 and later.
Lasterror is set.

73.1.46 GetNumberOfAngles as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of camera angles currently available.
Notes:

Returns the number of different camera angles in the current title. DVD-Video media supports up to 9 camera angles.

Lasterror is set.
Available in Mac OS X v10.3 and later.

73.1.47 GetNumberOfAudioStreams as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of audio streams currently available.
Notes:

Returns the number of audio streams available in the current title.
Lasterror is set.
Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.

73.1.48 GetNumberOfChapters(title as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of chapters in the specified title.
Notes:

title: An integer in the range 1 to 99 that specifies a title on the current media.
Returns the number of chapters in the specified title.
Lasterror is set.
If the specified chapter does not exist, this function does nothing and returns an error.
Available in Mac OS X v10.3 and later.

73.1.49 GetNumberOfSubPictureStreams as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of subpicture streams currently available.
Notes:

Returns the number of subpicture streams available in the current title. DVD-Video media supports up to 32 subpicture streams per title.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

73.1.50 GetNumberOfTitles as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of titles available on the media.
Notes:

Returns the number of titles on the current media in the range 0 to 99.
Lasterror is set.
Available in Mac OS X v10.3 and later.

73.1.51 GetScanRate(byref scanrate as Integer, byref direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current scan direction and rate.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.52 GetSPDIFDataOutDevice as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the selected SPDIF capable audio device.
Notes: Lasterror is set.

73.1.53 GetSPDIFDataOutDeviceCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of SPDIF capable audio devices.
Notes: Lasterror is set.

73.1.54 GetSPDIFDataOutDeviceName(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the name of a SPDIF capable audio device
Notes: Lasterror is set.

73.1.55 GetState as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current play state of the DVDPlayback framework.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

The current play state of the framework.

Constants:

kDVDStateUnknown	0	
kDVDStatePlaying	1	playing 1x or less (slow mo)
kDVDStatePlayingStill	2	
kDVDStatePaused	3	pause and step frame
kDVDStateStopped	4	
kDVDStateScanning	5	playing greater than 1x
kDVDStateIdle	6	

73.1.56 GetSubPictureLanguageCode(byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the subpicture language code and extension for the current subpicture stream.
Notes:

DVDLanguageCode: On return, the variable contains the language code for the current subpicture. For a list of possible values, see Language Codes.
DVDSubpictureExtensionCode: On return, the variable contains the extension code for the current subpicture. For a list of possible values, see Subpicture Extension Codes.

If subpictures are not available, this function does nothing and lasterror is set to 0.
Lasterror is set.

Available in Mac OS X v10.3 and later.

73.1.57 GetSubPictureLanguageCodeByStream(StreamIndex as Integer, byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the subpicture language code and extension for a specified subpicture stream.
Notes:

StreamIndex: A subpicture stream number in the current title. Subpicture stream numbers range from 1 to 32.

DVDLanguageCode: On return, the variable contains the language code for the subpicture stream. For a list of possible values, see Language Codes.

DVDSubpictureExtensionCode: On return, the variable contains the extension code for the subpicture stream. For a list of possible values, see Subpicture Extension Codes.

Lasterror is set.

If subpictures are not available, this function does nothing and lasterror is not 0.

Available in Mac OS X v10.3 and later.

73.1.58 GetSubPictureStream as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current subpicture stream.
Notes:

Returns the identifier of the current subpicture stream, or 0 if the current title has no subpictures. DVD-Video media supports up to 32 subpicture streams per title.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

73.1.59 GetTime(timecode as Integer, byref time as Integer, byref frames as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current playback position in the current title in seconds relative to the requested time code (elapsed,remaining).
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

Constants:

kDVDTimeCodeUninitialized	0	
kDVDTimeCodeElapsedSeconds	1	
kDVDTimeCodeRemainingSeconds	2	
kDVDTimeCodeTitleDurationSeconds	3	only useable for GetTime
kDVDTimeCodeChapterElapsedSeconds	4	only useable for GetTime
kDVDTimeCodeChapterRemainingSeconds	5	only useable for GetTime
kDVDTimeCodeChapterDurationSeconds	6	only useable for GetTime

73.1.60 GetTimeEventRate as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the rate of the time event.
Notes:

Returns the current interval between time events in milliseconds.

Lasterror is set.
Available in Mac OS X v10.3 and later.

73.1.61 GetTitle as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of the current title.
Notes:

Returns the current title number, or 0 if a menu is active. DVD-Video media can contain up to 99 titles.

Lasterror is set.
Available in Mac OS X v10.3 and later.

73.1.62 GetVideoBounds(byref x as Integer, byref y as Integer, byref w as Integer, byref h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns (in port coordinates) the rect used to play video.
Notes:

Lasterror is set.
Requires Mac OS X 10.3.

73.1.63 GetVideoDisplay as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the graphics display for the current DVD-Video playback session.
Notes:

Returns the display ID is set to the current video playback display.

Lasterror is set.

Before calling this function, you need to set the video playback display using SetVideoDisplay or SwitchToDisplay.

Available in Mac OS X v10.3 and later.

73.1.64 GetVideoKeyColor as color

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the key color used by the video driver.
Notes:

Available in Mac OS X v10.3 and later.
Deprecated in Mac OS X v10.5.
Not available to 64-bit applications.

This function does nothing and returns the color black.

73.1.65 GetVideoWindowID as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the window ID of the Cocoa window in use for DVD-Video playback.
Notes:

Returns the window ID of the Cocoa window currently in use for DVD-Video playback, or zero if there is no Cocoa window.

Lasterror is set.
Available in Mac OS X v10.3 and later.

73.1.66 GoBackOneLevel

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If a submenu is active, moves up one level in the same domain.
Notes:

Lasterror is set.

This function is used to navigate one level up in a hierarchical structure in the same domain—for example, from a scene selection menu back to the main menu. This action is comparable to navigating upwards in the directory or folder hierarchy of a file system.

Available in Mac OS X v10.3 and later.

73.1.67 GotoBookmark(Bookmark as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the video playback position using a bookmark, and resumes play.
Notes:

This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open. This function uses the specified bookmark to set the video playback position, and begins playing the media.

Bookmark ist a binary string. Make sure you did not destroy it by an encoding conversion!

Requires Mac OS X 10.4 or newer.
Lasterror is set.

73.1.68 GoToMenu(menu as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Jump to a particular menu (Root Menu,Sub Picture Menu, etc.).
Notes:

Requires Mac OS X 10.3 or newer.

Lasterror is set.

73.1.69 HasMedia as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the playback framework has media to play and the framework had received an Open call on the media.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.70 HasMenu(menu as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns if input menu type is available.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.71 HasNextChapter as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if there is a chapter after the current chapter.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.72 HasPreviousChapter as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if there is a chapter before the current chapter.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.73 Idle

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Allows the framework to get a consistent time to process at. (Might be removed in the future).
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.74 IsDisplayingSubPicture as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if subpictures are currently being displayed.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.75 IsMuted as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Toggles the mute setting on or off.
Notes:

Returns true if the playback volume is currently muted.
Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.76 IsOnMenu(byref OnMenu as boolean, byref menu as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Are we currently on a menu, and if so, which one.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.77 IsPaused as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the framework has media and is paused.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.78 IsPlaying as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the framework has media and is playing (even if paused).
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.79 IsSupportedDisplay(CGVideoDisplayHandle as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: True if the display is supported.
Notes:

Lasterror is set.
Requires Mac OS X 10.3 or newer.
You can use the handle from a CGDisplayMBS object.

73.1.80 IsValidMedia(folder as folderitem) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the folderitem points to a valid media layout.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.81 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: The last error code reported.
Notes:

Requires Mac OS X 10.3 or newer.

kDVDErrorUnknown	-70001	Catch all error
kDVDErrorInitializingLib	-70002	There was an error initializing the playback framework
kDVDErrorUninitializedLib	-70003	The playback framework has not been initialized.
kDVDErrorNotAllowedDuringPlayback	-70004	action is not allowed during playback
kDVDErrorUnassignedGrafPort	-70005	A grafport was not set.
kDVDErrorAlreadyPlaying	-70006	Media is already being played.
kDVDErrorNoFatalErrCallBack	-70007	The application did not install a callback routine for fatal errors returned by the framework.
kDVDErrorIsAlreadySleeping	-70008	The framework has already been notified to sleep.
kDVDErrorDontNeedWakeup	-70009	DVDWakeUp was called when the framework was not asleep.
kDVDErrorTimeOutOfRange	-70010	Time code is outside the valid range for the current title.
kDVDErrorUserActionNoOp	-70011	The operation was not allowed by the media at this time.
kDVDErrorMissingDrive	-70012	The DVD drive is not available.
kDVDErrorNotSupportedConfiguration	-70013	The current system configuration is not supported.
kDVDErrorNotSupportedFunction	-70014	The operation is not supported. For example, trying to slow mo backwards.
kDVDErrorNoValidMedia	-70015	The media was not valid for playback.
kDVDErrorWrongParam	-70016	The invalid parameter was passed.
kDVDErrorMissingGraphicsDevice	-70017	A valid graphics device is not available.
kDVDErrorGraphicsDevice	-70018	A graphics device error was encountered.
kDVDErrorPlaybackOpen	-70019	The framework is already open (probably by another process).
kDVDErrorInvalidRegionCode	-70020	The region code was not valid.
kDVDErrorRgnMgrInstall	-70021	The region manager was not properly installed or missing from the system.
kDVDErrorMismatchedRegionCode	-70022	The disc region code and the drive region code do not match.
kDVDErrorNoMoreRegionSets	-70023	The drive does not have any region changes left.
kDVDErrordRegionCodeUninitialized	-70024	The drive region code was not initialized.
kDVDErrorAuthentification	-70025	The user attempting to change the region code could not be authenticated.
kDVDErrorOutOfVideoMemory	-70026	The video driver does not have enough video memory available to playback the media.
kDVDErrorNoAudioOutputDevice	-70027	An appropriate audio output device could not be found.
kDVDErrorSystem	-70028	A system error was encountered.
kDVDErrorNavigation	-70029	The user has made a selection not supported in the current menu.

73.1.82 LastErrorString as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns an error message for the lasterror code.
Notes: Requires Mac OS X 10.3 or newer.

73.1.83 Mute(mute as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Toggles the mute setting on or off.
Notes:

mute: a boolean value that specifies whether to turn the mute setting on or off. To mute the video playback volume, pass TRUE. To restore the previous volume setting, pass FALSE.

Lasterror is set.

Available in Mac OS X v10.3 and later.

73.1.84 NextChapter

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets to the next chapter on the current title.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.85 Open

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: Call when preparing for playback. Usually when the application is initializing.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.
Returns an error of kDVDErrorPlaybackOpen if the playback framework is already being used.

73.1.86 OpenMediaFile(folder as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Opens a VIDEO_TS folder (can be on a hard drive or a dvd disc).
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.87 OpenMediaVolume(disc as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Opens a DVD disc for playback.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.88 Pause

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Pauses the media if currently playing.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.89 Play

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Starts playing the media.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.90 PreviousChapter

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets to the previous chapter on the current title.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.91 Resume

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Starts playing if currently paused.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.92 ReturnToTitle

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns from the menu back to the current position within the title.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.93 SetAngle(angle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the camera angle to display.
Notes:

angle: A 1-based index that specifies the camera angle to display. The angle number of the main angle is 1. DVD-Video media supports up to nine camera angles.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started. The DVD-Video author decides how many camera angles are used. If the specified angle does not exist, this function does nothing.

Available in Mac OS X v10.3 and later.

73.1.94 SetAspectRatio(AspectRatio as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the aspect ratio for the current title.
Notes:

AspectRatio: A constant that specifies the desired aspect ratio for the current title. For a list of possible values, see Aspect Ratios.

Lasterror is set.
This function does nothing and returns noErr.

Available in Mac OS X v10.3 and later.

73.1.95 SetAudioOutputMode(Mode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Set the audio mode.
Notes: Lasterror is set.

73.1.96 SetAudioStream(index as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the audio stream to use.
Notes:

index: An integer from 1 to 8 that specifies an audio stream in the current title. DVD-Video media supports up to 8 audio streams per title.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

73.1.97 SetAudioVolume(Volume as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the playback audio volume setting (0 - 255).
Notes:

Volume: An integer in the range 0 to 255 that specifies the new video playback volume setting. Larger values are clamped to 255.

Lasterror is set.

This function changes the current playback audio volume setting, not the system audio volume setting. The actual audio volume experienced by the user is a function of these two settings:

Actual audio volume = system volume * playback audio volume / 255

For example, if you set the playback volume to 127, the actual volume is approximately one-half the current system volume.

Available in Mac OS X v10.3 and later.

73.1.98 SetChapter(Chapter as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the chapter to play.
Notes:

Chapter: An integer that specifies the chapter to play.

Lasterror is set.
This function defines the specified chapter to be the current video playback chapter. If video playback is paused, this function starts playing the chapter immediately. Note that some discs do not allow jumping directly to a chapter.

Available in Mac OS X v10.3 and later.

73.1.99 SetDefaultAudioLanguageCode(DVDLanguageCode as string, DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the default audio language code and extension.
Notes:

DVDLanguageCode: A constant that specifies the default audio language for the specified audio extension.. For a list of possible values, see Language Codes. If no language is specified—that is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone—the default audio language is matched to the language setting in the International Preferences Panel.

DVDSubpictureExtensionCode: A constant that specifies an audio extension. For a list of possible values, see Audio Extension Codes.

Lasterror is set.

This function selects an audio language other than the DVD's default language for a specified audio extension. Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.

73.1.100 SetDefaultMenuLanguageCode(Code as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the default menu language code.
Notes:

Code: An integer code that specifies the default menu language for the current title. For a list of possible values, see "Language Codes." If no language is specified—that is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone—the default menu language is matched to the language setting in the International Preferences Panel.

Lasterror is set.

This function selects a language other than the DVD's default language for menus in the current title. Before calling this function, DVD-Video media needs to be open and video playback stopped.

Available in Mac OS X v10.3 and later.

73.1.101 SetDefaultSubPictureLanguageCode(DVDLanguageCode as string, DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the default subpicture language and extension when subpictures are enabled.
Notes:

DVDLanguageCode: A constant that specifies the default language for the specified subpicture extension. For a list of possible values, see "Language Codes." If no language is specified—that is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone—the default subpicture language code is matched to the language setting in the International Preferences Panel.

DVDSubpictureExtensionCode: A constant that specifies a subpicture extension. For a list of possible values, see "Subpicture Extension Codes."

Lasterror is set.
If the current title is playing, this function does nothing and lasterror is set to kDVDErrorAlreadyPlaying.

This function is used to select a subpicture language other than the system default language. Before calling this function, DVD-Video media needs to be open and video playback stopped.

Available in Mac OS X v10.3 and later.

73.1.102 SetDriveRegionCode(regioncode as Integer, AuthorizationHandle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the drive region code (requires user authentication).
Notes:

Lasterror is set.
Requires Mac OS X 10.3.

DVDRegionCode constants - The different possible region codes (used for both the disc and the drive):

kDVDRegionCodeUninitialized	& hff
kDVDRegionCode1	& hfe
kDVDRegionCode2	& hfd
kDVDRegionCode3	& hfb
kDVDRegionCode4	& hf7
kDVDRegionCode5	& hef
kDVDRegionCode6	& hdf
kDVDRegionCode7	& hbf
kDVDRegionCode8	& h7f

73.1.103 SetLastPlayBookmark(Bookmark as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the video playback position using a bookmark.
Notes:

Lasterror is set.

This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open. This function uses the specified bookmark to set the video playback position, but does not begin playing the media. See also GotoBookmark.

Available in Mac OS X v10.4 and later.

73.1.104 SetScanRate(scanrate as Integer, direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Fast forwards or rewinds depending on the direction parameter at the speed specified in the scanrate parameter.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

The rate at which to scan:

kDVDScanRateOneEigth	-8
kDVDScanRateOneFourth	-4
kDVDScanRateOneHalf	-2
kDVDScanRate1x	1
kDVDScanRate2x	2
kDVDScanRate4x	4
kDVDScanRate8x	8
kDVDScanRate16x	16
kDVDScanRate32x	32

Direction constants:

kDVDScanDirectionForward	0
kDVDScanDirectionBackward	1

73.1.105 SetSPDIFDataOutDevice(Device as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Selects a SPDIF capable audio device.
Notes: Lasterror is set.

73.1.106 SetSubPictureStream(index as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the current subpicture stream.
Notes:

index: A positive integer that specifies the subpicture stream to display. Subpicture stream numbers range from 1 to 32.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

73.1.107 SetTime(timecode as Integer, time as Integer, frames as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the current playback position in the current title based on a time position in seconds relative to the time code (elapsed,remaining).
Notes:

timecode: A time code constant. You must specify one of two values: kDVDTimeCodeElapsedSeconds or kDVDTimeCodeRemainingSeconds.

time: An integer that specifies the position in seconds.

frames: An integer that specifies the frame number. For the NTSC video format, the range of frame numbers is 0 to 29. For the PAL format, the range is 0 to 24.

his function sets the video playback position in the current title. Not all titles permit this operation, so it's important to check the result code returned by this function.

Before calling this function, DVD-Video media needs to be open and video playback started.

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.108 SetTimeEventRate(rate as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the rate of the DVD Playback time event.
Notes:

The new interval between time events, specified in milliseconds.

Lasterror is set.

The default interval between DVD Playback time events is 900 milliseconds. You can use this function to lengthen or shorten the interval between time events. This function is relevant when you have used the function DVDRegisterEventCallBack to register a callback for one or both of the time events: kDVDEvent-TitleTime and kDVDEventChapterTime . Time event callbacks are typically used for tasks such as updating the elapsed time or remaining time displayed in your user interface.

Available in Mac OS X v10.3 and later.

73.1.109 SetTitle(Title as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the title to play.
Notes:

Title: An integer in the range 1 to 99 that specifies the title to play.

Lasterror is set.
If the specified title exists on the current media and the media permits this operation, this function begins playing the title.

Available in Mac OS X v10.3 and later.

73.1.110 SetVideoBounds(x as Integer, y as Integer, w as Integer, h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the bounds in which to display the video.
Notes:

x,y,w,h: A rectangle that contains the desired bounds in window local coordinates.

Lasterror is set.

This function is used to set the area inside the current window in which to display the video. The video area is not required to fill the entire window. Generally you should set the video area to be smaller than the window whenever the aspect ratio of the current title and window are different. To find the aspect ratio of the current title, use the function GetAspectRatio.

Because the aspect ratios of the titles in a DVD-Video media folder are not always the same, you may need to call this function repeatedly to reset the video area as the user makes different viewing choices.

Available in Mac OS X v10.3 and later.
Deprecated in Mac OS X v10.5.
Not available to 64-bit applications.

73.1.111 SetVideoDisplay(CGVideoDisplayHandle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the graphics display for the current DVD-Video playback session.
Notes:

The Quartz display ID for the graphics display you want to use for video playback. For information about how to get a display ID, see Quartz Display Services Reference. (or CGDisplayMBS class)

Lasterror is set.

You need to call this function or DVDSetVideoDevice each time you move the video playback window to a new graphics display. To avoid degrading video performance, you should not attempt to draw a video playback window that spans two different displays.

Available in Mac OS X v10.3 and later.

73.1.112 SetVideoWindowID(WindowID as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Enables or disables DVD-Video playback in a Cocoa window.
Notes:

WindowID: The window ID associated with a Cocoa window, or NULL. For information about when to pass 0, see the Discussion below.

Lasterror is set.

If you're using a Cocoa window for DVD-Video playback, you need to use this function in two different situations:

Immediately after calling the constructor to start a new DVD-Video playback session, you should call this function and pass the window ID associated with the Cocoa window.

When video is not playing and you want to draw into the area of the window you set by calling the function SetVideoBounds, you should call this function and pass 0 in the inVidWindowID parameter.

To learn how to obtain the window number for a Cocoa window, see the description of the windowNumber method in the NSWindow class.

Availability
Available in Mac OS X v10.3 and later.

73.1.113 Sleep

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Call when system is putting machine to sleep so playback information can be saved.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.
The client must register for sleep notifications with the system so that it can notify the framework of sleep and wake notifications.

73.1.114 StepFrame(direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Steps one frame in the direction specified in DVDScanDirection.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.
Currently only supports kDVDScanDirectionForward.

73.1.115 Stop

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Stops if playing.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.116 SwitchToDisplay(CGVideoDisplayHandle as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Switches the output to the given display.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.
You can use the handle from a CGDisplayMBS object.

73.1.117 UpdateVideo

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Forces the video to be updated.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

73.1.118 WakeUp

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Call when system is waking up so playback information can be reset.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.
The client must register for sleep notifications with the system so that it can notify the framework of sleep and wake notifications.

73.1.119 Events

73.1.120 DVDEvent(eventcode as Integer, value1 as Integer, value2 as Integer)

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: .

Function: A DVD event.
Notes:

Lasterror is set.
Requires Mac OS X 10.3.

DVDEventCode constants - The different event a client can register for to get notified (return value: UInt32)

kDVDEventTitle	1	value1: Title
kDVDEventPTT	2	value1: Chapter
kDVDEventValidUOP	3	value1: UOP code mask (DVDUOPCode)
kDVDEventAngle	4	value1: StreamID
kDVDEventAudioStream	5	value1: StreamID
kDVDEventSubpictureStream	6	value1: streamID / (value2 ! 0): visible
kDVDEventDisplayMode	7	value1: DVDAspectRatio
kDVDEventDomain	8	value1: DVDDomainCode
kDVDEventBitrate	9	value1: Bits / sec
kDVDEventStill	10	value1: On (1) - Off (0)
kDVDEventPlayback	11	value1: DVDState
kDVDEventVideoStandard	12	value1: DVDFormat
kDVDEventStreams	13	value1: None (trigger for general stream change)
kDVDEventScanSpeed	14	value1: Speed (1x,2x,3x,...)
kDVDEventMenuCalled	15	value1: DVDMenu
kDVDEventParental	16	value1: parental level number
kDVDEventPGC	17	value1: PGC number
kDVDEventGPRM	18	value1: GPRM index / value2: data
kDVDEventRegionMismatch	19	value1: disc region
kDVDEventTitleTime	20	value1: elapsed time / value2: duration of title [ms]
kDVDEventSubpictureStreamNumbers	21	value1: number of subpicture streams in title
kDVDEventAudioStreamNumbers	22	value1: number of audio streams in title
kDVDEventAngleNumbers	23	value1: number of angles in title
kDVDEventError	24	value1: DVDErrorCode
kDVDEventCCInfo	25	value1: cc event opcode, value2: cc event data
kDVDEventChapterTime	26	value1: elapsed time / value2: duration of current chapter [ms]

73.1.121 FatalError(errorcode as Integer)

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: .

Function: A fatal error. Quit the application as soon as possible.
Notes:

Lasterror is set.
Requires Mac OS X 10.3.

73.1.122 Constants

73.1.123 kDVDAMGMDomain = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Audio Manager Menu domain (DVD-Audio only, not used).

73.1.124 kDVDAspectRatio16x9 = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the current aspect ratio.
Notes: The process of displaying a 16:9 video frame on a screen with the same aspect ratio.

73.1.125 kDVDAspectRatio4x3 = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the current aspect ratio.
Notes: The process of displaying a 4:3 video frame on a screen with the same aspect ratio.

73.1.126 kDVDAspectRatio4x3PanAndScan = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the current aspect ratio.
Notes: The process of choosing a sample area of a 16:9 video frame for display on a 4:3 screen, using center-of-interest information stored on the DVD.

73.1.127 kDVDAspectRatioLetterBox = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the current aspect ratio.
Notes: The process of displaying the entire 16:9 video frame on a 4:3 screen by shrinking the frame and adding mattes or black bars above and below the frame.

73.1.128 kDVDAspectRatioUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the current aspect ratio.
Notes: Available in Mac OS X v10.3 and later.

73.1.129 kDVDAudioAC3Format = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: The Dolby Digital AC-3 format.

73.1.130 kDVDAudioDDPlusFormat = 8

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies an audio mode.

73.1.131 kDVDAudioDTSFormat = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: The Digital Theater Systems (DTS) format. This format is not supported.

73.1.132 kDVDAudioDTSHDFormat = 9

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies an audio mode.

73.1.133 kDVDAudioExtensionCodeDirectorsComment1 = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of an audio channel.
Notes: First audio channel for the artistic director's comments.

73.1.134 kDVDAudioExtensionCodeDirectorsComment2 = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of an audio channel.
Notes: Second audio channel for the artistic director's comments.

73.1.135 kDVDAudioExtensionCodeNormalCaptions = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of an audio channel.
Notes: Audio channel for extended information about the title.

73.1.136 kDVDAudioExtensionCodeNotSpecified = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of an audio channel.
Notes: Audio extension not specified.

73.1.137 kDVDAudioExtensionCodeNVisualImpaired = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of an audio channel.
Notes: Audio channel for the visually impaired.

73.1.138 kDVDAudioMLPFormat = 7

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies an audio mode.

73.1.139 kDVDAudioModeProLogic = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies an audio mode.

73.1.140 kDVDAudioModeSPDIF = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies an audio mode.

73.1.141 kDVDAudioModeUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies an audio mode.

73.1.142 kDVDAudioMPEG1Format = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: The MPEG-1 Layer II digital format.

73.1.143 kDVDAudioMPEG2Format = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: The MPEG-2 digital format.

73.1.144 kDVDAudioPCMFormat = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: The linear pulse-code modulation (PCM) format used on CDs.

73.1.145 kDVDAudioSDDSFormat = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: The Sony Dynamic Digital Sound (SDDS) format. This format is not supported.

73.1.146 kDVDAudioUnknownFormat = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: An unspecified audio format.

73.1.147 kDVDButtonIndexNone = -1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant for an index of the selected menu button.

73.1.148 kDVDErrorAlreadyPlaying = -70006

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: See kDVDErrorNotAllowedDuringPlayback.

73.1.149 kDVDErrorAuthentification = -70025

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: An attempt to change the DVD drive region code could not be authenticated.

73.1.150 kDVDErrorDontNeedWakeup = -70009

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: DVDWakeUp was called without first calling Sleep.

73.1.151 kDVDErrorGraphicsDevice = -70018

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A graphics device error was encountered.

73.1.152 kDVDErrorInitializingLib = -70002

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: An error occurred while initializing a DVD-Video playback session. DVD Playback Services is probably being used in another process.

73.1.153 kDVDErrorInvalidBookmarkForMedia = -70032

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.

73.1.154 kDVDErrorInvalidBookmarkSize = -70031

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.

73.1.155 kDVDErrorInvalidBookmarkVersion = -70030

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.

73.1.156 kDVDErrorInvalidRegionCode = -70020

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: Region code is not valid.

73.1.157 kDVDErrorIsAlreadySleeping = -70008

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: DVDSleep was called twice without an intervening call to WakeUp.

73.1.158 kDVDErrorMismatchedRegionCode = -70022

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: DVD-Video disc region code does not match the region code currently assigned to the DVD drive.

73.1.159 kDVDErrorMissingDrive = -70012

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A DVD drive is not available.

73.1.160 kDVDErrorMissingGraphicsDevice = -70017

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A graphics device is not available.

73.1.161 kDVDErrorNavigation = -70029

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: The user has made a selection not supported in the current menu.

73.1.162 kDVDErrorNoAudioOutputDevice = -70027

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: An appropriate audio output device could not be found.

73.1.163 kDVDErrorNoFatalErrCallBack = -70007

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: No callback has been registered to handle unrecoverable errors during playback.

73.1.164 kDVDErrorNoMoreRegionSets = -70023

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: Changing the region code assigned to the DVD drive is no longer permitted.

73.1.165 kDVDErrorNotAllowedDuringPlayback = -70004

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: The operation is not permitted while DVD-Video media is playing.

73.1.166 kDVDErrorNotSupportedConfiguration = -70013

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: The current system configuration does not support DVD-Video playback.

73.1.167 kDVDErrorNotSupportedFunction = -70014

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: DVD Playback Services does not support this operation.

73.1.168 kDVDErrorNoValidBookmarkForLastPlay = -70033

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.

73.1.169 kDVDErrorNoValidMedia = -70015

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A VIDEO_TS media folder is not open for playback.

73.1.170 kDVDErrorOutOfVideoMemory = -70026

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: The video driver does not have enough video memory available for playback.

73.1.171 kDVDErrorPlaybackOpen = -70019

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A VIDEO_TS media folder is already open for playback.

73.1.172 kDVDErrorRegionCodeUninitialized = -70024

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: No region code has been assigned to the DVD drive.

73.1.173 kDVDErrorRgnMgrInstall = -70021

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: Not used.

73.1.174 kDVDErrorSystem = -70028

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A system error occurred.

73.1.175 kDVDErrorTimeOutOfRange = -70010

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: The time code is outside the valid range for the current title.

73.1.176 kDVDErrorUnassignedGrafPort = -70005

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A graphics port for DVD-Video playback has not been set.

73.1.177 kDVDErrorUninitializedLib = -70003

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A DVD-Video playback session has not been initialized. Any function except DVDInitialize could return this value.

73.1.178 kDVDErrorUnknown = -70001

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: Unspecified error.

73.1.179 kDVDErrorUserActionNoOp = -70011

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: The operation is not permitted at this time.

73.1.180 kDVDErrorWrongParam = -70016

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: An argument is invalid.

73.1.181 kDVDEventAngle = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Camera angle has changed.

73.1.182 kDVDEventAngleNumbers = 23

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: The number of angles has changed.

73.1.183 kDVDEventAudioStream = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Audio stream has changed.

73.1.184 kDVDEventAudioStreamNumbers = 22

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: The number of audio streams has changed.

73.1.185 kDVDEventBitrate = 9

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Bit rate has changed.

73.1.186 kDVDEventCCInfo = 25

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Closed caption has changed.

73.1.187 kDVDEventChapterTime = 26

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Chapter time has changed.

73.1.188 kDVDEventDisplayMode = 7

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Display mode has changed.

73.1.189 kDVDEventDomain = 8

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Domain has changed.

73.1.190 kDVDEventError = 24

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Hardware error.

73.1.191 kDVDEventGPRM = 18

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: GPRM data has changed.

73.1.192 kDVDEventMenuCalled = 15

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Menu has changed.

73.1.193 kDVDEventParental = 16

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Parental level has changed.

73.1.194 kDVDEventPGC = 17

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Program chain has changed.

73.1.195 kDVDEventPlayback = 11

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Playback state has changed.

73.1.196 kDVDEventPTT = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Chapter has changed.

73.1.197 kDVDEventRegionMismatch = 19

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Region mismatch between disc and playback device.

73.1.198 kDVDEventScanSpeed = 14

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Scan rate has changed.

73.1.199 kDVDEventStill = 10

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Still picture on or off.

73.1.200 kDVDEventStreams = 13

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Stream has changed (audio, subpicture, or angle).

73.1.201 kDVDEventSubpictureStream = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Subpicture has changed.

73.1.202 kDVDEventSubpictureStreamNumbers = 21

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: The number of subpicture streams has changed.

73.1.203 kDVDEventTitle = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Title has changed.

73.1.204 kDVDEventTitleTime = 20

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Title time has changed.

73.1.205 kDVDEventValidUOP = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: User operations that are disabled.

73.1.206 kDVDEventVideoStandard = 12

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Video format has changed

73.1.207 kDVDFormatNTSC = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies video broadcast formats used in DVD media.
Notes: National Television Standards Committee (NTSC) video format used in North America and Japan.

73.1.208 kDVDFormatNTSC_HDTV = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies video broadcast formats used in DVD media.

73.1.209 kDVDFormatPAL = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies video broadcast formats used in DVD media.
Notes: Phase Alternating Line (PAL) video format widely used in Europe, South Asia, Africa, and South America.

73.1.210 kDVDFormatPAL_HDTV = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies video broadcast formats used in DVD media.

73.1.211 kDVDFormatUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies video broadcast formats used in DVD media.
Notes: An unspecified video format.

73.1.212 kDVDFPDomain = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: First Play domain.

73.1.213 kDVDLanguageCodeAbkhazian = "ab "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

73.1.214 kDVDLanguageCodeAfar = "aa "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

73.1.215 kDVDLanguageCodeAfrikaans = "af "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

73.1.216 kDVDLanguageCodeAlbanian = "sq "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

73.1.217 kDVDLanguageCodeAmharic = "am "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

73.1.218 kDVDLanguageCodeArabic = "ar "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

73.1.219 kDVDLanguageCodeArmenian = "hy "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

73.1.220 kDVDLanguageCodeAssamese = "as "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

73.1.221 kDVDLanguageCodeAymara = "ay "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

73.1.222 kDVDLanguageCodeAzerbaijani = "az "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

73.1.223 kDVDLanguageCodeBashkir = "ba "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

73.1.224 kDVDLanguageCodeBasque = "eu "

MBS MacOSX Plugin, Plugin Version: 9.2.

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies marketing regions for DVD discs and playback devices.
Notes: The default region code for an uninitialized DVD drive.

73.1.368 kDVDScanDirectionBackward = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the direction of play.
Notes: Scan in the reverse direction.

73.1.369 kDVDScanDirectionForward = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the direction of play.
Notes: Scan in the forward direction.

73.1.370 kDVDScanRate16x = 16

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

73.1.371 kDVDScanRate1x = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

73.1.372 kDVDScanRate2x = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

73.1.373 kDVDScanRate32x = 32

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

73.1.374 kDVDScanRate4x = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

73.1.375 kDVDScanRate8x = 8

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

73.1.376 kDVDScanRateOneEigth = -8

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

73.1.377 kDVDScanRateOneFourth = -4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

73.1.378 kDVDScanRateOneHalf = -2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

73.1.379 kDVDStateIdle = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: Not used.

73.1.380 kDVDStatePaused = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: DVD-Video media is open and paused or frame-stepping.

73.1.381 kDVDStatePlaying = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: DVD-Video media is open and playing at normal rate (1x scan rate).

73.1.382 kDVDStatePlayingSlow = 7

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes:

DVD-Video media is open and playing in slow motion (less than 1x scan rate).
Available in Mac OS X v10.4 and later.

73.1.383 kDVDStatePlayingStill = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: DVD-Video media is open and playing a single frame.

73.1.384 kDVDStateScanning = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: DVD-Video media is open and playing in fast motion (greater than 1x scan rate).

73.1.385 kDVDStateStopped = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: DVD-Video media is open and stopped (not playing).

73.1.386 kDVDStateUnknown = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: The initial state of a new DVD-Video playback session.

73.1.387 kDVDSTOPDomain = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Stop State domain.

73.1.388 kDVDSubpictureExtensionCodeCaption4Children = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A language-caption subpicture for children.

73.1.389 kDVDSubpictureExtensionCodeCaptionBiggerSize = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A large language-caption subpicture.

73.1.390 kDVDSubpictureExtensionCodeCaptionNormalSize = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A language-caption subpicture.

73.1.391 kDVDSubpictureExtensionCodeClosedCaption4Children = 7

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A closed-caption subpicture for children.

73.1.392 kDVDSubpictureExtensionCodeClosedCaptionBiggerSize = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A large closed-caption subpicture.

73.1.393 kDVDSubpictureExtensionCodeClosedCaptionNormalSize = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A closed-caption subpicture.

73.1.394 kDVDSubpictureExtensionCodeForcedCaption = 9

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A subpicture which is always visible, regardless of the viewer's preferences.

73.1.395 kDVDSubpictureExtensionCodeNotSpecified = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: Subpicture not specified.

73.1.396 kDVDSubpictureExtensionDirectorsComment4Children = 15

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A subpicture for director's comments for children.

73.1.397 kDVDSubpictureExtensionDirectorsCommentBiggerSize = 14

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A large subpicture for director's comments.

73.1.398 kDVDSubpictureExtensionDirectorsCommentNormalSize = 13

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A normal subpicture for director's comments.

73.1.399 kDVDTimeCodeChapterDurationSeconds = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Number of seconds in the current chapter.

73.1.400 kDVDTimeCodeChapterElapsedSeconds = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Number of seconds elapsed since the beginning of the current chapter.

73.1.401 kDVDTimeCodeChapterRemainingSeconds = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Number of seconds remaining before the end of the current chapter.

73.1.402 kDVDTimeCodeElapsedSeconds = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Number of seconds after a specified position.

73.1.403 kDVDTimeCodeRemainingSeconds = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Number of seconds before a specified position.

73.1.404 kDVDTimeCodeTitleDurationSeconds = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Number of seconds in the current title.

73.1.405 kDVDTimeCodeUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Not used.

73.1.406 kDVDTTDomain = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Title domain.

73.1.407 kDVDTTGRDomain = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Title Group domain (DVD-Audio only, not used).

73.1.408 kDVDUOPAngleChange = 4194304

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function SetAngle is disabled.

73.1.409 kDVDUOPAudioStreamChange = 1048576

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function SetAudioStream is disabled.

73.1.410 kDVDUOPBackwardScan = 512

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function Scan in the backward direction is disabled.

73.1.411 kDVDUOPButton = 131072

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The functions DoMenuClick, DoMenuMouseOver, and DoUserNavigation are disabled.

73.1.412 kDVDUOPForwardScan = 256

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function Scan in the forward direction is disabled.

73.1.413 kDVDUOPGoUp = 16

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoBackOneLevel is disabled.

73.1.414 kDVDUOPKaraokeModeChange = 8388608

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: Not used.

73.1.415 kDVDUOPMenuCallAngle = 16384

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoToMenu for an angle menu is disabled.

73.1.416 kDVDUOPMenuCallAudio = 8192

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoToMenu for an audio menu is disabled.

73.1.417 kDVDUOPMenuCallPTT = 32768

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoToMenu for a chapter menu is disabled.

73.1.418 kDVDUOPMenuCallRoot = 2048

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoToMenu for a root menu is disabled.

73.1.419 kDVDUOPMenuCallSubPicture = 4096

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoToMenu for a subpicture menu is disabled.

73.1.420 kDVDUOPMenuCallTitle = 1024

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoToMenu for a title menu is disabled.

73.1.421 kDVDUOPNextPGSearch = 128

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function NextChapter is disabled.

73.1.422 kDVDUOPPauseOff = 67108864

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function Resume is disabled.

73.1.423 kDVDUOPPauseOn = 524288

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function Pause is disabled.

73.1.424 kDVDUOPPrevTopPGSearch = 64

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function PreviousChapter is disabled.

73.1.425 kDVDUOPPTTPlaySearch = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function SetTime is disabled.

73.1.426 kDVDUOPResume = 65536

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function SetTime is disabled.

73.1.427 kDVDUOPScanOff = 33554432

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: Not used.

73.1.428 kDVDUOPStillOff = 262144

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: Not used.

73.1.429 kDVDUOPStop = 8

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function Stop is disabled.

73.1.430 kDVDUOPSubPictureStreamChange = 2097152

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function SetAudioStream is disabled.

73.1.431 kDVDUOPTimePlaySearch = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function SetTime is disabled.

73.1.432 kDVDUOPTimePTTSearch = 32

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function DVDSetChapter is disabled.

73.1.433 kDVDUOPTitlePlay = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The functions ReturnToTitle, SetTitle, and SetChapter are disabled.

73.1.434 kDVDUOPVideoModeChange = 16777216

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: Not used.

73.1.435 kDVDUserNavigationEnter = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
Notes: Execute the action of the selected button.

73.1.436 kDVDUserNavigationMoveDown = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
Notes: Move to and select the button above the current location.

73.1.437 kDVDUserNavigationMoveLeft = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
Notes: Move to and select the button to the left of the current location.

73.1.438 kDVDUserNavigationMoveRight = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
Notes: Move to and select the button to the right of the current location.

73.1.439 kDVDUserNavigationMoveUp = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
Notes: Move to and select the button above the current location.

73.1.440 kDVDVMGMDomain = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Video Manager Menu domain.

73.1.441 kDVDVTSMDomain = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Video Title Set Menu domain.

73.2 class DVDPlaybackMissingFunctionExceptionMBS

73.2.1 class DVDPlaybackMissingFunctionExceptionMBS

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: The exception raised if a DVDPlayback function is not available on this Mac OS X version.
Notes:

Check the message property.
Subclass of the RuntimeException class.

73.3 class DVDPlaybackNotInitializedExceptionMBS

73.3.1 class DVDPlaybackNotInitializedExceptionMBS

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: The exception raised when you use a method on the DVDPlaybackMBS class without initializing it.
Notes: Subclass of the RuntimeException class.

Chapter 74

DynamicDeclares

74.1 class DeclareCallBackMBS

74.1.1 class DeclareCallBackMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a callback for use in declares.
Notes:

Allows you to dynamically create callback functions.
Pass the function pointer to a C function which later calls back your callback.

Please make sure this callback object stays alive, e.g. stored in a global property. When the object is released and the callback later invoked, the application will crash.

74.1.6 Methods

74.1.7 Constructor(Signature as String)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new callback object.
Notes:

Please pass a valid signature, e.g. "(pi)v" for a function taking one pointer, one integer and return nothing (void).
If the signature doesn't match the values put on the stack, the app may crash.

74.1.8 ParameterType(Index as Integer) as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries type of a parameter.
Notes: Index in range from 0 to ParameterCount-1.

74.1.9 Properties

74.1.10 AllowAsync as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the callbacks are allowed to go asynchronously.
Notes:

For MacOS/iOS only.

Asynchronous callbacks have no chance to return a value as the call to the Xojo event happens later and the C function returns before the Xojo event is started.
Synchronous callbacks would let the callback wait for the Xojo main thread to react to the event and then return the result back.

AllowAsync is set to true automatically for callbacks with void as return automatically.
(Read and Write property)

74.1.11 CallCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The call counter.
Notes:

We call how often the callback is called.
(Read only property)

74.1.12 FunctionPtr as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function pointer for the callback.
Notes:

Pass this to the C functions to pass a callback function pointer.
(Read only property)

74.1.13 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the callback.
Notes:

You can set this to later read value in debugging.
(Read and Write property)

74.1.14 ParameterCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of parameters.
Notes:

We currently limit this to 32 parameters.
(Read only property)

74.1.15 Signature as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature used to initialize this object.
Notes: (Read only property)

74.1.16 SignatureParameters as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the parameters.
Notes: (Read only property)

74.1.17 SignatureReturn as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the return value.
Notes: (Read only property)

74.1.18 Tag as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes:

Store whatever you need to keep referenced.
(Read and Write property)

74.1.19 ParameterCFRetain(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether a parameter needs to be retained via CFRetain() call.
Notes:

If the callback is within Apple's frameworks passing a CoreFoundation object, you can set this property to true, so we call CFRetain method on it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with CoreFoundation objects passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer.
(Read and Write computed property)

74.1.20 ParameterCopyString(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether a parameter needs to be copied as a zero terminated string.
Notes:

If the callback receives a C string, you can set this property to true, so we copy it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with strings passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer or string.
(Read and Write computed property)

74.1.21 ParameterNSRetain(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether a parameter needs to be retained via [NSObject retain] call.
Notes:

If the callback is within Apple's frameworks passing a Objective-C object, you can set this property to true, so we call retain method on it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with NSObject objects passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer.
(Read and Write computed property)

74.1.22 Events

74.1.23 Callback(Parameters() as Variant) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The callback event.
Notes:

Parameters are converted to variants and passed as array.
The result is converted to the required data type and returned.

74.1.24 Constants

74.1.25 kCallModeEllipsis = "e"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C ellipsis function call

74.1.26 kCallModeFastCallGNU = "f"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows GCC fast call

74.1.27 kCallModeFastCallMS = "F"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows Microsoft fast call

74.1.28 kCallModePrefix = "_"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: The character to indicate that next character in the signature is a calling convention prefix.

74.1.29 kCallModeStdCall = "s"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows standard call

74.1.30 kCallModeThisCallMS = "+"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows Microsoft this call

74.1.31 kTypeBool = "B"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: bool

74.1.32 kTypeChar = "c"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: char, 8 bit signed byte

74.1.33 kTypeDouble = "d"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Double, 64-bit and 8 bytes big.

74.1.34 kTypeEndArg = ")"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: end of arguments symbol.

74.1.35 kTypeFloat = "f"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Single, 32-bit and 4 bytes big.

74.1.36 kTypeInt = "i"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 32-bit signed integer.

74.1.37 kTypeInt64 = "l"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 64-bit signed integer.

74.1.38 kTypeLong = "j"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes:

32/64-bit signed integer.
64-bit only for MacOS and Linux in 64-bit application.
Always 32-bit on Windows.

74.1.39 kTypePtr = "p"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Pointer. Maybe a reference to an object or array.

74.1.40 kTypeShort = "s"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 16-bit signed integer.

74.1.41 kTypeString = "Z"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: C String with zero byte as terminator.

74.1.42 kTypeStruct = "T"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Structure

74.1.43 kTypeUnsignedChar = "C"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 8 bit unsigned byte

74.1.44 kTypeUnsignedInt = "I"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 32-bit unsigned integer.

74.1.45 kTypeUnsignedInt64 = "L"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 64-bit unsigned integer.

74.1.46 kTypeUnsignedLong = "J"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes:

32/64-bit unsigned integer.
64-bit only for MacOS and Linux in 64-bit application.
Always 32-bit on Windows.

74.1.47 kTypeUnsignedShort = "S"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 16-bit unsigned integer.

74.1.48 kTypeVoid = "v"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Nothing to return.

74.2 class DeclareFunctionMBS

74.2.1 class DeclareFunctionMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a C function call.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")
Dim f As New DeclareFunctionMBS("()Z", p)

Dim n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

Notes:

Compared to built-in declares in Xojo, those functions allow a much more dynamic calling of functions with various calling conventions.

We have

- more dynamic
- the possibility to define declares at runtime
- more calling conventions
- support for variable arguments in C (dots in argument list)
- thread safe callbacks with DeclareCallBackMBS class.

74.2.4 Methods

74.2.5 ClearParameters

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all parameters.
Notes: Sets them all to zero/nil.

74.2.6 Constructor(Signature as String, FunctionPtr as Ptr)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")
Dim f As New DeclareFunctionMBS("()Z", p)

Dim n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

Notes:

Pass the signature and function pointer from a C function.
If signature is incorrect, the application will probably crash with stack corruption.

74.2.7 Invoke as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Invokes the function.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")
Dim f As New DeclareFunctionMBS("()Z", p)

Dim n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

See also:

- 74.2.8 Invoke(Parameters() as Variant) as Variant 13624

74.2.8 Invoke(Parameters() as Variant) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Invokes the function.
Notes:

First calls SetParameters with the given array to set parameters.
Then invokes the function.
See also:

- 74.2.7 Invoke as Variant 13624

74.2.9 SetParameters(paramArray Parameters as Variant)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set all parameters together with passing arguments to this function.
Example:

```
// We try to run sysctlbyname on macOS

Dim d As New DeclareLibraryMBS("/usr/lib/libc.dylib")
```

```
// int sysctlbyname(const char *name, void *oldp, size_t *oldlenp, void *newp, size_t newlen);

Dim p As ptr = d.Symbol("sysctlbyname")

'const char* ->CString for name ->Z
'void* ->pointer to data ->p
'size_t * ->pointer to 32/64 bit integer for length ->p
'void* ->pointer to data ->p
'size_t ->32/64bit unsigned int ->L in 64-bit

Dim f As New DeclareFunctionMBS("(ZpppL)i", p)

Dim mData As New MemoryBlock(8)
Dim mLen As New MemoryBlock(8)
Dim pData As ptr = mData
dim pLen as ptr = mLen

mLen.UInt64Value(0) = mData.Size

f.SetParameters "hw.ncpu", pData, pLen, Nil, 0
Dim n As Integer = f.Invoke
// result is zero on result or -1 on failure

Dim CPUCount As Integer = mData.UInt32Value(0)

If n = 0 Then
MsgBox "CPU count: "+Str(CPUCount)
Else
MsgBox "Failed."
End If

Break // see in debugger
```

See also:

- 74.2.10 SetParameters(Parameters() as Variant) 13625

74.2.10 SetParameters(Parameters() as Variant)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets all arguments by passing an array of values.
See also:

- 74.2.9 SetParameters(paramArray Parameters as Variant) 13624

74.2.11 Properties

74.2.12 CallCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The call counter.
Notes:

We call how often the function is called.
(Read only property)

74.2.13 CallMode as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The calling convention mode to use.
Notes:

Default is to use default mode for the given platform.
(Read and Write property)

74.2.14 FunctionPtr as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer for the C function.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")

// call via delegate
' define delgate like this:
' Public Function zlibVersionDelegate() As CString

Dim z As New zlibVersionDelegate(p)
Dim v As String = z.Invoke
MsgBox "zlibVersion: "+v
```

Notes: (Read and Write property)

74.2.15 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the function.
Notes: (Read and Write property)

74.2.16 ParameterCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of parameters.
Notes:

We currently limit this to 32 parameters.
(Read only property)

74.2.17 Parameters as Dictionary

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all parameters.
Notes:

Mainly to inspect parameters in debugger.
Keys are indexes and values are the parameter values.
(Read only property)

74.2.18 Signature as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature used to initialize this object.
Notes: (Read only property)

74.2.19 SignatureParameters as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the parameters.
Notes: (Read only property)

74.2.20 SignatureReturn as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the return value.
Notes: (Read only property)

74.2.21 StackSize as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stack size to use.
Notes:

Defaults to 4096 bytes.
(Read and Write property)

74.2.22 Tag as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes:

Store whatever you need to keep referenced.
(Read and Write property)

74.2.23 ParameterBoolean(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as boolean.
Notes:

You can get and set value here.
(Read and Write computed property)

74.2.24 ParameterDouble(Index as Integer) as Double

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter value as double.
Notes:

You can get and set value here.
(Read and Write computed property)

74.2.25 ParameterInteger(Index as Integer) as Int64

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as integer value.
Notes:

You can get and set value here.
(Read and Write computed property)

74.2.26 ParameterPointer(Index as Integer) as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as pointer value.
Notes:

You can get and set value here.
(Read and Write computed property)

74.2.27 ParameterSingle(Index as Integer) as Single

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as single value.
Notes:

You can get and set value here.
(Read and Write computed property)

74.2.28 ParameterString(Index as Integer) as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as string value.
Example:

```
// We try to run strstr on C Library on macOS to find string in string with strstr as example:

Dim d As New DeclareLibraryMBS("/usr/lib/libc.dylib")

// char *strstr(Const char *__big, Const char *__little);

Dim p As ptr = d.Symbol("strstr")
Dim f As New DeclareFunctionMBS("(ZZ)Z", p)

f.ParameterString(0) = "Hello World!"
f.ParameterString(1) = "World"

Dim n1 As String = f.Invoke
// gives back World! as that was found

f.ParameterString(0) = "Hello World!"
f.ParameterString(1) = "xxx"

Dim n2 As String = f.Invoke
// gives empty string as not found

Break // see in debugger
```

Notes:

To avoid crashes, we only read strings from parameters with type string or pointer.
But you can assign a string value to all types, which may not make sense for numbers.
You can get and set value here.
(Read and Write computed property)

74.2.29 ParameterValue(Index as Integer) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the value as variant.
Notes:

We automatically convert values based on the parameter type.
The class stores reference to the variant when setting to make sure strings and MemoryBlocks are not freed too early.
You can get and set value here.
(Read and Write computed property)

74.2.30 Constants

74.2.31 kCallModeCArm64 = 22

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C arm64 call (AArch64)

74.2.32 kCallModeCArmArmhf = 30

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C arm call (arm hardfloat - e.g. raspberry pi)

74.2.33 kCallModeCDefault = 0

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C default function call for current platform

74.2.34 kCallModeCEllipsis = 100

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C ellipsis function call (named arguments (before '...'))

74.2.35 kCallModeCEllipsisVarargs = 101

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C ellipsis function call (variable/unnamed arguments (after '...'))

74.2.36 kCallModeCX64Win64 = 7

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x64 Windows standard call

74.2.37 kCallModeCX86Cdecl = 1

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x86 platforms standard call

74.2.38 kCallModeCX86Win32FastGnu = 4

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x86 Windows GCC fast call

74.2.39 kCallModeCX86Win32FastMs = 3

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x86 Windows Microsoft fast call

74.2.40 kCallModeCX86Win32Std = 2

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x86 Windows standard call

74.2.41 kCallModeCX86Win32ThisGnu = 6

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x86 Windows GCC this call

74.2.42 kCallModeCX86Win32ThisMs = 5

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x86 Windows Microsoft this call

74.2.43 kCallModeEllipsis = "e"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C ellipsis function call

74.2.44 kCallModeFastCallGNU = "f"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows GCC fast call

74.2.45 kCallModeFastCallMS = "F"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows Microsoft fast call

74.2.46 kCallModePrefix = "_"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: The character to indicate that next character in the signature is a calling convention prefix.

74.2.47 kCallModeStdCall = "s"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows standard call

74.2.48 kCallModeSysDefault = 200

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C default syscall for current platform

74.2.49 kCallModeSysX64SyscallSysV = 204

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C syscall for x64 System V platforms

74.2.50 kCallModeSysX86Int80HBSD = 202

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C syscall for x86 BSD platforms

74.2.51 kCallModeSysX86Int80HLinux = 201

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C syscall for x86 Linux

74.2.52 kCallModeThisCallMS = "+"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows Microsoft this call

74.2.53 kTypeBool = "B"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: bool

74.2.54 kTypeChar = "c"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: char, 8 bit signed byte

74.2.55 kTypeDouble = "d"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Double, 64-bit and 8 bytes big.

74.2.56 kTypeEndArg = ")"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: end of arguments symbol.

74.2.57 kTypeFloat = "f"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Single, 32-bit and 4 bytes big.

74.2.58 kTypeInt = "i"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 32-bit signed integer.

74.2.59 kTypeInt64 = "l"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 64-bit signed integer.

74.2.60 kTypeLong = "j"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes:

32/64-bit signed integer.
64-bit only for MacOS and Linux in 64-bit application.
Always 32-bit on Windows.

74.2.61 kTypePtr = "p"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Pointer. Maybe a reference to an object or array.

74.2.62 kTypeShort = "s"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 16-bit signed integer.

74.2.63 kTypeString = "Z"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: C String with zero byte as terminator.

74.2.64 kTypeStruct = "T"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Structure

74.2.65 kTypeUnsignedChar = "C"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 8 bit unsigned byte

74.2.66 kTypeUnsignedInt = "I"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 32-bit unsigned integer.

74.2.67 kTypeUnsignedInt64 = "L"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 64-bit unsigned integer.

74.2.68 kTypeUnsignedLong = "J"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes:

32/64-bit unsigned integer.
64-bit only for MacOS and Linux in 64-bit application.
Always 32-bit on Windows.

74.2.69 kTypeUnsignedShort = "S"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 16-bit unsigned integer.

74.2.70 kTypeVoid = "v"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Nothing to return.

74.3 class DeclareLibraryMBS

74.3.1 class DeclareLibraryMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a C library loaded into Xojo.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Dim lines() As String = d.SymbolNames
Break // look in list of functions
```

Notes: Allows you to load a DLL on Windows, dylib on MacOS and shared object (so) on Linux and inspect the available functions and load functions by name.

- Dynamic Declare for Xojo
- MBS Xojo Plugins, version 20.3pr1

74.3.4 Methods

74.3.5 Constructor(LibFile as folderItem)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a library.
Notes:

Pass path to DLL on Windows, dylib on MacOS or so file on Linux.
Raises exception in case of problems.
See also:

- 74.3.6 Constructor(LibPath as string) 13640

74.3.6 Constructor(LibPath as string)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a library.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Dim lines() As String = d.SymbolNames
Break // look in list of functions
```

Notes:

Pass path to DLL on Windows, dylib on MacOS or so file on Linux.
Raises exception in case of problems.
See also:

- 74.3.5 Constructor(LibFile as folderItem) 13639

74.3.7 Symbol(name as string) as ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries function or data pointer for a symbol.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")
Dim f As New DeclareFunctionMBS("()Z", p)
```

```
Dim n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

Notes: Returns nil if not found.

74.3.8 SymbolName(index as Integer) as string

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of a symbol.
Notes: Index is in range from 0 to SymbolCount-1.
See also:

- 74.3.9 SymbolName(p as Ptr) as string 13641

74.3.9 SymbolName(p as Ptr) as string

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of a symbol from the ptr.
Notes:

Looks up the symbol table to find the entry with the right pointer and returns the name.
Returns "" if not found.
See also:

- 74.3.8 SymbolName(index as Integer) as string 13641

74.3.10 SymbolNames as string()

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of symbols of a library.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Dim lines() As String = d.SymbolNames
Break // look in list of functions
```

Notes: This may show more symbols as defined in public C headers.

74.3.11 Properties

74.3.12 Handle as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object handle.
Notes: (Read only property)

74.3.13 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of the library.
Notes: (Read only property)

74.3.14 Path as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries path of the library.
Notes:

May return the path used to load the library.
(Read only property)

74.3.15 SymbolCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of symbols in the library.
Notes: (Read only property)

Chapter 75

DynaPDF

75.1 class DynaPDFAnnotationExMBS

75.1.1 class DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for extended annotation information.
Example:

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationExMBS = pdf.GetAnnotEx(i)

MsgBox str(a.Type)
next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS REALbasic Plugins, version 11.1pr4

75.1.4 Methods

75.1.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.1.6 DashPattern(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dash pattern.
Notes: If BorderStyle is kbsDashed.

75.1.7 InkList(index as UInt32) as Single()

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ink list.
Notes:

Ink annotations only. Array of array.
Index is from 0 to InkListCount-1.

75.1.8 QuadPoints(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a quad point value.
Notes:

Index from 0 to QuadPointsCount-1.
Highlight, Link, and Redact annotations only.

75.1.9 Vertices(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertices array.
Notes: Line, PolyLine, and Polygon annotations only.

75.1.10 Properties

75.1.11 AnnotFlags as UInt32

MBS DynaPDF Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags for this annotation.
Notes:

You can use this constants:

```
kafNone        = & h0000000
kafInvisible   = & h0000001
kafHidden      = & h0000002
kafPrint       = & h0000004
kafNoZoom      = & h0000008
kafNoRotate    = & h0000010
kafNoView      = & h0000020
kafReadOnly    = & h0000040
```

(Read only property)

75.1.12 Author as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's author.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

75.1.13 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

75.1.14 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box in bottom-up coordinates.
Notes: (Read only property)

75.1.15 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border color.
Notes: (Read only property)

75.1.16 BorderEffect as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The border effect.
Notes:

Circle, Square, FreeText, and Polygon annotations.
(Read only property)

75.1.17 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border style.
Notes: (Read only property)

75.1.18 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border width.
Notes: (Read only property)

75.1.19 Caption as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the annotation string Content is used as caption.
Notes:

The string is shown in a PopUp annotation otherwise.
(Read only property)

75.1.20 CaptionOffsetX as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Horizontal offset of the caption from its normal position.
Notes: (Read only property)

75.1.21 CaptionOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical offset of the caption from its normal position.
Notes: (Read only property)

75.1.22 CaptionPos as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position where the caption should be drawn if present.
Notes: (Read only property)

75.1.23 Content as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's contents.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

75.1.24 CreateDate as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creation Date ->Optional
Notes: (Read only property)

75.1.25 DashPatternCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read only property)

75.1.26 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this annotation marked as deleted?
Notes: (Read only property)

75.1.27 DestFile as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Notes:

For File link or web link annotations.

(Read only property)

75.1.28 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination page.
Notes:

For Page link annotations only.

(Read only property)

75.1.29 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination position.
Notes:

For Page link annotations only.

(Read only property)

75.1.30 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination type.
Notes:

For Page link annotations only.

(Read only property)

75.1.31 EmbeddedFileHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle for the embedded file.
Notes:

For FileAttach annotations only. Use the handle with the GetEmbeddedFile function.
(Read only property)

75.1.32 Grouped as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Meaningful only if Parent <>-1 and Type <>katPopUp.
Notes:

If true, the annotation is part of an annotation group. Properties like Content, CreateDate, ModDate, BackColor, Subject, and Open must be taken from the parent annotation.
(Read only property)

75.1.33 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

75.1.34 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Visual effect.
Notes: (Read only property)

75.1.35 Icon as Integer

MBS DynaPDF Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The icon type for this annotation.
Notes:

The Icon type depends on the annotation type. If the annotation type is atText then the Icon is of type TAnnotIcon. If the annotation type is atFileAttach then it is of type kTFileAttachIcon. If the annotation type is atStamp then the Icon is the stamp type (kTRubberStamp).
For any other annotion type this value is not set (-1).
(Read only property)

75.1.36 InkListCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of ink arrays.
Notes: (Read only property)

75.1.37 Intent as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Markup annotations only.
Notes:

The intent allows to distinguish between different uses of an annotation. For example, line annotations have two intents: LineArrow and LineDimension.
(Read only property)

75.1.38 LE1 as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Style of the start point ->Line and PolyLine annotations only.
Notes: (Read only property)

75.1.39 LE2 as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Style of the end point ->Line and PolyLine annotations only.
Notes: (Read only property)

75.1.40 LeaderLineExtend as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional leader line extend beyond the leader line.
Notes: (Read only property)

75.1.41 LeaderLineLen as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the leader lines (positive or negative)
Notes: (Read only property)

75.1.42 LeaderLineOffset as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Amount of space between the endpoints of the annotation and the leader lines.
Notes: (Read only property)

75.1.43 MarkupAnnot as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the annotation is a markup annotation.
Notes:

Markup annotations can be flattened separately, see FlattenAnnots function.
(Read only property)

75.1.44 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modification Date ->Optional
Notes: (Read only property)

75.1.45 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's name.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

75.1.46 OC as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of an OCG or OCMD or -1 if not set.
Notes:

Annotations can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller & h40000000.
(Read only property)

75.1.47 Opacity as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The annotation's opacity.
Notes:

Opacity = 1.0 = Opaque, Opacity <1.0 = Transparent, Markup annotations only
(Read only property)

75.1.48 Open as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Meaningful only for annotations which have a corresponding PopUp annotation.
Notes: (Read only property)

75.1.49 PageIndex as UInt32

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page index is used to sort form fields.
Notes:

See SortFieldsByIndex().
(Read only property)

75.1.50 PageNum as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Page on which the annotation appears.
Notes: (Read only property)

75.1.51 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parent annotation handle of a PopUp Annotation or the parent annotation if this annotation represents a state of a base annotation.
Notes:

In this case, the annotation type is always atText and only the following members should be considered:

State	The current state
StateModel	Marked, Review, and so on
CreateDate	Creation Date
ModDate	Modification Date
Author	The user who has set the state
Content	Not displayed in Adobe's Acrobat...
Subject	Not displayed in Adobe's Acrobat...

The PopUp annotation of a text annotation which represent an Annotation State must be ignored.
(Read only property)

75.1.52 PopUp as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of the corresponding PopUp annotation if any.
Notes: (Read only property)

75.1.53 QuadPointsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of quad points.
Notes:

Highlight, Link, and Redact annotations only.
(Read only property)

75.1.54 RD as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rectangular difference between the annotations bounding box and the content area.
Notes:

Caret, Circle, Square, and FreeText annotations.
(Read only property)

75.1.55 RichStyle as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional default style string.
Notes:

For FreeText annotations.
(Read only property)

75.1.56 RichText as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional rich text string (RC key).
Notes:

For Markup annotations.
(Read only property)

75.1.57 Rotate as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rotation for caret annotations.
Notes:

Caret annotations only. Must be zero or a multiple of 90. This key is not documented in the specs.
(Read only property)

75.1.58 StampName as String

MBS DynaPDF Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stamp name.
Notes:

Set only, if Icon property is rsUserDefined.
(Read only property)

75.1.59 State as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The state of the annotation.
Notes: (Read only property)

75.1.60 StateModel as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The state model (Marked, Review, and so on).
Notes: (Read only property)

75.1.61 Subject as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's subject.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

75.1.62 Subtype as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The subtype.
Notes:

Set only, if Type = katUnknownAnnot.
(Read only property)

75.1.63 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation type.
Notes:

See at* constants.
(Read only property)

75.1.64 VerticesCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the vertices array.
Notes:

This is the raw number of floating point values. Since a vertice requires always two coordinate pairs, the number of vertices or points is VerticeCount divided by 2.
(Read only property)

75.2 class DynaPDFAnnotationMBS

75.2.1 class DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for annotation information.
Example:

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationMBS = pdf.GetAnnot(i)

MsgBox str(a.Type)
next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.5pr4

75.2.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.5pr4

75.2.4 Methods

75.2.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.2.6 Properties

75.2.7 Author as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's author.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

75.2.8 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

75.2.9 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box in bottom-up coordinates.
Notes: (Read only property)

75.2.10 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border color.
Notes: (Read only property)

75.2.11 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border style.
Notes: (Read only property)

75.2.12 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border width.
Notes: (Read only property)

75.2.13 Content as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's contents.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

75.2.14 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this annotation marked as deleted?
Notes: (Read only property)

75.2.15 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation handle.
Notes: (Read only property)

75.2.16 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Visual effect.
Notes:

See hm* constants.
(Read only property)

75.2.17 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's name.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

75.2.18 PageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Page on which the annotation appears.
Notes: (Read only property)

75.2.19 Subject as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's subject.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

75.2.20 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation type.
Notes:

See at* constants.
(Read only property)

75.3 class DynaPDFBarcode2MBS

75.3.1 class DynaPDFBarcode2MBS

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for barcode creation parameters.

75.3.6 Properties

75.3.7 BarcodeType as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of barcode that should be created.
Notes:

See kbct* constants.
(Read and Write property)

75.3.8 BgColor as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes:

Default: NO_COLOR (transparent)
(Read and Write property)

75.3.9 BorderWidth as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border width
Notes:

Default is zero.
(Read and Write property)

75.3.10 Data as String

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data in the barcode.
Notes: (Read and Write property)

75.3.11 DataType as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Data type and escape flag.
Notes:

Default is kbcdtBinary.
See kbcdt* constants.
(Read and Write property)

75.3.12 DotSize as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Dotty mode only.
Notes:

Default is 4.0/5.0.
(Read and Write property)

75.3.13 Eci as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extended Channel Interpretation mode.
Notes:

Default 0.
(Read and Write property)

75.3.14 FgColor as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: RGB Foreground color
Notes: (Read and Write property)

75.3.15 FSizeFactor as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font size correction factor.
Notes:

Default 0.7.
(Read and Write property)

75.3.16 Option1 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various options, depends on barcode type.
Notes:

Default value is -1.

For QRCode:
Option1 is the ECC Level with values from 1 = low, 2 = middle, 3 = better, 4 high. Default is low.
Option2 is version code from 1 to 40. Default is 0 to auto select.
For MicroQR you can use ECC Level 1 to 3 as 4 is not supported.

For Data Matrix:
Option2 size from 1 to 30. 0 is auto. See table in zint manual pdf.
Option3 can be 100 to force square size.

For Code 39:
You can set Option2 to 1 to add module 43 checksum.

For MaxiCode:
Option 1 is the mode.

For PDF 417:
Option 1 is a number between 0 and 8 where the number of codewords used for check information is determined by 2^(value + 1).
Option 2 is the number of columns between 1 and 30.
(Read and Write property)

75.3.17 Option2 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various options, depends on barcode type.
Notes:

Default value is 0.
(Read and Write property)

75.3.18 Option3 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various options, depends on barcode type.
Notes:

Default value is 0.
(Read and Write property)

75.3.19 Options as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output options.
Notes:

See kbco* constants.
(Read and Write property)

75.3.20 Orientation as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The orientation of the barcode.
Notes:

Supported values: 0, 90, -90, 180, -180, 270, -270.
(Read and Write property)

75.3.21 OuterBorder as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional border around the scaled barcode measured in user space.
Notes:

The member OuterBorder can be used to extend the background rectangle. Each side of OuterBorder specifies the line width of the corresponding side of the rectangle. OuterBorder is measured in user space whereas BorderWidth is measured in pixels of the reference grid.

Note that the background rectangle is drawn only if BgColor is set to another value than NO_COLOR (default).
(Read and Write property)

75.3.22 Primary as String

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Primary data message (max 127 bytes).
Notes:

Composite codes only.
Image based barcodes only.

(Read and Write property)

75.3.23 Scale as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image based barcodes only.
Notes:

Default value is 1.0.
(Read and Write property)

75.3.24 ShowText as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Show human readable text?
Notes:

Default is true.
(Read and Write property)

75.3.25 SpaceWidth as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whitespace width in pixels
Notes:

Default value is 0 (auto).
(Read and Write property)

75.3.26 SymbHeight as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Symbol height
Notes:

Default is 50.
(Read and Write property)

75.3.27 TextOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Offset to correct the y-coordinate of text.
Notes:

The default value is zero.
(Read and Write property)

75.3.28 Constants

75.3.29 kbcdtBinary = 0

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the data type flags.
Notes: Binary data.

75.3.30 kbcdtEscapeMode = 8

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the data type flags.
Notes: Scan input data for escape sequences. This is a flag that can be combined with the other constants, e.g. pass EscapeMode and Unicode.

75.3.31 kbcdtGS1Mode = 2

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the data type flags.
Notes: Encodes GS1 data using FNC1 characters.

75.3.32 kbcdtUnicode = 1

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the data type flags.
Notes: UTF-8.

75.3.33 kbcoBind = 2

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Boundary bars above and below the symbol and between rows if stacking multiple symbols.

75.3.34 kbcoBoldText = 64

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Embolden human readable text.

75.3.35 kbcoBox = 4

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Add a box surrounding the symbol and whitespace.

75.3.36 kbcoDefault = 0

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Use default settings.

75.3.37 kbcoDottyMode = & h00000100

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Plot a matrix symbol using dots rather than squares.

75.3.38 kbcoGS1_GS_Separator = & h00000200

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Use GS instead FNC1 as GS1 separator.

75.3.39 kbcoImageOutput = & h01000000

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Draw the barcode as an image. Images are usually larger than vectors and require more processing time.

75.3.40 kbcoNoASCII = 1

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Consider non-ASCII characters when creating the barcode.

75.3.41 kbcoReaderInit = 16

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Add a reader initialisation symbol to the data before encoding.

75.3.42 kbcoSmallText = 32

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Use a smaller font for human readable text.

75.3.43 kbcoUseActiveFont = & h02000000

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Vector output only. If set, text is output with the active font. Helvetica is used otherwise.

75.3.44 kbctAustraliaPost = 63

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Australia Post Standard Customer

75.3.45 kbctAustraliaRedir = 68

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Australia Post Redirection

75.3.46 kbctAustraliaReply = 66

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Australia Post Reply Paid

75.3.47 kbctAustraliaRout = 67

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Australia Post Routing

75.3.48 kbctAztec = 92

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Aztec Code

75.3.49 kbctAztecRunes = & h00000080

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Aztec Runes

75.3.50 kbctC2Of5IATA = 4

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Code 2 of 5 IATA

75.3.51 kbctC2Of5Industrial = 7

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Code 2 of 5 Industrial

75.3.52 kbctC2Of5Interleaved = 3

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Interleaved 2 of 5

75.3.53 kbctC2Of5Logic = 6

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Code 2 of 5 Data Logic

75.3.54 kbctC2Of5Matrix = 2

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Standard Code 2 of 5

75.3.55 kbctChannelCode = & h0000008C

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Channel Code

75.3.56 kbctCodabar = 18

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Codabar

75.3.57 kbctCodablockF = 74

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Codablock-F

75.4 class DynaPDFBarcodeMBS

75.4.1 class DynaPDFBarcodeMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for detail information on barcode fields.

75.4.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

75.4.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

75.4.4 Properties

75.4.5 Caption as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, the caption.
Notes: (Read and Write property)

75.4.6 ECC as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error correction code.
Notes:

0..8 for PDF417, or 0..3 for QRCode
(Read and Write property)

75.4.7 Height as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Height in inches.
Notes: (Read and Write property)

75.4.8 nCodeWordCol as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of codewords per barcode coloumn.
Notes:

Required for PDF417.
(Read and Write property)

75.4.9 nCodeWordRow as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of codewords per barcode row.
Notes:

Required for PDF417.
(Read and Write property)

75.4.10 Resolution as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The resolution.
Notes:

Required. Should be 300.
(Read and Write property)

75.4.11 Symbology as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The symbology.
Notes:

PDF417, QRCode, or DataMatrix.
(Read and Write property)

75.4.12 Version as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of this object.
Notes:

Should be 1
(Read and Write property)

75.4.13 Width as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width in inches.
Notes: (Read and Write property)

75.4.14 XSymHeight as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical distance between two barcode modules, measured in pixels.
Notes:

Only needed for PDF417.
The ratio XSymHeight/XSymWidth shall be an integer value. For PDF417, the acceptable ratio range is from 1 to 4. For QRCode and DataMatrix, this ratio shall always be 1.
(Read and Write property)

75.4.15 XSymWidth as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Required. The horizontal distance, in pixels, between two barcode modules.
Notes: (Read and Write property)

75.5 class DynaPDFBitmapMBS

75.5.1 class DynaPDFBitmapMBS

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a bitmap in DynaPDF.
Notes:

Currently only used for RenderAnnotOrField function.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.5.2 Methods

75.5.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.5.4 Properties

75.5.5 Buffer as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw image buffer.
Notes:

To avoid problems, this is a copy of the image data.
(Read and Write property)

75.5.6 BufSize as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

75.5.7 DestX as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: x-coordinate in the main image (the rendered page)
Notes: (Read and Write property)

75.5.8 DestY as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: y-coordinate in the main image (the rendered page)
Notes: (Read and Write property)

75.5.9 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image height in pixels.
Notes: (Read and Write property)

75.5.10 Stride as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scanline length in bytes.
Notes: (Read and Write property)

75.5.11 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image width.
Notes: (Read and Write property)

75.6 class DynaPDFBookmarkMBS

75.6.1 class DynaPDFBookmarkMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for bookmark information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.6.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.6.6 Properties

75.6.7 ColorValue as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bookmark color (PDF 1.4).
Notes: (Read and Write property)

75.6.8 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination page.
Notes: (Read and Write property)

75.6.9 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination position.
Notes: (Read and Write property)

75.6.10 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination type.
Notes: (Read and Write property)

75.6.11 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bookmark handle.
Notes:

Index from 0 to GetBookmarkCount-1.
(Read and Write property)

75.6.12 Open as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the bookmark appears open.
Notes: (Read and Write property)

75.6.13 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parent bookmark if any or -1.
Notes: (Read and Write property)

75.6.14 Style as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text style (PDF 1.4).
Notes: (Read and Write property)

75.6.15 Title as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title string.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

75.6.16 TitleLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title length.
Notes: (Read and Write property)

75.7 class DynaPDFChoiceValueMBS

75.7.1 class DynaPDFChoiceValueMBS

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for choice values in a PDF.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.7.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

75.7.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

75.7.4 Methods

75.7.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.7.6 Properties

75.7.7 ExpValue as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ExpValue.
Notes: (Read and Write property)

75.7.8 Selected as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the choice value is selected.
Notes: (Read and Write property)

75.7.9 Value as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value.
Notes: (Read and Write property)

75.8 class DynaPDFCIDMetricMBS

75.8.1 class DynaPDFCIDMetricMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a CID Metric.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.8.2 Methods

75.8.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.8.4 Properties

75.8.5 Width as Double

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width value.
Notes: (Read and Write property)

75.8.6 x as Double

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: X value.
Notes: (Read and Write property)

75.8.7 y as Double

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y value.
Notes: (Read and Write property)

75.9 class DynaPDFCMapMBS

75.9.1 class DynaPDFCMapMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a character map in DynaPDF.
Notes:

This class contains several duplicate fields because CMap files contain usually a DSC comment section which provides Postscript specific initialization code. With exception of DSCResName the strings in the DSC section should not differ from their CMap counterparts. The Identity mapping of a character collection should contain the DSC comment "% % BeginResource: CMap (Identity)". Otherwise the string should be set to the CMap name.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.9.2 Methods

75.9.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.9.4 Properties

75.9.5 BaseCMap as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set, this base cmap is required when loading the cmap.
Notes: (Read only property)

75.9.6 CIDCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ID count.
Notes:

0 if not set.
(Read only property)

75.9.7 CMapName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMap name.
Notes: (Read only property)

75.9.8 CMapType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMap type.
Notes:

Should be 1!
(Read only property)

75.9.9 CMapVersion as Double

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMap version.
Notes: (Read only property)

75.9.10 DSCBaseCMap as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DSC comment.
Notes: (Read only property)

75.9.11 DSCCMapVersion as Double

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The DSC CMap version.
Notes: (Read only property)

75.9.12 DSCResName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DSC comment.
Notes:

If the CMap uses an Identity mapping this string should be set to Identity.
(Read only property)

75.9.13 DSCTitle as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The DSC title.
Notes:

DSC comment ->DSC CMap name + Registry + Ordering + Supplement, e.g. "GB-EUC-H Adobe GB1 0"
(Read only property)

75.9.14 FileName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file name.
Notes:

The file name and CMap name should be identical!
(Read only property)

75.9.15 FilePath as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path.
Notes: (Read only property)

75.9.16 Ordering as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ordering.
Notes:

CIDSystemInfo ->The Character Collection, e.g. Japan1.
(Read only property)

75.9.17 Registry as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The registry string.
Notes:

CIDSystemInfo ->The registrant of the Character Collection is usually Adobe.
(Read only property)

75.9.18 Supplement as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Supplement number.
Notes:

CIDSystemInfo ->The Supplement number should be supported in the used PDF Version.
(Read only property)

75.9.19 WritingMode as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The writing mode.
Notes:

0 == Horizontal, 1 == Vertical
(Read only property)

75.10 class DynaPDFColorProfilesExMBS

75.10.1 class DynaPDFColorProfilesExMBS

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A set of ICC profiles for color management.
Notes:

In general, the DefInXXX profiles are used if no other profile is available for the color space. Possible sources are DefaultGray, DefaultRGB, DefaultCMYK, and the Rendering Intents.
The SoftProof profile emulates the output device. This is typically a printer profile or a default CMYK profile. If no profile is set then no device will be emulated. What you see is maybe not what you get on a printer.
To disable color management set the parameter Profiles of InitColormanagement() to nil.

Please use DynaPDFColorProfilesExMBS when you have profiles in memory and DynaPDFColorProfilesMBS when you have them as files.

75.10.2 Properties

75.10.3 DefInCMYK as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMYK Profile.
Notes:

Optional, CMYK colors are the problematic ones.
The other profiles can be created on demand but this is not possible with a CMYK profile. So, this is the most important input profile.
(Read and Write property)

75.10.4 DefInGray as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gray profile.
Notes:

Optional
(Read and Write property)

75.10.5 DefInRGB as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RGB profile.
Notes:

Optional, sRGB is the default.
(Read and Write property)

75.10.6 DeviceProfile as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output device profile.
Notes:

Optional, the output profile must be compatible with the output color space.
At this time only Gray or RGB profiles are supported. This is the monitor profile! Default is sRGB.
(Read and Write property)

75.10.7 SoftProof as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The proofing profile.
Notes:

Optional but very important. This profile emulates the output device.
(Read and Write property)

75.11 class DynaPDFColorProfilesMBS

75.11.1 class DynaPDFColorProfilesMBS

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A set of ICC profiles for color management.
Notes:

In general, the DefInXXX profiles are used if no other profile is available for the color space. Possible sources are DefaultGray, DefaultRGB, DefaultCMYK, and the Rendering Intents.
The SoftProof profile emulates the output device. This is typically a printer profile or a default CMYK profile. If no profile is set then no device will be emulated. What you see is maybe not what you get on a printer.
To disable color management set the parameter Profiles of InitColormanagement() to nil.

Please use DynaPDFColorProfilesExMBS when you have profiles in memory and DynaPDFColorProfilesMBS when you have them as files.

75.11.3 Blog Entries

- DynaPDF Basics
- MBS Real Studio Plugins, version 11.3pr9

75.11.4 Properties

75.11.5 DefInCMYK as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMYK Profile.
Notes:

Optional, CMYK colors are the problematic ones.
The other profiles can be created on demand but this is not possible with a CMYK profile. So, this is the most important input profile.
(Read and Write property)

75.11.6 DefInGray as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gray profile.
Notes:

Optional
(Read and Write property)

75.11.7 DefInRGB as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RGB profile.
Notes:

Optional, sRGB is the default.
(Read and Write property)

75.11.8 DeviceProfile as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output device profile.
Notes:

Optional, the output profile must be compatible with the output color space.
At this time only Gray or RGB profiles are supported. This is the monitor profile! Default is sRGB.
(Read and Write property)

75.11.9 SoftProof as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The proofing profile.
Notes:

Optional but very important. This profile emulates the output device.
(Read and Write property)

75.12 class DynaPDFColorSpaceMBS

75.12.1 class DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space class.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.12.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.0pr6

75.12.4 Methods

75.12.5 BlackPoint(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CIE blackpoint.
Notes: If set, the array contains exactly 3 values. (index 0 to 2)

75.12.6 Colorants(index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorant names (Separation, DeviceN, and NChannel only).
Example:

```
Sub DrawSomething(pdf as DynaPDFMBS)
// draw all colorants with their own color
Dim MyX, MyY as Double

MyX = 10
MyY = 100
```

```
// set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

// loop over all color spaces
dim Colorcount as Integer = pdf.GetColorSpaceCount

For j as Integer = 0 to Colorcount-1
MyX = 10
dim MyColourSpace as DynaPDFColorSpaceMBS = PDF.GetColorSpaceObj(j)
dim ColorantsCount as Integer = MyColourSpace.ColorantsCount
dim c as Integer = MyColourSpace.NumInComponents
Call pdf.SetExtColorSpace j

// draw name of each colorant
for i as Integer = 0 to c-1

// build array with colors and set 100% for the one color we need
dim values() as Double
redim values(c-1)
values(i) = 1.0

// get name
dim name as string = "# "+str(i)
if i <= ColorantsCount then
name = MyColourSpace.Colorants(i)
end if

// seaw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX,MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY+20
Next
End Sub
```

Notes:

This array contains ColorantsCount strings.
The plugin marks the string as UTF-8 and it should contain UTF-8. Be we saw PDF files form other applications which put here WindowsANSI or MacRoman strings.

75.12.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.12.8 Gamma(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gamma values.
Notes: If set, one value per component.

75.12.9 Matrix(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: XYZ matrix.
Notes: If set, the array contains exactly 9 values.

75.12.10 Range(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The range values.
Notes: min/max for each component or for the .a and .b components of a Lab color space. Index is zero based.

75.12.11 WhitePoint(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CIE whitepoint.
Notes: If set, the array contains exactly 3 values. (index 0 to 2)

75.12.12 Properties

75.12.13 Alternate as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alternative color space.
Notes:

Only set if the color space contains an alternate or base color space.
(Read only property)

75.12.14 AlternateType as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Alternate color space or base space of an Indexed or Pattern color space.
Notes: (Read only property)

75.12.15 Buffer as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Contains either an ICC profile or the color table of an Indexed color space.
Notes: (Read only property)

75.12.16 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer length in bytes.
Notes: (Read only property)

75.12.17 ColorantsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of colorants in the array.
Example:

```
Sub DrawSomething(pdf as DynaPDFMBS)
// draw all colorants with their own color
```

```
Dim MyX, MyY as Double

MyX = 10
MyY = 100

// set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

// loop over all color spaces
dim Colorcount as Integer = pdf.GetColorSpaceCount

For j as Integer = 0 to Colorcount-1
MyX = 10
dim MyColourSpace as DynaPDFColorSpaceMBS = PDF.GetColorSpaceObj(j)
dim ColorantsCount as Integer = MyColourSpace.ColorantsCount
dim c as Integer = MyColourSpace.NumInComponents
Call pdf.SetExtColorSpace j

// draw name of each colorant
for i as Integer = 0 to c-1

// build array with colors and set 100% for the one color we need
dim values() as Double
redim values(c-1)
values(i) = 1.0

// get name
dim name as string = "# "+str(i)
if i <= ColorantsCount then
name = MyColourSpace.Colorants(i)
end if

// seaw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX,MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY+20
Next
End Sub
```

Notes: (Read only property)

75.12.18 Description as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description text for color space.
Notes:

For color spaces with valid ICC profile only.
(Read only property)

75.12.19 DeviceNAttributes as DynaPDFDeviceNAttributesMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional attributes of DeviceN or NChannel color spaces.
Notes: (Read only property)

75.12.20 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle for this color space object.
Notes:

An IColorSpaceObj reference.
(Read only property)

75.12.21 HasBlackPoint as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the black point array has values.
Notes: (Read only property)

75.12.22 HasGamma as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the gamma array has values.
Notes: (Read only property)

75.12.23 HasMatrix as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the matrix array has values.
Notes: (Read only property)

75.12.24 HasRange as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the range array has values.
Notes: (Read only property)

75.12.25 HasWhitePoint as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the white point array has values.
Notes: (Read only property)

75.12.26 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index in the color space list for current document.
Notes:

Can be -1 if not known by plugin.
In that case you would need to get list of all colorspaces and compare handle values to see which entry you got.
(Read only property)

75.12.27 Manufacturer as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The manufacturer text for color space.
Notes:

For color spaces with valid ICC profile only.
(Read only property)

75.12.28 MetaData as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional XMP metadata stream ->ICCBased only.
Notes: (Read only property)

75.12.29 MetadataSize as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Metadata length in bytes.
Notes: (Read only property)

75.12.30 Model as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The model text for color space.
Notes:

For color spaces with valid ICC profile only.
(Read only property)

75.12.31 Name as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the color space.
Notes:

For color spaces with valid ICC profile only.
The plugin picks name from Model, Description and Manufacturer properties.
(Read only property)

75.12.32 NumColors as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of colors in this color space.
Notes:

HiVal + 1 as specified in the color space. Indexed color space only.
(Read only property)

75.12.33 NumInComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of input components.
Notes: (Read only property)

75.12.34 NumOutComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of output components.
Notes: (Read only property)

75.12.35 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of this color space.
Notes: (Read only property)

75.12.36 TypeString as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type as string for viewing in debugger.
Notes: (Read only property)

75.13 class DynaPDFDeviceNAttributesMBS

75.13.1 class DynaPDFDeviceNAttributesMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for information about a Device N.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.13.4 Methods

75.13.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.13.6 ProcessColorants(index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns process colorants with the given index.
Notes:

Raises out of bounds exceptions on bad index or if object does not have such an array.
Index is zero based.

75.13.7 Separations(index as Integer) as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional array of separation color spaces.
Notes:

Raises out of bounds exceptions if used with wrong index parameter.
Index is zero based.

75.13.8 Properties

75.13.9 ProcessColorantsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of process colorants in the array or zero if not set.
Notes: (Read and Write property)

75.13.10 ProcessColorSpace as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The process color space.
Notes: (Read and Write property)

75.13.11 SeparationsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of color spaces in the Separations array.
Notes: (Read and Write property)

75.14 class DynaPDFEditTextMBS

75.14.1 class DynaPDFEditTextMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text editor.
Notes:

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

FindPattern needs at least Lite license and ReplacePattern needs a Pro license.

- MBS Real Studio Plugins, version 12.5pr1

75.14.5 Xojo Developer Magazine

- 15.2, page 9: News
- 11.1, page 9: News

75.14.6 Methods

75.14.7 Constructor(PDF as DynaPDFMBS)

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the edit text class with the given PDF instance.

75.14.8 Destructor

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

75.14.9 FindPattern(text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the text on the current PDF page for the given text.
Notes:

Returns the number of occurrences.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

FindPattern needs at least Lite license and ReplacePattern needs a Pro license.

75.14.10 ReplacePattern(NewText as string)

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the text with a new one or deletes it if the new string is an empty string.
Notes:

Use the PrepareWrite event.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

FindPattern needs at least Lite license and ReplacePattern needs a Pro license.

75.14.11 Properties

75.14.12 Parent as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference of the DynaPDFMBS object.
Notes: (Read only property)

75.14.13 Events

75.14.14 PrepareWrite(M as DynaPDFMatrixMBS, text as string, FillCS as Integer, FillColor as UInt32, StrokeCS as Integer, StrokeColor as UInt32, FontSize as Double, x as Double, y as Double, w as Double, h as Double, font as DynaPDFFontMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called before replace function writes.
Notes:

Changed font, text size or color here.
If you return true, the text is not written.
Like if you draw it yourself or delete it.

Add new parameters for fill color, stroke color, font size, rectangle and font information in version 17.0.

75.15 class DynaPDFEmbFileNodeMBS

75.15.1 class DynaPDFEmbFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an embedded file node.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.15.2 Methods

75.15.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.15.4 Properties

75.15.5 EF as DynaPDFFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Embedded file.
Notes: (Read only property)

75.15.6 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name.
Notes:

UTF-8 encoded name. This key contains usually a 7 bit ASCII string.
(Read only property)

75.15.7 NextObject as DynaPDFEmbFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Next node if any.
Notes: (Read only property)

75.16 class DynaPDFErrorExceptionMBS

75.16.1 class DynaPDFErrorExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error exception.
Notes:

We report errors as exceptions if Error event is not implemented or you return kErrorEventRaise there.
Subclass of the RuntimeException class.

75.17.4 Methods

75.17.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.17.6 Properties

75.17.7 Message as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error message
Notes: (Read and Write property)

75.17.8 ObjNum as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Object Number.
Notes:

-1 if not available
(Read and Write property)

75.17.9 Offset as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The offset.
Notes:

-1 if not available
(Read and Write property)

75.17.10 SrcFile as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source file.
Notes: (Read and Write property)

75.17.11 SrcLine as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Source Line.
Notes: (Read and Write property)

75.18 class DynaPDFExtGState2MBS

75.18.1 class DynaPDFExtGState2MBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The extended graphics state class.

75.18.2 Methods

75.18.3 BlendMode(index as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blend modes.
Notes: See bm* constants.

75.18.4 Properties

75.18.5 AlphaIsShape as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The AlphaIsShape property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

75.18.6 AutoStrokeAdjust as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The AutoStrokeAdjust property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

75.18.7 BlackGen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function handle or 0.
Notes: (Read and Write property)

75.18.8 BlackGen2 as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function handle or 0.
Notes: (Read and Write property)

75.18.9 BlendModeCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blend mode count.
Notes: (Read and Write property)

75.18.10 FillAlpha as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill alpha.
Notes:

-1.0 if not set.
(Read and Write property)

75.18.11 FlatnessTol as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The FlatnessTol property.
Notes:

-1.0 if not set.
(Read and Write property)

75.18.12 Halftone as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The halftone handle or 0.
Notes: (Read and Write property)

75.18.13 OverPrintFill as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintFill property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

75.18.14 OverPrintMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintMode property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

75.18.15 OverPrintStroke as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintStroke property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

75.18.16 RenderingIntent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rendering intent.
Notes:

riNone if not set
(Read and Write property)

75.18.17 SmoothnessTol as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SmoothnessTol property.
Notes:

-1.0 if not set.
(Read and Write property)

75.18.18 SoftMask as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Soft mask handle.
Notes: (Read and Write property)

75.18.19 SoftMaskNone as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the softmask must be disabled.
Notes: (Read and Write property)

75.18.20 StrokeAlpha as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stoke alpha value.
Notes:

-1.0 if not set.
(Read and Write property)

75.18.21 TextKnockout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TextKnockout property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

75.19 class DynaPDFExtGStateMBS

75.19.1 class DynaPDFExtGStateMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The extended graphics state class.

75.19.2 Properties

75.19.3 AlphaIsShape as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The AlphaIsShape property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

75.19.4 AutoStrokeAdjust as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The AutoStrokeAdjust property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

75.19.5 BlendMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blend mode.
Notes:

See bm* constants.
Default bmNotSet.
(Read and Write property)

75.19.6 FillAlpha as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill alpha.
Notes:

-1.0 if not set.
(Read and Write property)

75.19.7 FlatnessTol as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The FlatnessTol property.
Notes:

-1.0 if not set.
(Read and Write property)

75.19.8 OverPrintFill as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintFill property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

75.19.9 OverPrintMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintMode property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

75.19.10 OverPrintStroke as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintStroke property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

75.19.11 RenderingIntent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rendering intent.
Notes:

riNone if not set
(Read and Write property)

75.19.12 SmoothnessTol as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SmoothnessTol property.
Notes:

-1.0 if not set.
(Read and Write property)

75.19.13 SoftMask as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Soft mask pointer or nil. See CreateSoftMask for further information.
Notes: (Read and Write property)

75.19.14 SoftMaskNone as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Disables the active soft mask.
Notes: (Read and Write property)

75.19.15 StrokeAlpha as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stoke alpha value.
Notes:

-1.0 if not set.
(Read and Write property)

75.19.16 TextKnockout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TextKnockout property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

75.20 class DynaPDFFieldExMBS

75.20.1 class DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for extended field information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.20.4 Methods

75.20.5 Close

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: You can call close to release all values now or simply let it go automatically later.

75.20.6 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.20.7 Kids(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of child fields.

75.20.8 Properties

75.20.9 Action as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Action handle or -1 if not set.
Notes:

This action is executed when the field is activated.
(Read only property)

75.20.10 ActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of action.
Notes:

See kat* constants.
Meaningful only, if Action >= 0.
(Read only property)

75.20.11 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

75.20.12 BackColorSP as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of the background color.
Notes: (Read only property)

75.20.13 Barcode as DynaPDFBarcodeMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If present, this field is a barcode field.
Notes:

The field type is set to kftText since barcode fields are extended text fields.
(Read only property)

75.20.14 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box of the field in bottom-up coordinates.
Notes: (Read only property)

75.20.15 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Border color.
Notes: (Read only property)

75.20.16 BorderColorSP as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of the border color.
Notes: (Read only property)

75.20.17 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Border style.
Notes: (Read only property)

75.20.18 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Border width.
Notes: (Read only property)

75.20.19 CaptionPos as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Where to position the caption.
Notes:

Use constants kbcpCaptionAbove, kbcpCaptionBelow, kbcpCaptionLeft, kbcpCaptionOnly, kbcpCaptionOver, kbcpCaptionRight or kbcpImageOnly.
(Read only property)

75.20.20 CharSpacing as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The char spacing.
Notes:

Text fields only.
(Read only property)

75.20.21 CheckBoxChar as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ZapfDingbats character that is used to display the on state.
Notes: (Read only property)

75.20.22 Checked as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The check value.
Notes:

Check boxes only
(Read only property)

75.20.23 DefState as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default state.
Notes:

Check boxes only
(Read only property)

75.20.24 DefValue as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional default value.
Notes: (Read only property)

75.20.25 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the field was marked as deleted by DeleteField().
Notes: (Read only property)

75.20.26 DownCaption as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Caption of the down state.
Notes: (Read only property)

75.20.27 DownImage as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image handle of the down state.
Notes:

You can use this image handle with GetImageObj to get the image.
(Read only property)

75.20.28 EditFont as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Postscript name of the editing font.
Notes: (Read only property)

75.20.29 Events as DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The events for this fields.
Notes: (Read only property)

75.20.30 ExpValCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combo and list boxes only.
Notes:

The values can be accessed with GetFieldExpValueEx().
(Read only property)

75.20.31 ExpValue as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exp value.
Notes:

Check boxes only.
(Read only property)

75.20.32 FieldFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field flags.
Notes: (Read only property)

75.20.33 FieldFont as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Postscript name of the font.
Notes: (Read only property)

75.20.34 FieldName as String

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field name.
Notes:

Note that children of a field group or radio button have no name.
(Read only property)

75.20.35 FieldType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field type.
Notes: (Read only property)

75.20.36 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font size. 0.0 means auto font size.
Notes: (Read only property)

75.20.37 GroupType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If GroupType <>FieldType the field is a terminal field of a field group.
Notes: (Read only property)

75.20.38 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field handle.
Notes: (Read only property)

75.20.39 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Highlight mode.
Notes: (Read only property)

75.20.40 IEditFont as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The edit font object.
Notes:

The object is created on demand the first time you access and cached.
(Read only property)

75.20.41 IEditFontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The edit font info object.
Notes:

The object is created on demand the first time you access and cached.
(Read only property)

75.20.42 IFieldFont as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field font object.
Notes:

The object is created on demand the first time you access and cached.
(Read only property)

75.20.43 IFieldFontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field font info object.
Notes:

The object is created on demand the first time you access and cached.
(Read only property)

75.20.44 IsCalcField as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the OnCalc event of the field is connected with a JavaScript action.
Notes: (Read only property)

75.20.45 KidCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of fields in the Kids array.
Notes: (Read only property)

75.20.46 MapName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional unique mapping name of the field.
Notes: (Read only property)

75.20.47 MaxLen as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum text length.
Notes:

Text fields only ->zero means not restricted.
(Read only property)

75.20.48 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modification date.
Notes: (Read only property)

75.20.49 OC as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of an OCG or OCMD or -1.
Notes:

Fields can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller & h40000000.
(Read only property)

75.20.50 PageIndex as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array index to change the tab order.
Notes:

see SortFieldsByIndex().
(Read only property)

75.20.51 PageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Page on which the field is used or -1.
Notes: (Read only property)

75.20.52 RollCaption as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Caption of the roll over state.
Notes: (Read only property)

75.20.53 RollImage as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image handle of the roll over state.
Notes:

You can use this image handle with GetImageObj to get the image.
(Read only property)

75.20.54 Rotate as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotation angle in degrees.
Notes: (Read only property)

75.20.55 Signature as DynaPDFSigDictMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature details.
Notes:

Signature fields only. Present only for imported signature fields which which have a value. That means the file was digitally signed. -
Signed signature fields are always marked as deleted!
(Read only property)

75.20.56 TextAlign as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text align.
Notes:

Text fields only.
(Read only property)

75.20.57 TextColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text color.
Notes: (Read only property)

75.20.58 TextColorSP as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of the field's text.
Notes: (Read only property)

75.20.59 TextScaling as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text scaling.
Notes:

Text fields only.
(Read only property)

75.20.60 ToolTip as String

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tooltip text.
Notes:

Optional tool tip.
(Read only property)

75.20.61 UniqueName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional unique name (NM key).
Notes: (Read only property)

75.20.62 UpCaption as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Caption of the up state.
Notes: (Read only property)

75.20.63 UpImage as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image handle of the up state.
Notes:

You can use this image handle with GetImageObj to get the image.
(Read only property)

75.20.64 Value as String

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the field.
Notes: (Read only property)

75.20.65 WordSpacing as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The word spacing.
Notes:

Text fields only.
(Read only property)

75.21 class DynaPDFFieldMBS

75.21.1 class DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for field information.
Deprecated: This item is deprecated and should no longer be used. You can use DynaPDFFieldExMBS instead. **Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.21.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

75.21.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

75.21.4 Methods

75.21.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.21.6 Properties

75.21.7 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

75.21.8 BackCS as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of background / border color
Notes: (Read only property)

75.21.9 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Bounding box.
Notes: (Read only property)

75.21.10 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border color.
Notes: (Read only property)

75.21.11 Checked as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Only set if the field is a check box.
Notes: (Read only property)

75.21.12 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the field was deleted.
Notes: (Read only property)

75.21.13 FieldName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field name.
Notes:

May be unicode or ASCII encoded.
(Read only property)

75.21.14 FieldNameLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Field name length in characters.
Notes: (Read only property)

75.21.15 FieldType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field type (see ft* constants)
Notes: (Read only property)

75.21.16 Font as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used font by the field (PostScript name).
Notes: (Read only property)

75.21.17 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font size.
Notes: (Read only property)

75.21.18 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Field handle.
Notes: (Read only property)

75.21.19 KidCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Greater zero if the field has childs.
Notes: (Read only property)

75.21.20 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parent field handle if any.
Notes: (Read only property)

75.21.21 TextColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text color.
Notes: (Read only property)

75.21.22 TextCS as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of text color.
Notes: (Read only property)

75.21.23 ToolTip as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tool tip if any.
Notes:

Unicode or ASCII encoded.
(Read only property)

75.21.24 Value as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field value.
Notes:

Unicode or ASCII encoded.
(Read only property)

75.22 class DynaPDFFileSpecExMBS

75.22.1 class DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an extended file specification.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.22.2 Methods

75.22.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.22.4 Properties

75.22.5 AFRelationship as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The relationship.
Notes:

PDF 2.0
(Read and Write property)

75.22.6 ColItem as Ptr

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If <>nil the embedded file contains a collection item with user defined data.
Notes:

This entry can occur in PDF Collections only (PDF 1.7). See "PDF Collections" in the help file for further information.
(Read and Write property)

75.22.7 Description as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional description string.
Notes: (Read and Write property)

75.22.8 DOS as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional DOS file name.
Notes: (Read and Write property)

75.22.9 EmbFileNode as DynaPDFEmbFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The embedded file node for embedded file.
Notes: (Read and Write property)

75.22.10 FileName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: File name as 7 bit ASCII string.
Notes: (Read and Write property)

75.22.11 FileNameIsURL as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, FileName contains a URL.
Notes: (Read and Write property)

75.22.12 ID1 as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional file ID.
Notes:

Meaningful only if FileName points to a PDF file.
(Read and Write property)

75.22.13 ID2 as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional file ID.
Notes:

Meaningful only if FileName points to a PDF file.
(Read and Write property)

75.22.14 IsVolatile as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the file changes frequently with time.
Notes: (Read and Write property)

75.22.15 Mac as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional Mac file name.
Notes: (Read and Write property)

75.22.16 Thumb as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional thumb nail image.
Notes: (Read and Write property)

75.22.17 UFileName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file name.
Notes:

PDF 1.7. Same as FileName but Unicode is allowed.
(Read and Write property)

75.22.18 Unix as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional Unix file name.
Notes: (Read and Write property)

75.23 class DynaPDFFileSpecMBS

75.23.1 class DynaPDFFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for information about an embedded file.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.23.2 Methods

75.23.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.23.4 Properties

75.23.5 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer of an embedded file.
Notes: (Read and Write property)

75.23.6 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

75.23.7 Checksum as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: 16 byte MD5 digest if set.
Notes: (Read and Write property)

75.23.8 ColItem as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pointer to user defined collection item.
Notes: (Read and Write property)

75.23.9 Compressed as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Should be false if Decompress was true.
Notes: (Read and Write property)

75.23.10 CreateDate as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creation date as string.
Notes: (Read and Write property)

75.23.11 Description as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Description.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

75.23.12 FileName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: File name as 7 bit ASCII string.
Notes: (Read and Write property)

75.23.13 FileSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompressed stream size or zero if not known.
Notes: (Read and Write property)

75.23.14 IsURL as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, FileName contains a URL.
Notes: (Read and Write property)

75.23.15 MIMEType as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: MIME media type name (RFC 2046).
Notes:

See also MimeTypeToFileExtensionMBS function.
(Read and Write property)

75.23.16 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modification date as string.
Notes: (Read and Write property)

75.23.17 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the file specification in the name tree.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
This value is always present.
(Read and Write property)

75.23.18 UnicodeFileName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as FileName but Unicode is allowed.
Notes:

PDF 1.7.
This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

75.24 class DynaPDFFontInfoMBS

75.24.1 class DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for DynaPDF font info.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.24.2 Blog Entries

- Improvements for MBS Xojo DynaPDF Plugin
- MBS Xojo Plugins, version 18.1pr3

75.24.3 Blog Entries

- Improvements for MBS Xojo DynaPDF Plugin
- MBS Xojo Plugins, version 18.1pr3

75.24.4 Methods

75.24.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.24.6 HorzWidths(index as UInt32) as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Horizontal glyph widths.
Notes: Index from 0 ot HorzWidthsCount -1.

75.24.7 VertWidths(index as UInt32) as DynaPDFCIDMetricMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical glyph widths array.

75.24.8 Properties

75.24.9 Ascent as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Ascent (optional).
Notes: (Read only property)

75.24.10 AvgWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Average character width (optional).
Notes: (Read only property)

75.24.11 BaseEncoding as Integer

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The base encoding.
Notes:

Valid only if HaveEncoding is true.
Can be kbeWinAnsi, kbeStandard, kbeMacRoman or kbeMacExpert.
(Read only property)

75.24.12 BaseFont as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: PostScript Name or Family Name.
Notes: (Read only property)

75.24.13 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cap height (optional).
Notes: (Read only property)

75.24.14 CharSet as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The charset describes which glyphs are present in the font.
Notes: (Read only property)

75.24.15 CharSetSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the CharSet in bytes.
Notes: (Read only property)

75.24.16 CIDOrdering as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: SystemInfo ->Character collection.
Notes: (Read only property)

75.24.17 CIDRegistry as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: SystemInfo ->Issuer of the character collection.
Notes: (Read only property)

75.24.18 CIDSet as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CID fonts only.
Notes:

This is a table of bits indexed by CIDs.
(Read only property)

75.24.19 CIDSetSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the CIDSet in bytes.
Notes: (Read only property)

75.24.20 CIDSupplement as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CIDSystemInfo ->Supplement number.
Notes: (Read only property)

75.24.21 CIDToGIDMap as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allowed for embedded TrueType based CID fonts only.
Notes: (Read only property)

75.24.22 CIDToGIDMapSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the CIDToGIDMap in bytes.
Notes: (Read only property)

75.24.23 CMapBuf as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMap data.
Notes:

Only available if the CMap was embedded.
(Read only property)

75.24.24 CMapBufSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CMAP Buffer size in bytes.
Notes: (Read only property)

75.24.25 CMapName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CID fonts only external CMap name or encoding.
Notes: (Read only property)

75.24.26 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Descent (optional).
Notes: (Read only property)

75.24.27 Encoding as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unicode mapping 0..255.
Notes:

not available for CID fonts.
(Read only property)

75.24.28 FirstChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: First char (simple fonts only).
Notes: (Read only property)

75.24.29 Flags as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font flags.
Notes:

See DynaPDF manual.

The font flags describe certain properties of the font. The most important flags are the following:

* 1	Fixed pitch font
* 2	Serif style
* 4	Symbol font
* 8	Script style
* & h20	Non-symbolic font
* & h40	Italic style
* & h40000	Force Bold (Type1 fonts only)

The full set of available flags can be found in the PDF Reference.
(Read only property)

75.24.30 FontBBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the size of the largest glyph in this font.
Notes: (Read only property)

75.24.31 FontBuffer as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font data.
Notes:

Available if the font was embedded or loaded from a buffer.
(Read only property)

75.24.32 FontBufSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font file size in bytes..
Notes: (Read only property)

75.24.33 FontFamily as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional Font Family (Family Name).
Notes: (Read only property)

75.24.34 FontFilePath as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font file path.
Notes:

Only available for system fonts.
(Read only property)

75.24.35 FontFileType as Integer

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font file type.
Notes:

Can be:
kffsType1C, kffsOpenTypeC, kffsOpenType, kffsNoSubtype, kffsCIDFontType2 or kffsCIDFontType0C.
(Read only property)

75.24.36 FontName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font name (should be the same as BaseFont).
Notes: (Read only property)

75.24.37 FontStretch as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font stretch.
Notes:

Optional ->Condensed, and so on.
(Read only property)

75.24.38 FontType as Integer

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font type.
Notes:

If ftType0 the font is a CID font.
(Read only property)

75.24.39 FontWeight as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font weight (optional).
Notes: (Read only property)

75.24.40 FullName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The full name.
Notes:

System fonts only.
(Read only property)

75.24.41 HaveEncoding as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether encoding is known.
Notes:

If true, BaseEncoding was set from the font's encoding.
(Read only property)

75.24.42 HorzWidthsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of horizontal widths in the array.
Notes: (Read only property)

75.24.43 Imported as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether font is imported.
Notes:

If true, the font was imported from an external PDF file.
(Read only property)

75.24.44 ItalicAngle as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Italic angle.
Notes: (Read only property)

75.24.45 Lang as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional language code defined by BCP 47.
Notes: (Read only property)

75.24.46 LastChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last char (simple fonts only).
Notes: (Read only property)

75.24.47 Leading as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Leading (optional).
Notes: (Read only property)

75.24.48 Length1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the clear text portion of a Type1 font.
Notes: (Read only property)

75.24.49 Length2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the encrypted portion of a Type1 font program.
Notes: (Read only property)

75.24.50 Length3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the fixed-content portion of a Type1 font program.
Notes: (Read only property)

75.24.51 MaxWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum glyph width (optional).
Notes: (Read only property)

75.24.52 Metadata as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional XMP metadata stream about the font file.
Notes: (Read only property)

75.24.53 MetadataSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: MetaData size in bytes.
Notes: (Read only property)

75.24.54 MisWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Missing width (default = 0.0).
Notes: (Read only property)

75.24.55 Panose as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional 12 bytes long Panose string.
Notes:

CID fonts only.
(Read only property)

75.24.56 PostScriptName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: System fonts only.
Notes: (Read only property)

75.24.57 SpaceWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Space width in font units.
Notes:

A default value is set if the font contains no space character.
(Read only property)

75.24.58 StemH as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The thickness of horizontal stems.
Notes: (Read only property)

75.24.59 StemV as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The thickness of vertical stems.
Notes: (Read only property)

75.24.60 ToUnicode as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: ToUnicode CMap.
Notes:

Only available for imported fonts.
(Read only property)

75.24.61 ToUnicodeSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: ToUnicode CMap size in bytes.
Notes: (Read only property)

75.24.62 VertDefPos as DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default vertical displacement vector.
Notes: (Read only property)

75.24.63 VertWidthsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of vertical widths in the array.
Notes: (Read only property)

75.24.64 WMode as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writing Mode.
Notes:

0: Horizontal
1: Vertical.
(Read only property)

75.24.65 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of lowercase letters measured from the baseline.
Notes: (Read only property)

75.25 class DynaPDFFontMBS

75.25.1 class DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for pdf font information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.25.4 Methods

75.25.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.25.6 Encoding(Index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unicode mapping 0..255 if set.
Notes: Index from 0 to 255.

75.25.7 Widths(Index as Integer) as single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Glyph widths.
Notes: Index from 0 to WidthsCount-1.

75.25.8 Properties

75.25.9 Ascent as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ascent of this font.
Notes: (Read and Write property)

75.25.10 BaseFont as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: PostScript Name or Family Name.
Notes: (Read and Write property)

75.25.11 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Cap height.
Notes: (Read and Write property)

75.25.12 DefWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default character widths ->CID fonts only.
Notes: (Read and Write property)

75.25.13 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Descent.
Notes: (Read and Write property)

75.25.14 FirstChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first character.
Notes: (Read and Write property)

75.25.15 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font flags.
Notes: (Read and Write property)

75.25.16 FontFamily as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional Font Family (Family Name).
Notes:

Unicode or ASCII encoded.
(Read and Write property)

75.25.17 FontFile as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font file buffer.
Notes:

Only imported fonts are returned.
(Read and Write property)

75.25.18 FontFileType as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font file subtype.
Notes:

See kffs* constants like those:

Name	Value	Description
kffsType1C	0	CFF based Type1 font
kffsCIDFontType0C	1	CFF based Type1 CID font
kffsOpenType	2	TrueType based OpenType font
kffsOpenTypeC	3	CFF based OpenType font
kffsCIDFontType2	4	TrueType based CID Font
kffsNoSubtype	9	The font file is in the format of FontType

(Read and Write property)

75.25.19 FontName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Font name.
Notes: (Read and Write property)

75.25.20 FontType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font type.
Notes:

If ftType0 the font is a CID font.
(Read and Write property)

75.25.21 ItalicAngle as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Italic angle.
Notes: (Read and Write property)

75.25.22 LastChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Last char.
Notes: (Read and Write property)

75.25.23 Length1 as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the clear text portion of the Type1 font, or the length of the entire font program if FontType <>kffType1.
Notes: (Read and Write property)

75.25.24 Length2 as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the encrypted portion of the Type1 font program (Type1 fonts only).
Notes: (Read and Write property)

75.25.25 Length3 as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the fixed-content portion of the Type1 font program or zero if not present.
Notes: (Read and Write property)

75.25.26 SpaceWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Space width in font units or default value.
Notes: (Read and Write property)

75.25.27 WidthsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of widths in the array.
Notes: (Read and Write property)

75.25.28 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x-height.
Notes: (Read and Write property)

75.26 class DynaPDFFontMetricsMBS

75.26.1 class DynaPDFFontMetricsMBS

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for font metrics.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.26.3 Blog Entries

- MBS Xojo Plugins, version 21.2pr2

75.26.4 Methods

75.26.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.26.6 Properties

75.26.7 Ascent as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Ascent.
Notes: (Read and Write property)

75.26.8 AvgWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Average character width.
Notes: (Read and Write property)

75.26.9 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cap height.
Notes: (Read and Write property)

75.26.10 DefWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default width.
Notes: (Read and Write property)

75.26.11 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Descent.
Notes: (Read and Write property)

75.26.12 FirstChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: First char.
Notes: (Read and Write property)

75.26.13 FixedWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of all glyphs in a fixed pitch font.
Notes: (Read and Write property)

75.26.14 FontBBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font's bounding box.
Notes: (Read and Write property)

75.26.15 FontStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font style with which the font was loaded.
Notes:

See kfs* constants in DynaPDFMBS class.
(Read and Write property)

75.26.16 IsFixedPitch as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this a fixed pitch font?
Notes: (Read and Write property)

75.26.17 IsStdFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this is a standard font?
Notes: (Read and Write property)

75.26.18 IsSymbolFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this is a symbolic font?
Notes: (Read and Write property)

75.26.19 ItalicAngle as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Italic angle of italic fonts.
Notes: (Read and Write property)

75.26.20 LastChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last char.
Notes: (Read and Write property)

75.26.21 LineGap as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Typographic line gap.
Notes: (Read and Write property)

75.26.22 MacStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: macOS style flags.
Notes: (Read and Write property)

75.26.23 RealStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the real style of the font (bold and italic styles are maybe emulated)
Notes:

See kfs* constants in DynaPDFMBS class.
(Read and Write property)

75.26.24 StemV as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of vertical stems.
Notes: (Read and Write property)

75.26.25 StrikeoutPos as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Strikeout position.
Notes: (Read and Write property)

75.26.26 StrikeoutWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of the strikeout line.
Notes: (Read and Write property)

75.26.27 TypoAscender as Single

MBS DynaPDF Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: sTypoAscender of the OS/2 table of TrueType and OpenType fonts.
Notes: (Read and Write property)

75.26.28 TypoLeading as Single

MBS DynaPDF Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Typographic leading or line height of the font. T
Notes:

This is TypoAscender - Descent + LineGap.
If typographic metrics are not available then TypoAscender is set to Ascent.
(Read and Write property)

75.26.29 UnderlinePos as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Underline position.
Notes: (Read and Write property)

75.26.30 UnderlineWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of the underline.
Notes: (Read and Write property)

75.26.31 UnicodeRange1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitset for unicode ranges.
Notes: (Read and Write property)

75.26.32 UnicodeRange2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitset for unicode ranges.
Notes: (Read and Write property)

75.26.33 UnicodeRange3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitset for unicode ranges.
Notes: (Read and Write property)

75.26.34 UnicodeRange4 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitset for unicode ranges.
Notes: (Read and Write property)

75.26.35 Weight as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font weight.
Notes: (Read and Write property)

75.26.36 WidthClass as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width class of the font.
Notes: (Read and Write property)

75.26.37 WinDescent as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: usWinDescent of the OS/2 table of TrueType and OpenType fonts
Notes: (Read and Write property)

75.26.38 WinStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: fsSelection of the OS/2 table of TrueType and OpenType fonts
Notes: (Read and Write property)

75.26.39 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: X-height.
Notes: (Read and Write property)

75.26.40 Constants

75.26.41 kurAlphabeticPresentationForms = & h40000000

75.27 class DynaPDFGlyphOutlineMBS

75.27.1 class DynaPDFGlyphOutlineMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for glyph outline.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.27.2 Methods

75.27.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.27.4 Outline(index as Integer) as DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries point with given index.
Notes: Index from 0 to OutlineCount-1.

75.27.5 Outlines as DynaPDFPointMBS()

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array with all points.

75.27.6 Properties

75.27.7 AdvanceX as Single

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Glyph width in horizontal writing mode.
Notes: (Read only property)

75.27.8 AdvanceY as Single

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Glyph height in vertical writing mode.
Notes: (Read only property)

75.27.9 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box of the glyph outline.
Notes: (Read and Write property)

75.27.10 HaveBBox as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, BBox was computed.
Notes: (Read and Write property)

75.27.11 Lsb as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Left side bearing (already applied, info only).
Notes: (Read and Write property)

75.27.12 OriginX as Single

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Placement vector (vertical writing mode only).
Notes: (Read only property)

75.27.13 OriginY as Single

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Placement vector (vertical writing mode only).
Notes: (Read only property)

75.27.14 OutlineCount as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of points.
Notes: (Read and Write property)

75.27.15 Tsb as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Top side bearing (already applied, info only).
Notes: (Read and Write property)

75.28 class DynaPDFGoToActionMBS

75.28.1 class DynaPDFGoToActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details on a GoTo action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.28.2 Methods

75.28.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.28.4 DestPos(index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination position.
Notes:

Array of 4 floating point values if set.
Index from 0 to 3.

75.28.5 Properties

75.28.6 DestFile as DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Notes: (Read only property)

75.28.7 DestName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional named destination that shall be loaded when opening the file.
Notes: (Read only property)

75.28.8 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination page (the first page is denoted by 1).
Notes: (Read only property)

75.28.9 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination type.
Notes: (Read only property)

75.28.10 NewWindow as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to open a new window.
Notes:

Meaningful only if the destination file points to a PDF file.
-1 = viewer default, 0 = false, 1 = true.
(Read only property)

75.28.11 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index of the action.
Notes:

-1 or next action handle to be executed if any.
(Read only property)

75.28.12 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the action.
Notes:

Only set if NextAction is >= 0.
(Read only property)

75.29 class DynapdfGraphicsPathItemMBS

75.29.1 class DynapdfGraphicsPathItemMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a path item.
Notes: MBS Plugin needs to collect what path items you added, so we can later draw them to the PDF.

75.29.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr1

75.29.3 Blog Entries

- MBS Xojo Plugins, version 20.2pr1

75.29.4 Properties

75.29.5 clockwise as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The clockwise parameter.
Notes:

For drawing arcs.
(Read only property)

75.29.6 cornerHeight as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The corner height.
Notes:

for round rectangle.
(Read and Write property)

75.29.7 cornerWidth as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The corner width.
Notes:

for round rectangle.
(Read and Write property)

75.29.8 cp1X as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: First control point X coordinate.
Notes: (Read and Write property)

75.29.9 cp1Y as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: First control point Y coordinate.
Notes: (Read and Write property)

75.29.10 cp2X as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Second control point X coordinate.
Notes: (Read and Write property)

75.29.11 cp2Y as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Second control point Y coordinate.
Notes: (Read and Write property)

75.29.12 cpX as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Control point X coordinate.
Notes: (Read and Write property)

75.29.13 cpY as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Control point Y coordinate.
Notes: (Read and Write property)

75.29.14 endRadian as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The radian for the end angle.
Notes: (Read and Write property)

75.29.15 height as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height parameter.
Notes: (Read and Write property)

75.29.16 radius as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The radius for an arc.
Notes: (Read and Write property)

75.29.17 startRadian as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The radian for the start angle.
Notes: (Read and Write property)

75.29.18 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of path item.
Notes:

See type constants.
(Read only property)

75.29.19 width as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width parameter.
Notes: (Read and Write property)

75.29.20 x as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: X coordinate.
Notes: (Read and Write property)

75.29.21 y as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y coordinate.
Notes: (Read and Write property)

75.29.22 Constants

75.29.23 TypeAddArc = 1

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the item type constants.
Notes: Add arc

75.29.24 TypeAddCurveToPoint = 2

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the item type constants.
Notes: Add curve to point

75.29.25 TypeAddLineToPoint = 3

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the item type constants.
Notes: Add line to point

75.29.26 TypeAddQuadraticCurveToPoint = 4

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the item type constants.
Notes: Add quadratic curve to point

75.29.27 TypeAddRectangle = 5

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the item type constants.
Notes: Add rectangle

75.29.28 TypeAddRoundRectangle = 6

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the item type constants.
Notes: Add round rectangle

75.29.29 TypeMoveToPoint = 7

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the item type constants.
Notes: Move to point

75.29.30 TypeUnknown = 0

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the item type constants.
Notes: Unknown type. Only for an uninitialized object.

75.30 class DynapdfGraphicsPathMBS

75.30.1 class DynapdfGraphicsPathMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a path.
Notes:

We subclass the GraphicsPath class in Xojo 2019r2 and newer to be able to record what methods you call. Subclass of the GraphicsPath class.

75.30.4 Methods

75.30.5 AddArc(x As Double, y As Double, radius As Double, startRadian As Double, endRadian As Double, clockwise As Boolean)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an arc to the path.

75.30.6 AddCurveToPoint(cp1X As Double, cp1Y As Double, cp2X As Double, cp2Y As Double, x As Double, y As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a cubic Bézier curve to the point in the path.

75.30.7 AddLineToPoint(x As Double, y As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a line from the Point to the specified point.

75.30.8 AddQuadraticCurveToPoint(cpX As Double, cpY As Double, x As Double, y As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a quadratic Bézier curve to the point in the path.

75.30.9 AddRectangle(x As Double, y As Double, width As Double, height As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a rectangle to the path.

75.30.10 AddRoundRectangle(x As Double, y As Double, width As Double, height As Double, cornerWidth As Double, cornerHeight As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a rounded rectangle to the path.

75.30.11 MoveToPoint(x As Double, y As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves to the point without drawing anything.

75.30.12 PathItems as DynapdfGraphicsPathItemMBS()

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array of path items.

75.30.13 Properties

75.30.14 Count as Integer

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries count of items.
Notes: (Read only property)

75.31 class DynaPDFHideActionMBS

75.31.1 class DynaPDFHideActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a hide action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.31.2 Methods

75.31.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.31.4 Fields(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of fields.

75.31.5 Properties

75.31.6 FieldsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of fields in the array.
Notes: (Read only property)

75.31.7 Hide as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A flag indicating whether to hide or show the fields in the array.
Notes: (Read only property)

75.31.8 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle of the next action to use.
Notes:

-1 or next action handle to be executed if any.
(Read only property)

75.31.9 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

Only set if NextAction is >= 0.
(Read only property)

75.32 class DynaPDFImageMBS

75.32.1 class DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for dynapdf for passing image data.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.32.4 Methods

75.32.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.32.6 Decode as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decode array.
Notes:

If set, samples must be decoded. The array contains 2 * NumComponents values.
The decode array is never set if the image is returned decompressed since it is already applied during decompression.

75.32.7 MaskImage(Flags as UInt32 = 0) as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the image details on the soft mask for this image.
Notes:

If set, a 1 bit image is used as a transparency mask.
Plugin calls GetImageObjEx with the given flags to decode the image.

75.32.8 PictureData(ImageFormat as Integer = 0, ImageFilter as Integer = 0) as String

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Requests images in the given format.
Notes:

Default for ImageFormat is Tiff (kifmTIFF is zero) and default Image Filter is flate (kcfFlate is zero).
You can pass different constants.
If you request JPEG or JPEG 2000 and the image is already in that format, we pass through.
Else we recompress image.

75.32.9 SoftMask(Flags as UInt32 = 0) as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the image details on the soft mask for this image.
Notes:

If set, a grayscale image is used as alpha channel.
Plugin calls GetImageObjEx with the given flags to decode the image.

75.32.10 Properties

75.32.11 BitsPerPixel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bit depth of the image buffer.
Notes:

Possible values are 1, 2, 4, 8, 24, 32, and 64.

(Read only property)

75.32.12 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer for the image data as a string.
Notes:

Each scanline is aligned to a full byte.
(Read only property)

75.32.13 BufferPtr as Ptr

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer for the image data.
Notes:

Each scanline is aligned to a full byte.
(Read only property)

75.32.14 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the image buffer in bytes.
Notes: (Read only property)

75.32.15 ColorCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of colors in the color table.
Notes: (Read only property)

75.32.16 ColorMask as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pointer to color mask.
Notes:

The array contains ranges in the form min/max (2 values per component) for each component before decoding.
(Read only property)

75.32.17 ColorSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space refers either to the image buffer or to the color table if set.
Notes:

Note that 1 bit images can occur with and without a color table.

(Read only property)

75.32.18 ColorSpaceObject as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original color space.
Notes: (Read only property)

75.32.19 ColorTable as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color table or nil.
Notes: (Read only property)

75.32.20 DestHeight as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination height (can be negative).
Notes: (Read only property)

75.32.21 DestWidth as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination width (can be negative).
Notes: (Read only property)

75.32.22 DestX1 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X1 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

75.32.23 DestX2 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X2 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

75.32.24 DestX3 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X3 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

75.32.25 DestX4 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X4 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

75.32.26 DestY1 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y1 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

75.32.27 DestY2 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y2 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

75.32.28 DestY3 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y3 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

75.32.29 DestY4 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y4 coordinate of the parallelogram into which the image is drawn.
Notes: (Read only property)

75.32.30 FillColor as Integer

MBS DynaPDF Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current fill color.
Notes:

An image mask is drawn with the current fill color.
(Read only property)

75.32.31 FillColorSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space in which FillColor is defined.
Notes: (Read only property)

75.32.32 Filter as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Required decode filter if the image is compressed.
Notes:

Required decode filter if the image is compressed.
Possible values are dfDCTDecode (JPEG), dfJPXDecode (JPEG2000), and dfJBIG2Decode. Other filters are already removed by DynaPDF since a conversion to a native file format is then always required.

(Read only property)

75.32.33 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image height in pixel.
Notes: (Read only property)

75.32.34 ImageHandle as Ptr

MBS DynaPDF Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image handle if known.
Notes: (Read only property)

75.32.35 ImageIndex as Integer

MBS DynaPDF Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image index if known.
Notes: (Read only property)

75.32.36 IMaskImageHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index of the mask image.
Notes:

This is the index to use with DynaPDFMBS.GetImageObj function.
(Read only property)

75.32.37 InlineImage as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the image is an inline image.
Notes: (Read only property)

75.32.38 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rendering intent.
Notes:

Default riNone.
(Read only property)

75.32.39 Interpolate as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, image interpolation should be performed.
Notes: (Read and Write property)

75.32.40 ISoftMaskHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index of the soft mask image.
Notes:

This is the index to use with DynaPDFMBS.GetImageObj function.
(Read only property)

75.32.41 JBIG2Globals as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional global page 0 segment (kdfJBIG2Decode filter only).
Notes: (Read only property)

75.32.42 JBIG2GlobalsSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the bit stream in bytes.
Notes: (Read only property)

75.32.43 Measure as DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional measure dictionary.
Notes: (Read only property)

75.32.44 Metadata as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional XML Metadata stream.
Notes: (Read only property)

75.32.45 MetadataSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of Metadata in bytes.
Notes: (Read only property)

75.32.46 MinIsWhite as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the colors of 1 bit images are reversed.
Notes: (Read only property)

75.32.47 NumComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of components stored in the image buffer.
Notes: (Read only property)

75.32.48 OCG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of an OCG or OCMD or -1.
Notes:

Images can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller & h40000000.
(Read only property)

75.32.49 OrgFilter as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image was compressed with this filter in the PDF file.
Notes:

This info is useful to determine which compression filter should be used when creating a new image file from the image buffer.

(Read only property)

75.32.50 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference to the parent DynaPDF object.
Notes: (Read and Write property)

75.32.51 PtData as DynaPDFPointDataDictionaryMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Point Data dictionary.
Notes: (Read only property)

75.32.52 ResolutionX as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image resolution on the x-axis.
Notes: (Read only property)

75.32.53 ResolutionY as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image resolution on the y-axis.
Notes: (Read only property)

75.32.54 ScanLineLength as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of a scanline in bytes.
Notes: (Read only property)

75.32.55 SMaskInData as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SMaskInData value.
Notes:

JPXDecode only, PDF_MAX_INT if not set. See PDF Reference for further information.

(Read only property)

75.32.56 Transparent as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transparent mode.
Notes:

The meaning is different depending on the bit depth and whether a color table is available. If the image is a 1 bit image and if no color table is available, black pixels must be drawn with the current fill color. If the image contains a color table ColorMask contains the range of indexes in the form min/max index which appears transparent. If no color table is present ColorMask contains the transparent ranges in the form min/max for each component.

(Read only property)

75.32.57 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image width in pixel.
Notes: (Read only property)

75.33 class DynaPDFImportDataActionMBS

75.33.1 class DynaPDFImportDataActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an import data action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.33.2 Methods

75.33.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.33.4 Properties

75.33.5 Data as DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data or file to be loaded.
Notes: (Read only property)

75.33.6 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes:

-1 or next action handle to be executed if any
(Read only property)

75.33.7 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

Only set if NextAction is >= 0.
(Read only property)

75.34 class DynaPDFJavaScriptActionMBS

75.34.1 class DynaPDFJavaScriptActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a javascript action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.34.2 Methods

75.34.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.34.4 Properties

75.34.5 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes:

-1 or next action handle to be executed if any
(Read only property)

75.34.6 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

Only set if NextAction is >= 0.
(Read only property)

75.34.7 Script as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The script.
Notes: (Read only property)

75.35 class DynaPDFLaunchActionMBS

75.35.1 class DynaPDFLaunchActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details on a launch action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.35.2 Methods

75.35.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.35.4 Properties

75.35.5 AppName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional. The name of the application that should be launched.
Notes: (Read only property)

75.35.6 DefDir as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional default directory.
Notes: (Read only property)

75.35.7 File as DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file specification for the launch.
Notes: (Read only property)

75.35.8 NewWindow as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to launch in new window.
Notes:

-1 = viewer default, 0 = false, 1 = true.
(Read only property)

75.35.9 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes:

-1 or next action handle to be executed if any
(Read only property)

75.35.10 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

Only set if NextAction is >= 0.
(Read only property)

75.35.11 Operation as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional string specifying the operation to perform (open or print).
Notes: (Read only property)

75.35.12 Parameter as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional parameter string that shall be passed to the application (AppName).
Notes: (Read only property)

75.36 class DynaPDFLayerGroupMBS

75.36.1 class DynaPDFLayerGroupMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a DynaPDF Layer Group.
Notes:

Used to link layers in hierarchies.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.36.2 Methods

75.36.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.36.4 Properties

75.36.5 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

75.36.6 Owner as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The link to the parent DynaPDF object.
Notes: (Read only property)

75.37 class DynaPDFLineAnnotParameterMBS

75.37.1 class DynaPDFLineAnnotParameterMBS

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for line annotation parameters.

75.37.2 Properties

75.37.3 Caption as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies whether the parameter Content of the function LineAnnot should be used as caption of the measure line.
Notes: (Read and Write property)

75.37.4 CaptionOffsetX as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Horizontal offset of the caption from its normal position.
Notes: (Read and Write property)

75.37.5 CaptionOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical offset of the caption from its normal position.
Notes: (Read and Write property)

75.37.6 CaptionPos as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position where the caption should be drawn if present.
Notes: (Read and Write property)

75.37.7 LeaderLineExtend as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional leader line extend beyond the leader line (must be a positive value or zero).
Notes: (Read and Write property)

75.37.8 LeaderLineLen as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the leader lines (positive or negative).
Notes: (Read and Write property)

75.37.9 LeaderLineOffset as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Amount of space between the endpoints of the annotation and the leader lines (must be a positive value or zero)
Notes: (Read and Write property)

75.38 class DynaPDFMatrixMBS

75.38.1 class DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a DynaPDF matrix structure.
Notes: in the documentation known as TCTM struct.

75.38.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr2

- DynaPDF Text Position Examples
- MBS Xojo / Real Studio Plugins, version 17.0pr1
- MBS Real Studio Plugins, version 11.1pr8

75.38.4 Methods

75.38.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new matrix and sets it to identity.
Example:

```
dim m as new DynaPDFMatrixMBS
MsgBox m
```

See also:

- 75.38.6 Constructor(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 13850
- 75.38.7 Constructor(other as DynaPDFMatrixMBS) 13850

75.38.6 Constructor(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new instance with setting values to the given parameters.
Example:

```
dim m as new DynaPDFMatrixMBS(1,2,3,4,5,6)
MsgBox m
```

See also:

- 75.38.5 Constructor 13849
- 75.38.7 Constructor(other as DynaPDFMatrixMBS) 13850

75.38.7 Constructor(other as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a matrix object with copying the values.
Example:

```
dim m as new DynaPDFMatrixMBS(1,2,3,4,5,6)
dim n as new DynaPDFMatrixMBS(m)
MsgBox n
```

See also:

- 75.38.5 Constructor 13849
- 75.38.6 Constructor(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 13850

75.38.8 Identity as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates new object with identity matrix.
Example:

```
dim m as DynaPDFMatrixMBS = DynapdfMatrixMBS.Identity

MsgBox m // shows [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

75.38.9 Invert

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the matrix.
Example:

```
dim m as new DynaPDFMatrixMBS

m.Invert

MsgBox m // shows [ 1.000000 -0.000000 -0.000000 1.000000 0.000000 0.000000 ]
```

75.38.10 LeftMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies both matrix where self is on the left side.
See also:

- 75.38.11 LeftMultiply(other as DynaPDFMatrixMBS) 13851

75.38.11 LeftMultiply(other as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies both matrix where self is on the left side.
Example:

```
dim m1 as new DynaPDFMatrixMBS
dim m2 as new DynaPDFMatrixMBS

m1.Rotate 0.1
m2.Scale 2.0, 3.0
```

```
dim m3 as new DynaPDFMatrixMBS(m1)
m3.LeftMultiply(m2)

MsgBox m1.Str+EndOfLine+m2.Str+EndOfLine+m3.Str
```

See also:

- 75.38.10 LeftMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 13851

75.38.12 Operator_Compare(other as DynaPDFMatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two matrix objects whether they have same values.
Example:

```
dim m1 as new DynaPDFMatrixMBS
dim m2 as new DynaPDFMatrixMBS

if m1 = m2 then
MsgBox "Equal, same values."
else
MsgBox "Not equal ->Bug in Plugin."
end if

if m1 is m2 then
MsgBox "Equal ->Bug in Xojo."
else
MsgBox "Not equal, different objects."
end if
```

75.38.13 Operator_Convert as string

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts matrix into a string for displaying in log files.
Example:

```
dim m as new DynaPDFMatrixMBS
MsgBox m // shows [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

Notes: Added for debugging.

75.38.14 Operator_Multiply(other as DynaPDFMatrixMBS) as DynapdfMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies both matrix where self is on the left side.
Example:

```
dim m1 as new DynaPDFMatrixMBS
dim m2 as new DynaPDFMatrixMBS

m1.Rotate 0.1
m2.Scale 2.0, 3.0

dim m3 as DynaPDFMatrixMBS = m1*m2

MsgBox m1.Str+EndOfLine+m2.Str+EndOfLine+m3.Str
```

75.38.15 Operator_MultiplyRight(other as DynaPDFMatrixMBS) as DynapdfMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies both matrix where self is on the right side.

75.38.16 RightMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies both matrix where self is on the right side.
See also:

- 75.38.17 RightMultiply(other as DynaPDFMatrixMBS) 13853

75.38.17 RightMultiply(other as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies both matrix where self is on the right side.
See also:

- 75.38.16 RightMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 13853

75.38.18 Rotate(angle as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates matrix with the given angle.
Example:

```
dim m as new DynaPDFMatrixMBS

const pi = 3.14159265

dim angle as Double = 30.0/180.0*pi

m.Rotate(angle)

MsgBox m // shows [ 0.866025 0.500000 -0.500000 0.866025 0.000000 0.000000 ]
```

Notes: Angle in radians: 2*pi = 360 degree

75.38.19 Scale(sx as Double, sy as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the matrix.
Example:

```
dim m as new DynaPDFMatrixMBS

m.Scale 2.0, 3.0

MsgBox m // [ 2.000000 0.000000 0.000000 3.000000 0.000000 0.000000 ]
```

75.38.20 SetIdentity

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets values back to the identity matrix.
Example:

```
dim m as new DynaPDFMatrixMBS

m.Scale 2.0, 3.0 // modify values
m.SetIdentity // and reset

MsgBox m // [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

75.38.21 SetValues(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets all the values in one method
Example:

```
dim m as new DynaPDFMatrixMBS

m.SetValues 1,2,3,4,5,6

MsgBox m
```

75.38.22 Transform(byref x as Double, byref y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the matrix to the given point.
Example:

```
dim m as new DynaPDFMatrixMBS

const pi = 3.14159265
dim angle as Double = 30.0/180.0*pi
m.Rotate(angle)
m.Translate 2.0, 3.0

dim x as Double = 100.0
dim y as Double = 100.0

m.Transform x,y

MsgBox str(x)+" "+str(y) // 36.83459 140.2006
```

75.38.23 TransformInv(byref x as Double, byref y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the matrix to the given point in inverse mode.
Example:

```
dim m as new DynaPDFMatrixMBS

const pi = 3.14159265
dim angle as Double = 30.0/180.0*pi
m.Rotate(angle)
m.Translate 2.0, 3.0

dim x as Double = 100.0
dim y as Double = 100.0

// transform
m.Transform x,y

MsgBox str(x)+" "+str(y) // 36.83459 140.2006

// transform back
m.TransformInv x,y

MsgBox str(x)+" "+str(y) // 100 100#
```

Notes: Like you have a point and want to know whether it was before the matrix was applied.

75.38.24 Translate(x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates matrix by given values.
Example:

```
dim m as new DynaPDFMatrixMBS

m.Translate 2,3

MsgBox m // shows [ 1.000000 0.000000 0.000000 1.000000 2.000000 3.000000 ]
```

75.38.25 Properties

75.38.26 a as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the matrix properties.
Notes: (Read and Write property)

75.38.27 b as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the matrix properties.
Notes: (Read and Write property)

75.38.28 c as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the matrix properties.
Notes: (Read and Write property)

75.38.29 d as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the matrix properties.
Notes: (Read and Write property)

75.38.30 IsIdentity as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether matrix is the identity matrix.
Example:

```
dim m as new DynaPDFMatrixMBS
```

```
MsgBox str(m.IsIdentity)

m.a = 3.0

MsgBox str(m.IsIdentity)
```

Notes:

Returns true if a = 1, b = 0, c = 0, d = 1, x = 0 and y = 0.
(Read only property)

75.38.31 RotationAngle as Double

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the rotate angle.
Example:

```
dim m as DynaPDFMatrixMBS = DynapdfMatrixMBS.Identity

m.Rotate 0.1

MsgBox str(m.GetRotationAngle) // shows 0.1
```

Notes:

In radians from -pi to pi.
Used to be named GetRotationAngle before.
(Read only property)

75.38.32 ScaleFactor as Double

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the scale factor.
Example:

```
dim m as DynaPDFMatrixMBS = DynapdfMatrixMBS.Identity

m.Scale 3.0, 4.0

MsgBox str(m.GetScaleFactor) // shows 3.535534
```

Notes:

Used to be named GetScaleFactor before.
(Read only property)

75.38.33 StringValue as string

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts matrix into a string for displaying in log files.
Example:

```
dim m as new DynaPDFMatrixMBS
MsgBox m.Str // shows [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

Notes:

Added for debugging.
Used to be named Str.
(Read only property)

75.38.34 x as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the matrix properties.
Notes: (Read and Write property)

75.38.35 y as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the matrix properties.
Notes: (Read and Write property)

75.39 class DynaPDFMBS

75.39.1 class DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dynapdf class.
Notes:

A pdf library to create, modify, import pdf files.
You need a separate dynapdf license key for this class.

Please note that all constants have the prefix k. In the dynapdf_help.pdf file, the constants don't have a k prefix. And the C functions there have IPDF parameters which the plugin automatically passes for you. So

SI32 pdfSetPageCoords(const void* IDPF, TPageCoord PageCoords)

translates in Xojo to

function SetPageCoords(PageCoords as Integer) as Integer

and you call it like this:

call pdf.SetPageCoords pdf.kpcTopDown

where in this sample the DynaPDF object is named pdf.

Pro license is required for the following functions:

- BeginTransparencyGroup
- ConvertColors
- Create3DAnnot
- CreateSoftMask
- FlattenForm
- GetPageText
- ImportPage and ImportPageEx
- ParseContent

- RenderAnnotOrField
- RenderPage
- SetCMapDir
- SetExtColorSpace, SetExtFillColorSpace and SetExtStrokeColorSpace.
- SetUseGlobalImpFiles

Lite is required for:

- AddRenderingIntent and AddRenderingIntentEx
- CreateFormFields
- CloseFileEx
- ConvertEMFSpool
- CreateCollection
- CreateExtGState
- InsertMetafile and InsertMetafileEx
- OpenImportBuffer, OpenImportFile and OpenImportStream
- SetPDFVersion for PDF/A and PDF/X

And all functions relaying on those functions internally.

75.39.8 Methods

75.39.9 AddActionToObj(ObjType as Integer, theEvent as Integer, ActHandle as Integer, ObjHandle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds an action to a PDF object.
See also AddActionToObj function in DynaPDF manual.

75.39.10 AddAnnotToPage(PageNum as UInt32, Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an annotation to a page.
Notes:

With exception of PopUp annotations all annotation types can be drawn on multiple pages. Watermark or Stamp annotations are typical annotations which can be placed on multiple pages.
Returns true on success.
See also AddAnnotToPage function in DynaPDF manual.

75.39.11 AddArticle(PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a new article and adds it to the currently open article thread that must be created with CreateArticleThread() beforehand.
See also AddArticle function in DynaPDF manual.

75.39.12 AddBookmark(title as String, parent as Integer, DestPage as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to unicode.
See also AddBookmark function in DynaPDF manual.

75.39.13 AddBookmarkAnsi(title as String, parent as Integer, DestPage as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a bookmark to the global outline tree of the document.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The title parameter is converted to ANSI.
See also AddBookmark function in DynaPDF manual.

75.39.14 AddBookmarkEx(title as String, parent as Integer, NamedDest as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to unicode.
See also AddBookmarkEx function in DynaPDF manual.

75.39.15 AddBookmarkEx2(title as String, parent as Integer, NamedDest as String, unicode as boolean, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a bookmark to the global outline tree of the document.
Notes: If unicode is true, the plugin passes NamedDest as unicode, else as Windows ANSI text.
See also AddBookmarkEx2 function in DynaPDF manual.

75.39.16 AddBookmarkEx2Ansi(title as String, parent as Integer, NamedDest as String, unicode as boolean, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a bookmark to the global outline tree of the document.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** If unicode is true, the plugin passes NamedDest as unicode, else as Windows ANSI text.
See also AddBookmarkEx2 function in DynaPDF manual.

75.39.17 AddBookmarkExAnsi(title as String, parent as Integer, NamedDest as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a bookmark to the global outline tree of the document.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The title parameter is converted to ANSI.
See also AddBookmarkEx function in DynaPDF manual.

75.39.18 AddButtonImage(BtnHandle as Integer, State as Integer, Caption as string, ImgFile as FolderItem) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds an image to a push button to one or more of the three different states of a button.
See also AddButtonImage function in DynaPDF manual.

75.39.19 AddButtonImageEx(BtnHandle as Integer, State as Integer, Caption as string, hbitmap as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds a memory bitmap to a push button in the same ways as AddButtonImage() but accepts a HBITMAP handle as input image.
See also AddButtonImageEx function in DynaPDF manual.

75.39.20 AddContinueText(text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function prints a single text line and adds a line feed.
Notes: The text string is converted to Unicode.
See also AddContinueText function in DynaPDF manual.

75.39.21 AddContinueTextAnsi(text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function prints a single text line and adds a line feed.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text string is converted to ANSI.
See also AddContinueText function in DynaPDF manual.

75.39.22 AddDeviceNProcessColorants(DeviceNCS as Integer, Colorants() as string, ProcessCS as Integer, Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds DeviceN process colorants.
Notes: Returns true on success and false on failure.
See also AddDeviceNProcessColorants function in DynaPDF manual.

75.39.23 AddDeviceNSeparations(DeviceNCS as Integer, Colorants() as string, SeparationCS() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds device N seperations.
Notes:

Same as AddDeviceNSeparationsAnsi, but here the Xojo colorant strings are converted to UTF-8 encoding before they are passed to the DynaPDF library.

ubound(Colorants) must be ubound(SeparationCS).
Returns true on success and false on failure.

Currently limited to 100 colorants on the plugin side.
See also AddDeviceNSeparations function in DynaPDF manual.

75.39.24 AddDeviceNSeparationsAnsi(DeviceNCS as Integer, Colorants() as string, SeparationCS() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds device N seperations.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

Same as AddDeviceNSeparations, but here the Xojo colorant strings are converted to ANSI encoding before they are passed to the DynaPDF library.

ubound(Colorants) must be ubound(SeparationCS).
Returns true on success and false on failure.

Currently limited to 100 colorants on the plugin side.
See also AddDeviceNSeparations function in DynaPDF manual.

75.39.25 AddFieldToFormAction(Action as Integer, Field as Integer, Include as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a field to a form action.
See also AddFieldToFormAction function in DynaPDF manual.

75.39.26 AddFieldToHideAction(HideAct as Integer, Field as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a field to a hide action.
See also AddFieldToHideAction function in DynaPDF manual.

75.39.27 AddFileComment(Text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds one or more comments to the end of the PDF file.
Notes: The text parameter is converted to unicode.
See also AddFileComment function in DynaPDF manual.

75.39.28 AddFileCommentAnsi(Text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds one or more comments to the end of the PDF file.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also AddFileComment function in DynaPDF manual.

75.39.29 AddFontSearchPath(path as folderitem, recursive as boolean = true) as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a search path to the list of available font search paths.
Example:

```
dim d as new DynaPDFMBS
if TargetLinux then
call d.AddFontSearchPath "/usr/share/fonts/truetype", true
else
// on Mac and Windows we use system fonts.
end if
```

Notes:

This function adds a search path to the list of available font search paths. An arbitrary number of search paths can be added at runtime. Subdirectories are included recursively if the parameter Recursive is true. DynaPDF requires no separate metric files for Type1 fonts.

The list of search directories can be cleared at runtime with the function ClearHostFonts().

If system fonts are enabled (default) DynaPDF adds the default font directories of the operating system automatically to the list of font search paths (Windows and Mac OSX only, see SetUseSystemFonts() for further information). On Windows this is the % Windows% /Fonts directory as well as fonts listed in the Registry and linked fonts.

On Mac OSX the following directories are added to the list of font search paths (in this order):

- users font folder in
  textasciitilde /Library/Fonts
- /Library/Fonts

- /System/Library/Fonts

If the function succeeds the function returns the number of found font files (this is maybe not the number of available fonts, because the list is cleared each time all fonts in the list are processed during font selection). If the function fails a negative error code is returned.

Please call this method on Linux to get fonts loaded from your font folder.
See also AddFontSearchPath function in DynaPDF manual.
See also:

- 75.39.30 AddFontSearchPath(path as string, recursive as boolean = true) as Integer 13869

75.39.30 AddFontSearchPath(path as string, recursive as boolean = true) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a search path to the list of available font search paths.
Example:

```
dim d as new DynaPDFMBS
if TargetLinux then
call d.AddFontSearchPath "/usr/share/fonts/truetype", true
else
// on Mac and Windows we use system fonts.
end if
```

Notes:

This function adds a search path to the list of available font search paths. An arbitrary number of search paths can be added at runtime. Subdirectories are included recursively if the parameter Recursive is true. DynaPDF requires no separate metric files for Type1 fonts.

This function is implemented in an ANSI and Unicode compatible version. However, Unicode file paths are converted back to ANSI on Windows. On non-Windows operating systems the path is converted to UTF-8 and passed to the ANSI version of the function.

The list of search directories can be cleared at runtime with the function ClearHostFonts().

If system fonts are enabled (default) DynaPDF adds the default font directories of the operating system automatically to the list of font search paths (Windows and Mac OSX only, see SetUseSystemFonts() for further information). On Windows this is the % Windows% /Fonts directory as well as fonts listed in the Registry and linked fonts.

On Mac OSX the following directories are added to the list of font search paths (in this order):

- users font folder in
  textasciitilde /Library/Fonts
- /Library/Fonts
- /System/Library/Fonts

If the function succeeds the function returns the number of found font files (this is maybe not the number of available fonts, because the list is cleared each time all fonts in the list are processed during font selection). If the function fails a negative error code is returned.

Please call this method on Linux to get fonts loaded from your font folder.
See also AddFontSearchPath function in DynaPDF manual.
See also:

- 75.39.29 AddFontSearchPath(path as folderitem, recursive as boolean = true) as Integer 13868

75.39.31 AddImage(Filter as Integer, Flags as Integer, Image as DynaPDFImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an image to the current image file.
Notes:

For the filter you use one of the kcf* constants.
For the flags you use either kicNone of kicUseCCITT4.

TIFF is the only format that supports different compression filters. The Filter parameter of the function AddImage() is ignored if the image format supports only one specific compression filter.
Note that images are automatically converted to the nearest supported color space if the image format does not support the color space of the image.
See also AddImage function in DynaPDF manual.

75.39.32 AddInkList(InkAnnot as UInt32, points() as DynaPDFPointMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an array of points or path to an Ink Annotation.
Notes:

The function must be called within an open page.
An ink annotation can contain an arbitrary number of paths. The points will be connected by curves to achieve a smooth transition between points. The coordinates are treated in current user space. Any transformation that was applied on the coordinate system will be taken into account.
If the number of points is zero then all paths will be deleted from the annotation.

Returns true on success.
See also AddInkList function in DynaPDF manual.

75.39.33 AddJavaScript(Name as string, Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds a global JavaScript to the PDF file.
Notes: The script parameter is converted to unicode.
See also AddJavaScript function in DynaPDF manual.

75.39.34 AddJavaScriptAnsi(Name as string, Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds a global JavaScript to the PDF file.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The script parameter is converted to ANSI.
See also AddJavaScript function in DynaPDF manual.

75.39.35 AddLayerToDisplTree(parent as DynaPDFLayerGroupMBS, layer as UInt32, Title as string) as DynaPDFLayerGroupMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a layer to the display tree.
See also AddLayerToDisplTree function in DynaPDF manual.

75.39.36 AddLayerToDisplTreeAnsi(parent as DynaPDFLayerGroupMBS, layer as UInt32, Title as string) as DynaPDFLayerGroupMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a layer to the display tree.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also AddLayerToDisplTree function in DynaPDF manual.

75.39.37 AddMaskImage(BaseImage as Integer, Buffer as MemoryBlock, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds an image mask to a base image.
Notes:

Please note that this function can be called with Ptr or Memoryblock.
See also AddMaskImage function in dynapdf_help.pdf manual.
See also AddMaskImage function in DynaPDF manual.
See also:

- 75.39.38 AddMaskImage(BaseImage as Integer, Buffer as Ptr, BufSize as UInt32, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean 13872

75.39.38 AddMaskImage(BaseImage as Integer, Buffer as Ptr, BufSize as UInt32, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds an image mask to a base image.
Notes:

Please note that this function can be called with Ptr or Memoryblock.
See also AddMaskImage function in dynapdf_help.pdf manual.
See also AddMaskImage function in DynaPDF manual.
See also:

- 75.39.37 AddMaskImage(BaseImage as Integer, Buffer as MemoryBlock, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean 13872

75.39.39 AddObjectToLayer(OCG as UInt32, ObjType as Integer, Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds an object to an Optional Content Group (OCG) or Optional Content Membership dictionary (OCMD).
Notes:

If the function succeeds the return value is true. If the function fails the return value is false.

For ObjectType use the constants: kooAnnotation, kooField, kooImage and kooTemplate.
See also AddObjectToLayer function in DynaPDF manual.

75.39.40 AddOCGToAppEvent(Handle as UInt32, Events as Integer, Categories as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an Optional Content Group (OCG) to an application event.
Notes: See dynapdf_help.pdf manual for details.
See also AddOCGToAppEvent function in DynaPDF manual.

75.39.41 AddOutputIntent(ICCFile as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds an ICC color profile to the PDF file that should be used to render device dependent colors.
Notes:

This function was named AddRenderingIntent before.
Requires DynaPDF Lite license.
See also AddOutputIntent function in DynaPDF manual.

75.39.42 AddOutputIntentEx(buffer as Memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds an ICC color profile to the PDF file that should be used to render device dependent colors.
Notes:

This function was named AddRenderingIntentEx before.
Requires DynaPDF Lite license.
See also AddOutputIntentEx function in DynaPDF manual.
See also:

- 75.39.43 AddOutputIntentEx(buffer as string) as Integer 13874

75.39.43 AddOutputIntentEx(buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds an ICC color profile to the PDF file that should be used to render device dependent colors.
Notes:

This function was named AddRenderingIntentEx before.
Requires DynaPDF Lite license.
See also AddOutputIntentEx function in DynaPDF manual.
See also:

- 75.39.42 AddOutputIntentEx(buffer as Memoryblock) as Integer 13873

75.39.44 AddPageLabel(StartRange as UInt32, PageLabelFormat as Integer, Value as string, FirstPageNum as Int32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a page label object.
Notes: The Value string is converted to Unicode internally.
See also AddPageLabel function in DynaPDF manual.

75.39.45 AddPageLabelAnsi(StartRange as UInt32, PageLabelFormat as Integer, Value as string, FirstPageNum as Int32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a page label object.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Value string is converted to Windows ANSI internally.
See also AddPageLabel function in DynaPDF manual.

75.39.46 AddValToChoiceField(Field as Integer, ExpValue as string, Value as string, Selected as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function adds a value to a choice field.
Notes: The Value string is converted to Unicode.
See also AddValToChoiceField function in DynaPDF manual.

75.39.47 AofLAB(LAB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns A of a LAB color value.
Example:

```
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox str(DynaPDFMBS.AofLAB(lab)) // shows 2
```

75.39.48 Append as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function appends an empty page to the document.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Create a new page
bBool=pdf.Append
```

See also Append function in DynaPDF manual.

75.39.49 AppendTraceFile(File as FolderItem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a trace file with appending.
Notes:

The plugin writes debug messages to this file so you can check what functions you called.

Improved with 16.2 plugin to really cover over 99% of all calls with parameters and result. Please report if you miss something.

While assignment to TraceFile property or CreateTraceFile() always overwrites existing log file, this method can append to it.

75.39.50 ApplyAppEvent(TOCAppEvent as Integer, SaveResult as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The visibility state of optional content groups (OCGs) can be dynamically changed in application events like Export, View, or Print.
Notes:

DynaPDF loads the view state when rendering PDF pages by default.
The function can be used to apply the visibility state of another event if necessary. The result can optionally be stored in the PDF file but note that this has only an effect in PDF viewers which support layers but no application events since the events will not be deleted from the PDF file. It is also possible to delete the events with DeleteAppEvents().

If the function succeeds the return value is true. If the function fails the return value is false.

See also ApplyAppEvent function in DynaPDF manual.

75.39.51 ApplyPattern(PattHandle as Integer, ColorMode as Integer, ColorValue as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function sets a tiling pattern as current fill, stroke or fill, and stroke color.
See also ApplyPattern function in DynaPDF manual.

75.39.52 ApplyShading(ShadHandle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function applies a shading to the current clipping path, or if no clipping is active, to the entire page.
See also ApplyShading function in DynaPDF manual.

75.39.53 AssociateEmbFile(DestObject as Integer, DestHandle as Integer, Relationship as Integer, EmbFile as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function associates an embedded file with a PDF object.
Notes:

The parameter DestHandle must be a valid handle of a PDF object. If destination object type is a page, then the page number must be used as handle. The first page is denoted by one. If the destination object is the documents catalog then the parameter DestHandle is ignored. Set the parameter to zero or -1 in this case.
The parameter EmbFile must be a valid handle of an embedded file. See AttachFile() or AttachFileEx() for further information.

Associated files are supported since PDF 2.0 and in PDF/A 3 files. In PDF/A 3 files all embedded files must be associated with a PDF object.

If the function succeeds the return value is true. If the function fails the return value is false.
See also AssociateEmbFile function in DynaPDF manual.

75.39.54 AttachFile(File as folderitem, Description as string, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function attaches a file to the document.
Notes: On Windows, the description parameter is converted to unicode.
See also AttachFile function in DynaPDF manual.

75.39.55 AttachFileEx(Buffer as Memoryblock, Filename as string, Description as string, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function attaches a file to the document in the same way as AttachFile() but accepts a file buffer instead of a file path.
See also AttachFileEx function in DynaPDF manual.
See also:

- 75.39.56 AttachFileEx(Buffer as string, Filename as string, Description as string, Compress as boolean) as Integer 13877

75.39.56 AttachFileEx(Buffer as string, Filename as string, Description as string, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function attaches a file to the document in the same way as AttachFile() but accepts a file buffer instead of a file path.

Example:

```
dim pdf as DynaPDFMBS // your dynapdf object

// add embedded file to PDF
const Compressed = true
call pdf.AttachFileEx("This is hidden text in an attached file.", "attachment.txt", "", Compressed)
```

See also AttachFileEx function in DynaPDF manual.
See also:

- 75.39.55 AttachFileEx(Buffer as Memoryblock, Filename as string, Description as string, Compress as boolean) as Integer 13877

75.39.57 AutoTemplate(Templ as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: To insert a template automatically on newly created pages, use the function AutoTemplate().
See also AutoTemplate function in DynaPDF manual.

75.39.58 BeginContinueText(PosX as Double, PosY as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function prepares the output of multiple text lines which use the graphics state parameter Leading as line height, or the font size if Leading is not set.
See also BeginContinueText function in DynaPDF manual.

75.39.59 BeginLayer(OCG as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens a layer in the current open page or template.
Notes:

If the function succeeds the return value is true. If the function fails the return value is false.

See also BeginLayer function in DynaPDF manual.

75.39.60 BeginPageTemplate(Name as String, UseAutoTemplates as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new page template with given name.
Notes:

This function creates or opens a page template for editing. Page templates are hidden pages which can be added to the document or overlaid on existing pages via JavaScript.

The usage of the function is like Append() or EditPage(). If the template does already exist then it will be opened for editing. Page templates support form fields and annotations but it is not allowed to add article beads to them.
See also BeginPageTemplate function in DynaPDF manual.

75.39.61 BeginPattern(PatternType as Integer, TilingType as Integer, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a new tiling pattern.
See also BeginPattern function in DynaPDF manual.

75.39.62 BeginTemplate(Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Begins a new template
See also BeginTemplate function in DynaPDF manual.

75.39.63 BeginTemplateEx(BBox as DynaPDFRectMBS, Matrix as DynaPDF-MatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Begins a new template
Notes: The plugin passes nil to the library for the bbox or the matrix parameter if they are nil.

75.39.64 BeginTransparencyGroup(x1 as Double, y1 as Double, x2 as Double, y2 as Double, Isolated as Boolean, Knockout as Boolean, CS as Integer, CSHandle as Int32) as Int32

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Begins a new transparency group.
Notes:

CS: color space, pass kes* constants.

Requires DynaPDF Pro license.
See also BeginTransparencyGroup function in DynaPDF manual.

75.39.65 Bezier_1_2_3(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a bezier path to the pdf.
See also Bezier_1_2_3 function in DynaPDF manual.

75.39.66 Bezier_1_3(x1 as Double, y1 as Double, x3 as Double, y3 as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a bezier path to the pdf.
See also Bezier_1_3 function in DynaPDF manual.

75.39.67 Bezier_2_3(x2 as Double, y2 as Double, x3 as Double, y3 as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a bezier path to the pdf.
See also Bezier_2_3 function in DynaPDF manual.

75.39.68 BofLAB(LAB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns B of a LAB color value.
Example:

```
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox str(DynaPDFMBS.BofLAB(lab)) // shows 3
```

75.39.69 BofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns B of a RGB color value.
Example:

```
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox str(DynaPDFMBS.BofRGB(rgb)) // shows 3
```

75.39.70 BuildFamilyNameAndStyle(IFont as Integer, byref name as string, byref style as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a family name and style from a font object.
See also BuildFamilyNameAndStyle function in DynaPDF manual.

75.39.71 CalcWidthHeight(OrgWidth as Double, OrgHeight as Double, ScaledWidth as Double, ScaledHeight as Double) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function calculates the scaled width or height of a given size in the same way as InsertImage() or PlaceTemplate().
See also CalcWidthHeight function in DynaPDF manual.

75.39.72 CaretAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a caret annotation.
Notes:

This type of annotation is typically used to mark a position on a page where a user should add or edit text. If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CaretAnnot function in DynaPDF manual.

75.39.73 CaretAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a caret annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

This type of annotation is typically used to mark a position on a page where a user should add or edit text. If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CaretAnnot function in DynaPDF manual.

75.39.74 ChangeAnnotName(Handle as Integer, Name as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes or deletes the optional name of an annotation.
Notes: The Name parameter is converted to unicode.
See also ChangeAnnotName function in DynaPDF manual.

75.39.75 ChangeAnnotNameAnsi(Handle as Integer, Name as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes or deletes the optional name of an annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Name parameter is converted to ANSI.
See also ChangeAnnotName function in DynaPDF manual.

75.39.76 ChangeAnnotPos(Handle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the position and size of an annotation.
See also ChangeAnnotPos function in DynaPDF manual.

75.39.77 ChangeBookmark(ABmk as Integer, Text as string, Parent as Integer, DestPage as Integer, Open as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes an existing bookmark.
Notes: The text parameter is converted to unicode.
See also ChangeBookmark function in DynaPDF manual.

75.39.78 ChangeBookmarkAnsi(ABmk as Integer, Text as string, Parent as Integer, DestPage as Integer, Open as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes an existing bookmark.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function

instead. **Notes:** The text parameter is converted to ANSI.
See also ChangeBookmark function in DynaPDF manual.

75.39.79 ChangeFont(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes or sets the font to the one defined by the parameter AHandle.
See also ChangeFont function in DynaPDF manual.

75.39.80 ChangeFontEx(Handle as integer, FontSize as double, Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes or sets the font to the one of the parameter Handle.
Notes:

Handle must be a valid font handle that was returned by SetFont(), SetFontEx(), SetCIDFont(), or LoadFont().
The style flags should be the same as in the initial SetFont() call with exception of the flags fsUnderline or fsStriked which can be used to underline or strikeout text.
The parameter FontSize must be greater zero.

If the function succeeds the return value is true. If the function fails the return value is false.

75.39.81 ChangeFontSize(size as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the font size of the current font.
See also ChangeFontSize function in DynaPDF manual.

75.39.82 ChangeFontStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the style of the current font.
See also ChangeFontStyle function in DynaPDF manual.

75.39.83 ChangeFontStyleEx(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the font style of a font like ChangeFontStyle() but it accepts also the font styles fsBold and fsItalic.
See also ChangeFontStyleEx function in DynaPDF manual.

75.39.84 ChangeJavaScript(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function replaces a global JavaScript with a new one.
Notes: The text parameter is converted to unicode.
See also ChangeJavaScript function in DynaPDF manual.

75.39.85 ChangeJavaScriptAction(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function replaces the script of a JavaScript action with a new one.
Notes: The text parameter is converted to unicode.
See also ChangeJavaScriptAction function in DynaPDF manual.

75.39.86 ChangeJavaScriptActionAnsi(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function replaces the script of a JavaScript action with a new one.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also ChangeJavaScriptAction function in DynaPDF manual.

75.39.87 ChangeJavaScriptAnsi(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function replaces a global JavaScript with a new one.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.

See also ChangeJavaScript function in DynaPDF manual.

75.39.88 ChangeJavaScriptName(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the name of a global JavaScript.
Notes: The text parameter is converted to unicode.
See also ChangeJavaScriptName function in DynaPDF manual.

75.39.89 ChangeJavaScriptNameAnsi(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the name of a global JavaScript.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also ChangeJavaScriptName function in DynaPDF manual.

75.39.90 ChangeLinkAnnot(Handle as Integer, URL as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the link of a file link or web link annotation.
See also ChangeLinkAnnot function in DynaPDF manual.

75.39.91 ChangeOCGName(Handle as Integer, Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the name of an Optional Content Group (OCG).
Notes: Returns true on success and false in case of error.

75.39.92 ChangeSeparationColor(CSHandle as UInt32, NewColor as UInt32, AlternateExtColorSpace as Integer, AltHandle as Integer = -1) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the color of a separation color space.
Example:

```
// your instance
dim pdf as DynaPDFMBS

// Create new separation color
dim ColorSpaceHandle as Integer = pdf.CreateSeparationCS("test",DynaPDFMBS.kcsDeviceCMYK,-1,DynapdfMBS.CMYK
call pdf.SetExtColorSpace(ColorSpaceHandle)

// draw something
call pdf.SetfillColor(255) // 100% of the separation color test
call pdf.DrawCircle(193,389,66, pdf.kfmFill)

// change it to red
call pdf.ChangeSeparationColor(ColorSpaceHandle, 255, DynaPDFMBS.kcsDeviceRGB, -1)
```

Notes:

The new color value must be defined in the alternate color space. The alternate color space can be any device or ICC based color space including Lab. If a non-device color space is used, the parameter AltHandle must be set to the color space handle of the alternate color space.

Returns true on success or false on failure.
CSHandle is the index in the colorspace table, not the reference to the C++ object. So do not pass handle property from DynaPDFColorSpaceMBS, but the Index property.
See also ChangeSeparationColor function in DynaPDF manual.

75.39.93 CheckCollection as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function:

The function checks whether user defined data fields in embedded files are consistently defined with collection fields.
See also CheckCollection function in DynaPDF manual.

75.39.94 CheckConformance(ConformanceType as Integer, CheckOptions as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The functions checks whether the PDF file is compatible to a specific PDF standard or PDF version depending the parameter Type and modifies anything that is required to get the file compatible to the standard depending on the check options.
See also CheckConformance function in DynaPDF manual.

75.39.95 CheckFieldNames as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function checks all currently defined interactive form fields for invalid duplicate field names.
See also CheckFieldNames function in DynaPDF manual.

75.39.96 CircleAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a circle annotation on the current open page.
Notes:

If the parameters Width and Height are equal the function draws a circle, an ellipse otherwise. If the annotation should be drawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also CircleAnnot function in DynaPDF manual.

75.39.97 CircleAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a circle annotation on the current open page.

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

If the parameters Width and Height are equal the function draws a circle, an ellipse otherwise. If the annotation should be drawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also CircleAnnot function in DynaPDF manual.

75.39.98 ClearAutoTemplates as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes the array of templates which are automatically added to newly created pages.
See also ClearAutoTemplates function in DynaPDF manual.

75.39.99 ClearErrorLog

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the error log.
See also ClearErrorLog function in DynaPDF manual.

75.39.100 ClearHostFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes the array of fonts included in all currently defined font search paths.
See also ClearHostFonts function in DynaPDF manual.

75.39.101 ClearPageGraphics

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the page graphics objects.
Notes:

This method clears graphics object.

As the graphics object keeps a reference to DynaPDFMBS object and the DynaPDF object references the graphics object, this call may be required to make sure the circular reference is cleared.

Automatically called in Append, EndPage, CloseFile, ImportPDFFile, ImportPDFPage and CloseFileEx.

75.39.102 ClipPath(ClipMode as Integer, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function marks the current path as clipping path.
See also ClipPath function in DynaPDF manual.

75.39.103 CloseAndSignFile(CertFile as folderitem, Password as string, Reason as string, Location as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function finishes the PDF file, digitally signs it, and frees all used resources if the file was not created in memory.
Notes: Only for 1024 bit keys. For longer keys, check our custom signature example.
See also CloseAndSignFile function in DynaPDF manual.

75.39.104 CloseAndSignFileEx(OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer, CertFile as folderitem, Password as string, Reason as string, Location as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function finishes the PDF file, encrypts it, digitally signs it, and frees all used resources if the file was not created in memory.
See also CloseAndSignFileEx function in DynaPDF manual.

75.39.105 CloseAndSignFileExt(SigParams as DynaPDFSigParmsMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function closes the PDF file and returns either the file hash or the byte ranges to be signed by an external signature handler.
See also CloseAndSignFileExt function in DynaPDF manual.

75.39.106 CloseAndSignPDFFile(OutputFile as FolderItem, CertificateData as String, Password as String, ContactInfo as String = """, Location as String = """, Reason as String = """) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

Function: Closes and signs file.
Notes:

This uses pdf_signature.cpp example code from DynaPDF.
The function will on Windows use functions from Crypt DLL on Windows.
Internally calls CloseAndSignFileExt, OpenOutputFile and FinishSignature.
Returns true on success and false on failure.

Loads certificate from provided certificate file data.

Version 15.1 allows OutputFile to be nil.

75.39.107 CloseAndSignPDFFileWithDialog(OutputFile as FolderItem, StoreName as String = "MY", ContactInfo as String = """, Location as String = """, Reason as String = """) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

Function: Closes and signs file.
Notes:

Picks a certificate from the given certificate store on Windows.

This uses pdf_signature.cpp example code from DynaPDF.
The function will on Windows use functions from Crypt DLL on Windows.
Internally calls CloseAndSignFileExt, OpenOutputFile and FinishSignature.
Returns true on success and false on failure.

Version 15.1 allows OutputFile to be nil.

75.39.108 CloseFile as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function finishes the PDF file and frees all used resources if the file was not created in memory.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

bBool=pdf.CloseFile
```

See also CloseFile function in DynaPDF manual.

75.39.109 CloseFileEx(OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function finishes the PDF file, encrypts it, and frees all used resources if the file was not created in memory.
Notes: Requires DynaPDF Lite license.
See also CloseFileEx function in DynaPDF manual.

75.39.110 CloseImage as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the current open image.
See also CloseImage function in DynaPDF manual.

75.39.111 CloseImportFile as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function closes an open import file that was be opened by OpenImportFile() or OpenImportBuffer().
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

bBool=pdf.CloseImportFile
```

See also CloseImportFile function in DynaPDF manual.

75.39.112 CloseImportFileEx(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function closes a specific import file and deletes the corresponding parser instance.
Notes:

The parameter Handle must be a valid file handle that was returned by OpenImportFile() or OpenImportBuffer(). See OpenImportFile() for further information in dynapdf_help.pdf.
If the function succeeds the return value is true. If the function fails the return value is false.

See also CloseImportFileEx function in DynaPDF manual.

75.39.113 ClosePath(FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the current path.
See also ClosePath function in DynaPDF manual.

75.39.114 CloseTag as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes an open tag.
See also CloseTag function in DynaPDF manual.

75.39.115 CMYK(C as Integer, M as Integer, Y as Integer, K as Integer) as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a CMYK color value based on the given component values.
Example:

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox hex(cmyk)
```

Notes: Returns different values on BigEndian and LittleEndian systems.

75.39.116 CofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns C of a CMYK color value.
Example:

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.CofCMYK(cmyk)) // shows 1
```

Notes: Returns different values on BigEndian and LittleEndian systems.

75.39.117 ComputeBBox(Flags as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes the bounding box.
See also ComputeBBox function in DynaPDF manual.

75.39.118 ConvColor(Colors() as Double, SourceColorSpaceHandle as Integer, DestColorSpace as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a color from one ColorSpace to another.
Example:

```
// setup Environment
dim dy as new DynaPDFMBS
call dy.CreateNewPDF(nil)

// create a simple RGB colorspace
dim whitePoint as MemoryBlock = NewMemoryBlock(12)
whitePoint.SingleValue(0)=1.0
whitePoint.SingleValue(4)=1.0
whitePoint.SingleValue(8)=1.0

dim BlackPoint as MemoryBlock = nil // default
dim Gamma as MemoryBlock = nil // default
dim Matrix as MemoryBlock = nil // default

dim h as Integer = dy.CreateCIEColorSpace(dy.kesCalRGB, WhitePoint, BlackPoint, Gamma, Matrix)

// do we have one?
if dy.GetColorSpaceCount=0 then
MsgBox "No color space!"
Return
else
MsgBox str(dy.GetColorSpaceCount)+" Colorspace defined"
end if

// Now get the colorspace information including the Object reference:
dim c as DynaPDFColorSpaceMBS = dy.GetColorSpaceObj(h)

dim d(-1) as Double = array(0.3,0.5,0.7)
```

```
dim IColorSpace as Integer = c.Handle
dim DestCS as Integer = DynaPDFMBS.kesDeviceCMYK

// convert a color
dim n as Integer = dy.ConvColor(d, IColorSpace, DestCS)

MsgBox hex(n)
```

Notes:

Colors: The array of color values. 3 values for RGB, 4 values for CMYK and one value for Gray.
IColorSpaceSource: The source color space object reference.
DestCS: The destination color space. One of the kes* constants.
See also ConvColor function in DynaPDF manual.

75.39.119 ConvertColors(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the colors.
Notes: Requires DynaPDF Pro license.
See also ConvertColors function in DynaPDF manual.

75.39.120 ConvertEMFSpool(File as folderitem, LeftMargin as Double, TopMargin as Double, Flags as Integer = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an EMF spool file to PDF.
Notes:

See dynapdf_help.pdf file.
Pass kspc* flags.
Requires DynaPDF Lite license.
See also ConvertEMFSpool function in DynaPDF manual.

75.39.121 ConvertStyledText(StyledText as StyledText, LeadingFactor as double = -1) as String

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts styled text to formatting commands.
Example:

```
Public Function Convert(s as StyledText) as string
dim d as new DynaPDFMBS

// create dummy in memory pdf
call d.CreateNewPDF(nil)

// create dummy page
call d.Append

// convert
Return d.ConvertStyledText(s)

// destructor will cleanup
End Function
```

Notes:

You can use the result with WriteFText, WriteFTextEx or DynaPDFTableMBS.SetCellText functions.
Needs an open page as it loads fonts for you. May cause error events if fonts are not found.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2

75.39.122 CopyChoiceValues(Source as UInt32, Dest as UInt32, Share as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the list items, default value, and value of the source field to the destination field.
Notes:

The source and destination field can be combo and list boxes. It is allowed to copy the list items of a list box to a combo box or vice versa.
If Share is true, the function adds just a reference to the list item so that both fields share the same list items. This is still the case if more list items will be added to such a field. If Share is false, the list items will be copied to the destination field. Both fields contain independent list items in this case.
Already existing list items of the destination field will be deleted.
See also CopyChoiceValues function in DynaPDF manual.

75.39.123 Create3DAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Name as string, U3DFile as string, Image as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a 3D annotation from a U3D file.
See also Create3DAnnot function in DynaPDF manual.

75.39.124 Create3DAnnotAnsi(PosX as double, PosY as double, Width as double, Height as double, Author as string, Name as string, U3DFile as string, Image as string) as integer

MBS DynaPDF Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a 3D annotation from a U3D file.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also Create3DAnnot function in DynaPDF manual.

75.39.125 Create3DBackground(IView as Integer, BackColor as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a background dictionary for a 3D annotation that is used to change the annotation's background color.
See also Create3DBackground function in DynaPDF manual.

75.39.126 Create3DGotoViewAction(Base3DAnnot as Integer, IView as Integer, Named as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A go to 3D view action can be used to dynamically change the view of a 3D annotation.
See also Create3DGotoViewAction function in DynaPDF manual.

75.39.127 Create3DProjection(IView as Integer, ProjType as Integer, ScaleType as Integer, Diameter as Double, FOV as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a projection dictionary for a 3D annotation.
See also Create3DProjection function in DynaPDF manual.

75.39.128 Create3DView(Base3DAnnot as Integer, Name as string, SetAsDefault as boolean, Matrix as memoryblock, CamDistance as Double, RenderingMode as Integer, LightingSheme as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a 3D view for a 3D annotation.
Notes:

The plugin passes nil for the matrix if the matrix memoryblock parameter is nil.
This is the unicode version and you should prefer it.
See also Create3DView function in DynaPDF manual.

75.39.129 Create3DViewAnsi(Base3DAnnot as integer, Name as string, SetAsDefault as boolean, Matrix as memoryblock, CamDistance as double, RenderingMode as integer, LightingSheme as integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a 3D view for a 3D annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The plugin passes nil for the matrix if the matrix memoryblock parameter is nil.
This is the older ANSI version of the function.
See also Create3DView function in DynaPDF manual.

75.39.130 CreateAnnotAP(annot as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an annotation appereance stream.
Notes:

Returns the new annotation handle.
You can draw to this template directly.
You must close it with EndTemplate.

This method helps you to create a custom stamp or change different annotation appearance.
See also CreateAnnotAP function in DynaPDF manual.

75.39.131 CreateArticleThread(ThreadName as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a new article thread.
Notes: ThreadName string is converted to Unicode.
See also CreateArticleThread function in DynaPDF manual.

75.39.132 CreateArticleThreadAnsi(ThreadName as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a new article thread.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** ThreadName string is converted to ANSI.
See also CreateArticleThread function in DynaPDF manual.

75.39.133 CreateAxialShading(sX as Double, sY as Double, eX as Double, eY as Double, SCenter as Double, SColor as Integer, EColor as Integer, Extend1 as Boolean, Extend2 as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Axial shadings define a color blend that varies along a linear axis between two endpoints and extends indefinitely perpendicular to that axis.
Notes: Useful to draw gradients.
See also CreateAxialShading function in DynaPDF manual.

75.39.134 CreateBarcodeField(Name as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Barcode as DynaPDFBarcodeMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a barcode field.
Notes:

Note that users require either the full version of Adobe's Acrobat or a separate license of Adobe's Barcodes Paper Forms Solutions to enable the usage of barcode fields in Adobe's Reader.

See also CreateBarcodeField function in DynaPDF manual.

75.39.135 CreateButton(Name As String, Caption as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a push button.
Notes: The Caption parameter is converted to unicode.
See also CreateButton function in DynaPDF manual.

75.39.136 CreateButtonAnsi(Name As String, Caption as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a push button.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Caption parameter is converted to ANSI.
See also CreateButton function in DynaPDF manual.

75.39.137 CreateCheckBox(Name as string, ExpValue as string, Checked as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a check box.
See also CreateCheckBox function in DynaPDF manual.

75.39.138 CreateCIEColorSpace(Base as Integer, WhitePoint as memoryblock, BlackPoint as memoryblock, Gamma as memoryblock, Matrix as memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a CIE based color space.
See also CreateCIEColorSpace function in DynaPDF manual.

75.39.139 CreateColItemDate(EmbFile as Integer, Key as string, Value as Integer, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a user defined collection item which accepts a date time value.
See also CreateColItemDate function in DynaPDF manual.

75.39.140 CreateColItemNumber(EmbFile as Integer, Key as string, Value as Double, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a user defined collection item which accepts an arbitrary number as value.
See also CreateColItemNumber function in DynaPDF manual.

75.39.141 CreateColItemString(EmbFile as Integer, Key as string, Value as string, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a user defined collection item which accepts an arbitrary string as value.
Notes: The value and prefix parameters are converted to unicode.
See also CreateColItemString function in DynaPDF manual.

75.39.142 CreateColItemStringAnsi(EmbFile as Integer, Key as string, Value as string, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a user defined collection item which accepts an arbitrary string as value.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The value and prefix parameters are converted to ANSI.
See also CreateColItemString function in DynaPDF manual.

75.39.143 CreateCollection(View as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function marks the current PDF file in memory as PDF collection, also known as PDF Package.
Notes: Requires DynaPDF Lite license.
See also CreateCollection function in DynaPDF manual.

75.39.144 CreateCollectionField(ColType as Integer, Column as Integer, Name as String, Key as string, Visible as boolean, Editable as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a user defined collection field.
Notes: The name parameter is converted to unicode.
See also CreateCollectionField function in DynaPDF manual.

75.39.145 CreateCollectionFieldAnsi(ColType as Integer, Column as Integer, Name as String, Key as string, Visible as boolean, Editable as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a user defined collection field.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The name parameter is converted to ANSI.
See also CreateCollectionField function in DynaPDF manual.

75.39.146 CreateComboBox(Name as string, Sort as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a combo box.
See also CreateComboBox function in DynaPDF manual.

75.39.147 CreateDeviceNColorSpace(Colorants() as string, PostScriptFunc as string, AlternateColorSpace as Integer, Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new colorspace using the given color names.
Notes:

Strings are passed as UTF-8 Strings in this function to the library.
Currently the function is limited to 100 colorants on the plugin side.
See also CreateDeviceNColorSpace function in DynaPDF manual.

75.39.148 CreateDeviceNColorSpaceAnsi(Colorants() as string, PostScriptFunc as string, AlternateColorSpace as Integer, Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new colorspace using the given color names.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

Strings are passed as Windows ANSI Strings in this function to the library.
Currently the function is limited to 100 colorants on the plugin side.
See also CreateDeviceNColorSpace function in DynaPDF manual.

75.39.149 CreateExtGState(e as DynaPDFExtGStateMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an extended graphics state dictionary from the structure e.
Example:

```
dim h as Integer // handle
dim pdf as DynaPDFMBS
dim state as new DynaPDFExtGStateMBS

' get pdf, set state properties

h=pdf.CreateExtGState(state)

call pdf.SetExtGState(h)
```

Notes: Requires DynaPDF Lite license.
See also CreateExtGState function in DynaPDF manual.

75.39.150 CreateGoToAction(DestType as Integer, PageNum as Integer, a as Double, b as Double, c as Double, d as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A go-to action changes the view to a specific destination (page, location, and magnification factor).
See also CreateGoToAction function in DynaPDF manual.
See also:

- 75.39.151 CreateGoToAction(NamedDest as Integer) as Integer 13905

75.39.151 CreateGoToAction(NamedDest as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a goÅ] to action which uses a named destination to open the target page.
See also CreateGoToAction function in DynaPDF manual.
See also:

- 75.39.150 CreateGoToAction(DestType as Integer, PageNum as Integer, a as Double, b as Double, c as Double, d as Double) as Integer 13905

75.39.152 CreateGoToEAction(Location as Integer, Source as string, SrcPage as Integer, Target as string, DestName as string, DestPage as Integer, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an embedded GoTo action.
Notes: See also CreateGoToEAction function in dynapdf_help.pdf manual.
See also CreateGoToEAction function in DynaPDF manual.

75.39.153 CreateGoToRAction(File as folderitem, PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a go to remote action.
See also CreateGoToRAction function in DynaPDF manual.
See also:

- 75.39.154 CreateGoToRAction(FilePath as String, PageNum as integer) as integer 13906

75.39.154 CreateGoToRAction(FilePath as String, PageNum as integer) as integer

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a go to remote action.
See also CreateGoToRAction function in DynaPDF manual.
See also:

- 75.39.153 CreateGoToRAction(File as folderitem, PageNum as Integer) as Integer 13905

75.39.155 CreateGoToRActionEx(File as folderitem, DestName as String, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a go-to-remote action that opens a named destination in an external PDF file.
See also CreateGoToRActionEx function in DynaPDF manual.
See also:

- 75.39.156 CreateGoToRActionEx(FilePath as String, DestName as String, NewWindow as boolean) as integer 13906

75.39.156 CreateGoToRActionEx(FilePath as String, DestName as String, NewWindow as boolean) as integer

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a go-to-remote action that opens a named destination in an external PDF file.
See also CreateGoToRActionEx function in DynaPDF manual.
See also:

- 75.39.155 CreateGoToRActionEx(File as folderitem, DestName as String, NewWindow as boolean) as Integer 13906

75.39.157 CreateGoToRActionExU(File as folderitem, DestName as String, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a go-to-remote action that opens a named destination in an external PDF file.
See also:

- 75.39.158 CreateGoToRActionExU(FilePath as String, DestName as String, NewWindow as boolean) as integer 13907

75.39.158 CreateGoToRActionExU(FilePath as String, DestName as String, NewWindow as boolean) as integer

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a go-to-remote action that opens a named destination in an external PDF file.
See also:

- 75.39.157 CreateGoToRActionExU(File as folderitem, DestName as String, NewWindow as boolean) as Integer 13906

75.39.159 CreateGroupField(Name as string, Parent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a group field.
See also CreateGroupField function in DynaPDF manual.

75.39.160 CreateHideAction(Field as Integer, Hide as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A hide action hides or shows one or more interactive form fields on screen by setting or clearing their hidden flags.
See also CreateHideAction function in DynaPDF manual.

75.39.161 CreateICCBasedColorSpace(File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an ICC based color space.
Notes: Use the value returned for the SetExtColorSpace method.
See also CreateICCBasedColorSpace function in DynaPDF manual.
See also:

- 75.39.162 CreateICCBasedColorSpace(Path as String) as Integer 13908

75.39.162 CreateICCBasedColorSpace(Path as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an ICC based color space.
Notes: Use the value returned for the SetExtColorSpace method.
See also CreateICCBasedColorSpace function in DynaPDF manual.
See also:

- 75.39.161 CreateICCBasedColorSpace(File as folderitem) as Integer 13907

75.39.163 CreateICCBasedColorSpaceEx(Buffer as Memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new ICC based color space from ICC file content in a string buffer.
Notes: Returns the color space handle.
See also CreateICCBasedColorSpaceEx function in DynaPDF manual.
See also:

- 75.39.164 CreateICCBasedColorSpaceEx(Buffer as string) as Integer 13908

75.39.164 CreateICCBasedColorSpaceEx(Buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new ICC based color space from ICC file content in a string buffer.
Notes: Returns the color space handle.
See also CreateICCBasedColorSpaceEx function in DynaPDF manual.
See also:

- 75.39.163 CreateICCBasedColorSpaceEx(Buffer as Memoryblock) as Integer 13908

75.39.165 CreateImage(file as folderitem, format as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an image file with the given image format.
Notes:

For the format parameter use the kifm* constants.

If file parameter is nil for CreateImage, you create image in memory and can pick it up with GetImageBuffer function later after you closed it.
See also CreateImage function in DynaPDF manual.

75.39.166 CreateImpDataAction(DataFile as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An import data action imports FDF data into the document s interactive form.
Notes: Also check the dynapdf manual on the pdfCreateImpDataActionA function (pdfCreateImpDataActionW on Windows).

75.39.167 CreateIndexedColorSpace(Base as Integer, Handle as Integer, ColorTable as memoryblock, NumColors as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an indexed color space which can be used for vector graphics and text output.
Notes: Use the value returned for the SetExtColorSpace method.
See also CreateIndexedColorSpace function in DynaPDF manual.

75.39.168 CreateJSAction(Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a JavaScript action.
Notes: The script parameter is converted to unicode.
See also CreateJSAction function in DynaPDF manual.

75.39.169 CreateJSActionAnsi(Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a JavaScript action.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The script parameter is converted to ANSI.
See also CreateJSAction function in DynaPDF manual.

75.39.170 CreateLaunchAction(OP as Integer, FileName as folderitem, DefDir as string, Param as string, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A launch action launches an application or opens or prints a document.

See also CreateLaunchAction function in DynaPDF manual.

75.39.171 CreateLaunchActionEx(FileName as folderitem, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a launch link.
See also CreateLaunchActionEx function in DynaPDF manual.

75.39.172 CreateListBox(Name as string, Sort as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a list box.
See also CreateListBox function in DynaPDF manual.

75.39.173 CreateNamedAction(Action as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a named action.
See also CreateNamedAction function in DynaPDF manual.

75.39.174 CreateNamedDest(Name as string, DestPage as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a named destination that can be accessed from external PDF files.
Notes: The name parameter is converted to unicode.
See also CreateNamedDest function in DynaPDF manual.

75.39.175 CreateNamedDestAnsi(Name as string, DestPage as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a named destination that can be accessed from external PDF files.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The name parameter is converted to ANSI.
See also CreateNamedDest function in DynaPDF manual.

75.39.176 CreateNewPDF(OutPDF as folderitem = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a new PDF file.
Example:

```
dim dest as folderitem // where to save?
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// create new pdf
bBool=pdf.CreateNewPDF(dest)
if bBool=False then
MsgBox "Failed to create pdf file "+dest.NativePath
Return
end if
```

See also CreateNewPDF function in DynaPDF manual.

75.39.177 CreateOCG(name as string, DisplayInUI as boolean, Visible as boolean, Intent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an Optional Content Group (OCG).
Notes: CreateOCG stores the name in unicode encoding and CreateOCGAnsi in Windows ANSI encoding.
See also CreateOCG function in DynaPDF manual.

75.39.178 CreateOCGAnsi(name as string, DisplayInUI as boolean, Visible as boolean, Intent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an Optional Content Group (OCG).
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** CreateOCG stores the name in unicode encoding and CreateOCGAnsi in Windows ANSI encoding.
See also CreateOCG function in DynaPDF manual.

75.39.179 CreateOCMD(Visibility as Integer, OCGs() as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an Optional Content Membership Dictionary (OCMD).
Notes: For Visibility use the constants kovAllOff, kovAllOn, kovAnyOff, kovAnyOn and kovNotSet.
See also CreateOCMD function in DynaPDF manual.

75.39.180 CreateRadialShading(sX as Double, sY as Double, R1 as Double, eX as Double, eY as Double, R2 as Double, SCenter as Double, SColor as Integer, EColor as Integer, Extend1 as boolean, Extend2 as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Radial shadings define a color blend that varies between two circles.
Notes: Useful to draw gradients.
See also CreateRadialShading function in DynaPDF manual.

75.39.181 CreateRadioButton(Name as string, ExpValue as string, Checked as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A radio button field is a set of related toggle controls (check boxes), at most one of which may be on at any given time; selecting any one of the button automatically deselects all others.
See also CreateRadioButton function in DynaPDF manual.

75.39.182 CreateRectilinearMeasure(ViewPort as Integer, Scale as Double, UnitDescription as String, LabelDistance as String, LabelArea as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a rectilinear measure dictionary.
Notes:

This kind of measure dictionary can be used to convert PDF units to an arbitrary other unit like millimeters, meters, feets, and so on.
A measure dictionary is used by the measure tool of Adobe's Acrobat and by other PDF viewers which contain a PDF compatible measure tool.
The parameter Viewport must be a viewport handle that was returned by CreateViewport(). Scale is the required scaling factor to convert a PDF unit (1/72 inch) to the wished destination unit. The parameters UnitDescription, LabelDistance, and LabelArea are all required and cannot be NULL.
UnitDescription is a description of the coordinate conversion, e.g. "Inch to mm". LabelDistance is the label for the distance tool, e.g. "mm".
LabelArea is the label for the area tool, e.g. "mm2".

If the function succeds the return value is a measure handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CreateRectilinearMeasure function in DynaPDF manual.

75.39.183 CreateRectilinearMeasureAnsi(ViewPort as Integer, Scale as Double, UnitDescription as String, LabelDistance as String, LabelArea as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a rectilinear measure dictionary.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

This kind of measure dictionary can be used to convert PDF units to an arbitrary other unit like millimeters, meters, feets, and so on.
A measure dictionary is used by the measure tool of Adobe's Acrobat and by other PDF viewers which contain a PDF compatible measure tool.
The parameter Viewport must be a viewport handle that was returned by CreateViewport(). Scale is the required scaling factor to convert a PDF unit (1/72 inch) to the wished destination unit. The parameters UnitDescription, LabelDistance, and LabelArea are all required and cannot be NULL.
UnitDescription is a description of the coordinate conversion, e.g. "Inch to mm". LabelDistance is the label for the distance tool, e.g. "mm".
LabelArea is the label for the area tool, e.g. "mm2".

If the function succeds the return value is a measure handle, a value greater or equal zero. If the function fails the return value is a negative error code.

This is ANSI version, so all strings are converted to ANSI encoding.
See also CreateRectilinearMeasure function in DynaPDF manual.

75.39.184 CreateResetAction as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A reset form action resets all or specific fields of an interactive form to their default values.
See also CreateResetAction function in DynaPDF manual.

75.39.185 CreateSeparationCS(Colorant as string, Alternate as Integer, Handle as Integer, ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a Separation color space.
Notes: This function passes colorant string in UTF-8 encoding to the library.
See also CreateSeparationCS function in DynaPDF manual.

75.39.186 CreateSeparationCSAnsi(Colorant as string, Alternate as Integer, Handle as Integer, ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a Separation color space.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** This function passes colorant string in Windows ANSI encoding to the library.
See also CreateSeparationCS function in DynaPDF manual.

75.39.187 CreateSetOCGStateAction(On() as UInt32, Off() as UInt32, Toggle() as UInt32, PreserveRB as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a SetOCGState action that can be used to change the visibility state of certain Optional Content Groups (OCGs).

See also CreateSetOCGStateAction function in DynaPDF manual.

75.39.188 CreateSigField(Name as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates an empty signature field which can be used to digitally sign the PDF file.
Notes: If you see errors in Acrobat Reader with signing multiple fields, please try DynaPDF.CreateStructureTree function and test whether it works then.
See also CreateSigField function in DynaPDF manual.

75.39.189 CreateSigFieldAP(SigField as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a signature appearance template in the exact size of the base signature field.
See also CreateSigFieldAP function in DynaPDF manual.

75.39.190 CreateSoftMask(TranspGroup as UInt32, MaskType as Integer, BackColor as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new soft mask.
Notes:

MaskType: pass ksmtAlpha or ksmtLuminosity constants.
Requires DynaPDF Pro license.
See also CreateSoftMask function in DynaPDF manual.

75.39.191 CreateStdPattern(Pattern as Integer, LineWidth as Double, Distance as Double, LineColor as Integer, BackColor as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a hatch pattern.
See also CreateStdPattern function in DynaPDF manual.

75.39.192 CreateStructureTree as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a structure tree.
See also CreateStructureTree function in DynaPDF manual.

75.39.193 CreateSubmitAction(Flags as Integer, URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A submit form action submits the field values of an interactive form to a web server.
See also CreateSubmitAction function in DynaPDF manual.

75.39.194 CreateTable(AllocRows as UInt32, NumCols as UInt32, width as Double, DefRowHeight as Double) as DynaPDFTableMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a table with the given size.
Notes: Returns a new table object.
See also CreateTable function in DynaPDF manual.

75.39.195 CreateTextField(Name as string, Parent as Integer, Multiline as boolean, MaxLen as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a text field.
See also CreateTextField function in DynaPDF manual.

75.39.196 CreateTraceFile(File as FolderItem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a trace file.
Notes:

The plugin writes debug messages to this file so you can check what functions you called.

Improved with 16.2 plugin to really cover over 99% of all calls with parameters and result. Please report if you miss something.

While assignment to TraceFile property or CreateTraceFile() always overwrites existing log file, the AppendTraceFile method can append to it.

75.39.197 CreateURIAction(URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function:

A uniform resource identifier (URI) is a string that identifies (resolves to) a resource on the internet - typically a file that is the destination of a hyperlink, although it can also resolve to a query or other entity.
Notes:

A URI action causes a URI to be resolved. The parameter URL must be 7Å] bit ASCII string.

See also CreateURIAction function in DynaPDF manual.

75.39.198 CreateViewport(Name as String, X1 as Double, Y1 as Double, X2 as Double, Y2 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a viewport.
Notes:

A viewport is a rectangular region of a page that can be associated with a measure dictionary. A measure dictionary achieves a coordinate conversion so that the distance and area can be calculated in other units like meters, feets, or millimeters, for example.
This is especially useful for CAD drawings which are not defined in PDF units. A PDF unit represents 1/72 inch.
A page can contain an arbitrary number of viewports and every viewport can be assigned with its own measure dictionary, e.g. to calculate coordinates in different units on the same page.
Viewports should be created in drawing order. Since viewports might overlap a PDF viewer examines the array starting with the last one and itereates in reverse order. The first one whose bounding box contains the point or cursor coordiante is chosen.
See also CreateRectilinearMeasure().
See also CreateViewport function in DynaPDF manual.

75.39.199 CreateViewportAnsi(Name as String, X1 as Double, Y1 as Double, X2 as Double, Y2 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a viewport.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

A viewport is a rectangular region of a page that can be associated with a measure dictionary. A measure dictionary achieves a coordinate conversion so that the distance and area can be calculated in other units like meters, feets, or millimeters, for example.
This is especially useful for CAD drawings which are not defined in PDF units. A PDF unit represents 1/72 inch.
A page can contain an arbitrary number of viewports and every viewport can be assigned with its own measure dictionary, e.g. to calculate coordinates in different units on the same page.
Viewports should be created in drawing order. Since viewports might overlap a PDF viewer examines the array starting with the last one and itereates in reverse order. The first one whose bounding box contains the point or cursor coordiante is chosen.
See also CreateRectilinearMeasure().

This is ANSI version, so all strings are converted to ANSI encoding.
See also CreateViewport function in DynaPDF manual.

75.39.200 CreateXFAStream(Name as String, Buffer as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates an XFA stream and adds it to the global XFA resource array.
Notes:

The parameter Name must be the name of the XFA resource. Buffer must be a valid XFA stream buffer or "", if the buffer should be set later with SetXFAStream().

If the function succeeds the return value is the stream handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CreateXFAStream function in DynaPDF manual.

75.39.201 DecryptPDF(File as folderitem, PwdType as Integer, Password as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function decrypts a PDF file by using the supplied password to decrypt the file.

See also DecryptPDF function in DynaPDF manual.

75.39.202 DecryptPDFAnsi(Path as string, PwdType as Integer, Password as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function decrypts a PDF file by using the supplied password to decrypt the file.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** Same as DecryptPDF, but takes path name in Windows ANSI encoding.
See also DecryptPDF function in DynaPDF manual.

75.39.203 DeleteAcroForm

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an acrobat reader form.
See also DeleteAcroForm function in DynaPDF manual.

75.39.204 DeleteActionFromObj(ObjType as Integer, ActHandle as Integer, ObjHandle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes an action from a PDF object.
See also DeleteActionFromObj function in DynaPDF manual.

75.39.205 DeleteActionFromObjEx(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to delete an action from an object without using an action handle.
See also DeleteActionFromObjEx function in DynaPDF manual.

75.39.206 DeleteAnnotation(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes an annotation.
See also DeleteAnnotation function in DynaPDF manual.

75.39.207 DeleteAnnotationFromPage(PageNum as UInt32, Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an annotation from a page.
See also DeleteAnnotationFromPage function in DynaPDF manual.

75.39.208 DeleteAppEvents(ApplyEvent as Boolean, TOCAppEvent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes all application events if any.
Notes:

The function can optionally apply the visibility state of an event before the application events will be deleted. The new visibility state will be stored in the PDF file. To apply the visibility state of a specific event without deletion call ApplyAppEvent() instead.

If the function succeeds and if application events were deleted the return value is 1. If the no application events were defined the return value is 0. If the function fails the return value is a negative error code.

See also DeleteAppEvents function in DynaPDF manual.

75.39.209 DeleteBookmark(ABmk as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes a bookmark.
See also DeleteBookmark function in DynaPDF manual.

75.39.210 DeleteEmbeddedFile(handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the embedded file with the given handle.

See also DeleteEmbeddedFile function in DynaPDF manual.

75.39.211 DeleteField(Field as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes an interactive form field.
See also DeleteField function in DynaPDF manual.

75.39.212 DeleteFieldEx(URL as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes an interactive form field by using its full qualified name, that is the name of any parent group field separated by a period (.) plus the field name.
See also DeleteFieldEx function in DynaPDF manual.

75.39.213 DeleteJavaScripts(DelJavaScriptActions as boolean)

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes java scripts.
See also DeleteJavaScripts function in DynaPDF manual.

75.39.214 DeleteNamedDest(Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a named destination.
Notes: If Name is an empty string all named destinations will be deleted.

75.39.215 DeleteNamedDestByIndex(Index as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a named destination.
Notes: If Index is set to a negative value all named destinations will be deleted.

75.39.216 DeleteOCGFromAppEvent(Handle as UInt32, Events as Integer, Categories as Integer, DelCategoryOnly as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an OCG or layer from one or more application events, or it deletes only one or more categories from an application event in which the OCG was found (if DelCategoryOnly is true).
Notes:

If DelCategoryOnly is true, and if no more categories are left in the application event, then the event will be deleted. See also AddOCGToAppEvent() and SetOCGContUsage() for further information.
If the function succeeds the return value is true. If the function fails the return value is false.
See also DeleteOCGFromAppEvent function in DynaPDF manual.

75.39.217 DeleteOCGFromDisplayTree(OCGHandle as UInt32, Recursive as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a layer or OCG (Optional Content Group) from the display tree of the currently active layer configuration.
Notes:

Notice:
If the PDF file was not imported with ImportPDFFile() the function ImportOCProperties() must be called in order to import the global Optional Content Properties.
It is also required to load a layer configuration with LoadLayerConfig() before the function can be called.

The display tree is a linked list that contains UI nodes. UI stands for User Interface. Every node in this tree can contain an OCG or an array of OCGs with an optional label.
This function can be used to delete an OCG from the display tree without traversing every node of it with GetOCUINode() beforehand. Therefore, the function is suitable for console applications but GUI based applications should use DeleteOCUINode() instead. DeleteOCUINode() can also be used to delete the entire display tree with just one function call.

If the function succeeds the return value is true. If the function fails the return value is false.

75.39.218 DeleteOutputIntent(Index as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Can be used to delete a specific or all output intents.
Notes:

A PDF file can contain more than one output intent. Call GetOutputIntentCount to determine the number

of available output intents. If the parameter Index is set to -1 all output intents will be deleted.

If the function succeeds the return value is the remaining number of output intents. If the function fails the return value is a negative error code.
See also DeleteOutputIntent function in DynaPDF manual.

75.39.219 DeletePage(PageNum as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes a page.
Example:

```
// new PDF
Dim pdf As New MyDynapdfMBS

pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License

// create output file
Dim outFile As folderitem = SpecialFolder.Desktop.Child("NewPDF.pdf")
Call pdf.CreateNewPDF(outFile)

// set flags to import all
Dim flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)

// import PDF
Dim inFile As folderitem = SpecialFolder.Desktop.Child("test.pdf")

Call pdf.OpenImportFile(inFile)
Call pdf.ImportPDFFile(1)

// now delete one page
Call pdf.DeletePage(2)

// close output file
Call pdf.closefile
```

See also DeletePage function in DynaPDF manual.

75.39.220 DeletePageLabels

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes all page labels contained in the current open document, if any.
See also DeletePageLabels function in DynaPDF manual.

75.39.221 DeleteSeparationInfo(AllPages as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deleted the separation of the current open page or of all pages if the parameter AllPages is set to true.
See also DeleteSeparationInfo function in DynaPDF manual.

75.39.222 DeleteTemplate(handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes a template.
See also DeleteTemplate function in DynaPDF manual.

75.39.223 DeleteTemplateEx(index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function deletes a template by using an index instead of a template handle.
See also DeleteTemplateEx function in DynaPDF manual.

75.39.224 DeleteXFAForm

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes XFA Form.
See also DeleteXFAForm function in DynaPDF manual.

75.39.225 DrawArc(PosX as Double, PosY as Double, Radius as Double, StartAngle as Double, EndAngle as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws an arc by using a start and end angle.
See also DrawArc function in DynaPDF manual.

75.39.226 DrawArcEx(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws an elliptical arc.
Example:

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// create new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// new page
call pdf.Append

// black
call pdf.SetStrokeColor 0

// draw an arc
call pdf.DrawArcEx 100,100,100,100, 90,180
call pdf.StrokePath

// and a second one
call pdf.DrawArcEx 200,200,100,100, 0,90
call pdf.StrokePath

// and a third one. 0 to 0 gives a full circle
call pdf.DrawArcEx 300,300,100,100, 0,0
call pdf.StrokePath

// finish page
call pdf.EndPage

// Close file
call pdf.CloseFile
```

```
// open PDF
f.Launch
```

See also DrawArcEx function in DynaPDF manual.

75.39.227 DrawChord(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws an elliptical chord (a region bounded by the intersection of an ellipse and a line segment, called a secant).
See also DrawChord function in DynaPDF manual.

75.39.228 DrawCircle(PosX as Double, PosY as Double, Radius as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws a circle.
Example:

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
call pdf.Append

// a circle, filled
call pdf.SetFillColor pdf.RGB(0,255,0) // green
call pdf.DrawCircle(100, 100, 100, pdf.kfmFill)

// a circle, stoked
```

```
call pdf.SetStrokeColor pdf.RGB(255,0,0) // red
call pdf.DrawCircle(200, 200, 100, pdf.kfmStroke)

// end page
call pdf.EndPage

// Close page
call pdf.CloseFile

// Open PDF
f.Launch
```

See also DrawCircle function in DynaPDF manual.

75.39.229 DrawNGon(PosX as double, PosY as double, Radius as double, Alpha as double, NumSides as Integer, FillMode as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a n-gon.
Notes:

PosX: X-Coordinate of the midpoint of the ngon
PosY: Y-Coordinate of the midpoint of the ngon
Radius: The radius.
Alpha: Rotation angle in degrees
NumSides: Number of sides. Must be greater 2.
FillMode: Fill mode, e.g. kfmFillStroke

The function A n-gon is a polygon with "n" number of sides. The minimum number of sides is three.
A n-gon is a closed path that can be filled, stroked or both. It is also possible to draw a n-gon invisible to apply the filling rules nonzero winding number or even-odd. The filling rules are described at ClipPath(). The parameter FillMode is ignored if the circle is drawn inside a clipping path. The fill modes are described at ClosePath().

If the function succeeds the return value is true. If the function fails the return value is false.
See also DrawNGon function in DynaPDF manual.

75.39.230 DrawPie(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a pie-shaped wedge bounded by the intersection of an ellipse and two angles.
See also DrawPie function in DynaPDF manual.

75.39.231 EditPage(PageNum as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function prepares a page for editing.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance

// edit page 1
call pdf.EditPage(1)
// set a font
call pdf.SetFont( "Times New Roman",pdf.kfsNone,46,True,pdf.kcp1252 )
// set a color
call pdf.SetFillColor(0)

// now add a text annotation
call pdf.FreeTextAnnot( 100, 100, 100, 100, "author", "test", 0 )

// end page
call pdf.EndPage
```

See also EditPage function in DynaPDF manual.

75.39.232 EditTemplate(index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function prepares a template for editing.
See also EditTemplate function in DynaPDF manual.

75.39.233 EditTemplate2(handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prepares the template for editing.
See also EditTemplate2 function in DynaPDF manual.

75.39.234 Ellipse(PosX as Double, PosY as Double, Width as Double, Height as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws an ellipse.
See also Ellipse function in DynaPDF manual.

75.39.235 EnableMutex(Value as boolean)

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to enable mutex or not.

75.39.236 EncryptPDF(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function encrypts a PDF file.
See also EncryptPDF function in DynaPDF manual.

75.39.237 EncryptPDFAnsi(Path as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function encrypts a PDF file.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** Same as EncryptPDF, but takes path name in Windows ANSI encoding.
See also EncryptPDF function in DynaPDF manual.

75.39.238 EndContinueText as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function finishes a continue text block that was created with the function BeginContinueText() beforehand.
Deprecated: This item is deprecated and should no longer be used.

75.39.239 EndLayer as boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function closes a layer that was opened by BeginLayer.
Notes:

If the function succeeds the return value is true. If the function fails the return value is false.

See also EndLayer function in DynaPDF manual.

75.39.240 EndPage as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function closes an open page that was opened by Append() or EditPage().
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

bBool=pdf.EndPage
```

See also EndPage function in DynaPDF manual.

75.39.241 EndPattern as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function closes an open pattern that was opened by BeginPattern() or CreateStdPattern().
See also EndPattern function in DynaPDF manual.

75.39.242 EndTemplate as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function closes an open template that was opened by BeginTemplate(), EditTemplate() or EditTemplate2().
See also EndTemplate function in DynaPDF manual.

75.39.243 EnumDocFonts as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function enumerates all fonts used in the current PDF document.
Notes: Will call the EnumDocFont event.
See also EnumDocFonts function in DynaPDF manual.

75.39.244 EnumDocFontsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function enumerates all fonts used in the current PDF document and returns the count.
Notes: Returns the number of fonts found. Does not call the event.

75.39.245 EnumHostFonts as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function enumerates all fonts found in the search directories by passing the font names to a callback function.
Deprecated: This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
Notes: Calls the EnumHostFont event.
See also EnumHostFonts function in DynaPDF manual.

75.39.246 EnumHostFontsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function enumerates all fonts found in the search directories.
Deprecated: This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
Notes: Returns the number of fonts found. Does not call the event.

75.39.247 EnumHostFontsEx as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function enumerates all fonts found in the search directories in the same way as EnumHostFonts().
Deprecated: This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
Notes: Calls the EnumHostFontEx event.
See also EnumHostFontsEx function in DynaPDF manual.

75.39.248 EnumHostFontsExCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function enumerates all fonts found in the search directories in the same way as EnumHostFontsCount().
Deprecated: This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
Notes: Returns the number of fonts found. Does not call the event.

75.39.249 ExchangeBookmarks(Bmk1 as Integer, Bmk2 as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function exchanges two bookmarks.
See also ExchangeBookmarks function in DynaPDF manual.

75.39.250 ExchangePages(first as Integer, second as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function exchanges two pages.
See also ExchangePages function in DynaPDF manual.

75.39.251 ExtractPageText(RemoveText as boolean = false) as String

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts text of current open page.
Notes:

This is a convenience function so you don't need to use DynaPDFStackMBS class yourself.
Returns the text of the page. Use EditPage() to open a page and than EndPage() to close it.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.

Deprecated in favor of newer ExtractText function.

75.39.252 ExtractPageTextRect(Left as Double, Top as Double, Right as Double, Bottom as Double, RemoveText as boolean = false) as String

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts text of current open page within given rectangle.
Notes:

Text that starts within the given rectangle is captured.
Be aware that PDF coordinates start on bottom left of page with 0/0.

This is a convenience function so you don't need to use DynaPDFStackMBS class yourself.
Returns the text of the page. Use EditPage() to open a page and than EndPage() to close it.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.

Deprecated in favor of newer ExtractText function.

75.39.253 ExtractText(PageNum as Integer, Flags as Integer, rect as DynaPDFRectMBS = nil, byref text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the text of the page PageNum.
Example:

```
dim pdf as DynaPDFMBS

dim Page as Integer = 1 // first page
dim Flags as Integer = ktefDefault
dim text as string
dim ok as boolean = pdf.ExtractText(Page, Flags, text)

if ok then
msgbox text
```

end if

Notes:

The first page is denoted by 1.

Text lines can be sorted in x- and y-direction. The flag ktefDeleteOverlappingText causes that identical text records which are placed on the same position (with a tolerance of 2 units) will be deleted. The records must occur one after the other in order to detect them.

The optional parameter Area can be set to restrict the text extraction to that rectangle. The rectangle must be defined according to the current coordinate system. That means either in bottom up or top down coordinates, see SetPageCoords() for further information. Note also that the function considers the orientation of the page. The width and height of the rectangle must be exchanged if the orientation is 90, -90, 270, or -270 degrees.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ExtractText function in DynaPDF manual.

75.39.254 FileAttachAnnot(PosX as Double, PosY as Double, Icon as Integer, Author as string, Desc as string, File as folderitem, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a file attachment annotation on the current open page.
Notes: On Windows, the Desc and the Author parameters are converted to unicode.
See also FileAttachAnnot function in DynaPDF manual.

75.39.255 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as MemoryBlock, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file attachment annotation exactly in the same way as FileAttachAnnot() but accepts a file buffer as input.
Notes:

See FileAttachAnnot() for further information. The parameter FileName is required. It should contain the file name including extension, e.g. "MyImage.jpg".

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also FileAttachAnnotEx function in DynaPDF manual.
See also:

- 75.39.256 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as String, Compress as boolean) as Integer 13935

75.39.256 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as String, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file attachment annotation exactly in the same way as FileAttachAnnot() but accepts a file buffer as input.
Notes:

See FileAttachAnnot() for further information. The parameter FileName is required. It should contain the file name including extension, e.g. "MyImage.jpg".

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also FileAttachAnnotEx function in DynaPDF manual.
See also:

- 75.39.255 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as MemoryBlock, Compress as boolean) as Integer 13934

75.39.257 FileLink(PosX as Double, PosY as Double, Width as Double, Height as Double, FileLink as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a file link annotation.
Notes: Here you can pass a string which may be a relative file path like simply the file name of other pdf file in same folder.
See also FileLink function in DynaPDF manual.

75.39.258 FileLinkAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, FileLink as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a file link annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** Here you can pass a string which may be a relative file path like simply the file name of other pdf file in same folder.
See also FileLink function in DynaPDF manual.

75.39.259 FindBookmark(DestPage as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for a bookmark in the document outline tree.
Notes: The text parameter is converted to unicode.
See also FindBookmark function in DynaPDF manual.

75.39.260 FindBookmarkAnsi(DestPage as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for a bookmark in the document outline tree.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also FindBookmark function in DynaPDF manual.

75.39.261 FindEmbeddedFile(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the embedded file Name and returns the handle of it when it can be found.
Notes:

The file can then be extracted with GetEmbeddedFile().

If the function succeeds the return value is an embedded file handle, a value greater or equal zero. If the file cannot be found the return value is -1.
See also FindEmbeddedFile function in DynaPDF manual.

75.39.262 FindField(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for an interactive form field by using the fully qualified field name.
Notes: The Name parameter is converted to unicode.
See also FindField function in DynaPDF manual.

75.39.263 FindFieldAnsi(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for an interactive form field by using the fully qualified field name.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Name parameter is converted to ANSI.
See also FindField function in DynaPDF manual.

75.39.264 FindLinkAnnot(URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function searches for a file link or web link annotation.
See also FindLinkAnnot function in DynaPDF manual.

75.39.265 FindNextBookmark as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function searches for the next bookmark with the same search parameters which were used by a previous call of FindBookmark().
See also FindNextBookmark function in DynaPDF manual.

75.39.266 FinishSignature(PKCS7 as Memoryblock) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function writes the PKCS# 7 signature object to the PDF file and writes finally the finish PDF file to disk and frees all used resources if the file was not created in memory.
Notes:

If the file was created in memory GetBuffer() can now be called to obtain the finish PDF buffer.
CloseAndSignFileExt() must be called prior this function can be called.

Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also FinishSignature function in DynaPDF manual.
See also:

- 75.39.267 FinishSignature(PKCS7 as string) as boolean 13938

75.39.267 FinishSignature(PKCS7 as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function writes the PKCS# 7 signature object to the PDF file and writes finally the finish PDF file to disk and frees all used resources if the file was not created in memory.
Notes:

If the file was created in memory GetBuffer() can now be called to obtain the finish PDF buffer.
CloseAndSignFileExt() must be called prior this function can be called.

Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also FinishSignature function in DynaPDF manual.
See also:

- 75.39.266 FinishSignature(PKCS7 as Memoryblock) as boolean 13937

75.39.268 FlattenAnnotOrField(AnnotationOrFieldHandle as Integer, AnnotFlattenFlags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws an annotation or form field on the current open page.
Notes:

Form fields are annotations of type atWidget. The annotations of a page can be enumerated with GetPageAnnotEx() / GetPageAnnotCount().
The annotation or form field is deleted from the page's annotation array after it was flattened. If the function succeeds the return value is true. If the function fails the return value is false.
See also FlattenAnnotOrField function in DynaPDF manual.

75.39.269 FlattenAnnots(AnnotFlattenFlags as Integer = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flattens the annotations.
Notes:

By default all annotations which have an appearance stream and which have the print flag set are flattened. All annotations are deleted when the function returns with the exception of file attachment annotations. If you want to flatten the view state then set the flag affUseViewState.

Annotation flags:

kaffNone	0	Printable annotations independent of the type
kaffUseViewState	1	If set, annotations which are visible in a viewer become flattened.
kaffMarkupAnnots	2	If set, markup annotations are flattened only. Link, Sound, or FileAttach annotations are no markup annotations. These types will be left intact.

See also FlattenAnnots function in DynaPDF manual.

75.39.270 FlattenForm as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts all fields of an Interactive Form to native PDF vector graphics and deletes the form after all fields are converted, incl. all JavaScript actions which are connected with form fields, pages, or the catalog object, and global JavaScript functions.
Notes: Requires DynaPDF Pro license.
See also FlattenForm function in DynaPDF manual.

75.39.271 FlushPageContent(stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function replaces the content stream of a page or template that was changed with the function ReplacePageText() or ReplacePageTextEx() beforehand.
Notes:

The function must be called after all changes are made. See GetPageText() for an example application.

Return values:
If the function succeeds the return value is true. If the function fails the return value is false.

See also FlushPageContent function in DynaPDF manual.

75.39.272 FlushPages(Flags as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flushes pages.
Notes: Do not use FlushPages and SetUseSwapFile together. Use one function.
See also FlushPages function in DynaPDF manual.

75.39.273 FlushPagesEx(Flags as integer, LastPage as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the pages in memory to the PDF file exactly like FlushPages().
Notes: The only difference is that the last page can be specified. The function calls FlushPages() if LastPage is smaller than 1.
See also FlushPagesEx function in DynaPDF manual.

75.39.274 FreeImageBuffer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Frees the current image buffer.
See also FreeImageBuffer function in DynaPDF manual.

75.39.275 FreeImageObj(Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function releases memory that was allocated by GetImageObj to decompress the image.
Notes: If the function succeeds the return value is true. If the function fails the return value is false.
See also FreeImageObj function in DynaPDF manual.

75.39.276 FreePDF as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function frees all used resources except the font cache.
See also FreePDF function in DynaPDF manual.

75.39.277 FreeTextAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Align as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a free text annotation.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance

// edit page 1
call pdf.EditPage(1)
// set a font
call pdf.SetFont( "Times New Roman",pdf.kfsNone,46,True,pdf.kcp1252 )
// set a color
call pdf.SetFillColor(0)

// now add a text annotation
call pdf.FreeTextAnnot( 100, 100, 100, 100, "author", "test", 0 )

// end page
call pdf.EndPage
```

Notes: The Name and Author parameters are converted to unicode.
See also FreeTextAnnot function in DynaPDF manual.

75.39.278 FreeTextAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Align as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a free text annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Name and Author parameters are converted to ANSI.
See also FreeTextAnnot function in DynaPDF manual.

75.39.279 Get3DAnnotStream(Annot as UInt32, byref Data as String, byref SubType as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the data stream of a 3D annotation.
Notes:

At time of publication, PDF supports U3D and PRC files. Check the value of the string SubType to determine the file type. The default format is U3D. SubType can be "" in this case. For PRC files, SubType is required to be present.

Returns true on success and false on failure.
See also Get3DAnnotStream function in DynaPDF manual.

75.39.280 GetActionCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of actions contained in a document.
See also GetActionCount function in DynaPDF manual.

75.39.281 GetActionHandle(ObjType as Integer, ObjHandle as UInt32, ActIndex as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the handle of an action.
Notes:

To determine the number of available actions of a specific object call GetObjActionCount. Since the Catalog object contains no handle, the parameter ObjHandle will be ignored for this object type.

If the function succeeds the return value is the action handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also GetActionHandle function in DynaPDF manual.

75.39.282 GetActionType(ActHandle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the type of an annotation.
See also GetActionType function in DynaPDF manual.

75.39.283 GetActionTypeEx(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the action type of an action used by a specific PDF object.
See also GetActionTypeEx function in DynaPDF manual.

75.39.284 GetActiveFont as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the handle of the active font or -1 if no font is set.
See also GetActiveFont function in DynaPDF manual.

75.39.285 GetAllocBy as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the pre allocated buffer size of page content streams in bytes.
See also GetAllocBy function in DynaPDF manual.

75.39.286 GetAnnot(ahandle as Integer) as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function retrieves the most important properties of an annotation.
Example:

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationMBS = pdf.GetAnnot(i)

MsgBox str(a.Type)
next
```

Deprecated: This item is deprecated and should no longer be used. You can use GetAnnotEx instead.

75.39.287 GetAnnotBBox(ahandle as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function retrieves the bounding box of an annotation measured in bottom up coordinates.
See also GetAnnotBBox function in DynaPDF manual.

75.39.288 GetAnnotCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of annotations currently used in the document.
See also GetAnnotCount function in DynaPDF manual.

75.39.289 GetAnnotEx(ahandle as Integer) as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function retrieves the most important properties of an annotation.
Example:

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationExMBS = pdf.GetAnnotEx(i)

MsgBox str(a.Type)
next
```

See also GetAnnotEx function in DynaPDF manual.

75.39.290 GetAnnotFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default flags used for newly created annotations.
See also GetAnnotFlags function in DynaPDF manual.

75.39.291 GetAnnotLink(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the URL or file path of a file link annotation.
See also GetAnnotLink function in DynaPDF manual.

75.39.292 GetAnnotType(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the type of a specific annotation.
See also GetAnnotType function in DynaPDF manual.

75.39.293 GetAscent as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the ascender of the active font.
See also GetAscent function in DynaPDF manual.

75.39.294 GetBBox(boundary as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a bounding box of a PDF page.
See also GetBBox function in DynaPDF manual.

75.39.295 GetBidiMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current bidirectional mode.
Notes:

Useful constants:

kbmLeftToRight	0	Apply the bidi algorithm in Left to Right layout
kbmRightToLeft	1	Apply the bidi algorithm in Right to Left layout
kbmNone	2	Default ->do not apply the bidi algorithm

See also GetBidiMode function in DynaPDF manual.

75.39.296 GetBookmark(ahandle as Integer) as DynaPDFBookmarkMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the properties of a bookmark.
See also GetBookmark function in DynaPDF manual.

75.39.297 GetBookmarkCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of bookmarks defined in the document.
See also GetBookmarkCount function in DynaPDF manual.

75.39.298 GetBorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the global border style which is used for newly created Interactive Form fields.
See also GetBorderStyle function in DynaPDF manual.

75.39.299 GetBuffer as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a pointer to the buffer of a memory based PDF file.
Notes: The result string has no encoding set.
See also GetBuffer function in DynaPDF manual.

75.39.300 GetBufferMemory as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a pointer to the buffer of a memory based PDF file.
Notes: The result string has no encoding set.

75.39.301 GetCapHeight as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the cap height of the active font.
See also GetCapHeight function in DynaPDF manual.

75.39.302 GetCharacterSpacing as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current character spacing.
See also GetCharacterSpacing function in DynaPDF manual.

75.39.303 GetCheckBoxChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the character used for newly created check boxes.
See also GetCheckBoxChar function in DynaPDF manual.

75.39.304 GetCheckBoxCharEx(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the check box character for the given field.
See also GetCheckBoxCharEx function in DynaPDF manual.

75.39.305 GetCheckBoxDefState(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the default state of a check box, that is 1 == checked or 0 == unchecked.
See also GetCheckBoxDefState function in DynaPDF manual.

75.39.306 GetCMap(index as Integer) as DynaPDFCMapMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the CMap object with the given index.
See also GetCMap function in DynaPDF manual.

75.39.307 GetCMapCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of character maps.
See also GetCMapCount function in DynaPDF manual.

75.39.308 GetColorSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the active color space.
See also GetColorSpace function in DynaPDF manual.

75.39.309 GetColorSpaceCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of color spaces.
Example:

```
Sub DrawSomething(pdf as DynaPDFMBS)
// draw all colorants with their own color
Dim MyX, MyY as Double

MyX = 10
MyY = 100

// set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

// loop over all color spaces
dim Colorcount as Integer = pdf.GetColorSpaceCount

For j as Integer = 0 to Colorcount-1
MyX = 10
dim MyColourSpace as DynaPDFColorSpaceMBS = PDF.GetColorSpaceObj(j)
dim ColorantsCount as Integer = MyColourSpace.ColorantsCount
dim c as Integer = MyColourSpace.NumInComponents
Call pdf.SetExtColorSpace j
```

```
// draw name of each colorant
for i as Integer = 0 to c-1

// build array with colors and set 100% for the one color we need
dim values() as Double
redim values(c-1)
values(i) = 1.0

// get name
dim name as string = "# "+str(i)
if i <= ColorantsCount then
name = MyColourSpace.Colorants(i)
end if

// seaw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX,MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY+20
Next
End Sub
```

See also GetColorSpaceCount function in DynaPDF manual.

75.39.310 GetColorSpaceObj(index as Integer) as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a ColorSync Profile for the given index.
Notes: Index from 0 to GetColorSpaceCount-1.
See also GetColorSpaceObj function in DynaPDF manual.

75.39.311 GetCompressionFilter as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the standard compression filter for images.

See also GetCompressionFilter function in DynaPDF manual.

75.39.312 GetCompressionLevel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the active compression level.
See also GetCompressionLevel function in DynaPDF manual.

75.39.313 GetContent as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns a pointer to the content stream of the currently open page or template.
Notes: The result string has no encoding set.
See also GetContent function in DynaPDF manual.

75.39.314 GetDefBitsPerPixel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns default color depth in bits per pixel, which determines whether images should be down sampled.
See also GetDefBitsPerPixel function in DynaPDF manual.

75.39.315 GetDescent as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the descender of the active font.
See also GetDescent function in DynaPDF manual.

75.39.316 GetDocInfo(dinfo as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a document info entry as Unicode string.
Notes: The result is an unicode string.
See also GetDocInfo function in DynaPDF manual.

75.39.317 GetDocInfoCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of document info entries defined in the document.
See also GetDocInfoCount function in DynaPDF manual.

75.39.318 GetDocInfoEx(index as Integer, byref DInfo as Integer, byref key as string, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a document info entry.
Notes: Key is an ascii string and value an unicode string.
See also GetDocInfoEx function in DynaPDF manual.

75.39.319 GetDocumentColorSpaces as DynaPDFColorSpaceMBS()

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries Colorspace objects for all colorspaces in the current working document.

75.39.320 GetDocUsesTransparency(Flags as UInt32 = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether this document uses transparency.
Notes:

Checks whether a PDF file uses native PDF Transparency (PDF 1.4). The file uses transparency when it contains soft masks, blend modes other than Normal, or fill or stroke alpha values smaller than 1.0.
The function checks all pages, templates, extended graphics states, images, annotations, and form fields.
If the file uses transparency the return value is true. If it uses no transparency the return value is false.
See also GetDocUsesTransparency function in DynaPDF manual.

75.39.321 GetDrawDirection as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the actual draw direction for closed vector graphics such as rectangles, circles, ellipses and so on.

See also GetDrawDirection function in DynaPDF manual.

75.39.322 GetDynaPDFVersion as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the version string of DynaPDF.
Notes: Result is an ASCII string.
See also GetDynaPDFVersion function in DynaPDF manual.

75.39.323 GetEmbeddedFile(Handle as Integer, byref FileSpec as DynaPDF-FileSpecMBS, Decompress as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an embedded file as well as a pointer to the file buffer.
Example:

```
// new PDF Environment
dim pdf as new MyDynaPDFMBS
call pdf.CreateNewPDF nil

// import PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with hidden data.pdf")
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)
call pdf.OpenImportFile(f)
call pdf.ImportPDFFile(1)

// walk over list of embedded files and get their data
dim c as Integer = pdf.GetEmbeddedFileCount
for i as Integer = 0 to c-1
dim e as DynaPDFFileSpecMBS
if pdf.GetEmbeddedFile(i, e, true) then
dim data as string = e.Buffer

Break
end if
next

// cleanup
call pdf.CloseFile
```

See also GetEmbeddedFile function in DynaPDF manual.

75.39.324 GetEmbeddedFileCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of embedded files available in the PDF file.
Example:

```
// new PDF Environment
dim pdf as new MyDynaPDFMBS
call pdf.CreateNewPDF nil

// import PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with hidden data.pdf")
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)
call pdf.OpenImportFile(f)
call pdf.ImportPDFFile(1)

// walk over list of embedded files and get their data
dim c as Integer = pdf.GetEmbeddedFileCount
for i as Integer = 0 to c-1
dim e as DynaPDFFileSpecMBS
if pdf.GetEmbeddedFile(i, e, true) then
dim data as string = e.Buffer

Break
end if
next

// cleanup
call pdf.CloseFile
```

See also GetEmbeddedFileCount function in DynaPDF manual.

75.39.325 GetEMFPatternDistance as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the distance between lines of standard patterns during EMF conversion.
See also GetEMFPatternDistance function in DynaPDF manual.

75.39.326 GetErrLogMessage(index as Integer) as DynaPDFErrorMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Querties the error message details for the given index.
Notes: Index from 0 to GetErrLogMessageCount-1.
See also GetErrLogMessage function in DynaPDF manual.

75.39.327 GetErrLogMessageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of error log messages.
See also GetErrLogMessageCount function in DynaPDF manual.

75.39.328 GetErrorMessage as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the last error message as a string, or "" if no error occurred.
See also GetErrorMessage function in DynaPDF manual.

75.39.329 GetErrorMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current error mode.
See also GetErrorMode function in DynaPDF manual.

75.39.330 GetField(index as Integer) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of a field.
Deprecated: This item is deprecated and should no longer be used. You can use GetFieldEx instead.

75.39.331 GetFieldBackColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default background color used for newly created interactive form fields.
See also GetFieldBackColor function in DynaPDF manual.

75.39.332 GetFieldBorderColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default border color used for newly created interactive form fields.
See also GetFieldBorderColor function in DynaPDF manual.

75.39.333 GetFieldBorderStyle(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the border style of a specific form field.
See also GetFieldBorderStyle function in DynaPDF manual.

75.39.334 GetFieldBorderWidth(aField as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the line width of the border of a field.
See also GetFieldBorderWidth function in DynaPDF manual.

75.39.335 GetFieldCalcOrder as UInt32()

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries field calculation order.
Notes:

Retrieves the calculation order of form fields which contain an action in the OnCalc event (see AddActionToObj() for further information). This is the order in which their values will be recalculated when the value of any field changes. The retrieved array values are field handles.

To change the calculation order of a specific field call SetFieldCalcOrder().
See also GetFieldCalcOrder function in DynaPDF manual.

75.39.336 GetFieldChoiceValue(Field as Integer, ValIndex as Integer) as DynaPDFChoiceValueMBS

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the choice values for this field.
See also GetFieldChoiceValue function in DynaPDF manual.

75.39.337 GetFieldColor(Field as Integer, ColorType as Integer, byref ColorSpace as Integer, byref ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a specific color of an interactive form field.
See also GetFieldColor function in DynaPDF manual.

75.39.338 GetFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of fields contained in the document.
See also GetFieldCount function in DynaPDF manual.

75.39.339 GetFieldEx(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the most important properties of a field.
Example:

```
dim pdf as new MyDynaPDFMBS

pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License

call pdf.CreateNewPDF(nil)
call pdf.SetImportFlags(BitwiseOr(pdf.kifImportAll, pdf.kifImportAsPage))

dim filePath as FolderItem=SpecialFolder.Desktop.Child("acroform.pdf")
if (pdf.OpenImportFile(filePath, pdf.kptOpen, "") <0) then
MsgBox "Input file """+filePath.name+""" not found!"
quit
end if
```

```
// import all pages
dim r as Integer = pdf.ImportPDFFile( 1, 1.0, 1.0)

// now check all fields
dim n as Integer = pdf.GetFieldCount
for i as Integer = 0 to n-1
dim f as DynaPDFFieldExMBS = pdf.GetFieldEx(i)

break // inspect in debugger
next
```

Notes: See dynapdf_help.pdf for more details.
See also GetFieldEx function in DynaPDF manual.

75.39.340 GetFieldExpValCount(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of values/export values which are defined for a field.
See also GetFieldExpValCount function in DynaPDF manual.

75.39.341 GetFieldExpValue(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function retrieves the export value(s) of a check box, list box, or combo box.
See also GetFieldExpValue function in DynaPDF manual.

75.39.342 GetFieldExpValueEx(Field as Integer, ValIndex as Integer, byref Value as string, byref ExpValue as string, byref Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to enumerate the choice values of a combo box, list box, or radio button.
See also GetFieldExpValueEx function in DynaPDF manual.

75.39.343 GetFieldFlags(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the flags of a specific interactive form field.
See also GetFieldFlags function in DynaPDF manual.

75.39.344 GetFieldGroupType(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the base type of a field group.
See also GetFieldGroupType function in DynaPDF manual.

75.39.345 GetFieldHighlightMode(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the highlight mode of buttons, checkboxes, and signature fields.
See also GetFieldHighlightMode function in DynaPDF manual.

75.39.346 GetFieldIndex(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the index or tab order of the field.
See also GetFieldIndex function in DynaPDF manual.

75.39.347 GetFieldMapName(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the mapping name of a specific form field if set.
Notes: The result string is in unicode or ASCII encoding.
See also GetFieldMapName function in DynaPDF manual.

75.39.348 GetFieldName(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the name of a specific interactive form field.
See also GetFieldName function in DynaPDF manual.

75.39.349 GetFieldOrientation(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the orientation of a field.
See also GetFieldOrientation function in DynaPDF manual.

75.39.350 GetFieldTextAlign(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the text alignment of a text field or button field.
See also GetFieldTextAlign function in DynaPDF manual.

75.39.351 GetFieldTextColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default text color used for newly created fields.
See also GetFieldTextColor function in DynaPDF manual.

75.39.352 GetFieldToolTip(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a pointer to the tool tip string of a specific interactive form field.
Notes: The result string has either unicode or ascii encoding.
See also GetFieldToolTip function in DynaPDF manual.

75.39.353 GetFieldType(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the field type.
See also GetFieldType function in DynaPDF manual.

75.39.354 GetFillColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current color used for fillings.
See also GetFillColor function in DynaPDF manual.

75.39.355 GetFontCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the font count.
See also GetFontCount function in DynaPDF manual.

75.39.356 GetFontEx(index as Integer) as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the font information for the font specified by the index value.
Example:

```
// create PDF object with page
dim pdf as new DynaPDFMBS
call pdf.CreateNewPDF(nil)
call pdf.Append

// draw some text
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252
call pdf.WriteFText pdf.ktaCenter, "My first Xojo output!"

// and list all fonts:
dim n as Integer = pdf.GetFontCount-1

for i as Integer = 0 to n
MsgBox pdf.GetFontEx(i).FontName
next
```

Deprecated: This item is deprecated and should no longer be used. You can use GetFontInfo instead.
Notes:

Returns nil on any error.
Index from 0 to GetFontCount-1.

75.39.357 GetFontInfoEx(index as Integer) as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the most important properties of a font.
Notes:

This function accepts a font handle instead. A font handle is a simple array index. To enumerate all fonts of a document execute the function in a loop from zero to GetFontCount - 1.

If the function succeeds the return value is font info object. If the function fails the return value is nil.
See also GetFontInfoEx function in DynaPDF manual.

75.39.358 GetFontMetrics(FontHandle as Integer) as DynaPDFFontMetricsMBS

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries font metrics for a font handle.
See also GetFontMetrics function in DynaPDF manual.

75.39.359 GetFontOrigin as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current font origin.
See also GetFontOrigin function in DynaPDF manual.

75.39.360 GetFontSearchOrder as Integer()

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the font search order.
Notes:

The values in the array use this constants:

kfbtTrueType	TrueType, TrueType Collections, or OpenType fonts with TrueType outlines
kfbtType1	Type1 font
kfbtOpenType	OpenType font with Postscript outlines
kfbtStdFont	PDF Standard font
kfbtDisabled	This value can be used to disable a specific font format.

The array has 4 values.
See also GetFontSearchOrder function in DynaPDF manual.

75.39.361 GetFontSelMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current font selection mode.
See also GetFontSelMode function in DynaPDF manual.

75.39.362 GetFontWeight as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the weight that will be used to emulate a bold font style.
See also GetFontWeight function in DynaPDF manual.

75.39.363 GetFTextHeight(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Notes: The text parameter is converted to unicode.
See also GetFTextHeight function in DynaPDF manual.

75.39.364 GetFTextHeightAnsi(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also GetFTextHeight function in DynaPDF manual.

75.39.365 GetFTextHeightEx(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Notes: The text parameter is converted to unicode.
See also GetFTextHeightEx function in DynaPDF manual.

75.39.366 GetFTextHeightExAnsi(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also GetFTextHeightEx function in DynaPDF manual.

75.39.367 GetGlyphIndex(Index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the glyph index of the given code page or Unicode index.
Notes:

How Index must be defined depends on the code page with which the font was loaded. For example, if the font was loaded with a 8 bit code page, then indexes below 256 are treated as index into the code page table. Higher indexes are treated as Unicode value in this case. Note that all Unicode encoded glyphs of the font are accessible in this case, also if the font was loaded with a 8 bit code page!

At time of publication the function does not support CJK code pages which require a conversion to Unicode, e.g. cpCJK_Big5_Uni, cpCJK_EUC_JP_Uni, and so on.

If the function succeeds the return value is greater or equal zero. If the function fails the return value is a negative error code.
See also GetGlyphIndex function in DynaPDF manual.

75.39.368 GetGlyphOutline(Index as UInt32) as DynaPDFGlyphOutlineMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the outline of a glyph of the active font.
Notes:

Note that not all glyphs have an outline. A space character, for example, has no outline and therefore the size can be zero. The function returns normalized outlines scaled to a font size of 1000 units.

Please see dynapdf_help.pdf and our example project on how to process the outline data.
See also GetGlyphOutline function in DynaPDF manual.

75.39.369 GetGoToAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFGoToActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a GoToR action.
Notes:

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetGoToAction function in DynaPDF manual.

75.39.370 GetGoToRAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFGoToActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a GoTo action.
Notes:

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetGoToRAction function in DynaPDF manual.

75.39.371 GetGStateFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current graphics state flags.

See also GetGStateFlags function in DynaPDF manual.

75.39.372 GetHideAction(index as Integer) as DynaPDFHideActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a hide action.
Notes: Index is from 0 to GetActionCount-1.
See also GetHideAction function in DynaPDF manual.

75.39.373 GetIconColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the icon color used for newly created text annotations.
See also GetIconColor function in DynaPDF manual.

75.39.374 GetImageBuffer as string

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the image buffer.
See also GetImageBuffer function in DynaPDF manual.

75.39.375 GetImageBufferMemory as memoryblock

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the image buffer.

75.39.376 GetImageCount(File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of images contained in a multi page image.
See also GetImageCount function in DynaPDF manual.
See also:

- 75.39.377 GetImageCount(Path as string) as Integer 13966

75.39.377 GetImageCount(Path as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of images contained in a multi page image.
See also GetImageCount function in DynaPDF manual.
See also:

- 75.39.376 GetImageCount(File as folderitem) as Integer 13965

75.39.378 GetImageCountEx(Buffer as Memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function determines the number of images in a multi-page image in the same way as GetImageCount(), but accepts a file buffer as input.
See also GetImageCountEx function in DynaPDF manual.
See also:

- 75.39.379 GetImageCountEx(Buffer as string) as Integer 13966

75.39.379 GetImageCountEx(Buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function determines the number of images in a multi-page image in the same way as GetImageCount(), but accepts a file buffer as input.
See also GetImageCountEx function in DynaPDF manual.
See also:

- 75.39.378 GetImageCountEx(Buffer as Memoryblock) as Integer 13966

75.39.380 GetImageHeight(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the height of an image in pixel.
See also GetImageHeight function in DynaPDF manual.

75.39.381 GetImageObj(Handle as UInt32, Flags as Integer) as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the properties of an image as well as the decompressed image buffer if needed.
Notes:

For the flags use the constants: kpfNone, kpfDecomprAllImages, kpfNoJPXDecode, kpfDitherImagesToBW, kpfConvImagesToGray, kpfConvImagesToRGB, kpfConvImagesToCMYK or kpfImageInfoOnly.

By default all images are returned decompressed, with exception of image types which are already stored in a valid file format like JPEG and JPEG 2000 images.
If all image types should be decompressed set the flag kpfDecompressAllImages.
This function allocates memory that should be released with FreeImageObj when finish.
Image handles are simple array indexes. The number of image objects can be determined with GetImageObjCount. Note that this array does not include inline images which are stored in content streams. Such images can only be accessed with ParseContent().

Returns the function succeeds the return value is true. If the function fails the return value is false.
See also GetImageObj function in DynaPDF manual.

75.39.382 GetImageObjCount as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of image objects which were loaded with DynaPDF functions or imported from external PDF files.
Notes:

The images can be accessed with GetImageObj().
The return value is the number of image objects. This function cannot fail.
See also GetImageObjCount function in DynaPDF manual.

75.39.383 GetImageWidth(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the width of an image in pixel.
See also GetImageWidth function in DynaPDF manual.

75.39.384 GetImportDataAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFImportDataActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for an import action.
Notes:

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetImportDataAction function in DynaPDF manual.

75.39.385 GetImportFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current import flags used to import PDF files.
See also GetImportFlags function in DynaPDF manual.

75.39.386 GetImportFlags2 as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries import flags 2.
See also GetImportFlags2 function in DynaPDF manual.

75.39.387 GetInBBox(PageNum as Integer, Boundary as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a bounding box of an external PDF page.
Example:

```
dim pdf as new MyDynaPDFMBS

// import some PDF
call pdf.CreateNewPDF(nil)
call pdf.OpenImportFile(file, 0, "")
call pdf.SetImportFlags(pdf.kifImportAsPage) // important! It makes the rendering faster.
call pdf.ImportPDFFile(1,1.0,1.0)

dim bounds as DynaPDFRectMBS = pdf.GetInBBox(1, pdf.kpbMediaBox)
```

See also GetInBBox function in DynaPDF manual.

75.39.388 GetInDocInfo(DInfo as Integer, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves a document info entry from an external PDF file as Unicode string.
See also GetInDocInfo function in DynaPDF manual.

75.39.389 GetInDocInfoCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of available document info entries of the currently opened import file or a negative error code on failure.
See also GetInDocInfoCount function in DynaPDF manual.

75.39.390 GetInDocInfoEx(index as Integer, byref DInfo as Integer, byref key as string, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a document info entry from the currently opened import file.
Example:

```
dim p as new DynaPDFMBS

call p.CreateNewPDF(nil)

// Skip anything that is not required
call p.SetImportFlags p.kifImportAll+p.kifImportAsPage

// From which PDF file do you want to extract the information?
call p.OpenImportFile(file, p.kptOpen, "")

// lookup all document information

dim count as integer = p.GetInDocInfoCount
for i as integer = 0 to count-1

dim DInfo as integer
dim key as string
dim value as string
```

```
if p.GetInDocInfoEx(i, DInfo, key, value) >= 0 then

dim Type as string
select case dinfo
case p.kdiAuthor
type = "Author"
case p.kdiCreator
type = "Creator"
case p.kdiKeywords
type = "Keywords"
case p.kdiProducer
type = "Producer"
case p.kdiSubject
type = "Subject"
case p.kdiTitle
type = "Title"
case p.kdiCompany
type = "Company"
case p.kdiPDFX_Ver
type = "PDF/X Version"
case p.kdiCustom
type = "Custom"
case p.kdiPDFX_Conf
type = "PDF/X Config"
case p.kdiCreationDate
type = "Creation Date"
case p.kdiModDate
type = "Modification Date"
else
Break
type = "?"
end Select

List.AddRow type, key, value
end if

next

// close import file
call p.CloseImportFile
```

Notes:

The key result is an ASCII string.
The value result is an ASCII or Unicode string.
See also GetInDocInfoEx function in DynaPDF manual.

75.39.391 GetInEncryptionFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the encryption flags of the currently opened import file.
See also GetInEncryptionFlags function in DynaPDF manual.

75.39.392 GetInFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of field in open import file.
See also GetInFieldCount function in DynaPDF manual.

75.39.393 GetInIsCollection as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether the currently opened import file is a portable collection.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsCollection function in DynaPDF manual.

75.39.394 GetInIsEncrypted as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether the currently opened import file is encrypted.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsEncrypted function in DynaPDF manual.

75.39.395 GetInIsSigned as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to determine whether a PDF file contains a digital signature.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsSigned function in DynaPDF manual.

75.39.396 GetInIsTaggedPDF as integer

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the currently open import file is a Tagged PDF file.
Notes:

The PDF file must be opened beforehand with OpenImportFile() or OpenImportBuffer().
The return value is a set flags indicating the tagging status of the file.

If the function succeeds, the return value is greater or equal zero. If the function fails, the return value is a negative error code.

75.39.397 GetInIsTrapped as Integer

MBS DynaPDF Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the input PDF is trapped.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsTrapped function in DynaPDF manual.

75.39.398 GetInIsXFAForm as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the input PDF is a XFA form.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsXFAForm function in DynaPDF manual.

75.39.399 GetInMetadata(PageNum as Integer) as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Access the optional metadata streams of pages or the global metadata stream of the current open import file.
Notes:

Metadata streams are in XMP format that is a superset of XML. The PDF file must be opened with OpenImportImportFile or OpenImportBuffer beforehand.
Although the global XMP stream does usually exist in todays PDF files, metadata streams are optional and maybe not present. The function returns true if no error occurs, also if no metadata stream is present.
See also GetInMetadata function in DynaPDF manual.

75.39.400 GetInOrientation(PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the orientation of a specific page within the currently open import file (see also OpenImportFile()).
See also GetInOrientation function in DynaPDF manual.

75.39.401 GetInPageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of pages contained in an external PDF file.
See also GetInPageCount function in DynaPDF manual.

75.39.402 GetInPDFVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the minor PDF version number of an external PDF file.
See also GetInPDFVersion function in DynaPDF manual.

75.39.403 GetInPrintSettings as DynaPDFPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the print settings for the imported document.
Notes: This is a PDF 1.7 extension.
See also GetInPrintSettings function in DynaPDF manual.

75.39.404 GetInRepairMode as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to determine whether the current open import file was opened in repair or normal mode.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInRepairMode function in DynaPDF manual.

75.39.405 GetIsFixedPitch as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns 1 if the active font is a fixed pitch font or 0 if the font is a variable pitch font.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.

75.39.406 GetIsTaggingEnabled as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether tagging is enabled.
See also GetIsTaggingEnabled function in DynaPDF manual.

75.39.407 GetItalicAngle as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the italic angle in degrees that will be used to emulate italic style fonts.
See also GetItalicAngle function in DynaPDF manual.

75.39.408 GetJavaScript(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a global JavaScript as string.
Notes:

The result text string has either unicode or ASCII encoding.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

If the JavaScript is attached to a field, please use GetFieldEx functions to get the action handle (DynaPDFFieldExMBS.Action) and then use GetJavaScriptAction instead.
See also GetJavaScript function in DynaPDF manual.

75.39.409 GetJavaScriptAction(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a java script action value for the given handle.
Deprecated: This item is deprecated and should no longer be used. You can use GetJavaScriptActionEx instead. **Notes:** May return an unicode string.
See also:

- 75.39.410 GetJavaScriptAction(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer, byref ObjEvent as Integer) as string 13975

75.39.410 GetJavaScriptAction(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer, byref ObjEvent as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a java script action value for the given object.
Deprecated: This item is deprecated and should no longer be used. You can use GetJavaScriptActionEx instead. **Notes:**

May return an unicode string.

The ObjEvent parameter was added in plugin version 9.3 and contains a value from the koe* constants.
See also:

- 75.39.409 GetJavaScriptAction(Handle as Integer) as string 13975

75.39.411 GetJavaScriptActionEx(index as Integer) as DynaPDFJavaScriptActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for an javascript action.
Notes: Index is from 0 to GetActionCount-1.
See also GetJavaScriptActionEx function in DynaPDF manual.

75.39.412 GetJavaScriptCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of global JavaScripts contained in a document.
See also GetJavaScriptCount function in DynaPDF manual.

75.39.413 GetJavaScriptEx(Name as string) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns a global JavaScript as string by using the script s name instead of a handle to identify the script.
Notes:

The result string is an unicode or an ASCII string.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

If the JavaScript is attached to a field, please use GetFieldEx functions to get the action handle (DynaPDFFieldExMBS.Action) and then use GetJavaScriptAction instead.
See also GetJavaScriptEx function in DynaPDF manual.

75.39.414 GetJavaScriptName(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the name of a global JavaScript.
Notes: The result string has either unicode or ASCII encoding.
See also GetJavaScriptName function in DynaPDF manual.

75.39.415 GetJPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current JPEG compression quality in percent used for newly inserted images which are compressed with JPEG.
See also GetJPEGQuality function in DynaPDF manual.

75.39.416 GetJPEGVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries JPEG library version.
Notes: Currently reporting 9.1 for version 9b.

75.39.417 GetLanguage as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the language identifier of the document as an ISO 3166 language tag or IANA tag, or "" if not set.
See also GetLanguage function in DynaPDF manual.

75.39.418 GetLastTextPosX as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the x coordinate of the last printed text.

75.39.419 GetLastTextPosY as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the y coordinate of the last printed text.

75.39.420 GetLaunchAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFLaunchActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a launch action.
Notes:

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetLaunchAction function in DynaPDF manual.

75.39.421 GetLayerConfig(Index as Integer) as DynaPDFOCLayerConfigMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the most important properties of a layer configuration.
Notes:

A PDF file can contain one or more layer configurations so that different layers can be initially shown or hidden.
A PDF file that contains layers (Optional Content Groups in PDF syntax) contains usually at least a default configuration dictionary. This configuration is loaded by default when the visibility state of a layer or optional content group must be determined, e.g. when rendering a page.
To determine the number of available configurations call GetLayerConfigCount(). The first index is denoted by 0.

If the function succeeds the return value is the object. If the function fails the return value is nil.
See also GetLayerConfig function in DynaPDF manual.

75.39.422 GetLayerConfigCount as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of available layer configurations.
Notes:

Note that it is possible that a document contains layers but no layer configuration. To determine whether a document contains layers or optional content groups use GetOCGCount().
To load a specific layer configuration call LoadLayerConfig().
See also GetLayerConfigCount function in DynaPDF manual.

75.39.423 GetLeading as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current leading.
See also GetLeading function in DynaPDF manual.

75.39.424 GetLineCapStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current line cap style used for vector graphics.
See also GetLineCapStyle function in DynaPDF manual.

75.39.425 GetLineJoinStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current line join style used for vector graphics.
See also GetLineJoinStyle function in DynaPDF manual.

75.39.426 GetLineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current line width used for stroked vector graphics and the border of interactive objects.
See also GetLineWidth function in DynaPDF manual.

75.39.427 GetLinkHighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current highlight mode used for newly created annotations.
See also GetLinkHighlightMode function in DynaPDF manual.

75.39.428 GetLogMetafileSize(FileName as folderitem) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the logical bounding box of an enhanced or Windows metafile.
See also GetLogMetafileSize function in DynaPDF manual.

75.39.429 GetLogMetafileSizeEx(Buffer as Memoryblock) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the logical bounding box of an enhanced or Windows metafile.
See also GetLogMetafileSizeEx function in DynaPDF manual.
See also:

- 75.39.430 GetLogMetafileSizeEx(Buffer as string) as DynaPDFRectMBS 13980

75.39.430 GetLogMetafileSizeEx(Buffer as string) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the logical bounding box of an enhanced or Windows metafile.
See also GetLogMetafileSizeEx function in DynaPDF manual.
See also:

- 75.39.429 GetLogMetafileSizeEx(Buffer as Memoryblock) as DynaPDFRectMBS 13979

75.39.431 GetMatrix(byref Matrix as DynaPDFMatrixMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the current transformation.
See also GetMatrix function in DynaPDF manual.

75.39.432 GetMaxFieldLen(TxtField as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the allowed maximum string length of a text field, or zero if the length is not restricted.
See also GetMaxFieldLen function in DynaPDF manual.

75.39.433 GetMetaConvFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the conversion flags used to convert enhanced metafiles to PDF.
See also GetMetaConvFlags function in DynaPDF manual.

75.39.434 GetMetadata(ObjType as Integer, Handle as Integer) as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function can be used to access the optional metadata streams of pages, fonts, images, pages, templates, as well as the global metadata stream that is associated with the Catalog object.
Notes:

Metadata streams are in XMP format that is a superset of XML.
The global metadata stream will be created when this function is called. The returned stream is a preview of the XMP stream that will be stored in the file when CloseFile or CloseFileEx is called. Note that the

creation and modification date will be updated when the file is closed.
The original global XMP stream of external PDF files can be accessed with GetInMetadata().
Metadata streams are optional and maybe not present. The function returns true if no error occurs, also if no metadata stream is present.
See also GetMetadata function in DynaPDF manual.

75.39.435 GetMissingGlyphs as UInt32()

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with missing glyphs.
Notes: See also GetMissingGlyphsString.
See also GetMissingGlyphs function in DynaPDF manual.

75.39.436 GetMissingGlyphsString as String

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string containing the missing glpyhs characters.
Notes:

This is a convenience function which builds a string from the array given by pdfGetMissingGlyphs.

See also GetMissingGlyphs.

75.39.437 GetMiterLimit as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current miter limit used to draw stroked vector graphics.
See also GetMiterLimit function in DynaPDF manual.

75.39.438 GetMovieAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a movie action.
Notes:

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetMovieAction function in DynaPDF manual.

75.39.439 GetNamedAction(index as Integer) as DynaPDFNamedActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for a named action.
Notes: Index is from 0 to GetActionCount-1.
See also GetNamedAction function in DynaPDF manual.

75.39.440 GetNamedDest(index as Integer) as DynaPDFNamedDestMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries information about the named destination with the given index.
Notes:

Index from 0 to GetNamedDestCount-1.
Returns nil on any error.
See also GetNamedDest function in DynaPDF manual.

75.39.441 GetNamedDestCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of named destination objects.
See also GetNamedDestCount function in DynaPDF manual.

75.39.442 GetNeedAppearance as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether appearance is needed.
See also GetNeedAppearance function in DynaPDF manual.

75.39.443 GetObjActionCount(ObjType as Integer, ObjHandle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of actions used by an object.
Deprecated: This item is deprecated and should no longer be used. You can use GetObjActions instead.

75.39.444 GetObjActions(ObjType as Integer, ObjHandle as Integer, byref Actions as DynaPDFObjActionsMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for an object action.
Notes:

Index is from 0 to GetActionCount-1.

The function retrieves the first action and additional trigger events that should be executed when a specific event occurs.
If the object type is a page, then use the page number as handle.

Trigger events are supported by the global Catalog object (this is the document root), Pages, and Form Fields. All other objects do not support trigger events.
Actions are defined as a single linked list. That means one action can execute another action (if NextAction of that action is >= 0).
Note that an action can reference itself! The application must check whether an action is already in the execution list before it will be executed.

If an error occurred, the plugin returns nil.
On success, we provide the DynaPDFObjActionsMBS object in Actions parameter.

Return values:

<0	An error occurred, e.g. due to an invalid handle.
0	The object contains no action or trigger event.
1	The object contains an action.
2	The object contains a trigger event.
3	The object contains an action and a trigger event.

See also GetObjActions function in DynaPDF manual.

75.39.445 GetOCG(Handle as UInt32) as DynaPDFOCGMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the properties of an OCG, also called layer.
Notes:

An OCG handle is a simple array index. You can loop over all available OCGs from 0 to GetOCGCount - 1.
If the member HaveContUsage is true, the OCG contains a Content Usage dictionary. The contents of this dictionary can be accessed with the function GetOCGContUsage. A Content Usage dictionary contains additional information about a layer or OCG.

If the OCG is also included in an application event, this is the case if AppEvent is non-zero, then the Content Usage dictionary is used to control the visibility state of the layer. The member Categories specifies which categories control the visibility state.

Returns nil on any error.
See also GetOCG function in DynaPDF manual.

75.39.446 GetOCGContUsage(Handle as UInt32) as DynaPDFOCGContUsageMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the properties of the Content Usage dictionary that is associated with an OCG or layer.
Notes:

If the OCG is not included in an application event, then the contents in this dictionary serves as pure information.
If the OCG is included in one or more application events, then these settings control also the visibility state of the OCG. The function GetOCG returns the events and categories which control the layer visibility.
If UserNamesCount is greater zero, the dictionary contains also user names. The user names can be accessed with GetOCGUsageUserName.

Returns nil on any error.
See also GetOCGContUsage function in DynaPDF manual.

75.39.447 GetOCGCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of OCGs or layers which are available in document.
Notes: This function cannot fail, the return value is always greater or equal zero.
See also GetOCGCount function in DynaPDF manual.

75.39.448 GetOCGUsageUserName(Handle as UInt32, Index as UInt32, byref Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a user name of a Content Usage dictionary that is associated with an OCG or layer.
Notes:

The functions a pointer of the original string that is stored in the PDF file.
If the function succeeds the return value is true. If the function fails the return value is false.
See also GetOCGUsageUserName function in DynaPDF manual.

75.39.449 GetOCUINode(Node as Integer) as DynaPDFOCUINodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the most important properties of an Optional Content UI node (UI stands for User Interface).
Notes:

If the PDF file was not already imported with ImportPDFFile() the function ImportOCProperties() must be called to import the global Optional Content Properties.
UI nodes are part of a layer configuration. Therefore, a layer configuration must be loaded with LoadLayerConfig() before the function can be called.

Optional Content Groups (OCGs) which are returned by this function should be visible in the user interface of a viewer application. All other OCGs should not be shown by default.
UI nodes are stored in a single linked list. To get the pointer of the root node set the parameter Node to 0. The parameter OutNode will be ignored in this case but it is required otherwise.
The next node of the root is in the NextItem property. If no further node is available the return value will be 0.
Every node can contain one or more child nodes, an optional label, or a reference to an OCG.
See also GetOCUINode function in DynaPDF manual.

75.39.450 GetOpacity as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the opacity value used to draw the visible appearance of an annotation (requires Acrobat 5 or higher).
See also GetOpacity function in DynaPDF manual.

75.39.451 GetOrientation as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the orientation of the current open page if an open page was detected or the default orientation for newly created pages if no open page was detected.
See also GetOrientation function in DynaPDF manual.

75.39.452 GetOutputIntent(Index as Integer) as DynaPDFOutputIntentMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an output intent as well as the properties of it.
Notes:

An output intent is an ICC profile that describes the characteristics of the output device. The profile is mostly embedded but certain standards like PDF/X 4p, for example, allow also the usage of non-embedded profiles.

The parameter Index is the array index of the output intent. To determine the number of available intents call GetOutputIntentCount.

Returns nil in case of error.
See also GetOutputIntent function in DynaPDF manual.

75.39.453 GetOutputIntentCount as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of available output intents.
See also GetOutputIntentCount function in DynaPDF manual.

75.39.454 GetPage(PageNum as UInt32) as DynaPDFPageMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the page object for the given page number.
Notes: If you like to open a page for editing, please use editpage function.

75.39.455 GetPageAnnot(index as Integer) as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves the page annotation with the given index.
Deprecated: This item is deprecated and should no longer be used. You can use GetPageAnnotEx instead.

75.39.456 GetPageAnnotCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the page annotation count.
See also GetPageAnnotCount function in DynaPDF manual.

75.39.457 GetPageAnnotEx(index as Integer) as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries an extended annotation with the given index.
See also GetPageAnnotEx function in DynaPDF manual.

75.39.458 GetPageColorSpaces as DynaPDFColorSpaceMBS()

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries for current open page the color spaces used.
Notes:

Color spaces used for drawing colors (Stroke and Fill Color) and for image color space.
The list may be empty if for example everything is drawn in standard color spaces like RGB.

75.39.459 GetPageCoords as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the page coordinate system setting.
Notes: The native coordinate system of the Portable Document Format is bottom up.
See also GetPageCoords function in DynaPDF manual.

75.39.460 GetPageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of pages of the current PDF file if any.
See also GetPageCount function in DynaPDF manual.

75.39.461 GetPageField(Index as Integer) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of a field.
Deprecated: This item is deprecated and should no longer be used. You can use GetPageFieldEx instead.

75.39.462 GetPageFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of fields used by a page.
See also GetPageFieldCount function in DynaPDF manual.

75.39.463 GetPageFieldEx(Index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of a field.
Notes: The parameter Index must be a valid index to the page's field array. To enumerate the fields of a page execute the function in a loop from 0 to GetPageFieldCount - 1.
See also GetPageFieldEx function in DynaPDF manual.

75.39.464 GetPageHeight as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the height of the currently open page.
See also GetPageHeight function in DynaPDF manual.

75.39.465 GetPageLabel(index as Integer, byref Label as DynaPDFPageLabelMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the properties of a page label.
See also GetPageLabel function in DynaPDF manual.

75.39.466 GetPageLabelCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of page labels defined in the document.
See also GetPageLabelCount function in DynaPDF manual.

75.39.467 GetPageLayout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the page layout that is used when opening the document with Adobe s Acrobat.
See also GetPageLayout function in DynaPDF manual.

75.39.468 GetPageMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the page mode that is used when opening the document with Adobe's Acrobat.
See also GetPageMode function in DynaPDF manual.

75.39.469 GetPageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the page number of the currently open page.
See also GetPageNum function in DynaPDF manual.

75.39.470 GetPageText(stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to extract the text of a page or template, or to find a specific text that should be replaced or deleted with the function ReplacePageText() or ReplacePageTextEx().
Notes:

InitStack must be called before you use GetPageText.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
See also GetPageText function in DynaPDF manual.

75.39.471 GetPageWidth as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the width of the currently open page.
See also GetPageWidth function in DynaPDF manual.

75.39.472 GetPDFVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the minor version of the output PDF file as Integer value.
Notes: Zero stand for PDF 1.0, one for PDF 1.1 and so on.
See also GetPDFVersion function in DynaPDF manual.

75.39.473 GetPNGVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries PNG library version used in DynaPDF.

75.39.474 GetPrintSettings as DynaPDFPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the print settings for the current document.
Notes: This is a PDF 1.7 extension.
See also GetPrintSettings function in DynaPDF manual.

75.39.475 GetResetAction(Handle as UInt32) as DynaPDFResetFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the properties of a Reset Form Action.
See also GetResetAction function in DynaPDF manual.

75.39.476 GetResolution as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the resolution in DPI (Dots per Inch), in which images are stored by DynaPDF.
See also GetResolution function in DynaPDF manual.

75.39.477 GetSaveNewImageFormat as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If false, images are not downscaled if necessary.
See also GetSaveNewImageFormat function in DynaPDF manual.

75.39.478 GetSeparationInfo(byref Colorant as string, byref ColorSpace as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the separation info stored in the current open page.
See also GetSeparationInfo function in DynaPDF manual.

75.39.479 GetSpaceWidth(FontHandle as Integer, FontSize as Double) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the width of the space character of the font depending on the font size.
Notes:

If the font contains no space character a default size is used to compute the space width.
The parameter FontHandle must be a valid pointer to a PDF font. Such a reference is returned by GetPageText, EnumDocFonts, or by the content parser (see ParseContent).

Returns: If the function succeeds the return value is the space width. If the function fails the return value is zero. This function does not use the exception handling of DynaPDF. No error message is set on failure.

See also GetSpaceWidth function in DynaPDF manual.

75.39.480 GetStrokeColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current stroke color.
See also GetStrokeColor function in DynaPDF manual.

75.39.481 GetSubmitAction(Handle as UInt32) as DynaPDFSubmitFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the properties of a Submit Form Action.
Notes: Returns nil in case of an error.
See also GetSubmitAction function in DynaPDF manual.

75.39.482 GetSysFontInfo as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the most important properties of a system font.
Example:

```
// list all fonts
dim d as new DynaPDFMBS

dim f as DynaPDFSysFontMBS = d.GetSysFontInfo
while f<>nil
Listbox1.AddRow f.FamilyName

f = f.NextFont
wend
```

Notes:

The function returns the fonts in the current font search order. That means if the search order is { fbtTrueType, fbtOpenType, fbtType1, fbtStdFont } , for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on.
Since standard fonts are no system fonts, these fonts are not returned.

See also GetSysFontInfo function in DynaPDF manual.
See also:

- 75.39.483 GetSysFontInfo(PostscriptName as String) as DynaPDFSysFontMBS 13993

75.39.483 GetSysFontInfo(PostscriptName as String) as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries system font with given postscript name.
Example:

```
dim d as new DynaPDFMBS

// find one font with postscript name
dim font as DynaPDFSysFontMBS = d.GetSysFontInfo("Verdana-BoldItalic")

// find all with family name
dim fonts() as DynaPDFSysFontMBS = d.GetSysFontInfos("Verdana")

Break // see in debugger
```

Notes: Returns nil if font is not found.
See also GetSysFontInfo function in DynaPDF manual.
See also:

- 75.39.482 GetSysFontInfo as DynaPDFSysFontMBS 13992

75.39.484 GetSysFontInfos as DynaPDFSysFontMBS()

MBS DynaPDF Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with the most important properties of system fonts.
Example:

```
dim pdf as new MyDynaPDFMBS

// get all fonts
dim fonts() as DynaPDFSysFontMBS = pdf.GetSysFontInfos

// add one row for each font
for each f as DynaPDFSysFontMBS in fonts

dim name as string = f.FamilyName

if f.BaseType = pdf.kfbtOpenType and f.CIDOrdering = "" then
```

```
// This font cannot be used with Unicode

else
// Anything is ok
end if

next
```

Notes:

The function returns the fonts in the current font search order. That means if the search order is { fbtTrueType, fbtOpenType, fbtType1, fbtStdFont } , for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on.
Since standard fonts are no system fonts, these fonts are not returned.
See also:

- 75.39.485 GetSysFontInfos(Name as String) as DynaPDFSysFontMBS() 13994

75.39.485 GetSysFontInfos(Name as String) as DynaPDFSysFontMBS()

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with the most important properties of system fonts.
Example:

```
dim d as new DynaPDFMBS

// find one font with postscript name
dim font as DynaPDFSysFontMBS = d.GetSysFontInfo("Verdana-BoldItalic")

// find all with family name
dim fonts() as DynaPDFSysFontMBS = d.GetSysFontInfos("Verdana")

Break // see in debugger
```

Notes:

Matchs fonts by family name, full name or Postscript name.

The function returns the fonts in the current font search order. That means if the search order is { fbtTrueType, fbtOpenType, fbtType1, fbtStdFont } , for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on.
Since standard fonts are no system fonts, these fonts are not returned.
See also:

• 75.39.484 GetSysFontInfos as DynaPDFSysFontMBS() 13993

75.39.486 GetTabLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the tabulator length in spaces that is used to emulate tabulators during text formatting (see WriteFText() for further information).
See also GetTabLen function in DynaPDF manual.

75.39.487 GetTemplCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the number of templates used by a page.
See also GetTemplCount function in DynaPDF manual.

75.39.488 GetTemplHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the handle of the current open template or a negative error code on failure.
See also GetTemplHandle function in DynaPDF manual.

75.39.489 GetTemplHeight(Handle as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the height of a template.
See also GetTemplHeight function in DynaPDF manual.

75.39.490 GetTemplWidth(Handle as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the width of a template. The parameter Handle must be a valid template handle.
Notes: If the function succeeds the return value is the width of the template. If the function fails the return value is a negative error code.
See also GetTemplWidth function in DynaPDF manual.

75.39.491 GetTextDrawMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the text draw mode. Se draw modes are described in detail under SetTextDrawMode().
See also GetTextDrawMode function in DynaPDF manual.

75.39.492 GetTextFieldValue(Field as Integer, byref Value as string, byref DefValue as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the text of a field.
Notes: The strings may be ANSI or Unicode encoded.
See also GetTextFieldValue function in DynaPDF manual.

75.39.493 GetTextHeight(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Example:

```
dim pdf as DynaPDFMBS // your PDF instance

dim text as string = "Hello \ul# World"

dim h1 as Integer = pdf.GetTextHeight(pdf.ktaLeft, text)
dim h2 as Integer = pdf.GetFTextHeight(pdf.ktaLeft, text)

dim h3 as Integer = pdf.GetTextHeightEx(150, pdf.ktaLeft, text)
dim h4 as Integer = pdf.GetFTextHeightEx(150, pdf.ktaLeft, text)

// see different heights in debugger.
```

Notes:

GetTextHeight does escape backslashes so no formatting commands are taken from the string.
The text parameter is converted to unicode.

75.39.494 GetTextHeightAnsi(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

GetTextHeightAnsi does escape backslashes so no formatting commands are taken from the string.

The text parameter is converted to ANSI.

75.39.495 GetTextHeightEx(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Example:

```
dim pdf as new MyDynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.Append

call pdf.SetFont("Helvetica", pdf.kfsnone, 12, true, pdf.kcpUnicode)

dim h as Double = pdf.GetTextHeightEx(100, pdf.ktaLeft, "Hello World. Just a test string.")

MsgBox "height: "+str(h)

call pdf.EndPage
call pdf.CloseFile
```

Notes:

GetTextHeightEx does escape backslashes so no formatting commands are taken from the string.
The text parameter is converted to unicode.

75.39.496 GetTextHeightExAnsi(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function measures the height of a formatted text block.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

GetTextHeightExAnsi does escape backslashes so no formatting commands are taken from the string.
The text parameter is converted to ANSI.

75.39.497 GetTextRect(byref PosX as Double, byref PosY as Double, byref Width as Double, byref Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the bounding rectangle to output formatted text.
See also GetTextRect function in DynaPDF manual.

75.39.498 GetTextRise as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current text rise used to output text.
See also GetTextRise function in DynaPDF manual.

75.39.499 GetTextScaling as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current value of horizontal text scaling.
See also GetTextScaling function in DynaPDF manual.

75.39.500 GetTextWidth(aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function calculates the width of a string.
Notes: The text parameter is converted to unicode.
See also GetTextWidth function in DynaPDF manual.
See also:

- 75.39.501 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double

75.39.501 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates text width.
Notes:

The function can be used to calculate the width of a sub string that was returned by the content parser (see ParseContent() for further information). The parameter FontHandle must be a valid handle of a font object that was provided in the SetFont event. Note that this function is optimized for speed and does not use the normal error handling of DynaPDF. The parameters CharSpacing, WordSpacing, and TextScale must be taken from the current graphics state.

If the function succeeds the return value is the string width measured in text space. If the parameter FontHandle is set 0 the return value is 0.0.
See also GetTextWidth function in DynaPDF manual.
See also:

- 75.39.500 GetTextWidth(aText as string) as Double 13998

75.39.502 GetTextWidthAnsi(aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function calculates the width of a string.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also GetTextWidth function in DynaPDF manual.
See also:

- 75.39.500 GetTextWidth(aText as string) as Double 13998
- 75.39.501 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double 13999

75.39.503 GetTIFFVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of tiff library.
Notes:

Should be 3.7.2 on plugins 17.1.
Version is always same on Mac, Windows and Linux.
If you notice a mismatch, something is wrong!

75.39.504 GetTransparentColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the transparent color value that is used for newly inserted images.
See also GetTransparentColor function in DynaPDF manual.

75.39.505 GetTrapped as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the trapped key of the document.
See also GetTrapped function in DynaPDF manual.

75.39.506 GetTypoLeading as double

MBS DynaPDF Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the typographic leading or line height of a font.
Notes:

This is sTypoAscender – sTypoDescender + sTypoLineGap of the OS/2 table of TrueType and OpenType fonts. The value is scaled to the current font size. Type1 fonts do not support these metrics.

The function can be called after a font was activated in the graphics state, e.g. with SetFont(), SetFontEx(), SetCIDFont(), or ChangeFont().

If typographic metrics are not available the return value is Ascent – Descent. If the value is smaller than the font size then the font size is returned.

If the function succeeds the return value is the typographic leading of the active font, this is a value greater zero. If the function fails the return value is a negative error code.
See also GetTypoLeading function in DynaPDF manual.

75.39.507 GetURIAction(index as Integer) as DynaPDFURIActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries details for an URI action.
Notes: Index is from 0 to GetActionCount-1.
See also GetURIAction function in DynaPDF manual.

75.39.508 GetUseExactPwd as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the property UseExactPwd is false, an encrypted PDF file can always be decrypted, if either the open or owner password in the file is an empty string.
See also GetUseExactPwd function in DynaPDF manual.

75.39.509 GetUseGlobalImpFiles as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether import files should be loaded permanent into memory, e.g. to enable splitting of large PDF files.
See also GetUseGlobalImpFiles function in DynaPDF manual.

75.39.510 GetUserRights as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the encryption flags of an imported PDF file or -1 if the imported PDF file was not encrypted.
See also GetUserRights function in DynaPDF manual.

75.39.511 GetUserUnit as single

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the user unit of the current open page.
Notes:

A user unit acts like a scaling factor. The page format and all page coordinates are multiplied with this factor in a viewer application. The default size of a PDF unit is 1/72 inch and the default user unit is 1.0. User units can be useful if the page format would be too large to be expressed in standard PDF units. The largest page format in PDF is limited to 14400 units or 200 inches. This limit can be extended with the user unit.
The largest value that is supported is 75.0 which results in a maximum page format of 15,000 x 15,000 inches or 1,800,000 units.
See also GetUserUnit function in DynaPDF manual.

75.39.512 GetUseStdFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns 1 (true) if the 14 standard fonts are enabled.
See also GetUseStdFonts function in DynaPDF manual.

75.39.513 GetUsesTransparency(Page as Integer = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether a page or the entire document uses transparency.
Notes:

This is no quick check as GetDocUsesTransparency() applies. The function parses the page or pages to determine whether transparent objects are relly used.
To check whether a specific page uses transparency set the parameter PageNum to the wished page number. The first page is denoted by 1. To check the entire PDF file set PageNum to -1.

The return value is a bit mask on success (a positive integer value), or a negative error code on failure.
The following flags are defined:

- 0: The page or document uses no transparency.
- 1: The content stream of a page contains transparent objects.
- 2: A page defines the blending color space (Group dictionary).
- 4: A page contains transparent annotations or form fields.

The above values can occur in any combination. To check whether a specific flag was set use a binary and operator: BitwiseAnd(value, flag)
See also GetUsesTransparency function in DynaPDF manual.

75.39.514 GetUseSystemFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether the % Windows% /Fonts directory should be added automatically to the list of available font search paths.
See also GetUseSystemFonts function in DynaPDF manual.

75.39.515 GetUseTransparency as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether images should get a transparent background.
See also GetUseTransparency function in DynaPDF manual.

75.39.516 GetUseVisibleCoords as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether DynaPDF should consider the crop box to calculate to position of an object.
See also GetUseVisibleCoords function in DynaPDF manual.

75.39.517 GetViewerPreferences(byref Preference as Integer, byref AddVal as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the viewer preferences specified in the document.
See also GetViewerPreferences function in DynaPDF manual.

75.39.518 GetViewport(Page as UInt32, index as Integer) as DynaPDFViewportMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a viewport that is associated with a page.
Notes:

A viewport is a rectangular region of a page, that specifies usually a measure coordinate system or points in a geospatical coordinate system.
Since viewports might overlap, to determine the viewport to use for any point on a page, the viewports in the array shall be examined, starting with the last one and iterating in reverse, and the first one whose BBox entry contains the point shall be chosen.
To determine how viewports and measure dictionaries can be used, please have a look into the PDF Reference 2.0, ISO/DIS 32000-2, Section Measurement properties.
Returns nil on any error.
See also GetViewport function in DynaPDF manual.

75.39.519 GetViewportCount(Page as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of viewports which are associated with a page.
Notes:

The first page has the page number 1.
If the function succeeds the return value is the number of viewports, a number greater or equal zero. If the function fails the return value is a negative error code. The function can only fail if the page number is invalid.
See also GetViewportCount function in DynaPDF manual.

75.39.520 GetWMFDefExtent(byref width as Integer, byref height as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the default size which is used to convert non portable WMF files to EMF.
See also GetWMFDefExtent function in DynaPDF manual.

75.39.521 GetWMFPixelPerInch as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the default pixels per inch of the y-axis which are used to convert portable WMF files to EMF.
See also GetWMFPixelPerInch function in DynaPDF manual.

75.39.522 GetWordSpacing as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the current word spacing.
See also GetWordSpacing function in DynaPDF manual.

75.39.523 GetXFAStream(Handle as UInt32) as DynaPDFXFAStreamMBS

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns an XFA stream.
Notes:

The parameter Index is the array index. The function GetXFAStreamCount() returns the number of available streams.
An XFA form consist of several XML streams. The stream name must be used to determine which stream was returned.
If the function succeeds the return value is 1. If the function fails the return value is 0.
See also GetXFAStream function in DynaPDF manual.

75.39.524 GetXFAStreamCount as Integer

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of available XFA streams.
Notes:

XFA streams are available after a PDF file was imported.
If the function succeeds the return value is the number of available XFA streams. If the function fails the return value is a negative error code.
See also GetXFAStreamCount function in DynaPDF manual.

75.39.525 GetZlibVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of zlib library.
Notes:

Should be 1.2.7 on plugins 17.x.
Version is always same on Mac, Windows and Linux.
If you notice a mismatch, something is wrong!

75.39.526 GofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns G of a RGB color value.
Example:

```
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox str(DynaPDFMBS.GofRGB(rgb)) // shows 2
```

75.39.527 HaveOpenDoc as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If an error occurred it is not always clear whether the PDF file was already deleted or if it is still in memory.
See also HaveOpenDoc function in DynaPDF manual.

75.39.528 HaveOpenPage as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a page is open.
See also HaveOpenPage function in DynaPDF manual.

75.39.529 HighlightAnnot(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a highlight annotation with unicode text.
See also HighlightAnnot function in DynaPDF manual.

75.39.530 HighlightAnnotAnsi(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a highlight annotation with ANSI text.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also HighlightAnnot function in DynaPDF manual.

75.39.531 HighlightOnAllPages(SearchText as string, ColorValue as Color, CaseInsenitive as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Highlights text on all pages of the current document.
Notes:

If CaseInsenitive is true, the case of letters is ignored (also umlauts and accents)
Searches on all pages in the document.
Returns number of times the text was found.

75.39.532 HighlightOnCurrentPage(SearchText as string, ColorValue as Color, CaseInsenitive as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Highlights text on all pages of the current page.
Notes:

If CaseInsenitive is true, the case of letters is ignored (also umlauts and accents)
Use EditPage function to open the page before you search on it.
Returns number of times the text was found.

75.39.533 ImportBookmarks as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function imports the outline tree of the currently opened import file (see OpenImportFile() or OpenImportBuffer()).
See also ImportBookmarks function in DynaPDF manual.

75.39.534 ImportCatalogObjects as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports global objects of the currently opened import file such as bookmarks, JavaScripts, embedded files, open actions, invisible page templates, rendering intents, the document info entries, and certain other global properties such as the page mode or page layout.
See also ImportCatalogObjects function in DynaPDF manual.

75.39.535 ImportDocInfo as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports the document info entries from the currently opened import file.
See also ImportDocInfo function in DynaPDF manual.

75.39.536 ImportEncryptionSettings as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports the encryption settings from the currently open import file (see OpenImportFile() or OpenImportBuffer() for further information).
Notes:

If the PDF file is not encrypted, the function does nothing. To determine whether the open PDF file is encrypted call GetInIsEncrypted().
The encryption settings should be imported to make sure that the PDF file can be saved with the same settings after it was edited. The user rights should be considered if the file was opened with the open password, also if the password was just an empty string. See GetUserRights() for further information.
If the file was opened with the owner password, then all editing rights should be grated. The PDF file must be closed with CloseFile() or CloseAndSignFile() for example. Don't use
CloseFileEx() for example since this function would override the encryption settings.
If the file should be saved unencrypted call ResetEncryptionSettings() before closing the file. Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also ImportEncryptionSettings function in DynaPDF manual.

75.39.537 ImportOCProperties as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports the global Optional Content Properties of the curent open import file.
Notes:

OC properties are normally automatically imported by functions like ImportPDFFile() or when importing a page that contains layers. However, a viewer application must be able to access the OC properties right after the PDF file was opened so that the layer configuration and the layer tree can be loaded (see LoadLayerConfig() and GetOCUINode() for further information).
The function can be called multiple times without causing unwanted side effects.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ImportOCProperties function in DynaPDF manual.

75.39.538 ImportPage(PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports a page of an external PDF file and converts this page to a template.
Notes: Requires DynaPDF Pro license.
See also ImportPage function in DynaPDF manual.

75.39.539 ImportPageEx(PageNum as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports a PDF page of an external PDF file incl. interactive objects such as annotations, form fields and so on, if any.
Notes: Requires DynaPDF Pro license.
See also ImportPageEx function in DynaPDF manual.

75.39.540 ImportPDFFile(DestPage as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function imports an external PDF file incl. interactive objects such as annotations, bookmarks, form fields and so on.
Example:

```
// new PDF
Dim pdf As New MyDynapdfMBS

pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License

// create output file
Dim outFile As folderitem = SpecialFolder.Desktop.Child("NewPDF.pdf")
Call pdf.CreateNewPDF(outFile)

// set flags to import all
Dim flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)

// import PDF
Dim inFile As folderitem = SpecialFolder.Desktop.Child("test.pdf")

Call pdf.OpenImportFile(inFile)
Call pdf.ImportPDFFile(1)

// now delete one page
Call pdf.DeletePage(2)

// close output file
Call pdf.closefile
```

Notes:

Scaling factor is ignored if importing as pages (not templates).

This function returns the page number of the last page imported. It does not return how many pages are imported. If you need number of imported pages, please use returned value minus DestPage.
See also ImportPDFFile function in DynaPDF manual.

75.39.541 ImportPDFPage(PageNum as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports a PDF page.
Notes:

If a page is open, this function calls EndPage.
Than it appends a new page, calls ImportPageEx and Endpage.

On success the return value is zero. If the function fails the return value is a negative error code.

75.39.542 InitColorManagement(profiles as DynaPDFColorProfilesMBS, DestSpace as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes color management with the given default profiles.
Notes:

Pass nil for profiles to disable color management.
DestSpace can be kcsDeviceRGB, kcsDeviceCMYK or kcsDeviceGray.
Flags can be kicmDefault or kicmBPCompensation for:
Black point compensation preserves the black point when converting CMYK colors to different color spaces.

See also InitColorManagement function in DynaPDF manual.

75.39.543 InitColorManagementEx(profiles as DynaPDFColorProfilesExMBS, DestSpace as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize color management.
Notes:

The function enables color management in the functions RenderPage(), RenderPageEx(), RenderPageToImage(), and RenderPDFFile() exactly like InitColorManagement() but accepts ICC profile buffers instead of file paths. See InitColorManagement() for further information.

To disable color management set the parameter Profiles to nil.

Initializing the color management requires a considerable amount of processing time. It is strongly recommended to use one PDF instance as long as possible so that it must not be initialized again when another PDF file will be rendered.
The color management can be initialized right after the PDF instance was created.

Returns true on succes or false on failure.
See also InitColorManagementEx function in DynaPDF manual.

75.39.544 InitStack(byref stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function initializes the variable Stack with default values and prepares the editing of a content stream.
Example:

```
dim s as DynaPDFStackMBS
dim pdf as DynaPDFMBS // get your DynaPDF object

call pdf.InitStack(s)
```

Notes:

If stack is nil, a new one will be created and stored in the variable.

Return values:
If the function succeeds the return value is true. If the function fails the return value is false.

See also InitStack function in DynaPDF manual.

75.39.545 InkAnnot(points() as DynaPDFPointMBS, LineWidth as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an Ink annotation.
Notes:

An ink annotation (PDF 1.3) represents a freehand "scribble" composed of one or more disjoint paths. The parameter Points represents a stroked path. More paths can be added with AddInkList.
The points are interpreted in currect user space. Any transformation that was applied on the coordinate system will be taken into account.
The points are connected with bezier curves to achieve a smooth transition between points. If the points should be connected with straight lines, then create a PolyLine annotation instead (see PolyLineAnnot).
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState() if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also InkAnnot function in DynaPDF manual.

75.39.546 InkAnnotAnsi(points() as DynaPDFPointMBS, LineWidth as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an Ink annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

An ink annotation (PDF 1.3) represents a freehand "scribble" composed of one or more disjoint paths. The parameter Points represents a stroked path. More paths can be added with AddInkList.
The points are interpreted in currect user space. Any transformation that was applied on the coordinate system will be taken into account.
The points are connected with bezier curves to achieve a smooth transition between points. If the points should be connected with straight lines, then create a PolyLine annotation instead (see PolyLineAnnot).
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState() if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.

See also InkAnnot function in DynaPDF manual.

75.39.547 InsertBarcode(PosX as double, PosY as double, Width as double, Height as double, HAlign as Integer, VAlign as Integer, Barcode as DynaPDFBarcode2MBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts a barcode to the current open page.
Example:

```
Dim d As New DynapdfMBS
// create/edit a page, then draw barcode:

// UPCA
Dim b1 As New DynaPDFBarcode2MBS
b1.BarcodeType = b1.kbctUPCA
b1.Data = "72527270270"

Call d.InsertBarcode(100, 100, 200, 50, d.kcoLeft, d.kcoTop, b1)
```

Notes:

See the kbct* constants for the types supported.

Options are very similar to what we have in our BarcodeGeneratorMBS class as both use the same zint library.
See also InsertBarcode function in DynaPDF manual.

75.39.548 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a Device Independent Bitmap from a file buffer.
Deprecated: This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. See also:

- 75.39.549 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer 14014
- 75.39.550 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer 14014

75.39.549 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a Device Independent Bitmap from a file buffer.
Deprecated: This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. See also:

- 75.39.548 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer 14013
- 75.39.550 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer 14014

75.39.550 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a Device Independent Bitmap from a file buffer.
Deprecated: This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. See also:

- 75.39.548 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer 14013
- 75.39.549 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer 14014

75.39.551 InsertBMPFromHandle(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, hBitmap as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bitmap in the same way as InsertImage() but accepts a HBITMAP handle as input.
See also InsertBMPFromHandle function in DynaPDF manual.

75.39.552 InsertBookmark(title as String, parent as Integer, DestPage as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to unicode.
See also InsertBookmark function in DynaPDF manual.

75.39.553 InsertBookmarkAnsi(title as String, parent as Integer, DestPage as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bookmark to the global outline tree of the document.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The title parameter is converted to ANSI.
See also InsertBookmark function in DynaPDF manual.

75.39.554 InsertBookmarkEx(title as String, parent as Integer, NamedDest as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to unicode.
See also InsertBookmarkEx function in DynaPDF manual.

75.39.555 InsertBookmarkExAnsi(title as String, parent as Integer, NamedDest as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts a bookmark to the global outline tree of the document.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The title parameter is converted to ANSI.
See also InsertBookmarkEx function in DynaPDF manual.

75.39.556 InsertImage(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a file.
Example:

```
dim pdf as DynaPDFMBS

// ... add page

// use transparency from image
call pdf.SetUseTransparency(False)

// max 300 dpi for recompressed images
call pdf.SetResolution(300)

// use JPEG when compressing new pictures
call pdf.SetCompressionFilter(pdf.kcfJPEG)

// pass through JPEGs if possible
call pdf.SetSaveNewImageFormat(false)

// insert image
dim source as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
call pdf.InsertImage(0, 0, 300, 200, source)
```

Deprecated: This item is deprecated and should no longer be used. You can use InsertImage instead.
Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.

75.39.557 InsertImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a file.
Example:

```
dim pdf as DynaPDFMBS

// ... add page

// use transparency from image
call pdf.SetUseTransparency(False)
```

```
// max 300 dpi for recompressed images
call pdf.SetResolution(300)

// use JPEG when compressing new pictures
call pdf.SetCompressionFilter(pdf.kcfJPEG)

// pass through JPEGs if possible
call pdf.SetSaveNewImageFormat(false)

// insert image
dim source as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
call pdf.InsertImageEx(0, 0, 300, 200, source)
```

Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
See also InsertImageEx function in DynaPDF manual.
See also:

- 75.39.558 InsertImageEx(PosX as double, PosY as double, ScaleWidth as double, ScaleHeight as double, Path as String, index as integer = 1) as integer 14017

75.39.558 InsertImageEx(PosX as double, PosY as double, ScaleWidth as double, ScaleHeight as double, Path as String, index as integer = 1) as integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a file.
Example:

```
Dim d As New DynaPDFMBS

// create PDF in memory
Call d.CreateNewPDF

// add a picture
Call d.Append
Call d.InsertImageEx(100, 100, 100, 100, "/Users/cs/Pictures/mond.jpg")
Call d.EndPage

// okay?
If d.HaveOpenDoc Then
```

```
// open target file
Call d.OpenOutputFile("/Users/cs/Desktop/mond.pdf")

// write and close
Call d.CloseFile

End If
```

Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
See also InsertImageEx function in DynaPDF manual.
See also:

- 75.39.557 InsertImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem, index as Integer = 1) as Integer 14016

75.39.559 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as Memoryblock, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image in exactly the same way as InsertImageEx(), but it accepts a file buffer as input.
Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
Please pass positon and size as doubles. If you use integers, Xojo will give a compile error.
See also InsertImageFromBuffer function in DynaPDF manual.
See also:

- 75.39.560 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string, index as Integer = 1) as Integer 14019

75.39.560 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image in exactly the same way as InsertImageEx(), but it accepts a file buffer as input.
Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
Please pass positon and size as doubles. If you use integers, Xojo will give a compile error.
See also InsertImageFromBuffer function in DynaPDF manual.
See also:

- 75.39.559 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as Memoryblock, index as Integer = 1) as Integer 14018

75.39.561 InsertMetafile(FileName as folderitem, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic.
Notes: Requires DynaPDF Lite license.
See also InsertMetafile function in DynaPDF manual.

75.39.562 InsertMetafileEx(Buffer as memoryblock, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileEx function in DynaPDF manual.
See also:

- 75.39.563 InsertMetafileEx(Buffer as string, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 14020

75.39.563 InsertMetafileEx(Buffer as string, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileEx function in DynaPDF manual.
See also:

- 75.39.562 InsertMetafileEx(Buffer as memoryblock, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 14019

75.39.564 InsertMetafileExt(FileName as folderitem, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileExt function in DynaPDF manual.

75.39.565 InsertMetafileExtEx(Buffer as Memoryblock, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafileExt().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileExtEx function in DynaPDF manual.
See also:

- 75.39.566 InsertMetafileExtEx(Buffer as String, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 14021

75.39.566 InsertMetafileExtEx(Buffer as String, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafileExt().
Notes: Requires DynaPDF Lite license.
See also InsertMetafileExtEx function in DynaPDF manual.
See also:

- 75.39.565 InsertMetafileExtEx(Buffer as Memoryblock, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 14020

75.39.567 InsertMetafileFromHandle(hEnhMetafileHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts an Enhanced Metafile exactly in the same way as InsertMetafile() but accepts a HENHMETAFILE handle as input.
Notes: Requires DynaPDF Lite license.
See also InsertMetafileFromHandle function in DynaPDF manual.

75.39.568 InsertMetafileFromHandleEx(hEnhMetafileHandle as Integer, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function inserts an Enhanced Metafile exactly in the same way as InsertMetafileExt() but accepts a HENHMETAFILE handle as input.
Notes: Requires DynaPDF Lite license.
See also InsertMetafileFromHandleEx function in DynaPDF manual.

75.39.569 InsertPicture(pic as picture, mask as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Takes a Xojo picture with a mask and adds it to the PDF.
Example:

```
// insert MBS Logo with round Mask
dim d as new MyDynaPDFMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

call d.CreateNewPDF file
call d.Append

// get picture
dim p as Picture = LogoMBS(500)

// get mask
dim m as new Picture(500, 500, 32)
m.Graphics.ForeColor = & cFFFFFF
m.Graphics.FillRect 0,0,500,500
m.Graphics.ForeColor = & c000000
m.Graphics.FillOval 0,0,500,500

// add image to pdf
call d.InsertPicture(p, m, 50, 150, 500, 500)

call d.EndPage
call d.CloseFile
```

Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.
This is a convenience function to handle picture with mask.

Internally this calls pdfInsertRawImage so check the documtation on this function in the dynapdf manual.
Does not work with alpha channel pictures.

Usually InsertPicture with the mask/alpha is better.
PosX and PosY are the destination position and ScaledWidth and ScaledHeight is the new size of the image.
See also:

- 75.39.570 InsertPicture(pic as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

75.39.570 InsertPicture(pic as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Takes a Xojo picture and adds it to the PDF.
Notes:

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.
Internally this calls pdfInsertRawImage so check the documtation on this function in the dynapdf manual.
Does work with alpha channel or masked pictures.

PosX and PosY are the destination position and ScaledWidth and ScaledHeight is the new size of the image.
See also:

- 75.39.569 InsertPicture(pic as picture, mask as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 14021

75.39.571 InsertRawImage(Data as String, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a raw image buffer which contains no image header.
See also InsertRawImage function in DynaPDF manual.
See also:

- 75.39.572 InsertRawImage(Memory as MemoryBlock, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 14023

75.39.572 InsertRawImage(Memory as MemoryBlock, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a raw image buffer which contains no image header.
See also InsertRawImage function in DynaPDF manual.
See also:

- 75.39.571 InsertRawImage(Data as String, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 14023

75.39.573 InsertRawImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Image as DynaPDFRawImageMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts an image from a raw image buffer that contains no image header.
Notes:

See also InsertRawImageEx in dynapdf_help.pdf manual file.
Returns false if image parameter has invalid values.
See also InsertRawImageEx function in DynaPDF manual.

75.39.574 IsBidiText(Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function returns the position of the first bidirectional character that can be found in the string or -1 if no such character can be found.
Notes: The text parameter is converted to unicode.
See also IsBidiText function in DynaPDF manual.

75.39.575 IsColorPage(GrayIsColor as Boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function checks whether a page is a color page or if all graphic elements of the page use black & white only.
Notes: Value is 0 for false, 1 for true or negative for an error.
See also IsColorPage function in DynaPDF manual.

75.39.576 IsEmptyPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether a page is empty.
Notes: Value is 0 for false, 1 for true or negative for an error.

See also IsEmptyPage function in DynaPDF manual.

75.39.577 IsWrongPwd(errCode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether an error code is for a wrong password.
Notes: We have several error codes which result from different password protections and this function considers them all.
See also IsWrongPwd function in DynaPDF manual.

75.39.578 KofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns K of a CMYK color value.
Example:

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.KofCMYK(cmyk)) // shows 4
```

Notes: Returns different values on BigEndian and LittleEndian systems.

75.39.579 LAB(L as Integer, A as Integer, B as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a LAB color value based on the given component values.
Example:

```
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox hex(lab)
```

75.39.580 LineAnnot(x1 as Double, y1 as Double, x2 as Double, y2 as Double, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a line annotation.
See also LineAnnot function in DynaPDF manual.

75.39.581 LineAnnotAnsi(x1 as Double, y1 as Double, x2 as Double, y2 as Double, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a line annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also LineAnnot function in DynaPDF manual.

75.39.582 LineTo(PosX as Double, PosY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a path from the current position up to the specified point.
Example:

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
call pdf.Append
```

```
// black
call pdf.SetStrokeColor 0

// line down
call pdf.MoveTo(100,100)
call pdf.LineTo(200,200)
call pdf.StrokePath

// line up
call pdf.MoveTo(200,200)
call pdf.LineTo(300,100)
call pdf.StrokePath

// end page
call pdf.EndPage

// Close page
call pdf.CloseFile

// Open PDF
f.Launch
```

See also LineTo function in DynaPDF manual.

75.39.583 LoadCMap(CMapName as string, Embed as Boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a character map.
See also LoadCMap function in DynaPDF manual.

75.39.584 LoadError as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message from LoadLibrary call.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.dylib")

if DynaPDFMBS.LoadLibrary(f) then
MsgBox "OK"
else
```

```
MsgBox DynaPDFMBS.LoadError
end if
```

75.39.585 LoadFDFData(FileName as folderitem, Password as string, Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads PDF form data from the given PDF file.
See also LoadFDFData function in DynaPDF manual.

75.39.586 LoadFDFDataEx(Buffer as memoryblock, Password as string, Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads PDF form data from the given PDF file in the buffer.
See also LoadFDFDataEx function in DynaPDF manual.
See also:

- 75.39.587 LoadFDFDataEx(Buffer as string, Password as string, Flags as Integer) as Boolean 14028

75.39.587 LoadFDFDataEx(Buffer as string, Password as string, Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads PDF form data from the given PDF file in the buffer.
See also LoadFDFDataEx function in DynaPDF manual.
See also:

- 75.39.586 LoadFDFDataEx(Buffer as memoryblock, Password as string, Flags as Integer) as Boolean 14028

75.39.588 LoadFont(Buffer as memoryblock, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font from a file buffer.
Notes: Added CollectionIndex parameter in 12.1 plugin version.

See also LoadFont function in DynaPDF manual.
See also:

- 75.39.589 LoadFont(Buffer as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 14029

75.39.589 LoadFont(Buffer as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font from a file buffer.
Notes: Added CollectionIndex parameter in 12.1 plugin version.
See also LoadFont function in DynaPDF manual.
See also:

- 75.39.588 LoadFont(Buffer as memoryblock, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 14028

75.39.590 LoadFontEx(File as folderitem, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font from a font file and activates it in the graphics state if the function was called within an open page or template.
See also LoadFontEx function in DynaPDF manual.
See also:

- 75.39.591 LoadFontEx(Filepath as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 14029

75.39.591 LoadFontEx(Filepath as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font from a font file and activates it in the graphics state if the function was called within an open page or template.
See also LoadFontEx function in DynaPDF manual.
See also:

- 75.39.590 LoadFontEx(File as folderitem, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 14029

75.39.592 LoadLayerConfig(Index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the specified layer configuration.
Notes:

A PDF file that contains layers (Optional Content Groups in PDF syntax) contains usually at least a default configuration dictionary. This configuration is loaded by default when the visibility state of a layer or optional content group must be determined, e.g. when rendering a page.
Use this function to load another configuration if available. To determine the number of available configurations call GetLayerConfigCount().

The paramter Index can be one of the following:

- -1: Load the default configuration.
- -2: If a configuration was already loaded, leave it unchanged. Load
- the default configuration otherwise.
- 0..Count -1: Load the specified configuration.

If the function succeeds the return value is true. If the function fails the return value is false.
See also LoadLayerConfig function in DynaPDF manual.

75.39.593 LoadLibrary(File as FolderItem) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the dynapdf library file.
Example:

```
MsgBox "Version before: "+DynaPDFMBS.DynaPDFVersion

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf.dylib")

if DynaPDFMBS.LoadLibrary(f) then
MsgBox "Version after: "+DynaPDFMBS.DynaPDFVersion
else
MsgBox DynaPDFMBS.LoadError
end if
```

Notes:

Returns true on success or false on failure.

While the plugin comes with an internal dynapdf library, you can use this method to load a different version of the library.
See also:

- 75.39.594 LoadLibrary(Path as string) as boolean 14031

75.39.594 LoadLibrary(Path as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the dynapdf library file.
Notes:

Returns true on success or false on failure.

While the plugin comes with an internal dynapdf library, you can use this method to load a different version of the library.
See also:

- 75.39.593 LoadLibrary(File as FolderItem) as boolean 14030

75.39.595 LockLayer(layer as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unlocks a layer.
See also LockLayer function in DynaPDF manual.

75.39.596 LofLAB(LAB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns L of a LAB color value.
Example:

```
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox str(DynaPDFMBS.LofLAB(lab)) // shows 1
```

75.39.597 MofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns M of a CMYK color value.
Example:

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.MofCMYK(cmyk)) // shows 2
```

Notes: Returns different values on BigEndian and LittleEndian systems.

75.39.598 MovePage(source as Integer, dest as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function moves a page to another position in the document.
See also MovePage function in DynaPDF manual.

75.39.599 MoveTo(PosX as Double, PosY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function moves the current position to the point specified by PosX, PosY.
Example:

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
call pdf.Append

// black
call pdf.SetStrokeColor 0

// line down
```

```
call pdf.MoveTo(100,100)
call pdf.LineTo(200,200)
call pdf.StrokePath

// line up
call pdf.MoveTo(200,200)
call pdf.LineTo(300,100)
call pdf.StrokePath

// end page
call pdf.EndPage

// Close page
call pdf.CloseFile

// Open PDF
f.Launch
```

See also MoveTo function in DynaPDF manual.

75.39.600 MultiplyMatrix(M1 as DynaPDFMatrixMBS, M2 as DynapdfMatrixMBS, NewMatrix as DynapdfMatrixMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function multiplies two transformation matrices and stores the result in the parameter NewMatrix.
Notes: You must pass three non nil matrix references into the function.
See also MultiplyMatrix function in DynaPDF manual.

75.39.601 OpenImportBuffer(Buffer as Memoryblock, PwdType as Integer = 0, Password as string = "") as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function reads an external PDF from a file buffer so that it can be imported entirely or parts of it.
Notes: Requires DynaPDF Lite license.
See also OpenImportBuffer function in DynaPDF manual.
See also:

- 75.39.602 OpenImportBuffer(Buffer as string, PwdType as Integer = 0, Password as string = "") as Integer 14034

75.39.602 OpenImportBuffer(Buffer as string, PwdType as Integer = 0, Password as string = "") as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function reads an external PDF from a file buffer so that it can be imported entirely or parts of it.
Notes: Requires DynaPDF Lite license.
See also OpenImportBuffer function in DynaPDF manual.
See also:

- 75.39.601 OpenImportBuffer(Buffer as Memoryblock, PwdType as Integer = 0, Password as string = "") as Integer 14033

75.39.603 OpenImportFile(File as folderitem, PwdType as Integer = 0, Password as string = "") as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens an external PDF file so that it can be imported entirely or parts of it.
Notes: Requires DynaPDF Lite license.
See also OpenImportFile function in DynaPDF manual.
See also:

- 75.39.604 OpenImportFile(Path as String, PwdType as integer = 0, Password as string = "") as integer 14034

75.39.604 OpenImportFile(Path as String, PwdType as integer = 0, Password as string = "") as integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens an external PDF file so that it can be imported entirely or parts of it.
Notes: Requires DynaPDF Lite license.
See also OpenImportFile function in DynaPDF manual.
See also:

- 75.39.603 OpenImportFile(File as folderitem, PwdType as Integer = 0, Password as string = "") as Integer 14034

75.39.605 OpenOutputFile(File as folderitem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens the output file into which the PDF file should be written.
Example:

```
Dim d As New DynaPDFMBS

// create PDF in memory
Call d.CreateNewPDF

// add a picture
Call d.Append
Call d.InsertImageEx(100, 100, 100, 100, "/Users/cs/Pictures/mond.jpg")
Call d.EndPage

// okay?
If d.HaveOpenDoc Then

// open target file
Dim f As FolderItem = SpecialFolder.Desktop.Child("mond.pdf")
Call d.OpenOutputFile(f)

// write and close
Call d.CloseFile

End If
```

See also OpenOutputFile function in DynaPDF manual.
See also:

- 75.39.606 OpenOutputFile(Path as String) as Boolean 14035

75.39.606 OpenOutputFile(Path as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function opens the output file into which the PDF file should be written.
Example:

```
Dim d As New MyDynaPDFMBS

// create PDF in memory
Call d.CreateNewPDF

// add a picture
Call d.Append
Call d.InsertImageEx(100, 100, 100, 100, "/Users/cs/Pictures/mond.jpg")
Call d.EndPage

// okay?
If d.HaveOpenDoc Then
```

```
// open target file
Call d.OpenOutputFile("/Users/cs/Desktop/mond.pdf")

// write and close
Call d.CloseFile

End If
```

See also OpenOutputFile function in DynaPDF manual.
See also:

- 75.39.605 OpenOutputFile(File as folderitem) as Boolean 14034

75.39.607 OpenOutputFileEncrypted(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the output file and sets the encryption parameters.
Notes:

This function enables in combination with FlushPages the creation of very large encrypted PDF files with minimal memory usage.
The function can be called in a while statement, e.g. to display a open file dialog if the file could not be opened. Once the function succeeds the PDF file can be finished with CloseFile.

If the function succeeds the return value is true. If the function fails the return value is false.
See also OpenOutputFileEncrypted function in DynaPDF manual.
See also:

- 75.39.608 OpenOutputFileEncrypted(Path as String, OpenPwd as string, OwnerPwd as string, KeyLen as integer, Restrict as integer) as Boolean 14036

75.39.608 OpenOutputFileEncrypted(Path as String, OpenPwd as string, OwnerPwd as string, KeyLen as integer, Restrict as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the output file and sets the encryption parameters.
Notes:

This function enables in combination with FlushPages the creation of very large encrypted PDF files with minimal memory usage.

The function can be called in a while statement, e.g. to display a open file dialog if the file could not be opened. Once the function succeeds the PDF file can be finished with CloseFile.

If the function succeeds the return value is true. If the function fails the return value is false.
See also OpenOutputFileEncrypted function in DynaPDF manual.
See also:

- 75.39.607 OpenOutputFileEncrypted(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean 14036

75.39.609 OpenTag(Tag as Integer, Lang as string, AltText as string, Expansion as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tag.
See also OpenTag function in DynaPDF manual.

75.39.610 OpenTagAnsi(Tag as Integer, Lang as string, AltText as string, Expansion as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tag with ANSI encoding.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also OpenTag function in DynaPDF manual.

75.39.611 Optimize(Flags as Integer = 0, Params as DynaPDFOptimizeParamsMBS = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optimizes PDF.
Example:

```
dim pdf as new DynapdfMBS
// import PDF here

dim flags as integer = Bitwise.BitOr(_
pdf.kofInMemory, _ // Optimize the file fully in memory. Only useful for small PDF files.
pdf.kofScaleImages, _ // Scale images as specified in the DynaPDFOptimizeParamsMBS class.
pdf.kofNewLinkNames, _ // If set, rename all object links to short names like F1, F2 etc.
pdf.kofDeleteInvPaths, _ // Delete invisible paths.
```

```
pdf.kofDeletePrivateData, _ // Delete private data objects from pages, templates, and images.
pdf.kofIgnoreZeroLineWidth, _
pdf.kofDeleteAlternateImages, _ // If set, alternate images will be deleted.
pdf.kofDeleteThumbnails) // Thumbnails can be deleted since PDF viewers can create thumbnails easily on demand.

// pdf.kofInMemory // Optimize the file fully in memory. Only useful for small PDF files.
// pdf.kofConvertAllColors // If set, Separation, DeviceN, and NChannel color spaces will be converted to the device space.
// pdf.kofIgnoreICCBased // If set, ICCBased color spaces will be left unchanged.
// pdf.kofScaleImages // Scale all images
// pdf.kofNewLinkNames // If set, rename all object links to short names like F1, F2 etc.
// pdf.kofDeleteInvPaths // Delete invisible paths. An invisible path is a path that was finished with the no-op operator "n".
// more flags in DynaPDF documentation

Dim o As New DynaPDFOptimizeParamsMBS

o.MinColorRes = 100 // scale images with more than 100 dpi
o.ResColorImages = 150 // down to 150 dpi

call pdf.Optimize(flags, o)
```

Notes:

This repairs also a lot of errors in the PDF and can shrink the PDF size.
After optimize, please close PDF. If you need to further edit it, please import it again in a new environment.

You need to use InitColorManagement to get color conversion working well if needed.

Note that this function requires the DynaPDF Pro.
See also Optimize function in DynaPDF manual.

75.39.612 PageLink(PosX as Double, PosY as Double, Width as Double, Height as Double, DestPage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a page link onto the current open page.
See also PageLink function in DynaPDF manual.

75.39.613 PageLink2(PosX as Double, PosY as Double, Width as Double, Height as Double, NamedDest as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a page link onto the current open page by using a named destination as target.
See also PageLink2 function in DynaPDF manual.

75.39.614 PageLink3(PosX as Double, PosY as Double, Width as Double, Height as Double, NamedDest as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds a page link to the current open page by using a named destination as target.
Notes:

The difference in comparison to PageLink2() is that the named destination can be defined as string.
This makes it possible to create the link, also if you don't have the required information to create the named destination at this point. If the named destination does not exist when the file is closed then the link does nothing. See also, CreateNamedDest().

Return values:
If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.

See also PageLink3 function in DynaPDF manual.

75.39.615 PageLinkEx(PosX as Double, PosY as Double, Width as Double, Height as Double, DestType as Integer, DestPage as Integer, a as Double = 0.0, b as Double = 0.0, c as Double = 0.0, d as Double = 0.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a page link onto the current open page.
See also PageLinkEx function in DynaPDF manual.

75.39.616 PageStatistic(page as Integer = -1) as DynaPDFPageStatisticMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries statistics from a page.
Notes:

If page is -1 the current open page is used. Else the plugin uses editpage(page) to open the page and run the statistics on that.
Returns nil on any error or statistic value.

75.39.617 ParseContent(ParseInterface as DynaPDFParseInterfaceMBS, flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses the content of a page.
Notes: Requires DynaPDF Pro license.
See also ParseContent function in DynaPDF manual.

75.39.618 PlaceImage(ImgHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Images can be used multiple times on different positions and with different sizes. This function places an image onto a page or template that was already inserted beforehand by an image function.
See also PlaceImage function in DynaPDF manual.

75.39.619 PlaceSigFieldValidateIcon(SigField as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function places the validation icon in a signature field to the whished position.
See also PlaceSigFieldValidateIcon function in DynaPDF manual.

75.39.620 PlaceTemplate(TmplHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function places a template onto a page, another open template, or pattern.
See also PlaceTemplate function in DynaPDF manual.

75.39.621 PlaceTemplateEx(TmplHandle as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Places a template.
See also PlaceTemplateEx function in DynaPDF manual.

75.39.622 PolygonAnnot(Vertices() as DynaPDFPointMBS, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a Polygon Annotation.
Notes:

The vertices are connected by straight lines. The path is always closed before it will be drawn. It is not required to close the path explicitly. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The stroke or fill color can be set to the special constant kNO_COLOR to fill or stroke the polygon. It is not allowed to set both colors to kNO_COLOR since this would result in an invisible annotation.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolygonAnnot function in DynaPDF manual.

75.39.623 PolygonAnnotAnsi(Vertices() as DynaPDFPointMBS, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a Polygon Annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The vertices are connected by straight lines. The path is always closed before it will be drawn. It is not

required to close the path explicitly. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The stroke or fill color can be set to the special constant kNO_COLOR to fill or stroke the polygon. It is not allowed to set both colors to kNO_COLOR since this would result in an invisible annotation.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolygonAnnot function in DynaPDF manual.

75.39.624 PolyLineAnnot(Vertices() as DynaPDFPointMBS, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a PolyLine Annotation.
Notes:

The vertices are connected by straight lines. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The parameter FillColor is only used if the line end style of the start or end point has an interior that can be filled. The special constant kNO_COLOR represents a transparent interior.
The stroke color is required and must not be set to kNO_COLOR.

This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
The parameter LineWidth must be in the range 0 through 12 units. Values outside the valid range will be adjusted to the nearest allowed value. A zero line width produces a 1 pixel wide line.
The line end styles can be changed if necessary with SetAnnotLineEndStyle.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolyLineAnnot function in DynaPDF manual.

75.39.625 PolyLineAnnotAnsi(Vertices() as DynaPDFPointMBS, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a PolyLine Annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The vertices are connected by straight lines. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The parameter FillColor is only used if the line end style of the start or end point has an interior that can be filled. The special constant kNO_COLOR represents a transparent interior.
The stroke color is required and must not be set to kNO_COLOR.

This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
The parameter LineWidth must be in the range 0 through 12 units. Values outside the valid range will be adjusted to the nearest allowed value. A zero line width produces a 1 pixel wide line.
The line end styles can be changed if necessary with SetAnnotLineEndStyle.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolyLineAnnot function in DynaPDF manual.

75.39.626 PrintGetDevMode as String

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Queries last print dev mode.
Notes:

You can store this in a preferences file for next printing.
This is same data structure as in WindowsDeviceModeMBS class.

75.39.627 PrintGetDevNames(byref Driver as String, byref Device as String, byref Output as String, byref DefaultFlag as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Queries printer device names.
Notes:

Driver: File name (without the extension) of the device driver.
Device: Name of the device.
Output: Device name for the physical output medium (output port).
DefaultFlag: 1 if the selected printer is the default one.

Returns true on success or false on failure.

75.39.628 PrintPDFFile(TmpDir as FolderItem, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Prints current PDF file.
Notes:

Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
DCHandle is the handle of the graphics context.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function. Or use DeletePage to remove the pages you don't want to print.

Does not work with a graphics handle from Xojo 2016r4 and newer due to switch to DirectDraw APIs.
Or in other words, you can use a HDC handle from graphics class in Xojo 2016r3 and older to print PDF.
See also PrintPDFFile function in DynaPDF manual.
See also:

- 75.39.629 PrintPDFFile(TmpDir as FolderItem, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 14044

75.39.629 PrintPDFFile(TmpDir as FolderItem, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: All.

Function: Prints current PDF file.

Notes:

Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
PrinterName is the name of the printer to use. The plugin will open the printer and print PDF there with default settings.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function. Or use DeletePage to remove the pages you don't want to print.
See also PrintPDFFile function in DynaPDF manual.
See also:

- 75.39.628 PrintPDFFile(TmpDir as FolderItem, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 14044

75.39.630 PrintPDFFileWithDialog(TmpDir as FolderItem, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Prints current PDF file with dialog.
Notes:

Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
Shows print dialog and allows user to set printer.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function. Or use DeletePage to remove the pages you don't want to print.

After this call you can use PrintGetDevNames and PrintGetDevMode to get printer settings.
And before this call you can use PrintSetDevMode and PrintSetDevNames to restore printer settings.

75.39.631 PrintPDFPage(PageNum as Integer, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prints a page.
Notes: See PrintPDFFile for details and options.
See also:

- 75.39.632 PrintPDFPage(PageNum as Integer, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 14046

75.39.632 PrintPDFPage(PageNum as Integer, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prints a page.
Notes:

See PrintPDFFile for details and options.

Version 18.4 and newer use device mode set with DynaPDFMBS.PrintSetDevMode method for printer settings.
See also:

- 75.39.631 PrintPDFPage(PageNum as Integer, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 14046

75.39.633 PrintPDFPageWithDialog(PageNum as Integer, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Prints a page with dialog.
Notes: See PrintPDFFileWithDialog for details and options.

75.39.634 PrintSetDevMode(data as MemoryBlock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop only.

Function: Set last print dev mode.
Notes:

Returns true on success.
This is same data structure as in WindowsDeviceModeMBS class.
See also:

- 75.39.635 PrintSetDevMode(data as String) as Boolean 14047

75.39.635 PrintSetDevMode(data as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Set last print dev mode.
Notes:

Returns true on success.
This is same data structure as in WindowsDeviceModeMBS class.
See also:

- 75.39.634 PrintSetDevMode(data as MemoryBlock) as Boolean 14047

75.39.636 PrintSetDevNames(Driver as String, Device as String, Output as String, DefaultFlag as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Sets printer device names.
Notes:

Driver: File name (without the extension) of the device driver.
Device: Name of the device.
Output: Device name for the physical output medium (output port).
DefaultFlag: 1 if the selected printer is the default one.

Returns true on success or false on failure.

75.39.637 ReadImageFormat(FileName as folderitem, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an image file.

75.39.638 ReadImageFormat2(FileName as folderitem, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an image file.
Example:

```
// read image format and resolution and calculate physical size
dim bits as integer
dim useZip as Boolean
dim resX as integer = 0
dim resY as integer = 0
dim physHeight as integer
dim physWidth as integer
dim w as integer
dim h as integer

call pdf.ReadImageFormat2(Source, 1, w, h, bits, useZip)
call pdf.ReadImageResolution(Source, 1, resX, resY)

if (resX <>resY and resX >0 and resY >0) then
if (resX >resY) then
physWidth = w
physHeight = h \(resX \resY)
else
physWidth = w \(resY \resX)
physHeight = h
end if
else
physHeight = h
physWidth = w
end if
```

See also ReadImageFormat2 function in DynaPDF manual.

75.39.639 ReadImageFormatEx(hBitmap as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of a memory bitmap.
See also ReadImageFormatEx function in DynaPDF manual.

75.39.640 ReadImageFormatFromBuffer(Buffer as memoryblock, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an image in the same way as ReadImageFormat2(), but accepts an image buffer as input.
See also ReadImageFormatFromBuffer function in DynaPDF manual.
See also:

- 75.39.641 ReadImageFormatFromBuffer(Buffer as string, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean 14049

75.39.641 ReadImageFormatFromBuffer(Buffer as string, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the most important properties of an image in the same way as ReadImageFormat2(), but accepts an image buffer as input.
See also ReadImageFormatFromBuffer function in DynaPDF manual.
See also:

- 75.39.640 ReadImageFormatFromBuffer(Buffer as memoryblock, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean 14049

75.39.642 ReadImageResolution(FileName as folderitem, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the horizontal and vertical resolution of an image file.
Example:

```
// read image format and resolution and calculate physical size
dim bits as integer
dim useZip as Boolean
dim resX as integer = 0
dim resY as integer = 0
dim physHeight as integer
dim physWidth as integer
dim w as integer
dim h as integer

call pdf.ReadImageFormat2(Source, 1, w, h, bits, useZip)
call pdf.ReadImageResolution(Source, 1, resX, resY)

if (resX <>resY and resX >0 and resY >0) then
if (resX >resY) then
physWidth = w
physHeight = h \(resX \resY)
else
physWidth = w \(resY \resX)
physHeight = h
end if
else
physHeight = h
physWidth = w
end if
```

See also ReadImageResolution function in DynaPDF manual.

75.39.643 ReadImageResolutionEx(Buffer as Memoryblock, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the horizontal and vertical resolution of an image file in the same way as ReadImageResolution() but accepts an image buffer as input.
See also ReadImageResolutionEx function in DynaPDF manual.
See also:

- 75.39.644 ReadImageResolutionEx(Buffer as string, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

75.39.644 ReadImageResolutionEx(Buffer as string, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function retrieves the horizontal and vertical resolution of an image file in the same way as ReadImageResolution() but accepts an image buffer as input.
See also ReadImageResolutionEx function in DynaPDF manual.
See also:

- 75.39.643 ReadImageResolutionEx(Buffer as Memoryblock, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean 14050

75.39.645 Rectangle(PosX as Double, PosY as Double, Width as Double, Height as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function draws a rectangle.
See also Rectangle function in DynaPDF manual.

75.39.646 ReEncryptPDF(File as folderitem, PwdType as Integer, InPwd as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function encrypts an already encrypted or unencrypted PDF file.
See also ReEncryptPDF function in DynaPDF manual.

75.39.647 ReEncryptPDFAnsi(Path as string, PwdType as Integer, InPwd as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function encrypts an already encrypted or unencrypted PDF file.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** Same as ReEncryptPDF, but takes path name in Windows ANSI encoding.
See also ReEncryptPDF function in DynaPDF manual.

75.39.648 RenameSpotColor(Colorant as string, NewName as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renames a colorant.
Example:

```
// your instance
dim pdf as DynaPDFMBS

// rename the color
call pdf.RenameSpotColor("Magenta", "Magenta2")
```

Notes: Strings are converted to UTF-8.
See also RenameSpotColor function in DynaPDF manual.

75.39.649 RenderAnnotOrField(Handle as UInt32, IsAnnot as boolean, State as Integer, Matrix as DynaPDFMatrixMBS, Flags as Integer, PixFmt as Integer, Filter as Integer, byref Out as DynaPDFBitmapMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders an annotation or field independent of the page.
Notes:

Please check dynapdf_help.pdf for details on RenderAnnotOrField function.
Plugin will fill out parameter only if result is zero.
Requires DynaPDF Pro license.
See also RenderAnnotOrField function in DynaPDF manual.

75.39.650 RenderPagePicture(PageNum as Integer) as picture

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a picture for the page with the given page number.
Example:

```
dim pdf as new MyDynaPDFMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
```

```
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// and render first page
dim out as Picture = pdf.RenderPagePicture(1)

// display in window
Backdrop = out
```

Notes:

Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

The picture size is set to the Cropbox. If no crop box is defined, it uses the media box.

Returns nil on any error.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it's faster when you reuse the rasterizer.

Currently not available for Linux Desktop apps.
Requires DynaPDF Pro license.

For pages with orientation of 90 or 270 degree, the plugin will take that into account and swap width/height to have rendered picture have the riuht size.
See also:

- 75.39.651 RenderPagePicture(PageNum as Integer, Width as Integer, Height as Integer, DefScale as Integer = 2, matrix as DynaPDFMatrixMBS = nil) as picture 14054

75.39.651 RenderPagePicture(PageNum as Integer, Width as Integer, Height as Integer, DefScale as Integer = 2, matrix as DynaPDFMatrixMBS = nil) as picture

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a picture for the page with the given page number.
Example:

```
dim pdf as new MyDynaPDFMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// and render first page with window size
dim out as Picture = pdf.RenderPagePicture(1, Width, Height)

// display in window
Backdrop = out
```

Notes:

Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

The picture is created with the given size. The PDF page is scaled to fit size. You can use the constants kpsFitBest, kpsFitHeight or kpsFitWidth for the DefScale parameter. The matrix allows you to move, rotate or scale the PDF inside the picture.

Returns nil on any error.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it's faster when you reuse the rasterizer.

Currently not available for Linux Desktop apps.
Requires DynaPDF Pro license.

If page is rotated, please swap width and height yourself.
See also:

- 75.39.650 RenderPagePicture(PageNum as Integer) as picture 14052

75.39.652 RenderPageToImage(PageNumber as UInt32, OutFile as folderitem, Resolution as UInt32, Width as UInt32, Height as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders a PDF page into an image.
Example:

```
dim pdf as new MyDynaPDFMBS // your DynaPDF subclass with Error event filled

// where to get PDF page
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// where to write
dim t as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

pdf.SetLicenseKey "Pro" // For this example you can use a Pro or Enterprise License

call pdf.CreateNewPDF nil
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open file
call pdf.OpenImportFile(f,0,"")

// add page
call pdf.Append

// import the page
call pdf.ImportPageEx(1,1.0,1.0)
call pdf.EndPage

// render the page
call pdf.RenderPageToImage(1, t, 72, ImageView1.Width, ImageView1.Height, DynaPDFRasterImageMBS.krfDe-
```

fault, DynaPDFRasterizerMBS.kpxfRGB, DynaPDFMBS.kcfJPEG, DynaPDFMBS.kifmJPEG)

Notes:

PixFmt: pass kpxf* constants like DynaPDFRasterizerMBS.kpxfRGB.
Filter: Pass kcf* constants like DynaPDFMBS.kcfJPEG.
Format: pass kifm* constants like DynaPDFMBS.kifmJPEG.

The page that should be rendered must be closed (Append() or EditPage() open a page and EndPage() closes a page).
If the parameter OutFile is set to nil the image is created in memory. In this case call GetImageBuffer() to retrieve the image buffer and finally FreeImageBuffer() to release it.

The output image size can be calculated in different ways:

- If Resolution is >0 the image width and height is calculated according to the specified resolution. On a 32 bit machine it is possible to render pages in up to 1200 DPI depending on the page format. Larger resolutions require special techniques like banding to restrict the memory usage. However, no such feature is available in DynaPDF.
- If Width >0 and if Height == 0 the image height is calculated according to the given width to archive an image with exact proportions.
- If Width == 0 and if Height >0 then image width is calculated according to the given height to archive an image with exact proportions.
- If Width >0 and if Height >0 the image is scaled to the width and height.

The pixel format and the output image format must be compatible. Because TIFF is the only image format that supports different compression filters, the parameter Filter will be ignored for all other output formats.
If the function succeeds the return value is true. If the function fails the return value is false.
Requires DynaPDF Pro license.

75.39.653 RenderPageToImageMT(PageNumber as UInt32, OutFile as folderitem, Resolution as UInt32, Width as UInt32, Height as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders a PDF page into an image.
Notes:

PixFmt: pass kpxf* constants like DynaPDFRasterizerMBS.kpxfRGB.
Filter: Pass kcf* constants like DynaPDFMBS.kcfJPEG.
Format: pass kifm* constants like DynaPDFMBS.kifmJPEG.

The page that should be rendered must be closed (Append() or EditPage() open a page and EndPage() closes a page).
If the parameter OutFile is set to nil the image is created in memory. In this case call GetImageBuffer() to retrieve the image buffer and finally FreeImageBuffer() to release it.

The output image size can be calculated in different ways:

- If Resolution is >0 the image width and height is calculated according to the specified resolution. On a 32 bit machine it is possible to render pages in up to 1200 DPI depending on the page format. Larger resolutions require special techniques like banding to restrict the memory usage. However, no such feature is available in DynaPDF.
- If Width >0 and if Height == 0 the image height is calculated according to the given width to archive an image with exact proportions.
- If Width == 0 and if Height >0 then image width is calculated according to the given height to archive an image with exact proportions.
- If Width >0 and if Height >0 the image is scaled to the width and height.

The pixel format and the output image format must be compatible. Because TIFF is the only image format that supports different compression filters, the parameter Filter will be ignored for all other output formats.
If the function succeeds the return value is true. If the function fails the return value is false.

Requires DynaPDF Pro license.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

75.39.654 RenderPageToPicture(PageNum as integer, pic as picture, DefScale as integer = 2, matrix as DynaPDFMatrixMBS = nil, RenderWithAlpha as boolean = false) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders the page into the given picture.
Example:

```
dim pdf as new MyDynaPDFMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// create picture
dim out as new Picture(800, 600, 32)

// render first page in the existing picture
call pdf.RenderPageToPicture(1, out)

// display in window
Backdrop = out
```

Notes:

Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

This method draws into an existing picture. The PDF page is scaled to fit size. You can use the constants kpsFitBest, kpsFitHeight or kpsFitWidth for the DefScale parameter. The matrix allows you to move, rotate or scale the PDF inside the picture.

Returns nil on any error.

This does not work on Linux desktop targets as the plugin can't write into a picture there.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it's faster when you reuse the rasterizer.

Requires DynaPDF Pro license.

Added RenderWithAlpha parameter in plugin version 19.0.
If RenderWithAlpha is true, we render with alpha channel. If the destination is a picture has alpha channel, you should get the alpha there. Otherwise for picture without alpha channel, we only copy RGB channels.

75.39.655 RenderPDFFile(OutFile as folderitem, Resolution as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim pdf as new MyDynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.OpenImportFile(file, 0, "")
call pdf.ImportPDFFile(1, 1.0, 1.0)

// create a TIFF file:

dim outfile as FolderItem = SpecialFolder.Desktop.Child("test.tif")

dim Flags as Integer = DynaPDFRasterImageMBS.krfDefault
dim PixFmt as Integer = DynaPDFRasterizerMBS.kpxfRGB
dim Format as Integer = DynaPDFMBS.kifmTIFF // use kifm* constants
dim Filter as Integer = DynaPDFMBS.kcfLZW // pick a compression scheme for the file format

call pdf.RenderPDFFile(outfile, 300, Flags, PixFmt, Filter, Format)

// create a folder of JPEG file:

dim outfolder as FolderItem = SpecialFolder.Desktop.Child("test files")
outfolder.CreateAsFolder

Flags = DynaPDFRasterImageMBS.krfDefault
PixFmt = DynaPDFRasterizerMBS.kpxfRGB
Format = DynaPDFMBS.kifmJPEG // use kifm* constants
Filter = DynaPDFMBS.kcfJPEG

call pdf.RenderPDFFile(outfolder, 300, Flags, PixFmt, Filter, Format)
```

Deprecated: This item is deprecated and should no longer be used. You can use RenderPDFFileEx instead. **Notes:** Also check the dynapdf manual on the pdfRenderPDFFileA function (pdfRenderPDFFileW on Windows).

75.39.656 RenderPDFFileEx(OutFile as folderitem, Resolution as UInt32, Width as Integer, Height as Integer, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
Notes:

The pages in memory could be imported from one or more external PDF files, e.g. with ImportPDFFile(), created with DynaPDF functions, or a combination of both.

The parameter OutFile can be a path to an existing directory or the file name of the output image. The latter type can be used with TIFF images because this format supports multi-page output. When a file path is used with a single page image format only the first page will be rendered.

The function checks whether the path is a directory or a file name.
The function can render pages in a specific resolution, or scale them to a given width or height.

Depending on which parameters are set the image size is calculated as follows:

- Resolution >0 and Width == 0 and Height == 0: Pages are rendered according to the given resolution. Note that PDF pages can be very large. Therefore, it is maybe not possible to render all pages in the whished resolution.
- Resolution >0 and Width <0 and or Height <0: Pages are rendered according to the given resolution. Negative values of Width and Height are interpreted as maximum width or height if Resolution is greater zero. Since PDF pages can be very large, it is recommended to set the maximum width and height to a value that is low enough so that no out of memory exception occurs, e.g. 5000 x 5000 pixels.
- Resolution == 0 and Width >0 or Height >0: Pages are scaled to the given Width or Height. If Width and Height are greater zero then pages are scaled to that size independent of the original page format (not recommended). It is usually best to set the width or height to zero so that the function can calculate the missing value to preserve the aspect ratio.

On a 32 bit system it is possible to render PDF pages in RGB with up to around 1200 DPI, depending on the page format and available memory. The resolution of gray images can be higher but the encoder

must be able to handle such large images. The PNG and bitmap encoders accept images in almost arbitrary resolutions but all other encoders can fail when the resolution is larger than about 2000 DPI.

The function calls the progress events.
Returns true on success or false on failure.

See also RenderPDFFileEx function in DynaPDF manual.

75.39.657 RenderPDFFileExMT(OutFile as folderitem, Resolution as UInt32, Width as Integer, Height as Integer, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
Notes:

The pages in memory could be imported from one or more external PDF files, e.g. with ImportPDFFile(), created with DynaPDF functions, or a combination of both.

The parameter OutFile can be a path to an existing directory or the file name of the output image. The latter type can be used with TIFF images because this format supports multi-page output. When a file path is used with a single page image format only the first page will be rendered.

The function checks whether the path is a directory or a file name.
The function can render pages in a specific resolution, or scale them to a given width or height.

Depending on which parameters are set the image size is calculated as follows:

- Resolution >0 and Width == 0 and Height == 0: Pages are rendered according to the given resolution. Note that PDF pages can be very large. Therefore, it is maybe not possible to render all pages in the whished resolution.
- Resolution >0 and Width <0 and or Height <0: Pages are rendered according to the given resolution. Negative values of Width and Height are interpreted as maximum width or height if Resolution is greater zero. Since PDF pages can be very large, it is recommended to set the maximum width and height to a value that is low enough so that no out of memory exception occurs, e.g. 5000 x 5000 pixels.

The PNG and bitmap encoders accept images in almost arbitrary resolutions but all other encoders can fail when the resolution is larger than about 2000 DPI.

The function calls the progress events.
Returns true on success or false on failure.

Same as RenderPDFFile, but multithreaded.

Requires DynaPDF Pro license.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

75.39.658 RenderPDFFileMT(OutFile as folderitem, Resolution as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
Deprecated: This item is deprecated and should no longer be used. You can use RenderPDFFileEx instead.
Notes:

Same as RenderPDFFile, but multithreaded.
Also check the dynapdf manual on the pdfRenderPDFFileA function (pdfRenderPDFFileW on Windows).

Requires DynaPDF Pro license.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

75.39.659 ReOpenImportFile(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function re-opens a PDf file so that further contents can be imported from it.
Notes:

The parameter Handle must be a valid file handle that OpenImportFile() or OpenImportBuffer() returned.
When the file is no longer needed close the parser instance with CloseImportFileEx().
If the function succeeds the return value is true. If the function fails the return value is false.
See also ReOpenImportFile function in DynaPDF manual.

75.39.660 ReplaceFont(PDFFontRef as Integer, Name as string, Style as integer = 0, NameIsFamilyName as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Notes:

The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

On Linux or Unix system fonts must be loaded with AddFontSearchPath() before this function can be called. This should be done before the first PDF file is imported.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFont function in DynaPDF manual.

75.39.661 ReplaceFontAnsi(PDFFontRef as Integer, Name as string, Style as integer = 0, NameIsFamilyName as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

On Linux or Unix system fonts must be loaded with AddFontSearchPath() before this function can be called. This should be done before the first PDF file is imported.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFont function in DynaPDF manual.

75.39.662 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Notes:

The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFontEx function in DynaPDF manual.
See also:

- 75.39.663 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer 14064

75.39.663 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Notes:

The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFontEx function in DynaPDF manual.

See also:

- 75.39.662 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer 14064

75.39.664 ReplaceFontExAnsi(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces a PDF font with another one.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFontEx function in DynaPDF manual.
See also:

- 75.39.662 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer 14064
- 75.39.663 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer 14064

75.39.665 ReplaceICCProfile(ColorSpace as Integer, ICCFile as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function is used to dynamically create ICC based color spaces within OnReplaceICCProfile event of CheckConformance().
Notes: Use in OnReplaceICCProfile event.
See also ReplaceICCProfile function in DynaPDF manual.

75.39.666 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as MemoryBlock) as integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an ICC profile exactly in the same way as ReplaceICCProfile() but accepts a file buffer as input.
Notes:

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
Use in OnReplaceICCProfile event.
See also ReplaceICCProfileEx function in DynaPDF manual.
See also:

- 75.39.667 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as String) as integer 14066

75.39.667 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as String) as integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an ICC profile exactly in the same way as ReplaceICCProfile() but accepts a file buffer as input.
Notes:

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
Use in OnReplaceICCProfile event.
See also ReplaceICCProfileEx function in DynaPDF manual.
See also:

- 75.39.666 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as MemoryBlock) as integer 14065

75.39.668 ReplaceImage(ImageToReplace as DynaPDFImageMBS, ImageFile as FolderItem, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an image with another image.
Notes:

The parameter ImageToReplace must be a valid pointer of an image object which is retrieved by functions like GetImageObj() or ParseContent().
The resolution, aspect ratio, color space and so on can be freely chosen. However, note that this function does not change the output position or size. If the aspect ratio of the new image is different, then it will be stretched or shrinked to fit into the output rectangle.
The parameter ColorSpace specifies the destination color space into which the image should be converted or saved, if the image is already defined in that color space. CSHandle must be the handle of that color space if a non-device space is used. The will be ignored for devices spaces.

The function works in the very same way as InsertImageEx() with the following differences:
• The color of an image mask cannot be set or changed because this would require changes on the content stream in which the image is used. An image mask will be created if the image color depth is 1 bit and if color key masking is enabled (see SetUseTransparency()). SetUseTransparency() should normally be set to false before calling this function.
• The image will never be downscaled, independent of the current resolution, because the size of the output rectangle is not known.

If the image that should be replaced is a soft mask of another base image, then make sure that the destination color space is set to kesDeviceGray, kesCalGray, or to a one channel ICC based color space because a soft mask must not contain more than one color channel.
The flags kgfUseImageColorSpace, kgfIgnoreICCProfiles, kgfRealPassThrough, and kfNoBitmapAlpha are all supported. See SetGStateFlags() for further information.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ReplaceImage function in DynaPDF manual.

75.39.669 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as MemoryBlock, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an image with a new image exactly like ReplaceImage() but accepts a file buffer as input.
Notes:

See ReplaceImage() for further information.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also ReplaceImageEx function in DynaPDF manual.
See also:

- 75.39.670 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as String, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean 14067

75.39.670 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as String, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces an image with a new image exactly like ReplaceImage() but accepts a file buffer as input.
Notes:

See ReplaceImage() for further information.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also ReplaceImageEx function in DynaPDF manual.
See also:

- 75.39.669 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as MemoryBlock, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean 14067

75.39.671 ReplacePageText(text as string, stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.
Notes:

Be aware that ReplacePageText can't always replace text as encoding must match and fonts may not have the characters for the new text. For that better use ReplacePageTextEx.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
See also ReplacePageText function in DynaPDF manual.

75.39.672 ReplacePageTextEx(text as string, stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.
Notes:

The text parameter is converted to unicode.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
See also ReplacePageTextEx function in DynaPDF manual.

75.39.673 ReplacePageTextExAnsi(text as string, stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The text parameter is converted to ANSI.
Requires DynaPDF Pro license.
See also ReplacePageTextEx function in DynaPDF manual.

75.39.674 ResetAnnotAP(Handle as integer = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Forces a rebuild of the appearance stream of the specified annotation.
Notes: If Handle is set to -1 all annotation appearances will be rebuild. This function be useful if an imported annotation has an invalid or empty appearance stream.
See also ResetAnnotAP function in DynaPDF manual.

75.39.675 ResetEncryptionSettings as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the encryption settings which were imported from an external PDF file so that the PDF file in memory can be saved unencrypted.
Notes: If the function succeeds the return value is true. If the function fails the return value is false.
See also ResetEncryptionSettings function in DynaPDF manual.

75.39.676 ResetLineDashPattern as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function resets a previously defined line dash pattern to its default value (straight line).
See also ResetLineDashPattern function in DynaPDF manual.

75.39.677 RestoreGraphicState as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function restores a previously saved graphics state.
See also RestoreGraphicState function in DynaPDF manual.

75.39.678 RGB(R as Integer, G as Integer, B as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a RGB color value based on the given component values.
Example:

```
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox hex(rgb)
```

75.39.679 RofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns R of a RGB color value.
Example:

```
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox str(DynaPDFMBS.RofRGB(rgb)) // shows 1
```

75.39.680 RotateCoords(alpha as Double, OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function rotates the coordinate system at the point OriginX, OriginY by applying a transformation matrix.
Notes: Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also RotateCoords function in DynaPDF manual.

75.39.681 RotateTemplate(OldTemplate as Integer, Rotation as Integer, RotateCoords as boolean = true) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates a template.
Notes:

Returns a new template handle.
This is a convenience function which creates a new template and draws the existing template there with rotation.
Returns negative number for errors. The plugin uses -1 for plugin errors like wrong rotation angle.

RotateCoords: Whether to rotate coordinate system.
This is now done by DynaPDF automatically, so for current version of the library, this must be false. But older versions need the true.

75.39.682 RoundRect(PosX as Double, PosY as Double, Width as Double, Height as Double, Radius as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a rectangle with rounded corners.
Example:

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Round Rectangles.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

call pdf.CreateNewPDF f
call pdf.Append

dim PosX as Double = 100.0
dim PosY as Double = 100.0
dim Width as Double = 100.0
dim Height as Double = 100.0
dim Radius as Double = 20.0
dim FillMode as Integer = pdf.kfmFill

call pdf.RoundRect(PosX, PosY, Width, Height, Radius, FillMode)

PosX = 300.0
dim RadiusX as Double = 30.0
dim RadiusY as Double = 30.0

call pdf.RoundRectEx(PosX, PosY, Width, Height, RadiusX, RadiusY, FillMode)

call pdf.EndPage
call pdf.CloseFile
```

```
f.Launch
```

See also RoundRect function in DynaPDF manual.

75.39.683 RoundRectEx(PosX as Double, PosY as Double, Width as Double, Height as Double, rWidth as Double, rHeight as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a rectangle with elliptical corners.
Example:

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Round Rectangles.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

call pdf.CreateNewPDF f
call pdf.Append

dim PosX as Double = 100.0
dim PosY as Double = 100.0
dim Width as Double = 100.0
dim Height as Double = 100.0
dim Radius as Double = 20.0
dim FillMode as Integer = pdf.kfmFill

call pdf.RoundRect(PosX, PosY, Width, Height, Radius, FillMode)

PosX = 300.0
dim RadiusX as Double = 30.0
dim RadiusY as Double = 30.0

call pdf.RoundRectEx(PosX, PosY, Width, Height, RadiusX, RadiusY, FillMode)

call pdf.EndPage
call pdf.CloseFile

f.Launch
```

See also RoundRectEx function in DynaPDF manual.

75.39.684 SaveGraphicState as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function saves the current graphics state.
See also SaveGraphicState function in DynaPDF manual.

75.39.685 ScaleCoords(sx as Double, sy as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function scales the coordinate system by applying a transformation matrix.
Notes: Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also ScaleCoords function in DynaPDF manual.

75.39.686 SelfTest as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks the size of all required data types and checks whether the endian configuration of the library is correct.
See also SelfTest function in DynaPDF manual.

75.39.687 Set3DAnnotProps(Annot as Integer, ActType as Integer, DeActType as Integer, InstType as Integer, DeInstType as Integer, DisplayToolbar as boolean, DisplayModelTree as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the properties of a 3D Annotation.
See also Set3DAnnotProps function in DynaPDF manual.

75.39.688 Set3DAnnotScriptAnsi(Annot as Integer, Value as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the 3D Annoation Script.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also Set3DAnnotScript function in DynaPDF manual.

75.39.689 SetAllocBy(Value as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the size of the memory blocks in kilo bytes, which will be allocated if memory must be allocated for page content streams.
See also SetAllocBy function in DynaPDF manual.

75.39.690 SetAnnotBorderEffect(Handle as Integer, BorderEffect as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border effect for an annotation.
Notes:

Returns true on success.
Handle is in range of 0 to number of annotations - 1.
See also SetAnnotBorderEffect function in DynaPDF manual.

75.39.691 SetAnnotBorderStyle(Handle as Integer, BorderStyle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation border style.
See also SetAnnotBorderStyle function in DynaPDF manual.

75.39.692 SetAnnotBorderWidth(Handle as Integer, LineWidth as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation border width.
See also SetAnnotBorderWidth function in DynaPDF manual.

75.39.693 SetAnnotColor(Handle as Integer, ColorType as Integer, PDFColorSpace as Integer, ColorValue as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation color.
See also SetAnnotColor function in DynaPDF manual.

75.39.694 SetAnnotFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the default flags used for newly created annotations.
See also SetAnnotFlags function in DynaPDF manual.

75.39.695 SetAnnotFlagsEx(Handle as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation flags.
See also SetAnnotFlagsEx function in DynaPDF manual.

75.39.696 SetAnnotHighlightMode(Handle as Integer, HighlightMode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation highlight mode.
See also SetAnnotHighlightMode function in DynaPDF manual.

75.39.697 SetAnnotIcon(Handle as Integer, AnnotIcon as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation icon.
See also SetAnnotIcon function in DynaPDF manual.

75.39.698 SetAnnotLineDashPattern(Handle as UInt32, dash as memoryblock, NumValues as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or deletes the line dash pattern of an annotation.
Notes:

The following annotation types support line dash patterns:

- atCircle
- atInk
- atLine
- atPolygon
- atPolyLine
- atSquare

Memoryblock must contain floating point values (Single).
Returns true on success.

If array is nil, the pattern is removed.
See also SetAnnotLineDashPattern function in DynaPDF manual.
See also:

- 75.39.699 SetAnnotLineDashPattern(Handle as UInt32, dash() as single) as Boolean 14076

75.39.699 SetAnnotLineDashPattern(Handle as UInt32, dash() as single) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or deletes the line dash pattern of an annotation.
Notes:

The following annotation types support line dash patterns:

- atCircle
- atInk
- atLine
- atPolygon
- atPolyLine
- atSquare

Returns true on success.

If array is nil, the pattern is removed.
See also SetAnnotLineDashPattern function in DynaPDF manual.
See also:

- 75.39.698 SetAnnotLineDashPattern(Handle as UInt32, dash as memoryblock, NumValues as integer) as Boolean 14075

75.39.700 SetAnnotLineEndStyle(Handle as UInt32, StartLineStyle as Integer, EndLineStyle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the line end styles of a Line or PolyLine Annotation.
Notes: If the function succeeds the return value is true. If the function fails the return value is false.
See also SetAnnotLineEndStyle function in DynaPDF manual.

75.39.701 SetAnnotMigrationState(Handle as Integer, State as Integer, Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a migration state to a markup annotation.
Notes:

All annotation types with exception of 3D, Link, Movie, Screen, PrinterMark, TrapNet, and Watermark are markup annotations.
Migration states are stored in text annotations as reply to the base annotation. Further states are stored as reply to the last reply; the result is a single linked list. Because the base annotation contains no reference to the last reply or migration state the function must search for it. To speed upprocessing the function returns the handle of the text annotation so that the next state can directly be added to this annotation.

The migration state is defined since PDF 1.5. The function adjusts the PDF version automatically if it is lower than PDF 1.5.

If the function succeeds the return value is the handle of the text annotation, a value greater or equal zero. If the function fails the return value is a negative error code.

State can be kasNone, kasAccepted, kasRejected, kasCancelled, kasCompleted.
See also SetAnnotMigrationState function in DynaPDF manual.

75.39.702 SetAnnotMigrationStateAnsi(Handle as Integer, State as Integer, Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a migration state to a markup annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

All annotation types with exception of 3D, Link, Movie, Screen, PrinterMark, TrapNet, and Watermark are markup annotations.
Migration states are stored in text annotations as reply to the base annotation. Further states are stored as reply to the last reply; the result is a single linked list. Because the base annotation contains no reference to the last reply or migration state the function must search for it. To speed upprocessing the function returns the handle of the text annotation so that the next state can directly be added to this annotation.

The migration state is defined since PDF 1.5. The function adjusts the PDF version automatically if it is lower than PDF 1.5.

If the function succeeds the return value is the handle of the text annotation, a value greater or equal zero. If the function fails the return value is a negative error code.

State can be kasNone, kasAccepted, kasRejected, kasCancelled, kasCompleted.
See also SetAnnotMigrationState function in DynaPDF manual.

75.39.703 SetAnnotOpacity(Handle as Integer, opacity as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the opacity of a markup annotation.
Notes:

The function GetAnnotEx() or GetPageAnnotEx() can be used to determine whether an annotation is a markup annotation.

Returns true on succes or false on failure.
See also SetAnnotOpacity function in DynaPDF manual.

75.39.704 SetAnnotOpenState(Handle as Integer, Open as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the annotation open state.

See also SetAnnotOpenState function in DynaPDF manual.

75.39.705 SetAnnotOrFieldDate(CSHandle as UInt32, IsField as Boolean, Type as Integer, DateTime as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the creation or modification date of an annotation or form field.
Notes:

If the parameter IsField is set to true, a valid field handle must be passed to the parameter Handle. An annotation handle is expected otherwise.
Annotations and form fields support a modification date but a creation date is supported by markup annotations only.
The following annotation types are markup annotations:

- Care
- Circle
- FileAttach
- FreeText
- Highlight, Squiggly, Strikeout, Underline
- Ink
- Line
- Polygon
- Projection
- Redact
- Sound
- Square
- Stamp
- Text

The function GetAnnotEx() or GetPageAnnotEx() can also be used to determine whether an annotation is a markup annotation.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also SetAnnotOrFieldDate function in DynaPDF manual.

75.39.706 SetAnnotQuadPoints(Handle as UInt32, points() as DynaPDFPointMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or changes the quad points defintion of a Highlight, Link, Redakt, Squiggly, atStrikeOut, or Underline annotation.
Notes:

The function must be called within an open page.
Independent of the used coordinate system (bottom up or top down), the points must be defined in the following order:
x1,y1 x3,y3
x2,y2 x4,y4

The coordinates of the vertices are interpreted in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The number of points must be 4 or a multiple of 4.

Returns true on success.
See also SetAnnotQuadPoints function in DynaPDF manual.

75.39.707 SetAnnotString(Handle as Integer, StringType as Integer, Value as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stamp annotation.
See also SetAnnotString function in DynaPDF manual.

75.39.708 SetAnnotStringAnsi(Handle as Integer, StringType as Integer, Value as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stamp annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also SetAnnotString function in DynaPDF manual.

75.39.709 SetAnnotSubject(Handle as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the optional subject string of an annotation.
Notes: The value parameter is converted to unicode.
See also SetAnnotSubject function in DynaPDF manual.

75.39.710 SetAnnotSubjectAnsi(Handle as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the optional subject string of an annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The value parameter is converted to ANSI.
See also SetAnnotSubject function in DynaPDF manual.

75.39.711 SetBBox(Boundary as Integer, LeftX as Double, LeftY as Double, RightX as Double, RightY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets a specific bounding box of the current open PDF page.
See also SetBBox function in DynaPDF manual.

75.39.712 SetBidiMode(BidiMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the bidirectional mode.
See also SetBidiMode function in DynaPDF manual.

75.39.713 SetBlack(FillColor as Boolean, StrokeColor as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets black color.
Notes:

This function is a bit optimized to check the current color space.
Depending on whether it's RGB, Gray, CMYK or Lab, it will set different color values.
And if other color space is active, it switches to Gray colorspace to set black.

75.39.714 SetBookmarkDest(ABmk as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the destination of a bookmark.
See also SetBookmarkDest function in DynaPDF manual.

75.39.715 SetBookmarkStyle(ABmk as Integer, Style as Integer, RGBColor as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the bookmark style.
See also SetBookmarkStyle function in DynaPDF manual.

75.39.716 SetBorderStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set the global border style which is used for newly created form fields.
See also SetBorderStyle function in DynaPDF manual.

75.39.717 SetCharacterSpacing(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the current character spacing. The function requires an open page, template or pattern.
See also SetCharacterSpacing function in DynaPDF manual.

75.39.718 SetCheckBoxChar(CheckBoxChar as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the character which should be used for newly created check boxes.
See also SetCheckBoxChar function in DynaPDF manual.

75.39.719 SetCheckBoxDefState(Field as Integer, Checked as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function changes the default state of a check box; it can differ from the current visible state of the check box.
See also SetCheckBoxDefState function in DynaPDF manual.

75.39.720 SetCheckBoxState(Field as Integer, Checked as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the state of a check box. The parameter Field must be a valid check box handle.
See also SetCheckBoxState function in DynaPDF manual.

75.39.721 SetCIDFont(CMapHandle as Integer, Name as string, Style as Integer, Size as Double, Embed as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a CID Font.
See also SetCIDFont function in DynaPDF manual.

75.39.722 SetCMapDir(path as folderitem, flags as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the character map directory.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetCMapDir SpecialFolder.Desktop.Child("CMAP"), 3
```

Notes:

Takes an integer instead of a boolean starting with plugin version 11.2pr6.
See klcmDefault, klcmDelayed and klcmRecursive constants.
Requires DynaPDF Pro license.
See also SetCMapDir function in DynaPDF manual.
See also:

• 75.39.723 SetCMapDir(path as string, flags as Integer) as Integer 14084

75.39.723 SetCMapDir(path as string, flags as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the character map directory.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetCMapDir SpecialFolder.Desktop.Child("CMAP"), pdf.klcmRecursive
```

Notes:

Takes an integer instead of a boolean starting with plugin version 11.2pr6.
See klcmDefault, klcmDelayed and klcmRecursive constants.
Requires DynaPDF Pro license.
See also SetCMapDir function in DynaPDF manual.
See also:

• 75.39.722 SetCMapDir(path as folderitem, flags as Integer) as Integer 14083

75.39.724 SetColDefFile(EmbFile as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the initial document of a portable collection that should be opened in the viewer application. See also CreateCollection().
See also SetColDefFile function in DynaPDF manual.

75.39.725 SetColorMask(ImageHandle as Integer, Mask as Ptr, Count as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The functions sets or overrides the color mask of an image.
Notes: See also SetColorMask function in dynapdf_help.pdf manual.
See also SetColorMask function in DynaPDF manual.
See also:

• 75.39.726 SetColorMask(ImageHandle as Integer, Mask() as Integer) as boolean 14085

75.39.726 SetColorMask(ImageHandle as Integer, Mask() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The functions sets or overrides the color mask of an image.
Notes:

Same as other SetColorMask function, but values are taken from array.
See also SetColorMask function in dynapdf_help.pdf manual.
See also SetColorMask function in DynaPDF manual.
See also:

- 75.39.725 SetColorMask(ImageHandle as Integer, Mask as Ptr, Count as UInt32) as boolean 14084

75.39.727 SetColors(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the fill and stroke color.
See also SetColors function in DynaPDF manual.

75.39.728 SetColorSpace(ColorSpace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the color space.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// get the colorspace of the image file
const DP_csDeviceRGB=0
const DP_csDeviceCMYK=1
const DP_csDeviceGray=2

dim iColorSpace as Integer

iColorSpace=DP_csDeviceRGB

// define color space
bBool=pdf.SetColorSpace(iColorSpace)
```

See also SetColorSpace function in DynaPDF manual.

75.39.729 SetColSortField(ColField as Integer, AscendingOrder as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the collection field that should be used to sort the list of embedded files.
See also SetColSortField function in DynaPDF manual.

75.39.730 SetCompressionFilter(Filter as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the compression filter which is used to compress images.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// set compression filter
bBool = pdf.SetCompressionFilter(pdf.kcfJPEG)
```

Notes: Use kcfCCITT3, kcfCCITT4, kcfFlate, kcfFlateBW, kcfJP2K, kcfJPEG or kcfLZW constants.
See also SetCompressionFilter function in DynaPDF manual.

75.39.731 SetCompressionLevel(CompressLevel as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the current compression level.
See also SetCompressionLevel function in DynaPDF manual.

75.39.732 SetContent(buffer as memoryblock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function replaces the content stream of the currently open page or template with a new one.
See also SetContent function in DynaPDF manual.
See also:

- 75.39.733 SetContent(buffer as string) as Boolean 14087

75.39.733 SetContent(buffer as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function replaces the content stream of the currently open page or template with a new one.
See also SetContent function in DynaPDF manual.
See also:

- 75.39.732 SetContent(buffer as memoryblock) as Boolean 14086

75.39.734 SetDateTimeFormat(TxtField as Integer, Fmt as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function restricts the allowed value of a text field to a date time format and applies this format if the value was valid.
See also SetDateTimeFormat function in DynaPDF manual.

75.39.735 SetDefBitsPerPixel(value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the default color depth in bits per pixel, which determines whether images should be downsampled.
See also SetDefBitsPerPixel function in DynaPDF manual.

75.39.736 SetDocInfo(DInfo as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes a document info entry.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim source as FolderItem // source pdf file?

const diAuthor=0
const diCreator=1
const diKeywords=2
const diProducer=3
```

```
const diSubject=4
const diTitle=5

// Define some pdf properties:
bBool=pdf.SetDocInfo(diAuthor, SystemInformationMBS.Username)
bBool=pdf.SetDocInfo(diCreator, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfo(diKeywords, "")
bBool=pdf.SetDocInfo(diProducer, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfo(diSubject, "")
bBool=pdf.SetDocInfo(diTitle, source.name)
```

Notes: The text parameter is converted to unicode.
See also SetDocInfo function in DynaPDF manual.

75.39.737 SetDocInfoAnsi(DInfo as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes a document info entry.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim source as FolderItem // source pdf file?

const diAuthor=0
const diCreator=1
const diKeywords=2
const diProducer=3
const diSubject=4
const diTitle=5

// Define some pdf properties:
bBool=pdf.SetDocInfoAnsi(diAuthor, SystemInformationMBS.Username)
bBool=pdf.SetDocInfoAnsi(diCreator, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfoAnsi(diKeywords, "")
bBool=pdf.SetDocInfoAnsi(diProducer, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfoAnsi(diSubject, "")
bBool=pdf.SetDocInfoAnsi(diTitle, source.name)
```

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also SetDocInfo function in DynaPDF manual.

75.39.738 SetDocInfoEx(DInfo as Integer, Key as string, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes a document info entry.
Notes: The Text parameter is converted to unicode.
See also SetDocInfoEx function in DynaPDF manual.

75.39.739 SetDocInfoExAnsi(DInfo as Integer, Key as string, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes a document info entry.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Text parameter is converted to ANSI.
See also SetDocInfoEx function in DynaPDF manual.

75.39.740 SetDrawDirection(Direction as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the draw direction of closed vector graphics such as rectangles, ellipses, triangles and so on.
See also SetDrawDirection function in DynaPDF manual.

75.39.741 SetEMFFrameDPI(DPIX as Integer, DPIY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to adjust DPI value which is used to calculate the picture size of an EMF file.
See also SetEMFFrameDPI function in DynaPDF manual.

75.39.742 SetEMFPatternDistance(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the default distance between lines of standard patterns during EMF conversion.
See also SetEMFPatternDistance function in DynaPDF manual.

75.39.743 SetErrorMode(ErrMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error mode specifies which error types should be treated as fatal error.
See also SetErrorMode function in DynaPDF manual.

75.39.744 SetExtColorSpace(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function activates an extended color space in the graphics state.
Notes: Requires DynaPDF Pro license.
See also SetExtColorSpace function in DynaPDF manual.

75.39.745 SetExtFillColorSpace(Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the colorspace for filling.
Notes:

Pass Colorspace handle like for SetExtColorSpace.
Requires DynaPDF Pro license.
See also SetExtFillColorSpace function in DynaPDF manual.

75.39.746 SetExtGState(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function applies an extended graphics state.
See also SetExtGState function in DynaPDF manual.

75.39.747 SetExtStrokeColorSpace(Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the colorspace for filling.
Notes:

Pass Colorspace handle like for SetExtColorSpace.
Requires DynaPDF Pro license.
See also SetExtStrokeColorSpace function in DynaPDF manual.

75.39.748 SetFieldBackColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the background color used for newly created interactive form fields and annotations.
See also SetFieldBackColor function in DynaPDF manual.

75.39.749 SetFieldBBox(Handle as Integer, rect as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the bounding box of a field.
See also SetFieldBBox function in DynaPDF manual.

75.39.750 SetFieldBorderColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the border color used for newly created interactive form fields and annotations.
See also SetFieldBorderColor function in DynaPDF manual.

75.39.751 SetFieldBorderStyle(Field as Integer, Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the border style of a specific Interactive Form field.
See also SetFieldBorderStyle function in DynaPDF manual.

75.39.752 SetFieldBorderWidth(Field as Integer, LineWidth as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to change the border width of a field.
See also SetFieldBorderWidth function in DynaPDF manual.

75.39.753 SetFieldCalcOrder(CurrIndex as UInt32, NewIndex as UInt32) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves a field in the global calc order array.
Notes:

This is the order in which field values will be recalculated when the value of any field changes.
The current calc order can be accessed with GetFieldCalcOrder(). The calc order array contains field handles. A field handle is a simple array index.

Returns true on success.
See also SetFieldCalcOrder function in DynaPDF manual.

75.39.754 SetFieldColor(Field as Integer, ColorType as Integer, ColorSpace as Integer, ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets a specific color of an interactive form field.
See also SetFieldColor function in DynaPDF manual.

75.39.755 SetFieldExpValue(Field as Integer, ValIndex as Integer, Value as string, ExpValue as string, Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to change the choice values of a combo box, list box, or radio button.
See also SetFieldExpValue function in DynaPDF manual.

75.39.756 SetFieldExpValueAnsi(Field as Integer, ValIndex as Integer, Value as string, ExpValue as string, Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to change the choice values of a combo box, list box, or radio button.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also SetFieldExpValue function in DynaPDF manual.

75.39.757 SetFieldExpValueEx(Field as Integer, ValIndex as Integer, Selected as boolean, DefSelected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function marks a choice value of a combo or list box as selected or unselected.
Notes:

It can also be used to change the state of check boxes or the children of a radio button. The parameter ValIndex will be ignored if the field is a normal check box (no child of a redio button or field group).

To enumerate the choice values of a combo box, list box or radio button use the function GetFieldExpValueEx().

Return value:
If the function succeeds the return value is true. If the function fails the return value is false.

See also SetFieldExpValueEx function in DynaPDF manual.

75.39.758 SetFieldFlags(Field as Integer, Flags as Integer, Reset as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the flags of a specific interactive form field.
See also SetFieldFlags function in DynaPDF manual.

75.39.759 SetFieldFont(Field as Integer, Name as string, Style as Integer, Size as Double, Embed as Boolean, CodePage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the font of a form field.
Notes: See documentation of SetFieldFont function in dynapdf_help manual file for details.
See also SetFieldFont function in DynaPDF manual.

75.39.760 SetFieldFontAnsi(Field as Integer, Name as string, Style as Integer, Size as Double, Embed as Boolean, CodePage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the font of a form field.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** See documentation of SetFieldFont function in dynapdf_help manual file for details.
See also SetFieldFont function in DynaPDF manual.

75.39.761 SetFieldFontEx(Field as UInt32, Handle as UInt32, FontSize as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or replaces the font of a field.
Notes:

The function requires a font handle that was returned by SetFieldFont.
Returns true on success and false on failure.
See also SetFieldFontEx function in DynaPDF manual.

75.39.762 SetFieldFontSize(aField as Integer, FontSize as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the font size of a specific field.
See also SetFieldFontSize function in DynaPDF manual.

75.39.763 SetFieldHighlightMode(Field as Integer, HighlightMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the highlight mode of a specific field.
See also SetFieldHighlightMode function in DynaPDF manual.

75.39.764 SetFieldIndex(Field as Integer, Index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function can be used to set the tab order of interactive form fields.
See also SetFieldIndex function in DynaPDF manual.

75.39.765 SetFieldMapName(Field as Integer, Name as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the mapping name of a field.
Notes: The parameter name is converted to unicode.
See also SetFieldMapName function in DynaPDF manual.

75.39.766 SetFieldMapNameAnsi(Field as Integer, Name as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the mapping name of a field.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The parameter name is converted to ANSI.
See also SetFieldMapName function in DynaPDF manual.

75.39.767 SetFieldName(Field as Integer, NewName as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the name of an interactive form field.
See also SetFieldName function in DynaPDF manual.

75.39.768 SetFieldNameAnsi(Field as Integer, NewName as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the name of an interactive form field.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also SetFieldName function in DynaPDF manual.

75.39.769 SetFieldOrientation(Field as Integer, Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the orientation of a field.
See also SetFieldOrientation function in DynaPDF manual.

75.39.770 SetFieldTextAlign(Field as Integer, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes the text alignment of a text or button field.
See also SetFieldTextAlign function in DynaPDF manual.

75.39.771 SetFieldTextColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the text color which is used for newly created interactive form fields.
See also SetFieldTextColor function in DynaPDF manual.

75.39.772 SetFieldToolTip(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes the tool tip or description string of an interactive form field.
Notes: The value parameter is converted to unicode.
See also SetFieldToolTip function in DynaPDF manual.

75.39.773 SetFieldToolTipAnsi(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function set or changes the tool tip or description string of an interactive form field.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The value parameter is converted to ANSI.
See also SetFieldToolTip function in DynaPDF manual.

75.39.774 SetFillColor(ColorValue as Color) as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the fill color.
Notes:

Raises an exception if current color space is CMYK or Gray and not RGB.
The parameter Color must be defined in the current color space.
See also SetFillColor function in DynaPDF manual.
See also:

- 75.39.775 SetFillColor(ColorValue as Integer) as Boolean 14097
- 75.39.776 SetFillColor(values() as Double) as boolean 14098
- 75.39.777 SetFillColor(values() as single) as boolean 14099

75.39.775 SetFillColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the fill color.
Example:

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set red text color
call pdf.SetFillColor pdf.RGB(255,0,0)

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"
```

```
// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

Notes: The parameter Color must be defined in the current color space.
See also SetFillColor function in DynaPDF manual.
See also:

- 75.39.774 SetFillColor(ColorValue as Color) as Boolean 14097
- 75.39.776 SetFillColor(values() as Double) as boolean 14098
- 75.39.777 SetFillColor(values() as single) as boolean 14099

75.39.776 SetFillColor(values() as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets fill color based on an array of floats.
Example:

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set blue text color with values in memoryblock
dim colorvalues() as Double = array(0.0, 1.0, 0.0)
call pdf.SetFillColor colorvalues

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252
```

```
// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

Notes: The number of components must match.
See also SetFillColor function in DynaPDF manual.
See also:

- 75.39.774 SetFillColor(ColorValue as Color) as Boolean 14097
- 75.39.775 SetFillColor(ColorValue as Integer) as Boolean 14097
- 75.39.777 SetFillColor(values() as single) as boolean 14099

75.39.777 SetFillColor(values() as single) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets fill color based on an array of floats.
Notes: The number of components must match.
See also SetFillColor function in DynaPDF manual.
See also:

- 75.39.774 SetFillColor(ColorValue as Color) as Boolean 14097
- 75.39.775 SetFillColor(ColorValue as Integer) as Boolean 14097
- 75.39.776 SetFillColor(values() as Double) as boolean 14098

75.39.778 SetFillColorEx(colorvalues as memoryblock, count as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the fill color using the values in parameters.
Example:

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS
```

```
// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set blue text color with values in memoryblock
dim m as new MemoryBlock(3)
m.Byte(0) = 0
m.Byte(1) = 0
m.Byte(2) = 255
call pdf.SetFillColorEx m,3

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetFillColorEx function in DynaPDF manual.
See also:

- 75.39.779 SetFillColorEx(ParamArray colorvalue as Integer) as Boolean 14100

75.39.779 SetFillColorEx(ParamArray colorvalue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the fill color using the values in parameters.
Example:

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set red text color
call pdf.SetFillColorEx 255,0,0

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetFillColorEx function in DynaPDF manual.
See also:

- 75.39.778 SetFillColorEx(colorvalues as memoryblock, count as Integer) as Boolean 14099

75.39.780 SetFillColorSpace(Colorspace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the fill color space.
See also SetFillColorSpace function in DynaPDF manual.

75.39.781 SetFloatPrecision(NumTextDecDigits as UInt32, NumVectDecDigits as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the output precision of text and vector coordinates.
Notes:

The default precision for text and vector graphics is two decimal digits. This corresponds to 7200 DPI. The output precision of bezier curves is one higher as for vector graphics. The maximum output precision is 5 decimal digits.
Note that higher values increase the resulting file size.

NumTextDecDigits: Number decimal digits for text object.
NumVectDecDigits: Number of decimal digits for vector objects.

Returns boolean, true for success.
See also SetFloatPrecision function in DynaPDF manual.

75.39.782 SetFont(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CP as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font that can be used for text output and interactive form fields.
Notes:

The name parameter is converted to unicode.

If font is not found by name, please check SetFontSelMode function.
See also SetFont function in DynaPDF manual.

75.39.783 SetFontAnsi(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CP as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font that can be used for text output and interactive form fields.
Example:

```
dim pdf as DynaPDFMBS // your PDF object
call pdf.SetFontAnsi("Helvetica", pdf.kfsNone, 10.0, true, pdf.kcp1252)
```

Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The name parameter is converted to ANSI.

If font is not found by name, please check SetFontSelMode function.
See also SetFont function in DynaPDF manual.

75.39.784 SetFontEx(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CP as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font that can be used for text output and interactive form fields.
Notes:

The name parameter is converted to unicode.

If font is not found by name, please check SetFontSelMode function.
See also SetFontEx function in DynaPDF manual.

75.39.785 SetFontExAnsi(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CP as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function loads a font that can be used for text output and interactive form fields.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The name parameter is converted to ANSI.

If font is not found by name, please check SetFontSelMode function.
See also SetFontEx function in DynaPDF manual.

75.39.786 SetFontOrigin(Origin as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the current font origin that is used to position text strings.
See also SetFontOrigin function in DynaPDF manual.

75.39.787 SetFontSearchOrder(Order() as Integer)

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font search order.
Notes:

The values in the array use this constants:

kfbtTrueType	TrueType, TrueType Collections, or OpenType fonts with TrueType outlines
kfbtType1	Type1 font
kfbtOpenType	OpenType font with Postscript outlines
kfbtStdFont	PDF Standard font
kfbtDisabled	This value can be used to disable a specific font format.

The array has 4 values.
See also SetFontSearchOrder function in DynaPDF manual.

75.39.788 SetFontSearchOrderEx(Order1 as Integer, Order2 as Integer, Order3 as Integer, Order4 as Integer)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the font search order in the same way as SetFontSearchOrder() but it does not use an array to set the search order to improve compatibility to programming languages with limited array support.
Notes: use the font base constants.
See also SetFontSearchOrderEx function in DynaPDF manual.

75.39.789 SetFontSelMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the font selection mode.
See also SetFontSelMode function in DynaPDF manual.

75.39.790 SetFontWeight(Weight as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font weight specifies the thickness or boldness of a font.
See also SetFontWeight function in DynaPDF manual.

75.39.791 SetGStateFlags(Flags as Integer, Reset as boolean)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets optional flags affecting the graphics state and coordinate handling.
See also SetGStateFlags function in DynaPDF manual.

75.39.792 SetIconColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The icon color is used for the closed state of a text annotation.
See also SetIconColor function in DynaPDF manual.

75.39.793 SetImportFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets optional flags to control the import of external PDF files.
See also SetImportFlags function in DynaPDF manual.

75.39.794 SetImportFlags2(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets optional flags to control the import of external PDF files.
See also SetImportFlags2 function in DynaPDF manual.

75.39.795 SetItalicAngle(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property ItalicAngle is used to emulate an italic font if the font is not available in an italic style.
See also SetItalicAngle function in DynaPDF manual.

75.39.796 SetJPEGQuality(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the quality of JPEG compressed images in percent if JPEG compression is used.
See also SetJPEGQuality function in DynaPDF manual.

75.39.797 SetLanguage(ISOTag as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies the language of the document.
See also SetLanguage function in DynaPDF manual.

75.39.798 SetLeading(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the leading that will be used by the functions AddContinueText() and WriteFText() to calculate the distance between two text lines.
Notes: This is for setting the line height.
See also SetLeading function in DynaPDF manual.

75.39.799 SetLicenseKey(Value as string)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Use this function to enter your license key.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
pdf.SetLicenseKey("1234567890") // enter your code here
```

Deprecated: This item is deprecated and should no longer be used. You can use SetLicenseKeyGlobal instead. **Notes:**

If the value represents a correct license key the demo string does not longer appear on PDF pages. Once a correct key was set, it will be active until the library is unloaded or the current PDF object is released. Note that the key must be entered for each PDF object or process of a multi-threading application separately.

The license key must not be stored in the registry or other files in an unencrypted form.

You need to buy a license key from MBS.
The key will unlock the library to not run in demo mode.

Pro license is required for the following functions:

- BeginTransparencyGroup
- ConvertColors
- Create3DAnnot
- CreateSoftMask
- FlattenForm
- GetPageText
- ImportPage and ImportPageEx
- ParseContent
- RenderAnnotOrField
- RenderPage
- SetCMapDir
- SetExtColorSpace, SetExtFillColorSpace and SetExtStrokeColorSpace.
- SetUseGlobalImpFiles

Lite is required for:

- AddRenderingIntent and AddRenderingIntentEx
- CreateFormFields
- CloseFileEx

- ConvertEMFSpool
- CreateCollection
- CreateExtGState
- InsertMetafile and InsertMetafileEx
- OpenImportBuffer, OpenImportFile and OpenImportStream
- SetPDFVersion for PDF/A and PDF/X

And all functions relaying on those functions internally.
See also SetLicenseKey function in DynaPDF manual.

75.39.800 SetLicenseKeyGlobal(Value as string)

MBS DynaPDF Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Use this function to enter your license key.
Notes: This method stores the key for later use. The constructor uses than this key to call SetLicenseKey for any new instance of the DynaPDFMBS class. This way you can register in the app.open event for your whole application.
See also:

- 75.39.801 SetLicenseKeyGlobal(Value as string) 14108

75.39.801 SetLicenseKeyGlobal(Value as string)

MBS DynaPDF Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method to avoid you call this on an object.
Notes:

Please call shared method in app.open.
Because if you make a new object and set key, it's too late.
See also:

- 75.39.800 SetLicenseKeyGlobal(Value as string) 14108

75.39.802 SetLineAnnotParms(Handle as UInt32, FontHandle as Integer, FontSize as Double, Params as DynaPDFLineAnnotParameterMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the properties of a line annotation relating to measure lines.
Notes:

The parameter Parms can be set to nil to delete all measure line specific values. The parameters FontHandle and FontSize will be ignored in this case.
The member Caption specifies whether the parameter Content of the function LineAnnot should be used as caption of the measure line. Although a measure line can display the string in a PopUp annotation like ordinary line annotations, this is not recommended and not fully supported in Adobe's Acrobat or Reader.
If Caption is true (recommended), the caption is drawn horizontally centered either on top or inside the measure line. The text position can be changed from its normal position with the members CaptionOffsetX and CaptionOffsetY.
The parameter FontHandle can be used to specify an arbitrary font that should be used to draw the caption. Although it is possible to use any font or font size greater 0 with DynaPDF, a PDF viewer will change the font and font size to it's default values when the annotation will be edited since line annotations support no property to specify the font or font size.
Function Reference

The default font to draw the caption is Helvetica and the default font size is 9 units. In order to use the default font set the parameter FontHandle to -1. The default font size is used if the parameter FontSize is set to to zero.

Returns true on success or false on failure.
See also SetLineAnnotParms function in DynaPDF manual.

75.39.803 SetLineCapStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the line cap style that specifies how the endpoint of a line will be drawn.
See also SetLineCapStyle function in DynaPDF manual.

75.39.804 SetLineDashPattern(Dash as string, Phase as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The line dash pattern controls the pattern of dashes and gaps used to stroke paths.

75.39.805 SetLineDashPattern2(dash() as double, Phase as double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a line dash pattern with a given array.

Notes:

Returns true on success.
If array is nil, the pattern is removed.
See also SetLineDashPattern2 function in DynaPDF manual.

75.39.806 SetLineDashPatternEx(dash as memoryblock, NumValues as Integer, Phase as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets a line dash pattern in the same way as SetLineDashPattern().
Deprecated: This item is deprecated and should no longer be used. You can use SetLineDashPattern2 instead. **Notes:**

dash is a memoryblock with doubles.
So dash.size=NumValues*8.
See also:

- 75.39.807 SetLineDashPatternEx(dash() as double, Phase as integer) as Boolean 14110

75.39.807 SetLineDashPatternEx(dash() as double, Phase as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a line dash pattern with a given array.
Deprecated: This item is deprecated and should no longer be used. You can use SetLineDashPattern2 instead. **Notes:**

However, this version accepts an array of doubles instead of a string value.
Returns true on success.
See SetLineDashPattern for more details.

If array is nil, the pattern is removed.
See also:

- 75.39.806 SetLineDashPatternEx(dash as memoryblock, NumValues as Integer, Phase as Integer) as Boolean 14110

75.39.808 SetLineJoinStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the line join style which specifies how two line segments are connected.
See also SetLineJoinStyle function in DynaPDF manual.

75.39.809 SetLineWidth(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the line width used to stroke paths.
See also SetLineWidth function in DynaPDF manual.

75.39.810 SetLinkHighlightMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the highlight mode that is used by link annotations.
See also SetLinkHighlightMode function in DynaPDF manual.

75.39.811 SetListFont(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function marks an arbitrary font as list font.
See also SetListFont function in DynaPDF manual.

75.39.812 SetMatrix(Matrix as DynaPDFMatrixMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function left multiplies the current transformation matrix with the new one.
See also SetMatrix function in DynaPDF manual.

75.39.813 SetMaxErrLogMsgCount(value as Integer)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the maximum number of error log messages kept in memory.
See also SetMaxErrLogMsgCount function in DynaPDF manual.

75.39.814 SetMaxFieldLen(TxtField as Integer, MaxLen as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the maximum count of characters which can be entered into a text field.
Notes:

A value of zero determines that the string length should not be restricted.

See also SetMaxFieldLen function in DynaPDF manual.

75.39.815 SetMetaConvFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets specific flags to control the conversion of metafiles.
See also SetMetaConvFlags function in DynaPDF manual.

75.39.816 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as Memoryblock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or replaces the XMP metadata stream of a specific object.
Notes:

The function deletes the XMP stream if empty buffer will be provided.

If the global XMP stream of the Catalog object should be replaced then proceed as follows:

- Set the wished output PDF version with SetPDFVersion.
- Get a preview of the XMP stream with GetMetadata.
- Modify the returned stream as needed and save it with SetMetadata, finished!

The above steps make sure that the XMP metadata and document info contain the same values. This is especially important for PDF standards like PDF/A or PDF/X. DynaPDF makes sure that the creation and modification date will not be changed when closing the file.

Returns true on success and false on failure.
See also SetMetadata function in DynaPDF manual.
See also:

- 75.39.817 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as String) as Boolean 14113

75.39.817 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or replaces the XMP metadata stream of a specific object.
Notes:

The function deletes the XMP stream if empty buffer will be provided.

If the global XMP stream of the Catalog object should be replaced then proceed as follows:

- Set the wished output PDF version with SetPDFVersion.
- Get a preview of the XMP stream with GetMetadata.
- Modify the returned stream as needed and save it with SetMetadata, finished!

The above steps make sure that the XMP metadata and document info contain the same values. This is especially important for PDF standards like PDF/A or PDF/X. DynaPDF makes sure that the creation and modification date will not be changed when closing the file.

Returns true on success and false on failure.
See also SetMetadata function in DynaPDF manual.
See also:

- 75.39.816 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as Memoryblock) as Boolean 14112

75.39.818 SetMiterLimit(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the miter limit.
See also SetMiterLimit function in DynaPDF manual.

75.39.819 SetNeedAppearance(value as boolean)

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the appearance flag.
See also SetNeedAppearance function in DynaPDF manual.

75.39.820 SetNumberFormat(TxtField as Integer, Sep as Integer, DecPlaces as Integer, NegStyle as Integer, CurrStr as string, Prepend as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function restricts the allowed input characters of a text field to numbers and formats the resulting string as specified.
See also SetNumberFormat function in DynaPDF manual.

75.39.821 SetOCGContUsage(Handle as UInt32, Value as DynaPDFOCGContUsageMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates or changes the Content Usage dictionary of an OCG.
Notes:

See dynapdf_help.pdf manual for details.
If the function succeeds the return value is true. If the function fails the return value is false.
See also SetOCGContUsage function in DynaPDF manual.

75.39.822 SetOCGState(Handle as UInt32, On as Boolean, SaveState as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the visibility state of an OCG or layer.
Notes:

If the parameter SaveState is true, the new state is also saved in the PDF file. Otherwise, the state is only changed temporarily so that the whished state can be rendered with RenderPage or RenderPageToImage for example.
Note that only the new state of the current OCG will be be saved. If the state of other OCGs were changed beforehand, while SaveState was set to false, then these changes will not be considered.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetOCGState function in DynaPDF manual.

75.39.823 SetOpacity(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the opacity value which is used to render the appearance of a text annotation.
See also SetOpacity function in DynaPDF manual.

75.39.824 SetOrientation(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the orientation of a page.
See also SetOrientation function in DynaPDF manual.

75.39.825 SetOrientationEx(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the orientation of a page, incl. important page properties such as the width and height, and the coordinate system.
See also SetOrientationEx function in DynaPDF manual.

75.39.826 SetPageCoords(PageCoords as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native coordinate system of the Portable Document Format is bottom up.
Notes: Value can be kpcTopDown or kpcBottomUp. Default is kpcBottomUp.
See also SetPageCoords function in DynaPDF manual.

75.39.827 SetPageFormat(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets a predefined page or paper format.
Notes:

Common paper formats and sizes in points:

See also SetPageFormat function in DynaPDF manual.

Format	Size in units (Width x Height)
DIN A3	842.0 x 1191.0
DIN A4	595.0 x 842.0
DIN A5	419.0 x 595.0
DIN B4	709.0 x 1001.0
DIN B5	499.0 x 709.0
DIN B6	354.0 x 499.0
DIN C3	918.0 x 1298.0
DIN C4	649.0 x 918.0
DIN C5	459.0 x 649.0
DIN C6	323.0 x 459.0
DIN C65	323.0 x 649.0
DIN DL	312.0 x 624.0
DIN E4	623.0 x 879.0
DIN E5	439.0 x 624.0
DIN E6	312.0 x 439.0
DIN E65	312.0 x 624.0
DIN M5	439.0 x 632.0
DIN M65	317.0 x 632.0
US Legal	612.0 x 1008.0
US Letter	612.0 x 792.0

75.39.828 SetPageHeight(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the height of the currently open page if any, or the default height for newly created pages.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim dWidth as Double = 800 // new width
dim dHeight as Double = 600 // new heihht

// define page size
bBool=pdf.SetPageWidth(dWidth)
bBool=pdf.SetPageHeight(dHeight)
```

Notes:

Common paper formats and sizes in points:

Format	Size in units (Width x Height)
DIN A3	842.0 x 1191.0
DIN A4	595.0 x 842.0
DIN A5	419.0 x 595.0
DIN B4	709.0 x 1001.0
DIN B5	499.0 x 709.0
DIN B6	354.0 x 499.0
DIN C3	918.0 x 1298.0
DIN C4	649.0 x 918.0
DIN C5	459.0 x 649.0
DIN C6	323.0 x 459.0
DIN C65	323.0 x 649.0
DIN DL	312.0 x 624.0
DIN E4	623.0 x 879.0
DIN E5	439.0 x 624.0
DIN E6	312.0 x 439.0
DIN E65	312.0 x 624.0
DIN M5	439.0 x 632.0
DIN M65	317.0 x 632.0
US Legal	612.0 x 1008.0
US Letter	612.0 x 792.0

See also SetPageHeight function in DynaPDF manual.

75.39.829 SetPageLayout(Layout as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the page layout that is used when opening the document with Adobe's Acrobat.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// define page view
'plSinglePage = 0, // Show one page at time
'plOneColumn = 1, // Show the pages continous
'plTwoColumnLeft = 2, // Two columns, start with left column
'plTwoColumnRight = 3 // Two columns, start with right column
bBool=pdf.SetPageLayout(0)
```

See also SetPageLayout function in DynaPDF manual.

75.39.830 SetPageMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the page mode that is used when opening the document with Adobe's Acrobat.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// define page mode
'pmUseNone = 0, // Default
'pmUseOutlines = 1, // Show the outline tree
'pmUseThumbs = 2, // Show the thumb nails
'pmFullScreen = 3 // Open the document in full-screen mode
bBool=pdf.SetPageMode(0)
```

See also SetPageMode function in DynaPDF manual.

75.39.831 SetPageWidth(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the width of the currently open page if any, or the default width for newly created pages.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim dWidth as Double = 800 // new width
dim dHeight as Double = 600 // new heihht

// define page size
bBool=pdf.SetPageWidth(dWidth)
bBool=pdf.SetPageHeight(dHeight)
```

Notes:

Common paper formats and sizes in points:

Format	Size in units (Width x Height)
DIN A3	842.0 x 1191.0
DIN A4	595.0 x 842.0
DIN A5	419.0 x 595.0
DIN B4	709.0 x 1001.0
DIN B5	499.0 x 709.0
DIN B6	354.0 x 499.0
DIN C3	918.0 x 1298.0
DIN C4	649.0 x 918.0
DIN C5	459.0 x 649.0
DIN C6	323.0 x 459.0
DIN C65	323.0 x 649.0
DIN DL	312.0 x 624.0
DIN E4	623.0 x 879.0
DIN E5	439.0 x 624.0
DIN E6	312.0 x 439.0
DIN E65	312.0 x 624.0
DIN M5	439.0 x 632.0
DIN M65	317.0 x 632.0
US Legal	612.0 x 1008.0
US Letter	612.0 x 792.0

See also SetPageWidth function in DynaPDF manual.

75.39.832 SetPDFVersion(Version as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the output PDF file version.
Example:

```
const pvPDF_1_3=3

dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// ask to create a pdf in version 1.3
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvPDFA_2005)
```

Notes: Requires DynaPDF Lite license for PDF/A and PDF/X versions.
See also SetPDFVersion function in DynaPDF manual.

75.39.833 SetPrintSettings(Mode as Integer, PickTrayByPDFSize as Integer, NumCopies as Integer, PrintScaling as Integer, PrintRanges() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the print settings.
Notes:

This is a PDF 1.7 extension.

For the Mode use the kdpm* constants.
For the PrintScaling use the kps* constants.
See also SetPrintSettings function in DynaPDF manual.

75.39.834 SetResolution(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the resolution in DPI (Dots per Inch), in which images are stored by DynaPDF.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// set maximum resolution
bBool = pdf.SetResolution(150)
```

See also SetResolution function in DynaPDF manual.

75.39.835 SetSaveNewImageFormat(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property SaveNewImageFormat specifies whether images should be downscaled if the original resolution of the image is higher than the value of the property resolution (see also SetResolution()).
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
```

```
dim bBool as Boolean

// whether you want image to be recompressed
bBool=pdf.SetSaveNewImageFormat(False)
```

See also SetSaveNewImageFormat function in DynaPDF manual.

75.39.836 SetSeparationInfo(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the separation info of the current open page.
See also SetSeparationInfo function in DynaPDF manual.

75.39.837 SetStrokeColor(ColorValue as color) as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the color used for stroked graphics objects.
Notes: Raises an exception if current color space is CMYK or Gray and not RGB.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 75.39.838 SetStrokeColor(ColorValue as Integer) as Boolean 14121
- 75.39.839 SetStrokeColor(values() as Double) as boolean 14122
- 75.39.840 SetStrokeColor(values() as single) as boolean 14122

75.39.838 SetStrokeColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the color used for stroked graphics objects.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 75.39.837 SetStrokeColor(ColorValue as color) as Boolean 14121
- 75.39.839 SetStrokeColor(values() as Double) as boolean 14122
- 75.39.840 SetStrokeColor(values() as single) as boolean 14122

75.39.839 SetStrokeColor(values() as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets stroke color based on an array of floats.
Notes: The number of components must match.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 75.39.837 SetStrokeColor(ColorValue as color) as Boolean 14121
- 75.39.838 SetStrokeColor(ColorValue as Integer) as Boolean 14121
- 75.39.840 SetStrokeColor(values() as single) as boolean 14122

75.39.840 SetStrokeColor(values() as single) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets stroke color based on an array of floats.
Notes: The number of components must match.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 75.39.837 SetStrokeColor(ColorValue as color) as Boolean 14121
- 75.39.838 SetStrokeColor(ColorValue as Integer) as Boolean 14121
- 75.39.839 SetStrokeColor(values() as Double) as boolean 14122

75.39.841 SetStrokeColorEx(colorvalues as memoryblock, count as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the stroke color using the values in parameters.
Example:

```
dim p as DynaPDFMBS // get a pdf object

dim colorvalues as memoryblock

colorvalues=NewMemoryBlock(3)
colorvalues.Byte(0)=255
colorvalues.Byte(1)=128
colorvalues.Byte(2)=0

if p.SetStrokeColorEx(colorvalues, 3) then
```

```
' ok
else
' failed
end if
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetStrokeColorEx function in DynaPDF manual.
See also:

- 75.39.842 SetStrokeColorEx(ParamArray colorvalue as Integer) as Boolean 14123

75.39.842 SetStrokeColorEx(ParamArray colorvalue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the stroke color using the values in parameters.
Example:

```
dim p as DynaPDFMBS // get a pdf object

if p.SetStrokeColorEx(255,128,0) then
' ok
else
' failed
end if
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetStrokeColorEx function in DynaPDF manual.
See also:

- 75.39.841 SetStrokeColorEx(colorvalues as memoryblock, count as Integer) as Boolean 14122

75.39.843 SetStrokeColorSpace(Colorspace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the stroke color space. In PDF, fill and stroke colors use both their own color spaces.
See also SetStrokeColorSpace function in DynaPDF manual.

75.39.844 SetTabLen(TabLen as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the tabulator length, specified in number of spaces, which will be used to emulate tabulators during text formatting (see WriteFText() for further information).
See also SetTabLen function in DynaPDF manual.

75.39.845 SetTextDrawMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text draw mode specifies how text should be rendered.
See also SetTextDrawMode function in DynaPDF manual.

75.39.846 SetTextFieldValue(Field as Integer, Value as string, DefValue as string, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the value and default value of a text field.
Notes: The Value and the DefValue strings are converted to unicode.
See also SetTextFieldValue function in DynaPDF manual.

75.39.847 SetTextFieldValueAnsi(Field as Integer, Value as string, DefValue as string, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets or changes the value and default value of a text field.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Value and the DefValue strings are converted to ANSI.
See also SetTextFieldValue function in DynaPDF manual.

75.39.848 SetTextFieldValueAnsiEx(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text field value.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead.

75.39.849 SetTextFieldValueEx(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text field value.
See also SetTextFieldValueEx function in DynaPDF manual.

75.39.850 SetTextRect(PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function defines the output rectangle that is used to output formatted text by the function WriteFText().
See also SetTextRect function in DynaPDF manual.

75.39.851 SetTextRise(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rise specifies the distance, to move the baseline up or down from its default location.
See also SetTextRise function in DynaPDF manual.

75.39.852 SetTextScaling(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scaling value adjusts the width of glyphs by stretching or compressing them in the horizontal direction.
See also SetTextScaling function in DynaPDF manual.

75.39.853 SetTransparentColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the transparent color which is used for newly inserted images.
Example:

```
dim pdf as DynaPDFMBS

call pdf.SetTransparentColor pdf.kNO_COLOR
```

See also SetTransparentColor function in DynaPDF manual.

75.39.854 SetTrapped(value as boolean)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the trapped key of the document.
See also SetTrapped function in DynaPDF manual.

75.39.855 SetUseExactPwd(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the property UseExactPwd is false, an encrypted PDF file can always be decrypted, if either the open or owner password in the file is an empty string.
See also SetUseExactPwd function in DynaPDF manual.

75.39.856 SetUseGlobalImpFiles(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property can be used to load an external PDF file permanent into memory, e.g. to split a large PDF file into smaller pieces.
Notes: Requires DynaPDF Pro license.
See also SetUseGlobalImpFiles function in DynaPDF manual.

75.39.857 SetUseImageInterpolation(Index as Integer, Value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables or disables image interpolation explictely for a given image.
Notes:

If nothing was specified (this is the default), a viewer applications can only use a heuristic to determine whether image interpolation should be enabled or not. The result is then of course application specific.
The parameter Handle must be a valid image handle that was returned by a DynaPDF function like InsertImage(), InsertImageEx(), or InsertImageFromBuffer(), for example.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetUseImageInterpolation function in DynaPDF manual.

75.39.858 SetUserUnit(value as single) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the user unit of the current open page.
Notes:

A user unit acts like a scaling factor. The page format and all page coordinates are multiplied with this factor in a viewer application. The default size of a PDF unit is 1/72 inch. User units can be useful if the page format would be too large to be expressed in standard PDF units. The largest page format in PDF is limited to 14400 units or 200 inches. This limit can be extended with the user unit.
The largest value that is supported is 75.0 which results in a maximum page format of 15,000 x 15,000 inches or 1,800,000 units. Note that all functions which return page coordinates or page properties do not consider the user unit.
The page format must still be in the range 3..14400 units. It is also strongly recommended to set the user unit only if necessary. This is only the case if the required page format is larger 14400 units.
Default value = 1.0

Return values:
If the function succeeds the return value is true. If the function fails the return value is false.
See also SetUserUnit function in DynaPDF manual.

75.39.859 SetUseStdFonts(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function can be used to disable the 14 standard fonts temporarily.
See also SetUseStdFonts function in DynaPDF manual.

75.39.860 SetUseSwapFile(SwapContents as Boolean, SwapLimit as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: When creating large PDF files with many or large images it is sometimes recommended to page out large objects to a temp file to restrict the memory usage.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
```

```
// define a swap file in case memory is low
dim b as Boolean=pdf.SetUseSwapFile(False, 256*1024*1024)
if b=False then
MsgBox "Failed to create swap file."
Return
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

Do not use FlushPages and SetUseSwapFile together. Use one function.

75.39.861 SetUseSwapFileEx(SwapContents as Boolean, SwapLimit as Integer, SwapDir as FolderItem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function enables paging out of large objects to restrict the memory usage in the same way as SetUseSwapFile().
Deprecated: This item is deprecated and should no longer be used.

75.39.862 SetUseSystemFonts(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether the Windows/Fonts directory should be added automatically to the list of available font search paths.
See also SetUseSystemFonts function in DynaPDF manual.

75.39.863 SetUseTransparency(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether images should get a transparent background.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// allow transparency for images
bBool=pdf.SetUseTransparency(False)
```

See also SetUseTransparency function in DynaPDF manual.

75.39.864 SetUseVisibleCoords(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The property specifies whether DynaPDF should consider the crop box to calculate to position of an object.
See also SetUseVisibleCoords function in DynaPDF manual.

75.39.865 SetViewerPreferences(Value as Integer, AddVal as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the viewer preferences which can be used to control a few parameter of Adobe's Acrobat, such as hide the toolbar or men bar.
See also SetViewerPreferences function in DynaPDF manual.

75.39.866 SetWhite(FillColor as Boolean, StrokeColor as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets white color.
Notes:

This function is a bit optimized to check the current color space.
Depending on whether it's RGB, Gray, CMYK or Lab, it will set different color values.
And if other color space is active, it switches to Gray colorspace to set white.

75.39.867 SetWMFDefExtent(Width as Integer, Height as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the default size which is used to convert non-portable WMF files to EMF. See InsertMetafile() for further information.
See also SetWMFDefExtent function in DynaPDF manual.

75.39.868 SetWMFPixelPerInch(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the default pixels per inch of the y-axis which are used to convert portable WMF files to EMF.
See also SetWMFPixelPerInch function in DynaPDF manual.

75.39.869 SetWordSpacing(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the word spacing.
See also SetWordSpacing function in DynaPDF manual.

75.39.870 SetXFAStream(Index as UInt32, Buffer as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function replaces the contents of an XFA stream with new contents.
Notes:

Index must be a valid XFA resource index. XFA streams can be enumerated with GetXFAStream() / GetXFAStreamCount().
The function does not check whether the provided XFA buffer is valid. The buffer is written to the stream as is.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetXFAStream function in DynaPDF manual.

75.39.871 ShowDifferences(PageIndex1 as Integer, OtherPDF as DynaPDFMBS, PageIndex2 as Integer, CheckMoving as boolean, HighlightColor as UInt32 = & hFFFF, ScaleFactor as Integer = 1, ColorTolerance as Integer = 3, debug as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows differences on two PDF pages by adding highlight annotations.
Notes:

Please pass page indexes for both pages. OtherPDF can be same as the current instance you call this method on.

CheckMoving: Whether to check for moving parts, e.g. the big part of the page shifted up one line.

Returns number of annotations on success which means that highlight annotations have been added to both pages.
Or returns negative value in case of error.
You can than render a page to show differences to user.
Requires a DynaPDF Pro license. Without a license, the DynaPDF watermark will reduce the accuracy.

Scale: When comparison, scales up the pictures used for comparison. Default is 1 for 72dpi, but you can use 2 for double.
ColorTolerance: The tolerance for color comparison.
Colors where red, green or blue components are within given tolerance are considered equal. So FFFFFF and FFFFFD are equal.
Default is 3.

Debug Parameter: Whether to write debug images to temp folder.
If true, we write png files to temp folder. One image is before the check, one with all similar lines removed and one with result of comparison. Red pixels show you the raster, green equal pixels.

75.39.872 SkewCoords(alpha as Double, beta as Double, OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function skews the coordinate system and sets the coordinate origin to the point OriginX, OriginY.
Notes: Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also SkewCoords function in DynaPDF manual.

75.39.873 SortFieldsByIndex as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sorts the interactive form fields of a page by comparing the internal indices which can be set for each field separately (see SetFieldIndex() for further information).
See also SortFieldsByIndex function in DynaPDF manual.

75.39.874 SortFieldsByName as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sorts the interactive form fields of a page in ascending order by field name.
See also SortFieldsByName function in DynaPDF manual.

75.39.875 SquareAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a square annotation on the current open page.
Notes:

If the parameters Width and Height are equal the function draws a square, a rectangle otherwise. If the annotation should bedrawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also SquareAnnot function in DynaPDF manual.

75.39.876 SquareAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a square annotation on the current open page.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

If the parameters Width and Height are equal the function draws a square, a rectangle otherwise. If the annotation should bedrawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the

function fails, the return value is a negative error code.
See also SquareAnnot function in DynaPDF manual.

75.39.877 StampAnnot(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stamp annotation.
See also StampAnnot function in DynaPDF manual.

75.39.878 StampAnnotAnsi(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stamp annotation with ANSI encoded texts.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also StampAnnot function in DynaPDF manual.

75.39.879 StrokePath as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function strokes the current path without closing it.
See also StrokePath function in DynaPDF manual.

75.39.880 TestGlyphs(FontHandle as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether all glyphs of the text are available in the specified font.
Example:

```
// create dummy PDF with one page
dim d as new myDynaPDFMBS

call d.CreateNewPDF
call d.Append
```

```
// check this text
dim x as string = "" // Hello in Chinese

// load 2 fonts to check
dim FontHandle1 as Integer = d.SetFont("Times", 12)
dim FontHandle2 as Integer = d.SetFont("Arial Unicode MS", 12)

dim r1 as Integer = d.TestGlyphs(FontHandle1, x)

if r1 = -1 then
MsgBox "Times supports chinese characters"
else
MsgBox "Times does not support chinese characters"
end if

dim r2 as Integer = d.TestGlyphs(FontHandle2, x)

if r2 = -1 then
MsgBox "Arial Unicode MS supports chinese characters"
else
MsgBox "Arial Unicode MS does not support chinese characters"
end if
```

Notes:

The return value is the position of the first missing glyph, or -1 if all glyphs are available.
If the font uses a mixed 8/16 bit CJK code page that requires a conversion to Unicode (a code page that ends with "_Uni"), then the return value corresponds to the converted Unicode string and not to the CJK input string.
See also TestGlyphs function in DynaPDF manual.

75.39.881 TestGlyphsAnsi(FontHandle as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function checks whether all glyphs of the text are available in the specified font.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The return value is the position of the first missing glyph, or -1 if all glyphs are available.
If the font uses a mixed 8/16 bit CJK code page that requires a conversion to Unicode (a code page that ends with "_Uni"), then the return value corresponds to the converted Unicode string and not to the CJK input string.
The text parameter is converted to ANSI.

See also TestGlyphs function in DynaPDF manual.

75.39.882 TextAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Icon as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a text annotation.
Notes: The text and the author parameters are converted to unicode.
See also TextAnnot function in DynaPDF manual.

75.39.883 TextAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Icon as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function creates a text annotation.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text and the author parameters are converted to ANSI.
See also TextAnnot function in DynaPDF manual.

75.39.884 TranslateCoords(OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function translates the coordinate system to the new origin OriginX, OriginY.
See also TranslateCoords function in DynaPDF manual.

75.39.885 TranslateRawCode(IFont as Integer, text as string, byref Width as Double, byref Decoded as boolean, CharSpacing as Double, WordSpacing as Double, TextScale as Double) as string

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates a raw code.
Notes: Deprecated. Please use other variant with more parameters.
See also:

- 75.39.886 TranslateRawCode(IFont as integer, text as string, textOffset as Integer, byref Width as double, byref Decoded as boolean, CharSpacing as double, WordSpacing as double, TextScale as double, byref count as integer) as string 14136

75.39.886 TranslateRawCode(IFont as integer, text as string, textOffset as Integer, byref Width as double, byref Decoded as boolean, CharSpacing as double, WordSpacing as double, TextScale as double, byref count as integer) as string

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function converts a source character to Unicode.
Notes:

The code length of a character depends on the font's encoding. PDF supports encodings with fixed and variable code lengths from one through four bytes per character. The Count parameter provides the number of bytes which were consumed to convert the character to Unicode; this value must be used to increment the textOffset parameter for further calls.
The resulting Unicode character or sequence is returned in function result. The width parameter is used to return the character width.
The parameter Decoded is set to true if the source character could be sucsessfully converted to Unicode. If Decode is false the output string and character width contain no meaningful values.
The function can only fail when processing strings of CID fonts, e.g. if the font depends on an external CMap that could not be loaded, or if the font uses a damaged CMap. The search path(s) to external CMaps should always be set before extracting text from PDF files with SetCMapDir().
Passing an invalid or undefined code sequence to the function does not result in an error. In this case the notdef character is added to the output string (this is usually 0 or 0xFFFD if the font contains a ToUnicode CMap).
Notice:
To improve processing speed the function does not check whether the parameters are valid.
Remarks:
This function was designed to convert raw strings on a per character basis to Unicode which were returned by ParseContent() or GetPageText(). The parameters CharSpacing, WordSpacing, and TextScale must be taken from the current graphics state or from the structure DynaPDFStackMBS.
Return values:
The count value of this function is always greater or equal to one. Check the parameter Decoded to determine whether the function succeed.
See also:

- 75.39.885 TranslateRawCode(IFont as Integer, text as string, byref Width as Double, byref Decoded as boolean, CharSpacing as Double, WordSpacing as Double, TextScale as Double) as string 14135

75.39.887 TranslateString(IFont as Integer, text as string, flags as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates a string.
See also:

- 75.39.888 TranslateString(stack as DynaPDFStackMBS, flags as Integer) as string 14137

75.39.888 TranslateString(stack as DynaPDFStackMBS, flags as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function translates a binary string returned by GetPageText() to Unicode.
See also:

- 75.39.887 TranslateString(IFont as Integer, text as string, flags as Integer) as string 14136

75.39.889 Triangle(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function draws a triangle.
See also Triangle function in DynaPDF manual.

75.39.890 UnLockLayer(layer as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Locks a layer.
See also UnLockLayer function in DynaPDF manual.

75.39.891 WatermarkAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a Watermark annotation.
Example:

```
// create watermark annotation
Dim AnnotHandle As Integer = pdf.WatermarkAnnot(100, 100, 300, 200)

// it's empty initially
```

```
// so we create an annotation appearance stream
Dim x As Integer = pdf.CreateAnnotAP(AnnotHandle)

// set a color and draw rectangle
Call pdf.SetFillColor(& cFF7777)
Call pdf.Rectangle 0, 0, 300, 200, pdf.kfmFill

Call pdf.SetStrokeColor(& c000000)
Call pdf.SetFillColor(& c000000)
Call pdf.SetFont("Helvetica", pdf.kfsBold, 30)
Call pdf.WriteText(20, 20, "Hello World")

// close template
Call pdf.EndTemplate
```

Notes:

Watermark annotations have no interactive elements like other annotation types. This property is useful in many cases because it is usually not possible to select or change the contents of a watermark annotation in viewer applications.
The annotation has no appearance after it was created. Call CreateAnnotAP to create an appearance template for the annotation. After the appearance template was created you can draw text, images or vector graphics into it. The template must be closed with EndTemplate when finished. It is also possible to import an external page or EMF contents into the template.
Watermark annotations can be shared on multiple pages. To place the annotation on other pages call AddAnnotToPage.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also WatermarkAnnot function in DynaPDF manual.

75.39.892 WebLink(PosX as Double, PosY as Double, Width as Double, Height as Double, aText as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a web link onto the current open page.
Notes: The text parameter is converted to unicode.
See also WebLink function in DynaPDF manual.

75.39.893 WebLinkAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, aText as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a web link onto the current open page.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also WebLink function in DynaPDF manual.

75.39.894 WeightFromStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a style value to a weight value.

75.39.895 WeightToStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a weight value to a style value.

75.39.896 WidthFromStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a style constant to the width value.

75.39.897 WidthToStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a width value to a style value.

75.39.898 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Notes: The text parameter is converted to unicode.
See also WriteAngleText function in DynaPDF manual.
See also:

- 75.39.899 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 14140

75.39.899 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Notes:

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

See also WriteAngleText function in DynaPDF manual.
See also:

- 75.39.898 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 14139

75.39.900 WriteAngleTextAnsi(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI, so use only with SetFont with kcp1252.
See also WriteAngleText function in DynaPDF manual.
See also:

- 75.39.898 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 14139

- 75.39.899 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 14140

75.39.901 WriteAngleTextDirect(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Notes: The text parameter is not converted, so pass a string in the right encoding.
See also:

- 75.39.902 WriteAngleTextDirect(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 14141

75.39.902 WriteAngleTextDirect(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a string in a user defined angle around a radius.
Notes:

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

See also:

- 75.39.901 WriteAngleTextDirect(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 14141

75.39.903 WriteFText(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes:

The text parameter is converted to unicode.

The PageBreak event is called when needed by the plugin.
See also WriteFText function in DynaPDF manual.
See also:

- 75.39.904 WriteFText(Align as Integer, glyphs() as Integer) as Boolean 14142

75.39.904 WriteFText(Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes:

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

The PageBreak event is called when needed by the plugin.
See also WriteFText function in DynaPDF manual.
See also:

- 75.39.903 WriteFText(Align as Integer, aText as string) as Boolean 14141

75.39.905 WriteFTextAnsi(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The text parameter is converted to ANSI, so use only with SetFont with kcp1252.

The PageBreak event is called when needed by the plugin.
See also WriteFText function in DynaPDF manual.
See also:

- 75.39.903 WriteFText(Align as Integer, aText as string) as Boolean 14141
- 75.39.904 WriteFText(Align as Integer, glyphs() as Integer) as Boolean 14142

75.39.906 WriteFTextDirect(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes:

The text parameter is not converted, so pass a string in the right encoding.

The PageBreak event is called when needed by the plugin.
See also:

- 75.39.907 WriteFTextDirect(Align as Integer, glyphs() as Integer) as Boolean 14143

75.39.907 WriteFTextDirect(Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
Notes:

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

The PageBreak event is called when needed by the plugin.
See also:

- 75.39.906 WriteFTextDirect(Align as Integer, aText as string) as Boolean 14142

75.39.908 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes:

The text parameter is converted to unicode.

The PageBreak event is called when needed by the plugin.
See also WriteFTextEx function in DynaPDF manual.
See also:

- 75.39.909 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean 14143

75.39.909 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes:

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

The PageBreak event is called when needed by the plugin.
See also WriteFTextEx function in DynaPDF manual.
See also:

- 75.39.908 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean 14143

75.39.910 WriteFTextExAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a formatted text exactly in the same way as WriteFText().
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The text parameter is converted to ANSI, so use only with SetFont with kcp1252.

The PageBreak event is called when needed by the plugin.
See also WriteFTextEx function in DynaPDF manual.
See also:

- 75.39.909 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean 14143

75.39.911 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes:

The text parameter is not converted, so pass a string in the right encoding.

The PageBreak event is called when needed by the plugin.
See also:

- 75.39.912 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean 14145

75.39.912 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes:

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

The PageBreak event is called when needed by the plugin.
See also:

- 75.39.911 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean 14144

75.39.913 WriteStyledText(Align as Integer, StyledText as StyledText, LeadingFactor as double = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes styled text.
Notes:

Same as WriteFText, but calls ConvertStyledText for you to convert the styled text to formatting commands.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2
See also:

- 75.39.914 WriteStyledText(Align as Integer, TextArea as TextArea, LeadingFactor as double = -1) as Boolean 14145

75.39.914 WriteStyledText(Align as Integer, TextArea as TextArea, LeadingFactor as double = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Writes styled text from TextArea.
Notes:

Same as WriteFText, but calls ConvertStyledText for you to convert the styled text to formatting commands.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2
See also:

- 75.39.913 WriteStyledText(Align as Integer, StyledText as StyledText, LeadingFactor as double = -1) as Boolean 14145

75.39.915 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, StyledText as StyledText, LeadingFactor as double = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes styled text.
Notes:

Same as WriteFTextEx, but calls ConvertStyledText for you to convert the styled text to formatting commands.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2
See also:

- 75.39.916 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, TextArea as TextArea, LeadingFactor as double = -1) as Boolean 14146

75.39.916 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, TextArea as TextArea, LeadingFactor as double = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Writes styled text from TextArea.
Notes:

Same as WriteFTextEx, but calls ConvertStyledText for you to convert the styled text to formatting commands.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text

to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2
See also:

- 75.39.915 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, StyledText as StyledText, LeadingFactor as double = -1) as Boolean 14146

75.39.917 WriteText(PosX as Double, PosY as Double, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern.
Notes: The text parameter is converted to unicode.
See also WriteText function in DynaPDF manual.
See also:

- 75.39.918 WriteText(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean 14147

75.39.918 WriteText(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern.
Notes:

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

See also WriteText function in DynaPDF manual.
See also:

- 75.39.917 WriteText(PosX as Double, PosY as Double, aText as string) as Boolean 14147

75.39.919 WriteTextAnsi(PosX as Double, PosY as Double, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI, so use only with SetFont with kcp1252.
See also WriteText function in DynaPDF manual.
See also:

- 75.39.917 WriteText(PosX as Double, PosY as Double, aText as string) as Boolean 14147
- 75.39.918 WriteText(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean 14147

75.39.920 WriteTextDirect(PosX as Double, PosY as Double, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern.
Notes: The text parameter is not converted, so pass a string in the right encoding.
See also:

- 75.39.921 WriteTextDirect(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean 14148

75.39.921 WriteTextDirect(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern.
Notes:

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

See also:

- 75.39.920 WriteTextDirect(PosX as Double, PosY as Double, aText as string) as Boolean 14148

75.39.922 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes:

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

See also WriteTextMatrix function in DynaPDF manual.
See also:

- 75.39.923 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean 14149

75.39.923 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes: The text parameter is converted to unicode.
See also WriteTextMatrix function in DynaPDF manual.
See also:

- 75.39.922 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean 14148

75.39.924 WriteTextMatrixAnsi(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Deprecated: This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI, so use only with SetFont with kcp1252.
See also WriteTextMatrix function in DynaPDF manual.
See also:

- 75.39.922 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean 14148
- 75.39.923 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean 14149

75.39.925 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes:

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

See also:

- 75.39.926 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean 14150

75.39.926 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes: The text parameter is not converted, so pass a string in the right encoding.
See also:

- 75.39.925 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean 14149

75.39.927 YofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Y of a CMYK color value.
Example:

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.YofCMYK(cmyk)) // shows 3
```

Notes: Returns different values on BigEndian and LittleEndian systems.

75.39.928 Properties

75.39.929 ActiveFontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries font info for active font.
Notes:

Added, so you can see it in debugger.
(Read only property)

75.39.930 ClearRectMode as Integer

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ClearRect Mode for Graphics class.
Example:

```
dim pdf as new DynaPDFMBS
pdf.ClearRectMode = kClearRectModeIgnoreAll
```

Notes:

When graphics class is called with ClearRect method, the area in the PDF page is filled with white color.
If you like to ignore such calls, please set value to ignore all or just big rectangles.
(Read and Write property)

75.39.931 DynaPDFVersion as String

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The DynaPDF version text.
Notes: (Read only property)

75.39.932 ErrorCount as Integer

MBS DynaPDF Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of warnings reported by DynaPDF.
Notes:

Use Error event to track them.
Or catch exceptions.
(Read only property)

75.39.933 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The IPDF handle passed to each API function.
Notes:

The constructor fills this handle and the destructor frees it.
(Read only property)

75.39.934 HasLite as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a lite or pro license is in use.
Notes:

Relevant for some example projects and graphics class support to know whether CreateExtGState is available.
(Read only property)

75.39.935 HasPro as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a pro license is in use.
Notes:

Relevant for some example projects and graphics class support to know whether Render Engine is available.
(Read only property)

75.39.936 ImportFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set import flags.
Notes:

Same as using GetImportFlags and SetImportFlags.
(Read and Write property)

75.39.937 ImportFlags2 as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set import flags 2.
Notes:

Same as using GetImportFlags2 and SetImportFlags2.
(Read and Write property)

75.39.938 JasperVersion as String

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version of Jasper library.
Example:

MsgBox DynaPDFMBS.JasperVersion

Deprecated: This item is deprecated and should no longer be used. **Notes:**

DynaPDF uses customized version of Jasper library, so this may not be the latest public version.
But it's patched to fix a couple of issues seen in PDF context.
(Read only property)

75.39.939 PageCoords as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page coordinate system setting.
Notes:

The native coordinate system of the Portable Document Format is bottom up.
Also check the dynapdf manual on the pdfGetPageCoords and pdfSetPageCoords functions.
Value can be kpcTopDown or kpcBottomUp. Default is kpcBottomUp.
(Read and Write property)

75.39.940 PageGraphics as Graphics

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page graphics object.
Example:

```
Dim pdf As New DynapdfMBS
// please subclass DynapdfMBS to implement error event

Dim f As FolderItem = SpecialFolder.Desktop.Child("DynaPDF Graphics.pdf")

'pdf.SetLicenseKey "Starter"
// For this example you can use a Starter, Lite, Pro or Enterprise License

// Create new PDF. Use f = nil for in-memory PDF
Call pdf.CreateNewPDF(f)

// append a new page, so we have an open page
Call pdf.Append

// get graphics object to draw on the page
Dim g As Graphics = pdf.PageGraphics
```

```
// draw as usual
g.DrawString "Hello World", 105, 100
g.DrawRect 100, 80, 100, 100

// close page and file
Call pdf.EndPage
Call pdf.CloseFile

// for in-memory PDF, use GetBuffer here to grab it.
'Dim PDFData As String = pdf.GetBuffer
```

Notes:

We create a temporary picture and subclass the graphics to reproduce all drawing commands called on this graphics object to the current PDF Page.

For every drawing command, we apply the following properties from graphics object to DynaPDF:

- ForeColor
- Bold
- Italic
- Underline
- TextUnit
- TextFont
- TextSize
- ScaleX
- ScaleY
- PenHeight
- PenWidth
- CharacterSpacing

Supports the following graphics commands:

- Draw/Fill Oval/Rect/RoundRect/Line/Polygon
- DrawString

- StringHeight and StringWidth
- DrawPicture
- NextPage
- Get/Set Pixel.
- Clip
- Supports vector graphics classes (Object2D)
- Supports report engine

Some notes:

- Handle() function returns handle for picture.
- Pixel reads from temporary picture
- ClearRect draws white rectangle
- DrawCautionIcon, DrawNoteIcon and DrawStopIcon are not supported.
- NextPage method calls NextPage event. If missing, we end page and create a new one. In the event, please call EndPage and maybe Append or import an existing PDF page from import PDF.
- If CMYK, Gray or Lab colorspace is set, the plugin will keep them for white/black colors, but switch to RGB for all other colors.

StyledTextPrinter is not supported, but you can do similar things via WriteStyledText or WriteStyledTextEx methods in DynaPDFMBS class.

If no page is open, call this may append a new page. If no document is open, we call CreateNewPDF for you with nil folderitem, so an in memory PDF get's created.

Seems like reports on Windows may not work for v19.2 of our plugins. This is fixed for 19.3.
(Read only property)

75.39.941 PageGraphicsPicture as Picture

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The temporary picture for page graphics.
Notes:

For debugging it may be useful to see the temporary picture with all the draws made on the PDF page.
This is not 1 to 1 what you will see in rendered PDF Page.

This can be viewed even when graphics object is cleared.
(Read only property)

75.39.942 PrintCancelled as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether last print operation was cancelled.
Notes:

Set by PrintPDFFileWithDialog and PrintPDFPageWithDialog methods if user presses cancel button.
Otherwise will be false.
(Read and Write property)

75.39.943 TIFFVersion as String

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version of tiff library.
Example:

MsgBox DynaPDFMBS.TIFFVersion

Notes:

DynaPDF uses customized version of tiff library, so this may not be the latest public version.
But it's patched to fix a couple of issues seen in PDF context.
(Read only property)

75.39.944 TraceFile as FolderItem

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The trace file.
Notes:

The plugin writes debug messages to this file so you can check what functions you called.

Improved with 16.2 plugin to really cover over 99% of all calls with parameters and result. Please report if you miss something.

See also AppendTraceFile method to append the log file.

(Read and Write property)

75.39.945 TraceHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal file handle for the trace file.
Notes:

If this is not zero, the tracing option is turned on.
You can set this value indirectly by using the TraceFile property.
(Read only property)

75.39.946 ValidateTextEncodings as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to validate text encodings.
Example:

```
dim pdf as new DynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.Append

// enable validating
pdf.ValidateTextEncodings = true

// make text without text encoding
dim s as string = "Hello World"
s = DefineEncoding(s, nil) // remove encoding

call pdf.SetFont "Times", pdf.kfsItalic, 20.0, true, pdf.kcp1252
// now cause exception
call pdf.WriteText 50.0, 580.0, s

call pdf.EndPage
call pdf.CloseFile
```

Notes:

You should enable this for debugging to find bugs with text encodings.
(Read and Write property)

75.39.947 WarningCount as Integer

MBS DynaPDF Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of errors reported by DynaPDF.
Notes:

Use Error event to track them.
Or catch exceptions.
(Read only property)

75.39.948 zlibVersion as String

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version of zLib library.
Example:

MsgBox DynaPDFMBS.zlibVersion

Notes:

DynaPDF uses customized version of zlib library, so this may not be the latest public version.
But it's patched to fix a couple of issues seen in PDF context.
(Read only property)

75.39.949 Events

75.39.950 EnumDocFont(Font as DynaPDFFontMBS, FontInfo as DynaPDFFontInfoMBS, Type as Integer, BaseFont as string, Fontname as string, Embedded as boolean, IsFormFont as boolean, Flags as Integer, FontRef as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event being called if you use the EnumDocFonts function.
Notes:

Font is deprecated. FontRef is the internal reference to the font.
FontInfo is the new property to use for font details.

75.39.951 EnumHostFont(FamilyName as string, PostScriptName as string, Style as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called by EnumHostFonts.

75.39.952 EnumHostFontEx(FamilyName as string, PostScriptName as string, Style as Integer, BaseType as Integer, Embeddable as boolean, Flags as Integer, FilePath as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called by EnumHostFontsEx.

75.39.953 Error(ErrorCode as Integer, ErrorMessage as string, ErrorType as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The error callback.
Notes:

ErrCode is a positive error number starting at zero; it is an index into the array of error messages. ErrType is a bitmask to determine what kind of error occurred. The following
constants are defined:

const E_WARNING = & h02000000
const E_SYNTAX_ERROR = & h04000000
const E_VALUE_ERROR = & h08000000
const E_FONT_ERROR = & h10000000
const E_FATAL_ERROR = & h20000000
const E_FILE_ERROR = & h40000000

At time of publication only one flag is set at any one time. Future versions may be set multiple flags, e.g. E_SYNTAX_ERROR and E_WARNING. Because of this, it is recommended to mask out the error type with a bitwise and operator.
If the callback function returns a value other than zero (0), processing stops immediately.

You can return kErrorEventRaise (-2), we raise an exception.
We also raise the exception when no Error event is implemented.

75.39.954 InitProgress(ProgType as Integer, MaxCount as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when a progress ist starting.
Notes:

The return value of the progress callback function must be 0, any other return value breaks processing.

See pt* constants for ProgType.

75.39.955 NextPage(g as graphics)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called for graphics.nextpage method.
Notes:

If you don't implement this event, the plugin will end the page and append a new page.
You can implement this event to do your own code to import e.g. an existing page as background.

75.39.956 OnFontNotFound(PDFFontRef as Integer, FontName as string, Style as Integer, StdFontIndex as Integer, IsSymbolFont as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The events called when a font is not found.
Notes:

Please call one of the ReplaceFont functions here and return their return code from the callback.
Or return -1 if your code has an error.
See also OnFontNotFound function in DynaPDF manual.

75.39.957 OnReplaceICCProfile(Type as Integer, ColorSpace as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when an ICC profile is replaced.
Notes: Please use various ReplaceICCProfile functions to provide replacement profile.
See also OnReplaceICCProfile function in DynaPDF manual.

75.39.958 PageBreak(LastPosX as Double, LastPosY as Double, PageBreak as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called on every pagebreak.
Notes:

The parameter PageBreak of the event specifies why the event was called:

- If true, a page break tag in the string was found (see WriteFText for further information).
- If false, the output rectangle was filled with text entirely.

The usage of the event is described in detail under WriteFText(). However, the following return values of the event can be used the change the text alignment:

New Alignment Left	1
New Alignment Right	2
New Alignment Center	3
New Alignment Justify	4

A return value of zero indicates that the alignment must not be changed. Negative return values break processing immediately. WriteFText() returns then with a warning.

When the event is called, the coordinate system is always bottom-up, it can be changed to top-down coordinates inside the event if necessary. The current page is still open, the page must be closed with EndPage() before a new page can be added or opened with Append() or EditPage(). To determine the current page number, call GetPageNum().

For example SetFont may fail if you try normal font family names. That is because SetFontSelMode is used with postscript names and you may want to set it to ksmPostScriptName using SetFontSelMode for SetFont to accept family names.

75.39.959 Progress(ActivePage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The progress callback.
Notes: The return value of the progress callback function must be 0, any other return value breaks processing.

75.39.960 RasterShowText(MatrixBefore as DynaPDFMatrixMBS, MatrixAfter as DynapdfMatrixMBS, TextBuffers() as DynaPDFTextRecordAMBS, Texts() as String, Width as Double, Vertical as boolean, FontRef as Integer, textScaling as Double)

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Rastering draws text.
Notes:

This is experimental and will be replaced later with a better API in a future DynaPDF release.
Works only if you have a plugin where this is enabled by us.

If you implement this event, you get an event whenever one of the rasterizers draws some text on a page. MatrixBefore tells you start position, MatrixAfter end position. TextBuffers provide raw text data. Texts array the matching unicode text. Width is length of text in points. Vertical is true for vertical text. FontRef is the internal font reference. You can query fonts with EnumDocFont before to get a list of all fonts and find it in the array. Do not use font functions in the event as that can confuse the rasterizer.

Do not use with MT methods, please.

75.39.961 Constants

75.39.962 kadAnnotation = 0

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.
Notes: Destination is annotation handle.

75.39.963 kadCatalog = 1

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.
Notes: Destination is root object of document (no handle).

75.39.964 kadField = 2

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.
Notes: Destination is field handle.

75.39.965 kadImage = 3

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.
Notes: Destination is image handle.

75.39.966 kadPage = 4

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.
Notes: Destination is page handle.

75.39.967 kadTemplate = 5

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.
Notes: Destination is template handle.

75.39.968 kaeExport = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the application event constants.
Notes: Export

75.39.969 kaePrint = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the application event constants.
Notes: Print

75.39.970 kaeView = 4

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the application event constants.
Notes: View

75.39.971 kaffFormFields = 16

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the annotation flatten flags.
Notes: If set, form fields will be flattened too.

75.39.972 kaffKeepEmptySigFields = & h00008000

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the annotation flatten flags.
Notes: If set, signature fields which are not already signed will be kept.

75.39.973 kaffKeepFileAttach = & h00002000

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the annotation flatten flags.
Notes: If set, file attachment annotations will be kept.

75.39.974 kaffKeepLinkAnnots = & h00001000

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the annotation flatten flags.
Notes: If set, link annotations will be kept.

75.39.975 kaffKeepTextAnnots = & h00004000

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the annotation flatten flags.
Notes: If set, text annotations will be kept.

75.39.976 kaffMarkupAnnots = 2

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: One of the annotation flatten flags.
Notes: If set, markup annotations are flattened only. Link, Sound, or FileAttach annotations are no markup annotations. These types will be left intact.

75.39.977 kaffNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: One of the annotation flatten flags.
Notes:

Printable annotations independent of the type.
By default all annotations which have an appearance stream and which have the print flag set are flattened.
All annotations are deleted when the function returns with the exception of file attachment annotations.
If you want to flatten the view state then set the flag affUseViewState.

75.39.978 kaffNonPDFA_1 = 4

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the annotation flatten flags.
Notes: Flatten all annotations which are unsupported in PDF/A 1.

75.39.979 kaffNonPDFA_2 = 8

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the annotation flatten flags.
Notes: Flatten all annotations which are unsupported in PDF/A 2/3.

75.39.980 kaffPreserveZOrder = & h00400000

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the annotation flatten flags.
Notes: If set, preserve the z-order under any curcumstances. That means visible overlapping annotations or form fields will be flattened, regardless the type.

75.39.981 kaffSigFields = 64

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the annotation flatten flags.
Notes: Meaningful only if affFormFields is not set. If set, signature fields with an appearance stream will be flattened.

75.39.982 kaffUseFieldViewState = 32

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the annotation flatten flags.
Notes: Meaningful only if kaffFormFields or kaffSigFields is set. If set, flatten the view state of form fields. Use the print state otherwise.

75.39.983 kaffUseViewState = 1

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: One of the annotation flatten flags.
Notes: If set, annotations which are visible in a viewer become flattened.

75.39.984 kafHidden = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: One of the three options to hide the annotation (see dynapdf manual)

75.39.985 kafInvisible = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: One of the three options to hide the annotation (see dynapdf manual)

75.39.986 kafLocked = & h00000080

MBS DynaPDF Plugin, Plugin Version: 15.3.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: (PDF 1.4) If set, do not allow the annotation to be deleted or its properties (including position and size) to be modified by the user. However, this flag does not restrict changes to the annotation's contents.

75.39.987 kafLockedContents = & h00000200

MBS DynaPDF Plugin, Plugin Version: 15.3.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: (PDF 1.7) If set, do not allow the contents of the annotation to be modified by the user. This flag does not restrict deletion of the annotation or changes to other annotation properties, such as position and size.

75.39.988 kafNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: No flags are set

75.39.989 kafNoRotate = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: Do not rotate the annotation

75.39.990 kafNoView = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: One of the three options to hide the annotation (see dynapdf manual)

75.39.991 kafNoZoom = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: Do not zoom the annotation

75.39.992 kafPrint = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: Annotation is printable

75.39.993 kafReadOnly = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: Changes are not allowed.

75.39.994 kafToggleNoView = & h00000100

MBS DynaPDF Plugin, Plugin Version: 15.3.

Function: One of the DynaPDF annotation flags constants for SetAnnotFlags.
Notes: (PDF 1.5) If set, invert the interpretation of the NoView flag for certain events.

75.39.995 kaiComment = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for annotation icons.

75.39.996 kaiHelp = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for annotation icons.

75.39.997 kaiInsert = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for annotation icons.

75.39.998 kaiKey = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for annotation icons.

75.39.999 kaiNewParagraph = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for annotation icons.

75.39.1000 kaiNote = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for annotation icons.

75.39.1001 kaiParagraph = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for annotation icons.

75.39.1002 karAlternative = 4

MBS DynaPDF Plugin, Plugin Version: 14.3.

Function: One of the relationship constants.
Notes: This key must be used for ZUGFeRD compatible invoices

75.39.1003 karAssociated = 0

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the relationship constants.

75.39.1004 karData = 1

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the relationship constants.

75.39.1005 karSource = 2

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the relationship constants.

75.39.1006 karSupplement = 3

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the relationship constants.

75.39.1007 kasAccepted = 1

MBS DynaPDF Plugin, Plugin Version: 15.4.

Function: One of the annotation migration state constants.
Notes: Accepted

75.39.1008 kasAuthor = 0

MBS DynaPDF Plugin, Plugin Version: 9.7.

Function: One of the annotation string type constants for SetAnnotString.
Notes: Author

75.39.1009 kasCancelled = 3

MBS DynaPDF Plugin, Plugin Version: 15.4.

Function: One of the annotation migration state constants.
Notes: Cancelled

75.39.1010 kasCompleted = 4

MBS DynaPDF Plugin, Plugin Version: 15.4.

Function: One of the annotation migration state constants.
Notes: Completed

75.39.1011 kasContent = 1

MBS DynaPDF Plugin, Plugin Version: 9.7.

Function: One of the annotation string type constants for SetAnnotString.
Notes: Content

75.39.1012 kasCreateReply = 5

MBS DynaPDF Plugin, Plugin Version: 15.4.

Function: One of the annotation migration state constants.
Notes: Don't add a migration state, create a reply instead. Set the contents of the reply with SetAnnotString.

75.39.1013 kasName = 2

MBS DynaPDF Plugin, Plugin Version: 9.7.

Function: One of the annotation string type constants for SetAnnotString.
Notes: Name

75.39.1014 kasNone = 0

MBS DynaPDF Plugin, Plugin Version: 15.4.

Function: One of the annotation migration state constants.
Notes: Undefined

75.39.1015 kasRejected = 2

MBS DynaPDF Plugin, Plugin Version: 15.4.

Function: One of the annotation migration state constants.
Notes: Rejected

75.39.1016 kasRichStyle = 4

MBS DynaPDF Plugin, Plugin Version: 15.3.

Function: One of the annotation string type constants for SetAnnotString.
Notes: Default style string. ->FreeText annotations only.

75.39.1017 kasRichText = 5

MBS DynaPDF Plugin, Plugin Version: 15.3.

Function: One of the annotation string type constants for SetAnnotString.
Notes: Rich text string. ->Supported by markup annotations.

75.39.1018 kasSubject = 3

MBS DynaPDF Plugin, Plugin Version: 9.7.

Function: One of the annotation string type constants for SetAnnotString.
Notes: Subject

75.39.1019 kat3D = 19

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for annotation types.
Notes: PDF 1.6

75.39.1020 kat3D_AppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the 3D Activation Type constants.
Notes: Default.

75.39.1021 kat3D_Explicit = 3

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the 3D Activation Type constants.
Notes: The annotation should remain inactive until explicitely activated by a script or action (default).

75.39.1022 kat3D_PageOpen = 1

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the 3D Activation Type constants.
Notes: The annotaiton should be activated when the page is opened.

75.39.1023 kat3D_PageVisible = 2

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the 3D Activation Type constants.
Notes: The annotaiton should be activated when the page becomes visible.

75.39.1024 katCaret = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for annotation types.

75.39.1025 katCircle = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for annotation types.

75.39.1026 katFileAttach = 21

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for annotation types.
Notes: PDF 1.3

75.39.1027 katFileLink = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for annotation types.

75.39.1028 katFreeText = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for annotation types.

75.39.1029 katGoTo = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

75.39.1183 kccCross1 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

75.39.1184 kccCross2 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

75.39.1185 kccCross3 = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

75.39.1186 kccCross4 = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

75.39.1187 kccDiamond = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

75.39.1188 kccfBW_To_Gray = 0

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: One of the flag constants for color conversion.
Notes: Default, RGB Black and White set with rg or RG inline operators are converted to gray

75.39.1189 kccfRGB_To_Gray = 1

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: One of the flag constants for color conversion.
Notes: If set, inline color operators rg and RG are converted to gray

75.39.1190 kccfToGrayAdjust = 2

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the flag constants for color conversion.
Notes: Converts RGB and gray inline operators to gray and allows to darken or lighten the colors.

75.39.1191 kccSquare = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

75.39.1192 kccStar = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the checkbox character constants.

75.39.1193 kcfCCITT3 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: PDF or TIFF output ->B& W CCITT Fax G3 compression ->fast but less compression ratio

75.39.1194 kcfCCITT4 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: PDF or TIFF output ->B& W CCITT Fax G4 compression ->slower but higher compression ratio

75.39.1195 kcfConvGrayToOtsu = & h00002000

MBS DynaPDF Plugin, Plugin Version: 18.1.

Function: One of the DynaPDF constants for compression filter.
Notes: The Otsu filter is a special filter to produce black & white images. It is very useful if an OCR scan should be applied on the resulting 1 bit image. The flag is considered in AddRasImage(), RenderPDFFile(),

and RenderPageToImage() if the pixel format was set to pxfGray.

75.39.1196 kcfDitherFloydSteinberg = & h00001000

MBS DynaPDF Plugin, Plugin Version: 18.1.

Function: One of the DynaPDF constants for compression filter.
Notes: Floyd Steinberg dithering. Special flags for AddRasImage(). These flags can be combined with the filters cfFlate, cfCCITT3, cfCCITT4, and LZW.

75.39.1197 kcfFlate = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: PDF or TIFF output

75.39.1198 kcfFlateBW = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: TIFF, PNG, or BMP output ->Dithered black & white output. The resulting image will be compressed with Flate or left uncompressed if the output image format is a bitmap. If you want to use CCITT Fax 4 compression (TIFF only) set the flag icUseCCITT4 in the AddImage() function call. Note that this filter is not supported for PDF creation!

75.39.1199 kcfIgnoreICCProfile = & h00008000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the DynaPDF constants for compression filter.
Notes: Meaningful only if color management is enabled. If set, the device ICC profile is not embedded in the image.

75.39.1200 kcfJBIG2 = 8

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the DynaPDF constants for compression filter.
Notes: JBIG2 for PDF output only.

75.39.1201 kcfJP2K = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: PDF or JPEG2000 output

75.39.1202 kcfJPEG = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: PDF, JPEG, or TIFF output

75.39.1203 kcfLZW = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression filter.
Notes: TIFF or GIF output ->Very fast but less compression ratios than flate

75.39.1204 kcfLZWBW = 5

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the DynaPDF constants for compression filter.
Notes: TIFF output ->Very fast but less compression ratios than flate. For black and white.

75.39.1205 kcfNone = & h000000FF

MBS DynaPDF Plugin, Plugin Version: 20.4.

Function: One of the DynaPDF constants for compression filter.
Notes: No compression, only for TIFF format.

75.39.1206 kcfOrderedDithering = & h00004000

MBS DynaPDF Plugin, Plugin Version: 21.0.

Function: One of the DynaPDF constants for compression filter.
Notes: Ordered dithering. The difference in comparison to the pixel format pxf1Bit is that we render into a GrayA buffer instead of a native 1 bit buffer since this one produces incorrect results in certain transparency calculations.

75.39.1207 kcisCompressedSize = 8

MBS DynaPDF Plugin, Plugin Version: 11.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes:

The compressed file size.
Data value comes from the embedded file.

75.39.1208 kcisCreationDate = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes:

The creation date of this file.
Data value comes from the embedded file.

75.39.1209 kcisCustomDate = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes: User defined date.

75.39.1210 kcisCustomNumber = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes: User defined number.

75.39.1211 kcisCustomString = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes: User defined string.

75.39.1212 kcisDescription = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes:

The description of the file.
Data value comes from the embedded file.

75.39.1213 kcisFileName = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes:

The file name.
Data value comes from the embedded file.

75.39.1214 kcisModDate = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes:

The modification date.
Data value comes from the embedded file.

75.39.1215 kcisSize = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for user defined columns is stored in collection items.
Notes:

The file size.
Data value comes from the embedded file.

75.39.1216 kcivCustom = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the DynaPDF constants for specifying how a file collection is shown.
Notes: Custom: PDF 1.7 Extension Level 3, the collection view is presented by a SWF file.

75.39.1217 kcivDetails = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for specifying how a file collection is shown.
Notes: Details.

75.39.1218 kcivHidden = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for specifying how a file collection is shown.
Notes: Hidden.

75.39.1219 kcivNotSet = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for specifying how a file collection is shown.
Notes: Not set.

75.39.1220 kcivTile = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for specifying how a file collection is shown.
Notes: Title.

75.39.1221 kclDefault = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression level.

75.39.1222 kClearRectModeDefault = 0

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the Clear Rect Mode constants.
Notes: Let all ClearRect calls pass through.

75.39.1223 kClearRectModeIgnoreAll = 2

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the Clear Rect Mode constants.
Notes: Ignore all clearRect calls.

75.39.1224 kClearRectModeIgnoreBig = 1

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the Clear Rect Mode constants.
Notes: Ignore clear rect calls bigger than half of page size.

75.39.1225 kclFastest = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression level.

75.39.1226 kclMax = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression level.

75.39.1227 kclNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for compression level.

75.39.1228 kcmEvenOdd = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for clipping mode.

75.39.1229 kcmFill = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for color modes.

75.39.1230 kcmFillStroke = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for color modes.

75.39.1231 kcmStroke = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for color modes.

75.39.1232 kcmWinding = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for clipping mode.

75.39.1233 kcoAllowDeviceSpaces = & h40000000

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the check flag constants for CheckConformance.
Notes: If set, device color spaces will not be replaced with ICC based color spaces. This flag is meaningful for normalization only.

75.39.1234 kcoApplyExportState = & h00020000

MBS DynaPDF Plugin, Plugin Version: 16.0.

Function: One of the check flag constants for CheckConformance.
Notes: Meaningful only if coDeleteAppEvents is set. Apply the export state.

75.39.1235 kcoApplyPrintState = & h00040000

MBS DynaPDF Plugin, Plugin Version: 16.0.

Function: One of the check flag constants for CheckConformance.
Notes: Meaningful only if coDeleteAppEvents is set. Apply the print state.

75.39.1236 kcoBottom = 1

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the cell orientation constants.
Notes: Bottom

75.39.1237 kcoCenter = 2

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the cell orientation constants.
Notes: Center

75.39.1238 kcoCheckImages = & h00800000

MBS DynaPDF Plugin, Plugin Version: 18.2.

Function: One of the check flag constants for CheckConformance.
Notes: Images will be decompressed to identify damages.

75.39.1239 kcoDefault = & h0010FFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Default flags

75.39.1240 kcoDefault_Normalize = & h50000000

MBS DynaPDF Plugin, Plugin Version: 21.2.

Function: One of the check flag constants for CheckConformance.
Notes: kcoAllowDeviceSpaces + kcoNoFontEmbedding: Common default flags for different PDF/A versions:

75.39.1241 kcoDefault_PDFA_1 = & h0030FFFF

MBS DynaPDF Plugin, Plugin Version: 21.2.

Function: One of the check flag constants for CheckConformance.
Notes: The ability to flatten layers was added after coDefault was defined. Includes kcoFlattenLayers

75.39.1242 kcoDefault_PDFA_2 = & h0050FFFF

MBS DynaPDF Plugin, Plugin Version: 21.2.

Function: One of the check flag constants for CheckConformance.
Notes: Presentations are prohibited in PDF/A 2 and PDF/A 3. Includes kcoDeletePresentation

75.39.1243 kcoDefault_PDFA_3 = & h0050FF7F

MBS DynaPDF Plugin, Plugin Version: 21.2.

Function: One of the check flag constants for CheckConformance.
Notes: Embedded files are allowed in PDF/A 3. kcoDefault_PDFA_2, but without kcoDeleteEmbeddedFiles.

75.39.1244 kcoDeleteActionsAndScripts = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete actions and scripts. Imported files only.

75.39.1245 kcoDeleteAlternateImages = & h00000800

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the check flag constants for CheckConformance.
Notes:

Delete alternate images.
Alternate images are seldom used and prohibited in PDF/A.

75.39.1246 kcoDeleteAppEvents = & h00008000

MBS DynaPDF Plugin, Plugin Version: 16.0.

Function: One of the check flag constants for CheckConformance.
Notes: PDF/A 2 and 3. Application events are prohibited in PDF/A. The view state will be applied.

75.39.1247 kcoDeleteDamagedImages = & h01000000

MBS DynaPDF Plugin, Plugin Version: 18.2.

Function: One of the check flag constants for CheckConformance.
Notes: Meaningful only if coCheckImages is set.

75.39.1248 kcoDeleteEmbeddedFiles = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete embedded files. Imported files only

75.39.1249 kcoDeleteHalftones = & h00100000

MBS DynaPDF Plugin, Plugin Version: 16.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete halftone screens.

75.39.1250 kcoDeleteInvRenderingIntent = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete rendering intent. Imported files only

75.39.1251 kcoDeleteMultiMediaContents = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete multimedia content. Imported files only.

75.39.1252 kcoDeleteOPIComments = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete OPI comments. Imported files only

75.39.1253 kcoDeletePostscript = & h00000400

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete Postscript XObjects.

75.39.1254 kcoDeletePresentation = & h00400000

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the check flag constants for CheckConformance.
Notes: Presentations are prohibited in PDF/A 2 and 3.

75.39.1255 kcoDeleteReplies = & h00080000

MBS DynaPDF Plugin, Plugin Version: 16.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete annotation replies. If absent, replies will be converted to regular text annotations.

75.39.1256 kcoDeleteSignatures = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete signatures. Imported files only

75.39.1257 kcoDeleteTransferFuncs = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Delete transfer functions. Imported files only

75.39.1258 kcoEmbedSubsets = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Already done.

75.39.1259 kcoFlattenFormFields = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Flatten form fields.

75.39.1260 kcoFlattenLayers = & h00200000

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the check flag constants for CheckConformance.
Notes: PDF/A 1b only. Flatten layers if any.

75.39.1261 kcoFlushPages = & h20000000

MBS DynaPDF Plugin, Plugin Version: 16.0.

Function: One of the check flag constants for CheckConformance.
Notes: Write converted pages directly into the output file to reduce the memory usage.

75.39.1262 kcoLeft = 0

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the cell orientation constants.
Notes: Left

75.39.1263 kcoMakeLayerVisible = & h00004000

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the check flag constants for CheckConformance.
Notes: PDF/A 2 and 3 prohibit invisible layers. Layers can also be flattened if this is no option.

75.39.1264 kcoNoFontEmbedding = & h10000000

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the check flag constants for CheckConformance.
Notes:

Normalization only.
If this flag is set not PDF/A file will be produced!

75.39.1265 kcoReComprJPEG2000Images = & h00001000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the check flag constants for CheckConformance.
Notes:

Recompresses JPEG 2000 as flate images.
Recompression results in lower quality and usually in larger images. It is often better to keep such files as is.

75.39.1266 kcoRepairDamagedImages = & h02000000

MBS DynaPDF Plugin, Plugin Version: 18.2.

Function: One of the check flag constants for CheckConformance.
Notes: Meaningful only if coCheckImages is set. If set, try to recompress a damaged image. The new image is maybe incomplete but error free. This flag can be combined with coDeleteDamagedImages to delete the image if recompression fails.

75.39.1267 kcoReplaceV4ICCProfiles = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: Replace V4 ICC Profiles. Imported files only

75.39.1268 kcoReplCCITTFaxWithFlate = & h00010000

MBS DynaPDF Plugin, Plugin Version: 10.3.

Function: One of the check flag constants for CheckConformance.
Notes: Replace CCITT Fax compression with Flate.

75.39.1269 kcoResetAnnotAppearance = & h80000000

MBS DynaPDF Plugin, Plugin Version: 20.3.

Function: One of the check flag constants for CheckConformance.
Notes: If set, appearance streams of annotations are rebuild before executing CheckConformance.

75.39.1270 kcoResolveOverprint = & h00002000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the check flag constants for CheckConformance.
Notes: PDF/A 2 and 3. Set the overprint mode to 0 if the overprint mode = 1 and if overprinting for fill or stroke is true and if a ICCBased CMYK color space is used. Note that DeviceCMYK is treated as ICCBased color space due to implicit color conversion rules.

75.39.1271 kcoRight = 1

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the cell orientation constants.
Notes: Right

75.39.1272 kcoTop = 0

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the cell orientation constants.
Notes: Top

75.39.1273 kcp1250 = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1274 kcp1251 = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1275 kcp1252 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1276 kcp1253 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1277 kcp1254 = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1278 kcp1255 = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1279 kcp1256 = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1280 kcp1257 = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1281 kcp1258 = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1282 kcp437 = 23

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1283 kcp737 = 24

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1284 kcp775 = 25

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1285 kcp850 = 26

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1286 kcp852 = 27

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1287 kcp855 = 28

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1288 kcp857 = 29

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1289 kcp860 = 30

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1290 kcp861 = 31

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1291 kcp862 = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1292 kcp863 = 33

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1293 kcp864 = 34

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1294 kcp865 = 35

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1295 kcp866 = 36

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1296 kcp869 = 37

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1297 kcp874 = 38

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1298 kcp8859_10 = 17

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1299 kcp8859_13 = 18

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1300 kcp8859_14 = 19

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1301 kcp8859_15 = 20

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1302 kcp8859_16 = 21

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1303 kcp8859_2 = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1304 kcp8859_3 = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1305 kcp8859_4 = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1306 kcp8859_5 = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1307 kcp8859_6 = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1308 kcp8859_7 = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1309 kcp8859_8 = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1310 kcp8859_9 = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1311 kcpAdobeStd = 63

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for code pages.
Notes: Internal ->not usable

75.39.1312 kcpBig5 = 58

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for code pages.
Notes: Big5 plus HKSCS extension.

75.39.1313 kcpCJK_2022_CN_Uni = 47

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: ISO-2022-CN-EXT (GB-2312 plus ISO-11643 Planes 1-7).

75.39.1314 kcpCJK_2022_JP_Uni = 48

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: ISO-2022-JP.

75.39.1315 kcpCJK_2022_KR_Uni = 49

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: ISO-2022-KR.

75.39.1316 kcpCJK_646_CN_Uni = 50

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: ISO-646-CN (GB-1988-80).

75.39.1317 kcpCJK_646_JP_Uni = 51

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: ISO-646-JP (JIS_C6220-1969-RO).

75.39.1318 kcpCJK_932_Uni = 53

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: Microsoft extended version of SHIFT_JIS.

75.39.1319 kcpCJK_949_Uni = 54

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: EUC-KR extended with UHC (Unified Hangul Codes).

75.39.1320 kcpCJK_950_Uni = 55

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: Microsoft extended version of Big5.

75.39.1321 kcpCJK_Big5_Uni = 40

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: Big5 plus HKSCS extension.

75.39.1322 kcpCJK_EUC_JP_Uni = 41

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: EUC-JP.

75.39.1323 kcpCJK_EUC_KR_Uni = 42

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: EUC-KR.

75.39.1324 kcpCJK_EUC_TW_Uni = 43

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: CNS-11643-1992 (Planes 1-15).

75.39.1325 kcpCJK_GB12345_Uni = 45

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: GB-12345-1990 (Traditional Chinese form of GB-2312).

75.39.1326 kcpCJK_GBK_Uni = 44

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: GBK is the Microsoft code page 936 (GB2312, EUC-CN plus GBK extension).

75.39.1327 kcpCJK_HZ_Uni = 46

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: Mixed ASCII / GB-2312 encoding

75.39.1328 kcpCJK_IR_165_Uni = 52

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: ISO-IR-165 (extended version of GB-2312).

75.39.1329 kcpCJK_JOHAB_Uni = 56

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
Notes: JOHAB.

75.39.1330 kcpDingbats = 68

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the code page constants.
Notes: Internal ->Special encoding for ZapfDingbats

75.39.1331 kcpExtCMap = 67

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the code page constants.
Notes: Internal ->not usable. This code page is set when a font was loaded with an external cmap.

75.39.1332 kcpGB2312 = 59

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for code pages.
Notes: GB2312 charset plus GBK and cp936 extension.

75.39.1333 kcpGlyphIndexes = 65

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for code pages.
Notes: Internal ->not usable

75.39.1334 kcpInline = 0

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the Line Caption Positions.
Notes: The caption is centered inside the line.

75.39.1335 kcpJohab = 61

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for code pages.
Notes: The Johab text encoding.

75.39.1336 kcpMacRoman = 62

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for code pages.
Notes: The Mac Roman text encoding.

75.39.1337 kcpRoman8 = 70

MBS DynaPDF Plugin, Plugin Version: 12.5.

Function: One of the code page constants.
Notes: This is a standard PCL 5/6 code page.

75.39.1338 kcpShiftJIS = 57

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for code pages.
Notes: ShiftJIS charset plus code page 932 extension.

75.39.1339 kcpSymbol = 22

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for 8 bit code pages.

75.39.1340 kcpTop = 1

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the Line Caption Positions.
Notes: The caption is drawn on top of the line.

75.39.1341 kcpUnicode = 39

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for unicode codepage.

75.39.1342 kcpWansung = 60

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for code pages.
Notes: The Wansung encoding.

75.39.1343 kcsButtCap = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for line cap styles.
Notes: Butt cap.

75.39.1344 kcsDeviceCMYK = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF colorspace constants.

75.39.1345 kcsDeviceGray = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF colorspace constants.

75.39.1346 kcsDeviceRGB = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF colorspace constants.

75.39.1347 kcsRoundCap = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for line cap styles.
Notes: Round cap.

75.39.1348 kcsSquareCap = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for line cap styles.
Notes: Square cap.

75.39.1349 kctFacturX_Basic = 13

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the conformance type constants.
Notes: Set the FacturX conformance level to Basic.

75.39.1350 kctFacturX_Basic_WL = 14

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the conformance type constants.
Notes: Set the FacturX conformance level to Basic WL.

75.39.1351 kctFacturX_Comfort = 15

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the conformance type constants.
Notes: Set the FacturX conformance level to Comfort.

75.39.1352 kctFacturX_Extended = 16

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the conformance type constants.
Notes: Set the FacturX conformance level to Extended.

75.39.1353 kctFacturX_Minimum = 12

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the conformance type constants.
Notes: Set the FacturX conformance level to Minimum.

75.39.1354 kctFacturX_XRechnung = 17

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the conformance type constants.
Notes: German XRechnung profile

75.39.1355 kctNormalize = 1

MBS DynaPDF Plugin, Plugin Version: 10.3.

Function: One of the conformance type constants.
Notes: Check the file for errors, rebuild all embedded fonts plus options.

75.39.1356 kctPDFA_1b_2005 = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the conformance type constants.
Notes: Convert the file to PDF/A if possible.

75.39.1357 kctPDFA_2b = 2

MBS DynaPDF Plugin, Plugin Version: 14.4.

Function: One of the conformance type constants.
Notes: Convert the file to PDF/A 2b if possible

75.39.1358 kctPDFA_3b = 3

MBS DynaPDF Plugin, Plugin Version: 14.4.

Function: One of the conformance type constants.
Notes: Convert the file to PDF/A 3b if possible

75.39.1359 kctZUGFeRD2_Basic = 8

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the conformance type constants.
Notes: Set the ZUGFeRD 2.0 conformance level to Basic.

75.39.1360 kctZUGFeRD2_Basic_WL = 9

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the conformance type constants.
Notes: Set the ZUGFeRD 2.0 conformance level to Basic WL.

75.39.1361 kctZUGFeRD2_Comfort = 10

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the conformance type constants.
Notes: Set the ZUGFeRD 2.0 conformance level to Comfort (EN 169319).

75.39.1362 kctZUGFeRD2_Extended = 11

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the conformance type constants.
Notes: Set the ZUGFeRD 2.0 conformance level to Extended.

75.39.1363 kctZUGFeRD2_Minimum = 7

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the conformance type constants.
Notes: Set the ZUGFeRD 2.0 conformance level to Minimum.

75.39.1364 kctZUGFeRD_Basic = 4

MBS DynaPDF Plugin, Plugin Version: 16.3.

Function: One of the conformance type constants.
Notes:

Set the ZUGFeRD conformance level to Basic
This constant convert the file to PDF/A 3b and set the whished ZUGFeRD conformance level in the XMP metadata. CheckConformance() does not validate the XML invoice but it checks whether it is present. Setting the correct ZUGFeRD conformance level is very important since this value defines which fields must be present in the XML invoice.

75.39.1365 kctZUGFeRD_Comfort = 5

MBS DynaPDF Plugin, Plugin Version: 16.3.

Function: One of the conformance type constants.
Notes:

Set the ZUGFeRD conformance level to Comfort
This constant convert the file to PDF/A 3b and set the whished ZUGFeRD conformance level in the XMP metadata. CheckConformance() does not validate the XML invoice but it checks whether it is present. Setting the correct ZUGFeRD conformance level is very important since this value defines which fields must be present in the XML invoice.

75.39.1366 kctZUGFeRD_Extended = 6

MBS DynaPDF Plugin, Plugin Version: 16.3.

Function: One of the conformance type constants.
Notes:

Set the ZUGFeRD conformance level to Extended
This constant convert the file to PDF/A 3b and set the whished ZUGFeRD conformance level in the XMP metadata. CheckConformance() does not validate the XML invoice but it checks whether it is present. Setting the correct ZUGFeRD conformance level is very important since this value defines which fields must be present in the XML invoice.

75.39.1367 kddClockwise = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for draw direction.
Notes: Clockwise.

75.39.1368 kddCounterClockwise = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for draw direction.
Notes: Counter Clockwise.

75.39.1369 kDEFAULT_LIST_CHAR = & h0000009F

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: Default character index of the font Wingdings-Regular to create a list (see WriteFText())

75.39.1370 kdf12HR_MM = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 2pm:59

75.39.1371 kdf12HR_MM_SS = 17

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 2pm:59:59

75.39.1372 kdf24HR_MM = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 14:59

75.39.1373 kdf24HR_MM_SS = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 14:59:59

75.39.1374 kdfASCII85Decode = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Decode Filter constants.

75.39.1375 kdfASCIIHexDecode = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Decode Filter constants.

75.39.1376 kdfCCITTFaxDecode = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Decode Filter constants.

75.39.1377 kdfDCTDecode = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Decode Filter constants.

75.39.1378 kdfDD_MMM_YY = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 24 Dec 99

75.39.1379 kdfD_MMM = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 24 Dec

75.39.1380 kdfD_MMM_YY = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 24 Dec 99

75.39.1381 kdfFlateDecode = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Decode Filter constants.

75.39.1382 kdfJBIG2Decode = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Decode Filter constants.

75.39.1383 kdfJPXDecode = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Decode Filter constants.

75.39.1384 kdfLZWDecode = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Decode Filter constants.

75.39.1385 kdfMMMM_D_YYYY = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. December 24 1999

75.39.1386 kdfMMMM_YY = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. December 99

75.39.1387 kdfMMM_D_YYYY = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. Dec 24 1999

75.39.1388 kdfMMM_YY = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. Dec 99

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 12/24

75.39.1390 kdfMM_DD_YY = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 12/24/99

75.39.1391 kdfMM_YY = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 12 99

75.39.1392 kdfM_D_YY = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 12 24 99

75.39.1393 kdfM_D_YY_HH_MM = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 12/24/99 14:59

75.39.1394 kdfM_D_YY_H_MM_TT = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 12/24/99 14:59:59

75.39.1395 kdfNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Decode Filter constants.

75.39.1396 kdfRunLengthDecode = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Decode Filter constants.

75.39.1397 kdfYY_MM_DD = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the date/time constants.
Notes: e.g. 99.12.24

75.39.1398 kdi3D_AppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the De-instantiation type constants for Set3DAnnotProps.

75.39.1399 kdi3D_Instantiated = 2

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the De-instantiation type constants for Set3DAnnotProps.
Notes: The annotation will be instantiated but animations are disabled.

75.39.1400 kdi3D_Live = 3

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the De-instantiation type constants for Set3DAnnotProps.
Notes: The annotation will be instantiated and animations are enabled (default).

75.39.1401 kdi3D_UnInstantiated = 1

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the De-instantiation type constants for Set3DAnnotProps.
Notes: The annotation will be uninstantiated (default)

75.39.1402 kdiAuthor = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Notes: Author Name

75.39.1403 kdiCompany = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Notes: Company Name

75.39.1404 kdiCreationDate = 10

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the DynaPDF constants for document information.
Example:

```
// set creation date
call pdf.SetDocInfoEx pdf.kdiCreationDate, "", "D:20150418131854Z00'00'"
```

Notes: Creation Date

75.39.1405 kdiCreator = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Notes: Creator Name

75.39.1406 kdiCustom = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Notes: User defined key

75.39.1407 kdiKeywords = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Notes: Keywords

75.39.1408 kdiModDate = 11

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the DynaPDF constants for document information.
Notes: Modification date.

75.39.1409 kdiPDFX_Conf = 9

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the DynaPDF constants for document information.

75.39.1410 kdiPDFX_Ver = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Notes: GetInDocInfo() only ->The PDF/X version is set by SetPDFVersion()!

75.39.1411 kdiProducer = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetDocInfo pdf.kdiProducer, "Xojo test application"
```

Notes: Producer Name

75.39.1412 kdiSubject = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetDocInfo pdf.kdiSubject, "My first Xojo output"
```

Notes: Subject line

75.39.1413 kdiTitle = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for document information.
Example:

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetDocInfo pdf.kdiTitle, "My first Xojo output"
```

Notes: Title tag.

75.39.1414 kdmClipping = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

75.39.1415 kdmFillClip = 4

Function: One of the DynaPDF constants for draw modes.

75.39.1416 kdmFillStroke = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

75.39.1417 kdmFillStrokeClip = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

75.39.1418 kdmInvisible = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

75.39.1419 kdmNormal = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

75.39.1420 kdmStroke = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

75.39.1421 kdmStrokeClip = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for draw modes.

75.39.1422 kdpmFlipLongEdge = 3

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the duplex mode constants for the print settings.
Notes: flip long edge

75.39.1423 kdpmFlipShortEdge = 2

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the duplex mode constants for the print settings.
Notes: flip short edge

75.39.1424 kdpmNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the duplex mode constants for the print settings.
Notes: Use the default value of the viewer

75.39.1425 kdpmSimplex = 1

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the duplex mode constants for the print settings.
Notes: Simplex

75.39.1426 kDRV_FLOAT_PRECISION = 5

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: The precision used for float values.

75.39.1427 kdsCommaDot = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for thousand and decimal separators.
Notes: 1,234.56

75.39.1428 kdsDotComma = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for thousand and decimal separators.
Notes: 1.234,56

75.39.1429 kdsNoneComma = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for thousand and decimal separators.
Notes: 1234,56

75.39.1430 kdsNoneDot = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for thousand and decimal separators.
Notes: 1234.56

75.39.1431 kdt3D_AppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the 3D DeActivateType constants.

75.39.1432 kdt3D_Explicit = 3

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the 3D DeActivateType constants.
Notes: The annotation should remain active until explicitely deactivated by a script or action.

75.39.1433 kdt3D_PageClosed = 1

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the 3D DeActivateType constants.
Notes: The annotaiton should be deactivated as soon as the page is closed.

75.39.1434 kdt3D_PageInvisible = 2

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the 3D DeActivateType constants.
Notes: The annotaiton should be deactivated as soon as the page becomes invisible (default).

75.39.1435 kdtCreationDate = 0

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the date types.
Notes: Creation Date, Markup annotations only.

75.39.1436 kdtFit = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: no parameters

75.39.1437 kdtFitB = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: no parameters

75.39.1438 kdtFitBH_Top = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: one parameter (a)

75.39.1439 kdtFitBV_Left = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: one parameter (a)

75.39.1440 kdtFitH_Top = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: one parameter

75.39.1441 kdtFitV_Left = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: one parameter (a)

75.39.1442 kdtFit_Rect = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: four parameters (a, b, c, d) ->(left, bottom, right, top)

75.39.1443 kdtModDate = 1

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the date types.
Notes: Modification Date, Annotations or form fields.

75.39.1444 kdtXY_Zoom = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the destination type constants for a link.
Notes: Three parameters (a, b, c) ->(X, Y, Zoom)

75.39.1445 kDYNAPDF_REVISION = "$ Rev: 337 $ "

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: The version of the dynapdf library.

75.39.1446 kDYNAPDF_VERSIONSTRING = "4.0.58.153"

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: The version of the dynapdf library.

75.39.1447 keflChild = 0

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the possible values for embedded file location.
Notes: The file is an embedded file in the current document.

75.39.1448 keflChildAnnot = 1

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the possible values for embedded file location.
Notes: The file is located in a file attachment annotion in the current document.

75.39.1449 keflExternal = 2

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the possible values for embedded file location.
Notes: The file is an embedded file in an external document.

75.39.1450 keflExternalAnnot = 3

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the possible values for embedded file location.
Notes: The file is located in a file attachment annotion in an external document.

75.39.1451 keflParent = 4

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the possible values for embedded file location.
Notes: The file is located in the parent document.

75.39.1452 keflParentAnnot = 5

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the possible values for embedded file location.
Notes: The file is located in a file attachment annotion in the parent document.

75.39.1453 kefpAnsiPath = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the flags for the EnumHostFontEx event.
Notes: Code page 1252 on Windows, UTF-8 otherwise. The font has embedding rights.

75.39.1454 kefpEditable = 4

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the flags for the EnumHostFontEx event.
Notes: If set, the font has editing rights (important for form fields).

75.39.1455 kefpEmbeddable = 2

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the flags for the EnumHostFontEx event.
Notes: The font has embedding rights.

75.39.1456 kefpUnicodePath = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the flags for the EnumHostFontEx event.
Notes: FilePath is in Unicode format. Make a typecast to (UI16*) in this case. The plugin handles that for you.

75.39.1457 kemAllErrors = & h0000FFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: All errors

75.39.1458 kemFileError = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: File Error

75.39.1459 kemFontError = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: Font Error

75.39.1460 kemIgnoreAll = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: Ignore All

75.39.1461 kemLogFonts = & h00010000

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the error mode constants.
Notes: If set, CheckConformance() logs which fonts were replaced with system fonts or converted to Type3.

75.39.1462 kemLogFontsVerbose = & h00020000

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the error mode constants.
Notes: If set, the path to the font file is added to the message too. Use with kemLogFonts.

75.39.1463 kemNoFuncNames = & h10000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: Do not print function names in error messages

75.39.1464 kemSyntaxError = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: Syntax Error

75.39.1465 kemUseErrLog = & h20000000

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the error mode constants.
Notes: Redirect all error messages to the error log.

75.39.1466 kemValueError = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: Value Error

75.39.1467 kemWarning = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the error mode constants.
Notes: Warning

75.39.1468 kErrorEventContinue = 0

MBS DynaPDF Plugin, Plugin Version: 20.4.

Function: One of the return codes for the error event.
Notes: Please return zero to ignore the error and continue with your code.

75.39.1469 kErrorEventRaise = -2

MBS DynaPDF Plugin, Plugin Version: 20.4.

Function: One of the return codes for the error event.
Notes: Please return -2 to raise an exception.

75.39.1470 kErrorEventStop = -1

MBS DynaPDF Plugin, Plugin Version: 20.4.

Function: One of the return codes for the error event.
Notes: Please return -1 to stop processing.

75.39.1471 kesCalGray = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: CIE-based color space

75.39.1472 kesCalRGB = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: CIE-based color space

75.39.1473 kesDeviceCMYK = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Device color space

75.39.1474 kesDeviceGray = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Device color space

75.39.1475 kesDeviceN = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Special color space

75.39.1476 kesDeviceRGB = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Device color space

75.39.1477 kesICCBased = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: CIE-based color space ->contains an ICC profile

75.39.1478 kesIndexed = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Special color space

75.39.1479 kesLab = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: CIE-based color space

75.39.1480 kesNChannel = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Special color space

75.39.1481 kesPattern = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Special color space

75.39.1482 kesSeparation = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the extended color space constants.
Notes: Special color space

75.39.1483 kE_FATAL_ERROR = & h20000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for error types.
Notes:

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_FATAL_ERROR)=E_FATAL_ERROR then msgbox "A fatal error occurred!"

75.39.1484 kE_FILE_ERROR = & h40000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for error types.
Notes:

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_FILE_ERROR)=E_FILE_ERROR then msgbox "A fatal error occurred!"

75.39.1485 kE_FONT_ERROR = & h10000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for error types.
Notes:

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_FONT_ERROR)=E_FONT_ERROR then msgbox "A fatal error occurred!"

75.39.1486 kE_SYNTAX_ERROR = & h04000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for error types.
Notes:

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_SYNTAX_ERROR)=E_SYNTAX_ERROR then msgbox "A fatal error occurred!"

75.39.1487 kE_VALUE_ERROR = & h08000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for error types.
Notes:

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_VALUE_ERROR)=E_VALUE_ERROR then msgbox "A fatal error occurred!"

75.39.1488 kE_WARNING = & h02000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for error types.
Notes:

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_WARNING)=E_WARNING then msgbox "A fatal error occurred!"

75.39.1489 kfaiGraph = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the file attach icon constants.
Notes: Graph.

75.39.1490 kfaiPaperClip = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the file attach icon constants.
Notes: Paper Clip

75.39.1491 kfaiPushPin = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the file attach icon constants.
Notes: Push Pin

75.39.1492 kfaiTag = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the file attach icon constants.
Notes: Tag

75.39.1493 kfbtDisabled = 4

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font base type constants.
Notes: This value can be used to disable a specific font format. See SetFontSearchOrder() for further information.

75.39.1494 kfbtOpenType = 2

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font base type constants.
Notes: OpenType font with Postscript outlines

75.39.1495 kfbtStdFont = 3

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font base type constants.
Notes: PDF Standard font

75.39.1496 kfbtTrueType = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the font base type constants.
Notes: TrueType, TrueType Collections, or OpenType fonts with TrueType outlines

75.39.1497 kfbtType1 = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the font base type constants.
Notes: Type1 font

75.39.1498 kfcBackColor = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for field or annotation colors.

75.39.1499 kfcBorderColor = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for field or annotation colors.

75.39.1500 kfcTextColor = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for field or annotation colors.

75.39.1501 kffComb = & h01000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.
Notes: PDF 1.5 Text fields only

75.39.1502 kffCommitOnSelCh = & h04000000

MBS DynaPDF Plugin, Plugin Version: 9.3.

Function: One of the field flags constants.
Notes: (PDF 1.5) If set, the new value is committed as soon as a selection is made with the pointing device. This allows applications to perform an action once a selection is made, without requiring the user to exit the field. If clear, the new value is not committed until the user exits the field. Supported by combo boxes and list boxes only.

75.39.1503 kffDoNotScroll = & h00800000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.
Notes: PDF 1.4 Text fields only

75.39.1504 kffDoNotSpellCheck = & h00400000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.
Notes: PDF 1.4 Text fields, combo boxes. If the field is a combo box, this flag is meaningful only if ffEdit is also set.

75.39.1505 kffEdit = & h00040000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.
Notes: Combo boxes only

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.

75.39.1521 kffsCIDFontType0C = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font file sub types.
Notes: CFF based Type1 CID font

75.39.1522 kffsCIDFontType2 = 4

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font file type constants.
Notes: TrueType based CID Font

75.39.1523 kffsNoSubtype = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font file sub types.
Notes: The font file is in the format of FontType

75.39.1524 kffsOpenType = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font file sub types.
Notes: TrueType based OpenType font

75.39.1525 kffsOpenTypeC = 3

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font file type constants.
Notes: CFF based OpenType font

75.39.1526 kffSorted = & h00080000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field flags constants.
Notes: Use this flag to change the sort flag of combo boxes or list boxes

75.39.1527 kffsType1C = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font file sub types.
Notes: CFF based Type1 font.

75.39.1528 kfmClose = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Close the path, but do not fill or stroke it. More vertices are required or stroke the path in a separate step.

75.39.1529 kfmFill = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill path.

75.39.1530 kfmFillEvOdd = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill even odd.

75.39.1531 kfmFillEvOddNoClose = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill even odd and no close.

75.39.1532 kfmFillNoClose = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill, but don't close.

75.39.1533 kfmFillStroke = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill and stroke.

75.39.1534 kfmFillStrokeEvOdd = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill and stroke even odd.

75.39.1535 kfmFillStrokeEvOddNoClose = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill and stroke even odd, no close.

75.39.1536 kfmFillStrokeNoClose = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Fill, Stroke, but don't close.

75.39.1537 kfmNoFill = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Don't fill.

75.39.1538 kfmStroke = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Stroke path.

75.39.1539 kfmStrokeNoClose = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the fill mode.
Notes: Stroke, but do not close.

75.39.1540 kfoOpen = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for file operation for use with CreateLaunchAction function.
Notes: Open file.

75.39.1541 kfoPrint = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for file operation for use with CreateLaunchAction function.
Notes: Print file.

75.39.1542 kfpfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the flush constants for Flush method.
Notes: Write anything to the file that is possible.

75.39.1543 kfpfExclLastPage = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the flush constants for Flush method.
Notes: If set, the last page is not flushed.

75.39.1544 kfpfImagesOnly = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the flush constants for Flush method.
Notes: If set, only images are written to the file. The pages are still in memory and can be modified with EditPage(). Flushed images can still be referenced in other pages. The image handles remain valid.

75.39.1545 kfsBlack = & h38400000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

75.39.1559 kfsRegular = & h19000000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.
Notes: Same as fsNone

75.39.1560 kfsSemiCondensed = & h00000400

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

75.39.1561 kfsSemiExpanded = & h00000600

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

75.39.1562 kfsStriked = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for font style.

75.39.1563 kfsThin = & h06400000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.

75.39.1564 kfsUltraBlack = & h3E800000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the weight class.

75.39.1565 kfsUltraCondensed = & h00000100

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

75.39.1566 kfsUltraExpanded = & h00000900

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the font style constants for the width class.

75.39.1567 kfsUnderlined = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for font style.

75.39.1568 kfsVerticalMode = 16

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the constants for font style.
Notes: Not considered at this time (v2.5)

75.39.1569 kftButton = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the field type constants.
Notes: Button

75.39.1570 kftCheckBox = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Checkbox

75.39.1571 kftComboBox = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Combobox

75.39.1572 kftGroup = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: This is not a real field type, it is just an array of fields.

75.39.1573 kftListBox = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Listbox

75.39.1574 kftMMType1 = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font types.
Notes: Multiple Master

75.39.1575 kftRadioBtn = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Radio Button

75.39.1576 kftSignature = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Signature

75.39.1577 kftText = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Text.

75.39.1578 kftTrueType = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font types.
Notes: TrueType font

75.39.1579 kftType0 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font types.
Notes: CID font ->the descendant font can be a TrueType, Type1 (CFF), or OpenType font

75.39.1580 kftType1 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font types.
Notes: Type1 font

75.39.1581 kftType3 = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font types.
Notes: Type3 font

75.39.1582 kgfAnsiStringIsUTF8 = 32

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the graphics state flag constants.
Notes:

If set, single byte strings in Ansi functions are treated as UTF-8 encoded Unicode strings.
Currently not useable with plugins.

75.39.1583 kgfCompatible = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the graphics state flag constants.
Notes: Compatible graphics state to earlier DynaPDF versions ->default

75.39.1584 kgfComplexText = & h00000400

MBS DynaPDF Plugin, Plugin Version: 20.1.

Function: One of the graphics state flag constants.
Notes: If set, text is processed with Uniscribe on Windows.

75.39.1585 kgfIgnoreICCProfiles = 16

MBS DynaPDF Plugin, Plugin Version: 9.3.

Function: One of the graphics state flag constants.
Notes: Meaningful only if the flag kgfUseImageColorSpace is set. If set, an embedded profile is not used to create an ICCBased color space for the image. The image is inserted in the corresponding device color space instead.

75.39.1586 kgfNativeBlackWhite = 4

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the graphics state flag constants.
Notes: Do not convert RGB black or white to DeviceGray

75.39.1587 kgfNoBitmapAlpha = & h00000080

MBS DynaPDF Plugin, Plugin Version: 14.3.

Function: One of the graphics state flag constants.
Notes: If set, the alpha channel in 32 bit bitmaps will be ignored. Useful for bitmaps with an invalid alpha channel.

75.39.1588 kgfNoImageDuplCheck = & h00000100

MBS DynaPDF Plugin, Plugin Version: 14.3.

Function: One of the graphics state flag constants.
Notes: Disables duplicate check for images.

75.39.1589 kgfNoObjCompression = & h00000200

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the graphics state flag constants.
Notes: If set, object compression will be disabled.

75.39.1590 kgfRealPassThrough = 64

MBS DynaPDF Plugin, Plugin Version: 14.3.

Function: One of the graphics state flag constants.
Notes: If set, JPEG images are inserted as is. JPEG images are normally rebuild, also in pass-through mode, to avoid issues with certain malformed JPEG images which cannot be displayed in Adobes Acrobat or Reader. If you know that your JPEG images work then set this flag to avoid unnecessary processing time.

75.39.1591 kgfRealTopDownCoords = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the graphics state flag constants.
Notes: If set, the page coordinate system is not reset to bottom-up when transforming the coordinate system. However, real top-down coordinates require a large internal overhead and where never fully implemented. The usage of this flag should be avoided if possible.

75.39.1592 kgfRestorePageCoords = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the graphics state flag constants.
Notes: Restore the coordinate system with the graphics state (the value of PageCoords, see SetPageCoords())

75.39.1593 kgfUseImageColorSpace = 8

MBS DynaPDF Plugin, Plugin Version: 9.3.

Function: One of the graphics state flag constants.
Notes: If set, the active color space is ignored when inserting an image. The color space is taken from the image file instead.

75.39.1594 khmInvert = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Highlight Mode Constants.

75.39.1595 khmNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Highlight Mode Constants.

75.39.1596 khmOutline = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Highlight Mode Constants.

75.39.1597 khmPush = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Highlight Mode Constants.

75.39.1598 khmPushUpd = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Highlight Mode Constants.
Notes: Update appearance stream on changes

75.39.1599 khtDetached = 0

MBS DynaPDF Plugin, Plugin Version: 10.2.

Function: One of the constants for CloseAndSignFileExt.
Notes: Returns the byte ranges of the finish PDF buffer to create a detached signature.

75.39.1600 khtSHA1 = 1

MBS DynaPDF Plugin, Plugin Version: 10.2.

Function: One of the constants for CloseAndSignFileExt.
Notes: Returns the SHA1 hash of the PDF file so that it can be signed.

75.39.1601 kicfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the cache initialization flags.

75.39.1602 kicfIgnoreOpenAction = 1

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the cache initialization flags.

75.39.1603 kicfIgnorePageLayout = 2

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the cache initialization flags.

75.39.1604 kicmBPCompensation = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the flags to pass to InitColorManagement function.
Notes: Black point compensation preserves the black point when converting CMYK colors to different color spaces.

75.39.1605 kicmCheckBlackPoint = 2

MBS DynaPDF Plugin, Plugin Version: 14.2.

Function: One of the flags to pass to InitColorManagement function.
Notes: If set, soft proofing will be disabled if the black point of the output intent is probably invalid.

75.39.1606 kicmDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the flags to pass to InitColorManagement function.
Notes: Default rules.

75.39.1607 kicNone = 0

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the image conversion flag constants.
Notes: Default value.

75.39.1608 kictCMYK = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for ICC profile types.

75.39.1609 kictGray = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for ICC profile types.

75.39.1610 kictLab = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for ICC profile types.

75.39.1611 kictRGB = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for ICC profile types.

75.39.1612 kicUseCCITT4 = 1

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the image conversion flag constants.
Notes: Use CCITT Fax 4 compression instead of Flate for dithered images.

75.39.1613 kif2CopyEncryptDict = 64

MBS DynaPDF Plugin, Plugin Version: 17.0.

Function: One of the constants for ImportFlags2.
Notes:

If set, the encryption settings of an encrypted PDF file are copied to the new PDF file.
The flag does nothing if the file is not encrypted.

75.39.1614 kif2DuplicateCheck = 16

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the constants for ImportFlags2.
Notes: Perform a duplicate check on color spaces, fonts, images, patterns, and templates when merging PDF files.

75.39.1615 kif2MergeLayers = 1

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the constants for ImportFlags2.
Notes: If set, layers with identical name are merged. If this flag is absent DynaPDF imports such layers separately so that each layer refers still to the pages where it was orignally used.

75.39.1616 kif2NoMetadata = 8

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the constants for ImportFlags2.
Notes: Ignore metadata streams which are attached to fonts, pages, images, and so on.

75.39.1617 kif2NoResNameCheck = 32

MBS DynaPDF Plugin, Plugin Version: 16.5.

Function: One of the constants for ImportFlags2.
Notes: Useful in viewer applications

75.39.1618 kif2Normalize = 2

MBS DynaPDF Plugin, Plugin Version: 10.3.

Function: One of the constants for ImportFlags2.
Notes: Replace LZW compression with Flate, apply limit checks, repair errors if possible.

75.39.1619 kif2UseProxy = 4

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the constants for ImportFlags2.
Notes: Not meaningful for PDF files which are loaded from a memory buffer. If set, all streams are loaded from the file on demand but they are never hold in memory. This reduces drastically the memory usage and enables the processing of almost arbitrary large PDF files with minimal memory usage. The corresponding PDF file must not be deleted before CloseFile() or CloseFileEx() was called.

75.39.1620 kif3DAnnot = & h00100000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1621 kifAllAnnots = & h009F0000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1622 kifAllPageObjects = & h40000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1623 kifArticles = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1624 kifBookmarks = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1625 kifBoxColorInfo = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1626 kifCatalogAction = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1627 kifContentOnly = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1628 kifDocInfo = & h00008000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1629 kifEmbeddedFiles = & h00200000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1630 kifEnumFonts = & h20000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1631 kifFileCollections = & h00400000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1632 kifFormFields = & h01000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1633 kifFreeText = & h00010000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1634 kifImportAll = & h0FFFFFFE

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1635 kifImportAsPage = & h80000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1636 kifJavaScript = & h00002000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1637 kifJSActions = & h00004000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1638 kifLink = & h00040000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1639 kifmBMP = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the image format constants.
Notes: BMP: DeviceGray, DeviceRGB, Black & White ->Uncompressed.

75.39.1640 kifmJPC = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the image format constants.
Notes: JPEG 2000: DeviceRGB, DeviceCMYK, DeviceGray ->JPEG2000 compression.

75.39.1641 kifmJPEG = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the image format constants.
Notes: JPEG: DeviceRGB, DeviceCMYK, DeviceGray ->JPEG compression.

75.39.1642 kifmPNG = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the image format constants.
Notes: PNG: DeviceGray, DeviceRGB, Black & White ->Flate compression.

75.39.1643 kifmTIFF = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the image format constants.
Notes: TIFF: DeviceRGB, DeviceCMYK, DeviceGray, Black & White ->CCITT Fax Group 3/4, JPEG, Flate, LZW.

75.39.1644 kifNoContent = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1645 kifOtherAnnots = & h00800000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1646 kifPageActions = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1647 kifPageLabels = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1648 kifPieceInfo = & h02000000

MBS DynaPDF Plugin, Plugin Version: 16.5.

Function: One of the constants for import flags.
Notes: The PieceInfo dictionary contains arbitrary application defined data. The data in this dictionary is meaningful only for the application that created the data.

75.39.1649 kifPrepareForPDFA = & h10000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1650 kifSearchIndex = & h00001000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

75.39.1651 kifSeparationInfo = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.
Notes: Separation info

75.39.1652 kifStamp = & h00080000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for import flags.

Function: One of the constants for a 3D Rendering mode for Create3DView.

75.39.1694 klsRed = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

75.39.1695 klsWhite = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for a 3D Rendering mode for Create3DView.

75.39.1696 kmdoCatalog = 0

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the metadata object contants.
Notes: The global XMP stream of the document (no handle needed)

75.39.1697 kmdoFont = 1

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the metadata object contants.
Notes: Parameter Handle must be a font handle.

75.39.1698 kmdoImage = 2

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the metadata object contants.
Notes: Parameter Handle must be an image handle.

75.39.1699 kmdoPage = 3

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the metadata object contants.
Notes: Parameter Handle must be a page number.

75.39.1700 kmdoTemplate = 4

MBS DynaPDF Plugin, Plugin Version: 14.0.

Function: One of the metadata object contants.
Notes: Parameter Handle must be a template handle.

75.39.1701 kmfApplyBidiAlgo = & h00080000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Apply the bidirectional algorithm on Unicode strings

75.39.1702 kmfClipRclBounds = & h01000000

MBS DynaPDF Plugin, Plugin Version: 8.5.

Function: One of the metaflags constants.
Notes:

If set, the graphic is drawn into a clipping path with the size of rclBounds.
This flag is useful if the graphic contains content outside of its bounding box.

75.39.1703 kmfClipView = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Draw the file into a clipping rectangle

75.39.1704 kmfCurrComprFilter = & h20000000

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the meta flag constants.
Notes:

If set, the currently active compression filter is used to compress the image (see SetCompressionFilter()).
This flag is used only if the file is rastered to an image.

75.39.1705 kmfDebug = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Write debug information into the content stream.

75.39.1706 kmfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Default conversion

75.39.1707 kmfDefBkModeTransp = & h00040000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Initialize the background mode to transparent (SetBkMode() overrides this state).

75.39.1708 kmfDisableRasterEMF = & h02000000

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the metaflags constants.
Notes: If set, EMF files which use unsupported ROP codes are not rastered.

75.39.1709 kmfDontSkipROP_DPa = & h10000000

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the metaflags constants.
Notes:

If set, the ROP code 0x00A000C9 (DPa) is considered in BitBlt, StretchBlt, TranparentBlt, and AlphaBlend records.
This kind of ROP code combines a pattern brush with the backdrop. If the flag mfDisableRasterEMF is absent, the usage of such a ROP code causes that the file is rendered to an image.

75.39.1710 kmfFullScale = & h00010000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Recommended if 32 bit coordinates are used

75.39.1711 kmfGDIFontSelection = & h00100000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Use the GDI to select fonts

75.39.1712 kmfIgnoreEmbFonts = & h08000000

MBS DynaPDF Plugin, Plugin Version: 13.4.

Function: One of the meta flag constants.
Notes: If set, embedded fonts in GDIComment records will be ignored. This flag must be set if the fonts of an EMF spool file were pre-loaded with ConvertEMFSpool(). Spool fonts must always be loaded in a pre-processing step since required fonts are not necessarily embedded in the EMF files.

75.39.1713 kmfIntersectClipRect = & h00002000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: enabled by default ->can be disabled with mfNoClippingRgn

75.39.1714 kmfNoBBoxCheck = & h04000000

MBS DynaPDF Plugin, Plugin Version: 13.3.

Function: One of the meta flag constants.
Notes: Disable the bbox check.

75.39.1715 kmfNoBmpPatterns = & h00000400

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Ignore bitmap patterns

75.39.1716 kmfNoClippingRgn = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Disables SelectClippingRegion, IntersectClipRect, and SelectClipPath

75.39.1717 kmfNoFontEmbedding = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Do not embed fonts ->Fonts should be embedded!!!

75.39.1718 kmfNoImages = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Ignore image records

75.39.1719 kmfNoStdPatterns = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Ignore standard patterns

75.39.1720 kmfNoText = & h00000800

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Ignore text records

75.39.1721 kmfNoTextClipping = & h00400000

MBS DynaPDF Plugin, Plugin Version: 8.5.

Function: One of the metaflags constants.
Notes: If set, the ETO_CLIPPED flag in text records is ignored.

75.39.1722 kmfNoTextScaling = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Do not scale text

75.39.1723 kmfNoUnicode = & h00008000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Avoid usage of Unicode fonts ->recommended to enable PDF 1.2 compability

75.39.1724 kmfRclFrameEx = & h00200000

MBS DynaPDF Plugin, Plugin Version: 8.1.

Function: One of the DynaPDF constants.

75.39.1725 kmfShowBounds = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Show the bounding boxes of text strings

75.39.1726 kmfSrcCopy_Only = & h00800000

MBS DynaPDF Plugin, Plugin Version: 8.5.

Function: One of the metaflags constants.
Notes: If set, images which use a ROP code other than SRCCOPY are ignored. This is useful when processing Excel 2007 spool files.

75.39.1727 kmfUseRclBounds = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Use rclBounds instead of rclFrame

75.39.1728 kmfUseRclFrame = & h00020000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: This flag should be set if the rclFrame rectangle is properly set

75.39.1729 kmfUseSpacingArray = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: enabled by default ->can be disabled with mfUseTextScaling

75.39.1730 kmfUseTextScaling = & h00004000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Scale text instead of using the intercharacter spacing array

75.39.1731 kmfUseUnicode = & h00001000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the meta flag constants.
Notes: Ignore ANSI_CHARSET

75.39.1732 kmiNotTagged = 0

MBS DynaPDF Plugin, Plugin Version: 21.4.

Function: One of the flags for tagged PDF file status.
Notes: This is no Tagged PDF file.

75.39.1733 kmiSuspects = 2

MBS DynaPDF Plugin, Plugin Version: 21.4.

Function: One of the flags for tagged PDF file status.
Notes: The file contains suspect contents that whose ordering does not ordered meet the requirements of the Tagged PDF specifications.

75.39.1734 kmiTagged = 1

MBS DynaPDF Plugin, Plugin Version: 21.4.

Function: One of the flags for tagged PDF file status.
Notes: This is a Tagged PDF file.

75.39.1735 kmiUserProperties = 4

MBS DynaPDF Plugin, Plugin Version: 21.4.

Function: One of the flags for tagged PDF file status.
Notes: A flag indicating that at least one structure element contains user properties. User properties are stored in User Property dictionaries.

75.39.1736 knaDefault = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D named action.

75.39.1737 knaDeletePages = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1738 knaFirst = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D named action.

75.39.1739 knaFirstPage = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1740 knaFitPage = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1741 knaFontsInfo = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1742 knaFullScreen = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1743 knaGeneralInfo = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1744 knaGoBack = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1745 knaLast = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D named action.

75.39.1746 knaLastPage = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1747 knaNext = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D named action.

75.39.1748 knaNextPage = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1749 knaOpenDlg = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1750 knaPrevious = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D named action.

75.39.1751 knaPrevPage = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1752 knaPrintDlg = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1753 knaQuit = 14

MBS DynaPDF Plugin, Plugin Version: 9.8.

Function: One of the named action constants.

75.39.1754 knaSaveAs = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1755 knaSecurityInfo = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the named action constants.

75.39.1756 kNEW_ALIGN_CENTER = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.

75.39.1757 kNEW_ALIGN_JUSTIFY = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.

75.39.1758 kNEW_ALIGN_LEFT = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.

75.39.1759 kNEW_ALIGN_RIGHT = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.

75.39.1760 kNO_COLOR = & hFFFFFFF1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the RGB color constants.
Notes:

This value can be used for form fields, annotations and standard patterns to determine that the specific color is not set.
For example, when a form field should have a transparent background, set the field background color to NO_COLOR. The background appears then transparent.

75.39.1761 knsMinusBlack = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the negative number format constants for SetNumberFormat.
Notes: The number is colored black with a minus sign.

75.39.1762 knsParensBlack = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the negative number format constants for SetNumberFormat.
Notes: The number is colored black with parenthesis.

75.39.1763 knsParensRed = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the negative number format constants for SetNumberFormat.
Notes: The number is colored red with parenthesis.

75.39.1764 knsRed = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the negative number format constants for SetNumberFormat.
Notes: The number is colored red.

75.39.1765 koeOnAfterPrinting = 21

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: PDF 1.4 ->Catalog only

75.39.1766 koeOnAfterSaving = 19

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: PDF 1.4 ->Catalog only

75.39.1767 koeOnBeforeClosing = 17

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: PDF 1.4 ->Catalog only.

75.39.1768 koeOnBeforePrinting = 20

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: PDF 1.4 ->Catalog only.

75.39.1769 koeOnBeforeSaving = 18

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: PDF 1.4 ->Catalog only.

75.39.1770 koeOnBlur = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Form fields only

75.39.1771 koeOnCalc = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Form fields only.

75.39.1772 koeOnClose = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Pages only

75.39.1773 koeOnFocus = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Form fields only.

75.39.1774 koeOnFormat = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Form fields only.

75.39.1775 koeOnKeyStroke = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Form fields only.

75.39.1776 koeOnMouseDown = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Form fields only.

75.39.1777 koeOnMouseEnter = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Form fields only.

75.39.1778 koeOnMouseExit = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Form fields only

75.39.1779 koeOnMouseUp = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: All fields, page link annotations, bookmarks

75.39.1780 koeOnOpen = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: Catalog, Pages

75.39.1781 koeOnPageClose = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: PDF 1.5 ->Form fields only

75.39.1782 koeOnPageInVisible = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: PDF 1.5 ->Form fields only

75.39.1783 koeOnPageOpen = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: PDF 1.5 ->Form fields only

75.39.1784 koeOnPageVisible = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: PDF 1.5 ->Form fields only

75.39.1785 koeOnValidate = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants.
Notes: All form fields, except buttons

75.39.1786 kofAdjZeroLineWidthOnly = & h00002000

MBS DynaPDF Plugin, Plugin Version: 17.0.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if the parameter MinLineWidth of the optimize parameters is greater zero. If set, change the line width of real hairlines only (a hairline is a one pixel width line ->LineWidth = 0).

75.39.1787 kofCompressWithJBIG2 = & h00004000

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the constants for the Optimize function.
Notes: If set, 1 bit images are compressed with JBIG2 if not already compressed with this filter.

75.39.1788 kofConvertAllColors = 2

MBS DynaPDF Plugin, Plugin Version: 14.2.

Function: One of the constants for the Optimize function.
Notes: If set, Separation, DeviceN, and NChannel color spaces will be converted to the device space.

75.39.1789 kofConvertGrayTo1Bit = & h00010000

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the constants for the Optimize function.
Notes: Useful for scanned faxes since many scanners create gray images for black & white input.

75.39.1790 kofConvertToCMYK = & h00080000

MBS DynaPDF Plugin, Plugin Version: 19.3.

Function: One of the constants for the Optimize function.
Notes: If set, images, text, and vector graphics are converted to DeviceCMYK.

75.39.1791 kofConvertToGray = & h00020000

MBS DynaPDF Plugin, Plugin Version: 19.3.

Function: One of the constants for the Optimize function.
Notes: If set, images, text, and vector graphics are converted to DeviceGray.

75.39.1792 kofConvertToRGB = & h00040000

MBS DynaPDF Plugin, Plugin Version: 19.3.

Function: One of the constants for the Optimize function.
Notes: If set, images, text, and vector graphics are converted to DeviceRGB.

75.39.1793 kofConvNonEmbFontsOnly = & h00800000

MBS DynaPDF Plugin, Plugin Version: 21.0.

Function: One of the constants for the Optimize function.
Notes: Meaningful only, if the flag kofConvTextToOutlines is set. If set, text of non-embedded fonts are converted to outlines only. Embedded fonts remain embedded.

75.39.1794 kofConvTextToOutlines = & h00400000

MBS DynaPDF Plugin, Plugin Version: 21.0.

Function: One of the constants for the Optimize function.
Notes: If set, texts of non-Type3 fonts are converted to outlines or vector graphics. The resulting file contains no fonts with exception of Type3 fonts, if any. Such files are large but avoid printing issues due to missing or damaged fonts.

75.39.1795 kofDefault = 0

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes: Just rebuild the content streams.

75.39.1796 kofDeleteAlternateImages = & h00000400

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes: If set, alternate images will be deleted.

75.39.1797 kofDeleteInvPaths = 64

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the constants for the Optimize function.
Notes: Delete invisible paths. An invisible path is a path that was finished with the no-op operator "n".

75.39.1798 kofDeletePrivateData = & h00000100

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes:

Delete private data objects from pages, templates, and images.
For example Indesign may store the original Photoshop image within the PDF file.

75.39.1799 kofDeleteThumbnails = & h00000200

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes: Thumbnails can be deleted since PDF viewers can create thumbnails easily on demand.

75.39.1800 kofFailOnOverprinting = & h08000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if a color conversion flag is set. If set, the function returns with a fatal error if an object with enabled overprinting was found on the page. The appearance of overprinted objects would change and make the page maybe unusable. Overprinted objects can be left unchanged (set the flag kofSkipOverprintedObj in this case) or Optimize() can return with a fatal error to avoid the creation of an invalid document.

75.39.1801 kofFlattenLayers = & h00000080

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the constants for the Optimize function.
Notes: Flatten layers if any.

75.39.1802 kofIgnoreDeviceN = & h01000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: If set, DeviceN color spaces are left unchanged.

75.39.1803 kofIgnoreICCBased = 4

MBS DynaPDF Plugin, Plugin Version: 14.2.

Function: One of the constants for the Optimize function.
Notes: If set, ICCBased color spaces will be left unchanged.

75.39.1804 kofIgnoreNChannel = & h02000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: If set, NChannel color spaces are left unchanged.

75.39.1805 kofIgnoreSeparation = & h04000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: If set, Separation color spaces are left unchanged.

75.39.1806 kofIgnoreZeroLineWidth = & h00001000

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if the parameter MinLineWidth of the DynaPDFOptimizeParamsMBS class is greater zero. If set, ignore line width operators with a value of zero (zero means one device unit).

75.39.1807 kofInMemory = 1

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the constants for the Optimize function.
Notes: Optimize the file fully in memory. Only useful for small PDF files.

75.39.1808 kofNewLinkNames = 32

MBS DynaPDF Plugin, Plugin Version: 16.1.

Function: One of the constants for the Optimize function.
Notes: If set, rename all object links to short names like F1, F2 etc.

75.39.1809 kofNoFilterCheck = & h00008000

MBS DynaPDF Plugin, Plugin Version: 18.4.

Function: One of the constants for the Optimize function.
Notes: Meaningful only, if the flag ofCompressWithJBIG2 is set. If set, re-compress all 1 bit images, also if already compressed with JBIG2.

75.39.1810 kofNoImageSizeCheck = & h00000800

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if ofScaleImages is set. If set, do not check whether the scaled image is smaller as the original image.

75.39.1811 kofRemoveBatesNumbers = & h20000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: Remove bates numbers if any. The type BatesN can also contain headers / footers.

75.39.1812 kofRemoveHeaderFooter = & h40000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: Remove headers / footers if any. This type is set if no bates numbering was added.

75.39.1813 kofReplaceJP2KWithJPEG = & h00100000

MBS DynaPDF Plugin, Plugin Version: 19.3.

Function: One of the constants for the Optimize function.
Notes: Meaningful only, if the flag kofConvertToGray, kofConvertToRGB, or kofConvertToCMYK is set. If set, JPEG 2000 compressed images (which are converted to another color space) will be compressed with JPEG instead JPEG 2000. JPEG 2000 compression is very slow and requires much memory. JPEG compression is around 10 times faster and produces almost identical results.

75.39.1814 kofScaleImages = 8

MBS DynaPDF Plugin, Plugin Version: 14.2.

Function: One of the constants for the Optimize function.
Notes: Scale images as specified in the DynaPDFOptimizeParamsMBS class.

75.39.1815 kofSkipMaskedImages = 16

MBS DynaPDF Plugin, Plugin Version: 16.4.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if ofScaleImages is set. If set, don't scale images with a color mask.

75.39.1816 kofSkipOverprintedObj = & h10000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the constants for the Optimize function.
Notes: Meaningful only if a color conversion flag is set. If set, objects that would be rendered with enabled overprinting are left unchanged to avoid color errors on the page.

75.39.1817 kofUseOtsuFilter = & h00200000

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: Whether to use Otsu filter.
Notes:

Meaningfulonly, if the flag kofConvertGrayTo1Bit is set.
The Otsu filter is useful for gray scanned faxes.

75.39.1818 koiAll = 8

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object intent constants for CreateOCG.

75.39.1819 koiDesign = 2

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object intent constants for CreateOCG.

75.39.1820 koiEmpty = 16

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object intent constants for CreateOCG.
Notes: Internal (refers to koiView if used)

75.39.1821 koiView = 4

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object intent constants for CreateOCG.
Notes: Default.

75.39.1822 koiVisible = 32

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the object intent constants for CreateOCG.
Notes: Visible

75.39.1823 kooAnnotation = 0

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object type constants for AddObjectToLayer.
Notes: Handle is an annotation handle.

75.39.1824 kooField = 1

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object type constants for AddObjectToLayer.
Notes: Handle is a field handle.

75.39.1825 kooImage = 2

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object type constants for AddObjectToLayer.
Notes: Handle is a image handle.

75.39.1826 kooTemplate = 3

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the object type constants for AddObjectToLayer.
Notes: Handle is a template handle.

75.39.1827 korDownLeft = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the origin constants.

75.39.1828 korTopLeft = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the origin constants.

75.39.1829 kotAction = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Action

75.39.1830 kotAnnotation = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Annotation

75.39.1831 kotBookmark = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Bookmark

75.39.1832 kotCatalog = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Catalog. PDF 1.4

75.39.1833 kotField = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Field

75.39.1834 kotPage = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Page

75.39.1835 kotPageLink = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the object type constants.
Notes: Page Link.

75.39.1836 koucExport = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.
Notes: Export

75.39.1837 koucLanguage = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.
Notes: Language

75.39.1838 koucNone = 0

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.

75.39.1839 koucPrint = 4

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.
Notes: Print

75.39.1840 koucUser = 8

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.
Notes: User

75.39.1841 koucView = 16

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.
Notes: View

75.39.1842 koucZoom = 32

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the usage Categories which control the layer state.
Notes: Zoom

75.39.1843 kovAllOff = 0

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the visibility constants for CreateOCMD.
Notes: All Off

75.39.1844 kovAllOn = 1

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the visibility constants for CreateOCMD.
Notes: All On

75.39.1845 kovAnyOff = 2

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the visibility constants for CreateOCMD.
Notes: Any Off

75.39.1846 kovAnyOn = 3

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the visibility constants for CreateOCMD.
Notes: Any On

75.39.1847 kovNotSet = 4

MBS DynaPDF Plugin, Plugin Version: 10.5.

Function: One of the visibility constants for CreateOCMD.
Notes: Not Set

75.39.1848 kpbArtBox = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF box constants.
Notes: Art box.

75.39.1849 kpbBleedBox = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF box constants.
Notes: Bleed box.

75.39.1850 kpbCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF box constants.
Notes: Crop Box.

75.39.1851 kpbMediaBox = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF box constants.
Notes: Media Box.

75.39.1852 kpbTrimBox = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF box constants.
Notes: Trim Box.

75.39.1853 kpcBottomUp = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the page coordinates.

75.39.1854 kpcrHandClosed = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the cursor constants.

75.39.1855 kpcrHandNormal = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the cursor constants.

75.39.1856 kpcrHandPoint = 2

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the cursor constants.

75.39.1857 kpcrIBeam = 3

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the cursor constants.

75.39.1858 kpcTopDown = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the page coordinates.

75.39.1859 kPDF_ANNOT_INDEX = & h40000000

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: Special flag for GetPageFieldEx() to indicate that an annotation index was passed to the function.
Notes: See GetPageFieldEx() for further information.

75.39.1860 kPDF_AQUA = & h00FFFF00

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: aqua

75.39.1861 kPDF_BLACK = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: black

75.39.1862 kPDF_BLUE = & h00FF0000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: blue

75.39.1863 kPDF_CREAM = & h00F0FBFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: cream

75.39.1864 kPDF_DKGRAY = & h00808080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: dark gray

75.39.1865 kPDF_FUCHSIA = & h00FF00FF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: fuchsia

75.39.1866 kPDF_GRAY = & h00808080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: gray

75.39.1867 kPDF_GREEN = & h00008000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: green

75.39.1868 kPDF_LIME = & h0000FF00

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: lime

75.39.1869 kPDF_LIST_FONT = "Wingdings-Regular"

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: Default font to display the list symbol ->can be changed with SetListFont()

75.39.1870 kPDF_LIST_SEP_WIDTH = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: Default width between the list symbol and text (see WriteFText() in the help file for further information)

75.39.1871 kPDF_LTGRAY = & h00C0C0C0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: light gray

75.39.1872 kPDF_MAROON = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: maroon

75.39.1873 kPDF_MAX_INT = & h7FFFFFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: The maximum integer value.

75.39.1874 kPDF_MAX_LIST_COUNT = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: Maximum count of nested list levels (WriteFText())
Notes: Was 6, but got changed to 32 for DynaPDF version 4.0.28.81.

75.39.1875 kPDF_MEDGRAY = & h00A4A0A0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: medium gray

75.39.1876 kPDF_MOGREEN = & h00C0DCC0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: mogreen

75.39.1877 kPDF_NAVY = & h00800000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: navy

75.39.1878 kPDF_OLIVE = & h00008080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: olive

75.39.1879 kPDF_PURPLE = & h00800080

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: purple

75.39.1880 kPDF_RED = & h000000FF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: red

75.39.1881 kPDF_SILVER = & h00C0C0C0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: silver

75.39.1882 kPDF_SKYBLUE = & h00F0CAA6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: skyblue

75.39.1883 kPDF_TABLEN = 3

MBS DynaPDF Plugin, Plugin Version: 8.6.

Function: The default tab length.

75.39.1884 kPDF_TEAL = & h00808000

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: teal

75.39.1885 kPDF_WHITE = & h00FFFFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: white

75.39.1886 kPDF_YELLOW = & h0000FFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for basic RGB colors.
Notes: yellow

75.39.1887 kpeBackgroundImage = 0

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the possible pagination artefact for an optional content group.
Notes: Background image.

75.39.1888 kpeForegroundImage = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the possible pagination artefact for an optional content group.
Notes: Foreground Image.

75.39.1889 kpeHeaderFooter = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the possible pagination artefact for an optional content group.
Notes: Header or Footer

75.39.1890 kpeLogo = 3

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the possible pagination artefact for an optional content group.
Notes: Logo

75.39.1891 kpeNone = 4

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the possible pagination artefact for an optional content group.

75.39.1892 kpfConvImagesToCMYK = 64

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the PDF Parser constants.
Notes: Convert images to CMYK.

75.39.1893 kpfConvImagesToGray = 16

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the PDF Parser constants.
Notes: Convert images to grayscale.

75.39.1894 kpfConvImagesToRGB = 32

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the PDF Parser constants.
Notes: Convert images to RGB.

75.39.1895 kpfDecomprAllImages = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the parser flags.
Notes: This flag causes that all image formats will be decompressed with the exception of JBIG2 compressed images. If this flag is not set, images which are already stored in a valid image file format are returned as is. This is the case for RGB JPEG and JPEG2000 compressed images. If you want to extract the images of a PDF file this flag should be absent!

75.39.1896 kpfDIN_A0 = 20

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A0

75.39.1897 kpfDIN_A1 = 21

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A1

75.39.1898 kpfDIN_A10 = 27

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A10

75.39.1899 kpfDIN_A2 = 22

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A2

75.39.1900 kpfDIN_A3 = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A3

75.39.1901 kpfDIN_A4 = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A4

75.39.1902 kpfDIN_A5 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A5

75.39.1903 kpfDIN_A6 = 23

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A6

75.39.1904 kpfDIN_A7 = 24

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A7

75.39.1905 kpfDIN_A8 = 25

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A8

75.39.1906 kpfDIN_A9 = 26

MBS DynaPDF Plugin, Plugin Version: 18.5.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN A9

75.39.1907 kpfDIN_B4 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN B4

75.39.1908 kpfDIN_B5 = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN B5

75.39.1909 kpfDIN_B6 = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN B6

75.39.1910 kpfDIN_C3 = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN C3

75.39.1911 kpfDIN_C4 = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN C4

75.39.1912 kpfDIN_C5 = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN C5

75.39.1913 kpfDIN_C6 = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN C6

75.39.1914 kpfDIN_C65 = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN C65

75.39.1915 kpfDIN_DL = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN DL

75.39.1916 kpfDIN_E4 = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN E4

75.39.1917 kpfDIN_E5 = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN E5

75.39.1918 kpfDIN_E6 = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN E6

75.39.1919 kpfDIN_E65 = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN E65

75.39.1920 kpfDIN_M5 = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN M5

75.39.1921 kpfDIN_M65 = 17

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: DIN M65

75.39.1922 kpfDitherImagesToBW = 8

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the PDF Parser constants.
Notes: Floyd-Steinberg dithering.

75.39.1923 kpff1Bit = 1

MBS DynaPDF Plugin, Plugin Version: 15.1.

Function: One of the printing flags.
Notes: Print with 1 bit in black and white.

75.39.1924 kpffAllCap = & h00010000

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: All capitals font

75.39.1925 kpffAutoCenter = & h00000400

MBS DynaPDF Plugin, Plugin Version: 18.3.

Function: One of the printing flags.
Notes: Automatically scale the page to match printer context.

75.39.1926 kpffAutoRotate = & h00000200

MBS DynaPDF Plugin, Plugin Version: 18.3.

Function: One of the printing flags.
Notes: Automatically rotate the page to match printer context.

75.39.1927 kpffAutoRotateAndCenter = 4

MBS DynaPDF Plugin, Plugin Version: 15.1.

Function: One of the printing flags.
Notes:

Automatically rotate and scale the page to match printer context.
With newer versions you can use kpffAutoRotate and kpffAutoCenter separately.

75.39.1928 kpffColor = 2

MBS DynaPDF Plugin, Plugin Version: 15.1.

Function: One of the printing flags.
Notes: Print in color.

75.39.1929 kpffDefault = 0

MBS DynaPDF Plugin, Plugin Version: 15.1.

Function: One of the printing flags.
Notes: Default print settings.

75.39.1930 kpffFixedPitch = 1

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Fixed pitch

75.39.1931 kpffForceBold = & h00040000

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Bold required

75.39.1932 kpffItalic = 64

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Italic font

75.39.1933 kpffNoEndDoc = & h00000080

MBS DynaPDF Plugin, Plugin Version: 15.2.

Function: One of the printing flags.
Notes: Do not call EndDoc on Windows

75.39.1934 kpffNonSymbolic = 32

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Non symbolic font.

75.39.1935 kpffNoStartDoc = 32

MBS DynaPDF Plugin, Plugin Version: 15.2.

Function: One of the printing flags.
Notes: Do not call StartDoc on Windows

75.39.1936 kpffNoStartPage = 64

MBS DynaPDF Plugin, Plugin Version: 15.2.

Function: One of the printing flags.
Notes: Do not call StartPage on Windows

75.39.1937 kpffPrintAsImage = 8

MBS DynaPDF Plugin, Plugin Version: 15.1.

Function: One of the printing flags.
Notes: Print by rendering each page as image and drawing it in the graphics context.

75.39.1938 kpffPrintPageAsIs = & h00000100

MBS DynaPDF Plugin, Plugin Version: 17.2.

Function: One of the printing flags.
Notes: If set, do not scale or rotate a page to fit into the printable area.

75.39.1939 kpffScriptStyle = 8

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Font in script style.

75.39.1940 kpffSerifs = 2

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Serif font

75.39.1941 kpffShrinkToPrintArea = 16

MBS DynaPDF Plugin, Plugin Version: 15.1.

Function: One of the printing flags.
Notes: Shrink PDF to print area.

75.39.1942 kpffSmallCap = & h00020000

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Small Caps font

75.39.1943 kpffSymbolic = 4

MBS DynaPDF Plugin, Plugin Version: 20.2.

Function: One of the PDF font flag constants.
Notes: Symbolic font.

75.39.1944 kpfImageInfoOnly = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.2.

Function: One of the image import flags.
Notes: If set, images are not decompressed. This flag is useful if you want to enumerate the images of a PDF file or if you want to determine how many images are stored in it. Note that images can be compressed with multiple filters. The member Filter of the structure TPDFImage contains only the last filter with which the image was compressed. There is no indication whether multiple decode filters are required to decompress the image buffer. So, it makes no sense to set this flag if you want to try to decompress the image buffer manually with your own decode filters.

75.39.1945 kpfNoJPXDecode = 4

MBS DynaPDF Plugin, Plugin Version: 7.7.

Function: One of the PDF Parser constants.
Notes: Meaningful only if the flag pfDecomprAllImages is set. If set, JPEG2000 images are returned as is so that you can use your own library to decompress such images since the the entire JPEG2000 codec is still marked as experimental. If we find an alternative to the currently used Jasper library then we will replace it immediatly with another one...

75.39.1946 kpfNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Parser constants.

75.39.1947 kpfUS_Legal = 18

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: US Legal

75.39.1948 kpfUS_Letter = 19

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF page format constants for SetPageFormat.
Notes: US Letter

75.39.1949 kplDefault = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page layout constants.
Notes: Use viewer's default settings

75.39.1950 kplfDecimalArabic = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Page Label Format constants.
Notes: 1,2,3,4...

75.39.1951 kplfLowercaseLetters = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Page Label Format constants.
Notes: a,b,c,d...

75.39.1952 kplfLowercaseRoman = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Page Label Format constants.
Notes: i,ii,iii,iv...

75.39.1953 kplfNone = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Page Label Format constants.

75.39.1954 kplfUppercaseLetters = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Page Label Format constants.
Notes: A,B,C,D...

75.39.1955 kplfUppercaseRoman = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Page Label Format constants.
Notes: I,II,III,IV...

75.39.1956 kplOneColumn = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page layout constants.

75.39.1957 kplSinglePage = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page layout constants.

75.39.1958 kplTwoColumnLeft = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page layout constants.

75.39.1959 kplTwoColumnRight = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page layout constants.

75.39.1960 kplTwoPageLeft = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page layout constants.
Notes: PDF 1.5

75.39.1961 kplTwoPageRight = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page layout constants.
Notes: PDF 1.5

75.39.1962 kpmFullScreen = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page mode constants.

75.39.1963 kpmUseAttachments = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page mode constants.
Notes: PDF 1.6

75.39.1964 kpmUseNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page mode constants.

75.39.1965 kpmUseOC = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page mode constants.
Notes: PDF 1.5

75.39.1966 kpmUseOutlines = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page mode constants.

75.39.1967 kpmUseThumbs = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the page mode constants.

75.39.1968 kpsAppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the print scaling flag constants.

75.39.1969 kpsFitBest = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: Scale the page so that it fits fully into the image buffer.

75.39.1970 kpsFitHeight = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: Scale the page to the height of the image buffer.

75.39.1971 kpsFitWidth = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: Scale the page to the width of the image buffer.

75.39.1972 kpsFitZoom = 3

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: This mode must be used if the scaling factors of the transformation matrix are <>1.0

75.39.1973 kpsNone = 1

MBS DynaPDF Plugin, Plugin Version: 8.7.

Function: One of the print scaling flag constants.

75.39.1974 kpt3DOrthographic = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for 3D projection types.
Notes: Orthographic

75.39.1975 kpt3DPerspective = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for 3D projection types.
Notes: Perspective

75.39.1976 kptColored = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the pattern type constants.

75.39.1977 kptConvertPage = 3

MBS DynaPDF Plugin, Plugin Version: 21.1.

Function: One of the DynaPDF constants for the progtype parameter in the progress event.
Notes: Start converting the PDF file (Optimize(), CheckConformance())

75.39.1978 kptDontCopyBuf = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for password type to pass when opening files.
Notes: If set, OpenImportBuffer() does not copy the PDF buffer to an internal buffer. This increases the processing speed and reduces the memory usage. The PDF buffer must not be released until CloseImportFile() or CloseFile() was called.

75.39.1979 kptForceRepair = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for password type to pass when opening files.
Notes: Meaningful only when opening a PDF file with OpenImportFile() or OpenImportBuffer(). If set, the PDF parser rebuilds the cross-reference table by scanning all the objects in the file. This can be useful if the cross-reference table contains damages while the top level objects are intact. Setting this flag makes only sence if the file was already previously opened in normal mode and if errors occured when importing pages of it.

75.39.1980 kptImportPage = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the progtype parameter in the progress event.
Notes: This value is for: Start page import

75.39.1981 kptOpen = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for password type to pass when opening files.
Notes: No password.

75.39.1982 kptOwner = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for password type to pass when opening files.
Notes: Owner password provided.

75.39.1983 kptPrintPage = 2

MBS DynaPDF Plugin, Plugin Version: 15.2.

Function: One of the DynaPDF constants for the progtype parameter in the progress event.
Notes: Progress for printing a page.

75.39.1984 kptShadingPattern = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the pattern type constants.

75.39.1985 kptUnColored = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the pattern type constants.

75.39.1986 kptWritePage = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for the progtype parameter in the progress event.
Notes: This value is for: Start writing a page to file or buffer

75.39.1987 kpvFacturX_Basic = & h00100000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the PDF Version constants.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Factur-X Basic
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvFacturX_Basic)
```

Notes: Basic profile for FacturX.

75.39.1988 kpvFacturX_Basic_WL = & h00200000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the PDF Version constants.
Notes: Basic WL profile for FacturX.

75.39.1989 kpvFacturX_Comfort = & h00400000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the PDF Version constants.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Factur-X Comfort
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvFacturX_Comfort)
```

Notes: Comfort profile for FacturX.

75.39.1990 kpvFacturX_Extended = & h00800000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the PDF Version constants.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Factur-X Extended
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvFacturX_Extended)
```

Notes: Extended profile for FacturX.

75.39.1991 kpvFacturX_Mask = & h02F80000

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the PDF Version constants.
Notes:

Mask for all FacturX variants.
Contains kpvFacturX_Minimum, kpvFacturX_Basic, kpvFacturX_Basic_WL, kpvFacturX_Comfort, kpvFacturX_Extended and kpvFacturX_XRechnung,

75.39.1992 kpvFacturX_Minimum = & h00080000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the PDF Version constants.
Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Factur-X Minimum
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvFacturX_Minimum)
```

Notes: Minimum profile for FacturX.

75.39.1993 kpvPDFA_1a = 16

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the PDF Version constants.
Notes: PDF/A 1a

75.39.1994 kpvPDFA_2005 = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF/A-1b 2005

75.39.1995 kpvPDFA_2a = 17

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the PDF Version constants.
Notes: PDF/A 2a

75.39.1996 kpvPDFA_2b = 18

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the PDF Version constants.
Notes: PDF/A 2b

75.39.1997 kpvPDFA_2u = 19

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the PDF Version constants.
Notes: PDF/A 2u

75.39.1998 kpvPDFA_3a = 20

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the PDF Version constants.
Notes: PDF/A 3a

75.39.1999 kpvPDFA_3b = 21

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the PDF Version constants.
Notes: PDF/A 3b

75.39.2000 kpvPDFA_3u = 22

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the PDF Version constants.
Notes: PDF/A 3u

75.39.2001 kpvPDFX1a_2001 = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF/X-1a:2001

75.39.2002 kpvPDFX1a_2003 = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF/X-1a:2003

75.39.2003 kpvPDFX3_2002 = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF/X-3:2002

75.39.2004 kpvPDFX3_2003 = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF/X-3:2003

75.39.2005 kpvPDFX_4 = 15

MBS DynaPDF Plugin, Plugin Version: 13.0.

Function: One of the PDF Version constants.
Notes: PDF/X-4

75.39.2006 kpvPDF_1_0 = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF 1.0

75.39.2007 kpvPDF_1_1 = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF 1.1

75.39.2008 kpvPDF_1_2 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF 1.2

75.39.2009 kpvPDF_1_3 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF 1.3

75.39.2010 kpvPDF_1_4 = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF 1.4

75.39.2011 kpvPDF_1_5 = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF 1.5

75.39.2012 kpvPDF_1_6 = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF 1.6

75.39.2013 kpvPDF_1_7 = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the PDF Version constants.
Notes: PDF 1.7

75.39.2014 kpvPDF_2_0 = 8

MBS DynaPDF Plugin, Plugin Version: 13.0.

Function: One of the PDF Version constants.
Notes: PDF 2.0

75.39.2015 kpvZUGFeRD2_Flag = & h01000000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the PDF Version constants.
Notes: The flag to indicate it is a ZUGFeRD PDF and not FacturX.

75.39.2016 kpvZUGFeRD_Basic = & h00010000

MBS DynaPDF Plugin, Plugin Version: 16.3.

Function: One of the PDF Version constants.
Notes:

ZUGFeRD Basic level.
This constant are flags which can be combined with kpvPDFA_3a, kpvPDFA_3b, and kpvPDFA_3u. If used stand alone PDF/A 3b with the correspondig ZUGFeRD metadata will be created.

75.39.2017 kpvZUGFeRD_Comfort = & h00020000

MBS DynaPDF Plugin, Plugin Version: 16.3.

Function: One of the PDF Version constants.
Notes:

ZUGFeRD Comfort level.
This constant are flags which can be combined with kpvPDFA_3a, kpvPDFA_3b, and kpvPDFA_3u. If used stand alone PDF/A 3b with the correspondig ZUGFeRD metadata will be created.

75.39.2018 kpvZUGFeRD_Extended = & h00040000

MBS DynaPDF Plugin, Plugin Version: 16.3.

Function: One of the PDF Version constants.
Notes:

ZUGFeRD Extended level.
This constant are flags which can be combined with kpvPDFA_3a, kpvPDFA_3b, and kpvPDFA_3u. If used stand alone PDF/A 3b with the correspondig ZUGFeRD metadata will be created.

75.39.2019 kpvZUGFeRD_Mask = & h00070000

MBS DynaPDF Plugin, Plugin Version: 16.3.

Function: One of the PDF Version constants.
Notes: The mask to bitwise AND the value and get the ZUGFeRD part.

75.39.2020 kpxf1Bit = 0

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: 1 bit per pixel black and white.

75.39.2021 kpxfABGR = 7

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: ABGR.

75.39.2022 kpxfARGB = 6

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: ARGB

75.39.2023 kpxfBGR = 3

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: BGR

75.39.2024 kpxfBGRA = 5

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: BGRA

75.39.2025 kpxfCMYK = 9

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the pixel format constants.
Notes: CMYK without alpha

75.39.2026 kpxfCMYKA = 10

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the pixel format constants.
Notes: CMYK with alpha

75.39.2027 kpxfGray = 1

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: 8 bit grayscale.

75.39.2028 kpxfGrayA = 8

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the pixel format constants.
Notes: 8 bit grayscale with alpha.

75.39.2029 kpxfRGB = 2

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: RGB

75.39.2030 kpxfRGBA = 4

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: RGBA

75.39.2031 krfClipBoxMask = 28

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: The mask for Clip flags.

75.39.2032 krfClipToArtBox = 4

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes:

Clip the page to the art box if any.

Only one of these clip flags must be set at time!

75.39.2033 krfClipToBleedBox = 8

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes:

Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

75.39.2034 krfClipToTrimBox = 16

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes:

Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

75.39.2035 krfCompositeWhite = & h00001000

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the raster flag constants.
Notes: Composite pixel formats with an alpha channel finally with a white background. The alpha channel is 255 everywhere after composition. This flag is mainly provided for debug purposes but it can also be useful if the image must be copied on screen with a function that doesn't support alpha blending.

75.39.2036 krfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Render the page as usual

75.39.2037 krfDisableAAClipping = & h00200000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable Anti-Aliasing for clipping paths. This flag is the most important one since clipping paths cause often visible artefacts in PDF files with flattened transparency.

75.39.2038 krfDisableAAText = & h00400000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable Anti-Aliasing for text.

75.39.2039 krfDisableAAVector = & h00800000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable Anti-Aliasing for vector graphics.

75.39.2040 krfDisableAntiAliasing = & h00E00000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Combination of krfDisableAAVector, krfDisableAAText and krfDisableAAClipping.

75.39.2041 krfDisableBiLinearFilter = & h01000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable the BiLevel filter for images. Sometetimes useful if sharp images are needed, e.g. for barcodes.

75.39.2042 krfExclAnnotations = 32

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Don't render annotations.

75.39.2043 krfExclButtons = & h00004000

MBS DynaPDF Plugin, Plugin Version: 14.4.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude buttons. If all fields should be skipped then set the flag rfExclFormFields instead.

75.39.2044 krfExclCheckBoxes = & h00008000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude checkboxes. If all fields should be skipped then set the flag rfExclFormFields instead.

75.39.2045 krfExclComboBoxes = & h00010000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox. If all fields should be skipped then set the flag rfExclFormFields instead.

75.39.2046 krfExclFormFields = 64

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Don't render form fields.

75.39.2047 krfExclListBoxes = & h00020000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude listbox. If all fields should be skipped then set the flag rfExclFormFields instead.

75.39.2048 krfExclPageContent = & h00002000

MBS DynaPDF Plugin, Plugin Version: 14.4.

Function: One of the raster flag constants.
Notes: If set, only annotations and form fields will be rendered (if any).

75.39.2049 krfExclSigFields = & h00080000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude signature fields.

If all fields should be skipped then set the flag rfExclFormFields instead.

75.39.2050 krfExclTextFields = & h00040000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude text fields. If all fields should be skipped then set the flag rfExclFormFields instead.

75.39.2051 krfIgnoreCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Ignore the crop box and render anything inside the media box without clipping.

75.39.2052 krfInitBlack = & h00000800

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the raster flag constants.
Notes: Initialize the image buffer to black before rendering (RGBA or GrayA must be initialized to black)

75.39.2053 krfRenderInvisibleText = & h02000000

MBS DynaPDF Plugin, Plugin Version: 18.2.

Function: One of the raster flag constants.
Notes: If set, treat text rendering mode Invisible as Normal.

75.39.2054 krfRotate180 = & h00000200

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Rotate the page 180 degress.

75.39.2055 krfRotate270 = & h00000400

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Rotate the page 270 degress.

75.39.2056 krfRotate90 = & h00000100

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Example:

```
dim pdf as new DynaPDFMBS // make subclass to catch error event

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")

// create PDF
call pdf.CreateNewPDF(nil)
// set import flags
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open import file
call pdf.OpenImportFile(f, 0, "")

// import all pdf pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

dim PageCount as Integer = pdf.GetPageCount

// create rasterizer.
dim r as new DynaPDFRasterizerMBS(pdf, 1000,1000)

// create options
dim o as new DynaPDFRasterImageMBS

// fill white
o.InitWhite = true

// scale to fit
o.DefScale = o.kpsFitBest

// rotate
o.Flags = o.krfRotate90

// render all pages
```

```
for i as Integer = 1 to PageCount

dim p as DynaPDFPageMBS = pdf.GetPage(i)
if r.RenderPage(p, o) then
// save to disc
dim outfile as FolderItem = SpecialFolder.Desktop.Child("page "+Format(i,"0")+".jpg")
call outfile.SaveAsJPEGMBS(r.Pic, 75)
end
next
```

Notes: Rotate the page 90 degress.

75.39.2057 krfScaleToBBox = & h00100000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Meaningful only, if rfClipToArtBox, rfClipToBleedBox, or rfClipToTrimBox is set. If set, the picture size is set to the size of the whished bounding box.

75.39.2058 krfScaleToMediaBox = 1

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Render the real paper format. Contents outside the crop box is clipped.

75.39.2059 krfSkipUpdateBG = & h00000080

MBS DynaPDF Plugin, Plugin Version: 12.2.

Function: One of the raster flag constants.
Notes: Don't generate an update event after initializing the background to white.

75.39.2060 kriAbsoluteColorimetric = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the rendering intent constants.

75.39.2061 krifByteAligned = & h00001000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the flags for adding raw images.

75.39.2062 krifCMYKData = & h00004000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the flags for adding raw images.

75.39.2063 krifRGBData = & h00002000

MBS DynaPDF Plugin, Plugin Version: 10.1.

Function: One of the flags for adding raw images.

75.39.2064 kriPerceptual = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the rendering intent constants.

75.39.2065 kriRelativeColorimetric = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the rendering intent constants.

75.39.2066 kriSaturation = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the rendering intent constants.

75.39.2067 krmBoundingBox = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

75.39.2068 krmHiddenWireframe = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D rendering mode.

Function: One of the submit flag constants for CreateSubmitAction.

75.39.2118 ksfInclAppSaves = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the submit flag constants for CreateSubmitAction.
Notes: Requires the full version of Adobe's Acrobat

75.39.2119 ksfInclNoValFields = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the submit flag constants for CreateSubmitAction.

75.39.2120 ksfNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the submit flag constants for CreateSubmitAction.
Notes: The default export format is FDF

75.39.2121 ksfPDF = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the submit flag constants for CreateSubmitAction.
Notes: Submit the entire PDF file ->requires the full version of Adobe's Acrobat.

75.39.2122 ksfSubmCoords = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the submit flag constants for CreateSubmitAction.

75.39.2123 ksfXML = 36

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the submit flag constants for CreateSubmitAction.

75.39.2124 ksmFamilyName = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font selection modes.

75.39.2125 ksmFullName = 2

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the DynaPDF constants for font selection modes.
Notes: Full name.

75.39.2126 ksmPostScriptName = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for font selection modes.
Notes:

If font selection mode is set to smPostScriptName the font styles fsItalic or fsBold are ignored.
The PostScriptName is already a unique font name incl. style information.

75.39.2127 ksmtAlpha = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the soft mask constants.
Notes: Alpha mode.

75.39.2128 ksmtLuminosity = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the soft mask constants.
Notes: Luminosity mode.

75.39.2129 kspcDefault = 0

MBS DynaPDF Plugin, Plugin Version: 13.4.

Function: One of the constants for ConvertEMFSpool.
Notes: Default flags.

75.39.2130 kspcDontAddMargins = 2

MBS DynaPDF Plugin, Plugin Version: 13.4.

Function: One of the constants for ConvertEMFSpool.
Notes: If set, the page format is calculated from the EMF files as is. The current page format is not used to calculate margins which are maybe required. Note that the parameters LeftMargin and TopMargin will still be considered.

75.39.2131 kspcFlushPages = 8

MBS DynaPDF Plugin, Plugin Version: 13.4.

Function: One of the constants for ConvertEMFSpool.
Notes: If set, the function writes every finish page directly to the output file to reduce the memory usage. This flag is meaningful only if the PDF file is not created in memory. Note also that it is not possible to access already flushed pages again with EditPage().

75.39.2132 kspcIgnorePaperFormat = 1

MBS DynaPDF Plugin, Plugin Version: 13.4.

Function: One of the constants for ConvertEMFSpool.
Notes: If set, the current page format is used as is for the entire spool file.

75.39.2133 kspcLoadSpoolFontsOnly = 4

MBS DynaPDF Plugin, Plugin Version: 13.4.

Function: One of the constants for ConvertEMFSpool.
Notes: If set, only embedded fonts will be loaded. The EMF files must be converted with the flag mfIgnoreEmbFonts in this case. This flag can be useful if you want to use your own code to convert the EMF files of the spool file.

75.39.2134 kspCross = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Standard Pattern Constants.

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D scale type.

75.39.2144 kst3DWidth = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the DynaPDF constants for a 3D scale type.

75.39.2145 kstAxial = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

75.39.2146 kstCoonsPatch = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

75.39.2147 kstFreeFormGouraud = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

75.39.2148 kstFunctionBased = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

75.39.2149 kstLatticeFormGouraud = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

75.39.2150 kstRadial = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

75.39.2151 kstTensorProduct = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the shading type constants.

75.39.2152 ktaCenter = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for the text alignment.
Notes: Center

75.39.2153 ktaJustify = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for the text alignment.
Notes: Justify

75.39.2154 ktaLeft = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for the text alignment.
Notes: Left

75.39.2155 ktaPlainText = & h10000000

MBS DynaPDF Plugin, Plugin Version: 19.2.

Function: One of the constants for the text alignment.
Notes: Added to alignment flag to tell WriteFText to not interpret escape commands.

75.39.2156 ktaRight = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for the text alignment.
Notes: Right

75.39.2157 ktefDefault = 0

MBS DynaPDF Plugin, Plugin Version: 18.0.

Function: One of the text extraction flags.
Notes: Create text lines in the original order.

75.39.2158 ktefDeleteOverlappingText = 4

MBS DynaPDF Plugin, Plugin Version: 18.0.

Function: One of the text extraction flags.
Notes: Delete duplicate text records on same position.

75.39.2159 ktefSortTextX = 1

MBS DynaPDF Plugin, Plugin Version: 18.0.

Function: One of the text extraction flags.
Notes: Sort text records in x-direction.

75.39.2160 ktefSortTextXY = 3

MBS DynaPDF Plugin, Plugin Version: 18.0.

Function: One of the text extraction flags.
Notes: Sort text records in x and y-direction.

75.39.2161 ktefSortTextY = 2

MBS DynaPDF Plugin, Plugin Version: 18.0.

Function: One of the text extraction flags.
Notes: Sort text records in y-direction.

75.39.2162 ktoAnnots = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the Tab Order constants.
Notes: Annotation order ->PDF 1.7 Extension Level 3

75.39.2163 ktoColumn = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Tab Order constants.
Notes: Column.

75.39.2164 ktoFields = 5

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the Tab Order constants.
Notes: Widget order (Form Fields) ->PDF 1.7 Extension Level 3.

75.39.2165 ktoNone = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Tab Order constants.

75.39.2166 ktoRow = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Tab Order constants.
Notes: Row.

75.39.2167 ktoStructure = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the constants for the tab order.
Notes: Structure

75.39.2168 kTRANSP_3D_ANNOT = & h40000000

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the annotation flags.
Notes:

This flag can be combined with the annotation handle in Set3DAnnotProps().

3D Annotations with a transparent background are supported since PDF 1.7, Extension Level 3

75.39.2169 kttConstSpacing = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Tiling Type Constants.

75.39.2170 kttFastConstSpacing = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Tiling Type Constants.

75.39.2171 kttNoDistortion = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

Function: One of the Tiling Type Constants.

75.39.2172 kusbCursorHandClosed = 32

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes:

Occurs when the cursor leaves an action field and if the left mouse button is pressed.
The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.

75.39.2173 kusbCursorHandNormal = 16

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes:

This is the default if the left mouse button is not pressed and if we are not over an action field.
The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.

75.39.2174 kusbCursorHandPoint = 64

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes:

Occurs when we enter link or button field.
The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.

75.39.2175 kusbCursorIBeam = & h00000080

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes:

Occurs when we enter an action field that accepts text input.
The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.

75.39.2176 kusbCursorMask = & h0003FFF0

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes: Bitmask to mask out the cursor constants.

75.39.2177 kusbHorzRange = 4

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the scrollbar update constants.
Notes: Update the horizontal scroll range.

75.40 class DynaPDFMeasureMBS

75.40.1 class DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a measure dictionary.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.40.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

75.40.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

75.40.4 Methods

75.40.5 Angles as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array to measure angles.

75.40.6 Area as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array to measure areas.

75.40.7 Bounds as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of numbers taken pairwise to describe the bounds for which geospatial transforms are valid.

75.40.8 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.40.9 Distance as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array to measure distances.

75.40.10 GPTS as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Required, an array of numbers that shall be taken pairwise, defining points in geographic space as degrees of latitude and longitude, respectively.

75.40.11 LPTS as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, an array of numbers that shall be taken pairwise to define points in a 2D unit square.

75.40.12 Slope as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array for measurement of the slope of a line.

75.40.13 X as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array for measurement of change along the x-axis and, if Y is not present, along the y-axis as well.

75.40.14 Y as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number format array for measurement of change along the y-axis.

75.40.15 Properties

75.40.16 AnglesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

75.40.17 AreaCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

75.40.18 BoundCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes:

Should be a multiple of two.
(Read and Write property)

75.40.19 CXY as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, meaningful only when Y is present.
Notes: (Read and Write property)

75.40.20 DCS_EPSG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, either EPSG or WKT is set.
Notes: (Read and Write property)

75.40.21 DCS_IsSet as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the DCS members are set.
Notes: (Read and Write property)

75.40.22 DCS_Projected as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the DCS values contains a pojected coordinate system.
Notes: (Read and Write property)

75.40.23 DCS_WKT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional ASCII string.
Notes: (Read and Write property)

75.40.24 DistanceCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

75.40.25 GCS_EPSG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, either EPSG or WKT is set.
Notes: (Read and Write property)

75.40.26 GCS_Projected as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the GCS values contains a pojected coordinate system.
Notes: (Read and Write property)

75.40.27 GCS_WKT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional ASCII string.
Notes: (Read and Write property)

75.40.28 GPTSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read and Write property)

75.40.29 IsRectilinear as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the members of the rectilinear measure dictionary are set.
Notes:

The geospatial members otherwise.
(Read and Write property)

75.40.30 LPTSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read and Write property)

75.40.31 OriginX as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Origin of the measurement coordinate system.
Notes: (Read and Write property)

75.40.32 OriginY as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Origin of the measurement coordinate system.
Notes: (Read and Write property)

75.40.33 PDU1 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional preferred linear display units.
Notes: (Read and Write property)

75.40.34 PDU2 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional preferred area display units.
Notes: (Read and Write property)

75.40.35 PDU3 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional preferred angular display units.
Notes: (Read and Write property)

75.40.36 R as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A text string expressing the scale ratio of the drawing.
Notes: (Read and Write property)

75.40.37 SlopeCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

75.40.38 XCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

75.40.39 YCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of objects in the array.
Notes: (Read and Write property)

75.41 class DynaPDFMissingFunctionExceptionMBS

75.41.1 class DynaPDFMissingFunctionExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception for a missing function.
Notes:

Only used when DynaPDF library is loaded manually and is an older version and missing a function.
Subclass of the RuntimeException class.

75.42 class DynaPDFMovieActionMBS

75.42.1 class DynaPDFMovieActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a movie action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.42.2 Methods

75.42.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.42.4 FWPosition(index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position.
Notes: Index from 0 to 1.

75.42.5 FWScale(index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scaling.
Notes: Index from 0 to 1.

75.42.6 Properties

75.42.7 Annot as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional. The movie annotation handle identifying the movie that shall be played.
Notes:

Either Annot or Title should be set, but not both.
(Read only property)

75.42.8 Mode as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mode.
Notes: (Read only property)

75.42.9 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes:

-1 or next action handle to be executed if any
(Read only property)

75.42.10 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

Only set if NextAction is >= 0.
(Read only property)

75.42.11 Operation as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Operation.
Notes: (Read only property)

75.42.12 Rate as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The playback rate.
Notes: (Read only property)

75.42.13 ShowControls as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to show controls.
Notes: (Read only property)

75.42.14 Synchronous as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Synchronous flag.
Notes: (Read only property)

75.42.15 Title as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title of a movie annotation that shall be played.
Notes:

Either Annot or Title should be set, but not both.
(Read only property)

75.42.16 Volume as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The volume.
Notes: (Read only property)

75.43 class DynaPDFNamedActionMBS

75.43.1 class DynaPDFNamedActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a named action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.43.2 Methods

75.43.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.43.4 Properties

75.43.5 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the action.
Notes:

Only set if Type = knaUserDefined.
(Read only property)

75.43.6 NewWindow as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to show in a new window or not.
Notes:

-1 = viewer default, 0 = false, 1 = true.
(Read only property)

75.43.7 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes:

-1 or next action handle to be executed if any
(Read only property)

75.43.8 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

Only set if NextAction is >= 0.
(Read only property)

75.43.9 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Known pre-defined actions.
Notes:

See kna* constants.
(Read only property)

75.44 class DynaPDFNamedDestMBS

75.44.1 class DynaPDFNamedDestMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the Named Destination.

75.44.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

75.44.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

75.44.4 Properties

75.44.5 DestFile as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Notes: (Read only property)

75.44.6 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination page.
Notes: (Read only property)

75.44.7 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination position.
Notes: (Read only property)

75.44.8 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination type.
Notes:

Values can be a kdt* constant.
(Read only property)

75.44.9 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of that destination.
Notes:

This string is either Unicode or ANSI encoded.
(Read only property)

75.45 class DynaPDFNotInitializedExceptionMBS

75.45.1 class DynaPDFNotInitializedExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An exception for the case a function is called and the library is not initialized.
Notes:

Should only happen on the unsupported platforms.
Subclass of the RuntimeException class.

75.46 class DynaPDFNumberFormatMBS

75.46.1 class DynaPDFNumberFormatMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a number format.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.46.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

75.46.4 Methods

75.46.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.46.6 Properties

75.46.7 C as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The conversion factor used to multiply a value in partial units.
Notes: (Read and Write property)

75.46.8 D as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A positive integer that shall specify the precision or denominator of a fractional amount.
Notes: (Read and Write property)

75.46.9 F as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number format.
Notes:

can be kmnfDecimal, kmnfFractional, kmnfRound or kmnfTruncate.
(Read and Write property)

75.46.10 FD as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, a fractional value formatted according to the D entry may not have its denominator reduced or low-order zeros truncated.
Notes: (Read and Write property)

75.46.11 O as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The label position.
Notes:

Can be kmlpSuffix or kmlpPrefix.
(Read and Write property)

75.46.12 PS as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text to be concatenated to the left of the label specified by U.
Notes: (Read and Write property)

75.46.13 RD as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text for the decimal position in displaying numerical values.
Notes: (Read and Write property)

75.46.14 RT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text to be used between orders of thousands in display of numerical values.
Notes: (Read and Write property)

75.46.15 SS as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text that shall be concatenated after the label specified by U.
Notes: (Read and Write property)

75.46.16 U as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Label, should be a universally recognized abbreviation.
Notes: (Read and Write property)

75.46.17 Constants

75.46.18 kmlpPrefix = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the label position constants.
Notes: Prefix

75.46.19 kmlpSuffix = 0

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the label position constants.
Notes: Suffix

75.46.20 kmnfDecimal = 0

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the number formats.
Notes: Decimal

75.46.21 kmnfFractional = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the number formats.
Notes: Fractional

75.46.22 kmnfRound = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the number formats.
Notes: Round

75.46.23 kmnfTruncate = 3

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the number formats.
Notes: Truncate

75.47 class DynaPDFObjActionsMBS

75.47.1 class DynaPDFObjActionsMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an object action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.47.4 Methods

75.47.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.47.6 Properties

75.47.7 Action as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the action.
Notes:

-1 or action handle to be executed if any
(Read only property)

75.47.8 ActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the action.
Notes:

Only set if Action is >= 0.
(Read only property)

75.47.9 Events as DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Additional events if any.
Notes: (Read only property)

75.48 class DynaPDFObjEventMBS

75.48.1 class DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class with information about an object event.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.48.2 Methods

75.48.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.48.4 Properties

75.48.5 Action as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Action to be executed.
Notes: (Read only property)

75.48.6 ActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the action.
Notes:

See kat* constants.
(Read only property)

75.48.7 NextObject as DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pointer to the next event if any.
Notes: (Read only property)

75.48.8 ObjEvent as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event when the action should be executed.
Notes:

See koe* constants.
(Read only property)

75.49 class DynaPDFOCGContUsageMBS

75.49.1 class DynaPDFOCGContUsageMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for content usage properties of an optional layer.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.49.4 Methods

75.49.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.49.6 Properties

75.49.7 ExportState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The export state.
Notes:

0 = Off, 1 = On, PDF_MAX_INT = not set (2147483647)
(Read and Write property)

75.49.8 InfoCreator as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The application that created the group.
Notes: (Read and Write property)

75.49.9 InfoSubtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A name defining the type of content, e.g. Artwork, Technical etc.
Notes: (Read and Write property)

75.49.10 LangPreferred as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The preffered state if there is a partial but no exact match of the lang id.
Notes:

0 = Off, 1 = On, PDF_MAX_INT (2147483647) = not set.
(Read and Write property)

75.49.11 Language as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A language code as described at DynaPDFMBS.SetLanguage.
Notes: (Read and Write property)

75.49.12 PageElement as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the group contains a pagination artefact.
Notes: (Read and Write property)

75.49.13 PrintState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The print state.
Notes:

0 = Off, 1 = On, PDF_MAX_INT = not set (2147483647).
(Read and Write property)

75.49.14 PrintSubtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of content that is controlled by the OCG, e.g. Trapping, PrintersMarks or Watermark.
Notes: (Read and Write property)

75.49.15 UserNamesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user names can be accessed with GetOCGUsageUserName.
Notes: (Read and Write property)

75.49.16 UserType as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user for whom the OCG is primarily intendet.
Notes:

Can be kutIndividual, kutOrganization, kutTitle or kutNotSet. (constants defined in DynaPDFMBS)
(Read and Write property)

75.49.17 ViewState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The view state.
Notes:

0 = Off, 1 = On, PDF_MAX_INT (2147483647) = not set
(Read and Write property)

75.49.18 ZoomMax as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum zoom factor at which the OCG should be On.
Notes:

-1 = not set
(Read and Write property)

75.49.19 ZoomMin as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum zoom factor at which the OCG should be On.
Notes:

-1 = not set
(Read and Write property)

75.50 class DynaPDFOCGMBS

75.50.1 class DynaPDFOCGMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details ob OCG layers.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.50.2 Methods

75.50.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.50.4 Properties

75.50.5 AppEvents as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If non-zero, the layer is included in one or more app events which control the layer state.
Notes:

Only valid if HaveContUsage is true.
see TOCAppEvent constants: kaeExport, kaePrint and kaeView. (constants defined in DynaPDFMBS)
(Read and Write property)

75.50.6 Categories as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Usage Categories which control the layer state.
Notes:

Only valid if HaveContUsage is true.
See UsageCategory constants: koucNone, koucExport, koucLanguage, koucPrint, koucUser, koucView or oucZoom. (constants defined in DynaPDFMBS)
(Read and Write property)

75.50.7 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

75.50.8 HaveContUsage as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the layer contains a Content Usage dictionary.
Notes:

see GetOCGContUsage function.
(Read and Write property)

75.50.9 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The intent.
Notes:

See intent enumeration. Can be koiDesign, koiView, koiAll or koiEmpty. (constants defined in DynaPDFMBS)
(Read and Write property)

75.50.10 IsAll as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiAll.
Notes: (Read only property)

75.50.11 IsDesign as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiDesign.
Notes: (Read only property)

75.50.12 IsEmpty as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiEmpty.
Notes: (Read only property)

75.50.13 IsView as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiView.
Notes: (Read only property)

75.50.14 IsVisible as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An accessor for intent state koiVisible.
Notes: (Read only property)

75.50.15 Name as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The layer name.
Notes: (Read and Write property)

75.51 class DynaPDFOCLayerConfigMBS

75.51.1 class DynaPDFOCLayerConfigMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an optional content layer configuration.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.51.2 Blog Entries

- MBS Xojo Plugins, version 17.5pr3

75.51.4 Methods

75.51.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.51.6 Properties

75.51.7 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The object intent.
Notes:

Possible values koiDesign, koiView, or koiAll.
(Read only property)

75.51.8 IsDefault as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, this is the default configuration.
Notes: (Read only property)

75.51.9 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional configuration name.
Notes: (Read only property)

75.51.10 NameLen as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length in characters.
Notes: (Read only property)

75.52 class DynaPDFOCUINodeMBS

75.52.1 class DynaPDFOCUINodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an optional content user interface node.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.52.2 Blog Entries

- MBS Xojo Plugins, version 17.5pr3

75.52.3 Blog Entries

- MBS Xojo Plugins, version 17.5pr3

75.52.4 Methods

75.52.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.52.6 Properties

75.52.7 Label as String

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional label.
Notes: (Read only property)

75.52.8 LabelLength as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Label Length in characters.
Notes: (Read only property)

75.52.9 NewNode as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, a new child node must be created.
Notes: (Read only property)

75.52.10 NextChild as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set, the next child node that must be loaded.
Notes: (Read only property)

75.52.11 NextItem as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next item handle in the list.
Notes: (Read only property)

75.52.12 OCG as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional OCG handle.
Notes:

-1 if not set. See GetOCG method.
(Read only property)

75.53 class DynaPDFOptimizeParamsMBS

75.53.1 class DynaPDFOptimizeParamsMBS

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for optimize parameters.
Example:

```
dim o as new DynaPDFOptimizeParamsMBS

o.MinColorRes = 100 // scale colored images with more than 100 dpi
o.ResColorImages = 150 // down to 150 dpi
```

75.53.4 Methods

75.53.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

75.53.6 ExcludeCS as UInt32()

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of color space handles which should be excluded from color conversion.
Notes: Queries array, which you can change.

75.53.7 setExcludeCS(values() as UInt32)

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the array of color space handles which should be excluded from color conversion.
Notes: Replaces the current array with a new one.

75.53.8 Properties

75.53.9 ExcludeCSCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of color space handles in the array.
Notes:

This is ExcludeCS.ubound + 1.
(Read only property)

75.53.10 Filter1Bit as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filter for black & white images.
Notes:

See kcf* constants. Default is kcfJPEG.
(Read and Write property)

75.53.11 FilterColor as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filter for multi-channel images.
Notes:

See kcf* constants. Default is kcfJPEG.
(Read and Write property)

75.53.12 FilterGray as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The filter for gray image compression.
Notes:

See kcf* constants. Default is kcfJPEG.
(Read and Write property)

75.53.13 JP2KQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The JPEG 2000 quality.
Notes:

Default is 80.
(Read and Write property)

75.53.14 JPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The JPEG quality.
Notes:

Default is 80.
(Read and Write property)

75.53.15 Min1BitRes as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum resolution before scaling for one bit images.
Notes:

Default is 100.
Can be zero to disable.

(Read and Write property)

75.53.16 MinColorRes as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum resolution before scaling for color images.
Notes:

Default is 100.
Can be zero to disable.
(Read and Write property)

75.53.17 MinGrayRes as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum resolution before scaling for gray images.
Notes:

Default is 100 dpi.
Can be zero to disable.
(Read and Write property)

75.53.18 MinLineWidth as Single

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum line width for lines.
Notes:

Zero means no hair line removal.
(Read and Write property)

75.53.19 Res1BitImages as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolution for 1 bit black & white images.
Notes:

Default is 150.
Can be zero to disable.

(Read and Write property)

75.53.20 ResColorImages as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolution for images with more than one color channel.
Notes:

Default is 150.
Can be zero to disable.
(Read and Write property)

75.53.21 ResGrayImages as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolution for Gray images.
Notes:

Default is 150.
Can be zero to disable.
(Read and Write property)

75.54 class DynaPDFOutputIntentMBS

75.54.1 class DynaPDFOutputIntentMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details on an output intent.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.54.2 Methods

75.54.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private constructor.

75.54.4 Properties

75.54.5 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: ICC profile buffer (optional)
Notes: (Read and Write property)

75.54.6 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

75.54.7 Info as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Info string or name of the ICC profile.
Notes: (Read and Write property)

75.54.8 NumComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of components.
Notes: (Read and Write property)

75.54.9 OutputCondition as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Describtion of the output device.
Notes: (Read and Write property)

75.54.10 OutputConditionID as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Describtion of the output device.
Notes: (Read and Write property)

75.54.11 RegistryName as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The registry in which OutputConditionID is defined.
Notes: (Read and Write property)

75.54.12 SubType as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sub type.
Notes:

GTS_PDFX, GTS_PDFA1, or ISO_PDFE1
(Read and Write property)

75.55 class DynaPDFPageLabelMBS

75.55.1 class DynaPDFPageLabelMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a Page label.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.55.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.3pr2

75.55.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.3pr2

75.55.4 Methods

75.55.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.55.6 Properties

75.55.7 FirstPageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: First page number to be displayed in the page label.
Notes:

Subsequent pages are numbered sequentially from this value.
(Read only property)

75.55.8 Format as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The format of the page label.
Notes: (Read only property)

75.55.9 Prefix as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The prefix.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

75.55.10 PrefixLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of the prefix in characters.
Notes: (Read only property)

75.55.11 PrefixUni as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the prefix is in unicode.
Notes: (Read only property)

75.55.12 StartRange as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The start range.
Notes: (Read only property)

75.56 class DynaPDFPageMBS

75.56.1 class DynaPDFPageMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a DynaPDF page.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.56.2 Blog Entries

- MBS Xojo Plugins, version 18.2pr6

75.56.4 Methods

75.56.5 BBox(type as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the requested bounding box.
Notes:

use the constants kpbArtBox, kpbBleedBox, kpbCropBox, kpbMediaBox or kpbTrimBox.

If orientation gives you 90, 270, -90 or -270, you may want to swap width and height of the rectangle.

75.56.6 CalcPagePixelSize(DefScale as UInt32, Scale as single, FrameWidth as UInt32, FrameHeight as UInt32, Flags as UInt32, byref Width as UInt32, byref Height as UInt32)

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function calculates the image size of a page exactly in the way as RenderPage() does, if called with the same parameters.
Example:

```
// your PDF environment
dim pdf as new DynaPDFMBS

// some PDF
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

call pdf.CreateNewPDF(nil)

// We import all pages
call pdf.SetImportFlags(pdf.kifImportAsPage)
call pdf.OpenImportFile(file, 0, "")
call pdf.ImportPDFFile(1,1.0,1.0)

// get first page
dim p as DynaPDFPageMBS = pdf.GetPage(1)

// and calculate how big it would be:
dim PageWidth, PageHeight as UInt32

dim DefScale as UInt32 = DynaPDFMBS.kpsFitBest
dim Scale as Single = 1.0
dim Flags as Uint32 = DynaPDFRasterImageMBS.krfDefault

p.CalcPagePixelSize(DefScale, Scale, window1.Width, window1.Height, Flags, PageWidth, PageHeight)

MsgBox "PageWidth: "+str(PageWidth)+EndOfLine+"PageHeight: "+str(PageHeight)
```

Notes:

This makes it possible to create the image in the required size so that it can be rendered without a border.

75.56.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.56.8 GetWidthHeight(Flags as UInt32, byref Width as Single, byref Height as Single, Rotate as Integer = 0) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates page width and height.

75.56.9 SetBBox(type as integer, BBox as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets or changes the bounding box of a page.
Notes:

This function is intended to be fast as possible. It requires no open page like DynaPDFMBS.SetBBox(), it does not change the default media or crop box, and it does not adjust the current coordinate system if the media box will be changed.

The function is useful if only one or more bounding boxes must be changed, whithout editing a page, or when a specific area of a page should be rendered. In the latter case change the crop box and restore it to the previous value when finish.
To delete a bounding box set the bounding box to 0, 0, 0, 0. The parameter BBox is required to be present, it cannot be nil.

If the function succeeds the return value is true. If the function fails the return value is false.

75.56.10 Properties

75.56.11 ArtBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries art box for this page.
Notes:

May be nil if not defined.
(Read only property)

75.56.12 BleedBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries bleed box for this page.
Notes:

May be nil if not defined.
(Read only property)

75.56.13 CropBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries crop box for this page.
Notes:

May be nil if not defined.
(Read only property)

75.56.14 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

75.56.15 MediaBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries media box for this page.
Notes: (Read only property)

75.56.16 Orientation as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the page orientation.
Notes: (Read only property)

75.56.17 Page as Integer

MBS DynaPDF Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original page number used to query this page.
Notes: (Read only property)

75.56.18 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference back to parent dynaPDF object.
Notes: (Read only property)

75.56.19 TrimBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries trim box for this page.
Notes:

May be nil if not defined.
(Read only property)

75.56.20 Constants

75.56.21 kpbArtBox = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the PDF box constants.
Notes: Art box.

75.56.22 kpbBleedBox = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the PDF box constants.
Notes: Bleed box.

75.56.23 kpbCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the PDF box constants.
Notes: Crop Box.

75.56.24 kpbMediaBox = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the PDF box constants.
Notes: Media Box.

75.56.25 kpbTrimBox = 3

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the PDF box constants.
Notes: Trim Box.

75.57 class DynaPDFPageStatisticMBS

75.57.1 class DynaPDFPageStatisticMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for page statistics.
Notes:

You could count yourself with DynaPDFParseInterfaceMBS class and using the events.
This is just a convenience way to learn about whether for example there is an image on the page.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.57.6 Methods

75.57.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.57.8 Properties

75.57.9 BezierCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bezier curves.
Notes: (Read and Write property)

75.57.10 ClipPathCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of path clippings.
Notes: (Read and Write property)

75.57.11 ClosePathCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of paths closed.
Notes: (Read and Write property)

75.57.12 DrawShadingCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of shading drawings.
Notes: (Read and Write property)

75.57.13 FontCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of fonts used.
Notes: (Read and Write property)

75.57.14 ImageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of images used.
Notes: (Read and Write property)

75.57.15 LayerCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of layers used.
Notes: (Read and Write property)

75.57.16 LineCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of lines.
Notes: (Read and Write property)

75.57.17 PatternCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of patterns used.
Notes: (Read and Write property)

75.57.18 RectangleCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of rectangles.
Notes: (Read and Write property)

75.57.19 TemplateCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of templates.
Notes: (Read and Write property)

75.57.20 TextCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of text fragments.
Notes: (Read and Write property)

75.57.21 TextLength as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length in characters of the text on the page.
Notes: (Read and Write property)

75.58 class DynaPDFParseInterfaceMBS

75.58.1 class DynaPDFParseInterfaceMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for parsing pdf content.
Notes: You need to implement the BeginTemplate event in order to get events for images, vector graphics and text on the templates used on the page.

75.58.4 Events

75.58.5 ApplyPattern(ObjectPtr as Integer, Type as Integer, PatternPtr as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes:

Type is one of the following constants:

kptColored	= 0
kptUnColored	= 1
kptShadingPattern	= 2

75.58.6 BeginLayer(OCHandle as Integer, InVisible as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when the PDF parser found a begin layer command.
Notes:

The plugin will process the OCG object for you. So if handle is -1, there is no layer handle.
If it is >= 0, you have a handle. If it is <0, something failed.

75.58.7 BeginPattern(ObjectPtr as Integer, Fill as Boolean, PatternType as Integer, BBox as DynaPDFRectMBS, Matrix as DynaPDFMatrixMBS, XStep as Double, YStep as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes:

PatternType is one of the following constants:

kptColored	= 0
kptUnColored	= 1
kptShadingPattern	= 2

75.58.8 BeginTemplate(ObjectPtr as Integer, Handle as Integer, BBox as DynaPDFRectMBS, Matrix as DynaPDFMatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes: You need to implement this event in order to get text, images and vector graphics from inside templates.

75.58.9 BezierTo1(ObjectPtr as Integer, x1 as Double, y1 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.10 BezierTo2(ObjectPtr as Integer, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.11 BezierTo3(ObjectPtr as Integer, x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.12 ClipPath(ObjectPtr as Integer, EvenOdd as boolean, Mode as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes: For the Mode parameter, the kfm* constants are used.

75.58.13 ClosePath(ObjectPtr as Integer, Mode as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes: For the Mode parameter, the kfm* constants are used.

75.58.14 DrawShading(ObjectPtr as Integer, Type as Integer, Shading as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes:

For the type parameter you use the kst* constants.

75.58.15 EndLayer(OCHandle as Integer, InVisible as boolean)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when the PDF parser found an end layer command.

75.58.16 EndPattern

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.17 EndTemplate

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.18 InsertImage(image as DynaPDFImageMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes: You can return zero on success or 1 to stop processing.

75.58.19 LineTo(ObjectPtr as Integer, x as Double, y as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.20 MoveTo(ObjectPtr as Integer, x as Double, y as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.21 MulMatrix(ObjectPtr as Integer, matrix as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: A matrix multiplication was found.

75.58.22 Rectangle(ObjectPtr as Integer, x as Double, y as Double, w as Double, h as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: The parser found a rectangle.

75.58.23 RestoreGraphicState as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.24 SaveGraphicState as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.25 SetCharSpacing(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.26 SetExtGState(ObjectPtr as Integer, GS as DynaPDFExtGState2MBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.27 SetFillColor(ObjectPtr as Integer, NumComps as Integer, Color1 as Double, Color2 as Double, Color3 as Double, Color4 as Double, Colors() as Double, ColorspaceType as Integer, ColorSpace as DynaPDFColorSpaceMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes:

Colors array contains NumComps color values. First four values are provided directly with Color1, Color2, Color3 and Color4 parameters.
ColorSpaceType uses the kes* constants.
You can use ConvColor to convert colors to RGB or CMYK if needed.

75.58.28 SetFont(ObjectPtr as Integer, fontType as Integer, Embedded as boolean, FontName as string, Style as Integer, FontSize as Double, FontHandle as Integer, FontInfo as DynaPDFFontInfoMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.29 SetLeading(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.30 SetLineCapStyle(ObjectPtr as Integer, Style as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.31 SetLineDashPattern(ObjectPtr as integer, dash() as Double, NumValues as integer, Phase as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.32 SetLineJoinStyle(ObjectPtr as Integer, Style as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.33 SetLineWidth(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.34 SetMiterLimit(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.35 SetStrokeColor(ObjectPtr as Integer, NumComps as Integer, Color1 as Double, Color2 as Double, Color3 as Double, Color4 as Double, Colors() as Double, ColorspaceType as Integer, ColorSpace as DynaPDFColorSpaceMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.
Notes:

Colors array contains NumComps color values. First four values are provided directly with Color1, Color2, Color3 and Color4 parameters.
ColorSpaceType uses the kes* constants.
You can use ConvColor to convert colors to RGB or CMYK if needed.

75.58.36 SetTextDrawMode(ObjectPtr as Integer, Mode as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.37 SetTextScale(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.38 SetWordSpacing(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.39 ShowTextArrayA(ObjectPtr as Integer, Matrix as DynaPDFMatrixMBS, Kerning() as DynapdfTextRecordAMBS, Count as Integer, Width as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.58.40 ShowTextArrayW(Source() as DynaPDFTextRecordAMBS, Matrix as DynapdfMatrixMBS, Kerning() as DynapdfTextRecordWMBS, Count as Integer, Width as Double, Decoded as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the parser events.

75.59 class DynaPDFPointDataDictionaryMBS

75.59.1 class DynaPDFPointDataDictionaryMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a dictionary with point data.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.59.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

75.59.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

75.59.4 Methods

75.59.5 Arrays as DynaPDFPointDataMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of entries in the point data dictionary.

75.59.6 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.59.7 Properties

75.59.8 Count as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of point data arrays
Notes: (Read and Write property)

75.59.9 Subtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sub type for the point data.
Notes:

Should be Cloud.
(Read and Write property)

75.60 class DynaPDFPointDataMBS

75.60.1 class DynaPDFPointDataMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data class for point data dictionary entries.
Notes:

A point data dictionary specifies points in 2D space for geospatical measures. The parameter DataType specifies the type of points, such as LAT for latitude in degrees, LON for longitute in degrees, or ALT for altitude in metres.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.60.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

75.60.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

75.60.4 Methods

75.60.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.60.6 values as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array with values.

75.60.7 Properties

75.60.8 DataType as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Data type as string.
Notes:

Specifies the type of points, such as LAT for latitude in degrees, LON for longitute in degrees, or ALT for altitude in metres.
(Read and Write property)

75.60.9 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index in the dictionary.
Notes: (Read and Write property)

75.60.10 ValCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read and Write property)

75.61 class DynaPDFPointMBS

75.61.1 class DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a point.

75.61.2 Methods

75.61.3 Constructor(x as Double = 0.0, y as Double = 0.0)

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

75.61.4 Properties

75.61.5 X as Double

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The X value.
Notes: (Read and Write property)

75.61.6 Y as Double

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y value.
Notes: (Read and Write property)

75.62 class DynaPDFPrintParamsMBS

75.62.1 class DynaPDFPrintParamsMBS

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for additional print parameters.

75.62.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr6
- MBS Xojo Plugins, version 17.2pr4

75.62.3 Blog Entries

- MBS Xojo Plugins, version 19.5pr6
- MBS Xojo Plugins, version 17.2pr4

75.62.4 Properties

75.62.5 Compress as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to compress images sent to printer.
Notes:

Meaningful only for image output. If true, compressed images are send to the printer.
(Read and Write property)

75.62.6 FilterColor as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compression filter to use for color images.
Notes:

Meaningful only for image output. Supported filters on Windows: kcfFlate and kcfJPEG.
(Read and Write property)

75.62.7 FilterGray as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compression filter to use for grayscale images.
Notes:

Meaningful only for image output. Supported filters on Windows: kcfFlate and kcfJPEG.
(Read and Write property)

75.62.8 IgnoreDCSize as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, PageSize is used to calculate the output format.
Notes: (Read and Write property)

75.62.9 JPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: JPEG Quality in percent (1..100).
Notes:

Zero means Default, which is 60% .
(Read and Write property)

75.62.10 MaxRes as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum print resolution.
Notes:

Zero means Default, which is 600 DPI.
(Read and Write property)

75.62.11 PageSize as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page size to use.
Notes:

Considered only, if IgnoreDCSize is set to true.
(Read and Write property)

75.63 class DynaPDFPrintSettingsMBS

75.63.1 class DynaPDFPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the print settings in a PDF document.
Notes: This requires PDF 1.7.

75.63.2 Methods

75.63.3 PrintRanges(index as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of print ranges.
Notes: If set, the array contains PrintRangesCount * 2 values. Each pair consists of the first and last pages in the sub-range. The first page in the PDF file is denoted by 0.

75.63.4 Properties

75.63.5 DuplexMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The duplex mode.
Notes:

Use the kdpm* constants.
(Read only property)

75.63.6 NumCopies as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of copies.
Notes:

-1 means not set. Values larger than 5 are ignored in viewer applications.
(Read only property)

75.63.7 PickTrayByPDFSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The setting for picking the tray by the PDF size.
Notes:

-1 means not set. 0 = false, 1 = true.
(Read only property)

75.63.8 PrintRangesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of ranges available in PrintRanges.
Notes: (Read only property)

75.63.9 PrintScaling as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The print scaling setting.
Notes:

kdpmNone means not set.
(Read only property)

75.64 class DynaPDFRasterImageMBS

75.64.1 class DynaPDFRasterImageMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for advanced rendering options.
Example:

```
dim pdf as new DynaPDFMBS // make subclass to catch error event

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")

// create PDF
call pdf.CreateNewPDF(nil)
// set import flags
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open import file
call pdf.OpenImportFile(f, 0, "")

// import all pdf pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

dim PageCount as Integer = pdf.GetPageCount

// create rasterizer.
dim r as new DynaPDFRasterizerMBS(pdf, 1000,1000)

// create options
dim o as new DynaPDFRasterImageMBS

// fill white
o.InitWhite = true

// scale to fit
o.DefScale = o.kpsFitBest

// rotate
o.Flags = o.krfRotate90

// render all pages
for i as Integer = 1 to PageCount

dim p as DynaPDFPageMBS = pdf.GetPage(i)
if r.RenderPage(p, o) then
// save to disc
dim outfile as FolderItem = SpecialFolder.Desktop.Child("page "+Format(i,"0")+".jpg")
```

```
call outfile.SaveAsJPEGMBS(r.Pic, 75)
end
next
```

Notes: This class is named RasterImage due to the name in the underlying DynaPDF library. A better name would be RasterizerOptions as it includes options for the rasterizer engine.

75.64.2 Blog Entries

- RenderPageToImage
- MBS Real Studio Plugins, version 11.3pr9
- MBS Real Studio Plugins, version 11.2pr5

75.64.3 Blog Entries

- RenderPageToImage

75.64.4 Properties

75.64.5 ClipRect as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional clipping rectangle defined in device coordinates (Pixels)
Notes: (Read and Write property)

75.64.6 DefScale as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies how the page should be scaled into the image buffer.
Notes:

can be kpsFitBest, kpsFitHeight or kpsFitWidth.
(Read and Write property)

75.64.7 DrawFrameRect as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the area outside the page's bounding box is filled with the frame color.
Notes:

InitWhite can still be used, with or without a clipping rectangle.
(Read and Write property)

75.64.8 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flags for the raster operation.
Notes:

This is a bit mask. Flags can be combined with a binary or operator.
Use a combination of krf* constants.
(Read and Write property)

75.64.9 FrameColor as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color for drawing the frame.
Notes:

Must be defined in the color space of the pixel format but in the natural component order, e.g. RGB.
(Read and Write property)

75.64.10 InitWhite as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to clear the buffer first.
Notes:

If true, the buffer is initialized with white color (default).
Must be set to false if you want to raster the page over an existing image.

When a clipping rectangle is set, only the area inside the clipping rectangle is initialized to white.
(Read and Write property)

75.64.11 Matrix as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional transformation matrix.
Notes:

The matrix can be used to zoom into the page or to move the picture to a specific area in the image buffer. (Read and Write property)

75.64.12 NumAnnots as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rendered form annotations (excluding invisible annotation but annotations with no appearance are included)
Notes: (Read and Write property)

75.64.13 NumBezierCurves as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bezier curves which where rendered. Glyph outlines are not taken into account.
Notes: (Read and Write property)

75.64.14 NumClipPaths as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of clipping paths used in the page. Should be small as possible!
Notes: (Read and Write property)

75.64.15 NumFormFields as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rendered form fields (excluding invisible fields but fields with no appearance are included)
Notes: (Read and Write property)

75.64.16 NumGlyphs as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: When the number of glyphs equals NumTextRecords then there is probably some room for optimization...
Notes: (Read and Write property)

75.64.17 NumImages as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of images that were rendered.
Notes: (Read and Write property)

75.64.18 NumLineTo as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of LineTo operators.
Notes: (Read and Write property)

75.64.19 NumPaths as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of paths which were processed.
Notes: (Read and Write property)

75.64.20 NumPatterns as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of pattern which were processed.
Notes: (Read and Write property)

75.64.21 NumRectangles as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rectangle operators.
Notes: (Read and Write property)

75.64.22 NumRestoreGState as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Should be equal to NumSaveGraphicStates.
Notes: (Read and Write property)

75.64.23 NumSaveGState as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of save graphics state operators.
Notes: (Read and Write property)

75.64.24 NumShadings as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of shadings.
Notes: (Read and Write property)

75.64.25 NumSoftMasks as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of soft masks that were processed.
Notes:

Alpha channels of images are not taken into account.
(Read and Write property)

75.64.26 NumTextRecords as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of independent text records which were rendered.
Notes: (Read and Write property)

75.64.27 PageSpace as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The matrix represents the mapping from page space to device space.
Notes:

Output parameter.
This matrix is required when further objects should be drawn on the page, e.g. the bounding boxes.
(Read and Write property)

75.64.28 UpdateOnImageCoverage as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DynaPDF multiplies the output image area with this factor to determine when the window should be updated.
Notes:

The factor should be around 0.5 through 5.0. Larger values cause less frequently update events.
(Read and Write property)

75.64.29 UpdateOnPathCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Call OnUpdateWindow event when the UpdateOnPathCount limit was reached.
Notes:

Clipping paths increment the number too.
Only full paths are considered, independent of the number of vertices they contain. The value should be larger than 50 and smaller than 10000.
(Read and Write property)

75.64.30 Yield as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to yield time to other threads.
Notes:

Set to true if you render page in a thread, so time is given to other threads.
(Read and Write property)

75.64.31 Events

75.64.32 UpdateWindow(r as DynaPDFRectMBS, pic as Variant) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called regularly so you can update your GUI.
Notes:

Please set UpdateOnPathCount and UpdateOnImageCoverage to use this event.
If you draw to a picture, the picture is passed as parameter for your convenience.

Pic is a variant so the plugin compiles in older Xojo versions for console targets.

Returns -1 to stop the processing.

75.64.33 Constants

75.64.34 kpsFitBest = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: Scale the page so that it fits fully into the image buffer.

75.64.35 kpsFitHeight = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: Scale the page to the height of the image buffer.

75.64.36 kpsFitWidth = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the constants to specify how the page should be scaled into the image buffer.
Notes: Scale the page to the width of the image buffer.

75.64.37 krfClipToArtBox = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes:

Clip the page to the art box if any.

Only one of these clip flags must be set at time!

75.64.38 krfClipToBleedBox = 8

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes:

Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

75.64.39 krfClipToTrimBox = 16

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes:

Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

75.64.40 krfCompositeWhite = & h00001000

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the raster flag constants.
Notes: Composite pixel formats with an alpha channel finally with a white background. The alpha channel is 255 everywhere after composition. This flag is mainly provided for debug purposes but it can also be useful if the image must be copied on screen with a function that doesn't support alpha blending.

75.64.41 krfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes: Render the page as usual

75.64.42 krfDisableAAClipping = & h00200000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable Anti-Aliasing for clipping paths. This flag is the most important one since clipping paths cause often visible artefacts in PDF files with flattened transparency.

75.64.43 krfDisableAAText = & h00400000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable Anti-Aliasing for text.

75.64.44 krfDisableAAVector = & h00800000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable Anti-Aliasing for vector graphics.

75.64.45 krfDisableAntiAliasing = & h00E00000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Fully disable Anti-Aliasing.

75.64.46 krfDisableBiLinearFilter = & h01000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes: Disable the BiLevel filter for images. Sometetimes useful if sharp images are needed, e.g. for barcodes.

75.64.47 krfExclAnnotations = 32

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes: Don't render annotations.

75.64.48 krfExclButtons = & h00004000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude buttons.
If all fields should be skipped then set the flag rfExclFormFields instead.

75.64.49 krfExclCheckBoxes = & h00008000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

Exclude check boxes.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude checkboxes.
If all fields should be skipped then set the flag rfExclFormFields instead.

75.64.50 krfExclComboBoxes = & h00010000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

Exclude combo boxes.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox.
If all fields should be skipped then set the flag rfExclFormFields instead.

75.64.51 krfExclFormFields = 64

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes: Don't render form fields.

75.64.52 krfExclListBoxes = & h00020000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

Exclude listbox fields.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude listbox.
If all fields should be skipped then set the flag rfExclFormFields instead.

75.64.53 krfExclPageContent = & h00002000

MBS DynaPDF Plugin, Plugin Version: 14.4.

Function: One of the raster flag constants.
Notes: If set, only annotations and form fields will be rendered (if any).

75.64.54 krfExclSigFields = & h00080000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

Exclude signature fields.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude signature fields.

If all fields should be skipped then set the flag rfExclFormFields instead.

75.64.55 krfExclTextFields = & h00040000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

Exclude text fields.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude text fields.
If all fields should be skipped then set the flag rfExclFormFields instead.

75.64.56 krfIgnoreCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes: Ignore the crop box and render anything inside the media box without clipping.

75.64.57 krfInitBlack = & h00000800

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the raster flag constants.
Notes: Initialize the image buffer to black before rendering (RGBA or GrayA must be initialized to black)

75.64.58 krfRenderInvisibleText = & h02000000

MBS DynaPDF Plugin, Plugin Version: 18.2.

Function: One of the raster flag constants.
Notes: If set, treat text rendering mode Invisible as Normal.

75.64.59 krfRotate180 = & h00000200

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the raster flag constants.
Notes: Rotate the page 180 degress.

75.64.60 krfRotate270 = & h00000400

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the raster flag constants.
Notes: Rotate the page 270 degress.

75.64.61 krfRotate90 = & h00000100

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the raster flag constants.
Example:

```
dim pdf as new DynaPDFMBS // make subclass to catch error event

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")

// create PDF
call pdf.CreateNewPDF(nil)
// set import flags
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open import file
call pdf.OpenImportFile(f, 0, "")

// import all pdf pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

dim PageCount as Integer = pdf.GetPageCount

// create rasterizer.
dim r as new DynaPDFRasterizerMBS(pdf, 1000,1000)

// create options
dim o as new DynaPDFRasterImageMBS

// fill white
o.InitWhite = true

// scale to fit
o.DefScale = o.kpsFitBest

// rotate
```

```
o.Flags = o.krfRotate90

// render all pages
for i as Integer = 1 to PageCount

dim p as DynaPDFPageMBS = pdf.GetPage(i)
if r.RenderPage(p, o) then
// save to disc
dim outfile as FolderItem = SpecialFolder.Desktop.Child("page "+Format(i,"0")+".jpg")
call outfile.SaveAsJPEGMBS(r.Pic, 75)
end
next
```

Notes: Rotate the page 90 degress.

75.64.62 krfScaleToBBox = & h00100000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the raster flag constants.
Notes:

Considered only, if the flag rfClipToArtBox, rfClipToBleedBox, or rfClipToTrimBox is set.
If set, the picture size is set to the size of the whished bounding box.

75.64.63 krfScaleToMediaBox = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the raster flag constants.
Notes: Render the real paper format. Contents outside the crop box is clipped.

75.64.64 krfSkipUpdateBG = & h00000080

MBS DynaPDF Plugin, Plugin Version: 11.3.

Function: One of the raster flag constants.
Notes: Don't generate an update event after initializing the background to white.

75.65 class DynaPDFRasterizerMBS

75.65.1 class DynaPDFRasterizerMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the rasterizer interface.

75.65.8 Methods

75.65.9 Abort

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Aborts raster process.
Notes: Stops the function RenderPage as soon as possible when RenderPage() is running in a separate thread.

75.65.10 AddRasImage(Filter as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function adds an image from the rasterizer to the current open image file.
Notes: The output image must be opened with CreateImage() beforehand.

75.65.11 AttachImageBuffer(Pic as Picture, RenderWithAlpha as boolean = false) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Attaches a new image buffer of the same pixelformat.
Notes:

Returns true on success.
Added RenderWithAlpha parameter in plugin version 19.0.
If RenderWithAlpha is true, we render with alpha channel. If the destination is a picture has alpha channel, you should get the alpha there. Otherwise for picture without alpha channel, we only copy RGB channels.
See also:

- 75.65.12 AttachImageBuffer(Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) as boolean 14479

75.65.12 AttachImageBuffer(Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Attaches a new image buffer of the same pixelformat.
Notes:

For Pixelformat pass one of the kpx* constants.
You can pass Rows or Buffer, but the other memoryblock should be nil.
Returns true on success.
See also:

- 75.65.11 AttachImageBuffer(Pic as Picture, RenderWithAlpha as boolean = false) as boolean 14479

75.65.13 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32)

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes rasterizer targeting a device context.
Notes:

Special version to simplify rendering into a device context. It creates a DIB Section into which pages can be rendered.

See also:

- 75.65.14 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false) 14480
- 75.65.15 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 14480
- 75.65.16 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 14481

75.65.14 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new rasterizer object targeting the given picture.
Notes:

Added RenderWithAlpha parameter in plugin version 19.0.
If RenderWithAlpha is true, we render with alpha channel. If the destination is a picture has alpha channel, you should get the alpha there. Otherwise for picture without alpha channel, we only copy RGB channels.
See also:

- 75.65.13 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 14479
- 75.65.15 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 14480
- 75.65.16 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 14481

75.65.15 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new rasterizer object targeting the given memory area.
Notes:

For Pixelformat pass one of the kpx* constants.
You can pass Rows or Buffer, but the other memoryblock should be nil.
See also:

- 75.65.13 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 14479
- 75.65.14 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false) 14480
- 75.65.16 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 14481

75.65.16 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes:

Creates a new picture as buffer for you with the given size.
PDF must not be nil and point to a valid DynaPDF context.
See also:

- 75.65.13 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 14479
- 75.65.14 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false) 14480
- 75.65.15 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 14480

75.65.17 Redraw(DeviceContextHandle as Integer, DestX as Integer, DestY as Integer)

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Because there is no direct access to the internal DIB Sesction when rendering into a device context, this function can be used to redraw the bitmap on the device context.
Notes:

If RenderPageEx() was called in a separate thread then this function can be called after the thread returned. While the thread is running you can change the position by directly manipulating the coordinate variables which were passed to RenderPageEx().
The function calls the system function SetDIBitsToDevice() to copy the image into the device context.

75.65.18 RenderPage(page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a page of a PDF Document with the given options.
Notes: Returns true on success and false on failure.

75.65.19 RenderPageEx(DeviceContextHandle as Integer, byref DestX as Integer, byref DestY as Integer, page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a page into a device context.
Notes:

Only valid if you called Constructor with DeviceContextHandle.
Returns true on success.

75.65.20 RenderPageMT(page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders a page of a PDF Document with the given options.
Notes:

Returns true on success and false on failure.

Same as RenderPage, but with additional multithreading.

As the actual transfer runs on a preemptive thread, the event UpdateWindow is called asynchrounously and run a few milliseconds later.

Do not call other functions on this DynaPDFRasterizerMBS instance while RenderPageMT is running!

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

75.65.21 ResizeBitmap(DeviceContextHandle as Integer, Width as Integer, Height as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the size of the DIB Section.
Notes:

Only valid if you called Constructor with DeviceContextHandle.
Returns true on success.

75.65.22 Properties

75.65.23 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference to the rasterizer object.
Notes:

If the constructor is successful, this value is not zero.
(Read only property)

75.65.24 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture or buffer.
Notes: (Read only property)

75.65.25 MinLineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimum line width in which thin lines are rendered.
Notes:

The value should be in the range 0.1 through 1.0.
Default value: 0.5
(Read and Write property)

75.65.26 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference back to parent dynaPDF object.
Notes: (Read only property)

75.65.27 Pic as Picture

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target picture.
Notes: (Read only property)

75.65.28 PixelFormat as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pixel format of picture.
Notes: (Read only property)

75.65.29 ScanlineLen as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scan line length in bytes of the picture.
Notes: (Read only property)

75.65.30 TempBuffer as Ptr

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The temporary buffer data pointer.
Notes:

If the picture pixel format is not directly supported with DynaPDF, we render in a temporary buffer and copy it to the picture.
(Read only property)

75.65.31 TempPixelFormat as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The temporary buffer pixel format.
Notes: (Read only property)

75.65.32 TempScanlineLen as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The temporary buffer scan line length in bytes.
Notes: (Read only property)

75.65.33 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture or buffer.
Notes: (Read only property)

75.65.34 Constants

75.65.35 kpxf1Bit = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: 1 bit per pixel black and white.

75.65.36 kpxfABGR = 7

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: ABGR.

75.65.37 kpxfARGB = 6

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: ARGB

75.65.38 kpxfBGR = 3

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: BGR

75.65.39 kpxfBGRA = 5

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: BGRA

75.65.40 kpxfCMYK = 9

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the pixel format constants.
Notes: CMYK without alpha

75.65.41 kpxfCMYKA = 10

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the pixel format constants.
Notes: CMYK with alpha

75.65.42 kpxfGray = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: 8 bit grayscale.

75.65.43 kpxfGrayA = 8

MBS DynaPDF Plugin, Plugin Version: 11.2.

Function: One of the pixel format constants.
Notes: 8 bit grayscale with alpha.

75.65.44 kpxfRGB = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: RGB

75.65.45 kpxfRGBA = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

Function: One of the pixel format constants.
Notes: RGBA

75.66 class DynaPDFRawImageMBS

75.66.1 class DynaPDFRawImageMBS

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to hold information about a raw image.
Notes: Used with InsertRawImageEx.

75.66.4 Methods

75.66.5 setBuffer(data as MemoryBlock)

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the buffer to point to the bytes in the memoryblock.
Notes: Size is optional. Some memoryblocks have no known size and there you need to specify one.
See also:

- 75.66.6 setBuffer(data as MemoryBlock, size as Int64) 14488
- 75.66.7 setBuffer(data as Ptr) 14489
- 75.66.8 setBuffer(data as Ptr, size as Int64) 14489
- 75.66.9 setBuffer(data as string) 14490
- 75.66.10 setBuffer(data as string, size as Int64) 14490

75.66.6 setBuffer(data as MemoryBlock, size as Int64)

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the buffer to point to the bytes in the memoryblock.
Notes: Size is optional. Some memoryblocks have no known size and there you need to specify one.
See also:

- 75.66.5 setBuffer(data as MemoryBlock) 14488
- 75.66.7 setBuffer(data as Ptr) 14489
- 75.66.8 setBuffer(data as Ptr, size as Int64) 14489
- 75.66.9 setBuffer(data as string) 14490
- 75.66.10 setBuffer(data as string, size as Int64) 14490

75.66.7 setBuffer(data as Ptr)

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method to set the buffer using a pointer to some memory.
Notes: This is a private method to make sure nobody passes a ptr instead of memoryblock or ptr+size.
See also:

- 75.66.5 setBuffer(data as MemoryBlock) 14488
- 75.66.6 setBuffer(data as MemoryBlock, size as Int64) 14488
- 75.66.8 setBuffer(data as Ptr, size as Int64) 14489
- 75.66.9 setBuffer(data as string) 14490
- 75.66.10 setBuffer(data as string, size as Int64) 14490

75.66.8 setBuffer(data as Ptr, size as Int64)

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the buffer using a pointer to some memory.
Notes: Please provide the right size.
See also:

- 75.66.5 setBuffer(data as MemoryBlock) 14488
- 75.66.6 setBuffer(data as MemoryBlock, size as Int64) 14488
- 75.66.7 setBuffer(data as Ptr) 14489
- 75.66.9 setBuffer(data as string) 14490
- 75.66.10 setBuffer(data as string, size as Int64) 14490

75.66.9 setBuffer(data as string)

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets buffer to point to contents of this string.
Notes: If you specify a size, the size can be smaller than thing length to use only first part.
See also:

- 75.66.5 setBuffer(data as MemoryBlock) 14488
- 75.66.6 setBuffer(data as MemoryBlock, size as Int64) 14488
- 75.66.7 setBuffer(data as Ptr) 14489
- 75.66.8 setBuffer(data as Ptr, size as Int64) 14489
- 75.66.10 setBuffer(data as string, size as Int64) 14490

75.66.10 setBuffer(data as string, size as Int64)

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets buffer to point to contents of this string.
Notes: If you specify a size, the size can be smaller than thing length to use only first part.
See also:

- 75.66.5 setBuffer(data as MemoryBlock) 14488
- 75.66.6 setBuffer(data as MemoryBlock, size as Int64) 14488
- 75.66.7 setBuffer(data as Ptr) 14489
- 75.66.8 setBuffer(data as Ptr, size as Int64) 14489
- 75.66.9 setBuffer(data as string) 14490

75.66.11 Properties

75.66.12 BitsPerComponent as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bits per component.
Notes:

For example 8 for the usual RGB images.
(Read and Write property)

75.66.13 Buffer as Ptr

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer as pointer.
Notes:

Please use setBuffer methods to set this.
(Read only property)

75.66.14 BufSize as Int64

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer size.
Notes: (Read only property)

75.66.15 CS as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image color space.
Notes: (Read and Write property)

75.66.16 CSHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space handle or -1.
Notes: (Read and Write property)

75.66.17 HasAlpha as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image has an alpha channel?
Notes: (Read and Write property)

75.66.18 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Height in pixels.
Notes: (Read and Write property)

75.66.19 IsBGR as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Windows bitmap format?
Notes: (Read and Write property)

75.66.20 Memory as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock used with setBuffer.
Notes: (Read only property)

75.66.21 MinIsWhite as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether image has value zero for white instead of black.
Notes:

One bit images only.
(Read and Write property)

75.66.22 NumComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of components.
Notes:

Maximum is 32 for DynaPDF.
(Read and Write property)

75.66.23 Stride as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes per row.
Notes:

A negative value mirrors the image.
(Read and Write property)

75.66.24 String as String

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The String used with setBuffer.
Notes: (Read only property)

75.66.25 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width in pixels.
Notes: (Read and Write property)

75.67 class DynaPDFRectMBS

75.67.1 class DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A rectangle for DynaPDF.

75.67.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr1
- MBS REALbasic Plugins, version 11.1pr4

75.67.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr1
- MBS REALbasic Plugins, version 11.1pr4

75.67.4 Methods

75.67.5 Constructor(left as Double = 0.0, top as Double = 0.0, right as Double = 0.0, bottom as Double = 0.0)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new rectangle with the given values.

75.67.6 Properties

75.67.7 Bottom as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bottom coordinate.
Notes: (Read and Write property)

75.67.8 Left as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The left coordinate.
Notes: (Read and Write property)

75.67.9 Right as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The right coordinate.
Notes: (Read and Write property)

75.67.10 Top as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The top coordinate.
Notes: (Read and Write property)

75.67.11 Width as Double

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the rectangle.
Notes:

This is the difference between right and left.

Height property is missing as it depends on the coordinate origin. For top-down coordinates you would calculate bottom - top while for bottom-up coordinates you calculate top - bottom.
(Read and Write property)

75.68 class DynaPDFRelFileNodeMBS

75.68.1 class DynaPDFRelFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The information on a related file node.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.68.2 Methods

75.68.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.68.4 Properties

75.68.5 EF as DynaPDFFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Embedded file.
Notes: (Read only property)

75.68.6 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of this file spcification.
Notes: (Read only property)

75.68.7 NextNode as DynaPDFRelFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Next node if any.
Notes: (Read only property)

75.69 class DynaPDFResetFormActionMBS

75.69.1 class DynaPDFResetFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for reset form action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.69.2 Methods

75.69.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.69.4 Fields(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array of fields.
Notes: Index is from 0 to FieldsCount-1.

75.69.5 Properties

75.69.6 FieldsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of fields in the array.
Notes: (Read only property)

75.69.7 Include as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Include or exclude given fields?
Notes:

If true, the fields in the array must be reset. If false, these fields must be excluded.
(Read only property)

75.69.8 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next action.
Notes:

-1 or next action handle to be executed if any.
(Read only property)

75.69.9 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

See kat* constants.
(Read only property)

75.70 class DynaPDFSigDictMBS

75.70.1 class DynaPDFSigDictMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for details on signature fields.

75.70.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

75.70.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

75.70.4 Properties

75.70.5 Cert as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: X.509 Certificate when SubFilter is adbe.x509.rsa_sha1.
Notes: (Read and Write property)

75.70.6 ContactInfo as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional contact info string, e.g. an email address
Notes: (Read and Write property)

75.70.7 Contents as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature.
Notes:

This is either a DER encoded PKCS# 1 binary data object or a DER-encoded PKCS# 7 binary data object depending on the used SubFilter.

(Read and Write property)

75.70.8 Filter as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the security handler, usually Adobe.PPKLite.
Notes: (Read and Write property)

75.70.9 Location as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional location of the signer.
Notes: (Read and Write property)

75.70.10 Name as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional signers name.
Notes: (Read and Write property)

75.70.11 PropAuthTime as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional. The number of seconds since the signer was last authenticated.
Notes: (Read and Write property)

75.70.12 PropAuthType as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional. The method that shall be used to authenticate the signer.
Notes:

Valid values are PIN, Password, and Fingerprint.
(Read and Write property)

75.70.13 Reason as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional reason.
Notes: (Read and Write property)

75.70.14 Revision as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, The version of the signature handler that was used to create the signature.
Notes: (Read and Write property)

75.70.15 SignTime as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Date/Time string.
Notes: (Read and Write property)

75.70.16 SubFilter as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A name that describes the encoding of the signature value.
Notes:

Should be adbe.x509.rsa_sha1, adbe.pkcs7.detached, or adbe.pkcs7.sha1.
(Read and Write property)

75.70.17 Version as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the signature dictionary format.
Notes: (Read and Write property)

75.71 class DynaPDFSigParmsMBS

75.71.1 class DynaPDFSigParmsMBS

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for PDF signature parameters.

75.71.2 Blog Entries

- Sign PDF with DynaPDF and your custom signature
- MBS REALbasic Plugins, version 11.1pr4

75.71.3 Blog Entries

- Sign PDF with DynaPDF and your custom signature
- MBS REALbasic Plugins, version 11.1pr4

75.71.4 Properties

75.71.5 ContactInfo as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, e.g. an email address.
Notes:

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

75.71.6 Encrypt as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the file will be encrypted.
Notes: (Read and Write property)

75.71.7 HashType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hash type: khtDetached or khtSHA1.
Notes: (Read and Write property)

75.71.8 KeyLen as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Key length to encrypt the file.
Notes:

This value is ignored if Encrypt is set to false.
On of the kkl* constants like kkl128bit.
(Read and Write property)

75.71.9 Location as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional location of the signer.
Notes:

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

75.71.10 OpenPwd as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional open password.
Notes:

This value is ignored if Encrypt is set to false.
(Read and Write property)

75.71.11 OwnerPwd as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional owner password.
Notes:

This value is ignored if Encrypt is set to false.
(Read and Write property)

75.71.12 PKCS7ObjLen as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Max length of the signed PKCS# 7 object.
Notes: (Read and Write property)

75.71.13 Range1 as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Hash or byte range.
Notes: (Read and Write property)

75.71.14 Range1Length as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the buffer Range1.
Notes: (Read and Write property)

75.71.15 Range2 as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Second range value.
Notes:

Set only if HashType = htDetached.
(Read and Write property)

75.71.16 Range2Length as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of buffer Range2.
Notes: (Read and Write property)

75.71.17 Reason as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional reason why the file was signed.
Notes:

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

75.71.18 Restrict as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: What should be restricted?
Notes:

This value is ignored if Encrypt is set to false.
A combination of krs* constants.
(Read and Write property)

75.71.19 Signer as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, see manual.
Notes:

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

75.72 class DynaPDFStackMBS

75.72.1 class DynaPDFStackMBS

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the current text found by GetPageText.
Notes: Before you can use it, call InitStack.

75.72.2 Blog Entries

- MBS Xojo Plugins, version 17.1pr5
- MBS Xojo / Real Studio Plugins, version 16.2pr1
- MBS REALbasic Plugins, version 11.1pr4

75.72.3 Blog Entries

- MBS Xojo Plugins, version 17.1pr5
- MBS Xojo / Real Studio Plugins, version 16.2pr1
- MBS REALbasic Plugins, version 11.1pr4

75.72.4 Methods

75.72.5 KerningAdvance(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negative values move the cursor to the right.

75.72.6 KerningLength(index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length in characters.

75.72.7 KerningText(index as UInt32) as string

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translated Unicode string.
Notes:

May contain chr(0) characters.
Encoding is UTF8.

75.72.8 KerningWidth(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: String width measured in text space.

75.72.9 RawKernAdvance(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negative values move the cursor to the right.

75.72.10 RawKernLength(index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw text length in bytes.

75.72.11 RawKernText(index as UInt32) as string

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw text.

75.72.12 Properties

75.72.13 CharSP as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current character spacing, info only.
Notes: (Read only property)

75.72.14 CIDFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, a CID font is used to render the text.
Notes:

It is not possible to replace a text with ReplacePageText() in this case. However, it is still possible to delete the text. If the text should be replaced use either ReplacePageTextEx() or WriteTextMatrixEx().
(Read only property)

75.72.15 ConvColors as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function:

If true (default), all colors are converted to the destination color space
DestSpace.
Notes:

The default color space is DeviceRGB. This variable can be changed after the structure has been initialized with InitStack(). If set to false, colors of complex color spaces are still converted into the alternate color space but the color space can then be changed arbitrary often. See also the description of FillCS.
(Read and Write property)

75.72.16 ctm as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transformation matrix.
Notes:

Pre-multiplied global transformation matrix.
(Read only property)

75.72.17 DeleteKerningAt as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This member can be used in combination with ReplacePageText().
Notes:

ReplacePageText() deletes or replaces normally always a complete text record but this is often not required especially if a text must be deleted or replaced in the middle or end of a kerning array. To make text replacement easier it is possible to preserve an arbitrary number of kerning records from deletion. The value of DeleteKerningAt represents the first array index which should be deleted. All kerning records above this index will be deleted too. Take a look into the demo examples/edit_text which is delivered with DynaPDF to determine how this member can be used.
(Read and Write property)

75.72.18 DestSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination color space in which all colors should be converted.
Notes:

If
ConvColor is set to false, the value of this member is ignored. If the destination color space should be DeviceCMYK initialize the members FillColor and StrokeColor with PDF_CMYK(0,0,0,255); which represents black.
(Read and Write property)

75.72.19 DrawMode as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The draw mode used to render the text.
Notes:

See SetTextDrawMode() for further information.
(Read only property)

75.72.20 Embedded as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the font is embedded.
Notes:

This information is very important if the text should be replaced. The function ReplacePageText() can be used if the font is not embedded and if the member CIDFont is false. Otherwise, the function ReplacePageTextEx() or WriteTextMatrixEx() must be used to replace the text, see the examples on the following pages for further information.

(Read only property)

75.72.21 FillColor as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill color represents the text color if the text draw mode is dmNormal.
Notes:

Depending on the draw mode the fill and stroke color can be invoked to render the text.
(Read only property)

75.72.22 FillCS as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function:

This is the current color space in which the color value of FillColor is defined.
Notes:

If ConvColor is set to true (default) the value is always equal to DestSpace. If ConvColor is set to false the fill color is still returned in a device color space but the color space can be changed arbitrary often. Colors of complex color spaces, such as Separation or DeviceN, are always converted into the alternate color space. If the original or alternate color space is an ICC based color space the color value is returned as is and the color space is set depending on the number of components. The ICC profile is not invoked to calculate the color value in the device color space. Future versions of DynaPDF maybe use the ICC profile to convert the color into device color space.
(Read only property)

75.72.23 Font as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font object used to print the string.
Notes:

Deprecated. Better use FontInfo property.

Reading this property creates a new object each time.
Please put object in local variable and avoid querying the property value several times.
(Read only property)

75.72.24 FontFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PDF font flags.
Notes: (Read and Write property)

75.72.25 FontHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal font object handle.
Notes:

In DynaPDF documentation named IFont, a pointer to the C object for the font.
(Read only property)

75.72.26 FontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font object used to print the string.
Notes:

Reading this property creates a new object each time.
Please put object in local variable and avoid querying the property value several times.
(Read only property)

75.72.27 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font size used to display the text.
Notes: (Read only property)

75.72.28 HScale as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current horizontal scaling, info only.
Notes: (Read only property)

75.72.29 KerningCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of kerning records.
Notes:

RawKern and Kerning contain always the same number of records.
(Read only property)

75.72.30 Leading as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The leading is already included in the text transformation matrix tm.
Notes:

The value of leading must not be considered to calculate the text position.
(Read only property)

75.72.31 LineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current line width; it can be ignored if the text is not stroked.
Notes: (Read only property)

75.72.32 SpaceWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The space width.
Notes:

The space width can be used to determine whether a space character is
emulated at a given position. A default space width is set if the font does not

contain a space character. Note that many documents emulate spaces with kerning space. Such documents contain usually no space character. It is usually best to use the half space width to determine whether a space character is emulated. This is especially important if a document uses condensed fonts which contain no space character.
(Read only property)

75.72.33 StrokeColor as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stoke color.
Notes:

The stroke color can be ignored if the text draw mode is not dmStroke, dmFillStroke, dmStrokeClip or dmFillStrokeClip since it is then not used to render the text.
(Read only property)

75.72.34 StrokeCS as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function:

This is the current color space in which the color value of StrokeColor is defined.
Notes:

The color space is set in an identical manner like FillCS.
(Read only property)

75.72.35 Text as String

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw text line that was found in the content stream.
Notes:

This string can contain single or multi-byte characters. This member should no longer be used to extract or replace text. Use the Kerning array instead.
(Read only property)

75.72.36 TextLen as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string length in bytes, not characters!
Notes:

If TextLen is zero no text was found or an error occurred.
(Read only property)

75.72.37 TextRise as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text rise is already included in the text transformation matrix tm.
Notes:

The
value is always 0.0.
(Read only property)

75.72.38 TextWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text width measured in text space.
Notes:

This is the width of the entire kerning array incl. kerning space.
(Read only property)

75.72.39 tm as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transformation matrix.
Notes:

Pre-multiplied text transformation matrix.
(Read only property)

75.72.40 WordSP as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current word spacing, info only.
Notes: (Read only property)

75.72.41 x as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position.
Notes:

These members are no longer used. All positioning operators are already
included in the text transformation matrix tm.
(Read only property)

75.72.42 y as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position.
Notes:

These members are no longer used. All positioning operators are already
included in the text transformation matrix tm.
(Read only property)

75.73 class DynaPDFSubmitFormActionMBS

75.73.1 class DynaPDFSubmitFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for submit form action details.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.73.2 Methods

75.73.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.73.4 Fields(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array of field.
Notes: Index is from 0 to FieldCount-1.

75.73.5 Properties

75.73.6 CharSet as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional charset in which the form should be submitted.
Notes: (Read only property)

75.73.7 FieldsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of fields in the array.
Notes: (Read only property)

75.73.8 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various flags.
Notes:

See CreateSubmitAction() for further information.
(Read only property)

75.73.9 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next action.
Notes:

-1 or next action handle to be executed if any.
(Read only property)

75.73.10 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

See kat* constants.
(Read only property)

75.73.11 URL as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The URL of the script at the Web server that will process the submission.
Notes: (Read only property)

75.74 class DynaPDFSysFontMBS

75.74.1 class DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for system font info.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.74.2 Blog Entries

- MBS Xojo Plugins, version 18.4pr1
- MBS Xojo / Real Studio Plugins, version 15.0pr8

75.74.3 Blog Entries

- MBS Xojo Plugins, version 18.4pr1
- MBS Xojo / Real Studio Plugins, version 15.0pr8

75.74.4 Methods

75.74.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.74.6 NextFont as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries next font in the chain of fonts.
Notes: Returns nil on the end of list.

75.74.7 Properties

75.74.8 BaseType as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font type.
Notes:

Can be kfbtTrueType, kfbtType1, kfbtOpenType or kfbtStdFont.
(Read and Write property)

75.74.9 CIDOrdering as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: CID Ordering.
Notes:

OpenType CID fonts only.
(Read and Write property)

75.74.10 CIDRegistry as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CID Registry.
Notes:

OpenType CID fonts only
(Read and Write property)

75.74.11 CIDSupplement as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CID Supplement.
Notes:

OpenType CID fonts only
(Read and Write property)

75.74.12 DataOffset as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Data offset.
Notes: (Read and Write property)

75.74.13 FamilyName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Family name.
Notes: (Read and Write property)

75.74.14 FilePath as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font file path.
Notes: (Read and Write property)

75.74.15 FileSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: File size in bytes.
Notes: (Read and Write property)

75.74.16 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes:

Can be combination of kefpAnsiPath, kefpUnicodePath, kefpEmbeddable and kefpEditable.
(Read and Write property)

75.74.17 FullName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Full name.
Notes: (Read and Write property)

75.74.18 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Zero based font index if stored in a TrueType collection.
Notes: (Read and Write property)

75.74.19 IsFixedPitch as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the font is a fixed pitch font.
Notes: (Read and Write property)

75.74.20 Length1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the clear text portion of a Type1 font.
Notes: (Read and Write property)

75.74.21 Length2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the eexec encrypted binary portion of a Type1 font.
Notes: (Read and Write property)

75.74.22 PostScriptName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Postscript mame.
Notes: (Read and Write property)

75.74.23 Style as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font style.
Notes:

See kfs* constants.
(Read and Write property)

75.74.24 UnicodeRange1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supported unicode ranges, part 1.
Notes: (Read and Write property)

75.74.25 UnicodeRange2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supported unicode ranges, part 2.
Notes: (Read and Write property)

75.74.26 UnicodeRange3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supported unicode ranges, part 3.
Notes: (Read and Write property)

75.74.27 UnicodeRange4 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supported unicode ranges, part 4.
Notes: (Read and Write property)

75.74.28 Constants

75.74.29 kurAlphabeticPresentationForms = & h40000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the unicode range constants.

75.74.30 kurAncientGreekNumbers = 64

MBS DynaPDF Plugin, Plugin Version: 15.0.

Function: One of the unicode range constants.

75.74.31 kurAncientSymbols = & h00800000

75.75 class DynaPDFTableMBS

75.75.1 class DynaPDFTableMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a table in DynaPDF.
Notes:

This tables are more for doing a layout, but can also be used to show a list or a worksheet like in Excel.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.75.4 Methods

75.75.5 AddColumn(left as boolean, width as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a column to the table.
See also AddColumn function in DynaPDF manual.

75.75.6 AddRow(height as Double = 0.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a row with given height.
See also AddRow function in DynaPDF manual.

75.75.7 AddRows(count as UInt32, height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a couple of rows with given height.
See also AddRows function in DynaPDF manual.

75.75.8 ClearColumn(Col as Integer, Types as Integer)

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes the content in the specified column in all rows.
Notes: The paramter Types is described in ClearContent() below.
See also ClearColumn function in DynaPDF manual.

75.75.9 ClearContent(Types as Integer)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears content of table.
Notes: See kdc constants for possible flags.
See also ClearContent function in DynaPDF manual.

75.75.10 ClearRow(Row as Integer, Types as Integer)

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function deletes the content in the specified row.
Notes: The paramter Types is described in ClearContent().
See also ClearRow function in DynaPDF manual.

75.75.11 Constructor

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.75.12 DeleteColumn(column as UInt32)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the column.

75.75.13 DeleteRow(row as UInt32)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the row with the given index.
See also DeleteRow function in DynaPDF manual.

75.75.14 DeleteRows

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes all rows.
See also DeleteRows function in DynaPDF manual.

75.75.15 DrawTable(x as Double, y as Double, MaxHeight as Double = 0.0) as Double

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the table at the given position into the PDF:
See also DrawTable function in DynaPDF manual.

75.75.16 GetFirstRow as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries first row from last draw operation.
See also GetFirstRow function in DynaPDF manual.

75.75.17 GetFlags(Row as Integer, Column as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries flag for a cell, a column or a row.
Notes: If Row is -1, only column flags are returned. If Column is -1, the row flags are returned for given row.
See also GetFlags function in DynaPDF manual.

75.75.18 GetNextHeight(MaxHeight as Double, byref NextRow as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the next row.
Example:

```
dim pdf as new DynaPDFMBS
call pdf.CreateNewPDF(nil)
call pdf.Append

// create dummy table with 20 rows, 1 column and 500 points width. 20 points per row by default.
dim table as DynaPDFTableMBS = pdf.CreateTable(20, 1, 500.0, 20.0)

// fill in dummy data
for i as Integer = 1 to 20
dim rowNum as Integer = table.AddRow
call table.SetCellText(rowNum, 0, pdf.ktaLeft, table.kcoCenter, str(i))
next

// and do some calculations
dim nextrow as Integer
dim h as Double = table.GetNextHeight(0, nextrow)
```

```
MsgBox str(h)+" with no limit."

dim h2 as Double = table.GetNextHeight(200, nextrow)

MsgBox str(h2)+" with limit of 200 and rows till "+str(nextrow-1)

break
```

Notes:

If MaxHeight is zero, returns the height of table.
If MaxHeight is the height of space available, plugin calculates the effective height of table and which row would be the next one.
Returns negative number on error.
See also GetNextHeight function in DynaPDF manual.

75.75.19 GetNextRow as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries next row of last draw operation.
See also GetNextRow function in DynaPDF manual.

75.75.20 GetNumCols as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of columns of last draw operation.
See also GetNumCols function in DynaPDF manual.

75.75.21 GetNumRows as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of rows of last draw operation.
See also GetNumRows function in DynaPDF manual.

75.75.22 GetTableHeight as Double

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the table height.
See also GetTableHeight function in DynaPDF manual.

75.75.23 GetTableWidth as Double

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates table width.
See also GetTableWidth function in DynaPDF manual.

75.75.24 HaveMore as boolean

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether there are more rows to draw.
Notes: If you draw a table, you can loop and fill pages until the whole table is drawn.
See also HaveMore function in DynaPDF manual.

75.75.25 SetBackColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

const allRows = -1
const allColumns = -1

// add a few rows
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
```

```
// row 0 in 100% Cyan
call tbl.SetBackColor(0, allColumns, array(255,0,0,0), pdf.kcsDeviceCMYK)
// row 1 in 100% Cyan
call tbl.SetBackColor(1, allColumns, array(0, 255, 0, 0), pdf.kcsDeviceCMYK)
// row 2 in 100% Cyan
call tbl.SetBackColor(2, allColumns, array(0, 0, 255, 0), pdf.kcsDeviceCMYK)
// row 3 in RGB red with 50% transparency
call tbl.SetBackColor(3, allColumns, array(255, 0, 0))
```

Notes:

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 75.75.26 SetBackColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 14551

75.75.26 SetBackColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by integer values
const allRows = -1
const allColumns = -1
call tbl.SetBackColor(allRows, allColumns, 255, 0, 0)
```

Notes:

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 75.75.25 SetBackColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 14550

75.75.27 SetBackColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 100.0) // make some table

const allRows = -1
const allColumns = -1

// add a few rows
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)

// row 0 in 100% Cyan
call tbl.SetBackColorFloat(0, allColumns, array(1.0, 0.0, 0.0, 0.0), pdf.kcsDeviceCMYK)
// row 1 in 100% Cyan
call tbl.SetBackColorFloat(1, allColumns, array(0.0, 1.0, 0.0, 0.0), pdf.kcsDeviceCMYK)
// row 2 in 100% Cyan
call tbl.SetBackColorFloat(2, allColumns, array(0.0, 0.0, 1.0, 0.0), pdf.kcsDeviceCMYK)
// row 3 in RGB red
call tbl.SetBackColorFloat(3, allColumns, array(1.0, 0.0, 0.0))
```

Notes:

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 75.75.28 SetBackColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 14553

75.75.28 SetBackColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by double values
const allRows = -1
const allColumns = -1
call tbl.SetBackColorFloat(allRows, allColumns, 1.0, 0.0, 0.0)
```

Notes:

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 75.75.27 SetBackColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 14552

75.75.29 SetBackColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the back color of the table, a row or cells.
Example:

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by RGB() call
const allRows = -1
const allColumns = -1

dim c as Integer = DynaPDFMBS.RGB(255, 0, 0)
call tbl.SetBackColorValue(allRows, allColumns, DynaPDFMBS.kcsDeviceRGB, c)
```

Notes:

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

75.75.30 SetBorderColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
// set color in CMYK with cyan (255 = 100% )
Call tbl.SetBorderColor(-1, -1, Array(255, 0, 0, 0), pdf.kesDeviceCMYK)
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)
```

Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 75.75.31 SetBorderColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 14554

75.75.31 SetBorderColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
const AllRows = -1
const AllColumns = -1
```

```
// set gray color for all borders to RGB(100,100,100)
call tbl.SetBorderColor(AllRows, AllColumns, 100, 100, 100)

// set border for all cells with fine line
call table.SetBorderWidth(AllRows, AllColumns, 0.5, 0.5, 0.5, 0.5)
```

Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 75.75.30 SetBorderColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 14554

75.75.32 SetBorderColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
// set color in CMYK with magenta (1.0 = 100% )
Call tbl.SetBorderColorFloat(-1, -1, Array(0.0, 1.0, 0.0, 0.0), pdf.kesDeviceCMYK)
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)
```

Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 75.75.33 SetBorderColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 14556

75.75.33 SetBorderColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
// set color in RGB with blue (1.0 = 100% )
Call tbl.SetBorderColorFloat(-1, -1, 0.0, 0.0, 1.0)
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)
```

Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 75.75.32 SetBorderColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 14555

75.75.34 SetBorderColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border color of the table, a row or cells.
Example:

```
// set color in CMYK with magenta (255 = 100% )
Call tbl.SetBorderColorValue(-1, -1, pdf.kesDeviceCMYK, pdf.CMYK(0, 255, 0, 0))
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)

// set color in RGB with green (255 = 100% )
Call tbl.SetBorderColorValue(row, -1, pdf.kesDeviceRGB, pdf.RGB(0, 255, 0))
Call tbl.SetBorderWidth(row, -1, 2.0, 2.0, 2.0, 2.0)
```

Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

75.75.35 SetBorderWidth(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the border width of the table, a row or cells.
Example:

```
// set border for a row to right/bottom with fine line
call table.SetBorderWidth(rowNum, -1, 0.0, 0.0, 0.5, 0.5)
```

Notes:

Default value is 0.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

75.75.36 SetCellAction(Row as Integer, Column as Integer, ActionHandle as UInt32, Mode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an invisible link annotation for the specified cell or table and associates the provided action with that annotation.
Notes:

The result is an interactive area that executes the action if the user clicks on cell or table.
A cell action is always a background object that is created in the size of the background area when the table is drawn.

Unlike other cell objects like images, text, and so on, a cell link is no persistent object because the action will be deleted when then PDF file in memory will be closed or when destructor will be called.
If the table should be drawn into more than one PDF file then re-create the actions and cell action before drawing the table into the next PDF file.

Actions can be created with functions like CreateGoToAction(), CreateGoToRAction(), and so on.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetCellAction function in DynaPDF manual.

75.75.37 SetCellDashPattern(Row as Integer, Column as Integer, CellSide as Integer, LineCapStyle as Integer, values() as Double, Phase as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply a line dash pattern to cell, row, and table borders.
Notes: Pass kcsTop, kcsBottom, kcsLeft or kcsRight for CellSide parameter.
See also SetCellDashPattern function in DynaPDF manual.

75.75.38 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the cell image.
See also SetCellImage function in DynaPDF manual.
See also:

- 75.75.39 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean 14558

75.75.39 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the cell image.
See also SetCellImage function in DynaPDF manual.
See also:

- 75.75.38 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean 14558

75.75.40 SetCellImageAnsi(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cell image.
See also SetCellImage function in DynaPDF manual.
See also:

- 75.75.38 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean 14558
- 75.75.39 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean 14558

75.75.41 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as MemoryBlock, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cell image.
Example:

```
dim PictureData as memoryblock // from database maybe?
dim w as Double = 300 // destination size
dim h as Double = 200
dim row as Integer
dim column as Integer

dim table as DynaPDFTableMBS // your table

call table.SetCellImageData(row, column, true, table.kcoCenter, table.kcoCenter, w, h, PictureData, 0)
```

Notes: Returns true on success.
See also:

- 75.75.42 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as string, index as Integer = 0) as boolean 14560

75.75.42 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as string, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cell image.
Example:

```
dim PictureData as string // from database maybe?
dim w as Double = 300 // destination size
dim h as Double = 200
dim row as Integer
dim column as Integer

dim table as DynaPDFTableMBS // your table

call table.SetCellImageData(row, column, true, table.kcoCenter, table.kcoCenter, w, h, PictureData, 0)
```

See also:

- 75.75.41 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as MemoryBlock, index as Integer = 0) as boolean 14559

75.75.43 SetCellOrientation(Row as Integer, Column as Integer, Orientation as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function sets the cell orientation.
Notes: See dynapdf_help.pdf for details.
See also SetCellOrientation function in DynaPDF manual.

75.75.44 SetCellPadding(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the cell padding of the table, a row or cells.
Notes:

Default is zero.

If Row is -1, all rows are modified. If Column is -1, all columns are modified.

75.75.45 SetCellPicture(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as double, Height as Double, Pic as Picture) as boolean

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cell image with given picture.
Example:

```
dim Pic as picture // your picture from database maybe?
dim w as Double = 300 // destination size
dim h as Double = 200
dim row as Integer
dim column as Integer

dim table as DynaPDFTableMBS // your table

call table.SetCellPicture(row, column, true, table.kcoCenter, table.kcoCenter, w, h, Pic)
```

Notes: Returns true on success.

75.75.46 SetCellSpacing(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the cell spacing of the table, a row or cells.
Notes:

Default is zero.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

75.75.47 SetCellTable(Row as Integer, Column as Integer, HAlign as Integer, VAlign as Integer, SubTable as DynaPDFTableMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a sub table into the specfied cell.
Notes:

A sub table is always a foreground object that has a strong width and height. That means, if the cell is not large enough then it will be expanded.
Note that the function creates no copy of the table. Do not delete the sub table when it is used by another table.
In programming languages which use reference counting like Xojo, it is important to delete the tables in right order. Delete first the tables which contain references to sub tables. Finally, delete the sub tables.

If the function succeeds the return value is true. If the function fails the return value is false.
See dynapdf_help.pdf for details.
See also SetCellTable function in DynaPDF manual.

75.75.48 SetCellTemplate(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, TmplHandle as Integer, Width as Double = 0, Height as Double = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function inserts a template into the specified cell.
Notes: See dynapdf_help.pdf for details.
See also SetCellTemplate function in DynaPDF manual.

75.75.49 SetCellText(Row as Integer, Column as Integer, HAlign as Integer, VAlign as Integer, text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text of a cell.
See also SetCellText function in DynaPDF manual.

75.75.50 SetCellTextAnsi(Row as Integer, Column as Integer, HAlign as Integer, VAlign as Integer, text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text of a cell with ANSI text.
See also SetCellText function in DynaPDF manual.

75.75.51 SetColWidth(column as UInt32, Width as Double, ExtTable as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the column width for a column.
See also SetColWidth function in DynaPDF manual.

75.75.52 SetFlags(Row as Integer, Column as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the flags for a cell.
Notes: If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFlags function in DynaPDF manual.

75.75.53 SetFont(Row as Integer, Column as Integer, name as string, Style as Integer, Embed as Boolean, CodePage as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font of the table, a row or cells.
Example:

```
dim tbl as DynaPDFTableMBS // your table

// set font for all cells
call tbl.SetFont -1, -1, "Helvetica", pdf.kfsNone, true, pdf.kcpUnicode
// set bold font for a special cell
call tbl.SetFont rowNum, 2, "Helvetica", pdf.kfsBold, true, pdf.kcpUnicode
```

Notes:

Default is Helvetica, Code page 1252, Embed false.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFont function in DynaPDF manual.

75.75.54 SetFontAnsi(Row as Integer, Column as Integer, name as string, Style as Integer, Embed as Boolean, CodePage as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font of the table, a row or cells.
Notes:

Default is Helvetica, Code page 1252, Embed false.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFont function in DynaPDF manual.

75.75.55 SetFontSelMode(Row as Integer, Column as Integer, value as Int32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font selection mode of the table, a row or cells.
Notes:

Default is ksmFamilyName.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFontSelMode function in DynaPDF manual.

75.75.56 SetFontSize(Row as Integer, Column as Integer, size as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font size of the table, a row or cells.
Notes:

Default is 10.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFontSize function in DynaPDF manual.

75.75.57 SetGridHorizontalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 75.75.58 SetGridHorizontalColor(paramarray channels as Integer) as boolean 14565

75.75.58 SetGridHorizontalColor(paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 75.75.57 SetGridHorizontalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 14564

75.75.59 SetGridHorizontalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 75.75.60 SetGridHorizontalColorFloat(paramarray channels as Double) as boolean 14565

75.75.60 SetGridHorizontalColorFloat(paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 75.75.59 SetGridHorizontalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 14565

75.75.61 SetGridHorizontalColorValue(TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

75.75.62 SetGridVerticalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 75.75.63 SetGridVerticalColor(paramarray channels as Integer) as boolean 14567

75.75.63 SetGridVerticalColor(paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 75.75.62 SetGridVerticalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 14566

75.75.64 SetGridVerticalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 75.75.65 SetGridVerticalColorFloat(paramarray channels as Double) as boolean 14567

75.75.65 SetGridVerticalColorFloat(paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 75.75.64 SetGridVerticalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 14567

75.75.66 SetGridVerticalColorValue(TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the vertical grid color.
Notes:

Default is black.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

75.75.67 SetGridWidth(h as Double, v as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the grid width.
Notes: Default is 0.
See also SetGridWidth function in DynaPDF manual.

75.75.68 SetImageColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 75.75.69 SetImageColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 14569

75.75.69 SetImageColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 75.75.68 SetImageColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 14568

75.75.70 SetImageColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 75.75.71 SetImageColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 14569

75.75.71 SetImageColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 75.75.70 SetImageColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 14569

75.75.72 SetImageColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

75.75.73 SetPDF(pdf as DynaPDFMBS)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the target PDF for this table.

75.75.74 SetRowHeight(Row as Integer, value as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the row height of a row.
See also SetRowHeight function in DynaPDF manual.

75.75.75 SetTableWidth(Value as single, AdjustType as Integer, MinColWidth as single)

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function changes the width of the table.
Notes:

At least one column must be modified when the width will be changed. The parameter AdjustType specifies how the column width should be modified. If the new width is larger, then the difference can be added to the left or right column, or all columns can get a unique width (TableWidth / NumColumns). The parameter MinColWidth is ignored in this case.
If the new width is smaller then the difference must be subtracted from the columns. The parameter MinColWidth specifies in this case the minimum width of columns that must be adjusted. It is only used if AdjustType is not set to kcoaUniqueWidth. The column widths are adjusted starting from the left or right side as specified. If the width of the first column is not large enough to subtract the difference, then the minimum column width is set to the column. This adjustment continues until the gap is zero. If the new table width is smaller as MinColWidth * NumColumns then the widths of the remaining columns will be set to zero. Such cases should be avoided since the column widths must be adjusted again when the table is drawn.

kcoaUniqueWidth	Set the column widths to TableWidth / NumColumns
kcoaAdjLeft	Adjust the widths starting from the left side
kcoaAdjRight	Adjust the widths starting from the right side

See dynapdf_help manual for details.
Returns true on success or false on failure.
See also SetTableWidth function in DynaPDF manual.

75.75.76 SetTextColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 75.75.77 SetTextColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 14571

75.75.77 SetTextColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 75.75.76 SetTextColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 14571

75.75.78 SetTextColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 75.75.79 SetTextColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 14572

75.75.79 SetTextColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the text color of the table, a row or cells.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 75.75.78 SetTextColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 14572

75.75.80 SetTextColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the horizontal grid color.
Notes:

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

75.75.81 Properties

75.75.82 Parent as Variant

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reference to parent object.
Notes: (Read only property)

75.75.83 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reference to parent PDF object.
Notes: (Read only property)

75.75.84 Constants

75.75.85 kcctAction = 4

MBS DynaPDF Plugin, Plugin Version: 19.1.

Function: One of the cell content type constants.
Notes: Action

75.75.86 kcctImage = 1

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell content type constants.
Notes: Image.

75.75.87 kcctTable = 2

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell content type constants.
Notes: Table.

75.75.88 kcctTemplate = 3

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the cell content type constants.
Notes: Template.

75.75.89 kcctText = 0

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell content type constants.
Notes: Text

75.75.90 kcoaAdjLeft = 1

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the column adjustment constants.
Notes: Adjust the widths starting from the left side.

75.75.91 kcoaAdjRight = 2

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the column adjustment constants.
Notes: Adjust the widths starting from the right side.

75.75.92 kcoaUniqueWidth = 0

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the column adjustment constants.
Notes: Set the column widths to TableWidth / NumColumns.

75.75.93 kcoBottom = 1

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell orientation constants.
Notes: Bottom

75.75.94 kcoCenter = 2

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell orientation constants.
Notes: Center

75.75.95 kcoLeft = 0

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell orientation constants.
Notes: Left

75.75.96 kcoRight = 1

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell orientation constants.
Notes: Right

75.75.97 kcoTop = 0

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the cell orientation constants.
Notes: Top

75.75.98 kcsBottom = 1

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the cell side constants.
Notes: Bottom side

75.75.99 kcsLeft = 0

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the cell side constants.
Notes: Left side

75.75.100 kcsRight = 2

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the cell side constants.
Notes: Right side

75.75.101 kcsTop = 3

MBS DynaPDF Plugin, Plugin Version: 20.0.

Function: One of the cell side constants.
Notes: Top side

75.75.102 kdcAction = 16

MBS DynaPDF Plugin, Plugin Version: 19.1.

Function: One of the delete option flags for ClearContent function.
Notes: Delete action.

75.75.103 kdcAllCont = 31

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes: Delete all content types

75.75.104 kdcBackGround = & h20000000

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes: Delete background objects

75.75.105 kdcBoth = & h30000000

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes: Delete both foreground and background objects

75.75.106 kdcForeGround = & h10000000

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes: Delete foreground objects

75.75.107 kdcImage = 2

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes: Delete image.

75.75.108 kdcTable = 8

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes: Delete table.

75.75.109 kdcTemplate = 4

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the delete option flags for ClearContent function.
Notes: Template table.

75.75.110 kdcText = 1

MBS DynaPDF Plugin, Plugin Version: 12.4.

Function: One of the delete option flags for ClearContent function.
Notes:

Delete text.
Text is always a foreground object

75.75.111 ktfAddFlags = 32

MBS DynaPDF Plugin, Plugin Version: 15.2.

Function: One of the cell flags.
Notes:

If used when setting flags, the flags are not replacing existing values, but added.
This way a call can set one flag and later another call can add a second flag without clearing first one.

75.75.112 ktfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 12.5.

Function: One of the cell flags.
Notes: Default flag.

75.75.113 ktfHeaderRow = 2

MBS DynaPDF Plugin, Plugin Version: 13.1.

Function: One of the cell flags.
Notes: Header rows are drawn first after a page break occurred

75.75.114 ktfNoLineBreak = 4

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the cell flags.
Notes: Prohibit line breaks in cells whith text ->Can be set to the entire table, columns, rows, and cells.

75.75.115 ktfScaleToRect = 8

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the cell flags.
Notes:

If set, the specified output width and height represents the maximum size of the image or template.
The image or template is scaled into this rectangle without changing the aspect ratio.

75.75.116 ktfStatic = 1

MBS DynaPDF Plugin, Plugin Version: 12.5.

Function: One of the cell flags.
Notes: This flag marks a row, column, or cell as static to avoid the deletion of the content with ClearContent().

75.75.117 ktfUseImageCS = 16

MBS DynaPDF Plugin, Plugin Version: 13.2.

Function: One of the cell flags.
Notes: If set, images are inserted in the native image color space.

75.76 class DynaPDFTextRecordAMBS

75.76.1 class DynaPDFTextRecordAMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an ANSI text.

75.76.2 Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

75.76.3 Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

75.76.4 Properties

75.76.5 Advance as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The advance value for this text.
Notes:

Negative values move the cursor the right, positive to the left

(Read only property)

75.76.6 Length as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw text length in bytes.
Notes: (Read and Write property)

75.76.7 Text as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw text.
Notes: (Read and Write property)

75.77 class DynaPDFTextRecordWMBS

75.77.1 class DynaPDFTextRecordWMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an unicode text.

75.77.2 Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

- DynaPDF Text Position Examples

75.77.4 Properties

75.77.5 Advance as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The advance value for this text.
Notes:

Negative values move the cursor the right, positive to the left

(Read only property)

75.77.6 Length as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length in characters.
Notes: (Read and Write property)

75.77.7 Text as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Already translated Unicode string.
Notes: (Read and Write property)

75.77.8 Width as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: String width measured in text space.
Notes: (Read only property)

75.78 class DynaPDFURIActionMBS

75.78.1 class DynaPDFURIActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an URL action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.78.2 Methods

75.78.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.78.4 Properties

75.78.5 BaseURL as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, if defined in the Catalog object.
Notes: (Read only property)

75.78.6 IsMap as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A flag specifying whether to track the mouse position when the URI is resolved.
Notes:

e.g. http://test.org?50,70.
(Read only property)

75.78.7 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the next action.
Notes:

-1 or next action handle to be executed if any
(Read only property)

75.78.8 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the next action.
Notes:

Only set if NextAction is >= 0.
(Read only property)

75.78.9 URI as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Uniform Resource Identifier.
Notes: (Read only property)

75.79 class DynaPDFViewportMBS

75.79.1 class DynaPDFViewportMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The viewport details class.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.79.2 Blog Entries

75.79.4 Methods

75.79.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.79.6 Properties

75.79.7 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Bounding box.
Notes: (Read and Write property)

75.79.8 Measure as DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional measure dictionary.
Notes: (Read and Write property)

75.79.9 Name as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional name.
Notes: (Read and Write property)

75.79.10 PtData as DynaPDFPointDataDictionaryMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Point Data dictionary.
Notes: (Read and Write property)

75.80 class DynaPDFXFAStreamMBS

75.80.1 class DynaPDFXFAStreamMBS

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a XFA stream.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

75.80.4 Methods

75.80.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

75.80.6 Properties

75.80.7 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: XML Stream.
Notes: (Read and Write property)

75.80.8 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stream index.
Notes: (Read and Write property)

75.80.9 Name as String

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stream name.
Notes: (Read and Write property)

75.80.10 Size as Integer

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

Chapter 76

EmailParser

76.1 class MimeAddressListMBS

76.1.1 class MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a list of addresses.

76.1.2 Methods

76.1.3 Addresses as MimeAddressMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of addresses.
See also:

- 76.1.4 Addresses(index as Integer) as MimeAddressMBS 14591

76.1.4 Addresses(index as Integer) as MimeAddressMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries address by index.
Notes: Index is zero based.
See also:

- 76.1.3 Addresses as MimeAddressMBS() 14591

76.1.5 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a text with addresses.

76.1.6 Properties

76.1.7 AddressesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of addresses.
Notes:

This property is only to see array in debugger.
(Read only property)

76.1.8 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of addresses in this list.
Notes: (Read only property)

76.1.9 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The address list as a string.
Notes: (Read only property)

76.2 class MimeAddressMBS

76.2.1 class MimeAddressMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an address which can be an email or a group.

76.2.2 Methods

76.2.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an address from text.
Example:

```
dim m as new MimeAddressMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox m.Mailbox.LabelDecoded
```

76.2.4 Properties

76.2.5 Group as MimeGroupMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The group for this address.
Notes: (Read only property)

76.2.6 isGroup as Boolean

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this address is a group.
Notes: (Read only property)

76.2.7 Mailbox as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mailbox for this address.
Notes: (Read only property)

76.2.8 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The address as a string.
Notes: (Read only property)

76.3 class MimeAttachmentMBS

76.3.1 class MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an attachment.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

76.3.2 Methods

76.3.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

76.3.4 Properties

76.3.5 Body as MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference to the body of this attachment.
Notes:

The StringValue of the body has the attachment's encoded data.
(Read and Write property)

76.3.6 ContentDescription as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content description.
Notes: (Read and Write property)

76.3.7 ContentDisposition as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content disposition.
Notes:

e.g. inline; filename="agb.pdf"
(Read and Write property)

76.3.8 contentId as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content ID for inline graphics.
Notes:

e.g. c1441531740.48804.1@MacbookPro-Christian.local
(Read and Write property)

76.3.9 ContentTransferEncoding as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content transfer encoding.
Notes:

e.g. base64
(Read and Write property)

76.3.10 ContentType as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content type.
Notes:

e.g. text/plain, charset=utf-8 or application/pdf; name="agb.pdf"
(Read and Write property)

76.3.11 Data as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data for this attachment.
Notes:

Decoded for your convenience.
(Read and Write property)

76.3.12 Filename as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The filename for this attachment.
Notes:

The class pulls this from various header fields and decodes it if necessary.
The file name may contain invalid characters for your platform.
Like double colons for OS X or backslash for Windows.
(Read and Write property)

76.3.13 Header as MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The header details for this attachment.
Notes: (Read and Write property)

76.3.14 MimeType as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime type of the attachment.
Notes:

e.g. "application/pdf" for a PDF file
See also MimeTypeToFileExtensionMBS function.
(Read and Write property)

76.3.15 MimeVersion as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime version of the attachment.
Notes:

e.g. "1.0"
(Read and Write property)

76.4 class MimeBodyMBS

76.4.1 class MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a body of a mime entity.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

76.4.2 Methods

76.4.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

76.4.4 Parts as MimeEntityMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of parts.
Notes: Mime Entities are organized often in a tree. The email is an entity and has sub entities for html, plain text and attachments.
See also:

- 76.4.5 Parts(index as Integer) as MimeEntityMBS 14598

76.4.5 Parts(index as Integer) as MimeEntityMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries part by index.
Notes: Index is zero based.
See also:

- 76.4.4 Parts as MimeEntityMBS() 14598

76.4.6 Properties

76.4.7 epilogue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The epilogue of the body.
Notes: (Read only property)

76.4.8 PartsVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of parts.
Notes:

Mime Entities are organized often in a tree. The email is an entity and has sub entities for html, plain text and attachments.
This property is only to see array in debugger.
(Read only property)

76.4.9 preamble as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The preamble of the body.
Notes:

This is sometimes a message like: "This is a MIME encoded message."
(Read only property)

76.4.10 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value of the body.
Notes: (Read only property)

76.5 class MimeEmailMBS

76.5.1 class MimeEmailMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an email.
Notes: Subclass of the MimeEntityMBS class.

76.5.6 Methods

76.5.7 Attachments as MimeAttachmentMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of attachments.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox str(m.Attachments.Ubound+1)+" attachments and "+str(m.Inlines.Ubound+1)+" inlines"

for each a as MimeAttachmentMBS in m.Inlines
MsgBox "Inline: " + a.Filename
next
```

See also:

- 76.5.8 Attachments(index as Integer) as MimeAttachmentMBS 14601

76.5.8 Attachments(index as Integer) as MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries attachment by index.
Notes: Index is zero based.
See also:

- 76.5.7 Attachments as MimeAttachmentMBS() 14601

76.5.9 Constructor(Content as MemoryBlock)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an email from a memoryblock.
See also:

- 76.5.10 Constructor(Content as string) 14602
- 76.5.11 Constructor(File as FolderItem) 14602

76.5.10 Constructor(Content as string)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an email from a string.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim b as BinaryStream = BinaryStream.Open(f)
dim s as string = b.Read(b.Length)
dim m as new MimeEmailMBS(s)

MsgBox m.Subject
```

Notes:

This is to parse raw email text, e.g. eml file.
To parse emlx, open the text file and read the first line. The first line contains the length of the email. Then read the following number of bytes of that value and that is the eml content. Followed by a plist structure.
See also:

- 76.5.9 Constructor(Content as MemoryBlock) 14602
- 76.5.11 Constructor(File as FolderItem) 14602

76.5.11 Constructor(File as FolderItem)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an email from a text file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox m.Subject
```

Notes: You can pass here an EML file.
See also:

- 76.5.9 Constructor(Content as MemoryBlock) 14602
- 76.5.10 Constructor(Content as string) 14602

76.5.12 DecodeInline(Text as String) as String

MBS CURL Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a text with inline encoded text.
Example:

```
dim e,s as string

s = "=?UTF-8?B?WW91ciBBY2NvdW50IFNuYXBzaG90?="
e = MimeEmailMBS.DecodeInline(s)

MsgBox e
```

Notes:

This is the function our plugin uses to decode names and subject in the email.
You don't need to use it unless you got subject/name encoded from somewhere else.

76.5.13 HTMLToPlainText(HTMLText as String) as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts html to plain text.
Notes:

This is the function our plugin uses internally to fill PlainText field for html only email.
Removes HTML tags, decodes entities and adds returns where appropriated.

76.5.14 Inlines as MimeAttachmentMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of inline items.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox str(m.Attachments.Ubound+1)+" attachments and "+str(m.Inlines.Ubound+1)+" inlines"

for each a as MimeAttachmentMBS in m.Inlines
MsgBox "Inline: " + a.Filename
next
```

Notes: Inline items are like attachments, but shown in the email and normally referenced by ID from the html text.
See also:

- 76.5.15 Inlines(index as Integer) as MimeAttachmentMBS 14604

76.5.15 Inlines(index as Integer) as MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries inline by index.
Notes: Index is zero based.
See also:

- 76.5.14 Inlines as MimeAttachmentMBS() 14603

76.5.16 Properties

76.5.17 AttachmentsVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of attachments.
Notes:

This property is only to see array in debugger.
(Read only property)

76.5.18 Date as Date

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the sent date of the email.
Notes:

Can be undefined and return nil.
The plugin looks in email headers for a Date: header and parses the date.
The returned date is normalized to current time zone.
(Read only property)

76.5.19 HTMLText as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The html text of the email.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox m.HTMLText
```

Notes:

Decoded for your convenience.
You may want to use ReplaceLineEndings to make sure the line endings are what you need them to be.
(Read only property)

76.5.20 InlinesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of inline items.
Notes:

Inline items are like attachments, but shown in the email and normally referenced by ID from the html text.
This property is only to see array in debugger.
(Read only property)

76.5.21 PlainText as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plain text of the email.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)
```

MsgBox m.PlainText

Notes:

Decoded for your convenience.
You may want to use ReplaceLineEndings to make sure the line endings are what you need them to be.
(Read only property)

76.5.22 RaiseUnknownFormatExceptions as Boolean

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to raise an exception when plugin finds encoding in email which is not in list of known encodings.
Notes:

Used to find unknown encodings.
(Read and Write property)

76.5.23 ReceivedDate as Date

MBS CURL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the receive date of the email.
Notes:

Can be undefined and return nil.
The plugin looks in email headers for a Receive: header and parses the date.
The returned date is normalized to current time zone.
(Read only property)

76.5.24 Source as String

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source code of the email parsed.
Notes: (Read only property)

76.5.25 Subject as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decoded subject line of the email.
Notes: (Read only property)

76.6 class MimeEntityMBS

76.6.1 class MimeEntityMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a mime entity.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

76.6.2 Methods

76.6.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

76.6.4 Properties

76.6.5 Body as MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw content of this entity.
Notes:

This may be quoted printable, base64 or otherwise encoded.
(Read only property)

76.6.6 BodyDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decoded body content.
Notes: (Read only property)

76.6.7 Header as MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The header for this entity.
Notes:

The email itself has header, but each entity in the mime tree has also headers.
(Read only property)

76.7 class MimeFieldMBS

76.7.1 class MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a header field.

76.7.2 Methods

76.7.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses the text in a field.

76.7.4 Properties

76.7.5 Name as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field name.
Notes: (Read only property)

76.7.6 Value as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field value.
Notes: (Read only property)

76.8 class MimeGroupMBS

76.8.1 class MimeGroupMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an email group.
Example:

```
dim g as new MimeGroupMBS("clients:=?utf-8?Q?Josef=20M=C3=BCller?= <josef@test.test>, =?utf-8?Q?Peter=20M=C3=BCller?= <peter@test.test>;")

MsgBox g.NameDecoded+" "+str(g.Count)
MsgBox g.Mailboxes(0).LabelDecoded
MsgBox g.Mailboxes(1).LabelDecoded
```

76.8.2 Methods

76.8.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a group.
Example:

```
dim g as new MimeGroupMBS("clients:=?utf-8?Q?Josef=20M=C3=BCller?= <josef@test.test>, =?utf-8?Q?Peter=20M=C3=BCller?= <peter@test.test>;")

MsgBox g.NameDecoded+" "+str(g.Count)
```

76.8.4 Mailboxes as MimeMailboxMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of mailboxes in this group.
See also:

- 76.8.5 Mailboxes(index as Integer) as MimeMailboxMBS 14611

76.8.5 Mailboxes(index as Integer) as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a mailbox in the group.
Example:

```
dim g as new MimeGroupMBS("clients:=?utf-8?Q?Josef=20M=C3=BCller?= <josef@test.test>, =?utf-8?Q?Peter=20M=C3=BCller?= <peter@test.test>;")

MsgBox g.Mailboxes(0).LabelDecoded
MsgBox g.Mailboxes(1).LabelDecoded
```

See also:

- 76.8.4 Mailboxes as MimeMailboxMBS() 14611

76.8.6 Properties

76.8.7 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of emails in this group.
Notes: (Read only property)

76.8.8 MailboxesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of mailboxes in this group.
Notes:

This property is only to see array in debugger.
(Read only property)

76.8.9 Name as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the group.
Notes:

The name property has the raw name while the NameDecoded property has the decoded version for displaying to user.
(Read only property)

76.8.10 NameDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the group.
Notes:

The name property has the raw name while the NameDecoded property has the decoded version for displaying to user.
(Read only property)

76.8.11 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The group as a string.
Notes: (Read only property)

76.9 class MimeHeaderMBS

76.9.1 class MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for headers of a mime entity.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

76.9.2 Methods

76.9.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

76.9.4 FieldByName(name as string) as MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds a field by name.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.FieldByName("Date").Value
```

Notes: e.g. "Sat, 5 Sep 2015 23:52:13 +0200" for the date field.

76.9.5 Fields as MimeFieldMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of fields in this header.
See also:

- 76.9.6 Fields(index as Integer) as MimeFieldMBS

76.9.6 Fields(index as Integer) as MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries field by index.
Notes: Index is zero based.
See also:

- 76.9.5 Fields as MimeFieldMBS() 14614

76.9.7 hasField(name as string) as boolean

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a certain field exists.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
if h.hasField("Date") then
MsgBox "Has date: "+h.FieldByName("Date").Value
end if
```

76.9.8 Properties

76.9.9 bcc as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The BCC address list.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get BCC
dim l as MimeAddressListMBS = h.BCC
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it's an email and get it
```

```
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded+" "+x.Email
```

Notes: (Read only property)

76.9.10 cc as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CC address list.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get CC
dim l as MimeAddressListMBS = h.CC
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it's an email and get it
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded+" "+x.Email
```

Notes: (Read only property)

76.9.11 ContentDescription as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content description.
Notes: (Read only property)

76.9.12 ContentDisposition as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content disposition.
Notes: (Read only property)

76.9.13 contentId as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content ID for an inline graphic.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.contentId
```

Notes: (Read only property)

76.9.14 ContentTransferEncoding as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content transfer encoding.
Notes:

e.g. base64
(Read only property)

76.9.15 ContentTransferEncodingMechanism as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content transfer encoding mechanism.
Notes:

base64
(Read only property)

76.9.16 ContentType as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content type.
Notes:

e.g. "multipart/alternative; boundary="Apple-Mail=_F9738882-571C-4469-8349-574115CE32F4""
(Read only property)

76.9.17 from as MimeMailboxListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The from address list.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get from
dim l as MimeMailboxListMBS = h.from
// get mailboxes
dim a() as MimeMailboxMBS = l.Mailboxes
// get first one
dim b as MimeMailboxMBS = a(0)
// and show to user with name and email
MsgBox b.LabelDecoded+" "+b.Email
```

Notes: (Read only property)

76.9.18 messageid as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The message ID for this email.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.messageid
```

Notes:

e.g. "<599782DA-09A0-4461-8474-2BE9F3197CAF@macsw.de>"
(Read only property)

76.9.19 MimeVersion as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime version.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.MimeVersion
```

Notes:

e.g. "1.0"
(Read only property)

76.9.20 replyto as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The replyto address field.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get replyto
dim l as MimeAddressListMBS = h.replyto
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it's an email and get it
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded+" "+x.Email
```

Notes: (Read only property)

76.9.21 sender as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sender of the email.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
dim b as MimeMailboxMBS = h.sender
MsgBox b.Email
```

Notes:

May be different from "from" field.
(Read only property)

76.9.22 subject as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original subject line.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.subject
```

Notes:

The subject property has the original subject line while the plugin provides the decoded subjected line in the subjectDecoded for display to user.
(Read only property)

76.9.23 subjectDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decoded subject line.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.subjectDecoded
```

Notes:

The subject property has the original subject line while the plugin provides the decoded subjected line in the subjectDecoded for display to user.
(Read only property)

76.9.24 too as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TO receivers.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get to
dim l as MimeAddressListMBS = h.too
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it's an email and get it
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded+" "+x.Email
```

Notes:

Named "too" in this class as "to" is a reserved word.
(Read only property)

76.10 class MimeMailboxListMBS

76.10.1 class MimeMailboxListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a list of mailboxes.

76.10.2 Methods

76.10.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a list of mailboxes.
Example:

```
dim m as new MimeMailboxListMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox str(m.Count)
```

76.10.4 Mailboxes as MimeMailboxMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of mailboxes.
See also:

- 76.10.5 Mailboxes(index as Integer) as MimeMailboxMBS 14623

76.10.5 Mailboxes(index as Integer) as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries mailbox by index.
Notes: Index is zero based.
See also:

- 76.10.4 Mailboxes as MimeMailboxMBS() 14623

76.10.6 Properties

76.10.7 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of mailboxes in list.
Example:

```
dim m as new MimeMailboxListMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox str(m.Count)
```

Notes: (Read only property)

76.10.8 MailboxesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of mailboxes.
Notes:

This property is only to see array in debugger.
(Read only property)

76.10.9 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of this list as a string.
Notes: (Read only property)

76.11 class MimeMailboxMBS

76.11.1 class MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an email address.
Example:

```
dim m as new MimeMailboxMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox m.LabelDecoded+" "+m.Email
```

76.11.2 Methods

76.11.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses an email address.
Example:

```
dim m as new MimeMailboxMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox m.LabelDecoded+" "+m.Email
```

76.11.4 Properties

76.11.5 Domain as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The domain name of the email address.
Notes: (Read only property)

76.11.6 Email as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The email address.
Notes:

Mailbox and Domain together.

(Read only property)

76.11.7 Label as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The label for this email address.
Notes:

Label is the raw value and LabelDecoded is the decoded value.
So please use LabelDecoded for display.
(Read only property)

76.11.8 LabelDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The label for this email address.
Notes:

Label is the raw value and LabelDecoded is the decoded value.
So please use LabelDecoded for display.
(Read only property)

76.11.9 Mailbox as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the email mailbox.
Notes: (Read only property)

76.11.10 Sourceroute as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source route parameter.
Notes: (Read only property)

76.11.11 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The email address as a string.
Notes: (Read only property)

Chapter 77

Encryption and Hash

77.1 class AESMBS

77.1.1 class AESMBS

MBS Encryption Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for AES encryption.
Example:

```
dim a as AESMBS
dim key as MemoryBlock
dim data as MemoryBlock

key=NewMemoryBlock(20)
key.CString(0)="Hello World!1234" // 16 byte key for 128bit

a=new AESMBS

if a.SetKey(key, 128) then

data=NewMemoryBlock(20)
data.StringValue(0,16)="Hello World!"
MsgBox "Before: "+data.StringValue(0,16)
a.Encrypt(data)
MsgBox "After encryption: "+data.StringValue(0,16)
a.Decrypt(data)
MsgBox "After decryption: "+data.StringValue(0,16)
else
MsgBox "Failed"
end if
```

Notes:

For newer projects we recommend switching to CipherMBS class.

This class has low level functions like Encrypt. It also has mid level functions like EncryptCFB/CBC. For your convenience, we also have high level functions like EncryptString.

77.1.6 Methods

77.1.7 Decrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
Notes:

If odata is nil, idata is used for output.
This is ECB mode.

77.1.8 DecryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the 16 byte data blocks within LengthBytes bytes in the data.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

77.1.9 DecryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB1 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 77.1.10 DecryptCFB1(idata as string, IVector as memoryblock=nil) as string 14632

77.1.10 DecryptCFB1(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB1 mode.
Example:

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB1(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB1(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

Notes: If IVector is nil, a vector filled with zeros is used.
See also:

- 77.1.9 DecryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 14631

77.1.11 DecryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB128 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

Older plugin version had problems that they didn't use key at all. So if you want to read old data encrypted with them, you need simply to decrypt without setting key.
See also:

- 77.1.12 DecryptCFB128(idata as string, IVector as memoryblock=nil) as string 14633

77.1.12 DecryptCFB128(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB128 mode.
Example:

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB128(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB128(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

Notes:

If IVector is nil, a vector filled with zeros is used.

Older plugin version had problems that they didn't use key at all. So if you want to read old data encrypted with them, you need simply to decrypt without setting key.

77.1.13 DecryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB8 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

77.1.14 DecryptCFB8(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the data in CFB8 mode.
Example:

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB8(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB8(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

Notes: If IVector is nil, a vector filled with zeros is used.
See also:

- 77.1.13 DecryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 14634

77.1.15 DecryptECB(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decryptes the 16 byte data block in the data.
Notes: If odata is nil, idata is used for output.

77.1.16 Encrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
Notes:

If odata is nil, idata is used for output.
This is ECB mode.

77.1.17 EncryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the 16 byte data blocks within LengthBytes bytes in the data.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

77.1.18 EncryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB1 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 77.1.19 EncryptCFB1(idata as string, IVector as memoryblock=nil) as string 14636

77.1.19 EncryptCFB1(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB1 mode.
Example:

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB1(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB1(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

Notes:

If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 77.1.18 EncryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 14635

77.1.20 EncryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB128 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 77.1.21 EncryptCFB128(idata as string, IVector as memoryblock=nil) as string 14637

77.1.21 EncryptCFB128(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB128 mode.
Example:

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB128(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB128(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

Notes:

If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 77.1.20 EncryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 14637

77.1.22 EncryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB8 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 77.1.23 EncryptCFB8(idata as string, IVector as memoryblock=nil) as string 14638

77.1.23 EncryptCFB8(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in CFB8 mode.
Example:

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB8(input)
```

```
if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB8(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

Notes:

If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 77.1.22 EncryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 14638

77.1.24 EncryptECB(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the 16 byte data block in the data.
Notes: If odata is nil, idata is used for output.

77.1.25 EncryptOFB(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes the data in OFB mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

77.1.26 SetKey(key as memoryblock, nBits as Integer) as boolean

MBS Encryption Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the key.
Notes:

possible values for the bitcount:

128	key is 16 bytes long
192	key is 24 bytes long
256	key is 32 bytes long

Plugin version 13.4 and newer pads this memoryblock with 00 bytes if string is shorter.
See also:

- 77.1.27 SetKey(key as string) as boolean 14640

77.1.27 SetKey(key as string) as boolean

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the key.
Example:

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new AESMBS

call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
```

```
x=a.EncryptCFB128(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptCFB128(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

Notes:

Please use 16, 24 or 32 byte long key strings.
Plugin version 13.4 and newer pads this string with 00 bytes if string is shorter.
See also:

- 77.1.26 SetKey(key as memoryblock, nBits as Integer) as boolean 14640

77.2 class Argon2MBS

77.2.1 class Argon2MBS

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to calculate hashes using Argon2.
Example:

```
dim a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536 // 64 Megabytes
a.Lanes = 4
a.Threads = 4

dim hash as string = a.Calc(a.kTypeI)
dim t as string = EncodeHex(hash)

if t = "45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6" then
// ok
else
Break // failed
end if
```

Notes:

You can use this class to calculate password hashes.
Due to the cost associated to calculate it, the hash is difficult to brute force.

77.2.6 Methods

77.2.7 Calc(type as Integer = 0) as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Function that performs memory-hard hashing with certain degree of parallelism.
Example:

```
dim a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536 // 64 Megabytes
a.Lanes = 4
a.Threads = 4

dim hash as string = a.Calc(a.kTypeI)
dim t as string = EncodeHex(hash)

if t = "45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6" then
// ok
else
Break // failed
end if
```

Notes:

Returns hash on success or empty string in case of error.
Lasterror is set.

77.2.8 Constructor

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

77.2.9 Destructor

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destructor.

77.2.10 Verify(Hash as String, type as Integer = 0) as boolean

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a password hash.
Example:

```
dim a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536
a.Lanes = 4
a.Threads = 4

dim h as string = DecodeHex("45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6")
if a.Verify(h, a.kTypeI) then
// ok
break
else
// failed
break
end if
```

Notes:

Returns true on success.
Lasterror is set.

77.2.11 Properties

77.2.12 AssociatedData as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The associated data.
Notes: (Read and Write property)

77.2.13 Cost as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of passes.
Notes: (Read and Write property)

77.2.14 Flags as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: (Read and Write property)

77.2.15 Lanes as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of lanes.
Notes: (Read and Write property)

77.2.16 LastError as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

77.2.17 LastErrorMessage as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.
Notes: (Read and Write property)

77.2.18 MemoryCost as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Amount of memory requested (KB).
Notes:

In kilo bytes. Default is 1 MB.
(Read and Write property)

77.2.19 OutputLength as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of the hash.
Notes: (Read and Write property)

77.2.20 Password as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password to hash.
Notes: (Read and Write property)

77.2.21 Salt as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The salt.
Notes: (Read and Write property)

77.2.22 Secret as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The secret.
Notes: (Read and Write property)

77.2.23 Threads as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of threads.
Notes: (Read and Write property)

77.2.24 Version as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of argon to use.
Notes:

Can be kVersion10 or kVersion13.
(Read and Write property)

77.2.25 Constants

77.2.26 kErrorAdPtrMismatch = -21

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: AssociatedData ptr is nil, but size >0.

77.2.27 kErrorAdTooLong = -9

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: AssociatedData too long.

77.2.28 kErrorAdTooShort = -8

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: AssociatedData too short.

77.2.29 kErrorAllocateMemoryCbkNull = -24

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Allocation failed.

77.2.30 kErrorDecodingFail = -32

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Decoding failed.

77.2.31 kErrorDecodingLengthFail = -34

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Decoding length failed.

77.2.32 kErrorEncodingFail = -31

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Encoding failed.

77.2.33 kErrorFreeMemoryCbkNull = -23

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Free memory failed.

77.2.34 kErrorIncorrectParameter = -25

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Incorrect parameter.

77.2.35 kErrorIncorrectType = -26

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Incorrect type.

77.2.36 kErrorLanesTooFew = -16

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Lanes too small.

77.2.37 kErrorLanesTooMany = -17

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Too many lanes.

77.2.38 kErrorMemoryAllocationError = -22

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Memory allocation failed.

77.2.39 kErrorMemoryTooLittle = -14

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Memory too little.

77.2.40 kErrorMemoryTooMuch = -15

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Memory too big.

77.2.41 kErrorMissingArgs = -30

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Missing Argument.

77.2.42 kErrorOk = 0

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Okay.

77.2.43 kErrorOutPtrMismatch = -27

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Output ptr is nil, but size >0.

77.2.44 kErrorOutputPtrNull = -1

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Output Ptr is nil.

77.2.45 kErrorOutputTooLong = -3

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Output too long.

77.2.46 kErrorOutputTooShort = -2

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Output too short.

77.2.47 kErrorPwdPtrMismatch = -18

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Password ptr is nil, but size >0.

77.2.48 kErrorPwdTooLong = -5

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Password too long.

77.2.49 kErrorPwdTooShort = -4

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Password too short.

77.2.50 kErrorSaltPtrMismatch = -19

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Salt ptr is nil, but size >0.

77.2.51 kErrorSaltTooLong = -7

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Salt too long.

77.2.52 kErrorSaltTooShort = -6

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Salt too short.

77.2.53 kErrorSecretPtrMismatch = -20

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Secret ptr is nil, but size >0.

77.2.54 kErrorSecretTooLong = -11

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Secret too long.

77.2.55 kErrorSecretTooShort = -10

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Secret too short.

77.2.56 kErrorThreadFail = -33

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Threads failed.

77.2.57 kErrorThreadsTooFew = -28

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Threads too small.

77.2.58 kErrorThreadsTooMany = -29

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Too many threads.

77.2.59 kErrorTimeTooLarge = -13

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Time too large.

77.2.60 kErrorTimeTooSmall = -12

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Time too small.

77.2.61 kErrorVerifyMismatch = -35

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the error constants.
Notes: Verify Mismatch

77.2.62 kFlagClearMemory = 4

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the possible flags.
Notes: Clear memory.

77.2.63 kFlagClearPassword = 1

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the possible flags.
Notes: Clear password.

77.2.64 kFlagClearSecret = 2

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the possible flags.
Notes: Clear Secret after hashing.

77.2.65 kFlagDefault= 4

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the possible flags.
Notes: Default flags.

77.2.66 kMaxAssociatedDataLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum associated data length in bytes.

77.2.67 kMaxLanes = & hFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum number of lanes (degree of parallelism)

77.2.68 kMaxMemory = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum memory size.

77.2.69 kMaxOutputLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum digest size in bytes.

77.2.70 kMaxPasswordLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum password length in bytes.

77.2.71 kMaxSaltLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum salt length in bytes

77.2.72 kMaxSecretLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum key length in bytes.

77.2.73 kMaxThreads = & hFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum number of threads.

77.2.74 kMaxTime = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Maximum number of passes.

77.2.75 kMinAssociatedDataLength = 0

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum associated data length in bytes.

77.2.76 kMinLanes = 1

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum number of lanes (degree of parallelism)

77.2.77 kMinMemory = 8

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum and maximum number of memory blocks (each of BLOCK_SIZE bytes)

77.2.78 kMinOutputLength = 4

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum digest size in bytes.

77.2.79 kMinPasswordLength = 0

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum password length in bytes.

77.2.80 kMinSaltLength = 0

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum salt length in bytes

77.2.81 kMinSecretLength = 0

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum key length in bytes.

77.2.82 kMinThreads = 1

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum number of threads.

77.2.83 kMinTime = 1

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Minimum number of passes.

77.2.84 kSyncPoints = 4

MBS Encryption Plugin, Plugin Version: 16.4.

Function: Number of synchronization points between lanes per pass.

77.2.85 kTypeD = 0

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the types.
Notes: Argon2d is faster and uses data-depending memory access, which makes it highly resistant against GPU cracking attacks and suitable for applications with no threats from side-channel timing attacks (eg. cryptocurrencies).

77.2.86 kTypeI = 1

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the types.
Notes: Argon2i instead uses data-independent memory access, which is preferred for password hashing and password-based key derivation, but it is slower as it makes more passes over the memory to protect from tradeoff attacks.

77.2.87 kVersion10 = & h10

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the version numbers.
Notes: Version 1.0

77.2.88 kVersion13 = & h13

MBS Encryption Plugin, Plugin Version: 16.4.

Function: One of the version numbers.
Notes: Version 1.3

77.3 module BCryptMBS

77.3.1 module BCryptMBS

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for bcrypt encryption.

77.3.2 Blog Entries

77.3.6 Methods

77.3.7 BCrypt(Pass as String, Salt as String) as String

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Hashes password with bcrypt based on given salt.
Example:

```
Dim salt As String = BCryptMBS.BCryptSalt(11)
Dim hash As String = BCryptMBS.BCrypt("password", salt)
```

Break

77.3.8 BCryptSalt(Rounds as Integer) as String

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates salt based on given numbers of rounds.

77.3.9 Verify(Pass as String, Hash as String) as Boolean

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a hash to be right.
Example:

```
// check various levels
For i As Integer = 4 To 15
Dim salt As String = BCryptMBS.BCryptSalt(i)
Dim hash As String = BCryptMBS.BCrypt("password", salt)

Dim b As Boolean = BCryptMBS.Verify("password", hash)

System.DebugLog Str(i)+" "+Str(b)+" "+hash

If Not b Then Break
Next
```

Notes:

Check is case sensitive!
Returns true on success.

77.4 class BlowfishMBS

77.4.1 class BlowfishMBS

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for blowfish encryption.
Example:

```
dim s as string

// create string with known encoding so we can later define encoding after decryption!
s=ConvertEncoding("Hello",Encodings.UTF8)

// encrypt with a key
s=BlowfishMBS.Encrypt("MyKey",s)

// encoding is not set for the result string, still RB can guess the encoding when displaying
MsgBox s

// decrypt with same key
s=BlowfishMBS.Decrypt("MyKey",s)

// encoding is not set for the result string, so change it back:
s=DefineEncoding(s,encodings.UTF8)

// show original Hello
MsgBox s
```

Notes: For newer projects we recommend switching to CipherMBS class.

77.4.4 Methods

77.4.5 Decrypt(iodata as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lowest level function to decrypt data in a memoryblock.
Notes:

input and output are in host endian format.
memoryblock must be not nil and has a size of 8 bytes.
See also:

- 77.4.6 Decrypt(key as string, data as string) as string 14662

77.4.6 Decrypt(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts the data using blowfish and the given key.
Example:

```
dim s as string

// create string with known encoding so we can later define encoding after decryption!
s=ConvertEncoding("Hello",Encodings.UTF8)

// encrypt with a key
s=BlowfishMBS.Encrypt("MyKey",s)

// encoding is not set for the result string, still RB can guess the encoding when displaying
MsgBox s

// decrypt with same key
s=BlowfishMBS.Decrypt("MyKey",s)
```

```
// encoding is not set for the result string, so change it back:
s=DefineEncoding(s,encodings.UTF8)

// show original Hello
MsgBox s
```

Notes:

This is our convenience function to encode a string quickly. Using CFB64 mode and an all zero initializing vector.
If the lenb(result) is zero and lenb(data) is not zero, the memory was not sufficient.

Key can have any length, but 32 bytes (256 bits) are quite good.
The length of data is limited by the amount of available memory.
See also:

- 77.4.5 Decrypt(iodata as memoryblock) 14662

77.4.7 DecryptCBC(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Example:

```
dim b as new BlowfishMBS

dim s as string = "UTYbBEZSMLfa0kvNDSla/n/GSUcA/545gp7LcA330Nw="
dim x as string = DecodeBase64(s)

dim m as MemoryBlock = nil
b = new BlowfishMBS
b.SetKey "geheim"
dim t1 as string = b.DecryptCBC(x,m)

// shows SD10003$ $ 2012.03.16 11:00
MsgBox t1
```

Notes:

data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself an eight byte memoryblock with a starting value you want.
Be aware that this CBC method works with data in 8 byte blocks, so you need to unpad data if needed.
See also:

- 77.4.8 DecryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock) 14664

77.4.8 DecryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Notes:

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.

ivec should be a memoryblock of 8 bytes size which you create before calling the function for the first time. On the next time you passed the same block, so the function can store data inside this memoryblock between function calls.
Be aware that this CBC method works with data in 8 byte blocks, so you need to unpad data if needed.
See also:

- 77.4.7 DecryptCBC(data as string, byref temp as memoryblock) as string 14663

77.4.9 DecryptCFB64(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Notes:

data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.
See also:

- 77.4.10 DecryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer) 14665

77.4.10 DecryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Example:

```
dim b as BlowfishMBS

b=new BlowfishMBS
b.SetKey "Key"

dim temp as MemoryBlock
dim s as string

s=b.EncryptCFB64("Hello World",temp)

MsgBox s

temp=nil // reset
s=b.DecryptCFB64(s,temp)

MsgBox s
```

Notes:

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.
See also:

- 77.4.9 DecryptCFB64(data as string, byref temp as memoryblock) as string 14664

77.4.11 DecryptECB(data as string) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The basic Blowfish decryption function.
Notes:

This function decrypts only 8 bytes. For more, please use other functions!

data: data to be decrypted
Returns "" on invalid input.
See also:

- 77.4.12 DecryptECB(idata as memoryblock, odata as memoryblock, offset as Integer) 14666

77.4.12 DecryptECB(idata as memoryblock, odata as memoryblock, offset as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The basic Blowfish encryption function.
Notes:

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
See also:

- 77.4.11 DecryptECB(data as string) as string 14666

77.4.13 DecryptOFB64(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Notes:

data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 77.4.14 DecryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer) 14667

77.4.14 DecryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish decryption function.
Example:

```
dim b as BlowfishMBS

b=new BlowfishMBS
b.SetKey "Key"

dim temp as MemoryBlock
dim s as string

s=b.EncryptCFB64("Hello World",temp)

MsgBox s

temp=nil // reset
s=b.DecryptCFB64(s,temp)

MsgBox s
```

Notes:

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 77.4.13 DecryptOFB64(data as string, byref temp as memoryblock) as string 14666

77.4.15 Encrypt(iodata as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lowest level function to encrypt data in a memoryblock.
Notes:

input and output are in host endian format.
memoryblock must be not nil and has a size of 8 bytes.
See also:

- 77.4.16 Encrypt(key as string, data as string) as string 14668

77.4.16 Encrypt(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts the data using blowfish and the given key.
Example:

```
dim v as string = "Hello World, this is just a test string"

// encrypt CFB64 with BlowfishMBS
dim b as new BlowfishMBS
dim Key as string = "1234567812345678"
dim r as string = b.Encrypt( key , v )
dim h as string = EncodeHex( r )

// and decrypt with OpenSSL
dim c as CipherMBS = CipherMBS.bf_cfb64

c.DecryptInit key
dim d as string = c.ProcessString(r)
d = d + c.FinalizeAsString

Break // see in debugger, v and d have same content
```

Notes:

This is our convenience function to decode a string quickly. Using CFB64 mode and an all zero initializing vector.

If the lenb(result) is zero and lenb(data) is not zero, the memory was not sufficient.

Key can have any length, but 32 bytes (256 bits) are quite good.
The length of data is limited by the amount of available memory.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 77.4.15 Encrypt(iodata as memoryblock) 14668

77.4.17 EncryptCBC(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish encryption function.
Example:

```
dim m as memoryblock // temporary storage of current state
dim b as blowfishmbs
dim s as string

b=new blowfishmbs
b.SetKey "EinKey1234567890" // some key

s=b.EncryptCBC("Hallo",m)
s=s+b.EncryptCBC(" ",m)
s=s+b.EncryptCBC("Leute",m)
s=s+b.EncryptCBC("!",m)
```

Notes:

data: data to be encrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself an eight byte memoryblock with a starting value you want.
Be aware that this CBC method works with data in 8 byte blocks, so you need to pad data if needed.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

See also:

- 77.4.18 EncryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock) 14670

77.4.18 EncryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish encryption function.
Notes:

idata: memoryblock for input data, at least 8 bytes in size and not nil.
odata: memoryblock for output data, at least 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.

ivec should be a memoryblock of 8 bytes size which you create before calling the function for the first time. On the next time you passed the same block, so the function can store data inside this memoryblock between function calls.
Be aware that this CBC method works with data in 8 byte blocks, so you need to pad data if needed.

77.4.24 EncryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The continuing Blowfish encryption function.
Notes:

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 77.4.23 EncryptOFB64(data as string, byref temp as memoryblock) as string 14672

77.4.25 SetKey(key as string)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the key to be used.
Notes: The longer the key, the better. Suggested is at least 16 bytes.

77.5 Globals

77.5.1 CalculateCRC16MemoryMBS(data as MemoryBlock, Start as UInt16 = 65535, Polynomial as UInt16 = & h1021, FinalXOR as UInt16 = 0, ReflectInput as boolean = false, ReflectOutput as boolean = false) as UInt16

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided memoryblock.
Notes:

Start is the start value.
Polynominal is what is xored to the value in each round.
FinalXOR is an XOR we do on the end.
If ReflectInput is true, we swap bits in input.
If ReflectOutput is true, we swap bits in output (before final XOR).

Returns CRC value.

77.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr5

77.5.3 CalculateCRC16StringMBS(data as string, Start as UInt16 = 65535, Polynomial as UInt16 = & h1021, FinalXOR as UInt16 = 0, ReflectInput as boolean = false, ReflectOutput as boolean = false) as UInt16

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.
Example:

```
dim c as string = DecodeHex("3E4400026201000D")
dim p as UInt16 = CalculateCRC16StringMBS(c, & hFFFF, & h1021, 0, true, true)
MsgBox hex(p)+" = 3E5A"
```

Notes:

Start is the start value.
Polynominal is what is xored to the value in each round.
FinalXOR is an XOR we do on the end.
If ReflectInput is true, we swap bits in input.

If ReflectOutput is true, we swap bits in output (before final XOR).

Returns CRC value.

77.5.4 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr5

77.5.5 Adler32MemoryMBS(adler as UInt32, buf as memoryblock, offset as Integer, length as Integer) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The adler32 hash function from the zlib library.
Notes:

Offset and length must be correct for your memoryblock or you will crash your application!

Update a running Adler-32 checksum with the bytes and return the updated checksum. If buf is nil, this function returns the required initial value for the checksum.
An Adler-32 checksum is almost as reliable as a CRC32 but can be computed much faster.

77.5.6 Adler32StringMBS(adler as UInt32, buf as string) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The adler32 hash function from the zlib library.
Example:

```
dim b as binarystream // some stream
dim adler as Integer
dim data as string
dim originalAdler as Integer = 12345

adler=Adler32MemoryMBS(0,nil,0,0)

data=b.read(10000)
while data<>""
adler=Adler32StringMBS(adler, data)
data=b.read(10000)
wend

if adler <>originalAdler then msgbox "Error in checksum!"
```

Notes:

Update a running Adler-32 checksum with the bytes and return the updated checksum. If buf is nil, this function returns the required initial value for the checksum.
An Adler-32 checksum is almost as reliable as a CRC32 but can be computed much faster.

77.5.7 CRC32MemoryMBS(crc as UInt32, buf as memoryblock, offset as Integer, length as Integer) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The crc32 hash function from the zlib library.
Notes:

Offset and length must be correct for your memoryblock or you will crash your application!

Update a running crc with the bytes and return the updated crc. If buf is nil, this function returns the required initial value for the crc. Pre- and post-conditioning (one's complement) is performed within this function so it shouldn't be done by the application.

77.5.8 CRC32StringMBS(crc as UInt32, buf as string) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The crc32 hash function from the zlib library.
Example:

```
dim originalCrc as Integer// original CRC
dim crc as Integer // new crc
dim data as string
dim b as binarystream

crc=0

data=b.read(10000)
while data<>""
crc=CRC32StringMBS(crc, data)
data=b.read(10000)
wend

if crc <>originalCrc then msgbox "Error in checksum!"
```

Notes: Update a running crc with the bytes and return the updated crc. If buf is nil, this function returns the required initial value for the crc. Pre- and post-conditioning (one's complement) is performed within this function so it shouldn't be done by the application.

77.5.9 CRC16MBS(data as string) as UInt16

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.
Example:

```
dim n1 as Integer = CRC16MBS("Hello World")
dim n2 as Integer = CRC16MBS("Hallo World")

MsgBox str(n1)+" "+str(n2)
```

Notes: Please note: Different CRC functions give different result. This is one specific 16 bit CRC function which may be or not be the one you need for your application.

77.5.10 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

77.5.11 CRC_32InMemContMBS(address as Ptr, length as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided memory address.

77.5.12 CRC_32InMemMBS(address as Ptr, length as Integer) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided memory address.

77.5.13 CRC_32OfStrContMBS(s as String, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided block of data.

77.5.14 CRC_32OfStrMBS(s as String) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided string.
Example:

```
dim n as Integer
n=CRC_32OfStrMBS("Hello World")
' n is now 1243066710
```

Notes:

See the text "About-CRC" for details about this Checksum things.
This function is also available as part of the memoryblock class.

About Checksums:

These functions calculate CRCs over a range of bytes in a MemoryBlock or in a String.

There are three versions of CRC calculation: One for 16 Bit, one for 32 Bit and one for 16 to 64 Bit wide checksums. If you are free to choose, I suggest that you use the 32 Bit version because of its accuracy and performance.

Some background on using checksums/CRCs:
Checksums, such as CRCs, are used to quickly verify that a chunk of data has not been modified somehow without your control. To use it, you'd calculate the checksum (CRC) of your data, then store that checksum value (which only needs 2 to 8 bytes of storage) somewhere. Later, when retrieving your data, you calculate its checksum again and compare its value with the previously stored value. If it does not match, the data got somehow corrupted. If it matches, that it is quite likely, although not 100% sure, that the data is still in its original state.

There are 3 different CRC algorithms available:

- CRC_CCITT...() as Integer

- CRC_32...() as Integer
- CRC_Dillon...(bitWidth as Integer, ...) as String

The CCITT version calculates a rather classic 16 bit CRC. Unless you need that CRC for legacy data, I recomment not to use it, but rather use the CRC_32 version.

CRC_32 is the most common used algorithm for 32 bit wide CRCs. Be aware there are theoretically many other ways to calculate a CRC 32, however.

The Dillon algorithm is a smart routine to calculate CRCs in any width between 16 and 64 bit. This one is only useful if you find that a 32 bit CRC is not sufficient for your needs. If you can live with a plain 32 bit CRC, you should prefer the CRC_32 routines, because they are faster than the Dillon code.

The result, since it can be up to 64 bit in size, cannot be returned in an Integer (they can only hold 32 bit). Instead, the result is returned as a 8 byte value, stored in a 8 byte long string. To get the value of that string, you can copy the string into a MemoryBlock, and then access the parts opf the 8 byte long value there. The demo project shows how to accomplish this.

The CRC code was developed and published by Matthew Dillon. Here's his web page with more information about it:
http://www.backplane.com/diablo/crc64.html

77.5.15 CRC_CCITTInMemContMBS(address as Ptr, length as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided memory address.

77.5.16 CRC_CCITTInMemMBS(address as Ptr, length as Integer) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided memory address.

77.5.17 CRC_CCITTOfStrContMBS(s as String, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.

77.5.18 CRC_CCITTOfStrMBS(s as String) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.
Example:

```
dim n as Integer
n=CRC_CCITTOfStrMBS("Hello World")
' n is now 39210
```

77.5.19 CRC_DillonInMemMBS(bitWidth as Integer, address as Ptr, length as Integer) as String

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided memory address.

77.5.20 CRC_DillonOfStrMBS(bitWidth as Integer, s as String) as String

MBS Util Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided string.
Example:

```
dim s as string
s=CRC_DillonOfStrMBS(64,"Hello World")
' s has now the 64bit checksum inside an 8 byte binary string
```

77.5.21 CRC_DillonUInt64InMemMBS(bitWidth as Integer, address as Ptr, length as Integer) as UInt64

MBS Util Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided memory address.

77.5.22 CRC_DillonUInt64OfStrMBS(bitWidth as Integer, s as String) as UInt64

MBS Util Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided string.

77.5.23 GetHash32MBS(s as string) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates some special Hash value.
Example:

MsgBox hex(GetHash32MBS("xskin-b013fafit_01-PELVIS-BODY.skn")) // should show 67A53A4D

Notes:

The 255 char limit was in the original C function, but should be resolved for this plugin, so string longer than 255 chars will work.
The original C code looks like this:

```
static UInt32 GetHash32 (StringPtr inString)
{

 int                                    length = inString [ 0 ] ;
  UInt32        hash = length + 1;
  int                                   i;

for (i = 1; i <= length; i++)
{
hash = ___rlwinm(hash, 3, 0, 31) ^tolower(inString [ i ] );
}

return hash;
}
```

Originally this was added for Cherie Benoit, which describes it like this:

"GetHash32MBS" duplicates the hashing function of Westlake
Interactive's "Namer" application which creates LFN-style short
filenames for use with the Macintosh version of "The Sims."

77.5.24 ModBusCalculateRTUMessageCRCMBS(data as string) as UInt16

MBS Util Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the RTU Message CRC string.
Example:

```
dim m as new MemoryBlock(9)

m.UInt8Value(0) = 1 // start of package
m.UInt8Value(1) = 6 // command code
m.UInt8Value(2) = 0 // some data...
m.UInt8Value(3) = 0
m.UInt8Value(4) = 0
m.UInt8Value(5) = & h21
m.UInt8Value(6) = 0 // checksum comes here
m.UInt8Value(7) = 0
m.UInt8Value(8) = 4 // end of package

dim Data as string = m.StringValue(0,6)
dim CheckSum as Int16 = ModBusCalculateRTUMessageCRCMBS(data)

m.UInt16Value(6) = checksum

MsgBox EncodeHex(m)
```

77.5.25 MD5MBS(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a memoryblock as 16 byte string.

77.5.26 MD5StringMBS(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string as hex string.

77.5.27 ValidateUUIDMBS(UUID as string, mode as Integer = 0, requiredVersion as Integer = 0) as string

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Validates the given UUID/GUID.
Example:

```
// wrong
dim w1 as string = ValidateUUIDMBS("hello") // wrong due to missing {
dim w2 as string = ValidateUUIDMBS("550e8400-z29b-11d4-a716-446655440000",1) // wrong with, with z
dim w3 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d40716-446655440000 } ") // wrong with missing minus
dim w4 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-44665544000 } ") // wrong with being too short
dim w5 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1) // wrong as it has extra chars on end
dim w6 as string = ValidateUUIDMBS("550e8400-e29b-11d4-a716-446655440000",1,4) // wrong as not version 4
dim w7 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-ffcc-34c70b24a668",1,4) // wrong as not version 4

// okay
dim o1 as string = ValidateUUIDMBS("550e8400-e29b-11d4-a716-446655440000",1)
dim o2 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } ")
dim o3 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 1)
dim o4 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 3)
dim o5 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } ", 2)
dim o6 as string = ValidateUUIDMBS(" { 550e8400e29b11d4a716446655440000 } ", 2)
dim o7 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing minus, but fixed
dim o8 as string = ValidateUUIDMBS("550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing { , but fixed
dim o9 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 4, 4) // is version 4
dim o10 as string = ValidateUUIDMBS("6a12a4d5-e9e6-1568-afcc-34c70b24a668", 4, 1) // is version 1
dim o11 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1+4) // wrong as it has extra chars on end, but fixed

break // check in debugger
```

Notes:

If the UUID is valid, you get it back.
If the UUID is invalid, you get an empty string back.

Pass 1 in mode to not require braces around UUID. Pass 2 to ignore minus characters. Pass 3 to combine those two.
You can add 4 to have the GUID fixed a bit like adding braces and minus chars if missing.
The requiredVersion parameter can be 1 to 5 to indicate the required GUID version you want to have.

- MBS Real Studio Plugins, version 12.3pr11

77.5.29 MD5MBS(data as string) as string

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string.
Example:

```
// Compare RB5 MD5 to the one from MBS

dim a,b as String

a=MD5("Hallo")

b=MD5MBS("Hallo")

msgbox str(StrComp(a,b,0))
```

Notes: Same as the MD5 function in RB5.

77.5.31 MD5StringMBS(data as string) as string

MBS Encryption Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string as hex string.
Example:

```
// Compare RB5 MD5 to the one from MBS
```

```
dim a,b as String

a=EncodingToHexMBS(MD5("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern"))
b=MD5StringMBS("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

msgbox a+EndOfLine+b+EndOfLine+str(StrComp(a,b,0))
```

77.5.32 Blog Entries

- REAL Server Plugin 0.2

77.5.33 CRC_DillonUInt64MBS(extends mem as memoryblock, bitWidth as Integer, offset as Integer, numBytes as Integer) as UInt64

MBS Util Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided memory address.
Notes: The 64bit integer version for RB 2006r4 and newer.

77.6 class CCCryptorMBS

77.6.1 class CCCryptorMBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Generic interface for symmetric encryption.
Example:

```
// initialize
dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0,
"Hello12312345678")

if h.Lasterror<>0 then break

// destination memoryblock

dim m as new MemoryBlock(100)
dim Position as Uint64 = 0
dim BytesLeft as UInt64 = m.Size

// add a few bytes
dim q as UInt64 = 0
```

```
h.Update "Hello World!1234", m, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// now finalize:
q = 0

dim dp as ptr = m.AddressPtrMBS(Position)

h.Final dp, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// and show result
dim d as string = m.StringValue(0, Position)
MsgBox EncodingToHexMBS(d)
```

Notes:

This interface provides access to a number of symmetric encryption algorithms. Symmetric encryption algorithms come in two "flavors" - block ciphers, and stream ciphers. Block ciphers process data (while both encrypting and decrypting) in discrete chunks of data called blocks; stream ciphers operate on arbitrary sized data.

The object declared in this interface, CCCryptorMBS, provides access to both block ciphers and stream ciphers with the same API; however some options are available for block ciphers that do not apply to stream ciphers.

The general operation of a CCCryptor is: initialize it with raw key data and other optional fields with Constructor(); process input data via one or more calls to Update(), each of which may result in output data being written to caller-supplied memory; and obtain possible remaining output data with Final(). The CCCryptor is disposed of via Destructor(), or it can be reused (with the same key data as provided to Constructor()) by calling Reset().

One option for block ciphers is padding, as defined in PKCS7; when padding is enabled, the total amount of data encrypted does not have to be an even multiple of the block size, and the actual length of plaintext is calculated during decryption.

Another option for block ciphers is Cipher Block Chaining, known as CBC mode. When using CBC mode,

an Initialization Vector (IV) is provided along with the key when starting an encrypt or decrypt operation. If CBC mode is selected and no IV is provided, an IV of all zeroes will be used.

CCCryptorMBS also implements block bufferring, so that individual calls to Update() do not have to provide data whose length is aligned to the block size. (If padding is disabled, encrypting with block ciphers does require that the *total* length of data input to Update() call(s) be aligned to the block size.)

A given CCCryptorMBS can only be used by one thread at a time; multiple threads can use safely different CCCryptors at the same time.

This class uses the CommonCrypto interface which is available on Mac OS X 10.5 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

77.6.4 Methods

77.6.5 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as Ptr, keyLength as UInt64, iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Create a cryptographic context.
Notes:

operation: Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm: Defines the algorithm.
options: A word of flags defining options.
key: Raw key material, length keyLength bytes.

keyLength: Length of key material. Must be appropriate for the selected operation and algorithm. Some algorithms provide for varying key lengths.

iv: Initialization vector, optional. Used by block ciphers when Cipher Block Chaining (CBC) mode is enabled. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of the kCCOptionECBMode bit in the options flags) and no IV is present, a NULL (all zeroes) IV will be used. This parameter is ignored if ECB mode is used or if a stream cipher algorithm is selected.

Possible error is lasterror are kCCParamError and kCCMemoryFailure.
See also:

- 77.6.6 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as String, iv as Ptr = nil) 14688

77.6.6 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as String, iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Create a cryptographic context.
Example:

```
// key length must be 16 bytes for AES128
dim key as string = "1234567890123456"

dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, key)

if h.Lasterror<>0 then
MsgBox "error: "+str(h.Lasterror)
else
MsgBox "OK"
end if
```

Notes:

operation: Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm: Defines the algorithm.
options: A word of flags defining options.
key: Raw key material, length keyLength bytes.

iv: Initialization vector, optional. Used by block ciphers when Cipher Block Chaining (CBC) mode is enabled. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected

keyLength: Length of key material. Must be appropriate for the selected operation and algorithm. Some algorithms provide for varying key lengths.

(by the absence of the kCCOptionECBMode bit in the options flags) and no IV is present, a NULL (all zeroes) IV will be used. This parameter is ignored if ECB mode is used or if a stream cipher algorithm is selected.

Possible error is lasterror are kCCParamError and kCCMemoryFailure.
See also:

- 77.6.5 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as Ptr, keyLength as UInt64, iv as Ptr = nil) 14687

77.6.7 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as Ptr, KeyLength as UInt64, IV as Ptr, DataIn as Ptr, DataInLength as UInt64, DataOut as Ptr, DataOutAvailable as UInt64, byref DataOutMoved as UInt64) as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Stateless, one-shot encrypt or decrypt operation.
Example:

```
dim KeyString as string = "Hello12312345678"
dim InputString as string = "Hello World!1234"

dim InputMemory as MemoryBlock = InputString
dim KeyMemory as MemoryBlock = KeyString
dim IV as ptr = nil // default to zeros
dim OutputMemory as new MemoryBlock(100)
dim Size as UInt64 = 0

dim e as Integer = CCCryptorMBS.Crypt(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, KeyMemory, KeyMemory.size, IV, InputMemory, InputMemory.size, OutputMemory, OutputMemory.size, size)

if e = CCCryptorMBS.kCCSuccess then
dim result as string = OutputMemory.StringValue(0, size)
MsgBox EncodingToHexMBS(result)
else
MsgBox "Error: "+str(e)
end if
```

Notes:

This basically performs a sequence of Constructor, Update, Final and Destructor.

Parameters:

Operation	Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm	Defines the encryption algorithm.
Options	A word of flags defining options. See kCCOption constants.
Key	Raw key material, length keyLength bytes.
keyLength	Length of key material. Must be appropriate for the select algorithm. Some algorithms may provide for varying key lengths.
IV	Initialization vector, optional. Used for Cipher Block Chaining (CBC) mode. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of any mode bits in the options flags) and no IV is present, a nil (all zeroes) IV will be used. This is ignored if ECB mode is used or if a stream cipher algorithm is selected.
dataIn	Data to encrypt or decrypt, length dataInLength bytes.
dataInLength	Length of data to encrypt or decrypt.
dataOut	Result is written here. Allocated by caller. Encryption and decryption can be performed "in-place", with the same buffer used for input and output.
dataOutAvailable	The size of the dataOut buffer in bytes.
dataOutMoved	On successful return, the number of bytes written to dataOut. If kCCBuffer-TooSmall is returned as a result of insufficient buffer space being provided, the required buffer space is returned here.

Possible errors in lasterror:
kCCBufferTooSmall indicates insufficent space in the dataOut buffer. In this case, the dataOutMoved parameter will indicate the size of the buffer needed to complete the operation. The operation can be retried with minimal runtime penalty.
kCCAlignmentError indicates that dataInLength was not properly aligned. This can only be returned for block ciphers, and then only when decrypting or when encrypting with block with padding disabled.

kCCDecodeError	Indicates improperly formatted ciphertext or a "wrong key" error; occurs only during decrypt operations.

See also:

- 77.6.8 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as string, IV as Ptr, DataIn as string, byref DataOut as string) as Integer

77.6.8 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as string, IV as Ptr, DataIn as string, byref DataOut as string) as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Stateless, one-shot encrypt or decrypt operation.
Example:

```
dim KeyString as string = "Hello12312345678"
dim InputString as string = "Hello World!1234"
dim IV as ptr = nil // default to zeros
dim Output as string = ""

dim e as Integer = CCCryptorMBS.Crypt(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, KeyString, IV, InputString, Output)

if e = CCCryptorMBS.kCCSuccess then
MsgBox EncodingToHexMBS(Output)
else
MsgBox "Error: "+str(e)
end if
```

Notes:

This basically performs a sequence of Constructor, Update, Final and Destructor. This is the convenience function for Xojo with using strings instead of data pointers.

Parameters:

Operation	Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm	Defines the encryption algorithm.
Options	A word of flags defining options. See kCCOption constants.
Key	Raw Key.
IV	Initialization vector, optional. Used for Cipher Block Chaining (CBC) mode. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of any mode bits in the options flags) and no IV is present, a nil (all zeroes) IV will be used. This is ignored if ECB mode is used or if a stream cipher algorithm is selected.
dataIn	Data to encrypt or decrypt.
dataOut	Result is written here.

Possible errors in lasterror:

kCCBufferTooSmall indicates insufficent space in the dataOut buffer. In this case, the dataOutMoved parameter will indicate the size of the buffer needed to complete the operation. The operation can be retried with minimal runtime penalty.
kCCAlignmentError indicates that dataInLength was not properly aligned. This can only be returned for block ciphers, and then only when decrypting or when encrypting with block with padding disabled.

kCCDecodeError	Indicates improperly formatted ciphertext or a "wrong key" error; occurs only during decrypt operations.

See also:

- 77.6.7 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as Ptr, KeyLength as UInt64, IV as Ptr, DataIn as Ptr, DataInLength as UInt64, DataOut as Ptr, DataOutAvailable as UInt64, byref DataOutMoved as UInt64) as Integer 14689

77.6.9 Final(DataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Finish an encrypt or decrypt operation, and obtain the (possible) final data output.
Notes:

dataOut: Result is written here. Allocated by caller. Pass a memoryblock of right size.
dataOutAvailable: The size of the dataOut buffer in bytes.
dataOutMoved: On successful return, the number of bytes written to dataOut.

Lasterror is set to:
kCCBufferTooSmall indicates insufficent space in the dataOut buffer. The caller can use GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

kCCAlignmentError When decrypting, or when encrypting with a block cipher with padding disabled, kCCAlignmentError will be returned if the total number of bytes provided to Update() is not an integral multiple of the current algorithm's block size.

kCCDecodeError Indicates garbled ciphertext or the wrong key during decryption. This can only be returned while decrypting with padding enabled.

Except when kCCBufferTooSmall is returned, the CCCryptorMBS can no longer be used for subsequent operations unless Reset() is called on it.
It is not necessary to call Final() when performing symmetric encryption or decryption if padding is disabled, or when using a stream cipher.

77.6.10 GetOutputLength(inputLength as UInt64, Final as Boolean = true) as UInt64

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Determine output buffer size required to process a given input size.
Example:

```
dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, "Hello12312345678")

MsgBox str(h.GetOutputLength(1000))
```

Notes:

inputLength: The length of data which will be provided to Update().

Final: If false, the returned value will indicate the output buffer space needed when 'inputLength' bytes are provided to CCCryptorMBS.Update(). When 'final' is true, the returned value will indicate the total combined buffer space needed when 'inputLength' bytes are provided to CCCryptorMBS.Update() and then CCCryptorMBS.Final() is called.

Returns the maximum buffer space need to perform CCCryptorMBS.Update() and optionally CCCryptorMBS.Final().

Some general rules apply that allow clients of this module to know a priori how much output buffer space will be required in a given situation. For stream ciphers, the output size is always equal to the input size, and CCCryptorMBS.Final() never produces any data. For block ciphers, the output size will always be less than or equal to the input size plus the size of one block. For block ciphers, if the input size provided to each call to CCCryptorMBS.Update() is is an integral multiple of the block size, then the output size for each call to CCCryptorMBS.Update() is less than or equal to the input size for that call to CCCryptorMBS.Update(). CCCryptorMBS.Final() only produces output when using a block cipher with padding enabled.

77.6.11 RandomGenerateBytes(data as MemoryBlock) as integer

MBS MacOSX Plugin, Plugin Version: 21.4, Platform: macOS, Targets: All.

Function: Return random bytes in a buffer allocated by the caller.
Example:

```
Dim m As New MemoryBlock(16)

Dim r As Integer = CCCryptorMBS.RandomGenerateBytes(m)

If r = CCCryptorMBS.kCCSuccess Then
MessageBox EncodeHex(m)
```

```
Else
MessageBox "Error " + Str(r)
End If
```

Notes:

The PRNG returns cryptographically strong random bits suitable for use as cryptographic keys, IVs, nonces etc.

Return kCCSuccess on success.

77.6.12 Reset(iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Reinitializes an existing CCCryptorRef with a (possibly) new initialization vector.
Notes:

The key is unchanged. Not implemented for stream ciphers.

iv: Optional initialization vector; if present, must be the same size as the current algorithm's block size.

The the only possible errors are kCCParamError and kCCUnimplemented.
This can be called on a CCCryptorMBS with data pending (i.e. in a padded mode operation before Final is called); however any pending data will be lost in that case.

77.6.13 Update(dataIn as Ptr, dataInLength as UInt64, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Process (encrypt, decrypt) some data.
Notes:

The result, if any, is written to a caller-provided buffer.

Parameters:

dataOutAvailable The size of the dataOut buffer in bytes.

dataIn	Data to process, length dataInLength bytes.
dataInLength	Length of data to process.
dataOut	Result is written here. Allocated by caller. Encryption and decryption can be performed "in-place", with the same buffer used for input and output.
dataOutMoved	On successful return, the number of bytes written to dataOut.

Possible error codes:
kCCBufferTooSmall indicates insufficent space in the dataOut buffer. The caller can use CCCryptorMBS.GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

This routine can be called multiple times. The caller does not need to align input data lengths to block sizes; input is bufferred as necessary for block ciphers. When performing symmetric encryption with block ciphers, and padding is enabled via kCCOptionPKCS7Padding, the total number of bytes provided by all the calls to this function when encrypting can be arbitrary (i.e., the total number of bytes does not have to be block aligned). However if padding is disabled, or when decrypting, the total number of bytes does have to be aligned to the block size; otherwise CCCryptMBS.Final() will return kCCAlignmentError. A general rule for the size of the output buffer which must be provided by the caller is that for block ciphers, the output length is never larger than the input length plus the block size. For stream ciphers, the output length is always exactly the same as the input length. See the discussion for CCCryptorMBS.GetOutputLength() for more information on this topic. Generally, when all data has been processed, call CCCryptorMBS.Final(). In the following cases, the CCCryptorMBS.Final() is superfluous as it will not yield any data nor return an error:
1. Encrypting or decrypting with a block cipher with padding disabled, when the total amount of data provided to CCCryptorMBS.Update() is an integral multiple of the block size.
2. Encrypting or decrypting with a stream cipher.
See also:

- 77.6.14 Update(dataIn as String, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64) 14695

77.6.14 Update(dataIn as String, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Process (encrypt, decrypt) some data.
Notes:

The result, if any, is written to a caller-provided buffer.

Parameters:

dataIn	Data to process, length dataInLength bytes.
dataInLength	Length of data to process.
dataOut	Result is written here. Allocated by caller. Encryption and decryption can be performed "in-place", with the same buffer used for input and output.

dataOutAvailable The size of the dataOut buffer in bytes.

dataOutMoved	On successful return, the number of bytes written to dataOut.

Possible error codes:
kCCBufferTooSmall indicates insufficent space in the dataOut buffer. The caller can use CCCryptorMBS.GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

This routine can be called multiple times. The caller does not need to align input data lengths to block sizes; input is bufferred as necessary for block ciphers. When performing symmetric encryption with block ciphers, and padding is enabled via kCCOptionPKCS7Padding, the total number of bytes provided by all the calls to this function when encrypting can be arbitrary (i.e., the total number of bytes does not have to be block aligned). However if padding is disabled, or when decrypting, the total number of bytes does have to be aligned to the block size; otherwise CCCryptMBS.Final() will return kCCAlignmentError. A general rule for the size of the output buffer which must be provided by the caller is that for block ciphers, the output length is never larger than the input length plus the block size. For stream ciphers, the output length is always exactly the same as the input length. See the discussion for CCCryptorMBS.GetOutputLength() for more information on this topic. Generally, when all data has been processed, call CCCryptorMBS.Final(). In the following cases, the CCCryptorMBS.Final() is superfluous as it will not yield any data nor return an error:
1. Encrypting or decrypting with a block cipher with padding disabled, when the total amount of data provided to CCCryptorMBS.Update() is an integral multiple of the block size.
2. Encrypting or decrypting with a stream cipher.

77.6.15 Properties

77.6.16 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The internal handle for the crypter instance.
Notes: (Read and Write property)

77.6.17 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Last error code.
Notes: (Read and Write property)

77.6.18 Constants

77.6.19 kCCAlgorithm3DES = 2

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the encryption algorithms constants.
Notes: Triple-DES, three key, EDE configuration

77.6.20 kCCAlgorithmAES128 = 0

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the encryption algorithms constants.
Notes: Advanced Encryption Standard, 128-bit block. Key length 128 to 256 bits.

77.6.21 kCCAlgorithmBlowfish = 6

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the encryption algorithms constants.
Notes: Blowfish encryption.

77.6.22 kCCAlgorithmCAST = 3

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the encryption algorithms constants.
Notes: CAST

77.6.23 kCCAlgorithmDES = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the encryption algorithms constants.
Notes: Data Encryption Standard

77.6.24 kCCAlgorithmRC2 = 5

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the encryption algorithms constants.
Notes: RC2 stream cipher

77.6.25 kCCAlgorithmRC4 = 4

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the encryption algorithms constants.
Notes: RC4 stream cipher

77.6.26 kCCAlignmentError = -4303

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Input size was not aligned properly.

77.6.27 kCCBlockSize3DES = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the block size constants.
Notes: Triple DES block size.

77.6.28 kCCBlockSizeAES128 = 16

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the block size constants.
Notes: AES block size (currently, only 128-bit blocks are supported).

77.6.29 kCCBlockSizeBlowfish = 8

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the block size constants.
Notes: Blowfish block size.

77.6.30 kCCBlockSizeCAST = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the block size constants.
Notes: CAST block size.

77.6.31 kCCBlockSizeDES = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the block size constants.
Notes: DES block size.

77.6.32 kCCBlockSizeRC2 = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the block size constants.
Notes: RC2 block size.

77.6.33 kCCBufferTooSmall = -4301

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Insufficent buffer provided for specified operation.

77.6.34 kCCCallSequenceError = -4309

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the error constants.
Notes: Functions called in wrong order.

77.6.35 kCCDecodeError = -4304

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Input data did not decode or decrypt properly.

77.6.36 kCCDecrypt = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the operation modes.
Notes: Symmetric decryption.

77.6.37 kCCEncrypt = 0

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the operation modes.
Notes: Symmetric encryption.

77.6.38 kCCInvalidKey = -4311

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the error constants.
Notes: Key is not valid.

77.6.39 kCCKeySize3DES = 24

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

Triple DES key size.
DES and TripleDES have fixed key sizes.

77.6.40 kCCKeySizeAES128 = 16

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

128 bit AES key size.
AES has three discrete key sizes.

77.6.41 kCCKeySizeAES192 = 24

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

192 bit AES key size.
AES has three discrete key sizes.

77.6.42 kCCKeySizeAES256 = 32

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

256 bit AES key size.
AES has three discrete key sizes.

77.6.43 kCCKeySizeDES = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

DES key size.
DES and TripleDES have fixed key sizes.

77.6.44 kCCKeySizeError = -4310

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the error constants.
Notes: The key size is incorrect.

77.6.45 kCCKeySizeMaxBlowfish = 56

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the key size constants.
Notes: Maximum key size for blowfish. You may better do a hash on the key and use the hash.

77.6.46 kCCKeySizeMaxCAST = 16

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

CAST maximum key size.
CAST and RC4 have variable key sizes.

77.6.47 kCCKeySizeMaxRC2 = 128

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

RC2 maximum key size.
CAST and RC4 have variable key sizes.

77.6.48 kCCKeySizeMaxRC4 = 512

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

RC4 maximum key size.
CAST and RC4 have variable key sizes.

77.6.49 kCCKeySizeMinBlowfish = 8

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the key size constants.
Notes: Minimum key size for blowfish.

77.6.50 kCCKeySizeMinCAST = 5

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

CAST minimum key size.
CAST and RC4 have variable key sizes.

77.6.51 kCCKeySizeMinRC2 = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

RC2 minimum key size.
CAST and RC4 have variable key sizes.

77.6.52 kCCKeySizeMinRC4 = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the key size constants.
Notes:

RC4 minimum key size.
CAST and RC4 have variable key sizes.

77.6.53 kCCMemoryFailure = -4302

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Memory allocation failure.

77.6.54 kCCOptionCBCMode = 0

MBS MacOSX Plugin, Plugin Version: 20.1.

Function: One of the option constants.
Notes: Cipher Block Chaining Mode. Default is CBC.

77.6.55 kCCOptionECBMode = 2

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the option constants.
Notes:

Electronic Code Book Mode. Default is CBC.
Stream ciphers currently have no options

77.6.56 kCCOptionPKCS7Padding = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the option constants.
Example:

```
// initialize
dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, CC-
CryptorMBS.kCCOptionPKCS7Padding, "Hello12312345678")

if h.Lasterror<>0 then break

// destination memoryblock

dim m as new MemoryBlock(100)
dim Position as Uint64 = 0
dim BytesLeft as UInt64 = m.Size

// add a few bytes
```

```
dim q as UInt64 = 0

// due to padding, we don't need to pass a multiple of block size
h.Update "Hello World!", m, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// now finalize:
q = 0

dim dp as ptr = m.AddressPtrMBS(Position)

h.Final dp, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// and show result
dim d as string = m.StringValue(0, Position)
MsgBox EncodingToHexMBS(d)
```

Notes:

Perform PKCS7 padding.
Stream ciphers currently have no options

77.6.57 kCCOverflow = -4306

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the error constants.
Notes: Buffer overflow.

77.6.58 kCCParamError = -4300

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Illegal parameter value.

77.6.59 kCCRNGFailure = -4307

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the error constants.
Notes: Random number generator failed.

77.6.60 kCCSuccess = 0

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Operation completed normally.

77.6.61 kCCUnimplemented = -4305

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the error constants.
Notes: Function not implemented for the current algorithm.

77.6.62 kCCUnspecifiedError = -4308

MBS MacOSX Plugin, Plugin Version: 21.4.

Function: One of the error constants.
Notes: An error occurred, but not matching one of the other error codes.

77.7 class CCHMacMBS

77.7.1 class CCHMacMBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Keyed Message Authentication Code (HMAC) functions.
Example:

```
dim h as new CCHMacMBS(CCHMacMBS.kCCHmacAlgSHA1, "Hello")
h.Update "Hello World!"
dim m as MemoryBlock = h.Finalize
MsgBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.5 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

77.7.8 Final(macOut as Ptr)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Obtain the final Message Authentication Code.
Notes:

Writes mac to given pointer.
Please pass a memoryblock with 16 bytes for MD5 and 20 bytes for SHA1.

77.7.9 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Obtain the final Message Authentication Code.
Notes: Returns digest. 16 bytes for MD5 and 20 bytes for SHA1.

77.7.10 Hmac(algorithm as Integer, key as Ptr, keyLength as Integer, data as Ptr, dataLength as Integer, MacOut as Ptr)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Stateless, one-shot HMAC function.
Notes:

Make sure your memoryblock for key, data and macout have the right size and are not nil!
keyLength and dataLength are the size of key and data in bytes.
See also:

- 77.7.11 Hmac(algorithm as Integer, key as String, data as String) as String 14709

- 77.7.13 Update(data as Ptr, dataLength as UInt64) 14709

77.7.15 Properties

77.7.16 Algorithm as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The algorithm passed in the constructor.
Notes:

see kCCHmacAlg* constants.
(Read and Write property)

77.7.17 Constants

77.7.18 kCCHmacAlgMD5 = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the Algorithms selector constants.

77.7.19 kCCHmacAlgSHA1 = 0

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the Algorithms selector constants.

77.7.20 kCCHmacAlgSHA224 = 5

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the Algorithms selector constants.

77.7.21 kCCHmacAlgSHA256 = 2

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the Algorithms selector constants.

77.7.22 kCCHmacAlgSHA384 = 3

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the Algorithms selector constants.

77.7.23 kCCHmacAlgSHA512 = 4

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: One of the Algorithms selector constants.

77.7.24 kCCMD5DigestLength = 16

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: The length of the SHA1 digest in bytes.

77.7.25 kCCSHA1DigestLength = 20

MBS MacOSX Plugin, Plugin Version: 11.3.

Function: The length of the SHA1 digest in bytes.

77.8 class CCMD2MBS

77.8.1 class CCMD2MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The class for MD2 hash.
Example:

```
dim s as new CCMD2MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

77.8.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr5

77.8.4 Methods

77.8.5 Constructor

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initializes the hash engine.

77.8.6 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Finalizes hash and returns digest as memoryblock.
Notes: If you want to show the value to a human, please use EncodingToHexMBS function.

77.8.7 MD2(data as Ptr, dataLength as Integer) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One-shot hash calculation with MD2.
Notes: Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 77.8.8 MD2(data as String) as Memoryblock 14713

77.8.8 MD2(data as String) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One-shot hash calculation with MD2.
Example:

```
dim m as MemoryBlock = CCMD2MBS.MD2("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

Notes: Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 77.8.7 MD2(data as Ptr, dataLength as Integer) as Memoryblock 14713

77.8.9 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Processes some data.
Notes: Pass memoryblock and data length in bytes.
See also:

- 77.8.10 Update(data as string) 14713

77.8.10 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Processes some data.
Notes: Pass string with data.
See also:

- 77.8.9 Update(data as Ptr, dataLength as UInt64) 14713

77.9 class CCMD4MBS

77.9.1 class CCMD4MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The class for MD4 hash.
Example:

```
dim s as new CCMD4MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

Notes: Pass string with data.
See also:

- 77.15.9 Update(data as Ptr, dataLength as UInt64) 14734

77.16 class CipherMBS

77.16.1 class CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The high level cipher class using OpenSSL encryption.
Example:

```
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

dim a as new AESMBS

call a.SetKey CKey, 128
dim output2 as string = a.EncryptCFB128(data, CIV)

MsgBox EncodeHex(output1)+EndOfLine+EncodeHex(output2)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.16.6 Methods

77.16.7 aes_128_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim key as string = "mysecretkey"
dim encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"

encrypted = DecodeBase64(encrypted)

dim c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key

dim s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```

77.16.8 aes_128_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.9 aes_128_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.10 aes_128_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

dim a as new AESMBS
```

```
call a.SetKey CKey, 128
dim output2 as string = a.EncryptCFB128(data, CIV)

MsgBox EncodeHex(output1)+EndOfLine+EncodeHex(output2)
```

77.16.11 aes_128_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.12 aes_128_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.13 aes_128_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.14 aes_128_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.15 aes_128_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.16 aes_128_xts as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.aes_128_xts
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_128_xts
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

77.16.17 aes_192_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.18 aes_192_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.19 aes_192_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.20 aes_192_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.21 aes_192_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.22 aes_192_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.23 aes_192_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.24 aes_192_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.25 aes_192_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.26 aes_256_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.aes_256_cbc
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_256_cbc
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

77.16.27 aes_256_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.28 aes_256_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.29 aes_256_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.aes_256_cfb128
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_256_cfb128
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

77.16.30 aes_256_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.31 aes_256_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.32 aes_256_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.aes_256_ecb
```

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

c = CipherMBS.aes_256_ecb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

77.16.33 aes_256_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.34 aes_256_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.35 aes_256_xts as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.36 bf_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Blowfish with CBC mode.

77.16.37 bf_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Blowfish with CFB64 mode.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.bf_cfb64
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.bf_cfb64
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

77.16.38 bf_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Blowfish with ECB mode.

77.16.39 bf_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for Blowfish with OFB mode.

77.16.40 BytesToKey(cipher as CipherMBS, digest as DigestMBS, Salt as MemoryBlock, InputKey as Memoryblock, IterationCount as Integer, byref OutputKey as memoryblock, byref IV as memoryblock) as boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Derives a key and IV from a given input data.
Notes:

Returns true on success or false on failure.

BytesToKey() derives a key and IV from various parameters. type is the cipher to derive the key and IV for. md is the message digest to use. The salt paramter is used as a salt in the derivation: it should point to an 8 byte buffer or nil if no salt is used. data is a buffer containing datal bytes which is used to derive the keying data. count is the iteration count to use. The derived key and IV will be written to key and iv respectively.

A typical application of this function is to derive keying material for an encryption algorithm from a password in the data parameter.

Increasing the count parameter slows down the algorithm which makes it harder for an attacker to peform a brute force attack using a large number of candidate passwords.

If the total key and IV length is less than the digest length and MD5 is used then the derivation algorithm is compatible with PKCS# 5 v1.5 otherwise a non standard extension is used to derive the extra data.

Newer applications should use more standard algorithms such as PBKDF2 as defined in PKCS# 5v2.1 for key derivation.

Key Derivation Algorithm

The key and IV is derived by concatenating D_1, D_2, etc until enough data is available for the key and IV. D_i is defined as:

D_i = HASH^count(D_(i-1) | | data | | salt)

where | | denotes concatentaion, D_0 is empty, HASH is the digest algorithm in use, HASH^1(data) is simply HASH(data), HASH^2(data) is HASH(HASH(data)) and so on.

The initial bytes are used for the key and the subsequent bytes for the IV.

77.16.41 camellia_128_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.42 camellia_128_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.43 camellia_128_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.44 camellia_128_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.45 camellia_128_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.46 camellia_128_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.47 camellia_192_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.48 camellia_192_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.49 camellia_192_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.50 camellia_192_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.51 camellia_192_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.52 camellia_192_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.53 camellia_256_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.camellia_256_cbc
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.camellia_256_cbc
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

77.16.54 camellia_256_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.55 camellia_256_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.56 camellia_256_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.57 camellia_256_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.58 camellia_256_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.59 cast5_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.60 cast5_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.61 cast5_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.62 cast5_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.63 CipherByName(name as string) as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds a cipher by name.
Notes:

Possible names:
AES-128-CFB, BF-CBC, BF-CFB, BF-ECB, BF-OFB, AES-128-CBC, id-aes128-CCM, AES-128-CFB1, AES-128-CFB8, AES-128-CTR, AES-128-ECB, id-aes128-GCM, AES-128-OFB, AES-128-XTS, AES-192-CBC, id-aes192-CCM, AES-192-CFB1, AES-192-CFB8, AES-192-CFB, AES-192-CTR, AES-192-ECB, id-aes192-GCM, AES-192-OFB, AES-256-CBC, id-aes256-CCM, AES-256-CFB1, AES-256-CFB8, AES-256-CFB, AES-256-CTR, AES-256-ECB, id-aes256-GCM, AES-256-OFB, AES-256-XTS, CAMELLIA-128-CBC, CAMELLIA-128-CFB1, CAMELLIA-128-CFB8, CAMELLIA-128-CFB, CAMELLIA-128-ECB, CAMELLIA-128-OFB, CAMELLIA-192-CBC, CAMELLIA-192-CFB1, CAMELLIA-192-CFB8, CAMELLIA-192-CFB, CAMELLIA-192-ECB, CAMELLIA-192-OFB, CAMELLIA-256-CBC, CAMELLIA-256-CFB1, CAMELLIA-256-CFB8, CAMELLIA-256-CFB, CAMELLIA-256-ECB, CAMELLIA-256-OFB, CAST5-CBC, CAST5-CFB, CAST5-ECB, CAST5-OFB, DES-EDE, DES-EDE-CBC, DES-EDE-CFB, DES-EDE, DES-EDE-OFB, DES-EDE3, DES-EDE3-CBC, DES-EDE3-CFB1, DES-EDE3-CFB8, DES-EDE3-CFB, DES-EDE3, DES-EDE3-OFB, RC2-40-CBC, RC2-64-CBC, RC2-CBC, RC2-CFB, RC2-ECB, RC2-OFB, RC4, RC4-40, RC4-HMAC-MD5, IDEA-CFB, IDEA-ECB, IDEA-OFB, IDEA-CBC, DES-CFB1, DES-CFB8, DES-CFB, DES-OFB, DES-ECB, DES-CBC or DESX-CBC.

77.16.64 CipherInit(key as memoryblock, IV as memoryblock, Encrypt as boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the cipher for encryption or decryption.
Notes:

We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

77.16.65 CipherNames as String()

MBS Encryption Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all ciphers.
Example:

```
// see hash and encryption algorithms available
dim CipherNames() as string = CipherMBS.CipherNames
dim DigestNames() as string = DigestMBS.DigestNames
Break
```

Notes:

The list may not be the same for Mac, Windows and Linux.

Current list:

aes-128-cbc, aes-128-cbc-hmac-sha1, aes-128-ccm, aes-128-cfb, aes-128-cfb1, aes-128-cfb8, aes-128-ctr, aes-128-ecb, aes-128-gcm, aes-128-ocb, aes-128-ofb, aes-128-xts, aes-192-cbc, aes-192-ccm, aes-192-cfb, aes-192-cfb1, aes-192-cfb8, aes-192-ctr, aes-192-ecb, aes-192-gcm, aes-192-ocb, aes-192-ofb, aes-256-cbc, aes-256-cbc-hmac-sha1, aes-256-ccm, aes-256-cfb, aes-256-cfb1, aes-256-cfb8, aes-256-ctr, aes-256-ecb, aes-256-gcm, aes-256-ocb, aes-256-ofb, aes-256-xts, aes128, aes128-wrap, aes192, aes192-wrap, aes256, aes256-wrap, aria-128-cbc, aria-128-ccm, aria-128-cfb, aria-128-cfb1, aria-128-cfb8, aria-128-ctr, aria-128-ecb, aria-128-gcm, aria-128-ofb, aria-192-cbc, aria-192-ccm, aria-192-cfb, aria-192-cfb1, aria-192-cfb8, aria-192-ctr, aria-192-ecb, aria-192-gcm, aria-192-ofb, aria-256-cbc, aria-256-ccm, aria-256-cfb, aria-256-cfb1, aria-256-cfb8, aria-256-ctr, aria-256-ecb, aria-256-gcm, aria-256-ofb, aria128, aria192, aria256, bf, bf-cbc, bf-cfb, bf-ecb, bf-ofb, blowfish, camellia-128-cbc, camellia-128-cfb, camellia-128-cfb1, camellia-128-cfb8, camellia-128-ctr, camellia-128-ecb, camellia-128-ofb, camellia-192-cbc, camellia-192-cfb, camellia-192-cfb1, camellia-192-cfb8, camellia-192-ctr, camellia-192-ecb, camellia-192-ofb, camellia-256-cbc, camellia-256-cfb, camellia-256-cfb1, camellia-256-cfb8, camellia-256-ctr, camellia-256-ecb, camellia-256-ofb, camellia128, camellia192, camellia256, cast, cast-cbc, cast5-cbc, cast5-cfb, cast5-ecb, cast5-ofb, chacha20, chacha20-poly1305, des, des-cbc, des-cfb, des-cfb1, des-cfb8, des-ecb, des-ede, des-ede-cbc, des-ede-cfb, des-ede-ecb, des-ede-ofb, des-ede3, des-ede3-cbc, des-ede3-cfb, des-ede3-cfb1, des-ede3-cfb8, des-ede3-ecb, des-ede3-ofb, des-ofb, des3, des3-wrap, desx, desx-cbc, id-aes128-CCM, id-aes128-GCM, id-aes128-wrap, id-aes128-wrap-pad, id-aes192-CCM, id-aes192-GCM, id-aes192-wrap, id-aes192-wrap-pad, id-aes256-CCM, id-aes256-GCM, id-aes256-wrap, id-aes256-wrap-pad, id-smime-alg-CMS3DESwrap, idea, idea-cbc, idea-cfb, idea-ecb, idea-ofb, rc2, rc2-128, rc2-40, rc2-40-cbc, rc2-64, rc2-64-cbc, rc2-cbc, rc2-cfb, rc2-ecb, rc2-ofb, rc4, rc4-40, rc4-hmac-md5, RC5, rc5-cbc, rc5-cfb, rc5-ecb, rc5-ofb, seed, seed-cbc, seed-cfb, seed-ecb, seed-ofb, sm4, sm4-cbc, sm4-cfb, sm4-ctr, sm4-ecb, sm4-ofb

77.16.66 Clear

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the current state.

77.16.67 Constructor

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.16.68 DecryptInit(key as memoryblock, IV as memoryblock = nil) as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the cipher for decrypting.
Example:

```
dim key as string = "mysecretkey"
dim encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"

encrypted = DecodeBase64(encrypted)

dim c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key

dim s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```

Notes:

We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

For AES the length of the key defines whether you get 128, 192 or 256 bit encryption. Pass some other key length will return an error. Best is usually to put a hashing algorithm before to make sure the key has the required bit length, e.g. use SHA256MBS class.

77.16.69 desx_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DESX algorithm in CBC mode.

77.16.70 des_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in CBC.

77.16.71 des_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in CFB.

77.16.72 des_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in CFB.

77.16.73 des_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in CFB.

77.16.74 des_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in ECB.

77.16.75 des_ede as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.76 des_ede3 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.77 des_ede3_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.78 des_ede3_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.79 des_ede3_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.80 des_ede3_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.81 des_ede3_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.82 des_ede3_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.83 des_ede_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.84 des_ede_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.85 des_ede_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.86 des_ede_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.87 des_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for DES in OFB.

77.16.88 EncryptInit(key as memoryblock, IV as memoryblock = nil) as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the cipher for encrypting.
Example:

```
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output as string = c.ProcessString(data)
output = output + c.FinalizeAsString

MsgBox EncodeHex(output)
```

Notes:

We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

For AES the length of the key defines whether you get 128, 192 or 256 bit encryption. Pass some other key length will return an error. Best is usually to put a hashing algorithm before to make sure the key has the required bit length, e.g. use SHA256MBS class.

77.16.89 FinalizeAsMemory as memoryblock

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes en/decryption and returns last data.

77.16.90 FinalizeAsString as String

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes en/decryption and returns last data.
Example:

```
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output as string = c.ProcessString(data)
output = output + c.FinalizeAsString

MsgBox EncodeHex(output)
```

Notes:

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

77.16.91 idea_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for IDEA encryption algorithm in CBC.

77.16.92 idea_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for IDEA encryption algorithm in CFB.

77.16.93 idea_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for IDEA encryption algorithm in ECB.

77.16.94 idea_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for IDEA encryption algorithm in OFB.

77.16.95 MaxBlockLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum possible block length size for any cipher.

77.16.96 MaxIVLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum possible IV vector size for any cipher.

77.16.97 MaxKeyLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum possible key length size for any cipher.

77.16.98 ProcessFile(InputFile as FolderItem, OutputFile as FolderItem) as boolean

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes content of file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks and write to output file.
Returns true on success or false on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.

77.16.99 ProcessMemory(data as memoryblock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes data in a memory block.
Notes: due to block sizes, the result may be longer or shorter than the input size.

77.16.100 ProcessString(data as String) as string

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes data in a string.
Example:

```
dim key as string = "mysecretkey"
dim encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"

encrypted = DecodeBase64(encrypted)

dim c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key

dim s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```

Notes:

due to block sizes, the result may be longer or shorter than the input size.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

77.16.101 rc2_40_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.102 rc2_64_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.

77.16.103 rc2_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.rc2_cbc
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_cbc
call c.DecryptInit Ckey, CIV
```

```
dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

77.16.104 rc2_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.rc2_cfb64
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_cfb64
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

77.16.105 rc2_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.rc2_ecb
```

```
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_ecb
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

77.16.106 rc2_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc2_ofb
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc2_ofb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

77.16.107 rc4 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc4
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc4
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

77.16.108 rc4_40 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc4_40
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString
```

```
MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc4_40
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

77.16.109 rc4_hmac_md5 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc4_hmac_md5
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc4_hmac_md5
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

77.16.110 rc5_32_12_16_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc5_32_12_16_cbc
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_cbc
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

Notes: RC5 with CBC. 32 bit word size, 12 rounds, 16 byte key.

77.16.111 rc5_32_12_16_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc5_32_12_16_cfb64
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
```

```
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_cfb64
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

Notes: RC5 with CFB64. 32 bit word size, 12 rounds, 16 byte key.

77.16.112 rc5_32_12_16_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc5_32_12_16_ecb
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_ecb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

Notes: RC5 with ECB. 32 bit word size, 12 rounds, 16 byte key.

77.16.113 rc5_32_12_16_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher.
Example:

```
dim c as CipherMBS = CipherMBS.rc5_32_12_16_ofb
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_ofb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

Notes: RC5 with OFB. 32 bit word size, 12 rounds, 16 byte key.

77.16.114 seed_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cipher for a Seed CBC.

77.16.115 seed_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Seed cipher for CFB128 mode.

77.16.116 seed_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cipher for seed ECB.

77.16.117 seed_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Seed cipher for OFB mode.

77.16.118 SetPadding(padding as boolean)

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables padding.
Notes: On by default.

77.16.119 Properties

77.16.120 BlockSize as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the block size for this cipher.
Notes: (Read only property)

77.16.121 Encrypting as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the class is encrypting or decrypting.
Notes:

True if encrypting or false for decrypting.
(Read only property)

77.16.122 Flags as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the flags for the cipher.
Notes: (Read only property)

77.16.123 IVLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the size of the initialization vector.
Notes: (Read only property)

77.16.124 KeyLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The key length.
Notes: (Read and Write property)

77.16.125 Mode as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries cipher mode.
Notes: (Read only property)

77.16.126 Name as String

MBS Encryption Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the cipher engine.
Notes: (Read only property)

77.16.127 Padding as Boolean

MBS Encryption Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to apply padding or not.
Example:

```
dim c as CipherMBS = CipherMBS.aes_256_ctr

call c.EncryptInit "Hello"

MsgBox "default: "+str(c.Padding)
c.Padding = false

MsgBox "set to false: "+str(c.Padding)
c.Padding = true

MsgBox "set to true: "+str(c.Padding)
```

Notes:

On by default.
(Read and Write property)

77.16.128 RC2KeyBits as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bits for RC2.
Notes: (Read and Write property)

77.16.129 RC5Rounds as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of rounds for RC5.
Notes: (Read and Write property)

77.17 class DigestMBS

77.17.1 class DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OpenSSL class for calculating hashes.
Example:

```
dim d as DigestMBS = DigestMBS.MD5
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.17.6 Methods

77.17.7 Clear

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the current state.

77.17.8 Constructor

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.17.9 DigestByName(name as string) as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a digest by name.
Example:

```
dim d as DigestMBS = DigestMBS.DigestByName("md5")
MsgBox str(d.Size)
```

Notes:

Returns nil if name is not registered.
May need string to be in upper case.

77.17.10 DigestNames as String()

MBS Encryption Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all digest algorithms.
Example:

```
// see hash and encryption algorithms available
dim CipherNames() as string = CipherMBS.CipherNames
dim DigestNames() as string = DigestMBS.DigestNames
Break
```

Notes:

The list may not be the same for Mac, Windows and Linux.

Current list:

blake2b512, blake2s256, id-rsassa-pkcs1-v1_5-with-sha3-224, id-rsassa-pkcs1-v1_5-with-sha3-256, id-rsassa-pkcs1-v1_5-with-sha3-384, id-rsassa-pkcs1-v1_5-with-sha3-512, md4, md4WithRSAEncryption, md5, md5-sha1, md5WithRSAEncryption, mdc2, mdc2WithRSA, ripemd, ripemd160, ripemd160WithRSA, rmd160, RSA-MD4, RSA-MD5, RSA-MDC2, RSA-RIPEMD160, RSA-SHA1, RSA-SHA1-2, RSA-SHA224, RSA-SHA256, RSA-SHA3-224, RSA-SHA3-256, RSA-SHA3-384, RSA-SHA3-512, RSA-SHA384, RSA-SHA512, RSA-SHA512/224, RSA-SHA512/256, RSA-SM3, sha1, sha1WithRSAEncryption, sha224, sha224WithRSAEncryption, sha256, sha256WithRSAEncryption, sha3-224, sha3-256, sha3-384, sha3-512, sha384, sha384WithRSAEncryption, sha512, sha512-224, sha512-224WithRSAEncryption, sha512-256, sha512-256WithRSAEncryption, sha512WithRSAEncryption, shake128, shake256, sm3, sm3WithRSAEncryption, ssl3-md5, ssl3-sha1, whirlpool

77.17.11 Final as memoryblock

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes the hash and returns it.

77.17.12 FinalText as String

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finalizes the hash and returns it.
Notes: Returns text with hex encoding.

77.17.13 MD5 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for MD5.
Example:

```
dim d as DigestMBS = DigestMBS.MD5
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

77.17.14 MDC2 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for MDC2.
Example:

```
dim d as DigestMBS = DigestMBS.MDC2
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

77.17.15 Process(data as memoryblock)

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds more data to the hash.
See also:

- 77.17.16 Process(data as string) 14775
- 77.17.17 Process(file as FolderItem) as boolean 14776

77.17.16 Process(data as string)

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds more data to the hash.
See also:

- 77.17.15 Process(data as memoryblock) 14775
- 77.17.17 Process(file as FolderItem) as boolean 14776

77.17.17 Process(file as FolderItem) as boolean

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes content of file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns true on success or false on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
See also:

- 77.17.15 Process(data as memoryblock) 14775
- 77.17.16 Process(data as string) 14775

77.17.18 RipeMD160 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for RipeMD160.
Example:

```
dim d as DigestMBS = DigestMBS.RipeMD160
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

77.17.19 SHA1 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 1.
Example:

```
dim d as DigestMBS = DigestMBS.SHA1
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
```

MsgBox result

77.17.20 SHA224 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 224.
Example:

```
dim d as DigestMBS = DigestMBS.SHA224
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

77.17.21 SHA256 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 256.
Example:

```
dim d as DigestMBS = DigestMBS.SHA256
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

77.17.22 SHA384 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA 384.
Example:

```
dim d as DigestMBS = DigestMBS.SHA384
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

77.17.23 SHA3_224 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA-3 with 224 bits.
Example:

```
dim d as DigestMBS = DigestMBS.SHA3_224
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

77.17.24 SHA3_256 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA-3 with 256 bits.
Example:

```
dim d as DigestMBS = DigestMBS.SHA3_256
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

77.17.25 SHA3_384 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA-3 with 384 bits.
Example:

```
dim d as DigestMBS = DigestMBS.SHA3_384
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

77.17.26 SHA3_512 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA-3 with 512 bits.

Example:

```
dim d as DigestMBS = DigestMBS.SHA3_512
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

77.17.27 SHA512 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the cipher for SHA512.
Example:

```
dim d as DigestMBS = DigestMBS.SHA512
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

77.17.28 Properties

77.17.29 BlockSize as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries block size.
Example:

```
dim d as DigestMBS = DigestMBS.DigestByName("md5")
MsgBox str(d.BlockSize)
```

Notes: (Read only property)

77.17.30 Name as String

MBS Encryption Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the digest engine.
Notes: (Read only property)

77.17.31 Size as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries size of digest.
Example:

```
dim d as DigestMBS = DigestMBS.SHA512
MsgBox str(d.Size)
```

Notes: (Read only property)

77.18 class ECDHEMBS

77.18.1 class ECDHEMBS

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for ECDH key creation.
Notes:

Elliptic Curve Diffie Hellman (ECDH) is an Elliptic Curve variant of the standard Diffie Hellman algorithm. See Elliptic Curve Cryptography for an overview of the basic concepts behind Elliptic Curve algorithms. ECDH is used for the purposes of key agreement.

Constructor to create and map functions into the struct.
EC_Curve_NID An Elliptical Curve ID specified in the openssl header <openssl/obj_mac.h>. (e.g. NID_X9_62_prime256v1)

77.18.6 Methods

77.18.7 Constructor(CurveID as Integer)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Creates a new key with the given CurveID, e.g. NID_X9_62_prime256v1.

77.18.8 DeriveSecretKey(peerKey as string) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: After receiving a public key from your peer, derive the secret key by combining the peer key with yours.
Notes:

Returns a string (i.e. shared secret) that is the result of the EC DHE secret derivation.
Never use a derived secret directly. Typically it is passed through some hash function to produce a key (e.g. SHA512).
peerKey: A string containing the peer's public key.

77.18.9 Destructor

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: Public keys and shared secrets should be copied before freeing memory as ecdhe owns the public key and shared secret.

77.18.10 LastError as String

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error string.

77.18.11 PublicKey as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the public key.
Example:

```
dim EC_Curve_ID as Integer = 415 // NID_X9_62_prime256v1
dim ec_dhe as new ECDHEMBS(EC_Curve_ID)
dim publicKey as string = ec_dhe.PublicKey

MsgBox publicKey
```

Notes:

Returns a string (i.e. public key) to be shared with your peer; this can be accomplished over the network or by file.
Encoding is PEM, so you can write to a file with .pem file name extension.

77.18.12 Properties

77.18.13 CurveID as Integer

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Curve ID used in constructor.
Notes: (Read only property)

77.18.14 CurveIDName as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The textual name of the used curve ID.
Notes: (Read only property)

77.18.15 ParamsInfo as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Debug Information on the parameters used.
Notes: (Read only property)

77.18.16 PeerKeyInfo as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Debug Information on the peer key used.
Notes: (Read only property)

77.18.17 PrivateKeyInfo as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Debug Information on the private key used.
Notes: (Read only property)

77.18.18 Constants

77.18.19 NID_secp112r1 = 704

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.20 NID_secp112r2 = 705

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.21 NID_secp128r1 = 706

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.22 NID_secp128r2 = 707

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.23 NID_secp160k1 = 708

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.24 NID_secp160r1 = 709

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.25 NID_secp160r2 = 710

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.26 NID_secp192k1 = 711

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.27 NID_secp224k1 = 712

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.28 NID_secp224r1 = 713

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.29 NID_secp256k1 = 714

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.30 NID_secp384r1 = 715

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.31 NID_secp521r1 = 716

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.32 NID_sect113r1 = 717

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.33 NID_sect113r2 = 718

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.34 NID_sect131r1 = 719

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.35 NID_sect131r2 = 720

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.36 NID_sect163k1 = 721

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.37 NID_sect163r1 = 722

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.38 NID_sect163r2 = 723

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.39 NID_sect193r1 = 724

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.40 NID_sect193r2 = 725

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.41 NID_sect233k1 = 726

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.42 NID_sect233r1 = 727

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.43 NID_sect239k1 = 728

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.44 NID_sect283k1 = 729

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.45 NID_sect283r1 = 730

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.46 NID_sect409k1 = 731

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.47 NID_sect409r1 = 732

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.48 NID_sect571k1 = 733

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.49 NID_sect571r1 = 734

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.50 NID_wap_wsg_idm_ecid_wtls1 = 735

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.51 NID_wap_wsg_idm_ecid_wtls10 = 743

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.52 NID_wap_wsg_idm_ecid_wtls11 = 744

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.53 NID_wap_wsg_idm_ecid_wtls12 = 745

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.54 NID_wap_wsg_idm_ecid_wtls3 = 736

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.55 NID_wap_wsg_idm_ecid_wtls4 = 737

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.56 NID_wap_wsg_idm_ecid_wtls5 = 738

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.57 NID_wap_wsg_idm_ecid_wtls7 = 740

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.58 NID_wap_wsg_idm_ecid_wtls8 = 741

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.59 NID_wap_wsg_idm_ecid_wtls9 = 742

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.60 NID_X9_62_c2pnb163v1 = 684

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.61 NID_X9_62_c2pnb163v2 = 685

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.62 NID_X9_62_c2pnb163v3 = 686

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.63 NID_X9_62_c2pnb176v1 = 687

Function: One of the curve constants.

77.18.64 NID_X9_62_c2pnb208w1 = 693

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.65 NID_X9_62_c2pnb272w1 = 699

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.66 NID_X9_62_c2pnb304w1 = 700

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.67 NID_X9_62_c2pnb368w1 = 702

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.68 NID_X9_62_c2tnb191v1 = 688

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.69 NID_X9_62_c2tnb191v2 = 689

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.70 NID_X9_62_c2tnb191v3 = 690

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.71 NID_X9_62_c2tnb239v1 = 694

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.72 NID_X9_62_c2tnb239v2 = 695

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.73 NID_X9_62_c2tnb239v3 = 696

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.74 NID_X9_62_c2tnb359v1 = 701

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.75 NID_X9_62_c2tnb431r1 = 703

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.18.76 NID_X9_62_prime256v1 = 415

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the curve constants.

77.19 class ECKeyMBS

77.19.1 class ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for Elliptic Curve Digital Signature Algorithm.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox key.Description
```

77.19.2 Blog Entries

77.19.4 Methods

77.19.5 BuiltInCurves as Dictionary

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries built in curves.
Example:

```
// show curve IDs with description in listbox
dim d as Dictionary = ECKeyMBS.BuiltInCurves

for each key as Variant in d.keys
Listbox1.AddRow key, d.Value(key)
next
```

Notes:

The dictionary returned has as key the ID and the description as value.

The list looks like this:

77.19.6 Constructor

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

77.19.7 Copy as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the key.

77.19.8 Generate as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates new key and stores in the current object.
Notes: Returns true on success or false on failure.

77.19.9 GetPrivateKey(Hex as Boolean) as String

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries priv key.
Example:

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

// show private key
MsgBox e.GetPrivateKey(True)+_
EndOfLine+_
```

```
e.GetPrivateKey(False)
```

Notes: The private key is a big number, which can be returned as decimal or hexadecimal value.

77.19.10 GetPublicKey(byref x as String, byref y as String, Hex as Boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries X and Y of public key.
Example:

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

// show public key
dim x,y as string
If e.GetPublicKey(x, y, False) Then
MsgBox x+EndOfLine+y
End If
```

Notes:

The public key is made up with two big numbers, which can be returned as decimal or hexadecimal value.
Returns true on success or false on failure.

77.19.11 GetPublicKeyPoint as String

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries Public key as hex string.
Example:

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

// show public key
msgbox e.GetPublicKeyPoint
```

Notes: Can be queried to save/send and later be assigned with SetPublicKeyPoint.

77.19.12 KeyByCurveName(CurveID as Integer, Generate as Boolean = true) as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a new pair of private and public keys.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox key.Description
```

Notes:

You can use ReadPrivateKey and ReadPublicKey functions to get the keys.
If Generate is false, we create an empty object with private and public keys.

Some possible curve IDs:

77.19.13 OpenPrivateKey(Data as String) as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a priv key.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim PrivateKeyData as string = key.PrivateKey

// read again
dim pub as ECKeyMBS = ECKeyMBS.OpenPrivateKey(PrivateKeyData)
MsgBox pub.Description
```

77.19.14 OpenPublicKey(Data as String, CurveID as Integer) as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a public key.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim pubKeyData as string = key.PublicKey

// read again
dim pub as ECKeyMBS = ECKeyMBS.OpenPublicKey(pubKeyData, NID_secp192k1)
MsgBox pub.Description
```

77.19.15 PrivateKey as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the priv key.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim Data as string = key.PrivateKey
MsgBox EncodeBase64(data)
```

77.19.16 PublicKey as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the public key.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim Data as string = key.PublicKey
MsgBox EncodeBase64(data)
```

77.19.17 SetPrivateKey(Value as String, Hex as Boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the key.
Example:

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox e.Description

// get hex
Dim pubk As String = e.GetPublicKeyPoint
Dim priv As String = e.GetPrivateKey(False)

// make new empty key and put in the data
Dim ee As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1, False)

If ee.SetPrivateKey(priv, False) Then
If ee.SetPublicKeyPoint(pubk) Then
MsgBox ee.Description
Else
Break // failed?
End If
Else
Break // failed?
End If
```

Notes: Returns true on success or false on failure.

77.19.18 SetPublicKey(x as String, y as String, Hex as Boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets X and Y of public key.
Example:

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox e.Description

// get hex
Dim pubk As String = e.GetPublicKeyPoint
Dim priv As String = e.GetPrivateKey(False)

// make new empty key and put in the data
```

```
Dim ee As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1, False)

If ee.SetPrivateKey(priv, False) Then
If ee.SetPublicKeyPoint(pubk) Then
MsgBox ee.Description
Else
Break // failed?
End If
Else
Break // failed?
End If
```

Notes: Returns true on success or false on failure.

77.19.19 SetPublicKeyPoint(Value as String) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets public key.
Notes: Returns true on success or false on failure.

77.19.20 Sign(Data as String) as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs the given data.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim text as string = "Hello World"
dim data as string = SHA512MBS.Hash(text)
dim sig as string = key.Sign(data)

if key.Verify(data, sig) then
MsgBox "Signature ok"
end if
```

Notes:

We highly recommend to use a hash like SHA-512 to preprocess the data.
Returns the signature as string on success.

77.19.21 Verify(SignatureData as String, Data as String) as Boolean

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies the digital signature.
Example:

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim text as string = "Hello World"
dim data as string = SHA512MBS.Hash(text)
dim sig as string = key.Sign(data)

if key.Verify(data, sig) then
MsgBox "Signature ok"
end if
```

Notes:

Returns true on success. Returns false if data, signature and public key don't belong together.
We highly recommend to use a hash like SHA-512 to preprocess the data.

77.19.22 Properties

77.19.23 CanSign as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Indicates if an ECKey can be used for signing.
Notes:

Returns true if can can sign and false otherwise.
(Read only property)

77.19.24 Description as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an user readable description text for the current key.
Example:

```
const NID_secp192k1 = 711
```

```
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox key.Description
```

Notes: (Read only property)

77.19.25 Flags as Integer

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flag field.
Notes:

see OpenSSL for details.
(Read and Write property)

77.19.26 Size as Integer

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns size of key.
Notes: (Read only property)

77.19.27 Valid as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies that a private and/or public key is valid.
Notes:

Returns true on success and false otherwise.
(Read only property)

77.20 class EncryptMBS

77.20.1 class EncryptMBS

MBS Encryption Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class does a enryption using a 104 Byte Key.
Deprecated: This item is deprecated and should no longer be used. You can use CipherMBS instead.
Notes:

Fixed with version 8.1 to work on 64-bit.

This class is kept for compatibility. On new projects please use the blowfishMBS class which offers more options. And two easy usable shared methods to quickly encrypt and decrypt.

Create a EncryptMBS Object using "e=new EncryptMBS". Then initialize it with your password using "e.init(password)". Now you can call Encode and Decode to get your data encrypted.
The GetKey function is only for you to verify if it is working correctly. For the same password, you should always get the same key and the same result for the same data.
Known issues:
The data length must be aligned to 8 bytes for best results.
e.g. "Hello World!" has a length of 12 bytes and the encode function will only do the first 8 bytes.

The result on Mac and Windows is not the same!
See also AESMBS class and BlowfishMBS class.

77.20.4 Methods

77.20.5 Decode(data as string) as string

MBS Encryption Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes the string using the key.
Example:

```
dim e as new EncryptMBS

e.Init "password"
dim encoded as string = e.encode("Hello World")
MsgBox e.Decode(encoded)
```

Notes:

Does nothing without you calling Init before to generate a key.
The result is not the same for BigEndian and LittleEndian CPUs.
The strings returned are marked to have the encoding Binary.

77.20.6 Encode(data as string) as string

MBS Encryption Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes the string using the key.
Example:

```
dim e as new EncryptMBS

e.Init "password"
msgbox e.encode("Hello World")
```

Notes:

Does nothing without you calling Init before to generate a key.
The result is a binary string which can contain any ASCII value and may not be printable.
The result is not the same for BigEndian and LittleEndian CPUs.
The strings returned are marked to have the encoding Binary.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

77.20.7 Init(password as string)

MBS Encryption Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates the key needed for encryption based on the provided keyword.
Example:

```
dim e as new EncryptMBS
e.init("mypassword")
```

77.20.8 Key as string

MBS Encryption Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the key used inside the encryption object.
Example:

```
dim e as new EncryptMBS
e.Init "Hello"
msgbox e.key
```

Notes: Call Init to generate this key before.

77.21 class MD5DigestMBS

77.21.1 class MD5DigestMBS

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to calculate the message-digest of a string.
Notes:

Same class as the one in RB5, so the same documentation:

The MD5Digest class enables you to process a string in segments. Pass each string segment to the Process method. The value property contains the current message digest and the clear method clears the MD5Digest object so that you can repeat the process.

The MD5 message digest algorithm takes a message of any length and produces a 128-bit "fingerprint" or message digest of the input string. The MD5 algorithm is useful for digital signature applications, where a large file must be processed in a secure manner before being encrypted with a secret key under a system such as RSA.

77.21.4 Methods

77.21.5 clear

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the MD5Digest object so that you can start with a new data stream.

77.21.6 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates hash from whole file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

77.21.7 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the a specific HASH based on the key and the data string.

77.21.8 MD5(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string.
See also:

- 77.21.9 MD5(data as string) as string

77.21.9 MD5(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string.
Example:

```
// Compare RB5 MD5 to the one from MBS

dim a,b as String

a=MD5("Hallo")

b=MD5DigestMBS.MD5("Hallo")

msgbox str(StrComp(a,b,0))
```

Notes: Same as the MD5 function in RB5.
See also:

- 77.21.8 MD5(data as memoryblock) as string 14810

77.21.10 MD5String(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a memoryblock as hex string.
See also:

- 77.21.11 MD5String(data as string) as string 14811

77.21.11 MD5String(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MD5 message digest value of a string as hex string.
Example:

```
// Compare RB5 MD5 to the one from MBS

dim a,b as String

a=EncodingToHexMBS(MD5("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern"))
b=MD5DigestMBS.MD5String("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

msgbox a+EndOfLine+b+EndOfLine+str(StrComp(a,b,0))
```

See also:

- 77.21.10 MD5String(data as memoryblock) as string 14811

77.21.12 Process(data as memoryblock)

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes the given data.
See also:

- 77.21.13 Process(Data as string) 14812

77.21.13 Process(Data as string)

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes the given data.
Example:

```
dim f as FolderItem
dim b as BinaryStream
dim s as string
dim m as new MD5DigestMBS
dim lines(-1) as string

// process file part by part (big files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
s=b.Read(1000000)
m.Process s
wend

lines.append EncodingToHexMBS(m.Value)+" using plugin with MD5DigestMBS"

dim d as new MD5Digest

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
```

```
s=b.Read(1000000)
d.Process s
wend

lines.append EncodingToHexMBS(d.Value)+" using RB with MD5Digest"

// process file in one chunk (small files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

s=b.Read(b.Length)

lines.append EncodingToHexMBS(MD5MBS(s))+" using plugin with MD5MBS()"

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

s=b.Read(b.length)

lines.append EncodingToHexMBS(MD5(s))+" using RB with MD5()"

MsgBox Join(lines,EndOfLine)
```

See also:

- 77.21.12 Process(data as memoryblock) 14812

77.21.14 Properties

77.21.15 Value as string

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Contains the current message digest.
Notes: (Read only property)

77.22 class OldAESMBS

77.22.1 class OldAESMBS

MBS Encryption Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for AES encryption.
Example:

```
dim a as OldAESMBS
dim key as MemoryBlock
dim data as MemoryBlock

key=NewMemoryBlock(20)
key.CString(0)="Hello World!1234" // 16 byte key for 128bit

a=new OldAESMBS

if a.SetKey(key, 128) then

data=NewMemoryBlock(20)
data.StringValue(0,16)="Hello World!"
MsgBox "Before: "+data.StringValue(0,16)
a.Encrypt(data)
MsgBox "After encryption: "+data.StringValue(0,16)
a.Decrypt(data)
MsgBox "After decryption: "+data.StringValue(0,16)
else
MsgBox "Failed"
end if
```

Deprecated: This item is deprecated and should no longer be used. You can use AESMBS instead. **Notes:**

Please don't use this class. This class is deprecated and just kept for compatibility. This class will not be available in 64bit.

This class has low level functions like Encrypt. It also has mid level functions like EncryptCFB/CBC. For your convenience, we also have high level functions like EncryptString.

77.22.4 Methods

77.22.5 Decrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
Notes:

If odata is nil, idata is used for output.
This is ECB mode.

77.22.6 DecryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decryptes the 16 byte data blocks within LengthBytes bytes in the data.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

77.22.7 DecryptCFB(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decryptes the data in CFB128 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

77.22.8 DecryptCFBOld(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decryptes the data in CFB128 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.#

77.22.9 DecryptString(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypts a string in CFB128 mode.
Example:

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)
```

```
dim a as new OldAESMBS

call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

Notes:

If IVector is nil, a vector filled with zeros is used.
The bytes from the string are read without checking the text encoding and the result string has no text encoding assigned.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

77.22.10 DecryptStringOld(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypts a string in CFB128 mode.
Example:

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new OldAESMBS
```

```
call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

Notes:

If IVector is nil, a vector filled with zeros is used.
The bytes from the string are read without checking the text encoding and the result string has no text encoding assigned.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

77.22.11 Encrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
Notes:

If odata is nil, idata is used for output.
This is ECB mode.

77.22.12 EncryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encryptes the 16 byte data blocks within LengthBytes bytes in the data.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

77.22.13 EncryptCFB(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encryptes the data in CFB128 mode.
Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

77.22.14 EncryptCFBOld(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encryptes the data in CFB128 mode.
Notes:

If odata is nil, idata is used for output.

If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

77.22.15 EncryptString(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts a string in CFB128 mode.
Example:

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new OldAESMBS

call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

Notes:

If IVector is nil, a vector filled with zeros is used.
The bytes from the string are read without checking the text encoding and the result string has no text encoding assigned.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

77.22.16 EncryptStringOld(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts a string in CFB128 mode.
Example:

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new OldAESMBS

call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

Notes:

If IVector is nil, a vector filled with zeros is used.

The bytes from the string are read without checking the text encoding and the result string has no text encoding assigned.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

77.22.17 SetKey(key as memoryblock, nBits as Integer) as boolean

MBS Encryption Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the key.
Notes:

possible values for the bitcount:

128	key is 16 bytes long
192	key is 24 bytes long
256	key is 32 bytes long

See also:

- 77.22.18 SetKey(key as string) as boolean 14822

77.22.18 SetKey(key as string) as boolean

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the key.
Example:

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new OldAESMBS

call a.SetKey("1234567890123456")
```

```
iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

Notes:

Please make sure the key has right text encoding to avoid unexpected results.
Please use 16, 24 or 32 byte long key strings.
See also:

- 77.22.17 SetKey(key as memoryblock, nBits as Integer) as boolean 14822

77.23 class OpenSSLExceptionMBS

77.23.1 class OpenSSLExceptionMBS

MBS Encryption Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OpenSSL class for error exceptions.
Notes: Subclass of the RuntimeException class.

77.24.6 Methods

77.24.7 ErrorString(ErrorCode as Integer) as string

MBS Encryption Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the human readable error string for an OpenSSL error.
Example:

```
MsgBox OpenSSLMBS.ErrorString(336109761)
```

77.24.8 GeneratePrivateKey(Bits as Integer = 4096, Exp as Integer = 65537, Password as string = """, Algorithm as string = """) as string

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a new private key.
Example:

```
dim privateKey as string = OpenSSLMBS.GeneratePrivateKey
dim publicKey as string = OpenSSLMBS.GetPublicKey(privateKey)

break // got key pair
```

Notes:

Bit size of key should be high.
See RSA key documentation on the web about details.

In Plugin version 16.2 and later this function yields time to other Xojo threads.
Algorithm specifies the encryption algorithm for key encryption. See CipherMBS for cipher names, e.g. "AES-128-CBC". (new in 17.5)

77.24.9 GetPublicKey(PrivateKey as String, PrivateKeyPassword as string = "") as string

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts public key from private key.
Example:

```
dim privateKey as string = OpenSSLMBS.GeneratePrivateKey
dim publicKey as string = OpenSSLMBS.GetPublicKey(privateKey)

break // got key pair
```

Notes: Optionally you can define a password for private key.

77.24.10 OpenSSLVersion as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of OpenSSL version.
Example:

```
MsgBox OpenSSLMBS.OpenSSLVersion
```

77.24.11 PKCS7Sign(flags as Integer, InputData as string, SignKey as string, PrivateKey as String, PrivateKeyPassword as string, intermediaCertsData() as string, OutputBinary as boolean) as string

MBS Encryption Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs with SMIME.
Example:

```
dim testPrivKey as string = ReadFile("passkey.pem")
dim testCertificate as string = ReadFile("passcertificate.pem")
dim data as string = ReadFile("test.txt")
dim privKeyPassword as string = "12345"

dim intermediateCertificates() as string
intermediateCertificates.Append ReadFile("WWDR.pem")
dim Sign as string = OpenSSLMBS.PKCS7Sign(0, data, testCertificate, testPrivKey, privKeyPassword, intermediateCertificates, true)
```

```
// write result
dim f as FolderItem = SpecialFolder.Desktop.Child("output")
dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write sign
```

Notes:

Returns the signature. If OutputBinary is true, we use DER output, else text based output.
intermediaCertsData array can be empty if you have no intermediate certificates.

77.24.12 PKCS7SignData(Certificate as X509MBS, PrivateKey as PKeyMBS, certs() as X509MBS = nil, data as string, flags as Integer = 0) as string

MBS Encryption Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs with PKCS7.
Notes:

Returns the signature (binary format = DER).
intermediaCertsData array can be empty or nil if you have no intermediate certificates.

77.24.13 PKCS7SignedData(DataP7M as String) as String

MBS Encryption Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads content of signed data in PKCS7 file.
Example:

```
// get a file
Dim f As FolderItem = GetFolderItem("/Users/cs/Desktop/p7m/work.xml.p7m", FolderItem.PathTypeNa-
tive)

// read
Dim b As BinaryStream = BinaryStream.Open(f)
Dim s As String = b.Read(b.Length)

// decode
Dim data As String = OpenSSLMBS.PKCS7SignedData(s)

Break
```

Notes:

Please pass content of a P7M file, so we can read signed content.
Returns data or empty string if this failed.

77.24.14 RandomBytes(count as Integer) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates random bytes.
Example:

```
Dim m As MemoryBlock = OpenSSLMBS.RandomBytes(16)
MsgBox EncodeHex(m)
```

Notes: Puts count cryptographically strong pseudo-random bytes into MemoryBlock.

77.24.15 RandomBytesString(count as Integer) as String

MBS Encryption Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates random bytes.
Example:

```
Dim p As String = OpenSSLMBS.RandomBytesString(16)
MsgBox EncodeHex(p)
```

Notes: Puts count cryptographically strong pseudo-random bytes into string.

77.24.16 RSAPrivateDecrypt(data as string, PrivateKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts data using private key.
Example:

```
// encrypt with public, decrypt with private key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
```

```
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPublicEncrypt(UnencryptedData, PubKey)
dim decryptedData as string = OpenSSLMBS.RSAPrivateDecrypt(EncryptedData, PrivKey)

Break // check in debugger
```

Notes:

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only decrypt data if it's <= length of key.

77.24.17 RSAPrivateEncrypt(data as string, PrivateKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts data using private key.
Example:

```
// encrypt with private, decrypt with public key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPrivateEncrypt(UnencryptedData, PrivKey)
dim decryptedData as string = OpenSSLMBS.RSAPublicDecrypt(EncryptedData, PubKey)

Break // check in debugger
```

Notes:

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only encrypt data if it's <= length of key.

77.24.18 RSAPublicDecrypt(data as string, PublicKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts data using public key.
Example:

```
// encrypt with private, decrypt with public key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPrivateEncrypt(UnencryptedData, PrivKey)
dim decryptedData as string = OpenSSLMBS.RSAPublicDecrypt(EncryptedData, PubKey)

Break // check in debugger
```

Notes:

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only decrypt data if it's <= length of key.

77.24.19 RSAPublicEncrypt(data as string, PublicKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts data using public key.
Example:

```
// encrypt with public, decrypt with private key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPublicEncrypt(UnencryptedData, PubKey)
dim decryptedData as string = OpenSSLMBS.RSAPrivateDecrypt(EncryptedData, PrivKey)

Break // check in debugger
```

Notes:

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only encrypt data if it's <= length of key.

77.24.20 SignData(data as string, key as string, Password as string = "") as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs a piece of data with a given private key.
Example:

```
dim data as string // some data
dim test as string // the private key PEM file content
dim Signature as string = OpenSSLMBS.SignData(data, test)
msgbox EncodeHex(Signature)
```

Notes:

Returns signature. Use EncodeHex or EncodeBase64 to make a text representation.

Internally we make a SHA1 hash of the data, open the private RSA key and do a RSA sign operation. We return the raw key as a string bytes.
On any error, we return an empty string.
Optional you can pass a password to read password protected keys.
See also:

- 77.24.21 SignData(data as string, key as string, Password as string = "", Algorithm as Integer) as string 14833

77.24.21 SignData(data as string, key as string, Password as string = "", Algorithm as Integer) as string

MBS Encryption Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs a piece of data with a given private key.
Example:

```
dim test_pem as string = ReadFile("test.pem")
dim test_pub as string = ReadFile("test.pub")
dim data as string = ReadFile("Create Keys.rtf") // some data file
dim signature as string

// create signature

Signature = OpenSSLMBS.SignData(data, test_pem, OpenSSLMBS.kAlgorithmSHA512)
if Signature = "" then
// failed
break
end if

// verify with private key
dim r1 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pem, OpenSSLMBS.kAlgorithmSHA256)

// verify with public key
dim r2 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pub, OpenSSLMBS.kAlgorithmSHA256)
```

Notes:

Returns signature. Use EncodeHex or EncodeBase64 to make a text representation.

Internally we make a hash of the data with given algorithm, open the private RSA key and do a RSA sign operation. We return the raw signature as a string bytes.
On any error, we return an empty string.
Optional you can pass a password to read password protected keys.
See also:

- 77.24.20 SignData(data as string, key as string, Password as string = "") as string 14832

77.24.22 SMimePKCS7Decrypt(InputData as string, Certificate as X509MBS, SignKey as PKeyMBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts S/Mime PKCS# 7 encrypted data.
Notes:

Raises nil object exception if certificate or key is nil.
Returns empty text on error.

77.24.23 SMimePKCS7Encrypt(InputData as string, Certificate as X509MBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts data with S/Mime PKCS# 7.
Notes:

Raises nil object exception if certificate is nil.
Returns empty text on error.

77.24.24 SMimePKCS7Sign(InputData as string, Certificate as X509MBS, SignKey as PKeyMBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signs data with S/Mime PKCS# 7.
Notes:

Raises nil object exception if certificate or key is nil.
Returns empty text on error.

77.24.25 SMimePKCS7Verify(InputData as string, Certificate as X509MBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies S/Mime PKCS# 7 signature.
Notes:

Raises nil object exception if certificate is nil.
Returns empty text on error.

77.24.26 VerifyData(data as string, Signature as string, Key as string, Password as string = "") as boolean

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a signature with given data and public key.
Notes:

Key can be the public or private key, but of course normally you use the public key.
Data is the raw data to compare agains. A SHA1 hash is performed and verified with the signature.
Signature must be the string returned like from SignData function. If you used EncodeHex on it, you now need to do DecodeHex.
Returns true if signature is valid and false on any other error.
Optional you can pass a password to read password protected keys.
See also:

- 77.24.27 VerifyData(data as string, Signature as string, Key as string, Password as string = "", Algorithm as Integer) as boolean 14835

77.24.27 VerifyData(data as string, Signature as string, Key as string, Password as string = "", Algorithm as Integer) as boolean

MBS Encryption Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a signature with given data and public key.
Example:

```
dim test_pem as string = ReadFile("test.pem")
dim test_pub as string = ReadFile("test.pub")
dim data as string = ReadFile("Create Keys.rtf") // some data file
dim signature as string

// create signature

Signature = OpenSSLMBS.SignData(data, test_pem, OpenSSLMBS.kAlgorithmSHA512)
```

```
if Signature = "" then
// failed
break
end if

// verify with private key
dim r1 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pem, OpenSSLMBS.kAlgorithmSHA512)

// verify with public key
dim r2 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pub, OpenSSLMBS.kAlgorithmSHA512)
```

Notes:

Key can be the public or private key, but of course normally you use the public key.
Data is the raw data to compare agains. A hash is performed with given algorithm and verified with the signature.
Signature must be the string returned like from SignData function. If you used EncodeHex on it, you now need to do DecodeHex.
Returns true if signature is valid and false on any other error.
Optional you can pass a password to read password protected keys.
See also:

- 77.24.26 VerifyData(data as string, Signature as string, Key as string, Password as string = "") as boolean 14835

77.24.28 Constants

77.24.29 kAlgorithmSHA1 = 1

MBS Encryption Plugin, Plugin Version: 16.0.

Function: One of the hash algorithms.
Notes: SHA 1.

77.24.30 kAlgorithmSHA224 = 2

MBS Encryption Plugin, Plugin Version: 16.0.

Function: One of the hash algorithms.
Notes: SHA 2 with 224bit.

77.24.31 kAlgorithmSHA256 = 3

MBS Encryption Plugin, Plugin Version: 16.0.

Function: One of the hash algorithms.
Notes: SHA 2 with 256bit.

77.24.32 kAlgorithmSHA384 = 4

MBS Encryption Plugin, Plugin Version: 16.0.

Function: One of the hash algorithms.
Notes: SHA 2 with 384bit.

77.24.33 kAlgorithmSHA512 = 5

MBS Encryption Plugin, Plugin Version: 16.0.

Function: One of the hash algorithms.
Notes: SHA 2 with 512bit.

77.24.34 kPaddingNone = 3

MBS Encryption Plugin, Plugin Version: 16.2.

Function: One of the padding options for RSA encryption.
Notes: Raw RSA encryption. This mode should only be used to implement cryptographically sound padding modes in the application code. Encrypting user data directly with RSA is insecure.

77.24.35 kPaddingPKCS1 = 1

MBS Encryption Plugin, Plugin Version: 16.2.

Function: One of the padding options for RSA encryption.
Notes: PKCS # 1 v1.5 padding. This currently is the most widely used mode.

77.24.36 kPaddingPKCS1OAEP = 4

MBS Encryption Plugin, Plugin Version: 16.2.

Function: One of the padding options for RSA encryption.
Notes: EME-OAEP as defined in PKCS # 1 v2.0 with SHA-1, MGF1 and an empty encoding parameter. This mode is recommended for all new applications.

77.24.37 kPaddingSSLv23 = 2

MBS Encryption Plugin, Plugin Version: 16.2.

Function: One of the padding options for RSA encryption.
Notes: PKCS # 1 v1.5 padding with an SSL-specific modification that denotes that the server is SSL3 capable.

77.24.38 kPaddingX931 = 5

MBS Encryption Plugin, Plugin Version: 16.2.

Function: One of the padding options for RSA encryption.
Notes: X931 padding.

77.25 module PassSignerMBS

77.25.1 module PassSignerMBS

MBS MacExtras Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The module to sign iOS passes from a Mac app.

77.25.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr7

77.25.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr7

77.25.4 Methods

77.25.5 signPass(Pass as folderitem, CertSuffix as String, Output as folderitem, Zip as boolean = true) as boolean

MBS MacExtras Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Sign a pass.
Notes:

Pass: Input folder with pass files.
CertSuffix: The certificate suffix.
Output: Where to store the new pass.
Zip: If true, we do the last step to zip the pass.
Returns true if signed or false if failed.

77.25.6 verifyPassSignature(pass as folderitem) as Boolean

MBS MacExtras Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Verify a pass.
Notes:

Pass must point to the pass file (a zip archive).
Returns true if verified and false if failed.

77.26 class PKeyMBS

77.26.1 class PKeyMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a public/private key.
Notes:

Currently this class only implements a part of the PKey functionality of OpenSSL. If needed, we could add more.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.26.7 Videos

- Presentation from London conference about MBS Plugins.

77.26.8 Methods

77.26.9 Constructor

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.
Notes:

Creates a new empty key.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

77.26.10 Copy as PKeyMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the key.

77.26.11 Open(Data as MemoryBlock) as PKeyMBS

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a private or public key.
Notes: Returns key or nil in case of error.
See also:

- 77.26.12 Open(Data as String) as PKeyMBS 14842

77.26.12 Open(Data as String) as PKeyMBS

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a private or public key.
Notes: Returns key or nil in case of error.
See also:

- 77.26.11 Open(Data as MemoryBlock) as PKeyMBS 14841

77.26.13 PrivateKeyData as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The key as binary representation.
Notes: You can write this to a pem file.

77.26.14 PublicKeyData as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The key as binary representation.
Notes: You can write this to a pem file.

77.26.15 Properties

77.26.16 Bits as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bits of key.
Notes: (Read only property)

77.26.17 DescriptionParams as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description of the parameters.
Notes:

This is only for human to read.
(Read only property)

77.26.18 DescriptionPrivateKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description of private/public key.
Notes:

If no private key is there, you only get the public key part here.
This is only for human to read.
(Read only property)

77.26.19 DescriptionPublicKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description of public key.
Notes:

This is only for human to read.
(Read only property)

77.26.20 Handle as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the key.
Notes: (Read and Write property)

77.26.21 ID as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ID (type) of the key.
Notes: (Read only property)

77.26.22 PrivateKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the private key.
Notes:

This is the binary representation.
(Read only property)

77.26.23 PublicKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the public key.
Notes:

This is the binary representation.
(Read only property)

77.26.24 Size as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the key in bytes.
Notes: (Read only property)

77.26.25 Type as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of key.
Notes: (Read only property)

77.26.26 TypeString as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of key as string.
Notes:

EC, DSA, RSA or DH.
(Read only property)

77.27 class RC4MBS

77.27.1 class RC4MBS

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: An implementation of the RC4 algorithem.
Example:

```
dim r as RC4MBS

// Encrypt:
r = new RC4MBS("Key")

dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.Crypt(OriginalData)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC4MBS("Key")

dim UnencryptedData as string = r.Crypt(EncryptedData)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

Notes:

The source in RB is in the examples folder (see Crypto 1.5 via RB). This implementation inside the plugin is only to make the calculation faster.
In case RS will improve RB more to produce faster code, the plugin may be no longer needed.

77.27.2 Methods

77.27.3 Constructor(key as MemoryBlock)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the class with the given key.
See also:

- 77.27.4 Constructor(key as string)

77.27.4 Constructor(key as string)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the class with the given key.
Example:

```
dim r as new RC4MBS("MyKey")
dim s as string = r.Crypt("MyData")

MsgBox EncodeHex(s)
```

Notes: Please make sure the key has right text encoding to avoid unexpected results.
See also:

- 77.27.3 Constructor(key as MemoryBlock) 14845

77.27.5 Crypt(data as Memoryblock) as Memoryblock

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes or decryptes the given Memoryblock.
See also:

- 77.27.6 Crypt(data as string) as string 14846

77.27.6 Crypt(data as string) as string

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encryptes or decryptes the given string.
Example:

```
dim r as RC4MBS

// Encrypt:
r = new RC4MBS("Key")

dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.Crypt(OriginalData)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC4MBS("Key")

dim UnencryptedData as string = r.Crypt(EncryptedData)
```

UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData

Notes:

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 77.27.5 Crypt(data as Memoryblock) as Memoryblock 14846

77.28 class RC5MBS

77.28.1 class RC5MBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for RC5 encryption.
Example:

```
dim r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

dim iv as MemoryBlock
dim num as Integer
dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC5MBS("Key")

iv = nil
num = 0
dim UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

Notes:

Do use to read existing RC5 encrypted things.
New projects may better use a better encryption.

77.28.2 Methods

77.28.3 Constructor(key as MemoryBlock, rounds as Integer = 16)

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
dim r as new RC5MBS("MyKey")
dim s as string = r.Encrypt("MyData")
```

MsgBox EncodeHex(s)

See also:

- 77.28.4 Constructor(key as string, rounds as Integer = 16) 14849

77.28.4 Constructor(key as string, rounds as Integer = 16)

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
dim r as new RC5MBS("MyKey")
dim s as string = r.Encrypt("MyData")

MsgBox EncodeHex(s)
```

Notes: Please make sure the key has right text encoding to avoid unexpected results.
See also:

- 77.28.3 Constructor(key as MemoryBlock, rounds as Integer = 16) 14848

77.28.5 decrypt(data as Memoryblock) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes: Low level variant without any block mode.
See also:

- 77.28.6 decrypt(data as string) as string 14849

77.28.6 decrypt(data as string) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
Low level variant without any block mode.
See also:

• 77.28.5 decrypt(data as Memoryblock) as Memoryblock 14849

77.28.7 decryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes: With Cipher Block Chaining mode.
See also:

• 77.28.8 decryptCBC(data as string, iv as memoryblock = nil) as string 14850

77.28.8 decryptCBC(data as string, iv as memoryblock = nil) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
With Cipher Block Chaining mode.
See also:

• 77.28.7 decryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock 14850

77.28.9 decryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Example:

```
dim r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

dim iv as MemoryBlock
dim num as Integer
dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
```

```
r = new RC5MBS("Key")

iv = nil
num = 0
dim UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

Notes: with Cipher Feedback mode.
See also:

- 77.28.10 decryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string 14851

77.28.10 decryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
with Cipher Feedback mode.
See also:

- 77.28.9 decryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock 14850

77.28.11 encrypt(data as Memoryblock) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: Low level variant without any block mode.
See also:

- 77.28.12 encrypt(data as string) as string 14851

77.28.12 encrypt(data as string) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
Low level variant without any block mode.
See also:

- 77.28.11 encrypt(data as Memoryblock) as Memoryblock 14851

77.28.13 encryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: With Cipher Block Chaining mode.
See also:

- 77.28.14 encryptCBC(data as string, iv as memoryblock = nil) as string 14852

77.28.14 encryptCBC(data as string, iv as memoryblock = nil) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
With Cipher Block Chaining mode.
See also:

- 77.28.13 encryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock 14852

77.28.15 encryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Example:

```
dim r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

dim iv as MemoryBlock
dim num as Integer
dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
```

```
dim EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC5MBS("Key")

iv = nil
num = 0
dim UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

Notes: with Cipher Feedback mode.
See also:

- 77.28.16 encryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string 14853

77.28.16 encryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
with Cipher Feedback mode.
See also:

- 77.28.15 encryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock 14852

77.28.17 encryptOFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes: with Output Feedback mode.
See also:

- 77.28.18 encryptOFB64(data as string, iv as memoryblock, byref num as Integer) as string 14854

77.28.18 encryptOFB64(data as string, iv as memoryblock, byref num as Integer) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encrypts some data.
Notes:

Please make sure the key has right text encoding to avoid unexpected results.
with Output Feedback mode.
See also:

- 77.28.17 encryptOFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock 14853

77.29 class SHA1MBS

77.29.1 class SHA1MBS

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: An implementation of the SHA1 algorithem to calculate hash values.
Example:

```
dim f as FolderItem
dim b as BinaryStream
dim s as string
dim m as new SHA1MBS

// process file part by part (big files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
s=b.Read(1000000)
m.Add s

wend

MsgBox EncodingToHexMBS(m.Result)+" using plugin with SHA1MBS"
```

Notes:

The source in RB is in the examples folder (see Crypto 1.5 via RB). This implementation inside the plugin is only to make the calculation faster.
In case RS will improve RB more to produce faster code, the plugin may be no longer needed.

77.29.6 Methods

77.29.7 Add(data as string)

MBS Encryption Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds more input bytes to the current hash.
Example:

```
dim s as new SHA1MBS
s.Reset
s.Add "Hello"
s.Add "World"
dim e as string=s.Result
```

Notes: Lasterror is set.

77.29.8 Hash(data as string) as string

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hash string for the given key.
Example:

MsgBox EncodeHex(SHA1MBS.Hash("Hello World"))

Notes:

The string returned is 20 bytes long (if successfull) and has the 5 integer properties stored inside (in big endian format) which make up the key.
Does change the current hash value stored in the class itself.

77.29.9 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates hash from whole file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

77.29.10 HashText(data as string) as string

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hash string for the given key.
Example:

MsgBox EncodeHex(SHA1MBS.Hash("Hello World"))

Notes:

The string returned is 20 bytes long (if successfull) and has the 5 integer properties stored inside (in big endian format) which make up the key.
Does change the current hash value stored in the class itself.
Returns the digest as text string with hexadecimal digits.

77.29.11 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the a specific HASH based on the key and the data string.
Example:

```
Function HMAC(key as string, data as string) As string
// Implementation by Matthijs van Duin
# pragma DisableBackgroundTasks

dim ikey, okey, k as string
dim temp, i as Integer

if (lenB(key) >64) then
k = Hash(key)
else
k = key
end if

for i = 1 to 64
temp = ascB(midB(k, i, 1))
ikey = ikey + chrB(BitwiseXor(temp, & h36))
okey = okey + chrB(BitwiseXor(temp, & h5C))
next

return Hash(okey + Hash(ikey + data))
End Function

// test code:

// de7c9b85b8b78aa6bc8a7a36f70a90701c9db4d9
dim s as string = SHA1MBS.HMAC("key", "The quick brown fox jumps over the lazy dog")
MsgBox EncodeHex(s)

// fbdb1d1b18aa6c08324b7d64b71fb76370690e1d
s = SHA1MBS.HMAC("", "")
MsgBox EncodeHex(s)
```

Notes: Above is the source code of this function.

77.29.12 Reset

MBS Encryption Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the current hash value.

77.29.13 Result as string

MBS Encryption Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current hash value.
Notes:

Returns "" on any error.
Lasterror is set.

77.29.14 ResultText as string

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current hash value.
Notes:

Returns the digest as text string with hexadecimal digits.
Returns "" on any error.
Lasterror is set.

77.30 class SHA256MBS

77.30.1 class SHA256MBS

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to calculate SHA-256 hashes.
Example:

```
dim s3 as string = SHA256MBS.Hash("")
dim e3 as string = EncodingToHexMBS(s3)
dim e4 as string = SHA256MBS.HashText("")

if e3 <>"e3b0c44298fc1c149afbf4c8996fb92427ae41e4649b934ca495991b7852b855" then
break
elseif e3 <>e4 then
break
else
MsgBox "OK"
end if
```

77.30.4 Methods

77.30.5 Add(data as string)

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to the hash calculation.
Example:

```
dim s as new SHA256MBS

s.Add "Franz jagt im komplett"
s.Add " verwahrlosten Taxi quer"
s.Add " durch Bayern"

dim r as string = s.ResultText
if r = "d32b568cd1b96d459e7291ebf4b25d007f275c9f13149beeb782fac0716613f8" then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Using this method you can process huge amounts of data by passing them in small portions.

77.30.6 Hash(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
dim s2 as string = SHA256MBS.Hash("Frank jagt im komplett verwahrlosten Taxi quer durch Bayern")
dim e2 as string = EncodingToHexMBS(s2)

if e2 = "78206a866dbb2bf017d8e34274aed01a8ce405b69d45db30bafa00f5eeed7d5e" then
Msgbox "OK"
else
MsgBox "Failed"
```

```
end if
```

Notes:

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

77.30.7 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates hash from whole file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

77.30.8 HashText(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
dim s1 as string = SHA256MBS.HashText("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

if s1 = "d32b568cd1b96d459e7291ebf4b25d007f275c9f13149beeb782fac0716613f8" then
Msgbox "OK"
else
MsgBox "Failed"
end if
```

Notes: Returns the digest as text string with hexadecimal digits.

77.30.9 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the a specific HASH based on the key and the data string.

77.30.10 Reset

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the hash class so you can reuse it for the SHA-256 hash.

77.30.11 Result as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash.
Notes:

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

77.30.12 ResultText as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash.
Notes: Returns the digest as text string with hexadecimal digits.

77.31 class SHA3MBS

77.31.1 class SHA3MBS

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to calculate SHA-3 hashes.
Example:

```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim s as new SHA3MBS(1088, 512)

s.Add t
dim h as string = s.ResultText(32)

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h
```

77.31.4 Methods

77.31.5 Add(data as memoryblock)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to the hash calculation.
Notes: Using this method you can process huge amounts of data by passing them in small portions.
See also:

- 77.31.6 Add(data as string)

77.31.6 Add(data as string)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to the hash calculation.
Notes: Using this method you can process huge amounts of data by passing them in small portions.
See also:

- 77.31.5 Add(data as memoryblock) 14864

77.31.7 Constructor(Rate as UInt32, capacity as UInt32)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
dim s as new SHA3MBS(1088, 512) // 256 bit

s.Add "Compute Me"
s.Add "Me too"

dim h as string = s.ResultText(256/8)

Break
```

Notes: See example project or SHA-3 documentation for useful values for Rate and Capacity.

77.31.8 Hash(data as string, Rate as UInt32, capacity as UInt32, outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim h as string = SHA3MBS.Hash(t, 1088, 512, 32)

// encode as text to display
h = EncodeHex(h)
// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h
```

Notes:

Returns the digest as text string with hexadecimal digits.
Or empty string in case of any error.
Before you show it to the user, pass it through EncodingToHexMBS.

77.31.9 HashText(data as string, Rate as UInt32, capacity as UInt32, outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim h as string = SHA3MBS.HashText(t, 1088, 512, 32)

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h
```

Notes:

Returns the digest as text string with hexadecimal digits.
Or empty string in case of any error.

77.31.10 Reset(Rate as UInt32, capacity as UInt32)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the hash class so you can reuse it for another SHA-3 hash.

77.31.11 Result(outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash in the requested length.
Notes:

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

77.31.12 ResultText(outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash in the requested length.
Example:

```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim s as new SHA3MBS(1088, 512)

s.Add t
dim h as string = s.ResultText(32)

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h
```

Notes: Returns the digest as text string with hexadecimal digits.

77.32 class SHA512MBS

77.32.1 class SHA512MBS

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to calculate SHA-512 hashes.
Example:

```
dim s3 as string = SHA512MBS.Hash("")
dim e3 as string = EncodingToHexMBS(s3)

if e3 = "CF83E1357EEFB8BDF1542850D66D8007D620E4050B5715DC83F4A921D36CE9CE47D0D13C5D85F2B0FF8318D2
then
Msgbox "OK"
else
MsgBox "Failed"
end if
```

77.32.4 Methods

77.32.5 Add(data as string)

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to the hash calculation.
Example:

```
dim s as new SHA512MBS

s.Add "Franz jagt im komplett"
s.Add " verwahrlosten Taxi quer"
s.Add " durch Bayern"

dim r as string = s.ResultText
if r = "AF9ED2DE700433B803240A552B41B5A472A6EF3FE1431A722B2063C75E9F07451F67A28E37D09CDE769424C96A
then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Using this method you can process huge amounts of data by passing them in small portions.

77.32.6 Hash(data as string) as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
dim s2 as string = SHA512MBS.Hash("Frank jagt im komplett verwahrlosten Taxi quer durch Bayern")
dim e2 as string = EncodingToHexMBS(s2)

if e2 = "90B30EF9902AE4C4C691D2D78C2F8FA0AA785AFBC5545286B310F68E91DD2299C84A2484F0419FC5EAA7DE5
then
Msgbox "OK"
else
```

```
MsgBox "Failed"
end if
```

Notes:

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

77.32.7 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates hash from whole file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

77.32.8 HashText(data as string) as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to quickly create a hash for a given string.
Example:

```
dim s1 as string = SHA512MBS.HashText("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

if s1 = "AF9ED2DE700433B803240A552B41B5A472A6EF3FE1431A722B2063C75E9F07451F67A28E37D09CDE769424C96A
then
Msgbox "OK"
else
MsgBox "Failed"
end if
```

Notes: Returns the digest as text string with hexadecimal digits.

77.32.9 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the a specific HASH based on the key and the data string.

77.32.10 Reset

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the hash class so you can reuse it for the SHA-256 hash.

77.32.11 Result as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash.
Notes:

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

77.32.12 ResultText as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The final hash.
Notes: Returns the digest as text string with hexadecimal digits.

77.33 module TwofishMBS

77.33.1 module TwofishMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for Twofish encryption.
Notes: You can use this class for compatibility to PHP.

77.33.8 Methods

77.33.9 DecryptCBC(Key as MemoryBlock, InputData as MemoryBlock, IV as MemoryBlock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrypts with CBC mode and memoryblocks.
Example:

```
// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"
dim IV as MemoryBlock = "1234567812345678" // 16 byte IV

// some UTF-8 input
dim InputText as string = "Just a test. äöü"
