Function: Gets the last acceleration value received from the PhidgetAccelerometer for a particular axis.
Notes: Lasterror is set.

135.1.5 getAccelerationChangeTrigger(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of change that should exist between the last reported value and the current value before an OnAccelerationChange event is fired.
Notes: Lasterror is set.

135.1.6 getAccelerationMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum accleration supported by an axis.
Notes: The Lasterror property is set.

135.1.7 getAccelerationMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum acceleraiton supported by an axis.
Notes: The Lasterror property is set.

135.1.8 getAxisCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of acceleration axes supported by this accelerometer.
Notes: The Lasterror property is set.

135.1.9 setAccelerationChangeTrigger(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specifies the amount of change that should exist between the last reported value and the current value before an AccelerationChange event is fired.
Notes:

If the AccelerationChangeTrigger is set to 0, an event will be triggered for every measurement of acceleration taken.

Lasterror is set.

135.1.10 Events

135.1.11 AccelerationChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called for each change on the Acceleration.
Notes:

Index: Index of the Accelerometer posting event
Value: Value of the Accelerometer

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.2 class PhidgetAdvancedServoMBS

135.2.1 class PhidgetAdvancedServoMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for a phidget advanced servo device.
Notes:

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the PhidgetMBS class.

135.2.2 Methods

135.2.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: On success the handle value is not zero.

135.2.4 getAcceleration(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the acceleration for the given index.
Notes: The Lasterror property is set.

135.2.5 getAccelerationMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum acceleration supported by a motor.
Notes: The Lasterror property is set.

135.2.6 getAccelerationMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum acceleration supported by a motor.
Notes: The Lasterror property is set.

135.2.7 getCurrent(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current value.
Notes: The Lasterror property is set.

135.2.8 getEngaged(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the engaged state of a motor.
Notes:

This is whether the motor is powered or not.
The Lasterror property is set.

135.2.9 getMotorCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of motors supported by this controller.
Notes: The Lasterror property is set.

135.2.10 getPosition(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current position of an encoder.
Notes: The Lasterror property is set.

135.2.11 getPositionMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum position that a motor can go to.
Notes: The Lasterror property is set.

135.2.12 getPositionMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum position that a motor can go to.
Notes: The Lasterror property is set.

135.2.13 getServoType(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the servo type of a motor.
Notes:

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

135.2.14 getSpeedRampingOn(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the speed ramping state for a motor.
Notes:

This is whether or not velocity and acceleration are used.
The Lasterror property is set.

135.2.15 getStopped(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the stopped state of a motor.
Notes:

This is true when the motor is not moving and there are no outstanding commands.
The Lasterror property is set.

135.2.16 getVelocity(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current velocity.
Notes: The Lasterror property is set.

135.2.17 getVelocityLimit(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last set velocity limit for a motor.
Notes: The Lasterror property is set.

135.2.18 getVelocityMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum velocity that can be set for a motor.
Notes: The Lasterror property is set.

135.2.19 getVelocityMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum velocity that can be set for a motor.
Notes: The Lasterror property is set.

135.2.20 setAcceleration(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the acceleration.
Notes: The Lasterror property is set.

135.2.21 setEngaged(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the engaged state of a motor. This is whether the motor is powered or not.
Notes: The Lasterror property is set.

135.2.22 setPosition(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the current position of a motor.
Notes: The Lasterror property is set.

135.2.23 setPositionMax(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the maximum position that a motor can go to.
Notes: The Lasterror property is set.

135.2.24 setPositionMin(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the minimum position that a motor can go to.
Notes: The Lasterror property is set.

135.2.25 setServoParameters(index as Integer, min_us as Double, max_us as Double, degrees as Double, velocity_max as Double)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the servo parameters of a motor.
Notes:

The Lasterror property is set.

index	The motor index.
min_us	The minimum supported PCM in microseconds.
max_us	The maximum supported PCM in microseconds.
degrees	The degrees of rotation defined by the given PCM range.
velocity_max	The maximum velocity in degrees/second.

135.2.26 setServoType(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the servo type of a motor.
Notes:

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

135.2.27 setSpeedRampingOn(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the speed ramping state for a motor.
Notes:

This is whether or not velocity and acceleration are used.
The Lasterror property is set.

135.2.28 setVelocityLimit(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the velocity limit for a motor.
Notes: The Lasterror property is set.

135.2.29 Events

135.2.30 CurrentChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The current value changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.2.31 PositionChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The position changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.2.32 VelocityChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The velocity changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems

described in the ThreadMBS class documentation.

135.2.33 Constants

135.2.34 PHIDGET_SERVO_DEFAULT = 1

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.35 PHIDGET_SERVO_FIRGELLI_L12_100_100_06_R = 17

MBS USB Plugin, Plugin Version: 12.1.

Function: One of the servo type constants.

135.2.36 PHIDGET_SERVO_FIRGELLI_L12_100_50_06_R = 16

MBS USB Plugin, Plugin Version: 12.1.

Function: One of the servo type constants.

135.2.37 PHIDGET_SERVO_FIRGELLI_L12_30_50_06_R = 13

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.38 PHIDGET_SERVO_FIRGELLI_L12_50_100_06_R = 14

MBS USB Plugin, Plugin Version: 12.1.

Function: One of the servo type constants.

135.2.39 PHIDGET_SERVO_FIRGELLI_L12_50_210_06_R = 15

MBS USB Plugin, Plugin Version: 12.1.

Function: One of the servo type constants.

135.2.40 PHIDGET_SERVO_HITEC_805BB = 5

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.41 PHIDGET_SERVO_HITEC_815BB = 12

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.42 PHIDGET_SERVO_HITEC_HS322HD = 3

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.43 PHIDGET_SERVO_HITEC_HS422 = 6

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.44 PHIDGET_SERVO_HITEC_HS485HB = 10

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.45 PHIDGET_SERVO_HITEC_HS5245MG = 4

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.46 PHIDGET_SERVO_HITEC_HS645MG = 11

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.47 PHIDGET_SERVO_HITEC_HS785HB = 9

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.48 PHIDGET_SERVO_HITEC_HSR1425CR = 8

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.49 PHIDGET_SERVO_RAW_us_MODE = 2

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.50 PHIDGET_SERVO_SPRINGRC_SM_S2313M = 18

MBS USB Plugin, Plugin Version: 12.1.

Function: One of the servo type constants.

135.2.51 PHIDGET_SERVO_SPRINGRC_SM_S3317M = 19

MBS USB Plugin, Plugin Version: 13.4.

Function: One of the servo type constants.

135.2.52 PHIDGET_SERVO_SPRINGRC_SM_S3317SR = 20

MBS USB Plugin, Plugin Version: 13.4.

Function: One of the servo type constants.

135.2.53 PHIDGET_SERVO_SPRINGRC_SM_S4303R = 21

MBS USB Plugin, Plugin Version: 20.3.

Function: One of the servo type constants.

135.2.54 PHIDGET_SERVO_SPRINGRC_SM_S4315M = 22

MBS USB Plugin, Plugin Version: 20.3.

Function: One of the servo type constants.

135.2.55 PHIDGET_SERVO_SPRINGRC_SM_S4315R = 23

MBS USB Plugin, Plugin Version: 20.3.

Function: One of the servo type constants.

135.2.56 PHIDGET_SERVO_SPRINGRC_SM_S4505B = 24

MBS USB Plugin, Plugin Version: 20.3.

Function: One of the servo type constants.

135.2.57 PHIDGET_SERVO_TOWERPRO_MG90 = 7

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

135.2.58 PHIDGET_SERVO_USER_DEFINED = 25

MBS USB Plugin, Plugin Version: 20.3.

Function: One of the servo type constants.

135.3 class PhidgetAnalogMBS

135.3.1 class PhidgetAnalogMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Class specific to the Phidget Analog.
Notes:

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the PhidgetMBS class.

135.3.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.3.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.3.4 Methods

135.3.5 Constructor

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new analog device instance.
Notes: Lasterror is set.

135.3.6 getEnabled(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the enabled state for an output.
Notes: Lasterror is set.

135.3.7 getOutputCount as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of outputs supported by this phidget analog.
Notes: Lasterror is set.

135.3.8 getVoltage(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the currently set voltage for an output, in V.
Notes: Lasterror is set.

135.3.9 getVoltageMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum settable output voltage, in V.
Notes: Lasterror is set.

135.3.10 getVoltageMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum settable output voltage, in V.
Notes: Lasterror is set.

135.3.11 setEnabled(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the enabled state for an output.
Notes: Lasterror is set.

135.3.12 setVoltage(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the voltage of an output, in V.
Notes: Lasterror is set.

135.4 class PhidgetBridgeMBS

135.4.1 class PhidgetBridgeMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class specific to the Phidget Bridge.
Notes:

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the PhidgetMBS class.

135.4.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.4.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.4.4 Methods

135.4.5 Constructor

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new instance.
Notes: Lasterror is set.

135.4.6 getBridgeMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum value supported by a bridge input, in mV/V. This is affected by Gain.
Notes: Lasterror is set.

135.4.7 getBridgeMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum value supported by a bridge input, in mV/V. This is affected by Gain.
Notes: Lasterror is set.

135.4.8 getBridgeValue(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current value of a bridge input, in mV/V.
Notes: Lasterror is set.

135.4.9 getDataRate as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the the data rate for the Phidget Bridge, in milliseconds.
Notes: Lasterror is set.

135.4.10 getDataRateMax as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the the maximum data rate for the Phidget Bridge, in milliseconds.
Notes: Lasterror is set.

135.4.11 getDataRateMin as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the the minimum data rate for the Phidget Bridge, in milliseconds.
Notes: Lasterror is set.

135.4.12 getEnabled(index as Integer) as Boolean

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the enabled state for an input.
Notes: Lasterror is set.

135.4.13 getGain(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the the Gain for an input.
Notes: Lasterror is set.

135.4.14 getInputCount as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of inputs supported by this phidget bridge.
Notes: Lasterror is set.

135.4.15 setDataRate(milliseconds as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the the data rate for the Phidget Bridge, in milliseconds.
Notes: Lasterror is set.

135.4.16 setEnabled(index as Integer, value as Boolean)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the enabled state for an input.
Notes: Lasterror is set.

135.4.17 setGain(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the the Gain for an input.
Notes: Lasterror is set.

135.4.18 Events

135.4.19 BridgeDataReceived(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The bridge data event handler.
Notes: This is called at a set rate as defined by data rate.

135.4.20 Constants

135.4.21 PHIDGET_BRIDGE_GAIN_1 = 1

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Gain of 1.

135.4.22 PHIDGET_BRIDGE_GAIN_128 = 6

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Gain of 128.

135.4.23 PHIDGET_BRIDGE_GAIN_16 = 3

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Gain of 16.

135.4.24 PHIDGET_BRIDGE_GAIN_32 = 4

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Gain of 32.

135.4.25 PHIDGET_BRIDGE_GAIN_64 = 5

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Gain of 64.

135.4.26 PHIDGET_BRIDGE_GAIN_8 = 2

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Gain of 8.

135.4.27 PHIDGET_BRIDGE_GAIN_UNKNOWN = 7

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Unknown Gain.

135.5 class PhidgetDictionaryMBS

135.5.1 class PhidgetDictionaryMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Phidget Dictionary is a service provided by the Phidget Webservice.
Notes:

The Webservice maintains a centralized dictionary of key-value pairs that can be accessed and changed from any number of clients through the CPhidgetDictionary interface available in phidget21.

Note that the Webservice uses this dictionary to control access to Phidgets through the openRemote and openRemoteIP interfaces, and as such, you should never add or modify a key that starts with /PSK/ or /PCK/, unless you want to explicitly modify Phidget specific data – and this is highly discouraged, as it's very easy to break things. Listening to these keys is fine if so desired.

The intended use for the dictionary is as a central repository for communication and persistent storage of data between several client applications. As an example - a higher level interface exposed by one application – which controls the Phidgets, for others to access – rather then every client talking directly to the Phidgets themselves.

The dictionary makes use of extended regular expressions for key matching. See the end of this document for the rules of regular expressions.

See the Phidget manuals for help on regular expressions.

135.5.2 Methods

135.5.3 addKey(key as string, value as string, persistent as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a new key to the Dictionary, or modifies the value of an existing key.
Notes:

The key can only contain numbers, letters, '/', '.', '-', '_', and must begin with a letter, '_' or '/'.
The value can contain any value.
The persistent value controls whether a key will stay in the dictionary after the client that created it disconnects. If persistent == 0, the key is removed when the connection closes. Otherwise the key remains in the dictionary until it is explicitly removed.

Lasterror is set.

135.5.4 Close

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the file handles for this device.
Notes:

You should always call this when finished with a Dictionary.
Lasterror is set.

135.5.5 Constructor

MBS USB Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A dummy constructor doing nothing.
See also:

- 135.5.6 Constructor(pattern as string) 21211

135.5.6 Constructor(pattern as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

The Lasterror property is set.
Pattern is a regular expression that matches the keys you want to listen for in the keychange event.
See also:

- 135.5.5 Constructor 21211

135.5.7 GetDeviceStatus as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an integer indicating the status of the device.
Notes:

Returns:
PHIDGET_ATTACHED 0x1
PHIDGET_NOTATTACHED 0x0

Lasterror is set.

135.5.8 getServerAddress(byref port as Integer) as string

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the address and port.
Notes: The Lasterror property is set.

135.5.9 getServerID as string

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the server ID.
Notes: The Lasterror property is set.

135.5.10 GetServerStatus as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an integer indicating the connection status of a Webservice.
Notes:

Returns one of the following values:
1 CONNECTED
0 NOTCONNECTED

Lasterror is set.

135.5.11 openRemote(serverID as string, password as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.
Notes: The Lasterror property is set.

135.5.12 openRemoteIP(addr as string, port as Integer, password as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a connection to a remote Phidget Dictionary.
Notes:

OpenRemoteIP will block until it connects to the server, which means that when it returns with EPHIDGET_OK, this means that the connection is active. If the server is unavailable, this will return an error code.

If the connection to a webservice is disrupted while in use, an error event will be thrown, and it is recommended that an error event listener be registered for this reason.

Lasterror is set.

135.5.13 removeKey(pattern as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes a key, or set of keys, from the Dictionary.
Notes:

The key name is a regular expressions pattern, and so care must be taken to only have it match the specific keys you want to remove.
Lasterror is set.

135.5.14 Properties

135.5.15 Handle as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal used CPhidgetDictionaryHandle.
Notes: (Read and Write property)

135.5.16 Lasterror as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

135.5.17 Events

135.5.18 Error(errorCode as Integer, errorDescription as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This error event is used for reporting asynchronous errors – mostly related to opening remote Phidgets.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.5.19 KeyChanged(key as string, value as string, reason as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: These event will be called on key add, remove, and change.
Notes:

The Lasterror property is set.
It will also fire once to give an initial key value as soon as it is registered, if the key already exists.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

Reason values:

PHIDGET_DICTIONARY_VALUE_CHANGED	1
PHIDGET_DICTIONARY_ENTRY_ADDED	2
PHIDGET_DICTIONARY_ENTRY_REMOVING	3
PHIDGET_DICTIONARY_CURRENT_VALUE	4

135.5.20 ServerConnect

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when a connection to the sever has been made.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.5.21 ServerDisconnect

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when a connection to the server has been lost.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.6 class PhidgetEncoderMBS

135.6.1 class PhidgetEncoderMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for the phidget encoder device.
Notes:

The PhidgetEncoder is a component that provides a high-level programmer interface to control a PhidgetEncoder device connected through a USB port.
With this component, the programmer can:

- Detect changes in position of incremental and absolute encoders.
- Easily track the changes with respect to time.

Subclass of the PhidgetMBS class.

135.6.2 Methods

135.6.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

135.6.4 getEnabled(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the enabled state of an encoder. This is whether the encoder is powered or not.
Notes: The Lasterror property is set.

135.6.5 getEncoderCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of encoder inputs supported by this board.
Notes: The Lasterror property is set.

135.6.6 getIndexPosition(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries index position.
Notes:

Gets the position of the last index pulse, as referenced to getPosition.
This will return EPHIDGET_UNKNOWN if there hasn't been an index event, or if the encoder doesn't support index.

The Lasterror property is set.

135.6.7 getInputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of digital inputs supported by this board.
Notes: The Lasterror property is set.

135.6.8 getInputState(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of a digital input.
Notes: The Lasterror property is set.

135.6.9 getPosition(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current position of an encoder.
Notes: The Lasterror property is set.

135.6.10 setEnabled(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the enabled state of an encoder. This is whether the encoder is powered or not.
Notes: The Lasterror property is set.

135.6.11 setPosition(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the current position of an encoder.
Notes: The Lasterror property is set.

135.6.12 Events

135.6.13 InputChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event for a change in the input.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.6.14 PositionChanged(index as Integer, position as Integer, time as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called for every position change.
Notes:

Index: Index of the Encoder firing the Event
Position: Position of the Encoder
Time: Time of change

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.7 class PhidgetFrequencyCounterMBS

135.7.1 class PhidgetFrequencyCounterMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Class specific to the Phidget Frequency Counter.
Notes:

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the PhidgetMBS class.

135.7.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.7.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.7.4 Methods

135.7.5 Constructor

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new instance.
Notes: Lasterror is set.

135.7.6 getEnabled(index as Integer) as Boolean

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the enabled state for an input.
Notes: Lasterror is set.

135.7.7 getFilter(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the filter type for an input.
Notes: Lasterror is set.

135.7.8 getFrequency(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the measured frequency of an input, in Hz.
Notes: Lasterror is set.

135.7.9 getFrequencyInputCount as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of inputs supported by this phidget frequency counter.
Notes: Lasterror is set.

135.7.10 getTimeout(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the timeout value for an input, in microseconds. This controls the lowest measurable frequency.
Notes: Lasterror is set.

135.7.11 getTotalCount(index as Integer) as Int64

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the total number of ticks that have happened since the last reset on this input.
Notes: Lasterror is set.

135.7.12 getTotalTime(index as Integer) as Int64

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the total time that has passed since the last reset on this input, in microseconds.
Notes: Lasterror is set.

135.7.13 reset(index as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets total count and total time for an input.
Notes: Lasterror is set.

135.7.14 setEnabled(index as Integer, value as Boolean)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the enabled state for an input.
Notes: Lasterror is set.

135.7.15 setFilter(index as Integer, filter as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the filter type for an input.
Notes: Lasterror is set.

135.7.16 setTimeout(index as Integer, filter as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the timeout value for an input, in microseconds.
Notes: Lasterror is set.

135.7.17 Events

135.7.18 Counted(index as Integer, time as Integer, counts as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when ticks have been counted on an input, or when the timeout has passed.

135.7.19 Constants

135.7.20 PHIDGET_FREQUENCYCOUNTER_FILTERTYPE_LOGIC_LEVEL = 2

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the Filter Type Constants.
Notes: Logic level signal filter.

135.7.21 PHIDGET_FREQUENCYCOUNTER_FILTERTYPE_UNKNOWN = 3

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the Filter Type Constants.
Notes: Filter type unknown.

135.7.22 PHIDGET_FREQUENCYCOUNTER_FILTERTYPE_ZERO_CROSSING = 1

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the Filter Type Constants.

Notes: Zero crossing signal filter.

135.8 class PhidgetGPGGAMBS

135.8.1 class PhidgetGPGGAMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a NMEA GGA Sentence.

135.8.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.8.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.8.4 Properties

135.8.5 altitude as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The altitude value.
Notes: (Read only property)

135.8.6 fixQuality as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The fix Quality.
Notes: (Read and Write property)

135.8.7 heightOfGeoid as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The height of GEO ID.
Notes: (Read only property)

135.8.8 horizontalDilution as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The horizontal dilution.
Notes: (Read only property)

135.8.9 latitude as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The latitude value.
Notes: (Read only property)

135.8.10 longitude as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The longitude value.
Notes: (Read only property)

135.8.11 numSatellites as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of satellites.
Notes: (Read and Write property)

135.8.12 time as PhidgetGPSTimeMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time value.
Notes: (Read and Write property)

135.9 class PhidgetGPGSAMBS

135.9.1 class PhidgetGPGSAMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The NMEA GSA Sentence class.

135.9.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.9.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.9.4 Methods

135.9.5 satUsed(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: IDs of used sats in no real order, 0 means nothing.

135.9.6 Properties

135.9.7 fixType as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The fix type.
Notes: (Read and Write property)

135.9.8 horizDilution as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Horizontal dilution.
Notes: (Read only property)

135.9.9 mode as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mode.
Notes: (Read and Write property)

135.9.10 posnDilution as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Position dilution.
Notes: (Read only property)

135.9.11 vertDilution as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Vertical dilution.
Notes: (Read only property)

135.9.12 Constants

135.9.13 kFixType2D = 2

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the Fix Type values.
Notes: 2D

135.9.14 kFixType3D = 3

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the Fix Type values.
Notes: 3D

135.9.15 kFixTypeNo = 1

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the Fix Type values.
Notes: no fix.

135.9.16 kModeAuto = 65

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the mode constants.
Notes: Auto

135.9.17 kModeForced = 77

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the mode constants.
Notes: Forced

135.10 class PhidgetGPGSVMBS

135.10.1 class PhidgetGPGSVMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The NMEA GSV Sentence class.

135.10.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.10.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.10.4 Methods

135.10.5 satInfo(index as Integer) as PhidgetGPSSatInfoMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query the satellite information with the given index.
Notes: Index from 0 to 11.

135.10.6 Properties

135.10.7 satsInView as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of satellites in view.
Notes: (Read and Write property)

135.11 class PhidgetGPRMCMBS

135.11.1 class PhidgetGPRMCMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for NMEA RMC Sentence

135.11.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.11.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.11.4 Properties

135.11.5 date as PhidgetGPSDateMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The date value.
Notes: (Read and Write property)

135.11.6 heading as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The heading value.
Notes: (Read only property)

135.11.7 latitude as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The latitude value.
Notes: (Read only property)

135.11.8 longitude as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The longitude value.
Notes: (Read only property)

135.11.9 magneticVariation as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The magnetic variation.
Notes: (Read only property)

135.11.10 mode as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mode value.
Notes: (Read and Write property)

135.11.11 speedKnots as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The speed in knots.
Notes: (Read only property)

135.11.12 status as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The status value.
Notes: (Read and Write property)

135.11.13 time as PhidgetGPSTimeMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time value.
Notes: (Read and Write property)

135.12 class PhidgetGPSDateMBS

135.12.1 class PhidgetGPSDateMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GPS Date in UTC.

135.12.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.12.3 Blog Entries

135.12.4 Properties

135.12.5 Day as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Day of the month (1-31).
Notes: (Read and Write property)

135.12.6 Month as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Month (1-12).
Notes: (Read and Write property)

135.12.7 Year as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Year.
Notes: (Read and Write property)

135.13 class PhidgetGPSMBS

135.13.1 class PhidgetGPSMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Class specific to the Phidget GPS.
Notes:

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the PhidgetMBS class.

135.13.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

135.13.4 Methods

135.13.5 Constructor

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates an GPS instance.
Notes: Lasterror is set.

135.13.6 getAltitude as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current altitude, in meters.
Notes: Lasterror is set.

135.13.7 getDate as PhidgetGPSDateMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current GPS date, in UTC
Notes: Lasterror is set.

135.13.8 getHeading as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current heading, in degrees.
Notes: Lasterror is set.

135.13.9 getLatitude as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current latitude.
Notes: Lasterror is set.

135.13.10 getLongitude as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current longitude.
Notes: Lasterror is set.

135.13.11 getNMEAData as PhidgetNMEADataMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets Raw NMEA Data.
Notes: Lasterror is set.

135.13.12 getPositionFixStatus as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the position fix status.
Notes: Lasterror is set.

135.13.13 getTime as PhidgetGPSTimeMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current GPS time, in UTC.
Notes: Lasterror is set.

135.13.14 getVelocity as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current velocity, in km/h.
Notes: Lasterror is set.

135.13.15 Events

135.13.16 PositionChanged(latitude as Double, longitude as Double, altitude as Double)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The position change event.
Notes: Called when any of latitude, longitude, or altitude change.

135.13.17 PositionFixStatusChanged(status as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The position fix status change event.
Notes: Called when a position fix is aquired or lost.

135.14 class PhidgetGPSSatInfoMBS

135.14.1 class PhidgetGPSSatInfoMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for Satellite info - used in GSV sentence.

- New Phidgets supported

135.14.4 Properties

135.14.5 Azimuth as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The azimuth value.
Notes: (Read and Write property)

135.14.6 Elevation as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The elevation value.
Notes: (Read and Write property)

135.14.7 ID as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ID.
Notes: (Read and Write property)

135.14.8 SNR as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The serial number.
Notes: (Read and Write property)

135.15 class PhidgetGPSTimeMBS

135.15.1 class PhidgetGPSTimeMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GPS Time in UTC.

135.15.4 Properties

135.15.5 Hour as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hour value.
Notes: (Read and Write property)

135.15.6 Millisecond as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Milliseconds value.
Notes: (Read and Write property)

135.15.7 Minute as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minutes value.
Notes: (Read and Write property)

135.15.8 Second as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The seconds value.
Notes: (Read and Write property)

135.16 class PhidgetGPVTGMBS

135.16.1 class PhidgetGPVTGMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for a NMEA VTG Sentence.

135.16.4 Properties

135.16.5 magneticHeading as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The magnetic heading.
Notes: (Read only property)

135.16.6 mode as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mode.
Notes: (Read and Write property)

135.16.7 speed as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The speed in km/hour.
Notes: (Read only property)

135.16.8 speedKnots as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The speed in knots.
Notes: (Read only property)

135.16.9 trueHeading as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The true heading.
Notes: (Read only property)

135.17 class PhidgetInterfaceKitMBS

135.17.1 class PhidgetInterfaceKitMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget interface kit.
Notes:

The PhidgetInterfaceKit is a component that provides a high-level programmer interface to control a PhidgetInterfaceKit device connected through a USB port.
With this component, the programmer can:

- Turn particular outputs on and off.
- Get notified of changes of state of the inputs as events.
- Configure events to fire when the analog inputs change.

The PhidgetInterfaceKit devices provide a combination of:

- Digital outputs.
- Digital inputs.
- Analog inputs.

Subclass of the PhidgetMBS class.

135.17.2 Methods

135.17.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

135.17.4 getDataRate(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the Data Rate for an analog input in milliseconds.
Notes:

The Lasterror property is set.

This is the event rate. Since we're not going to run an extra thread, the accuracy of the data rate is limited by the interrupt endpoint data rate (>=8ms).

135.17.5 getDataRateMax(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum supported data rate for an analog input in milliseconds.
Notes: The Lasterror property is set.

135.17.6 getDataRateMin(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum supported data rate for an analog input in milliseconds.
Notes: The Lasterror property is set.

135.17.7 getInputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of digital inputs supported by this board.
Notes: The Lasterror property is set.

135.17.8 getInputState(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of a digital input.
Notes: The Lasterror property is set.

135.17.9 getOutputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of digital outputs supported by this board.
Notes: The Lasterror property is set.

135.17.10 getOutputState(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of a digital output.
Notes: The Lasterror property is set.

135.17.11 getRatiometric as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the ratiometric state for this board.
Notes: The Lasterror property is set.

135.17.12 getSensorChangeTrigger(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of change that should exist between the last reported value and the current value before an OnSensorChange event is fired.
Notes:

To receive all events, set the SensorChangeTrigger to zero.
The Lasterror property is set.

135.17.13 getSensorCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of sensor (analog) inputs supported by this board.
Notes: The Lasterror property is set.

135.17.14 getSensorRawValue(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the reported actual value of the sensor between 0 - 4095.
Notes:

This is directly proportional to the analog input, ranging from 0-5V (or 0-Vcc if Ratiometric is set to True). Note that this value defaults to 65535 for an unitialised state. Applications that do not wish to encounter this value should use ChangeTrigger event handlers as opposed to polling the device for new data.
The Lasterror property is set.

135.17.15 getSensorValue(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last reported sensor value for the given index as a value from 0-1000
Notes:

Note that this value defaults to 65535 for an unitialised state. Applications that do not wish to encounter this value should use ChangeTrigger event handlers as opposed to polling the device for new data.
The Lasterror property is set.

135.17.16 setDataRate(index as Integer, milliseconds as Integer)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the Data Rate for an analog input in milliseconds.
Notes: The Lasterror property is set.

135.17.17 setOutputState(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the state of a digital output.
Notes: The Lasterror property is set.

135.17.18 setRatiometric(value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the ratiometric state for this board.
Notes: The Lasterror property is set.

135.17.19 setSensorChangeTrigger(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specifies the amount of change that should exist between the last reported value and the current value before an OnSensorChange event is fired.
Notes: Lasterror is set.

135.17.20 Events

135.17.21 InputChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: Called on any input change.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.17.22 OutputChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: Returns the number of digital outputs on this particular Phidget device.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.17.23 SensorChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: Called on any sensor change.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.18 class PhidgetIRCodeInfoMBS

135.18.1 class PhidgetIRCodeInfoMBS

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a code info for the IR receiver/sender.
Notes:

The PhidgetIR CodeInfo structure contains all information needed to transmit a code, apart from the actual code data.
Some values can be set to null to select defaults. See the product manual for more information.

135.18.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

135.18.3 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

135.18.4 Properties

135.18.5 bitCount as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of bits in the code.
Notes: (Read and Write property)

135.18.6 carrierFrequency as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Carrier frequency in Hz - defaults to 38kHz.
Notes: (Read and Write property)

135.18.7 dutyCycle as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Duty Cycle in percent (10-50).
Notes:

Defaults to 33.
(Read and Write property)

135.18.8 encoding as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encoding used to encode the data.
Notes:

See the PHIDGET_IR_ENCODING_* constants.
(Read and Write property)

135.18.9 gap as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gap time in us.
Notes: (Read and Write property)

135.18.10 length as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The length of the code.
Notes:

Constant or Variable length encoding.
See PHIDGET_IR_LENGTH_* constants.
(Read and Write property)

135.18.11 minRepeat as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Minium number of times to repeat a code on transmit.
Notes: (Read and Write property)

135.18.12 trail as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Trail time in us - can be 0 for none.
Notes: (Read and Write property)

135.18.13 header(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The header value.
Notes:

Header pulse and space - can be 0 for none
Index from 0 to 1.
(Read and Write computed property)

135.18.14 one(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The one array.
Notes:

Pulse and Space times to represent a '1' bit, in us
Index from 0 to 1.
(Read and Write computed property)

135.18.15 repeat(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A series or pulse and space times to represent the repeat code.
Notes:

Start and end with pulses and null terminate. Set to 0 for none.
Index from 0 to 25.
(Read and Write computed property)

135.18.16 toggleMask(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bit toggles, which are applied to the code after each transmit.
Notes: (Read and Write computed property)

135.18.17 zero(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the arrays.
Notes:

Index from 0 to 1.
Pulse and Space times to represent a '0' bit, in us.
(Read and Write computed property)

135.18.18 Constants

135.18.19 PHIDGET_IR_ENCODING_BIPHASE = 4

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the encoding constants.
Notes: Bi-Phase, or Manchester encoding.

135.18.20 PHIDGET_IR_ENCODING_PULSE = 3

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the encoding constants.
Notes: Pulse encoding, or Pulse Width Modulation.

135.18.21 PHIDGET_IR_ENCODING_RC5 = 5

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the encoding constants.
Notes: RC5 - a type of Bi-Phase encoding.

135.18.22 PHIDGET_IR_ENCODING_RC6 = 6

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the encoding constants.
Notes: RC6 - a type of Bi-Phase encoding.

135.18.23 PHIDGET_IR_ENCODING_SPACE = 2

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the encoding constants.
Notes: Space encoding, or Pulse Distance Modulation.

135.18.24 PHIDGET_IR_ENCODING_UNKNOWN = 1

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the encoding constants.
Notes: Unknown - the default value.

135.18.25 PHIDGET_IR_LENGTH_CONSTANT = 2

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the length constants.
Notes: Constant - the bitstream + gap length is constant.

135.18.26 PHIDGET_IR_LENGTH_UNKNOWN = 1

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the length constants.
Notes: Unknown - the default value.

135.18.27 PHIDGET_IR_LENGTH_VARIABLE = 3

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the length constants.
Notes: Variable - the bitstream has a variable length with a constant gap.

135.19 class PhidgetIRMBS

135.19.1 class PhidgetIRMBS

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for an IR receiver/sender.
Notes:

Calls specific to the Phidget IR. See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the PhidgetMBS class.

135.19.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

135.19.3 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

135.19.4 Methods

135.19.5 Constructor

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

The Lasterror property is set.
On success the handle value is not zero.

135.19.6 getLastCode(byref bitCount as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last code that was received.
Notes:

The Lasterror property is set.

bitCount: set to the bit count of the code.

135.19.7 getLastLearnedCode(byref codeInfo as PhidgetIRCodeInfoMBS) as MemoryBlock

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last code that was learned.
Notes: The Lasterror property is set.

135.19.8 getRawData as MemoryBlock

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read any available raw data.
Notes:

This should be polled continuously (every 20ms) to avoid missing data. Read data always starts with a space and ends with a pulse.
The Lasterror property is set.

135.19.9 Transmit(data as MemoryBlock, codeInfo as PhidgetIRCodeInfoMBS)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmits a code according to the settings in a CodeInto object.
Notes:

The Lasterror property is set.

data: The code to send. Data is transmitted MSBit first. MSByte is in array index 0. LSBit is right justified, so MSBit may be in bit positions 0-7 in array index 0 depending on the bit count.
codeInfo: The CodeInfo structure specifying to to send the code. Anything left as null to select default is filled in for the user.

135.19.10 TransmitRaw(data as MemoryBlock, length as Integer, carrierFrequency as Integer, dutyCycle as Integer, gap as Integer)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmits RAW data as a series of pulses and spaces.
Notes:

The Lasterror property is set.

data: The data to send. The array (Int32) must start and end with a pulse and each element is a positive time in us.
length: The length of the data array. Maximum length is 1024, but streams should be kept much shorter, ie. <100ms between gaps.
carrierFrequency: The Carrier Frequency in Hz. leave as 0 for default.
dutyCycle: The Duty Cycle (10-50). Leave as 0 for default.
gap: The gap time in us. This guarantees a gap time (no transmitting) after the data is sent, but can be set to 0.

135.19.11 TransmitRepeat

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmits a repeat of the last transmited code.
Notes:

The Lasterror property is set.
Depending of the CodeInfo structure, this may be a retransmission of the code itself, or there may be a special repeat code.

135.19.12 Events

135.19.13 Code(data as memoryblock, bitcount as Integer, repeat as Integer)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: A code was received.
Notes:

This is called when a code has been received that could be automatically decoded.
Data is return as an array with MSB in index 0. Bit count and a repeat flag are also returned. (Int32 values)
Repeats are detected as either the same code repeated in <100ms or as a special repeat code.

135.19.14 Learn(data as memoryblock, code as PhidgetIRCodeInfoMBS)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The learn event.
Notes:

This is called when a code has been received for long enough to be learned.
The returned CodeInfo object can be used to retransmit the same code.

135.19.15 RawData(tag as memoryblock)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: This is called when raw data has been read from the device.
Notes:

Raw data always starts with a space and ends with a pulse.
tag contains 4 byte integer values.

135.20 class PhidgetLEDMBS

135.20.1 class PhidgetLEDMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget LED device.
Notes:

The PhidgetLED is a component that provides a high-level programmer interface to control a PhidgetLED device connected through a USB port.

With this component, the programmer can:

- Control each led individually, On/Off and Brightness.

Subclass of the PhidgetMBS class.

135.20.2 Methods

135.20.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

The Lasterror property is set.
On success the handle value is not zero.

135.20.4 getCurrentLimit as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current limit.
Notes:

This is for all outputs.
Lasterror is set.
See the PHIDGET_LED_CURRENT_LIMIT_* constants.

135.20.5 getDiscreteLED(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the brightness of an individual LED.
Notes:

The Lasterror property is set.
Range of brightness is 0-100.

135.20.6 getLEDCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the number of LED positions available in this Phidget.
Notes:

The Lasterror property is set.
This property does not return the number of LEDs actually attached.

135.20.7 getVoltage as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the voltage.
Notes:

Lasterror is set.
See the PHIDGET_LED_VOLTAGE_* constants.

135.20.8 setCurrentLimit(currentLimit as Integer)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the current limit.
Notes:

Lasterror is set.
See the PHIDGET_LED_CURRENT_LIMIT_* constants.

135.20.9 setDiscreteLED(index as Integer, Brightness as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the brightness of an individual LED.
Notes:

The Lasterror property is set.
Range of brightness is 0-100.

135.20.10 setVoltage(Voltage as Integer)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the current voltage.
Notes:

Lasterror is set.
See the PHIDGET_LED_VOLTAGE_* constants.

135.20.11 Constants

135.20.12 PHIDGET_LED_CURRENT_LIMIT_20mA = 1

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the limit constants.
Notes: 20mA

135.20.13 PHIDGET_LED_CURRENT_LIMIT_40mA = 2

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the limit constants.
Notes: 40mA

135.20.14 PHIDGET_LED_CURRENT_LIMIT_60mA = 3

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the limit constants.
Notes: 60mA

135.20.15 PHIDGET_LED_CURRENT_LIMIT_80mA = 4

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the limit constants.
Notes: 80mA

135.20.16 PHIDGET_LED_VOLTAGE_1_7V = 1

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the voltage constants.
Notes: 1.7V

135.20.17 PHIDGET_LED_VOLTAGE_2_75V = 2

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the voltage constants.
Notes: 2.75V

135.20.18 PHIDGET_LED_VOLTAGE_3_9V = 3

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the voltage constants.
Notes: 3.9V

135.20.19 PHIDGET_LED_VOLTAGE_5_0V = 4

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the voltage constants.
Notes: 5.0V

135.21 class PhidgetManagerMBS

135.21.1 class PhidgetManagerMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Phidget manager is an interface that allows for monitoring of all phidgets connected to a system, without opening them.

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr4

135.21.4 Methods

135.21.5 Close

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the file handles for this device. You should always call this when finished with a Manager.
Notes: Lasterror is set.

135.21.6 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

The Lasterror property is set.
On success the handle value is not zero.

135.21.7 Device(index as Integer) as PhidgetMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The array of the attached devices.
Notes:

The Lasterror property is set.
You need to call getAttachedDevices before this property is valid.

135.21.8 getAttachedDevices

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies the list of attached devices into the Device and Count properties.
Notes: Lasterror is set.

135.21.9 GetDeviceStatus as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an integer indicating the status of the device.
Notes:

Returns:
PHIDGET_ATTACHED 0x1
PHIDGET_NOTATTACHED 0x0

Lasterror is set.

135.21.10 getServerAddress(byref port as Integer) as string

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the address and port.
Notes: The Lasterror property is set.

135.21.11 getServerID as string

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the server ID.
Notes: The Lasterror property is set.

135.21.12 GetServerStatus as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an integer indicating the connection status of a Webservice.
Notes:

Returns one of the following values:
1 CONNECTED
0 NOTCONNECTED

Lasterror is set.

135.21.13 Open

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a connection to the local Phidget Manager.
Notes: Lasterror is set.

135.21.14 openRemote(serverID as string, password as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.
Notes: Lasterror is set.

135.21.15 openRemoteIP(addr as string, port as Integer, password as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a connection to a remote Phidget Manager.
Notes:

OpenRemoteIP will block until it connects to the server, which means that when it returns with EPHIDGET_OK, this means that the connection is active.

If the server is unavailable, this will return an error code. If the connection to a webservice is disrupted while in use, an error event will be thrown.

Lasterror is set.

Address is the address of the computer running the Phidget Webservice.
This can be either an IP address or a hostname.
Port specifies the port of the Webservice on the remote computer.
Password specifies the password, which is required if authentication is active on the Webservice.
If authentication is not active, this can be set to "".

135.21.16 Properties

135.21.17 Count as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of devices.
Notes:

The Lasterror property is set.
You need to call getAttachedDevices before this property is valid.
(Read and Write property)

135.21.18 Handle as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal used CPhidgetManagerHandle.
Notes: (Read and Write property)

135.21.19 Lasterror as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code reported.
Notes: (Read and Write property)

135.21.20 Events

135.21.21 Attach(devicehandle as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when a device is attached.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.21.22 Detach(devicehandle as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when a device is detached.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.21.23 Error(errorCode as Integer, errorDescription as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is used for reporting asynchronous errors – mostly related to opening remote Phidgets.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems

described in the ThreadMBS class documentation.

135.21.24 ServerConnect

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when a connection to the sever has been made.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.21.25 ServerDisconnect

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when a connection to the server has been lost.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.22 class PhidgetMBS

135.22.1 class PhidgetMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The base class of all Phidget device classes.
Notes:

Check phidgets.com for information on this devices.
http://www.phidgets.com/

135.22.2 Methods

135.22.3 Close

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the file handles for this device.
Notes:

You can call this while reads and writes are still outstanding; they will fail quickly.
Lasterror is set.
The destructor does a close if you forget it.

135.22.4 disableLogging

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disables logging on the library.
Notes: The Lasterror property is set.

135.22.5 enableLogging(level as Integer, outputFile as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables logging on the library.
Notes:

The Lasterror property is set.
Data is written to the file specified with the output file path.
Not sure how the path must be specified. This is depending on the library used.

The levels:

PHIDGET_LOG_CRITICAL	1
PHIDGET_LOG_ERROR	2
PHIDGET_LOG_WARNING	3
PHIDGET_LOG_DEBUG	4
PHIDGET_LOG_INFO	5
PHIDGET_LOG_VERBOSE	6

135.22.6 GetDeviceClass as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the class of a Phidget.
Notes: See the PHIDCLASS_* constants.

135.22.7 GetDeviceID as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the device ID of a Phidget.
Notes: See the PHIDID_* constants.

135.22.8 GetDeviceLabel as string

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the Label for the Phidget.
Notes:

The Label is a user programmable serial number stored on the Phidget - it can be used to implement a serial numbering scheme, or describe the functionality of the Phidget in a specific application.

Lasterror is set.

135.22.9 GetDeviceName as string

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns string describing the name of the Phidget.
Notes:

For example, "Phidget InterfaceKit 8/8/8", "Phidget InterfaceKit 0/0/4", etc.
The Lasterror property is set.

135.22.10 GetDeviceStatus as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an integer indicating the status of the device.
Notes:

Returns:
PHIDGET_ATTACHED 0x1
PHIDGET_NOTATTACHED 0x0

Lasterror is set.

135.22.11 GetDeviceType as string

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a string describing the type of the Phidget.
Notes:

All PhidgetInterfaceKits will return "PhidgetInterfaceKit", PhidgetRFID returns "PhidgetRFID" and so on.

Lasterror is set.

135.22.12 GetDeviceVersion as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a string describing the Device Version of the Phidget.

Notes: Lasterror is set.

135.22.13 GetErrorDescription(errorcode as Integer) as string

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a string describing the ErrorCode passed.
Notes:

Lasterror is set.

The list of the error codes:

0 EPHIDGET_OK
1 EPHIDGET_NOTFOUND
2 EPHIDGET_NOMEMORY
3 EPHIDGET_UNEXPECTED
4 EPHIDGET_INVALIDARG
5 EPHIDGET_NOTATTACHED
6 EPHIDGET_INTERRUPTED
7 EPHIDGET_INVALID
8 EPHIDGET_NETWORK
9 EPHIDGET_UNKNOWNVAL
10 EPHIDGET_BADPASSWORD
11 EPHIDGET_UNSUPPORTED
12 EPHIDGET_DUPLICATE
13 EPHIDGET_TIMEOUT
14 EPHIDGET_OUTOFBOUNDS
15 EPHIDGET_EVENT
16 EPHIDGET_NETWORK_NOTCONNECTED
17 EPHIDGET_WRONGDEVICE

135.22.14 GetLibraryVersion as string

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: returns a string providing the version number of the API library.
Notes: Lasterror is set.

135.22.15 GetSerialNumber as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the unique serial number of this Phidget.
Notes:

Lasterror is set.
This number is set during manufacturing, and is unique across all Phidgets.

135.22.16 GetServerAddress(byref port as Integer) as string

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the IP Address and Port of a remote Phidget device.
Notes:

This should only be called on Phidgets that were opened with openRemote or openRemoteIP.
Lasterror is set.

135.22.17 GetServerID as string

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the Server ID for a remote Phidget device.
Notes:

This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.

This should only be called on Phidgets that were opened with openRemote or openRemoteIP.
The Lasterror property is set.

135.22.18 GetServerStatus as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an integer indicating the connection status of a Webservice.
Notes:

Returns one of the following values:

1 CONNECTED
0 NOTCONNECTED

Lasterror is set.

135.22.19 Open(serialNumber as Integer = -1)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a connection between an PhidgetMBS object and a physical Phidget.
Example:

```
dim p as new PhidgetInterfaceKitMBS

p.open -1
p.waitForAttachment 0
// use the phidget
```

Notes:

Open is pervasive. What this means is that you can call open on a device before it is plugged in, and keep the device opened across device dis- and re-connections.
Open is Asynchronous. What this means is that open will return immediately - before the device being opened is actually available.
What this means is that you need to either poll getDeviceStatus for an attached status, or handle the attach event, in order to wait for the device to become available before trying to use it.

SerialNumber specifies the desired serial number, allowing the call to open a specific Phidget. Specifying -1 for the serial number will cause it to open the first available device.
Lasterror is set.

135.22.20 OpenLabel(label as string = "")

MBS USB Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a Phidget by label.
Notes:

Available with phidget library from December 2011.
Labels can be up to 10 characters (UTF-8 encoding). Specify "" to open any.
Lasterror is set.

135.22.21 openLabelRemote(label as string, serverID as string, password as string = "")

MBS USB Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a Phidget remotely by ServerID. Note that this requires Bonjour (mDNS) to be running on both the host and the server.
Notes:

Available with phidget library from December 2011.
label: The label string. Labels can be up to 10 characters (UTF-8 encoding). Specify "" to open any.
serverID: Server ID. Specify "" to open any.
password: The Password. Can be "" if the server is running unsecured.
Lasterror is set.

135.22.22 openLabelRemoteIP(label as string, addr as string, port as Integer, password as string = "")

MBS USB Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a Phidget remotely by address and port, with optional label.
Notes:

Available with phidget library from December 2011.
Lasterror is set.

label: Label string. Labels can be up to 10 characters (UTF-8 encoding). Specify "" to open any.
address: The Address. This can be a hostname or IP address.
port: The Port number. Default is 5001.
password: The Password. Can be NULL if the server is running unsecured.

135.22.23 openRemote(serial as Integer, serverID as string, password as string = "")

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.
Notes: Lasterror is set.

135.22.24 openRemoteIP(serial as Integer, addr as string, port as Integer, password as string = "")

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Attempts to open a connection to a Phidget Webservice, and waits for a phidget on that connection.
Notes:

OpenRemoteIP will block until it connects to the server, which means that when it returns with EPHIDGET_OK, this means that the connection is active. If the server is unavailable, this will return an error code. If the connection to a webservice is disrupted while in use, an error event will be thrown, and it is recommended that an error event listener be registered for this reason.
As with the regular open, openRemoteIP is pervasive and asynchronous – so long as the connection to the Webservice remains active.
SerialNumber specifies the desired serial number, allowing the call to open a specific Phidget. Specifying -1 for the serial number will cause it to open the first available device.
Address is the address of the computer running the Phidget Webservice. This can be either an IP address or a hostname.
Port specifies the port of the Webservice on the remote computer.
Password specifies the password, which is required if authentication is active on the Webservice. If authentication is not active, this can be set to "".
Lasterror is set.

135.22.25 PUNK_DBL as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value used for unknown values (Double).

135.22.26 PUNK_FLT as single

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value used for unknown values (Float).

135.22.27 SetDeviceLabel(label as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a Label – a string up to 10 characters long – to the Phidget associated with this handle.
Notes:

SetDeviceLabel may not be available on all operating systems.
Currently it is available on MacOS X, Linux, and Windows CE.
Calling this on Windows will return EPHIDGET_UNSUPPORTED
Lasterror is set.

135.22.28 waitForAttachment(milliseconds as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Waits the given time till a device has been attached.
Example:

```
dim p as new PhidgetInterfaceKitMBS

p.open -1
p.waitForAttachment 0
// use the phidget
```

Notes:

Lasterror is set to EPHIDGET_OK when the device is available, or to EPHIDGET_TIMEOUT if the device is not attached before the timeout expires.
Timeouts below about 300ms cannot be trusted because of initialization time, and sometimes an even larger timeout is required – ie. the first time a device is plugged into a windows machine.
A timeout of 0 is infinite.
This function can be used in conjunction with (or instead of) an attach event handler.
The Lasterror property is set.

135.22.29 Properties

135.22.30 Handle as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal used CPhidgetHandle.
Notes: (Read and Write property)

135.22.31 Lasterror as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

EPHIDGET_NOTFOUND	1	"A Phidget matching the type and or serial number could not be found." This indicates that a Phidget being searched for (ie. via Open) could not be located.
EPHIDGET_NOMEMORY	2	"Memory could not be allocated." This indicates that there is not enough memory for the Phidgets library to create the object requested.
EPHIDGET_UNEXPECTED	3	"Unexpected Error. Contact Phidgets Inc. for support." Indicates that a serious error has occurred, or a severe bug exists within the library.
EPHIDGET_INVALIDARG	4	"Invalid argument passed to function." An argument is not valid to the requirements of the function. In many cases this refers to an invalid Phidget Handle.
EPHIDGET_NOTATTACHED	5	"Phidget not physically attached." Indicates the function requires an attached Phidget to operate.
EPHIDGET_INTERRUPTED	6	"Read/Write operation was interrupted" An error occurred while attempting to communicate with the Phidget over USB.
EPHIDGET_INVALID	7	"The Error Code is not defined." Indicates that a serious error has occurred, or a severe bug exists within the library.
EPHIDGET_NETWORK	8	"Network Error." Attempting to communicate with the Phidget via the Network has failed.
EPHIDGET_UNKNOWNVAL	9	"Value is Unknown (State not yet received from device)." A query to a value on the Phidget device has failed as the Phidget has not returned data yet.
EPHIDGET_BADPASSWORD	10	"Authorization Failed." The remote access method has failed it's authorization.
EPHIDGET_UNSUPPORTED	11	"Not Supported" This is a bad or unsupported function call.
EPHIDGET_DUPLICATE	12	"Duplicated request" A previous request to the device has already performed this function, and it is not valid to perform twice.
EPHIDGET_TIMEOUT	13	"Given timeout has been exceeded" A synchronous request has failed it's time limits. Usually this is returned when attempting WaitForConnect.
EPHIDGET_OUTOFBOUNDS	14	"Index out of Bounds" An index into the function is above or below the recognized bounds of the device. ie. when accessing a single sensor on a multisensor device.
EPHIDGET_EVENT	15	"A non-null error code was returned from an event handler" An error code was passed to a function handler. Note that correct decoding of the actual error would have to be done within the event handler itself.
EPHIDGET_NETWORK_NOTCONNECTED	16	"A connection to the server does not ex-ist." An attempt to connect to a remotely connected device or service failed due to network connectivity problems.
EPHIDGET_WRONGDEVICE	17	"Function is not applicable for this device." The wrong type of device handle was passed as an argument to a function. (ie. calling CPhidgetWeightSensor_getWeight with an Accelerometer handle)

(Read and Write property)

135.22.32 Events

135.22.33 Attach

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when a device is attached.

Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.22.34 Detach

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when a device is detached.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.22.35 Error(errorCode as Integer, errorDescription as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function:

This event is used for reporting asynchronous errors - mostly related to opening
remote Phidgets.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.22.36 ServerConnect

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is used for opening Phidgets remotely, and is called when a connection to the sever has been made.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems

described in the ThreadMBS class documentation.

135.22.37 ServerDisconnect

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is used for opening Phidgets remotely, and is called when a connection to the server has been lost.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.22.38 Wakeup

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when the device wakes up.

135.22.39 WillSleep

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when the device will go to sleep.

135.22.40 Constants

135.22.41 EPHIDGET_BADPASSWORD=10

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Authorization exception. "No longer used. Replaced by EEPHIDGET_BADPASSWORD"

135.22.42 EPHIDGET_BADVERSION=19

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Version Mismatch. "No longer used. Replaced by EEPHIDGET_BADVERSION"

135.22.43 EPHIDGET_CLOSED=18

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Phidget Closed. "Phidget handle was closed."

135.22.44 EPHIDGET_DUPLICATE=12

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Duplicate request. "Duplicated request."

135.22.45 EPHIDGET_EVENT=15

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Event. "A non-null error code was returned from an event handler." This code is not currently used.

135.22.46 EPHIDGET_INTERRUPTED=6

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Interrupted. "Read/Write operation was interrupted." This code is not currently used.

135.22.47 EPHIDGET_INVALID=7

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Invalid error code. "The Error Code is not defined."

135.22.48 EPHIDGET_INVALIDARG=4

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Invalid argument. "Invalid argument passed to function."

135.22.49 EPHIDGET_NETWORK=8

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Network. "Network Error."

135.22.50 EPHIDGET_NETWORK_NOTCONNECTED=16

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Network not connected. "A connection to the server does not exist."

135.22.51 EPHIDGET_NOMEMORY=2

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: No memory. "Memory could not be allocated."

135.22.52 EPHIDGET_NOTATTACHED=5

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Phidget not attached. "Phidget not physically attached."

135.22.53 EPHIDGET_NOTFOUND=1

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Phidget not found. "A Phidget matching the type and or serial number could not be found."

135.22.54 EPHIDGET_OK=0

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Function completed successfully.

135.22.55 EPHIDGET_OUTOFBOUNDS=14

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Out of bounds. "Index out of Bounds."

135.22.56 EPHIDGET_TIMEOUT=13

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Timeout. "Given timeout has been exceeded."

135.22.57 EPHIDGET_UNEXPECTED=3

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Unexpected. "Unexpected Error. Contact Phidgets Inc. for support."

135.23 class PhidgetMissingFunctionExceptionMBS

135.23.1 class PhidgetMissingFunctionExceptionMBS

MBS USB Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class used to report that a given phidget function was not loaded from the library.
Notes:

Check the message property.
Subclass of the RuntimeException class.

135.23.2 Blog Entries

- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

135.23.3 Blog Entries

- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

135.24 class PhidgetMotorControlMBS

135.24.1 class PhidgetMotorControlMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for the phidget motor control device.
Notes:

The PhidgetMotorControl is a component that provides a high-level programmer interface to control a PhidgetMotorControl device connected through a USB port.

With this component, the programmer can:

- Control direction, and start and stop DC motors.
- Control the velocity and acceleration of each DC motor.
- Read the limit switch.

Subclass of the PhidgetMBS class.

135.24.2 Methods

135.24.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
Lasterror is set.

135.24.4 getAcceleration(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current acceleration.
Notes:

Note that this value defaults to 10 upon initialisation.
The Lasterror property is set.

135.24.5 getAccelerationMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum acceleration supported by a motor.
Notes: The Lasterror property is set.

135.24.6 getAccelerationMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum acceleration supported by a motor.
Notes: The Lasterror property is set.

135.24.7 getBackEMF(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the Back EMF voltage for a motor.
Notes: Lasterror is set.

135.24.8 getBackEMFSensingState(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the Back EMF sensing state for a motor.
Notes: Lasterror is set.

135.24.9 getBraking(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the Braking value for a motor.
Notes:

Lasterror is set.
Returns the braking value, in percent.

135.24.10 getCurrent(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: get the current motor current consumption.
Notes: The Lasterror property is set.

135.24.11 getEncoderCount as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of encoder inputs supported by this board.
Notes: Lasterror is set.

135.24.12 getEncoderPosition(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the position of an encoder. This position starts at 0 every time the phidget is opened.
Notes: Lasterror is set.

135.24.13 getInputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of digital inputs supported by this board.
Notes: The Lasterror property is set.

135.24.14 getInputState(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of a digital input.
Notes: The Lasterror property is set.

135.24.15 getMotorCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of motors supported by this controller.
Notes: The Lasterror property is set.

135.24.16 getRatiometric as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the ratiometric state.
Notes: Lasterror is set.

135.24.17 getSensorCount as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of sensor inputs supported by this board.
Notes: Lasterror is set.

135.24.18 getSensorRawValue(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the raw value of a sensor (12-bit).
Notes: Lasterror is set.

135.24.19 getSensorValue(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of a sensor.
Notes: Lasterror is set.

135.24.20 getSupplyVoltage as Double

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the Supply voltage for the motors.
Notes:

This could be higher then the actual supply voltage.
Returns the supply voltage, in volts.
Lasterror is set.

135.24.21 getVelocity(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current velocity of a motor.
Notes: The Lasterror property is set.

135.24.22 setAcceleration(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the Motor's Maximum accesleration.
Notes:

Valid values are 0-100.
The Lasterror property is set.

135.24.23 setBackEMFSensingState(index as Integer, EMFState as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the Back EMF sensing state for a motor.
Notes: Lasterror is set.

135.24.24 setBraking(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the Braking value for a motor.
Notes:

This is applied when velocity is 0. Default is 0% .
value: The braking value, in percent.
Lasterror is set.

135.24.25 setEncoderPosition(index as Integer, position as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the encoder position.
Notes:

This can be used to set the position to a known value, and should only be called when the encoder is not moving.
Lasterror is set.

135.24.26 setRatiometric(value as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the ratiometric state.
Notes:

This control the voltage reference used for sampling the analog sensors.
Lasterror is set.

135.24.27 setVelocity(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the velocity of a motor.
Notes: The Lasterror property is set.

135.24.28 Events

135.24.29 BackEMFUpdated(index as Integer, voltage as Double)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called at a constant rate; every 16ms, when back EMF sensing is enabled for that motor.

135.24.30 CurrentChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The current motor current consumption changed.
Notes:

Index: Index of the Motor firing the Event
Value: Value of the Motor Current

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.24.31 CurrentUpdated(index as Integer, current as Double)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The current update event.
Notes: This is called at a constant rate; every 8ms.

135.24.32 EncoderPositionChanged(index as Integer, time as Integer, positionChange as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The encoder position change event.
Notes: This is called when the encoder position changes.

135.24.33 EncoderPositionUpdated(index as Integer, positionChange as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The encoder position update event.
Notes: This is called at a constant rate; every 8ms, whether the encoder position has changed or not.

135.24.34 InputChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The input value changed.
Notes:

Index: Index of the Input firing the Event
State: State of the Input

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.24.35 SensorUpdated(index as Integer, sensorValue as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The sensor update event.
Notes: This is called at a constant rate; every 8ms.

135.24.36 VelocityChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when the velocity changes.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.25 class PhidgetNMEADataMBS

135.25.1 class PhidgetNMEADataMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA Data Structure. Contains a set of supported NMEA sentences.

135.25.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.25.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

135.25.4 Properties

135.25.5 GGA as PhidgetGPGGAMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GPS Fix and position data.
Notes: (Read and Write property)

135.25.6 GSA as PhidgetGPGSAMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GPS DOP and active satellites.
Notes: (Read and Write property)

135.25.7 GSV as PhidgetGPGSVMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Detailed satellite information.
Notes: (Read and Write property)

135.25.8 RMC as PhidgetGPRMCMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Recommended minimum data.
Notes: (Read and Write property)

135.25.9 VTG as PhidgetGPVTGMBS

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Heading and Speed over the Ground.
Notes: (Read and Write property)

135.26 class PhidgetNotInitialzedExceptionMBS

135.26.1 class PhidgetNotInitialzedExceptionMBS

MBS USB Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class used to report that a given phidget object was not initialized properly.
Notes:

Check the message property.
Subclass of the RuntimeException class.

135.26.2 Blog Entries

- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

135.26.3 Blog Entries

- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

135.27 class PhidgetPHSensorMBS

135.27.1 class PhidgetPHSensorMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget PH sensor device.
Notes:

The PhidgetPHSensor is a component that provides a high-level programmer interface to control a PhidgetPHSensor device connected through a USB port.

With this component, the programmer can:

- Read the pH of a liquid with a pH sensor.

Subclass of the PhidgetMBS class.

135.27.2 Methods

135.27.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

135.27.4 getPH as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current pH.
Notes:

The Lasterror property is set.
Valid range is -10 to 10.
Note that this value defaults to -20. Applications not wishing to encounter this value should use Change

Handlers instead of polling the device for data.

135.27.5 getPHChangeTrigger as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of change that should exist between the last reported value and the current value before an PHChange event is fired.
Notes: The Lasterror property is set.

135.27.6 getPHMax as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum PH that the sensor could report.
Notes: The Lasterror property is set.

135.27.7 getPHMin as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum PH that the sensor could report.
Notes: The Lasterror property is set.

135.27.8 getPotential as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current potential in volts.
Notes:

The Lasterror property is set.
Range is 0-5v.
2.5v corresponds to a pH of 7.0.

135.27.9 getPotentialMax as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum potential that can be sensed.
Notes: The Lasterror property is set.

135.27.10 getPotentialMin as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum potential that can be sensed.
Notes: The Lasterror property is set.

135.27.11 setPHChangeTrigger(value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specifies the amount of change that should exist between the last reported value and the current value before an OnPHChange event is fired.
Notes: The Lasterror property is set.

135.27.12 setTemperature(value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the ambient temperature of the PH sensor for increased accuracy.
Notes:

This value defaults to 20 degrees celcius which is applicable for most applications.
The Lasterror property is set.

135.27.13 Events

135.27.14 PHChanged(value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called if the pH changes by more than the PH trigger.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.28 class PhidgetRFIDMBS

135.28.1 class PhidgetRFIDMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget RFID device.
Notes:

The PhidgetRFID is a component that provides a high-level programmer interface to control a PhidgetRFID device connected through a USB port.
With this component, the programmer can:

- Read Radio Frequency Identification tags.

Radio Frequency Identification or RFID, is a non-contact identification technology which uses a reader to read data stored on low cost tags.

The particular instance of the technology we use stores a 40-bit number on the tag. Every tag that is purchased from Phidgets Inc. is guaranteed unique.

When a RFID tag is read, the component returns the unique number contained in the RFID tag.
Subclass of the PhidgetMBS class.

135.28.2 Methods

135.28.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

135.28.4 getAntennaOn as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of the antenna.
Notes: The Lasterror property is set.

135.28.5 getLastTag(m as memoryblock) as memoryblock

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Stores the last tag in a memoryblock.
Notes:

You need to pass in a memoryblock of the correct size for your tags.
For convenience the memoryblock is returned.

The Lasterror property is set.

135.28.6 getLEDOn as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of the onboard LED.
Notes: The Lasterror property is set.

135.28.7 getOutputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of outputs supported by this board.
Notes: The Lasterror property is set.

135.28.8 getOutputState(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of an output.
Notes: The Lasterror property is set.

135.28.9 getTagStatus as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the tag present status.
Notes:

This is whether or not a tag is being read by the reader.
The Lasterror property is set.

135.28.10 setAntennaOn(value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the state of the antenna.
Notes:

Note that the antenna must be enabled before tags will be read.
The Lasterror property is set.

135.28.11 setLEDOn(value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the state of the onboard LED.
Notes: The Lasterror property is set.

135.28.12 setOutputState(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the state of an output.
Notes: The Lasterror property is set.

135.28.13 Events

135.28.14 OutputChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called if an output changes.
Notes:

Index: Index of the Output firing the Event
Value: State of the Output.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.28.15 Tag(tag as memoryblock)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: An RFID Tag is read.
Notes:

Current plugins expect a maximum tag size of 20 bytes. Not all 20 bytes may be used for the given tag.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.28.16 TagLost(tag as memoryblock)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: A RFID Tag is removed from the field.
Notes:

Current plugins expect a maximum tag size of 20 bytes. Not all 20 bytes may be used for the given tag.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.29 Globals

135.29.1 LoadPhidgetFrameworkMBS(framework as folderitem) as boolean

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the phidget framework.
Notes:

Returns true on success and false on failure.
Path a folderitem for the phidget.framework in /library/frameworks.
Deprecated in plugin version 10.4.

135.29.2 LoadPhidgetLibraryMBS(file as folderitem) as boolean

MBS USB Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the Phidgets shared library.
Notes:

Returns true on success and false on failure.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.
See also:

- 135.29.3 LoadPhidgetLibraryMBS(path as string) as boolean 21335

135.29.3 LoadPhidgetLibraryMBS(path as string) as boolean

MBS USB Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the Phidgets shared library.
Notes:

Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.

135.29.4 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr3

See also:

- 135.29.2 LoadPhidgetLibraryMBS(file as folderitem) as boolean 21335

135.29.5 LoadPhidgetLinuxLibraryMBS(path as string) as boolean

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the phidget library.
Notes:

Returns true on success and false on failure.
Pass in the path to a .so file.
Deprecated in plugin version 10.4.

135.29.6 LoadPhidgetWindowsDLLMBS(dllpath as string) as boolean

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the windows dll.
Notes:

Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.
Deprecated in plugin version 10.4.

135.30 class PhidgetServoMBS

135.30.1 class PhidgetServoMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget servo device.
Notes:

The PhidgetServo is a component that provides a high-level programmer interface to control a PhidgetServo device connected through a USB port.

With this component, the programmer can:

- Set the desired position for a servo motor, ranging from 0 to 180 degrees.

Subclass of the PhidgetMBS class.

135.30.2 Methods

135.30.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

135.30.4 getEngaged(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the engaged state of a motor. This is whether the motor is powered or not.
Notes:

The Lasterror property is set.

index: The motor index.

135.30.5 getMotorCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of motors supported by this controller
Notes: The Lasterror property is set.

135.30.6 getPosition(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current position of a motor.
Notes:

index: The motor index.

The Lasterror property is set.

135.30.7 getPositionMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum position that a motor can be set to.
Notes:

index: The motor index.

The Lasterror property is set.

135.30.8 getPositionMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum position that a motor can be set to.
Notes:

index: The motor index.

The Lasterror property is set.

135.30.9 getServoType(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the servo type of a motor.
Notes:

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

135.30.10 setEngaged(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the engaged state of a motor. This is whether the motor is powered or not.
Notes:

index: The motor index.

The Lasterror property is set.

135.30.11 setPosition(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the current position of a motor.
Notes:

The Lasterror property is set.

index: The motor index.
position: The motor position.

135.30.12 setServoParameters(index as Integer, min_us as Double, max_us as Double, degrees as Double)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the servo parameters of a motor.

Notes:

The Lasterror property is set.

index	The motor index.
min_us	The minimum supported PCM in microseconds.
max_us	The maximum supported PCM in microseconds.
degrees	The degrees of rotation defined by the given PCM range.

135.30.13 setServoType(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the servo type of a motor.
Notes:

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

135.30.14 Events

135.30.15 MotorPositionChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called if the motor position is changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.31 class PhidgetSpatialEventDataMBS

135.31.1 class PhidgetSpatialEventDataMBS

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for event data on a spatial device.
Notes: Timestamped position data returned by the PhidgetSpatialMBS.SpatialData event.

135.31.2 Blog Entries

135.31.3 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

135.31.4 Properties

135.31.5 TimestampMicroseconds as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The microseconds part of the Hardware timestamp.
Notes: (Read and Write property)

135.31.6 TimestampSeconds as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The seconds part of the Hardware timestamp.
Notes: (Read and Write property)

135.31.7 acceleration(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Acceleration data for up to 3 axes.
Notes:

Index from 0 to 2.
(Read and Write computed property)

135.31.8 angularRate(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Angular rate data (Gyroscope) for up to 3 axes.
Notes:

Index from 0 to 2.
(Read and Write computed property)

135.31.9 magneticField(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Magnetic field data (Compass) for up to 3 axes.
Notes:

Index from 0 to 2.
(Read and Write computed property)

135.32 class PhidgetSpatialMBS

135.32.1 class PhidgetSpatialMBS

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class to control the spatial phidget device.
Notes:

Calls specific to the Phidget Spatial. See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the PhidgetMBS class.

135.32.4 Methods

135.32.5 Constructor

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
Lasterror is set.

135.32.6 getAcceleration(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current acceleration of an axis.
Notes:

index: The acceleration index.
Returns the acceleration in gs.
Lasterror is set.

135.32.7 getAccelerationAxisCount as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of acceleration axes supplied by this board.

135.32.8 getAccelerationMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum accleration supported by an axis.
Notes:

index: The acceleration index.
Lasterror is set.

135.32.9 getAccelerationMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum acceleration supported by an axis.
Notes: index: The acceleration index.

135.32.10 getAngularRate(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current angular rate of an axis.
Notes:

Returns the angular rate in degrees/second.
index: The angular rate index.
Lasterror is set.

135.32.11 getAngularRateMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum angular rate supported by an axis.
Notes:

index: The angular rate index.
Lasterror is set.

135.32.12 getAngularRateMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum angular rate supported by an axis.
Notes:

index: The angular rate index.
Lasterror is set.

135.32.13 getCompassAxisCount as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of compass axes supplied by this board.
Notes: Lasterror is set.

135.32.14 getDataRate as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the data rate in milliseconds.
Notes: Lasterror is set.

135.32.15 getDataRateMax as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum supported data rate in milliseconds.
Notes: Lasterror is set.

135.32.16 getDataRateMin as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum supported data rate in milliseconds.
Notes: Lasterror is set.

135.32.17 getGyroAxisCount as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of gyroscope axes supplied by this board.
Notes: Lasterror is set.

135.32.18 getMagneticField(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current magnetic field stregth of an axis.
Notes:

index: The magnetic field index.
Returns the magnetic field strength in Gauss.
Lasterror is set.

135.32.19 getMagneticFieldMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum magnetic field stregth supported by an axis.
Notes:

index: The magnetic field index.
Lasterror is set.

135.32.20 getMagneticFieldMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum magnetic field stregth supported by an axis.
Notes:

index: The magnetic field index.
Lasterror is set.

135.32.21 resetCompassCorrectionParameters

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the compass correction factors.
Notes:

Magnetic field data will be presented directly as reported by the sensor.
Lasterror is set.

135.32.22 setCompassCorrectionParameters(magField as Double, offset0 as Double, offset1 as Double, offset2 as Double, gain0 as Double, gain1 as Double, gain2 as Double, T0 as Double, T1 as Double, T2 as Double, T3 as Double, T4 as Double, T5 as Double)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the compass correction factors. This can be used to correcting any sensor errors, including hard and soft iron offsets and sensor error factors.
Notes:

Lasterror is set.

magField: Local magnetic field strength.
offset0: Axis 0 offset correction.
offset1: Axis 1 offset correction.
offset2: Axis 2 offset correction.
gain0: Axis 0 gain correction.
gain1: Axis 1 gain correction.
gain2: Axis 2 gain correction.
T0: Non-orthogonality correction factor 0.
T1: Non-orthogonality correction factor 1.
T2: Non-orthogonality correction factor 2.
T3: Non-orthogonality correction factor 3.
T4: Non-orthogonality correction factor 4.
T5: Non-orthogonality correction factor 5.

135.32.23 setDataRate(milliseconds as Integer)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the data rate in milliseconds.
Notes:

Lasterror is set.
Note that data at rates faster then 8ms will be delivered to events as an array of data.

135.32.24 zeroGyro

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Zeroes the gyroscope.
Notes:

This takes about two seconds and the gyro zxes will report 0 during the process.
This should only be called when the board is not moving.

Lasterror is set.

135.32.25 Events

135.32.26 SpatialData(data() as PhidgetSpatialEventDataMBS, dataCount as Integer)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when new data has been received.
Notes:

This is called at getDataRate, up to 8ms, for faster then 8ms data, multiple sets of data are supplied in a single event.
Lasterror is set.

135.33 class PhidgetStepperMBS

135.33.1 class PhidgetStepperMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for a phidget stepper device.
Notes:

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the PhidgetMBS class.

135.33.2 Methods

135.33.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: On success the handle value is not zero.

135.33.4 getAcceleration(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the acceleration value.
Notes: The Lasterror property is set.

135.33.5 getAccelerationMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum acceleration supported by a motor.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.6 getAccelerationMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum acceleration supported by a motor.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.7 getCurrent(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current value.
Notes: The Lasterror property is set.

135.33.8 getCurrentLimit(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum position that a motor can go to.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.9 getCurrentMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum current limit.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.10 getCurrentMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum current limit.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.11 getCurrentPosition(index as Integer) as int64

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current position of a motor.
Notes: The Lasterror property is set.

135.33.12 getEngaged(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the engaged state of a motor. This is whether the motor is powered or not.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.13 getInputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of digital inputs supported by this board.
Notes: The Lasterror property is set.

135.33.14 getInputState(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of a digital input.
Notes: The Lasterror property is set.

135.33.15 getMotorCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of motors supported by this controller.
Notes: The Lasterror property is set.

135.33.16 getPositionMax(index as Integer) as int64

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum velocity that can be set for a motor.
Notes: The Lasterror property is set.

135.33.17 getPositionMin(index as Integer) as int64

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum position that a motor can go to.
Notes: The Lasterror property is set.

135.33.18 getStopped(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the stopped state of a motor. This is true when the motor is not moving and there are no outstanding commands.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.19 getTargetPosition(index as Integer) as int64

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last set target position of a motor.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.20 getVelocity(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current velocity of a motor.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.21 getVelocityLimit(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last set velocity limit for a motor.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.22 getVelocityMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum velocity that can be set for a motor.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.23 getVelocityMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum velocity that can be set for a motor.
Notes: The Lasterror property is set.

135.33.24 setAcceleration(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the acceleration.
Notes: The Lasterror property is set.

135.33.25 setCurrentLimit(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current limit for a motor.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.26 setCurrentPosition(index as Integer, value as int64)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the current position of a motor.
Notes:

This will not move the motor, just update the position value.

index: The motor index.
value: The position.

The Lasterror property is set.

135.33.27 setEngaged(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the engaged state of a motor. This is whether the motor is powered or not.
Notes:

index: The motor index.
value: The engaged state. Possible values are true and false.

The Lasterror property is set.

135.33.28 setTargetPosition(index as Integer, value as int64)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the target position of a motor.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.29 setVelocityLimit(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the velocity limit for a motor.
Notes:

index: The motor index.

The Lasterror property is set.

135.33.30 Events

135.33.31 CurrentChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The current value changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.33.32 InputChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The input value changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.33.33 ServoChanged(index as Integer, value as int64)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The servo value changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.33.34 VelocityChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when the velocity changes.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.34 class PhidgetTemperatureSensorMBS

135.34.1 class PhidgetTemperatureSensorMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget temperature sensor.
Notes:

The PhidgetTemperatureSensor is a component that provides a high-level programmer interface to control a PhidgetTemperatureSensor device connected through a USB port.

With this component, the programmer can:

- Read the temperature of Thermocouple device.
- Read cold junction temperature.
- Get notification of temperature change.

Subclass of the PhidgetMBS class.

135.34.2 Methods

135.34.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: On success the handle value is not zero.

135.34.4 getAmbientTemperature as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the ambient (board) temperature.
Notes: The Lasterror property is set.

135.34.5 getAmbientTemperatureMax as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum temperature that the ambient onboard temperature sensor can measure.
Notes: The Lasterror property is set.

135.34.6 getAmbientTemperatureMin as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum temperature that the ambient onboard temperature sensor can measure.
Notes: The Lasterror property is set.

135.34.7 getPotential(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the potential value for the temperature sender with the given index.
Notes: The Lasterror property is set.

135.34.8 getPotentialMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum potential that a thermocouple input can measure.
Notes: The Lasterror property is set.

135.34.9 getPotentialMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum potential that a thermocouple input can measure.
Notes: The Lasterror property is set.

135.34.10 getTemperature(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current temperature in Celsius or Fahrenheit (depending on UseImperial property).
Notes:

Index = 0 returns the temperature of the cold junction.
Index = 1 returns the temperatrue of the thermocouple.

Note that this value defaults to -500. Applications that do not wish to see this value should use Change Handlers instead of polling the device for data.

The Lasterror property is set.

135.34.11 getTemperatureChangeTrigger(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of change that should exist between the last reported value and the current value before an TemperatureChange event is fired.
Notes: The Lasterror property is set.

135.34.12 getTemperatureInputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of thermocouple inputs supported by this board.
Notes: The Lasterror property is set.

135.34.13 getTemperatureMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum temperature that can be measured by a thermocouple input. This depends on the type of thermocouple attached.
Notes: The Lasterror property is set.

135.34.14 getTemperatureMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum temperature that can be measured by a thermocouple input.
Notes:

This depends on the type of thermocouple attached.
The Lasterror property is set.

135.34.15 getThermocoupleType(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the type of thermocouple set to be at a thermocouple input. By default this is K-Type.
Notes:

The Lasterror property is set.
type: The thermocouple type.

135.34.16 setTemperatureChangeTrigger(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specifies the amount of change that should exist between the last reported value and the current value before an TemperatureChange event is fired.
Notes: The Lasterror property is set.

135.34.17 setThermocoupleType(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the type of thermocouple plugged into a thermocouple input. By default this is K-Type.
Example:

```
dim t as PhidgetTemperatureSensorMBS

const PHIDGET_TEMPERATURE_SENSOR_K_TYPE = 1 // K-Type thermocouple
const PHIDGET_TEMPERATURE_SENSOR_J_TYPE = 2 // J-Type thermocouple
const PHIDGET_TEMPERATURE_SENSOR_E_TYPE = 3 // E-Type thermocouple
```

```
const PHIDGET_TEMPERATURE_SENSOR_T_TYPE = 4 // T-Type thermocouple

t.setThermocoupleType 0, PHIDGET_TEMPERATURE_SENSOR_T_TYPE
```

Notes: The Lasterror property is set.

135.34.18 Events

135.34.19 TemperatureChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The temperatur changed.
Notes:

Index: Index of the Temperature Sensor firing the Event
Value: Value of the Temperature Sensor

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

135.34.20 Constants

135.34.21 PHIDGET_TEMPERATURE_SENSOR_E_TYPE = 3

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the sensor type constants.
Notes: E-Type thermocouple

135.34.22 PHIDGET_TEMPERATURE_SENSOR_J_TYPE = 2

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the sensor type constants.
Notes: J-Type thermocouple

135.34.23 PHIDGET_TEMPERATURE_SENSOR_K_TYPE = 1

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the sensor type constants.
Notes: K-Type thermocouple

135.34.24 PHIDGET_TEMPERATURE_SENSOR_T_TYPE = 4

MBS USB Plugin, Plugin Version: 11.0.

Function: One of the sensor type constants.
Notes: T-Type thermocouple

135.35 class PhidgetTextLCDMBS

135.35.1 class PhidgetTextLCDMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for the phidget text LCD.
Notes:

The PhidgetTextLCD is a component that provides a high-level programmer interface to control a PhidgetTextLCD device connected through a USB port.

With this component, the programmer can:

- Display text on a PhidgetTextLCD module.

Subclass of the PhidgetMBS class.

135.35.2 Methods

135.35.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
Lasterror is set.

135.35.4 getBacklight as boolean

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of the backlight.
Notes: The Lasterror property is set.

135.35.5 getBrightness as Integer

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the brightness of the backlight. Not supported on all TextLCDs
Notes:

The backlight brightness has a range of 0 to 255.
The Lasterror property is set.

135.35.6 getColumnCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of columns per supported by this display.
Notes: The Lasterror property is set.

135.35.7 getContrast as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the contrast value from 0-255.
Notes:

Note that this defaults to 0.
The Lasterror property is set.

135.35.8 getCursorBlink as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines if the cursor's blinking is on or off.
Notes:

Note that this defaults to False.
The Lasterror property is set.

135.35.9 getCursorOn as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines if the cursor is on or off.
Notes:

Note that this defaults to False.
The Lasterror property is set.

135.35.10 getRowCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of rows supported by this display.
Notes: The Lasterror property is set.

135.35.11 getScreen as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the active screen.
Notes: Lasterror is set.

135.35.12 getScreenCount as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of Display supported by this TextLCD.
Notes: Lasterror is set.

135.35.13 getScreenSize as Integer

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the screen size.
Notes:

See PHIDGET_TEXTLCD_SCREEN_* constants.
Lasterror is set.

135.35.14 initialize

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes the active screen.
Notes:

Only supported on the TextLCD adapter.
This should be called if a screen is attached after power up, or to clear the screen after setting the size.
Lasterror is set.

135.35.15 setBacklight(backlightState as boolean)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the state of the backlight.
Notes: The Lasterror property is set.

135.35.16 setBrightness(Brightness as Integer)

MBS USB Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the brightness of the backlight. Not supported on all TextLCDs
Notes:

The backlight brightness has a range of 0 to 255.
The Lasterror property is set.

135.35.17 setContrast(Contrast as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the contrast from 0-255.
Notes: The Lasterror property is set.

135.35.18 setCursorBlink(CursorBlink as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the cursor's blinking on or off.
Notes: The Lasterror property is set.

135.35.19 setCursorOn(CursorOn as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the cursor on or off.
Notes:

This cursor is displayed at the last location that was changed.

The Lasterror property is set.

135.35.20 setCustomCharacter(index as Integer, val1 as Integer, val2 as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets a custom character.
Notes:

With existing hardware, there is space for 8 custom characters : Index can range from 8 to 15.
Each character is described by a set of integers.
For more information, have a look at the TextLCD example in the examples.zip for Phidget21.

The Lasterror property is set.

135.35.21 setDisplayCharacter(index as Integer, column as Integer, character as Integer)

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets a single character on the display.
Notes:

index: The row index.
column: The column index.
character: The character to display.

The Lasterror property is set.

135.35.22 setDisplayString(row as Integer, displayString as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the text to display on a particular row of the display.
Notes:

Row: Row to set on display
DisplayString: String to set on display. The text will be clipped at the right edge of the display.
The Lasterror property is set.

135.35.23 setScreen(screenIndex as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the active screen.
Notes:

This is the screen that all subsequent API calls will apply to.
Lasterror is set.

135.35.24 setScreenSize(screenSize as Integer)

MBS USB Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the active screen size. Only supported on the TextLCD Adapter.
Notes: Lasterror is set.

135.35.25 Constants

135.35.26 PHIDGET_TEXTLCD_SCREEN_1x16 = 4

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 1 row, 16 column screen

135.35.27 PHIDGET_TEXTLCD_SCREEN_1x40 = 10

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 1 row, 40 column screen

135.35.28 PHIDGET_TEXTLCD_SCREEN_1x8 = 2

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 1 row, 8 column screen

135.35.29 PHIDGET_TEXTLCD_SCREEN_2x16 = 5

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 16 column screen

135.35.30 PHIDGET_TEXTLCD_SCREEN_2x20 = 7

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 20 column screen

135.35.31 PHIDGET_TEXTLCD_SCREEN_2x24 = 9

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 24 column screen

135.35.32 PHIDGET_TEXTLCD_SCREEN_2x40 = 11

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 40 column screen

135.35.33 PHIDGET_TEXTLCD_SCREEN_2x8 = 3

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 8 column screen

135.35.34 PHIDGET_TEXTLCD_SCREEN_4x16 = 6

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 4 row, 16 column screen

135.35.35 PHIDGET_TEXTLCD_SCREEN_4x20 = 8

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 4 row, 20 column screen

135.35.36 PHIDGET_TEXTLCD_SCREEN_4x40 = 12

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 4 row, 40 column screen (special case, requires both screen connections)

135.35.37 PHIDGET_TEXTLCD_SCREEN_NONE = 1

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: no screen attached

135.35.38 PHIDGET_TEXTLCD_SCREEN_UNKNOWN = 13

MBS USB Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: Unknown

135.36 class PhidgetTextLEDMBS

135.36.1 class PhidgetTextLEDMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget text LED.
Notes:

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the PhidgetMBS class.

135.36.2 Methods

135.36.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: On success the handle value is not zero.

135.36.4 getBrightness as Integer

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current brightness.
Notes: The Lasterror property is set.

135.36.5 getColumnCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of columns per supported by this display.
Notes: The Lasterror property is set.

135.36.6 getRowCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of rows supported by this display.
Notes: The Lasterror property is set.

135.36.7 setBrightness(Brightness as Integer)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the brightness.
Notes: The Lasterror property is set.

135.36.8 setDisplayString(row as Integer, displayString as string)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the display string for the given row.
Notes: The Lasterror property is set.

135.37 class PhidgetWeightSensorMBS

135.37.1 class PhidgetWeightSensorMBS

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget weight sensor.
Notes:

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the PhidgetMBS class.

135.37.2 Methods

135.37.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

135.37.4 getWeight as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current weight.
Notes: The Lasterror property is set.

135.37.5 getWeightChangeTrigger as Double

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of change that should exist between the last reported value and the current value before an WeightChange event is fired.

Notes: The Lasterror property is set.

135.37.6 setWeightChangeTrigger(value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the amount of change that should exist between the last reported value and the current value before an WeightChange event is fired.
Notes: The Lasterror property is set.

135.37.7 Events

135.37.8 WeightChanged(value as Double)

MBS USB Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The weight changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

Chapter 136

Photos

136.1 class PHAdjustmentDataMBS

136.1.1 class PHAdjustmentDataMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of the edits made to an asset's photo, video, or Live Photo content, which allows your app to reconstruct or revert the effects of prior editing sessions.
Notes:

When a user edits an asset, Photos saves a PHAdjustmentData object along with the modified image or video data. This object provides an application-defined "recipe" you can use to reconstruct the edit. For example, if your app applies filters to a photo, you might might create adjustment data that identifies which filters the user picked, the parameters for each, and the order to apply the filters in. Later, the user can resume working with those filters and parameters by using your app or another app that understands your adjustment data format. When iCloud Photos is enabled, a user can revert or resume edits made on a different device.

You work with adjustment data when editing an asset, using either the requestContentEditingInputWithOptions method or a photo extension view controller that implements the PHContentEditingController protocol.

- When you begin an edit (through a PHContentEditingInputMBS object), examine the editing input's adjustmentData property to decide whether the last edit made to the asset is compatible with your app. If so, you can allow the user to resume working with that edit. If not, you can make further edits to the last saved version of the photo.
- When you commit an edit (through a PHContentEditingOutputMBS object), provide a new adjustment whose data represents the changes your app made.

For each asset, Photos stores only one PHAdjustmentDataMBS object, representing the most recent edit

made to the asset's content.

136.1.2 Methods

136.1.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.11 or newer.

136.1.4 Constructor(formatIdentifier as string, formatVersion as string, data as Memoryblock)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes an adjustment object with the specified format and data.
Notes:

formatIdentifier: A string that uniquely identifies the format of the adjustment data.
formatVersion: A version number for the adjustment data format.
data: A serialized form of whatever information is needed to reconstruct the adjustment.

Returns an initialized adjustment object.

To uniquely identify the adjustments your app makes, use the the formatIdentifier and formatVersion parameters. These parameters help you determine whether and how to interpret the adjustment data when working with an edited asset later. For best results, use reverse-DNS-style identifiers and monotonically increasing version numbers.
For example, in the first version of your app, you might save adjustment data using the identifier com.example.myApp and version 1.0. If a later version of your app adds incompatible information to the adjustment data, you can use the same identifier and increase the version number to 2.0.

Use the data parameter to store whatever information is useful to your app for reconstructing an edit. For example, if your app applies Core Image filters to photos, you can use this parameter to store a serialized property list that describes the filters and their parameters.

Because Photos limits the size of adjustment data, you should keep your edit information short and descriptive. Don't use image data to describe an edit—instead, save only the minimal information that is needed to recreate the edit.
Your app must provide a non-empty Memoryblock for the data parameter. If you cannot provide relevant data to describe an edit, you may pass data that encodes an NSUUID object.

136.1.5 Properties

136.1.6 data as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Data that contains the information necessary to reconstruct the adjustment.
Notes:

Use this property to resume working with the last edit that was made to an asset. For example, if your app applies Core Image filters to photos, this property may hold a serialized property list that describes the filters and their parameters. Use the formatIdentifier and formatVersion properties to determine whether the adjustment data saved with an asset is in a format that your app can understand.
(Read only property)

136.1.7 formatIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string uniquely identifying the format of the adjustment data.
Notes:

Set this identifier when you create an adjustment object with the constructor. For best results, identify your organization or product using a reverse-DNS-style name, such as com.example.myApp.

Read this property, and the formatVersion property, to determine whether the adjustment data saved with an asset was created by your app or is otherwise compatible with your app.
(Read only property)

136.1.8 formatVersion as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A version number for the adjustment data format.
Notes:

Set this identifier when creating an adjustment object with the constructor.
Read this property, and the formatIdentifier property, to determine whether the adjustment data saved with an asset was created by your app or is otherwise compatible with your app.
For example, in the first version of your app, you might save adjustment data using the identifier com.example.myApp and version 1.0. If a later version of your app adds incompatible information to the adjustment data, you can use the same identifier and increase the version number to 2.0.

(Read only property)

136.1.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.2 class PHAssetChangeRequestMBS

136.2.1 class PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create, delete, change metadata for, or edit the content of a Photos asset, for use in a photo library change block.
Notes:

You use the PHAssetChangeRequest class to request changes for PHAssetMBS objects. To make changes to assets in the Photos library, create a change request by using the appropriate class method for the change you want to perform.

- Call one of the methods listed in Adding New Assets to create a new asset from an image or video file.
- Call the deleteAssets: method to delete existing assets.
- Call the changeRequestForAsset: method to modify an asset's content or metadata.

A change request for creating or modifying an asset works like a mutable version of the asset object. Use the change request's properties to request changes to the corresponding properties of the asset itself.

After Photos runs the change block and calls your completion handler, the asset's state reflects the changes that you requested in the block.

If you create or use a change request object outside a photo library change block, Photos raises an Objective-C exception. For details on change blocks, see PHPhotoLibraryMBS.

136.2.2 Methods

136.2.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.2.4 changeRequestForAsset(asset as PHAssetMBS) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified asset.
Notes:

asset: The asset to be modified.

Returns an asset change request.

Before editing an asset, use its canPerformEditOperation method to see if the asset allows editing.

After you create a change request within a photo library change block, propose changes to the original asset's properties by setting the corresponding properties of the change request. After Photos runs your change block, the asset's properties reflect your changes. For details on change blocks, see PHPhotoLibraryMBS.

To edit an asset's image or video content, first begin a content editing session with the asset's requestContentEditingInputWithOptions method. You commit a content edit by setting the contentEditingOutput property of a change request within a change block. For more information about asset content editing, see PHAssetMBS.

136.2.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.2.6 creationRequestForAssetFromImage(image as NSImageMBS) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new image asset to the Photos library.
Notes:

image: An image.

Returns an asset creation request.

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS.
To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

136.2.7 creationRequestForAssetFromImageAtFile(file as FolderItem) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new image asset to the Photos library, using the image file at the specified URL.
Notes:

file: A URL for an image file.

Returns an asset creation request.

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS.

To set metadata properties of the newly created asset, use the corresponding properties of the change request (listed in Modifying Assets). To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

136.2.8 creationRequestForAssetFromVideoAtFileURL(file as FolderItem) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new video asset to the Photos library, using the video file at the specified URL.
Notes:

file: A folderitem for a video file.

Returns an asset creation request.

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS.

To set metadata properties of the newly created asset, use the corresponding properties of the change request (listed in Modifying Assets). To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

136.2.9 deleteAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests that the specified assets be deleted.
Notes:

assets: An array of PHAssetMBS objects to be deleted.

Call this method within a photo library change block to delete assets. For details on change blocks, see PHPhotoLibraryMBS.

136.2.10 revertAssetContentToOriginal

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Request to revert any edits made to the asset's content.
Notes:

When an asset has been edited, Photos stores multiple versions of the asset: the original version of the asset as it was first captured or imported, and the input and output of the most recent edit. (You work with asset versions when requesting to edit an asset's content—see PHContentEditingInputRequestOptions.) Call this method to revert to the original version of the asset, discarding all edits.

This request fails if original content for the asset is not available on the current device (for example, if iCloud Photo Library is enabled and the user has edited the asset on a different device). Use PHAssetResourceManagerMBS to ensure that original asset content is downloaded to the current device before making this request.

136.2.11 Properties

136.2.12 contentEditingOutput as PHContentEditingOutputMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The output of an asset content editing session.
Notes:

To edit an asset's image or video content, you must first begin a content editing session with the asset's requestContentEditingInputWithOptions method. You commit a content edit by setting the contentEditingOutput property of a change request within a change block. For more information about asset content editing, see PHAssetMBS.
(Read and Write property)

136.2.13 creationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The date and time at which the asset claims to have been originally created.
Notes:

Set this property to change the creation date of an asset.
(Read and Write property)

136.2.14 creationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The date and time at which the asset claims to have been originally created.
Notes:

Set this property to change the creation date of an asset.
(Read and Write property)

136.2.15 Favorite as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset is marked as one of the user's favorites.
Notes: (Read and Write property)

136.2.16 Hidden as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset is hidden in collections.
Notes:

Hidden assets do not appear in the Moments interface in the Photos app.
(Read and Write property)

136.2.17 location as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The location information saved with the asset.
Notes:

Typically, an asset's location metadata identifies the place where the asset was captured. Use this property to provide a different location.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read and Write property)

136.2.18 placeholderForCreatedAsset as PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A placeholder object for the asset that the change request creates.
Notes:

Use this property if you need to reference the asset created by a change request within the same change block.
(Read only property)

136.3 class PHAssetCollectionChangeRequestMBS

136.3.1 class PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create, delete, or modify a Photos asset collection, for use in a photo library change block.
Notes:

You use the PHAssetCollectionChangeRequestMBS class to request changes for PHAssetCollectionMBS objects. To make changes to asset collections (such as user-created albums) in the Photos library, create a change request using the appropriate class method for the change you want to perform.

- Call the creationRequestForAssetCollectionWithTitle: method to create a new asset collection.
- Call the deleteAssetCollections: method to delete existing asset collections.
- Call the changeRequestForAssetCollection: or changeRequestForAssetCollection:assets: method to modify a collection's metadata or list of member assets.

Before creating a change request, use the canPerformEditOperation: method to verify that the collection allows the edit operation you're requesting. If you attempt to perform an unsupported edit operation, Photos throws an exception.
A change request for creating or modifying an asset collection works like a mutable version of the asset collection object. Use the change request's properties and instance methods to request changes to the asset collection itself.

After Photos runs the change block and calls your completion handler, the asset collection's state reflects the changes you requested in the block.
If you create or use a change request object outside a photo library change block, Photos raises an Objective-C exception. For details on change blocks, see PHPhotoLibraryMBS.
Subclass of the PHChangeRequestMBS class.

136.3.2 Methods

136.3.3 addAsset(asset as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Add the specified asset to the asset collection.
Notes:

asset: The PHAsset object to be added to the asset collection.

If you created the change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method, Photos inserts the new assets after the existing assets in the collection. Otherwise, the arrangement of the new assets relative to others in the collection is undefined.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

136.3.4 addAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Add the specified assets to the asset collection.
Notes:

assets: An array of PHAsset objects to be added to the asset collection.

If you created the change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method, Photos inserts the new assets after the existing assets in the collection. Otherwise, the arrangement of the new assets relative to others in the collection is undefined.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

136.3.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.3.6 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS) as PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified asset collection.
Notes:

assetCollection: The asset collection to be modified.

Returns an asset collection change request.

After you create a change request within a photo library change block, propose changes to the collection's title or list of member assets with the properties and instance methods of the change request. After Photos runs your change block, the asset collection reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.

Use this method when modifying an asset collection's metadata or when adding or removing assets without regard to their arrangement. To work with indexes in the list of member assets, use the changeRequestForAssetCollection method instead.
See also:

- 136.3.7 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS, assets as PHFetchResultMBS) as PHAssetCollectionChangeRequestMBS 21391

136.3.7 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS, assets as PHFetchResultMBS) as PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified asset collection, with a fetch result for tracking changes.
Notes:

assetCollection: The asset collection to be modified.
assets: A fetch result listing the assets in the collection.

Returns an asset collection change request.

After you create a change request within a photo library change block, you propose changes to the collection's title or list of member assets with the properties and instance methods of the change request. After Photos runs your change block, the asset collection reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.

Use this method when you need to insert, remove, or rearrange assets at specified indexes in the asset collection's list of member assets. By passing in a fetch result reflecting what your app sees as the current state of the collection's membership, the Photos framework can ensure that the indexes you specify are valid even if the collection has changed since you last fetched it. If you don't need to work with indexes in the list of member assets, you can use the changeRequestForAssetCollection method instead.
See also:

- 136.3.6 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS) as PHAssetCollectionChangeRequestMBS 21390

136.3.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.3.9 creationRequestForAssetCollectionWithTitle(title as string) as PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new asset collection to the Photos library.
Notes:

image: A name for the new asset collection.

Returns an asset collection creation request.

Call this method within a photo library change block to create a new asset collection. For details on change blocks, see PHPhotoLibraryMBS.
To add assets to the newly created asset collection or change its title, use the methods listed in Modifying Asset Collections. To reference the newly created asset collection later in the same change block or after the change block completes, use the placeholderForCreatedAssetCollection property to retrieve a placeholder object.

136.3.10 deleteAssetCollections(Collections() as PHCollectionListMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests that the specified asset collections be deleted.
Notes:

assetCollections: An array of PHAssetCollectionMBS objects to be deleted.

Call this method within a photo library change block to delete asset collections. For details on change blocks, see PHPhotoLibraryMBS.

136.3.11 insertAsset(asset as PHAssetMBS, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Insert the specified asset into the collection at the specified indexes.

Notes:

asset: A PHAssetMBS object to be inserted into the asset collection.
index: The index at which the asset should be inserted. The count of locations in this index set must equal the count of assets.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method before inserting assets.

For a detailed discussion of how the index set you specify maps to insertions in the list of assets, see the similar NSMutableArray method insertObjects.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

136.3.12 insertAssets(assets() as PHAssetMBS, indexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts the specified assets into the collection at the specified indexes.
Notes:

assets: An array of PHAssetMBS objects to be inserted into the asset collection.
indexes: The indexes at which the assets should be inserted. The count of locations in this index set must equal the count of assets.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method before inserting assets.

For a detailed discussion of how the index set you specify maps to insertions in the list of assets, see the similar NSMutableArray method insertObjects.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

136.3.13 moveAsset(fromIndex as Integer, toIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Move the asset at the specified index in the asset collection to a new index.
Notes:

fromIndex: The indexes of the asset to be moved in the asset collection.
toIndex: The index at which to place the moved asset, relative to the collection's ordering after removing the items at indexes.

When you call this method, Photos first removes the items in the indexes parameter from the collection, and then inserts them at the location specified by the toIndex parameter.
To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method before rearranging assets.

136.3.14 moveAssets(fromIndexes as NSIndexSetMBS, toIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Moves the assets at the specified indexes in the asset collection to a new index.
Notes:

fromIndexes: The indexes of the assets to be moved in the asset collection.
toIndex: The index at which to place the moved assets, relative to the collection's ordering after removing the items at indexes.

When you call this method, Photos first removes the items in the indexes parameter from the collection, and then inserts them at the location specified by the toIndex parameter.
To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method before rearranging assets.

136.3.15 removeAsset(asset as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the specified asset from the asset collection.
Notes:

asset: A PHAssetMBS object to be removed from the asset collection.

This method removes assets from the collection based on their identity (determined by the localIdentifier

property of each asset). To remove objects at specified indexes, use the removeAssets method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets:title: method) do not support adding or removing content.
See also:

- 136.3.16 removeAsset(AtIndex as Integer) 21395

136.3.16 removeAsset(AtIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the asset at the specified index from the asset collection.
Notes:

index: The index of the asset to be removed from the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAsset-Collection method before removing assets. To remove objects based on their identities (without regard to their indexes in the collection), use the removeAssets: method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.
See also:

- 136.3.15 removeAsset(asset as PHAssetMBS) 21394

136.3.17 removeAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the specified assets from the asset collection.
Notes:

assets: An array of PHAssetMBS objects to be removed from the asset collection.

This method removes assets from the collection based on their identity (determined by the localIdentifier property of each asset). To remove objects at specified indexes, use the removeAssets method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets:title: method) do not support adding or removing content.
See also:

- 136.3.18 removeAssets(AtIndexes as NSIndexSetMBS) 21396

136.3.18 removeAssets(AtIndexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the assets at the specified indexes from the asset collection.
Notes:

indexes: The indexes of the assets to be removed from the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAsset-Collection method before removing assets. To remove objects based on their identities (without regard to their indexes in the collection), use the removeAssets: method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.
See also:

- 136.3.17 removeAssets(assets() as PHAssetMBS) 21395

136.3.19 replaceAsset(AtIndex as Integer, asset as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Replaces the asset at the specified index in the asset collection with the specified asset.
Notes:

index: The index of the asset to be replaced in the asset collection.
asset: A PHAssetMBS object to be inserted into (or moved within) the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAs-setCollection method before rearranging assets.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAsset-CollectionWithAssets method) do not support adding or removing content.

136.3.20 replaceAssets(AtIndexes as NSIndexSetMBS, assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Replaces the assets at the specified indexes in the asset collection with the specified assets.
Notes:

indexes: The indexes of the assets to be replaced in the asset collection.
assets: An array of PHAssetMBS objects to be inserted into (or moved within) the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method before rearranging assets.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

136.3.21 Properties

136.3.22 placeholderForCreatedAssetCollection as PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A placeholder object for the asset collection that the change request creates.
Notes:

Use this property if you need to reference the asset collection created by a change request within the same change block.
(Read only property)

136.3.23 title as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The displayed name of the asset collection.
Notes:

Set this property to change the asset collection's title.
(Read and Write property)

136.4 class PHAssetCollectionMBS

136.4.1 class PHAssetCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A representation of a Photos asset grouping, such as a moment, user-created album, or smart album.
Notes:

In the Photos framework, collection objects (including asset collections) do not directly reference their member objects, and there are no other objects that directly reference collection objects. To retrieve the members of an asset collection, fetch them with a PHAsset class method such as fetchAssetsInAssetCollection. To find asset collections, use one of the methods listed in Fetching Asset Collections.

Important
Accessing or modifying the Photos library requires explicit authorization from the user. The first time you call one of the methods listed in Fetching Asset Collections, Photos automatically prompts the user for authorization. (Alternatively, you can use the PHPhotoLibraryMBS.requestAuthorization method to prompt the user at a time of your choosing.)

Your app's Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10.0 will crash if this key is not present.

Like assets and collection lists, asset collections are immutable. To create, rename, or delete asset collections, or to add, remove, or rearrange members in an asset collection, create a PHAssetCollectionChangeRequestMBS object within a photo library change block. For details on using change requests and change blocks to update the photo library, see PHPhotoLibraryMBS.
Subclass of the PHCollectionMBS class.

136.4.2 Blog Entries

- Show Live Photos in your Xojo application

136.4.3 Blog Entries

- Show Live Photos in your Xojo application

136.4.4 Methods

136.4.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.4.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.4.7 fetchAssetCollectionsContainingAsset(asset as PHAssetMBS, type as Integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves asset collections of the specified type containing the specified asset.
Notes:

asset: A Photos asset.
type: An asset collection type, such as an album or a moment. See Type constants.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

136.4.8 fetchAssetCollectionsWithALAssetGroupURLs(assetGroupURLs() as string, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves asset collections using URLs provided by the Assets Library framework.
Notes:

assetGroupURLs: An array of URLs, each an asset group URL that was previously retrieved from an ALAssetsGroupMBS object.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use

default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

The Assets Library framework is deprecated in iOS 8.0 and later, replaced by the Photos framework. Use this method if your app has previously stored URLs from ALAssetsGroupMBS objects and you need to retrieve the corresponding Photos framework objects.

136.4.9 fetchAssetCollectionsWithLocalIdentifiers(identifiers() as string, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves asset collections with the specified unique identifiers.
Notes:

identifiers: An array of strings, each the localIdentifier string of an asset collection.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

136.4.10 fetchAssetCollectionsWithType(type as Integer, subType as integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves asset collections of the specified type and subtype.
Notes:

type: A type of asset collection, such as an album or a moment. See Type constants.
subtype: A subtype of asset collection. See Subtype constants.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all asset collections with the specified type and subtype. To retrieve a more specific set of asset collections, provide a PHFetchOptionsMBS object containing

a filter predicate.

136.4.11 localizedLocationNames as String()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The names of locations grouped by the collection (an array of strings).
Notes: This property applies only to asset collections whose type is PHAssetCollectionTypeMoment. The Photos app automatically creates moments to group assets by time and location. A moment might group assets captured in multiple locations, so this array can contain multiple names. For other asset collection types, this property's value is nil.

136.4.12 transientAssetCollectionWithAssetFetchResult(fetchResult as PHAssetMBS, title as string) as PHAssetCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a temporary asset collection containing the assets from the specified fetch result.
Notes:

fetchResult: A fetch result containing one or more PHAssetMBS objects.
title: A name for the new temporary asset collection.

Returns a new asset collection.

Transient asset collections are not saved to local storage or iCloud and do not appear in the Photos application or other apps using the Photos framework. A transient collection can be useful if you've designed a UI for displaying the contents of a collection and want to display an arbitrary set of assets.

136.4.13 transientAssetCollectionWithAssets(assets() as PHAssetMBS, title as string) as PHAssetCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a temporary asset collection containing the specified assets.
Notes:

assets: An array of PHAssetMBS objects.
title: A name for the new temporary asset collection.

Returns a new asset collection.

Transient asset collections are not saved to local storage or iCloud and do not appear in the Photos app or other apps using the Photos framework. A transient collection can be useful if you've designed a UI for displaying the contents of a collection and want to display an arbitrary set of assets.

136.4.14 Properties

136.4.15 approximateLocation as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A location representing those of all assets in the collection.
Notes:

The Photos app automatically creates moments to group assets by time and location. A moment can contain photos from several locations in close proximity. In such cases, this property describes the general area containing the locations of all assets in the moment.
This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property's value is nil.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read only property)

136.4.16 assetCollectionSubtype as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtype of the asset collection.
Notes:

Use subtypes to make minor distinctions between collections of the same type. For albums, for example, you might distinguish user-created albums from those synced from iPhoto. See Subtype constants for possible values.
(Read only property)

136.4.17 assetCollectionType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of the asset collection, such as an album or a moment.
Notes: (Read only property)

136.4.18 endDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The latest creation date among all assets in the asset collection.
Notes:

This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property's value is nil.
(Read only property)

136.4.19 endDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The latest creation date among all assets in the asset collection.
Notes:

This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property's value is nil.
(Read only property)

136.4.20 estimatedAssetCount as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The estimated number of assets in the asset collection.
Notes:

This count may not match the current number of assets in the collection. To get the most recent count, fetch the collection's assets with the fetchAssetsInAssetCollection method and read the count property of the fetch result.
If asset count information is not available for the collection, this property's value is NSNotFound.
(Read only property)

136.4.21 startDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The earliest creation date among all assets in the asset collection.
Notes:

This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property's value is nil.

(Read only property)

136.4.22 startDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The earliest creation date among all assets in the asset collection.
Notes:

This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property's value is nil.
(Read only property)

136.4.23 Constants

136.4.24 SubtypeAlbumCloudShared = 101

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: An iCloud Shared Photo Stream.

136.4.25 SubtypeAlbumImported = 6

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: An album imported from a camera or external storage.

136.4.26 SubtypeAlbumMyPhotoStream = 100

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: The user's personal iCloud Photo Stream.

136.4.27 SubtypeAlbumRegular = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: An album created in the Photos app.

136.4.28 SubtypeAlbumSyncedAlbum = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: An album synced to the device from iPhoto.

136.4.29 SubtypeAlbumSyncedEvent = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: An Event synced to the device from iPhoto.

136.4.30 SubtypeAlbumSyncedFaces = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A Faces group synced to the device from iPhoto.

136.4.31 SubtypeAny = -1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A bit mask representing all possible subtypes.

136.4.32 SubtypeSmartAlbumAllHidden = 205

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all assets hidden from the Moments view in the Photos app.

136.4.33 SubtypeSmartAlbumAnimated = 214

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all image animation assets.

136.4.34 SubtypeSmartAlbumBursts = 207

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all burst photo sequences in the photo library.

136.4.35 SubtypeSmartAlbumDepthEffect = 212

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all images captured using the Depth Effect camera mode on compatible devices.

136.4.36 SubtypeSmartAlbumFavorites = 203

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all assets that the user has marked as favorites.

136.4.37 SubtypeSmartAlbumGeneric = 200

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album of no more specific subtype.

136.4.38 SubtypeSmartAlbumLivePhotos = 213

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all Live Photo assets.

136.4.39 SubtypeSmartAlbumLongExposures = 215

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all Live Photo assets where the Long Exposure variation is enabled.

136.4.40 SubtypeSmartAlbumPanoramas = 201

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all panorama photos in the photo library.

136.4.41 SubtypeSmartAlbumRecentlyAdded = 206

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups assets that were recently added to the photo library.

136.4.42 SubtypeSmartAlbumScreenshots = 211

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all images captured using the device's screenshot function.

136.4.43 SubtypeSmartAlbumSelfPortraits = 210

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all photos and videos captured using the device's front-facing camera.

136.4.44 SubtypeSmartAlbumSlomoVideos = 208

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all Slow-Mo videos in the photo library.

136.4.45 SubtypeSmartAlbumTimelapses = 204

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all time-lapse videos in the photo library.

136.4.46 SubtypeSmartAlbumUnableToUpload = 216

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: Unable to upload album.

136.4.47 SubtypeSmartAlbumUserLibrary = 209

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all assets that originate in the user's own library (as opposed to assets from iCloud Shared Albums).

136.4.48 SubtypeSmartAlbumVideos = 202

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all video assets in the photo library.

136.4.49 TypeAlbum = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the asset collection types.
Notes: An album in the Photos app.

136.4.50 TypeMoment= 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the asset collection types.
Notes: A moment in the Photos app. Deprecated by Apple.

136.4.51 TypeSmartAlbum = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the asset collection types.
Notes: A smart album whose contents update dynamically.

136.5 class PHAssetCreationRequestMBS

136.5.1 class PHAssetCreationRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create a new Photos asset from underlying data resources, for use in a photo library change block.
Notes:

A PHAssetCreationRequestMBS object, used within a photo library change block, constructs a new photo or video asset from data resources, and adds it to the Photos library. This class works in terms of the raw data resources that together form an asset, so you can use it together with the PHAssetResource class to perform a complete copy (or backup and restore) of an asset's underlying resources. To instead simply create a new asset from an image object, image file, or video file, see the superclass PHAssetChangeRequestMBS.

To create a new asset from data resources, first start a change block using the shared PHPhotoLibraryMBS method performChanges or performChangesAndWait. Then, within the change block:

1. Within the change block, create a new asset creation request with the creationRequestForAsset method.
2. Add image, video, or data resources using the methods listed in Providing Data Resources for the New Asset.
3. (Optional.) Set metadata for the new asset using methods and properties of the superclass PHAssetChangeRequestMBS.

After Photos runs the change block and calls your completion handler, the new asset is created in the Photos library.
If you instantiate or use this class outside a photo library change block, Photos throws an exception. For details on change blocks, see PHPhotoLibrary.
Subclass of the PHAssetChangeRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.5.2 Methods

136.5.3 addResource(type as Integer, data as MemoryBlock, options as PHAssetResourceCreationOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a data resource to the asset being created, using the specified data.
Notes:

type: The role of this data resource in constructing an asset. For details, see type constants.
data: The data for the asset resource.

options: Options affecting how Photos constructs the asset resource and incorporates its data into the Photos library. For details, see PHAssetResourceCreationOptionsMBS class.

Photos imports the asset resource data only when it executes the PHPhotoLibraryMBS change block in which you create a PHAssetCreationRequest object and call this method. If you attempt to create an asset with invalid data or an invalid combination of resources, Photos reports an error in the completion handler of your PHPhotoLibraryMBS call.

- 136.5.4 addResource(type as Integer, data as String, options as PHAssetResourceCreationOptionsMBS = nil) 21411
- 136.5.5 addResource(type as Integer, file as FolderItem, options as PHAssetResourceCreationOptionsMBS = nil) 21411

136.5.4 addResource(type as Integer, data as String, options as PHAssetResourceCreationOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a data resource to the asset being created, using the specified data.
Notes:

type: The role of this data resource in constructing an asset. For details, see type constants.
data: The data for the asset resource.
options: Options affecting how Photos constructs the asset resource and incorporates its data into the Photos library. For details, see PHAssetResourceCreationOptionsMBS class.

Photos imports the asset resource data only when it executes the PHPhotoLibraryMBS change block in which you create a PHAssetCreationRequest object and call this method. If you attempt to create an asset with invalid data or an invalid combination of resources, Photos reports an error in the completion handler of your PHPhotoLibraryMBS call.
See also:

- 136.5.3 addResource(type as Integer, data as MemoryBlock, options as PHAssetResourceCreationOptionsMBS = nil) 21410
- 136.5.5 addResource(type as Integer, file as FolderItem, options as PHAssetResourceCreationOptionsMBS = nil) 21411

136.5.5 addResource(type as Integer, file as FolderItem, options as PHAssetResourceCreationOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a data resource to the asset being created, using the file at the specified URL.
Notes:

type: The role of this data resource in constructing an asset. For details, see type constants.
file: The URL to a local file containing data for the asset resource.
options: Options affecting how Photos constructs the asset resource and incorporates its data into the Photos library. For details, see PHAssetResourceCreationOptionsMBS.

Photos imports the asset resource data only when it executes the PHPhotoLibrary change block in which you create a PHAssetCreationRequestMBS object and call this method. If you attempt to create an asset with invalid data or an invalid combination of resources, Photos reports an error in the completion handler of your PHPhotoLibraryMBS call.
See also:

- 136.5.3 addResource(type as Integer, data as MemoryBlock, options as PHAssetResourceCreationOptionsMBS = nil) 21410
- 136.5.4 addResource(type as Integer, data as String, options as PHAssetResourceCreationOptionsMBS = nil) 21411

136.5.6 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.5.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

136.5.8 creationRequestForAsset as PHAssetCreationRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new asset to the Photos library using asset resources.
Notes:

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS. After calling this method, and before returning from the change block use the methods listed in Providing Data Resources for the New Asset to specify one or more data resources for the asset.

To set metadata properties of the newly created asset, use the corresponding properties of the change request (provided by the superclass PHAssetChangeRequestMBS and listed in Modifying Assets). To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

136.5.9 supportsAssetResourceTypes(types() as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether Photos supports creating an asset with the specified combination of resource types.
Notes:

types: An array of numbers, each the raw value of a PHAssetResourceType identifier.
Return true if Photos supports the specified combination of resource types; otherwise, false.

When you request creation of an asset from resource data, Photos does not validate that the resources can construct a complete asset until the complete PHPhotoLibrary performChanges change block executes. (If an asset cannot be constructed from the provided resources, Photos calls the completionHandler you provide in that method with an error describing the failure.) To perform preflight validation before executing an asset creation request, use this method to verify that the set of resource types from which you want to create an asset are correct.

This method verifies only that the collection of asset resource types is valid (for example, ensuring that you do not attempt to construct a photo asset without image data), so it is still possible for an asset creation request to fail if the data itself is incomplete or invalid. However, calling by using this method you can avoid some kinds of asset creation failure before performing the expensive operation of reading (and potentially downloading or transmitting) asset resource data.

136.5.10 Constants

136.5.11 TypeAdjustmentBasePairedVideo = 11

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes:

The resource provides an unaltered version of the video data for a Live Photo asset for use in reconstructing recent edits.
Requires MacOS 10.15 or newer.

136.5.12 TypeAdjustmentBasePhoto = 8

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides an unaltered version of its photo asset for use in for use in reconstructing recent edits.

136.5.13 TypeAdjustmentBaseVideo = 12

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes:

The resource provides an unaltered version of the video data for video asset for use in reconstructing recent edits.
Requires MacOS 10.15 or newer.

136.5.14 TypeAdjustmentData = 7

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides data for use in reconstructing recent edits to its asset.

136.5.15 TypeAlternatePhoto = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides photo data that is not the primary form of its asset.

136.5.16 TypeAudio = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides original audio data for its asset.

136.5.17 TypeFullSizePairedVideo = 10

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes:

The resource provides the current video data component of a Live Photo asset.
Requires MacOS 10.15 or newer.

136.5.18 TypeFullSizePhoto = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides photo data at the highest available size and quality for its asset.

136.5.19 TypeFullSizeVideo = 6

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides video data at the highest available size and quality for its asset.

136.5.20 TypePairedVideo = 9

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides the original video data component of a Live Photo asset.

136.5.21 TypePhoto = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides original photo data for its asset.

136.5.22 TypeVideo = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides original video data for its asset.

136.6 class PHAssetMBS

136.6.1 class PHAssetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The class representating of an image, video, or Live Photo in the Photos library.
Notes:

You fetch assets to begin working with them. Use the class methods listed in Fetching Assets to retrieve one or more PHAsset instances representing the assets you want to display or edit.

Assets contain only metadata. The underlying image or video data for any given asset might not be stored on the local device. However, depending on how you plan to use this data, you may not need to download all of it. If you need to populate a collection view with thumbnail images, the Photos framework can manage downloading, generating, and caching thumbnails for each asset. For details, see PHImageManagerMBS.

Asset objects are immutable. To edit an asset's metadata (such as marking it as a favorite photo), create a PHAssetChangeRequestMBS object within a photo library change block. For more details on using change requests and change blocks to update the photo library, see PHPhotoLibraryMBS.
Subclass of the PHObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.6.2 Blog Entries

- Show Live Photos in your Xojo application

136.6.3 Blog Entries

- Show Live Photos in your Xojo application

136.6.4 Methods

136.6.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.6.6 cancelContentEditingInputRequest(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels a request for editing the asset's content.
Notes:

requestID: The numeric identifier of the request to be canceled.

When you request asset editing information with the requestContentEditingInputWithOptions method, the asset returns a numeric identifier for the request. To cancel the request before it completes, provide this identifier when calling the cancelContentEditingInputRequest method.

136.6.7 canPerformEditOperation(editOperation as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns whether the asset supports the specified editing operation.
Notes:

editOperation: The operation to be tested.

Returns true if the asset supports the the specified editing operation; otherwise, false.

If an asset supports editing, you can create a PHAssetChangeRequestMBS object inside a PHPhotoLibraryMBS change block to submit a change.

136.6.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

136.6.9 fetchAssets(options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves all assets matching the specified options.
Notes:

options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

By default, fetch results do not include photos synced to the device through iTunes or stored in iCloud Shared Albums. To change this behavior, use the includeAssetSourceTypes property in the options parameter.

136.6.10 fetchAssetsInAssetCollection(assetCollection as PHAssetCollectionMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets from the specified asset collection.
Notes:

assetCollection: The asset collection from which to fetch assets.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all assets in the specified collection. To retrieve a more specific set of assets, provide a PHFetchOptionsMBS object containing a filter predicate.

136.6.11 fetchAssetsWithBurstIdentifier(burstIdentifier as String, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets with the specified burst photo sequence identifier.
Notes:

burstIdentifier: A burst identifier string, as provided by the burstIdentifier property of an asset.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

A burst photo sequence, as seen in the Photos app, corresponds to a group of Photos assets that share the same burstIdentifier string.

By default, the returned PHFetchResultMBS object contains only the representative asset and any user-picked photos from the burst sequence. To retrieve all photos in the burst sequence, provide a PHFetchOptionsMBS object containing a filter predicate.

136.6.12 fetchAssetsWithLocalIdentifiers(identifiers() as String, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets with the specified local-device-specific unique identifiers.
Notes:

identifiers: An array of strings, each the localIdentifier string of an asset.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

136.6.13 fetchAssetsWithMediaType(mediaType as Integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets with the specified media type.
Notes:

mediaType: A media type, such as image or video. See type constants.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all assets with the specified type. To retrieve a more specific set of assets, provide a PHFetchOptionsMBS object containing a filter predicate.

By default, fetch results do not include photos synced to the device through iTunes or stored in iCloud Shared Albums. To change this behavior, use the includeAssetSourceTypes property in the options parameter.

136.6.14 fetchKeyAssetsInAssetCollection(assetCollection as PHAssetCollectionMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets marked as key assets in the specified asset collection.
Notes:

assetCollection: The asset collection from which to fetch assets.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result or nil if no objects match the request.

Most asset collections contain a key asset, which the Photos app displays as a proxy for the collection. Different types of asset collections have different ways of specifying one or more key assets. For example, in the Camera Roll collection, the most recently captured photo or video is the key asset.

This method returns nil if the assetCollection parameter references a transient asset collection (such as one created with the transientAssetCollectionWithAssets method).

136.6.15 PHContentEditingInputCancelledKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys indicating the status of an asset content editing request.
Notes:

A Boolean value indicating whether the image request was canceled. (boolean)

If you call the cancelContentEditingInputRequest method to cancel a request, Photos calls your result handler delegate with the value true for this key.

136.6.16 PHContentEditingInputErrorKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys indicating the status of an asset content editing request.
Notes:

An error that occurred while attempting to load the asset data, NSErrorMBS.

Photos provides an error object for this key if it cannot provide asset data for your handler block's contentEditingInput parameter. Examine the error object for information about the cause of the error.

136.6.17 PHContentEditingInputResultIsInCloudKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys indicating the status of an asset content editing request.
Notes:

A Boolean value indicating whether the asset data is stored on the local device or must be downloaded from iCloud.

If true, no asset data was provided because the asset data must be downloaded from iCloud. To do this, submit another request, specifying true for the networkAccessAllowed option.

136.6.18 requestContentEditingInputWithOptions(options as PHContentEditingInputRequestOptionsMBS, CompletionDelegate as RequestContentEditingInputWithOptionsCompletedMBS, tag as variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests asset information for beginning a content editing session.
Notes:

options: Options affecting how Photos handles an edit session request.

Returns a numeric identifier for the request. Pass this identifier to the cancelContentEditingInputRequest method if you need to cancel the request before it completes.

When you call this method, Photos downloads the asset's image or video data (if necessary) and prepares it for editing, then calls your completionHandler ddelegate to provide a PHContentEditingInputMBS object you use for editing.

To complete the edit, create a PHContentEditingOutputMBS object from the editing input to provide the edited asset data. Then, commit the edit by posting a change block to the shared PHPhotoLibrary object. In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output you created.

136.6.19 Properties

136.6.20 burstIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The unique identifier shared by photo assets from the same burst sequence.
Notes:

When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together. The Photos framework identifies a burst sequence as a group of assets sharing the same burst identifier string.
(Read only property)

136.6.21 burstSelectionTypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The selection type of the asset in a burst photo sequence.
Notes:

When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together and allows the user to select favorite members of the sequence. Photos also automatically marks members of the sequence as potential user favorites. See PHAssetBurstSelectionType for possible values.

Because an asset may have more than one selection type, you use bit masks to identify an asset.
(Read only property)

136.6.22 creationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The date and time at which the asset was originally created.
Notes: (Read only property)

136.6.23 creationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The date and time at which the asset was originally created.
Notes: (Read only property)

136.6.24 duration as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The duration, in seconds, of the video asset.
Notes:

For photo assets, the duration is always zero.
(Read only property)

136.6.25 Favorite as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the user has marked the asset as a favorite.
Notes: (Read only property)

136.6.26 Hidden as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the user has hidden the asset.
Notes:

Hidden assets do not appear in the Moments interface in the Photos app and are not returned when fetching the contents of a moment collection.
(Read only property)

136.6.27 location as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The location information saved with the asset.
Notes:

Typically, an asset's location metadata identifies the place where the asset was captured.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read only property)

136.6.28 mediaSubtypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtypes of the asset, identifying special kinds of assets such as panoramic photo or high-framerate video.
Notes:

See subtype constants for possible values.
Because an asset may have more than one subtype, you use these values as bit masks to identify an asset.
(Read only property)

136.6.29 mediaType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of the asset, such as video or audio.
Notes:

See Type constants.
(Read only property)

136.6.30 modificationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The date and time at which the asset was last modified.
Notes:

Photos updates the modification date when an asset's image or video content or metadata changes.
(Read only property)

136.6.31 modificationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The date and time at which the asset was last modified.
Notes:

Photos updates the modification date when an asset's image or video content or metadata changes.
(Read only property)

136.6.32 pixelHeight as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The height, in pixels, of the asset's image or video data.
Notes:

If the asset's content has been edited, this property describes the size of the current version of the asset.
(Read only property)

136.6.33 pixelWidth as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The width, in pixels, of the asset's image or video data.
Notes:

If the asset's content has been edited, this property describes the size of the current version of the asset.
(Read only property)

136.6.34 playbackStyle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The playback style for the asset.
Notes: (Read only property)

136.6.35 RepresentsBurst as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset is the representative photo from a burst photo sequence.
Notes:

When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together. One asset represents the entire sequence in displayed collections.
(Read only property)

136.6.36 sourceType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The means by which the asset entered the user's Photos library.
Notes:

Assets from some sources can be edited, deleted, or added to collections; assets from other sources do not support these operations. For details, see SourceType constants.
(Read only property)

136.6.37 Constants

136.6.38 BurstSelectionTypeAutoPick = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants Bit mask values indicating whether and how an asset is marked as a favorite member of a burst photo sequence.
Notes: Photos has automatically identified the asset as a potential user favorite.

136.6.39 BurstSelectionTypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants Bit mask values indicating whether and how an asset is marked as a favorite member of a burst photo sequence.
Notes: The asset is not marked as a favorite member of its burst sequence or is not a member of a burst sequence.

136.6.40 BurstSelectionTypeUserPick = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants Bit mask values indicating whether and how an asset is marked as a favorite member of a burst photo sequence.
Notes: The user has marked the asset as a favorite member of its burst sequence.

136.6.41 EditOperationContent = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for edit operations.
Notes: The asset's photo or video content can be edited.

136.6.42 EditOperationDelete = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for edit operations.
Notes: The asset can be deleted from the photo library.

136.6.43 EditOperationProperties = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for edit operations.
Notes: The asset's metadata properties can be edited.

136.6.44 MediaSubtypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes:

The asset has no subtype.
This is the default subtype for most photo and video assets.

136.6.45 MediaSubtypePhotoDepthEffect = 16

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes: The asset is a photo captured with the Camera app's Portrait mode depth effect.

136.6.46 MediaSubtypePhotoHDR = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes: The asset is a High Dynamic Range photo.

136.6.47 MediaSubtypePhotoLive = 8

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes:

The asset is a Live Photo that includes movement and sounds from the moments just before and after its capture.
To display a Live Photo asset with its associated video content, retrieve a PHLivePhotoMBS object using the PHImageManagerMBS class and assign it to a PHLivePhotoViewMBS object.

136.6.48 MediaSubtypePhotoPanorama = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes: The asset is a large-format panorama photo.

136.6.49 MediaSubtypePhotoScreenshot = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes: The asset is an image captured with the device's screenshot feature.

136.6.50 MediaSubtypeVideoHighFrameRate = & h20000

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes:

The asset is a high-frame-rate video.

High-frame-rate videos are created by the Slow-Mo feature in the Camera app on an iOS device.

136.6.51 MediaSubtypeVideoStreamed = & h10000

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes:

The asset is a video whose contents are always streamed over a network connection.
This subtype identifies video assets that are never stored on the local device, such as shared videos in a subscribed iCloud Photo Stream.

136.6.52 MediaSubtypeVideoTimelapse = & h40000

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes: The asset is a time-lapse video.

136.6.53 MediaTypeAudio = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset is an audio file.

136.6.54 MediaTypeImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset is a photo or other static image.

136.6.55 MediaTypeUnknown = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset's type is unknown.

136.6.56 MediaTypeVideo = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset is a video file.

136.6.57 PlaybackStyleImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a still image.

136.6.58 PlaybackStyleImageAnimated = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as an animated image.

136.6.59 PlaybackStyleLivePhoto = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a Live Photo.

136.6.60 PlaybackStyleUnsupported = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset has an unsupported or undefined media playback type.

136.6.61 PlaybackStyleVideo = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a video.

136.6.62 PlaybackStyleVideoLooping = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a looping video.

136.6.63 SourceTypeCloudShared = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for source types.
Notes:

The asset originates from an iCloud Shared Album.
Assets from shared albums cannot be edited and do not appear in Moments collections.

136.6.64 SourceTypeiTunesSynced = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for source types.
Notes:

The asset originates from a Mac or PC and is present on the device through iTunes sync.
iTunes-synced assets cannot be edited or deleted.

136.6.65 SourceTypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for source types.
Notes: Source information is not available for the asset.

136.6.66 SourceTypeUserLibrary = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for source types.
Notes:

The asset is part of the user's main Photos library.

The main library contains both assets that originate on the device (such as photos and videos captured with the Camera app or screenshots) and assets synchronized through iCloud Photo Library or My Photo Stream. These assets appear in Moments collections and can be edited or deleted.

136.6.67 Delegates

136.6.68 RequestContentEditingInputWithOptionsCompletedMBS(Asset as PHAssetMBS, Options as PHContentEditingInputRequestOptionsMBS, tag as variant, contentEditingInput as PHContentEditingInputMBS, info as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that Photos calls when the requested asset editing information is ready.
Notes:

contentEditingInput: An object that describes the asset for editing and provides methods for loading the image or video content to be edited.
info: A dictionary providing information about the status of the request. See Editing Request Info Keys for possible keys and values.

136.7 class PHAssetResourceCreationOptionsMBS

136.7.1 class PHAssetResourceCreationOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the creation of a new Photos asset from underlying resources.
Notes: You use this class when creating an asset for addition to the Photos library with a PHAssetCreationRequestMBS object.

136.7.2 Methods

136.7.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.7.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.7.5 copy as PHAssetResourceCreationOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Copies the options object.

136.7.6 Properties

136.7.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.7.8 originalFilename as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The filename for the asset resource being created.
Notes:

You can use this property to track the original name of the file from which you import an asset resource even if you use the addResourceWithType method to create a resource from data instead of from a file. After creating the asset, this information is available in the originalFilename property of the corresponding PHAssetResourceMBS object.

If you do not specify a value for this property and are using the addResourceWithType method to create a resource, Photos infers the filename from that method's fileURL parameter. Otherwise, Photos automatically generates a filename.
(Read and Write property)

136.7.9 shouldMoveFile as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether Photos moves or duplicates files when creating an asset resource.
Notes:

This property applies only when creating an asset resource with the addResourceWithType method. If this value is true, Photos moves the specified file into the Photos library to create the asset resource, removing the original file after the asset has been successfully created. When using this option, Photos does not make an intermediary copy of the resource data, so no additional storage space is required.

If this value is false (the default), Photos copies the contents of the original file into the Photos library.

Attempting to move a file that is currently open or has hard links fails.
(Read and Write property)

136.7.10 uniformTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The uniform type identifier for the resource.
Notes:

If you do not specify a value for this property, Photos infers the data type from the type value you specify when adding the resource to a creation request.

For details in uniform type identifiers, see Uniform Type Identifiers Overview.
(Read and Write property)

136.8 class PHAssetResourceManagerMBS

136.8.1 class PHAssetResourceManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A resource manager for the data storage underlying a Photos asset.
Notes:

An asset can have multiple underlying data resources—for example, both original and edited versions—each of which is represented by a PHAssetResourceMBS object. Unlike the PHImageManagerMBS class, which provides and caches the primary representations of assets as thumbnails, image objects, or video objects, the asset resource manager provides direct access to these underlying data resources.

Available in MacOS 10.15 or newer.

136.8.2 Methods

136.8.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.8.4 cancelDataRequest(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an asynchronous request.
Notes:

requestID: The numeric identifier of the request to be canceled.

When you perform an asynchronous request for asset resource data using the requestDataForAssetResource method, the image manager returns a numeric identifier for the request. To cancel the request before it completes, provide this identifier when calling the cancelDataRequest method.

136.8.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.8.6 defaultManager as PHAssetResourceManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the shared asset resource manager object.
Notes: This method always returns the same asset resource manager object, which is shared for all uses in your app.

136.8.7 requestDataForAssetResource(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, DataReceivedHandler as RequestDataForAssetResourceDataReceivedMBS, CompleteHandler as RequestDataForAssetResourceCompletedMBS, tag as variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the underlying data for the specified asset resource, to be delivered asynchronously.
Notes:

resource: The asset resource for which to request data.
options: Options specifying how Photos should handle the request and notify your app of progress. For details, see PHAssetResourceRequestOptionsMBS.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelDataRequest: method.

When you call this method, Photos begins asynchronously reading the underlying data for the asset resource. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

While reading (or downloading) asset resource data, Photos calls your handler block at least once, progressively providing chunks of data. After reading all of the data, Photos calls your completionHandler block to indicate that the data is complete. (At this point, the complete data for the asset is the concatenation of the data parameters from all calls to your handler block.) If Photos cannot finish reading or downloading asset resource data, it calls your completionHandler block with a description of the error. Photos can also call the completionHandler block with a non-nil error when the data is complete if the user cancels downloading.

136.8.8 writeDataForAssetResource(resource as PHAssetResourceMBS, file as FolderItem, options as PHAssetResourceRequestOptionsMBS, CompleteHandler as WriteDataForAssetResourceCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the underlying data for the specified asset resource, to be asynchronously written to a local file.
Notes:

resource: The asset resource for which to request data.
fileURL: A URL identifying the local filename at which to write the asset resource's data.
options: Options specifying how Photos should handle the request and notify your app of progress. For details, see PHAssetResourceRequestOptionsMBS.

When you call this method, Photos begins asynchronously reading the underlying data for the asset resource. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

While reading (or downloading) asset resource data, Photos progressively writes the data into the specified file. After writing all of the data, or if an error prevents reading all of the data, Photos calls your delegate.

136.8.9 Properties

136.8.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.8.11 Constants

136.8.12 PHInvalidAssetResourceDataRequestID = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: The invalid request ID.

136.8.13 Delegates

136.8.14 RequestDataForAssetResourceCompletedMBS(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, Error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that photos calls after the request has been fulfilled or has failed.
Notes: error: If the request has failed, an NSErrorMBS object describing the failure; otherwise nil.

136.8.15 RequestDataForAssetResourceDataReceivedMBS(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, Data as MemoryBlock, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that Photos calls to provide the requested data.
Notes: data: The requested asset resource data.

136.8.16 WriteDataForAssetResourceCompletedMBS(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, File as FolderItem, Error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that photos calls after the request has been fulfilled or has failed.
Notes: error: If the request has failed, an NSErrorMBS object describing the failure; otherwise nil.

136.9 class PHAssetResourceMBS

136.9.1 class PHAssetResourceMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An underlying data resource associated with a photo, video, or Live Photo asset in the Photos library.
Notes:

Each PHAssetMBS object references one or more resources. Use these objects to work with those resources directly, like when backing up or restoring assets.

- A photo asset can contain both JPEG and RAW files representing the same photo.
- A Live Photo asset contains both still photo and video resources.
- An edited asset contains resources representing asset content before and after the edit, as well as a resource corresponding to the PHAdjustmentDataMBS object that describes the edit.

To work with the data contained in an asset resource, fetch it using the PHAssetResourceManagerMBS class. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.9.2 Methods

136.9.3 assetResourcesForAsset(asset as PHAssetMBS) as PHAssetResourceMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the list of data resources associated with an asset.
Notes:

asset: A photo or video asset in the Photos library.

Returns the asset's resources.

Asset resource objects describe the data files that an asset represents. An asset can contain multiple resources—for example, an edited photo asset contains resources for both the original and edited images, as well as for the PHAdjustmentDataMBS object describing the edit. To work with one of these files, fetch the underlying data using the PHAssetResourceManagerMBS class.

136.9.4 assetResourcesForLivePhoto(livePhoto as PHLivePhotoMBS) as PHAssetResourceMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the list of data resources associated with a Live Photo object.
Notes:

livePhoto: A Live Photo object.

Returns the underlying resources that constitute the Live Photo.

A Live Photo is a picture, taken with a compatible device, that includes movement and sound from the moments just before and after its capture. A PHLivePhoto object represents the displayable combination of image, motion, and sound data. You can obtain such objects from the Photos library using the PHImageManagerMBS class or construct them from asset resources exported from a Photos library using the PHLivePhotoMBS class.

Use this method to export the underlying resources that constitute a Live Photo. For example, a social networking app can retrieve those data files and upload them to a server. Then, on another user's device, the app downloads those data files and uses the PHLivePhoto class to re-create a Live Photo object for display using the PHLivePhotoViewMBS class.

136.9.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.9.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

136.9.7 Properties

136.9.8 assetLocalIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The unique identifier for the asset object this resource is associated with.
Notes:

This property's value corresponds to the localIdentifier property of the PHAssetMBS object that owns this asset resource. If you've obtained an asset resource without a reference to its owning asset, use the fetchAssetsWithLocalIdentifiers method with this identifier to retrieve the correct PHAssetMBS object.
(Read only property)

136.9.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.9.10 originalFilename as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The original filename of the asset resource from when it was created or imported.
Notes: (Read only property)

136.9.11 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The relationship of this asset resource to its owning asset.
Notes:

An asset can contain multiple resources, and different resources contribute to the asset in different ways. For details and examples, see resource types.
(Read only property)

136.9.12 uniformTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The uniform type identifier for the asset resource's image or video data.
Notes:

For more information, see Uniform Type Identifiers Overview in Apple's documentation.
(Read only property)

136.10 class PHAssetResourceRequestOptionsMBS

136.10.1 class PHAssetResourceRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of underlying asset data that you request from the asset resource manager.
Notes:

You use this class when requesting the underlying data for photo, video, and Live Photo asset resources from a PHAssetResourceManagerMBS object.

Requires MacOS 10.15 or newer.

136.10.2 Methods

136.10.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.10.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.10.5 copy as PHAssetResourceRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the request options.

136.10.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

136.10.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate that Photos calls periodically while downloading the asset resource data.
Notes: If you request an asset resource whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress.

136.10.8 Properties

136.10.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.10.10 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested asset resource data from iCloud.
Notes:

If true, and the requested resource data is not stored on the local device, Photos downloads that data from iCloud. To be notified of the download's progress, use the progressHandler property to provide a block that Photos calls periodically while downloading the resource data. If false (the default), and the resource data is not on the local device, Photos calls the completionHandler block you provided in your request, with an NSErrorMBS object indicating that the resource requires network access.
(Read and Write property)

136.10.11 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls periodically while downloading the asset resource data.
Notes:

If you request an asset resource whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress.
(Read and Write property)

136.10.12 Delegates

136.10.13 ProgressHandlerMBS(progress as double, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls while downloading asset resource data from iCloud. Used by the progressHandler property.
Notes:

If you request an asset resource whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress.

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates that the download has just started, and a value of 1.0 indicates the download is complete.

136.11 class PHCachingImageManagerMBS

136.11.1 class PHCachingImageManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that facilitates retrieving or generating preview thumbnails, optimized for batch preloading large numbers of assets.
Notes:

For quick performance when you are working with many assets, a caching image manager can prepare asset images in the background in order to eliminate delays when you later request individual images. For example, use a caching image manager when you want to populate a collection view or similar UI with thumbnails of photo or video assets.

Much of the key functionality of the PHCachingImageManager class is defined by its superclass, PHImageManagerMBS. For details, see PHImageManagerMBS.

To use a caching image manager:
1. Create a PHCachingImageManager instance. (This step replaces using the shared PHImageManager instance.)
2. Use PHAsset class methods to fetch the assets you're interested in.
3. To prepare images for those assets, call the startCachingImagesForAssets:targetSize:contentMode:options: method with the target size, content mode, and options you plan to use when later requesting images for each individual asset.
4. When you need an image for an individual asset, call the requestImageForAsset:targetSize:contentMode:options:resultHandler: method, and pass the same parameters you used when preparing that asset.

If the image you request is among those already prepared, the PHCachingImageManager object immediately returns that image. Otherwise, Photos prepares the image on demand and caches it for later use.
Subclass of the PHImageManagerMBS class.

136.11.2 Methods

136.11.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.11.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.11.5 startCachingImagesForAssets(assets() as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function:

Prepares image representations of the specified assets for later use.

Notes:

assets: An array of PHAssetMBS objects for which to prepare image representations.
targetSize: The size of the images to be prepared.
contentMode: An option for how to fit the images to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested images, and notify your app of progress or errors. For details, see PHImageRequestOptions.

When you call this method, Photos begins to fetch image data and generates thumbnail images on a background thread. At any time afterward, you can use the requestImageForAsset:targetSize method to request individual images from the cache. If Photos has finished preparing a requested image, that method provides the image immediately.

Photos caches images with the exact target size, content mode, and options you specify in this method. If you later request an image with, for example, a different target size than you passed when calling this method, Photos cannot make use of the cache and so it must fetch or generate a new image.

136.11.6 stopCachingImagesForAllAssets

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels all image preparation that is currently in progress.

136.11.7 stopCachingImagesForAssets(assets() as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels image preparation for the specified assets and options.
Notes:

assets: The array of specific PHAssetMBS objects for which image preparation is in progress but is no longer needed.
targetSize: The target size with which you requested image preparation.
contentMode: The content mode with which you requested image preparation.
options: The options with which you requested image preparation.

This method cancels image preparation for the specified assets with the specified options. Use it when image preparation that might be in progress is no longer needed. For example, if you prepare images for a collection view filled with photo thumbnails and then the user chooses a different thumbnail size for your collection view, call this method to cancel generating thumbnail images at the old size.

136.11.8 Properties

136.11.9 allowsCachingHighQualityImages as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the image manager prepares high-quality images.
Notes:

If true (the default), the image manager prepares images at high quality. This option produces better images, at a high performance cost.
For faster performance when preparing large numbers of images—such as while the user is scrolling quickly through a collection of thumbnails—set this property to false.
(Read and Write property)

136.12 class PHChangeMBS

136.12.1 class PHChangeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of a change that occurred in the photo library.
Notes:

Photos provides PHChangeMBS objects to notify your app of changes to the assets and collections managed by the Photos app. To receive change information, implement the DidChange event in your PHPhotoLibraryMBS subclass.

After Photos provides you with a change object, you use its methods to get a change details object. Call the changeDetailsForObject or changeDetailsForFetchResult method, passing an asset or collection object you've previously fetched or a fetch result containing several such objects. The resulting PHObjectChangeDetailsMBS or PHFetchResultChangeDetailsMBS object describes any changes that have happened to the object or fetch result since you last fetched it.

136.12.2 Methods

136.12.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.12.4 changeDetailsForFetchResult(FetchResult as PHFetchResultMBS) as PHFetchResultChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns detailed change information for a fetch result.
Notes:

object: A fetch result.

Returns a change details object, or nil if there have been no changes affecting the fetch result's contents.

When Photos calls your change observer's photoLibraryDidChange method, call the changeDetailsForObject method to get detailed change information about the results of a fetch you've previously performed. If there have been any changes in the Photos library affecting the fetch, the resulting PHFetchResultChangeDe-

tailsMBS object tells you if any contents in the fetch result have been added, removed, or changed since you fetched it. If there have been no changes since you performed the fetch, this method returns nil.

Typically, if your app displays the members of a collection (such as an album or moment), you use a method such as fetchAssetsInAssetCollection to retrieve those members and then keep the resulting PHFetchResultMBS object. You can then pass that fetch result to this method to learn about changes to the collection, such as whether new members have been added to it (and which indexes to insert them at in your UI).

To find out about changes to an object's properties, such as a collection's title or an asset's metadata, use the changeDetailsForObject: method.

136.12.5 changeDetailsForObject(PHObject as PHObjectMBS) as PHObjectChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns detailed change information for the specified asset or collection.
Notes:

object: A PHAssetMBS, PHAssetCollectionMBS, or PHCollectionListMBS object.

Returns a change details object, or nil if there have been no changes to the specified asset or collection.

When Photos calls your change observer's photoLibraryDidChange: method, call the changeDetailsForObject method to get detailed change information about an asset or collection you've previously fetched. If the asset or collection has changed since you last fetched it, the resulting PHObjectChangeDetailsMBS object describes the changes. If there are no changes between the fetched object and the current state of the asset or collection it represents in the Photos library, this method returns nil.
For an asset collection or collection list, this method and the PHObjectChangeDetailsMBS object it returns describe changes only to the collection's properties. If you are instead interested in changes to the collection's membership, use the changeDetailsForFetchResult method.

136.12.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.12.7 Properties

136.12.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.13 class PHChangeRequestMBS

136.13.1 class PHChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create, delete, change metadata for, or edit the content of a Photos asset, for use in a photo library change delegate.
Notes:

You use the PHAssetChangeRequestMBS class to request changes for PHAssetMBS objects. To make changes to assets in the Photos library, create a change request by using the appropriate class method for the change you want to perform.

- Call one of the methods listed in Adding New Assets to create a new asset from an image or video file.
- Call the deleteAssets: method to delete existing assets.
- Call the changeRequestForAsset: method to modify an asset's content or metadata.

A change request for creating or modifying an asset works like a mutable version of the asset object. Use the change request's properties to request changes to the corresponding properties of the asset itself.

After Photos runs the change block and calls your completion handler, the asset's state reflects the changes that you requested in the block.

If you create or use a change request object outside a photo library change block, Photos raises an Objective-C exception. For details on change blocks, see PHPhotoLibraryMBS.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.13.2 Methods

136.13.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.13.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

136.13.5 Properties

136.13.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.14 class PHCloudIdentifierMBS

136.14.1 class PHCloudIdentifierMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A cloud identifier for a Photos project extension.
Notes: The user can choose to store Photos project extensions in iCloud. The cloud identifier uniquely references project extensions in the cloud by string serialization. When a project's global identifier can't be determined from its local identifier, the notFoundIdentifier identifier is provided in that array slot.

136.14.2 Methods

136.14.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.14.4 Constructor(stringValue as String)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Deserializes a cloud identifier from its string value.

136.14.5 notFoundIdentifier as PHCloudIdentifierMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The global identifier used in an array slot for items that couldn't be found.

136.14.6 Properties

136.14.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.14.8 stringValue as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string version of the cloud identifier to use in serialization.
Notes: (Read only property)

136.15 class PHCollectionListChangeRequestMBS

136.15.1 class PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create, delete, or modify a Photos collection list, for use in a photo library change block.
Notes:

You use the PHCollectionListChangeRequest class to request changes for PHCollectionList objects. To make changes to collection lists (such as folders containing user-created albums) in the Photos library, create a change request using the appropriate class method for the change you want to perform.

- Call the creationRequestForCollectionListWithTitle method to create a new asset collection.
- Call the deleteCollectionLists: method to delete existing asset collections.
- Call the changeRequestForCollectionList: or changeRequestForCollectionList method to modify a collection's metadata or its list of child collections.

Before creating a change request, use the canPerformEditOperation: method to verify that the collection allows the edit operation you're requesting. If you attempt to perform an unsupported edit operation, Photos throws an exception.
A change request for creating or modifying a collection list works like a mutable version of the collection list object. Use the change request's properties and instance methods to request changes to the collection list itself.

After Photos runs the change delegate and calls your completion handler, the collection list's state reflects the changes you requested in the delegate.

If you create or use a change request object outside a photo library change delegate, Photos raises an Objective-C exception. For details on change delegates, see PHPhotoLibraryMBS.
Subclass of the PHChangeRequestMBS class.

136.15.2 Methods

136.15.3 addChildCollections(collections() as PHCollectionMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Add the specified collections as children of the collection list.
Notes:

collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be added to the collection list.

If you created the change request with a snapshot of the collection list's contents using the changeRequestForCollectionList method, Photos inserts the new children after the existing child collections in the collection list. Otherwise, the arrangement of the new children relative to others in the collection is undefined.

136.15.4 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.15.5 changeRequestForCollectionList(collectionList as PHCollectionListMBS) as PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified collection list.
Notes:

collectionList: The collection list to be modified.

Returns a collection list change request.

After you create a change request within a photo library change block, propose changes to the collection's title or list of child collections with the properties and instance methods of the change request. After Photos runs your change block, the collection list reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.
Use this method when modifying a collection list's metadata or when adding or removing child collections without regard to their arrangement. To work with indexes in the list of child collections, use the changeRequestForCollectionList method instead.
See also:

- 136.15.6 changeRequestForCollectionList(collectionList as PHCollectionListMBS, childCollections as PHFetchResultMBS) as PHCollectionListChangeRequestMBS

136.15.6 changeRequestForCollectionList(collectionList as PHCollectionListMBS, childCollections as PHFetchResultMBS) as PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified collection list, with a fetch result for tracking changes.
Notes:

collectionList: The collection list to be modified.
childCollections: A fetch result listing the child collections in the collection.

Returns a collection list change request.

After you create a change request within a photo library change block, propose changes to the collection's title or list of child collections with the properties and instance methods of the change request. After Photos runs your change block, the collection list reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.

Use this method when you need to insert, remove, or rearrange collections at specified indexes in the collection list. By passing in a fetch result reflecting what your app sees as the current state of the collection's membership, the Photos framework can ensure that the indexes you specify are valid even if the collection has changed since you last fetched it. If you don't need to work with indexes in the list of child collections, you can use the changeRequestForCollectionList method instead.
See also:

- 136.15.5 changeRequestForCollectionList(collectionList as PHCollectionListMBS) as PHCollectionListChangeRequestMBS 21458

136.15.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.15.8 creationRequestForCollectionListWithTitle(title as string) as PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new collection list to the Photos library.
Notes:

title: A name for the new collection list.

Returns a collection list creation request.

Call this method within a photo library change block to create a new collection list. For details on change blocks, see PHPhotoLibraryMBS.
To add collections to the newly created collection list or to change its title, use the methods listed in Modifying Collection Lists. To reference the newly created collection collection list later in the same change delegate or after the change delegate completes, use the placeholderForCreatedCollectionListMBS property to retrieve a placeholder object.

136.15.9 deleteCollectionLists(collectionLists() as PHCollectionListMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests to delete the specified asset collections.
Notes:

collectionLists: An array of PHCollectionListMBS objects to be deleted.

Call this method within a photo library change block to delete collection lists. For details on change blocks, see PHPhotoLibraryMBS.

Deleting a collection list also deletes any child collections it contains. To preserve those collections, remove them from the collection list (with the removeChildCollections or removeChildCollectionsAtIndexes method) before deleting it. Deleting a collection list does not delete assets contained in its child collections.

136.15.10 insertChildCollections(collections() as PHCollectionMBS, indexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts the specified collections into the collection list at the specified indexes.
Notes:

collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be inserted into the collection list.
indexes: The indexes at which the collections should be inserted. The count of locations in this index set must equal the count of collections.

To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list's contents using the changeRequestForCollec-

tionList method before inserting child collections.
For a detailed discussion of how the index set you specify maps to insertions in the collection list, see the similar NSMutableArray method insertObjects.

136.15.11 moveChildCollections(AtIndexes as NSIndexSetMBS, toIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Moves the child collections at the specified indexes in the collection list to a new index.
Notes:

indexes: The indexes of the child collections to be moved in the collection list.
toIndex: The index at which to place the moved child collections, relative to the collection list's ordering after removing the items at indexes.

When you call this method, Photos first removes the items in the indexes parameter from the collection, and then inserts them at the location specified by the toIndex parameter.
To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list's contents using the changeRequestForCollectionList method before rearranging child collections.

136.15.12 removeChildCollections(AtIndexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the child collections at the specified indexes from the collection list.
Notes:

indexes: The indexes of the child collections to be removed from the collection list.

To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list's contents using the changeRequestForCollectionList method before removing child collections. To remove objects based on their identities (without regard to their indexes in the collection), use the removeChildCollections method.
See also:

- 136.15.13 removeChildCollections(collections() as PHCollectionMBS) 21461

136.15.13 removeChildCollections(collections() as PHCollectionMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the specified child collections from the collection list.
Notes:

collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be removed from the collection list.

This method removes child collections from the collection list based on their identity (determined by the localIdentifier property of each collection). To remove objects at specified indexes, use the removeChildCollections method.
See also:

- 136.15.12 removeChildCollections(AtIndexes as NSIndexSetMBS) 21461

136.15.14 replaceChildCollections(AtIndexes as NSIndexSetMBS, ChildCollections() as PHCollectionMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Replaces the child collections at the specified indexes in the collection list with the specified collections.
Notes:

indexes: The indexes of the child collections to be replaced in the collection list.
collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be inserted into (or moved within) the collection list.

To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list's contents using the changeRequestForCollectionList method before rearranging child collections.

136.15.15 Properties

136.15.16 placeholderForCreatedCollectionList as PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A placeholder object for the collection list that the change request creates.
Notes:

Use this property if you need to reference the collection created by a change request within the same change block. For details on change blocks, see PHPhotoLibraryMBS.
(Read only property)

136.15.17 title as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The displayed name of the collection list.
Notes:

Set this property to change the collection list's title.
(Read and Write property)

136.16 class PHCollectionListMBS

136.16.1 class PHCollectionListMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A group containing Photos asset collections, such as Moments, Years, or folders of user-created albums.
Notes:

In the Photos framework, collection objects (including asset collections) do not directly reference their member objects, and there are no other objects that directly reference collection objects. To retrieve the members of a collection list, fetch them with a PHCollectionMBS class method such as fetchCollectionsInCollectionList. To find objects at the root of the collection list hierarchy (such as album folders with no parent folders), use the fetchTopLevelUserCollectionsWithOptions method.

Accessing or modifying the Photos library requires explicit authorization from the user. The first time you call one of the methods listed in Fetching Collection Lists, Photos automatically prompts the user for authorization. (Alternatively, you can use the PHPhotoLibraryMBS requestAuthorization: method to prompt the user at a time of your choosing.)

Your app's Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10.0 will crash if this key is not present.

Like assets and asset collections, collection lists are immutable. To create, rename, or delete collection lists, or to add, remove, or rearrange members in a collection list, create a PHCollectionListChangeRequestMBS object within a photo library change block. For details on using change requests and change blocks to update the photo library, see PHPhotoLibraryMBS.
Subclass of the PHCollectionMBS class.

136.16.2 Methods

136.16.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.16.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.16.5 fetchCollectionListsContainingCollection(collection as PHCollectionMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collection lists that contain the specified collection.
Notes:

collection: An asset collection or another collection list.
options: Options that specify a filter predicate and sort order for the fetched collection lists, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHCollectionList objects, or an empty fetch result if no objects match the request.

Different kinds of collections have different containment possibilities. For example, an asset collection whose type is TypeAlbum may be contained in a folder, or have no containing collection list. A folder, in turn, may be contained in another folder. An asset collection whose type is TypeMoment is always contained by two collection lists: a moment cluster and a moment year.

136.16.6 fetchCollectionListsWithLocalIdentifiers(identifiers() as string, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collection lists with the specified local-device-specific unique identifiers.
Notes:

identifiers: An array of strings, each the localIdentifier string of a collection list.
options: Options that specify a filter predicate and sort order for the fetched collection lists, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollectionListMBS objects, or an empty fetch result if no objects match the request.

136.16.7 fetchCollectionListsWithType(collectionListType as Integer, subtype as Integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collection lists of the specified type.
Notes:

collectionListType: A type of collection list. See PHCollectionListType.
subtype: A subtype of collection list. See PHCollectionListSubtype.
options: Options that specify a filter predicate and sort order for the fetched collection lists, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollectionListMBS objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResult object contains all collection lists with the specified type and subtype. To retrieve a more specific set of collection lists, provide a PHFetchOptionsMBS object containing a filter predicate.

136.16.8 localizedLocationNames as String()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The names of locations grouped by the collection (an array of strings).
Notes: For a collection list representing a group of moments, as seen in the Collections view in the Photos app, this property lists the location names associated with each moment in the group. For other types of collection list, this property's value is nil.

136.16.9 transientCollectionListWithCollections(collections() as PHCollectionMBS, title as String) as PHCollectionListMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a temporary collection list that contains the specified asset collections.
Notes:

collections: An array of PHAssetCollectionMBS objects.
title: A name for the new temporary collection list.

Returns a new collection list.

Transient collection lists are not saved to local storage or iCloud and do not appear in the Photos application or other apps using the Photos framework. A transient collection can be useful if you've designed a UI for displaying the contents of a collection list and want to display an arbitrary set of collections.

136.16.10 transientCollectionListWithCollectionsFetchResult(fetchResult as PHFetchResultMBS, title as String) as PHCollectionListMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a temporary collection list containing the asset collections in the specified fetch result.
Notes:

fetchResult: A fetch result that contains one or more PHAssetCollection objects.
title: A name for the new temporary collection list.

Returns a new collection list.

Transient collection lists are not saved to local storage or iCloud and do not appear in the Photos application or other apps using the Photos framework. A transient collection can be useful if you've designed a UI for displaying the contents of a collection list and want to display an arbitrary set of collections.

136.16.11 Properties

136.16.12 collectionListSubtype as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of asset collection grouping the collection list represents.
Notes:

Use subtypes to make minor distinctions between collection lists of the same type, such as moment clusters and moment years. See Subtype constants.
(Read only property)

136.16.13 collectionListType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of asset collection group that the collection list represents.
Notes:

A collection list may represent an upper level of the Moments hierarchy shown in the Photos app, a folder that contains albums, or a smart folder synced from iPhoto.

(Read only property)

136.16.14 endDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The latest creation date among all assets in the collection list.
Notes:

This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property's value is nil.
(Read only property)

136.16.15 endDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The latest creation date among all assets in the collection list.
Notes:

This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property's value is nil.
(Read only property)

136.16.16 startDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The earliest creation date among all assets in the collection list.
Notes:

This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property's value is nil.
(Read only property)

136.16.17 startDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The earliest creation date among all assets in the collection list.
Notes:

This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property's value is nil.
(Read only property)

136.16.18 Constants

136.16.19 SubtypeAny = -1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for the major distinctions between kinds of collection list.
Notes: Use this value to fetch collection lists of all possible subtypes.

136.16.20 SubtypeMomentListCluster = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for the major distinctions between kinds of collection list.
Notes: The collection list is a moment cluster, grouping several related moments.

136.16.21 SubtypeMomentListYear = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for the major distinctions between kinds of collection list.
Notes: The collection list is a moment year, grouping all moments from one or more calendar years.

136.16.22 SubtypeRegularFolder = 100

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for the major distinctions between kinds of collection list.
Notes: The collection list is a folder containing albums or other folders.

136.16.23 SubtypeSmartFolderEvents = 200

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for the major distinctions between kinds of collection list.
Notes: The collection list is a smart folder containing one or more Events synced from iPhoto.

136.16.24 SubtypeSmartFolderFaces = 201

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for the major distinctions between kinds of collection list.
Notes: The collection list is a smart folder containing one or more Faces synced from iPhoto.

136.16.25 TypeFolder = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for major distinctions between kinds of collection list,
Notes: A folder containing asset collections of type PHAssetCollectionTypeAlbum or PHAssetCollection-TypeSmartAlbum.

136.16.26 TypeMomentList = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for major distinctions between kinds of collection list,
Notes:

A group of asset collections of type PHAssetCollectionTypeMoment.
Moment lists include both moment clusters and moment years. Moment clusters appear as "Collections" in the Photos app, grouping individual moments. Years group all moments containing assets created in the same calendar year.

136.16.27 TypeSmartFolder = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for major distinctions between kinds of collection list,
Notes: A smart folder synced to the device.

136.17 class PHCollectionMBS

136.17.1 class PHCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The abstract superclass for Photos asset collections and collection lists.
Notes:

You do not create or work with instances of this class directly. Instead, use one of its two concrete subclasses, PHAssetCollectionMBS or PHCollectionListMBS.

- A PHAssetCollectionMBS object represents a collection of photo or video assets, such as an album, moment, or Shared Photo Stream.
- A PHCollectionListMBS object represents a collection that contains other collections, such as a a folder containing albums or the set of all moments in a calendar year.

Accessing or modifying the Photos library requires explicit authorization from the user. The first time you call one of the methods listed in Fetching Collections, Photos automatically prompts the user for authorization. (Alternatively, you can use the PHPhotoLibraryMBS requestAuthorization method to prompt the user at a time of your choosing.)

Your app's Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10.0 will crash if this key is not present.
Subclass of the PHObjectMBS class.

136.17.2 Methods

136.17.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.17.4 canPerformEditOperation(anOperation as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns whether the collection supports the specified editing operation.
Notes:

anOperation: A bit mask of editing operations to be tested.

Returns true if the asset supports the specified editing operation; otherwise, false.

If an asset collection or collection list supports editing, you can create a PHAssetCollectionChangeRequestMBS or PHCollectionListChangeRequestMBS object inside a PHPhotoLibraryMBS change block to submit a change.

136.17.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.17.6 fetchCollectionsInCollectionList(collectionList as PHCollectionListMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collections from the specified collection list.
Notes:

collectionList: The collection list from which to fetch collections.
options: Options that specify a filter predicate and sort order for the fetched collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollectionMBS objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all collections in the specified collection list. To retrieve a more specific set of assets, provide a PHFetchOptionsMBS object that contains a filter predicate.

136.17.7 fetchTopLevelUserCollections(options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collections from the root of the photo library's hierarchy of user-created albums and folders.
Notes:

options: Options that specify a filter predicate and sort order for the fetched collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollection objects, or an empty fetch result if no objects match the request.

136.17.8 Properties

136.17.9 canContainAssets as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the collection can contain assets.
Notes:

If this value is true, the collection is a PHAssetCollection object; otherwise, false. For details on asset collections, see PHAssetCollectionMBS.
(Read only property)

136.17.10 canContainCollections as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the collection can contain other collections.
Notes:

If this value is true, the collection is a PHCollectionList object; otherwise, false. For details on collection lists, see PHCollectionListMBS.
(Read only property)

136.17.11 localizedTitle as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The localized name of the collection.
Notes:

This property's value can be either a user-supplied name for a user-created collection, or the localized name of a collection built into the Photos app.
(Read only property)

136.17.12 Constants

136.17.13 EditOperationAddContent = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
Notes: The collection supports adding items that already exist elsewhere in the photo library.

136.17.14 EditOperationCreateContent = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
Notes: The collection supports creating new items.

136.17.15 EditOperationDelete = 6

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
Notes: The collection itself can be deleted.

136.17.16 EditOperationDeleteContent = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
Notes: The collection supports deleting the items it contains.

136.17.17 EditOperationRearrangeContent = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.

Notes: The collection supports reordering the arrangement of items it contains.

136.17.18 EditOperationRemoveContent = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
Notes: The collection supports removing the items it contains.

136.17.19 EditOperationRename = 7

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
Notes: The collection itself can be renamed.

136.18 class PHContentEditingInputMBS

136.18.1 class PHContentEditingInputMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A container that provides information about and access to the image, video, or Live Photo content of an asset to be edited.
Notes:

To edit an asset's photo or video content:

1. Fetch a PHAsset object that represents the photo or video to be edited.
2. Call the asset's requestContentEditingInputWithOptions method to retrieve a PHContentEditingInputMBS object.
3. Apply your edits to the asset. To allow a user to continue working with the edit later (for example, to adjust the parameters of a photo filter), create a PHAdjustmentDataMBS object describing the changes.
4. Initialize a PHContentEditingOutputMBS object. For photo- or video-only assets, use the editing output's properties to provide edited asset data. For Live Photo assets, create a PHLivePhotoEditingContextMBS object to edit the Live Photo content.
5. Use a photo library change block to commit the edit. In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output that you created. For more details, see PHPhotoLibraryMBS.

You can also edit assets from photo editing extensions. In this case, instead of working with a PHAsset object, you implement methods in the PHContentEditingControllerMBS protocol. Photos provides a PHContentEditingInputMBS object when your extension begins editing. When editing is complete, Photos requests a PHContentEditingOutputMBS object that contains the edited asset content.

136.18.2 Methods

136.18.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.11 or newer.

136.18.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.18.5 Properties

136.18.6 adjustmentData as PHAdjustmentDataMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that describes the most recent edit to the asset's content.
Notes:

Adjustment data describes the "recipe" for the last edit made to an asset's photo or video content. For example, a photo editing app can use this property to read information about a set of filters applied to a photo. With this information, your app can later allow a user to change the filter parameters.
(Read only property)

136.18.7 audiovisualAsset as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The video asset, as an AVAssetMBS object.
Notes:

This object provides access to the video asset as a collection of tracks and metadata. For details on working with AVAssetMBS objects.

We pass result, the AVAssetMBS object, as variant to avoid plugin dependencies.
(Read only property)

136.18.8 creationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The date and time when the asset was originally created.
Notes: (Read only property)

136.18.9 creationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date and time when the asset was originally created.
Notes: (Read only property)

136.18.10 displaySizeImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An image of the asset's contents, appropriately sized for display.
Notes:

This property does not provide the full-sized image for a photo asset but rather a scaled-down image appropriate for use in a photo editing user interface. To load the full-sized asset image, use the fullSizeImageURL property.
(Read only property)

136.18.11 fullSizeImageOrientation as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The Exif display orientation of the full-size image file.
Notes:

This property's value is a raw numeric value describing the encoded image orientation according to the TIFF and Exif specifications. To more easily work with such values, convert this value to the CGImagePropertyOrientation type.
(Read only property)

136.18.12 fullSizeImageURL as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The URL to a file that contains the full-sized image data.
Notes:

Typically, your app or extension does not need to load a full-sized image for use in an editing UI. Instead, use the displaySizeImage property to retrieve an image suitable for screen display. You can then load the full-sized image on a background queue so that it will be ready by the time the user finishes editing the display-size image. At that time, apply the user's adjustments to the full-sized image and then use the PHContentEditingOutputMBS class to commit the edit to the photo library.
(Read only property)

136.18.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.18.14 livePhoto as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The unedited Live Photo content of the editing input.
Notes:

To edit the video and photo content of the Live Photo, create a PHLivePhotoEditingContextMBS object using this PHContentEditingInputMBS object.
If the editing input does not represent a Live Photo, this property's value is nil, indicating that you cannot use this PHContentEditingInputMBS object to create a Live Photo editing context.
(Read only property)

136.18.15 location as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The location information that was saved with the asset.
Notes:

Typically, an asset's location metadata identifies the place where the asset was captured.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read only property)

136.18.16 mediaSubtypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtypes of the asset, identifying special kinds of assets such as a panoramic photo or a high-frame-rate video.
Notes:

See MediaSubtype* constants for possible values.
Because an asset can have more than one subtype, use these values as bit masks to identify an asset.
(Read only property)

136.18.17 mediaType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of the asset, such as video or audio.
Notes:

See MediaType* constants.
(Read only property)

136.18.18 playbackStyle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The playback style for the asset.
Notes: (Read only property)

136.18.19 uniformTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The uniform type identifier for the asset's image or video data.
Notes: (Read only property)

136.18.20 Constants

136.18.21 PlaybackStyleImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a still image.

136.18.22 PlaybackStyleImageAnimated = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as an animated image.

136.18.23 PlaybackStyleLivePhoto = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a Live Photo.

136.18.24 PlaybackStyleUnsupported = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset has an unsupported or undefined media playback type.

136.18.25 PlaybackStyleVideo = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a video.

136.18.26 PlaybackStyleVideoLooping = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a looping video.

136.19 class PHContentEditingInputRequestOptionsMBS

136.19.1 class PHContentEditingInputRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of image or video data when you request to edit the content of a Photos asset.
Notes:

You use the PHContentEditingInputRequestOptionsMBS class with the requestContentEditingInputWithOptions method for editing the contents of a PHAssetMBS object.
This class does not affect photo editing extensions.

136.19.2 Methods

136.19.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.19.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

136.19.6 SetCanHandleAdjustmentData(CanHandleAdjustmentData as CanHandleAdjustmentDataMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets delegate to be called when Photos needs to determine whether your app can continue previous edits made to an asset.
Notes: When an asset is edited, Photos stores a PHAdjustmentDataMBS object provided by the app or extension that edited the asset. This object provides all information necessary to reconstruct the edited asset using the original asset data. When your app requests to edit an asset, Photos calls this block to inquire whether your app can handle the asset's past adjustments.

136.19.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate Photos calls periodically while downloading the asset.
Notes: If you request an asset whose data is not on the local device, and have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and allow canceling the download.

136.19.8 Properties

136.19.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.19.10 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested asset from iCloud if needed.
Notes:

If true (the default), Photos downloads the asset requested for editing if it is not stored on the local device. To be notified of the download's progress, use the PHContentEditingInputRequestOptionsMBS property to provide a delegate that Photos calls periodically while downloading the asset.
(Read and Write property)

136.19.11 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate Photos calls periodically while downloading the asset.
Notes:

If you request an asset whose data is not on the local device, and have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and allow canceling the download.
(Read and Write property)

136.19.12 Delegates

136.19.13 CanHandleAdjustmentDataMBS(adjustmentData as PHAdjustmentDataMBS, tag as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate takes the following parameter.
Notes:

adjustmentData: A PHAdjustmentDataMBS object you can use to determine whether your app can work with past edits made to the asset. Typically, you make this decision based on the adjustment data's formatIdentifier and formatVersion properties.

If your method returns true, Photos provides the original asset data for editing. Your app uses the adjustment data to alter, add to, or reapply previous edits. (For example, an adjustment data may describe filters applied to a photo. Your app reapplies those filters and allows the user to change filter parameters, add new filters, or remove filters.)
If your method returns false, Photos provides the most recent asset data—the rendered output of all previous edits—for editing.

136.19.14 ProgressHandlerMBS(progress as double, byref stop as boolean, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate takes the following parameters.
Notes:

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates the download has just started, and a value of 1.0 indicates the download is complete.
stop: Set stop to true inside the block to cancel the download.

136.20 class PHContentEditingOutputMBS

136.20.1 class PHContentEditingOutputMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A container to which you provide the results of editing the photo, video, or Live Photo content of a Photos asset.
Notes:

To edit an asset's photo or video content:

1. Fetch a PHAssetMBS object that represents the photo or video to be edited.
2. Call the asset's requestContentEditingInputWithOptions method to retrieve a PHContentEditingInputMBS object. This object provides information about the asset, the asset data to be edited, and a preview image for display.
3. Apply your edits to the asset. To allow a user to continue working with the edit later (for example, to adjust the parameters of a photo filter), create a PHAdjustmentDataMBS object describing the changes.
4. Initialize a PHContentEditingOutput object. For photo- or video-only assets, provide the edited content with the renderedContentURL property. For Live Photo assets, create a PHLivePhotoEditingContext object to edit the Live Photo content and pass your content editing output to the saveLivePhotoToOutput method. For all asset types, provide your adjustment data with the adjustmentData property of the content editing output.
5. Use a photo library change block to commit the edit. (For details, see PHPhotoLibraryMBS.) In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output that you created.

Each PHPhotoLibraryperformChanges call prompts the user for permission to edit the contents of the photo library—to edit multiple assets in one batch, create multiple PHAssetChangeRequest objects within the same change block, each with its own corresponding PHContentEditingOutput object.

You can also edit assets from photo editing extensions. In this case, instead of working with a PHAssetMBS object, you implement methods in the PHContentEditingController protocol. Photos provides a PHContentEditingOutputMBS object when your extension begins editing. When editing is complete, Photos requests a PHContentEditingOutputMBS object that contains the edited asset content.

Requires MacOS 10.11 or newer.

136.20.2 Methods

136.20.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.

Notes: Should return true on MacOS 10.11 or newer.

136.20.4 Constructor(contentEditingInput as PHContentEditingInputMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an editing output from the specified editing input.
Notes:

contentEditingInput: An object providing information about the asset to be edited.

Returns an initialized content editing output.

To complete the edit, use the renderedContentURL property to provide the edited asset content. Then, use the PHAssetChangeRequestMBS class or PHContentEditingController protocol to commit the edit to storage.
See also:

- 136.20.5 Constructor(placeholderForCreatedAsset as PHObjectPlaceholderMBS) 21486

136.20.5 Constructor(placeholderForCreatedAsset as PHObjectPlaceholderMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an editing output for use in adding a new asset to the photo library.
Notes:

placeholderForCreatedAsset: A placeholder object that ties the editing output to a PHAssetChangeRequest object for creating a new asset.

Returns an initialized content editing output.

Use this method if you want to add a new asset to the Photos library with edited content, as opposed to editing the content of an asset after adding it to the library. For example, you might use this option if your app applies filters to photos it captures with the device camera—instead of saving only the filtered image to the Photos library, your app can save both the filtered and the original image, allowing the user to revert to the original image or apply different filters later.
See also:

- 136.20.4 Constructor(contentEditingInput as PHContentEditingInputMBS) 21486

136.20.6 Properties

136.20.7 adjustmentData as PHAdjustmentDataMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object describing the changes made to the asset.
Notes:

You use adjustment data to describe the "recipe" for an edit that later edits can make use of. For example, a photo editing app can use this property to save information about the filters applied to a photo. Later, the same app (or another app that understands its adjustment data format) can load the filter information, change the filter parameters, and reapply the filters to the original photo.

If you write new asset content to the URL specified by the renderedContentURL property, you must also provide a new, distinct PHAdjustmentDataMBS object describing your edit. Passing a preexisting adjustment data object (that describes an earlier edit) results in undefined behavior.
(Read only property)

136.20.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.20.9 renderedContentURL as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The URL at which to write a file containing edited asset content.
Notes:

Read this property to find a URL for writing edited asset content. Then, if editing a photo asset, write the altered photo image to a file in JPEG format at this URL. If editing a video asset, export the video to a QuickTime (.mov) file at this URL.

Edited asset content must incorporate (or "bake in") the intended orientation of the asset. That is, the orientation metadata (if any) that you write in the output image or video file must declare the "up" orientation, and the image or video data must appear right-side up when presented without orientation metadata.

For Live Photo content, you don't write output to this URL. Instead, pass the editing output object to the saveLivePhotoToOutput method.

(Read only property)

136.21 class PHFetchOptionsMBS

136.21.1 class PHFetchOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options that affect the filtering, sorting, and management of results that Photos returns when you fetch asset or collection objects.
Notes:

Using class methods on the PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, and PHCollectionListMBS classes to fetch assets or collections produces a PHFetchResultMBS object containing the requested objects. The options you specify control which objects the fetch result includes, how those objects are arranged in the fetch result, and how Photos should notify your app of changes to the fetch result.

Photos supports only a restricted set of keys for the predicate and sortDescriptors properties. The set of available keys depends on which class you're using to fetch assets or collections—see Table 1 for the list of keys supported by each class.

Supported predicate and sort descriptor keys

Class for Fetch Method	Supported Keys
PHAsset	SELF, localIdentifier, creationDate, modificationDate, mediaType, mediaSubtypes, duration, pixelWidth, pixelHeight, favorite (or isFavorite), hidden (or isHidden), burstIdentifier
PHAssetCollection	SELF, localIdentifier, localizedTitle (or title), startDate, endDate, estimatedAssetCount
PHCollectionList	SELF, localIdentifier, localizedTitle (or title), startDate, endDate
PHCollection (can fetch a mix of PHCollectionList and PHAssetCollection objects)	SELF, localIdentifier, localizedTitle (or title), startDate, endDate

Available in MacOS 10.13 or newer.

136.21.2 Methods

136.21.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.21.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.21.5 copy as PHFetchOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

136.21.6 setSortDescriptors(sortDescriptors() as NSSortDescriptorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the list of sort descriptors, specifying an order for the fetched objects.

136.21.7 sortDescriptors as NSSortDescriptorMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A list of sort descriptors, specifying an order for the fetched objects.

136.21.8 Properties

136.21.9 fetchLimit as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum number of objects to include in the fetch result.
Notes:

With the default fetch limit of zero, Photos returns all requested assets or collections in a fetch result. Change this value to fetch more efficiently in situations where a potentially very large result is not needed. For example, to fetch only the most recently captured asset, call the fetchAssetsWithOptions method, using the sortDescriptors property to sort in descending date order, and setting a fetch limit of one.
(Read and Write property)

136.21.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.21.11 includeAllBurstAssets as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the fetch result includes all assets from burst photo sequences.
Notes:

When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together and allows the user to select favorite members of the sequence. Photos also automatically marks members of the sequence as potential user favorites.

If the value is false (the default), fetches that include burst photo sequences return only the user-picked members and representative asset of each sequence. If the value is true, such fetches include all assets in each sequence.
(Read and Write property)

136.21.12 includeAssetSourceTypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The set of source types for which to include assets in the fetch result.
Notes:

Asset source types identify the means by which an asset enters the Photos library, and affect the possible actions you can perform on an asset. For example, assets synced from iTunes cannot be edited or deleted.

The SourceType type is an option set—to include multiple source types in the same query, combine type constants with the bitwise OR operator. See SourceType constants in PHAssetMBS class.
(Read and Write property)

136.21.13 includeHiddenAssets as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the fetch result includes assets marked as hidden.
Notes:

If the value is false (the default), fetches exclude assets whose hidden property is true. If the value is true, fetches include all assets regardless of their hidden state.

(Read and Write property)

136.21.14 predicate as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A predicate that specifies which properties to select results by and that also specifies any constraints on selection.
Notes:

Construct a predicate with the properties of the class of objects that you want to fetch
(Read and Write property)

136.21.15 wantsIncrementalChangeDetails as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether your app receives detailed change information for the objects in the fetch result.
Notes:

If you have registered a change observer with the shared PHPhotoLibraryMBS object, fetching assets or collections automatically registers your observer to receive information about later changes to the fetch result and about the objects it contains. For a fetch result, change information (a PHFetchResultChangeDetailsMBS object) can include a detailed list of incremental differences from the previous state of the fetch result, such as new photos captured since the original fetch.

If true (the default), Photos sends detailed incremental changes when such information is available. If false, Photos tells your app only when the fetch result has changed (in which case you can perform the fetch again to receive updated results).
(Read and Write property)

136.22 class PHFetchResultChangeDetailsMBS

136.22.1 class PHFetchResultChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of changes that occurred in the set of asset or collection objects listed in a fetch result.
Notes: A PHFetchResultChangeDetailsMBS object provides detailed information about the differences between two fetch results—one that you previously obtained and an updated one that would result if you performed the same fetch again. The change details object provides information useful for updating a UI that lists the contents of a fetch result, such as the indexes of added, removed, and rearranged objects.

136.22.2 Methods

136.22.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.22.4 changeDetailsFromFetchResult(fromResult as PHFetchResultMBS, toFetchResult as PHFetchResultMBS, changedObjects() as PHObjectMBS) as PHFetchResultChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a change details object that summarizes the differences between two fetch results.
Notes:

fromResult: A fetch result to be treated as the "before" state in the resulting change details object.
toResult: A fetch result to be treated as the "after" state in the resulting change details object.
changedObjects: An collection of objects to manually note as changed between the two fetch results.

Typically, you use the PHChangeMBS class to retrieve PHFetchResultChangeDetailsMBS objects describing any changes that have occurred since you performed a fetch, but you can also use this method to get a change details object that summarizes the difference between two arbitrary PHFetchResultMBS objects. In this case, Photos cannot automatically determine when the same objects are present in both fetch results but those objects' content has changed, so the changedIndexes and changedObjects properties are empty.

However, you can use the changedObjects parameter to manually note objects as changed. For example, consider a view controller that maintains a base fetch result representing a list of albums, and a transient

collection that filters the list according to the user's search terms.

136.22.5 changedObjects() as PHObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The objects in the fetch result whose content or metadata have been updated.
Notes:

An array of PHAssetMBS, PHAssetCollectionMBS, or PHCollectionListMBS objects.
If the hasIncrementalChanges property's value is false, this property's value is nil.

136.22.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.22.7 enumerateMoves(theDelegate as enumerateMovesHandlerMBS, Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Runs the specified block for each case where an object has moved from one index to another in the fetch result.
Notes: The toIndex parameter in the handler block is relative to the state of the fetch result after you've applied the changes described by the removedIndexes, insertedIndexes and changedIndexes properties. Therefore, if you use this method to update a collection view or similar user interface displaying the contents of the fetch result, update your UI to reflect insertions, removals, and changes before you process moves.

136.22.8 insertedObjects() as PHObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The new items that have been inserted in the fetch result.
Notes:

This array can contain PHAssetMBS, PHAssetCollectionMBS or PHCollectionListMBS objects, or some combination thereof.
If the hasIncrementalChanges property's value is false, this property's value is nil.

136.22.9 removedObjects() as PHObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The items that have been removed from the fetch result.
Notes:

This array can contain PHAssetMBS, PHAssetCollectionMBS, or PHCollectionListMBS objects, or some combination thereof.
If the hasIncrementalChanges property's value is false, this property's value is nil.

136.22.10 Properties

136.22.11 changedIndexes as NSIndexSetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The indexes of objects in the fetch result whose content or metadata have been updated.
Notes:

Use this index set to update elements in a collection view or similar user interface that displays the contents of the fetch result. These indexes are relative to the original fetch result (the fetchResultBeforeChanges property) after you've applied the changes described by the removedIndexes and insertedIndexes properties; when updating your app's interface, apply changes after removals and insertions and before moves.

If the hasIncrementalChanges property's value is false, this property's value is nil.
(Read only property)

136.22.12 fetchResultAfterChanges as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The current fetch result, incorporating recent changes.
Notes:

You can use this object to inspect the current state of the fetched objects even if the hasIncrementalChanges property's value is false. Using this fetch result is equivalent to performing once more the same fetch that returned the original fetch result.
(Read only property)

136.22.13 fetchResultBeforeChanges as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The original fetch result, without recent changes.
Notes:

This property's value is the same object you passed to the changeDetailsForFetchResult method to request change details.
(Read only property)

136.22.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.22.15 hasIncrementalChanges as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether changes to the fetch result can be described incrementally.
Notes:

If this value is true, use the insertedIndexes, removedIndexes, and changedIndexes properties (or the insertedObjects, removedObjects, and changedObjects properties) to find out which objects in the fetch result have been added, removed, or updated. You can also use the hasMoves property and enumerateMoves method to find out which objects in the fetch result have been rearranged. These properties can be useful for updating a collection view or similar interface that displays the fetch result's contents.

If this value is false, the fetch result is too different from its original state for incremental change information to be meaningful. Use the fetchResultAfterChanges property to get the fetch result's current membership. (If displaying the fetch result's contents, reload your user interface to match the new fetch result.)
(Read only property)

136.22.16 hasMoves as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether objects have been rearranged in the fetch result.
Notes:

If this value is true, use the enumerateMoves method to find out which elements have been moved and what their new indexes are.
(Read only property)

136.22.17 insertedIndexes as NSIndexSetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The indexes where new objects have been inserted in the fetch result.
Notes:

Use this index set can to insert elements in a collection view or similar user interface that displays the contents of the fetch result. These indexes are relative to the original fetch result (the fetchResultBeforeChanges property) after you've applied the changes described by the removedIndexes property; when updating your app's interface, apply insertions after removals and before changes and moves.

If the hasIncrementalChanges property's value is false, this property's value is nil.
(Read only property)

136.22.18 removedIndexes as NSIndexSetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The indexes from which objects have been removed from the fetch result.
Notes:

Use this index set to remove elements from a collection view or similar user interface that displays the contents of the fetch result. These indexes are relative to the original fetch result (the fetchResultBeforeChanges property); when updating your app's interface, apply removals before insertions, changes, and moves.
If the hasIncrementalChanges property's value is false, this property's value is nil.
(Read only property)

136.22.19 Delegates

136.22.20 enumerateMovesHandlerMBS(fromIndex as Integer, toIndex as Integer, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that Photos calls to provide details about which objects in the fetch result have moved to which indexes.
Notes:

fromIndex: The index of an object in the original fetch result.
toIndex: The index to which the object has moved in the new fetch result.

136.23 class PHFetchResultMBS

136.23.1 class PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An ordered list of assets or collections returned from a Photos fetch method.
Notes:

When you use class methods on the PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, and PHCollectionListMBS classes to retrieve objects, Photos provides the resulting objects in a fetch result. You access the contents of a fetch result with various methods. Unlike an array, however, a PHFetchResult object dynamically loads its contents from the Photos library as needed, providing optimal performance even when handling a large number of results.

A fetch result provides thread-safe access to its contents. After a fetch, the fetch result's count value is constant, and all objects in the fetch result keep the same localIdentifier value. (To get updated content for a fetch, register a change observer with the shared PHPhotoLibraryMBS object.)

A fetch result caches its contents, keeping a batch of objects around the most recently accessed index. Because objects outside of the batch are no longer cached, accessing these objects results in refetching those objects. This process can result in changes to values previously read from those objects.

136.23.3 Blog Entries

- Show Live Photos in your Xojo application

136.23.4 Methods

136.23.5 allObjects as Variant()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Queries all objects as array.

136.23.6 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.23.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.23.8 containsObject(anObject as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns whether the specified object is present in the fetch result.
Notes:

anObject: An object.

Returns true if anObject is present in the fetch result, otherwise false.

This method determines whether anObject is present in the fetch result by sending an isEqual: message to each of the fetch result's objects (and passing anObject as the parameter to each isEqual message).

136.23.9 copy as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the result set.

136.23.10 countOfAssetsWithMediaType(MediaType as Integer) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the number of assets in the fetch result of a specified type.
Notes:

mediaType: The type of assets to count, such as image or video. See MediaType constants.

Returns the number of assets in the fetch result of the specified type.

The first time you call this method, Photos enumerates the contents of the fetch result to count those of the specified type, then caches the result. Subsequent calls with the same mediaType parameter return the cached value.
This method counts only the PHAssetMBS objects in a fetch result. If a fetch result contains only PHAssetCollectionMBS or PHCollectionListMBS objects, the return value is 0.

136.23.11 indexOfObject(anObject as Variant) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the lowest index whose corresponding object in the fetch result is equal to the specified object.
Notes:

anObject: An object.

Returns the lowest index whose corresponding object in the fetch result is equal to anObject, or NSNotFound if no such object is in the fetch result.

Starting at index 0, this method sends an isEqual message to each object in the fetch result until it finds a match or reaches the end of the fetch result. This method passes the anObject parameter to each isEqual message.
See also:

- 136.23.12 indexOfObject(anObject as Variant, range as NSRangeMBS) as Integer 21500

136.23.12 indexOfObject(anObject as Variant, range as NSRangeMBS) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the lowest index within the specified range whose corresponding object in the fetch result is equal to the specified object.
Notes:

anObject: An object.
range: The range of indexes in the fetch result within which to search for anObject.

Returns the lowest index within range whose corresponding object in the fetch result is equal to anObject,

or NSNotFound if no such object is in the fetch result.

Starting at range.location, this method sends an isEqual message to each object in the fetch result until it finds a match or reaches the end of the fetch result. This method passes the anObject parameter to each isEqual message.
Raises an exception (NSExceptionMBS class) if the range parameter represents a range that doesn't exist in the fetch result.
See also:

- 136.23.11 indexOfObject(anObject as Variant) as Integer 21500

136.23.13 objectAtIndex(index as Integer) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the object located at the specified index.
Notes:

index: An index within the bounds of the fetch result.

Returns the object located at index in the fetch result.

Raises an exception (NSExceptionMBS class) if index is beyond the end of the fetch result (that is, greater than or equal to the value of the count property).

136.23.14 objectsAtIndexes(indexes as NSIndexSetMBS) as Variant()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns an array containing the objects in the fetch result at the indexes in the specified index set.
Notes:

indexes: An index set containing indexes within the bounds of the fetch result.

Returns an array containing the objects in the fetch result at the indexes specified by indexes.

The ordering of the returned array follows the index set. That is, in the returned array, an object with a higher index in the index set comes after any object with a smaller index in the index set.
Raises an exception (NSExceptionMBS) if any index in the index set is beyond the end of the fetch result (that is, greater than or equal to the value of the count property).

136.23.15 Properties

136.23.16 count as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The number of objects in the fetch result.
Notes: (Read only property)

136.23.17 firstObject as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The first object in the fetch result.
Notes:

You specify the ordering of a fetch result in the PHFetchOptionsMBS object you pass to a fetch method.
Returns nil if the fetch result is empty.
(Read only property)

136.23.18 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.23.19 lastObject as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The last object in the fetch result.
Notes:

You specify the ordering of a fetch result in the PHFetchOptionsMBS object you pass to a fetch method.
Returns nil if the fetch result is empty.
(Read only property)

136.23.20 Constants

136.23.21 EditOperationContent = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the identifying possible actions an asset can support, used by the canPerformEditOperation method.
Notes:

The asset's photo or video content can be edited.
To begin the process of editing an asset, use the requestContentEditingInputWithOptions method.

136.23.22 EditOperationDelete = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the identifying possible actions an asset can support, used by the canPerformEditOperation method.
Notes:

The asset can be deleted from the photo library.
To delete one or more assets, create a change request with the deleteAssets method inside a PHPhotoLibrary change block.

136.23.23 EditOperationProperties = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the identifying possible actions an asset can support, used by the canPerformEditOperation method.
Notes:

The asset's metadata properties can be edited.
To change an asset's properties, create a change request with the changeRequestForAsset method inside a PHPhotoLibraryMBS change block.

136.23.24 MediaTypeAudio = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset is an audio file.

136.23.25 MediaTypeImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset is a photo or other static image.

136.23.26 MediaTypeUnknown = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset's type is unknown.

136.23.27 MediaTypeVideo = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset is a video file.

136.23.28 PlaybackStyleImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a still image.

136.23.29 PlaybackStyleImageAnimated = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as an animated image.

136.23.30 PlaybackStyleLivePhoto = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a Live Photo.

136.23.31 PlaybackStyleUnsupported = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset has an unsupported or undefined media playback type.

136.23.32 PlaybackStyleVideo = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a video.

136.23.33 PlaybackStyleVideoLooping = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a looping video.

136.24 class PHImageManagerMBS

136.24.1 class PHImageManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that facilitates retrieving or generating preview thumbnails and asset data.
Notes:

Use these methods to fetch full-size photo assets or thumbnail images, or to retrieve AVFoundation objects for playing, exporting, and manipulating video assets.

To load image or video data:
1. Use the PHAsset class to fetch the asset you're interested in.
2. Call the defaultManager method to retrieve the shared image manager object.
3. Use one of the methods listed in Requesting Images and Requesting Video Objects to load the asset's image or video data.

The image manager caches the asset images and data it provides, so later requests for the same assets with similar parameters will return results more quickly.

If you need to load image data for many assets together, use the PHCachingImageManagerMBS class to "preheat" the cache by loading images you expect to need soon. For example, when populating a collection view with photo asset thumbnails, you can cache images ahead of the current scroll position.

Available in MacOS 10.13 or later.

136.24.2 Blog Entries

- Show Live Photos in your Xojo application

136.24.3 Blog Entries

- Show Live Photos in your Xojo application

136.24.4 Methods

136.24.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.24.6 cancelImageRequest(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an asynchronous request.
Notes:

requestID: The numeric identifier of the request to be canceled.

When you perform an asynchronous request for image data using the requestImageForAsset method, or for a video object using one of the methods listed in Requesting Video Objects, the image manager returns a numeric identifier for the request. To cancel the request before it completes, provide this identifier when calling the cancelImageRequest method.

136.24.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.24.8 defaultManager as PHImageManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the shared image manager object.
Notes: This method always returns the same image manager object, which is shared for all uses in your app.

136.24.9 MaximumSize as CGSizeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A special value for requesting original image data or the largest rendered image available.
Notes: When you use the PHImageManagerMaximumSize option, Photos provides the largest image available for the asset without scaling or cropping. (That is, it ignores the resizeMode option.)

136.24.10 PHImageCancelledKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes:

A key whose value indicates whether the image request was canceled.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is a Boolean value.If you call the cancelImageRequest method to cancel a request, Photos calls your result handler block with the value true for this key.

136.24.11 PHImageErrorKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes:

A key whose value is an error that occurred when Photos attempted to load the image.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is an NSErrorMBS object.Photos provides an error object for this key if it cannot provide an image for your handler block's result parameter. Examine the error object for information about the cause of the error.

136.24.12 PHImageResultIsDegradedKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes:

A key whose value indicates whether the result image is a low-quality substitute for the requested image.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is a Boolean value. If true, the result parameter of your resultHandler block contains a low-quality image because Photos could not yet provide a higher-quality image. Depending on your settings in the PHImageRequestOptions object that you provided with the request, Photos may call your result handler delegate again to provide a higher-quality image.

136.24.13 PHImageResultIsInCloudKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes:

A key whose value indicates whether photo asset data is stored on the local device or must be downloaded from iCloud.

This key provides information about an image loading result in the resultHandler delegate for methods listed in Requesting Images. The corresponding value is a Boolean value.

If true, no image was provided, because the asset data must be downloaded from iCloud. To download the data, submit another request, and specify true for the networkAccessAllowed option.

136.24.14 PHImageResultRequestIDKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes:

A key whose value is a unique identifier for the image request.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is an integer value. This identifier matches that returned when making a request. You can use it with the cancelImageRequest method to cancel requests with pending results that are no longer needed.

136.24.15 RequestAVAssetForVideo(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, exportPreset as String, CompletionHandler as RequestAVAssetForVideoCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests AVFoundation objects representing the video asset's content and state, to be loaded asynchronously.
Notes:

asset: The video asset for which video objects are to be loaded.
options: Options specifying how Photos should handle the request and notify your app of progress or errors. For details, see PHVideoRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos downloads the video data (if necessary) and creates AVFoundation objects. It then calls your resultHandler block to provide the requested video.

Use this method when you want to work with the arrangement of audio and video tracks that an asset contains. If you plan to use the asset only for playback, call the requestPlayerItemForVideo method. If you plan to export the asset data, call the requestExportSessionForVideo method.

136.24.16 RequestExportSessionForVideo(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, exportPreset as String, CompletionHandler as RequestExportSessionForVideoCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests an export session for writing the video asset's data to a file, to be loaded asynchronously.
Notes:

asset: The video asset for which an export session is to be created.
options: Options specifying how Photos should handle the request and notify your app of progress or errors. For details, see PHVideoRequestOptionsMBS.
exportPreset: The export preset name for exporting the asset. For available presets, see AVAssetExportSessionMBS.

A numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos downloads the video data (if necessary) and creates an export session. It then calls your resultHandler delegate to provide the requested video.
For additional export options, use the requestAVAssetForVideo method and then create AVAssetReader and AVAssetWriterMBS objects to transcode and output the video asset's data.

136.24.17 RequestImageDataAndOrientationForAsset(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, CompletionHandler as RequestImageForAssetCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the largest represented image as data bytes and EXIF orientation for the specified asset.
Notes:

asset: The asset for which to load image data.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors.

If PHImageRequestOptionsMBS.VersionCurrent is requested and the asset has adjustments, the largest rendered image data is returned. In all other cases, the original image data is returned.
For further details, see PHImageRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos loads the largest available representation of the image asset, then calls your resultHandler block to provide the requested data. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

By default, this method executes asynchronously. If you call it from a background thread, you may change the synchronous property of the options parameter to true to block the calling thread until either the requested image is ready or an error occurs, at which time Photos calls your result handler. This method ignores the deliveryMode option—Photos calls your result handler block exactly once.

If the version option is set to PHImageRequestOptionsMBS.VersionCurrent, Photos provides rendered image data, including the results of any edits that have been made to the asset content. Otherwise, Photos provides the originally captured image data for the asset.

136.24.18 RequestImageForAsset(asset as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS, CompletionHandler as RequestImageForAssetCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests an image representation for the specified asset.
Notes:

asset: The asset whose image data is to be loaded.
targetSize: The target size of image to be returned.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors. For details, see PHImageRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos loads or generates an image of the asset at, or near, the size you specify. Next, it calls your resultHandler block to provide the requested image. To serve your request more quickly, Photos may provide an image that is slightly larger than the target size—either because such an image is already cached or because it can be generated more efficiently. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

By default, this method executes asynchronously. If you call it from a background thread you may change the synchronous property of the options parameter to true to block the calling thread until either the requested image is ready or an error occurs, at which time Photos calls your result handler.

For an asynchronous request, Photos may call your result handler block more than once. Photos first calls the block to provide a low-quality image suitable for displaying temporarily while it prepares a high-quality image. (If low-quality image data is immediately available, the first call may occur before the method returns.) When the high-quality image is ready, Photos calls your result handler again to provide it. If the image manager has already cached the requested image at full quality, Photos calls your result handler only once. The PHImageResultIsDegradedKey key in the result handler's info parameter indicates when Photos is providing a temporary low-quality image.

You can use this method for both photo and video assets — for a video asset, an image request provides a thumbnail image or poster frame.

136.24.19 RequestImageForAssetSync(asset as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS, byref Info as Dictionary) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests an image representation for the specified asset synchronously.
Notes:

asset: The asset whose image data is to be loaded.
targetSize: The target size of image to be returned.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors. For details, see PHImageRequestOptionsMBS class.

Returns the image.

136.24.20 RequestLivePhotoForAsset(asset as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHLivePhotoRequestOptionsMBS, CompletionHandler as RequestLivePhotoForAssetCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests a Live Photo representation for the specified asset.
Notes:

asset: The asset whose Live Photo data is to be loaded.
targetSize: The target size of Live Photo to be returned.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors. For details, see PHLivePhotoRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

A Live Photo is a picture, taken with a supported device, that includes movement and sound from the moments just before and after its capture. Much like how a UIImage object represents a ready-to-use form of an image, a PHLivePhotoMBS object represents a Live Photo whose image, motion, and sound data are prepared for display. Use this method to request an asset's Live Photo form; after Photos calls your resultHandler delegate to provide the Live Photo, you can display it using the PHLivePhotoViewMBS class.

Use this method only when you plan to display the motion and sound content associated with a Live Photo. In contexts where you need only a still image for a Live Photo asset—for example, when loading thumbnails to display in a photo chooser interface—use the requestImageForAsset method instead.

When you call this method, Photos loads or generates a PHLivePhotoMBS object for the asset at, or near, the size you specify. Next, it calls your resultHandler block to provide the requested image. To serve your request more quickly, Photos may provide an image that is slightly larger than the target size—either because such an image is already cached or because it can be generated more efficiently. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network. This method always executes asynchronously.

Photos may call your result handler block more than once. Photos first calls the block to provide a low-quality image suitable for displaying temporarily while it prepares a high-quality image. (If low-quality image data is immediately available, the first call may occur before the method returns.) When the high-quality image is ready, Photos calls your result handler again to provide it. If the image manager has already cached the requested image at full quality, Photos calls your result handler only once. The PHImageResultIsDegradedKey key in the result handler's info parameter indicates when Photos is providing a temporary low-quality image.

136.24.21 RequestPlayerItemForVideo(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, CompletionHandler as RequestPlayerItemForVideoCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests a representation of the video asset for playback, to be loaded asynchronously.
Notes:

asset: The video asset to be played back.
options: Options specifying how Photos should handle the request and notify your app of progress or errors. For details, see PHVideoRequestOptionsMBS.

A numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos downloads the video data (if necessary) and creates a player item. It then calls your resultHandler block to provide the requested video.

Use this method when you want to simply play back the video asset as it currently exists. For more detailed options or to work with the asset's audio and video tracks, use the requestAVAssetForVideo method instead.

136.24.22 Properties

136.24.23 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.24.24 Constants

136.24.25 ContentModeAspectFill = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the content mode constants.
Notes: Scales the image so that it completely fills the target size.

136.24.26 ContentModeAspectFit = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the content mode constants.
Notes: Scales the image so that its larger dimension fits the target size.

136.24.27 ContentModeDefault = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the content mode constants.
Notes:

Fits the image to the requested size using the default option, PHImageContentModeAspectFit.

Use this content mode when requesting a full-sized image using the PHImageManagerMBS.MaximumSize value for the target size. In this case, the image manager does not scale or crop the image.

136.24.28 PHInvalidImageRequestID = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: A special value provided for asynchronous image requests that cannot be canceled.

136.24.29 Delegates

136.24.30 RequestAVAssetForVideoCompletedMBS(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, AVAsset as Variant, AVAudioMix as Variant, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that Photos calls after loading the asset's data.
Notes:

asset: An object that provides access to the video asset as a collection of tracks and metadata. For details on working with AVAsset objects, see AVFoundation Programming Guide.
audioMix: Use this object to rearrange the asset's audio tracks, edit additional audio into the mix, or configure an AVAssetReaderOutput object for exporting the asset's audio data. If nil, the asset uses a default audio mix.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for

possible keys and values.

We pass AVAsset, the AVAssetMBS object, as variant to avoid plugin dependencies.
Same for AVAudioMix with AVAudioMixMBS object.

136.24.31 RequestExportSessionForVideoCompletedMBS(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, exportPreset as string, exportSession as Variant, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that Photos calls after loading the asset's data and preparing the export session.
Notes:

exportSession: An AVAssetExportSessionMBS object that you can use for writing the video asset's data to a file.
info: A dictionary that provides information about the status of the request. See Image Result Info Keys for possible keys and values.

We pass AVAsset, the AVAssetExportSessionMBS object, as variant to avoid plugin dependencies.

136.24.32 RequestImageDataAndOrientationForAssetCompletedMBS(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, imageData as MemoryBlock, dataUTI as String, orientation as Integer, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate called, exactly once, when image loading is complete, providing the requested image or information about the status of the request.
Notes:

imageData: The requested image.
dataUTI: The uniform type identifier for the image.
orientation: The EXIF orientation for the image, as a CGImagePropertyOrientation.
info: A dictionary providing information about the status of the request.

136.24.33 RequestImageForAssetCompletedMBS(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, result as NSImageMBS, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate to be called when image loading is complete, providing the requested image or information about the status of the request.
Notes:

result: The requested image.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

136.24.34 RequestLivePhotoForAssetCompletedMBS(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, livePhoto as PHLivePhotoMBS, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate to be called when image loading is complete, providing the requested image or information about the status of the request.
Notes:

result: The requested Live Photo object.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

136.24.35 RequestPlayerItemForVideoCompletedMBS(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, playerItem as Variant, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate Photos calls after loading the asset's data and preparing the player item.
Notes:

playerItem: An AVPlayerItemMBS object that you can use for playing back the video asset.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

We pass playerItem, the AVPlayerItemMBS object, as variant to avoid plugin dependencies.

136.25 class PHImageRequestOptionsMBS

136.25.1 class PHImageRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of still image representations of Photos assets you request from an image manager.
Notes: Available on macOS 10.13 or newer.

136.25.2 Methods

136.25.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.25.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.25.5 copy as PHImageRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the request.

136.25.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

136.25.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate that Photos calls periodically while downloading the image.
Notes: If you request an image whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.

136.25.8 Properties

136.25.9 DeliveryMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The requested image quality and delivery priority.
Notes:

Use this property to tell Photos to provide an image quickly (possibly sacrificing image quality), to provide a high-quality image (possibly sacrificing speed), or to provide both automatically if needed. See DeliveryMode constants.
(Read and Write property)

136.25.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.25.11 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested image from iCloud.
Notes:

If true, and the requested image is not stored on the local device, Photos downloads the image from iCloud. To be notified of the download's progress, use the progressHandler property to provide a delegate that Photos calls periodically while downloading the image. If false (the default), and the image is not on the local device, the PHImageResultIsInCloudKey value in the result handler's info dictionary indicates that the image is not available unless you enable network access.

(Read and Write property)

136.25.12 normalizedCropRect as CGRectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A rectangle for requesting a cropped version of the original image.
Notes:

To request a cropped image, specify the crop rectangle in a unit coordinate space relative to the image. In this coordinate system, the point { 0.0,0.0 } refers to the upper left corner of the image, and the point { 1.0,1.0 } refers to the opposite corner regardless of the image's aspect ratio.
This property defaults to zero rectangle, which specifies no cropping.
If you specify a crop rectangle, you must also specify the PHImageRequestOptionsResizeModeExact option for the resizeMode property.
(Read and Write property)

136.25.13 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls periodically while downloading the image.
Notes:

If you request an image whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.
(Read and Write property)

136.25.14 ResizeMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A mode that specifies how to resize the requested image.
Notes:

Use this property to choose how to fit the image to the target size you specified when requesting image data.
See PHImageRequestOptionsResizeMode.
(Read and Write property)

136.25.15 Synchronous as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether Photos processes the image request synchronously.
Notes:

If false (the default), the requestImageForAsset method returns immediately. Depending on the deliveryMode property, Photos may call your resultHandler delegate before the method returns, at some later time, or both.
If true, the requestImageForAsset method blocks the calling thread until image data is ready or an error occurs. Photos calls your result handler delegate exactly once.

Perform synchronous requests from a background thread only.
(Read and Write property)

136.25.16 Version as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The version of the image to be requested.
Notes:

Use this property to request a version of the image with or without adjustments, or to request high-quality original data (for example, a RAW file) if such is available. See Version constants.
(Read and Write property)

136.25.17 Constants

136.25.18 DeliveryModeFastFormat = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested image data, used by the deliveryMode property.
Notes: Photos provides only a fast-loading image, possibly sacrificing image quality.

136.25.19 DeliveryModeHighQualityFormat = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested image data, used by the deliveryMode property.

Notes: Photos provides only the highest-quality image available, regardless of how much time it takes to load.

136.25.20 DeliveryModeOpportunistic = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested image data, used by the deliveryMode property.
Notes: Photos automatically provides one or more results in order to balance image quality and responsiveness.

136.25.21 ResizeModeExact = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for how to resize the requested image to fit a target size, used by the resizeMode property.
Notes:

Photos resizes the image to match the target size exactly.
Resizing to exactly match a target size is less efficient than using the fast resizing option.
You must choose this option if you use the normalizedCropRect property to request a cropped image.

136.25.22 ResizeModeFast = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for how to resize the requested image to fit a target size, used by the resizeMode property.
Notes:

Photos efficiently resizes the image to a size similar to, or slightly larger than, the target size.
With this option, Photos can use image subsampling to quickly provide an image at a size roughly matching the target size.

136.25.23 ResizeModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for how to resize the requested image to fit a target size, used by the resizeMode property.

Notes: Photos does not resize the image asset.

136.25.24 VersionCurrent = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for requesting an image asset with or without adjustments, used by the version property.
Notes: Request the most recent version of the image asset (the one that reflects all edits).

136.25.25 VersionOriginal = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for requesting an image asset with or without adjustments, used by the version property.
Notes: Request the original, highest-fidelity version of the image asset.

136.25.26 VersionUnadjusted = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for requesting an image asset with or without adjustments, used by the version property.
Notes: Request a version of the image asset without adjustments.

136.25.27 Delegates

136.25.28 ProgressHandlerMBS(progress as double, error as NSErrorMBS, byref stop as boolean, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls while downloading asset data from iCloud. Used by the progressHandler property.
Notes:

If you request an image whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and to allow you to cancel the download.

Photos calls this block in an arbitrary serial queue. Dispatch to the main thread if your handler needs to update the user interface.

The method takes the following parameters:
progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates that the download has just started, and a value of 1.0 indicates the download is complete.
error: An NSErrorMBS object describing an error that occurred when attempting to download the image, or nil if no errors have occurred.
stop: A pointer to a Boolean value. To cancel the download, set stop to true inside the block.
info: A dictionary providing additional information about the status of the image request. See Image Result Info Keys for possible keys and values. For example, a true value for the key PHImageResultIsDegradedKey indicates that Photos may send the full-quality version of the image later, depending on the value of the image request's deliveryMode property.

If the method call is asynchronously dispatched to main thread, the stop property does not work.

136.26 control PHLivePhotoControlMBS

136.26.1 control PHLivePhotoControlMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A view that displays a Live Photo—a picture that also includes motion and sound from the moments just before and after its capture.
Notes:

Use a Live Photo view to display the photo and control playback of its motion and sound content.

In macOS, Live Photo objects are available only when editing Live Photo content in a photo editing extension that runs in the Photos app—see the PHContentEditingInputMBS class to access Live Photo content in an editing session.

By default, a Live Photo view uses its own gesture recognizer to allow the user to play the motion and sound content of a Live Photo with the same interactions and visual effects seen in the Photos app. To customize this gesture recognizer—for example, to install it on a different view for proper event handling in your app's view hierarchy—use the playbackGestureRecognizer property.

To animate the view briefly to hint that a picture is a Live Photo, use the startPlayback method with the PlaybackStyleHint option.

136.26.6 Methods

136.26.7 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: Whether this control is available.

136.26.8 startPlayback(style as integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Begins playback of Live Photo content in the view.
Notes:

style: An option for how much of the Live Photo's motion and sound content to play. See PHLivePhotoViewPlaybackStyle.

Use the style parameter to choose whether to play the full motion and sound content of the Live Photo or only a brief section.

Typically, an app does not need to directly control playback, because a Live Photo view provides interactive playback control. Use this method only when non-interactive playback is appropriate—for example, to briefly animate the content to indicate that a view contains a Live Photo rather than a still image.

136.26.9 stopPlayback

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Ends playback of Live Photo content in the view.
See also:

- 136.26.10 stopPlayback(animated as boolean) 21526

136.26.10 stopPlayback(animated as boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Ends playback of Live Photo content in the view.
See also:

- 136.26.9 stopPlayback 21526

136.26.11 Properties

136.26.12 audioVolume as Single

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The audio gain to apply to the Live Photo's movie content during playback.
Notes:

Values for this property must be between 0.0 and 1.0, inclusive. A value of 1.0 (the default) plays audio content from the Live Photo at full volume (relative to the system volume). A value of 0.0 is equivalent to setting the muted property to true.
(Read and Write property)

136.26.13 ContentMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The content mode.
Notes: (Read and Write property)

136.26.14 LivePhoto as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The Live Photo displayed in the view.
Notes: (Read and Write property)

136.26.15 livePhotoBadgeView as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A view for displaying Live Photo status.
Notes:

The PHLivePhotoViewMBS uses this subview to display icons indicating the existence or status of Live Photo content. Photos manages the content displayed in the badge view, so you don't need to do anything with view's content—instead, this property provides access to the badge view so you can change where it appears in your view hierarchy if needed. For example, if you display a Live Photo view within a scroll view, you can move the badge view so that its position remains constant while the scroll view scrolls.
(Read only property)

136.26.16 muted as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether the view plays the audio content of its Live Photo.
Notes:

The default value is false, indicating that the view plays audio content along with the motion content of its Live Photo. Change this value to true to play motion content but not audio content.
(Read and Write property)

136.26.17 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

136.26.18 Events

136.26.19 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

136.26.20 didEndPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Notifies the delegate that Live Photo playback has ended.
Notes: playbackStyle: The style of playback, indicating whether the content was played in full or briefly previewed.

136.26.21 EnableMenuItems

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The event where you can enable menu items.

136.26.22 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

136.26.23 GotFocus

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

136.26.24 LostFocus

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

136.26.25 MenuAction(HitItem as MenuItem) As Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

136.26.26 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

136.26.27 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

136.26.28 MouseUp(x As Integer, y As Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

136.26.29 ScaleFactorChanged(NewFactor as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

136.26.30 willBeginPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Notifies the control that Live Photo playback is about to begin.
Notes: playbackStyle: The style of playback, indicating whether the content is to be played in full or briefly previewed.

136.26.31 Constants

136.26.32 ContentModeAspectFill = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the content mode constants.
Notes: Aspect Fill.

136.26.33 ContentModeAspectFit = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the content mode constants.
Notes: Aspect Fit.

136.26.34 PlaybackStyleFull = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the playback styles.
Notes: Plays back the entire motion and sound content of the Live Photo, including transition effects at the start and end.

136.26.35 PlaybackStyleHint = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the playback styles.
Notes: Plays back only a brief section of the motion content of the Live Photo, without sound.

136.26.36 PlaybackStyleUndefined = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the playback styles.
Notes: This value is invalid for use.

136.27 class PHLivePhotoEditingContextMBS

136.27.1 class PHLivePhotoEditingContextMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An editing session for modifying the photo, video, and audio content of a Live Photo.
Notes:

A Live Photo is a picture, captured by a supported iOS device, that includes motion and sound from the moments just before and after it was taken. Editing the content of a Live Photo works much like editing other asset types:

1. In an app using the Photos framework, fetch a PHAsset object that represents the Live Photo to edit, and use that object's requestContentEditingInputWithOptions method to retrieve a PHContentEditingInputMBS object.
In a photo editing extension that runs within the Photos app, your extension's main view controller (which adopts the PHContentEditingController protocol) receives a PHContentEditingInputMBS object when the user chooses to edit a Live Photo with your extension.
2. Create a Live Photo editing context with the initWithLivePhotoEditingInput initializer.
You can create a Live Photo editing context only from PHContentEditingInputMBS object that represents a Live Photo. Use the livePhoto property of the editing input to verify that it has live Photo content.
3. Use the frameProcessor property to define a block to be used in processing the Live Photo's visual content. Photos will call this block repeatedly to process each frame of the Live Photo's video and still photo content.
4. Create a PHContentEditingOutputMBS object to store the results of your edit, then call the saveLivePhotoToOutput:options to process the Live Photo and save it to your editing output object. This method applies your frameProcessor to each frame.
Note
You can also use the prepareLivePhotoForPlaybackWithTargetSize method to process a preview-quality version of the Live Photo to display in your app's UI during editing.
5. To allow a user to continue working with the edit later (for example, to adjust the parameters of a filter), create a PHAdjustmentDataMBS object describing your changes, and store it in the adjustmentData property of your editing output.
6. In an app using the Photos framework, use a photo library change block to commit the edit. (For details, see PHPhotoLibrary.) In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output that you created.
In a photo editing extension, provide the PHContentEditingOutputMBS object that you created in your main view controller's finishContentEditing method.

When you use either of the methods listed in Processing an Editing Context's Live Photo, Photos calls your frameProcessor delegate repeatedly to process each frame of the Live Photo's video and still photo content. In that block, a PHLivePhotoFrameMBS object provides the Live Photo's existing content as a CIImageMBS object. You use Core Image to modify the image, then provide the result of your edits by returning a CIImageMBS object representing the result of processing the input image.

Core Image provides several ways to process the Live Photo's visual content. You can use the built-in filters

listed in Core Image Filter Reference or create CIFilterMBS subclasses using custom graphics kernel code. Or, to use other image processing technologies, you can directly access and modify image content in pixel buffers, Metal textures, or IOSurfaceRef objects with a custom CIImageProcessorKernel subclass.

136.27.2 Methods

136.27.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.12 or newer.

136.27.4 cancel

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Aborts any Live Photo processing in progress.
Notes: This method applies only after you've begun processing a Live Photo for display or output with the initWithLivePhotoEditingInput or saveLivePhotoToOutput method. After you call this method, Photos calls your completion handler and provides an error with the PHLivePhotoEditingErrorCodeAborted error code.

136.27.5 Constructor(livePhotoInput as PHContentEditingInputMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a Live Photo editing context for the specified editing input.
Notes:

livePhotoInput: A content editing input object representing the Live Photo for which to perform editing.

Returns a new Live Photo editing context, or nil if the provided content editing input does not represent a Live Photo.

In an app using the Photos framework, you obtain a PHContentEditingInputMBS object by calling requestContentEditingInputWithOptions method of a PHAssetMBS object that you've previously fetched.
In a photo editing extension that runs within the Photos app, your extension's main view controller (which adopts the PHContentEditingController protocol) receives a PHContentEditingInputMBS object when the user chooses to edit a Live Photo with your extension.

You can create a Live Photo editing context only from PHContentEditingInputMBS object that represents a Live Photo. Use the livePhoto property of the editing input to verify that it has live Photo content.

136.27.6 PHLivePhotoShouldRenderAtPlaybackTime as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies whether processing should occur during or before playback.
Notes:

The value for this key is an NSNumber object with a Boolean value. With the default value of false, Photos always renders your edits immediately when you call the Constructor, calling your frameProcessor block for each frame in the Live Photo's video and still photo content.

When you specify a value of true, Photos can defer rendering until playback time, calling your frameProcessor block only for photo and video frames that need to be displayed. However, in this case Photos may still choose to pre-render your edits if needed.

This option does not apply when rendering for output with the saveLivePhotoToOutput method.

136.27.7 prepareLivePhotoForPlayback(targetSize as CGSizeMBS, options as Dictionary = nil, completionHandler as PrepareLivePhotoForPlaybackCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Processes a Live Photo with your edits for viewing.
Notes:

targetSize: The size of the view in which you plan to preview the edited Live Photo output.
options: Options that affect Live Photo rendering. See Live Photo Processing Options.

Use this method to generate preview versions of the edited Live Photo—for example, to display in your editing UI.

136.27.8 saveLivePhotoToOutput(ContentEditingOutput as PHContentEditingOutputMBS, options as Dictionary = nil, completionHandler as PrepareLivePhotoForPlaybackCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Processes and saves a full-quality Live Photo as the output of your editing session.
Notes:

output: The photo editing output to receive the rendered Live Photo, created from the same PHContentEditingInputMBS object you used to begin this Live Photo editing context.
options: Options that affect Live Photo rendering. See Live Photo Processing Options.

Use this method when you have finished an editing session and need to provide rendered output in a PHContentEditingOutputMBS object. Unlike when rendering output for a photo or video asset, you don't need to provide rendered output using the renderedContentURL property of the editing output object. Instead, create a PHContentEditingOutputMBS object using the Constructor initializer, passing the same PHContentEditingInputMBS object you used in the FrameProcessing delegate initializer to start this Live Photo editing context. Then pass that editing output object to this method, and Photos renders the Live Photo and provides it to the editing output.

Don't forget to describe your edits in a PHAdjustmentDataMBS object and provide that to the adjustmentData property of your content editing output. Providing adjustment data allows your app (or photo editing extension) to non-destructively resume working with an edit later, whether on the same device or on another Mac or iOS device using iCloud Photo Library.

After this method's completion handler signals successful rendering, you use the content editing output to complete the edit. In an app using the Photos framework, create a PHAssetChangeRequestMBS object inside a changes, and set its contentEditingOutput property to your editing output. In a photo editing extension running in the Photos app, your main view controller provides content editing output when requested by the finishContentEditing method.

136.27.9 SetFrameProcessor(FrameProcessor as FrameProcessorMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets a delegate to be called by Photos for processing each frame of the Live Photo's visual content.
Notes:

Use this property to define the image processing to be performed on each frame of the Live Photo. Setting this property does not begin processing; instead, after you call one of the methods listed in Processing an Editing Context's Live Photo, Photos executes your block repeatedly to process each frame of the Live Photo's video and still photo content.

In your frame processor block, use the image property of the provided PHLivePhotoFrameMBS object to access the image to be processed, and return a CIImageMBS object representing the result of your processing. For example, the following code sets up a processor block to apply a simple sepia-tone filter, then calls the saveLivePhotoToOutput method to begin processing the Live Photo for output.

136.27.10 Properties

136.27.11 audioVolume as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The audio gain to apply to the processed Live Photo.
Notes:

Values must be between 0.0 and 1.0, inclusive. A value of 1.0 (the default) leaves the audio content of the Live Photo unchanged. A value of 0.0 mutes all audio in the output Live Photo.
Setting this property does not process the Live Photo content; instead, it sets the audio gain to be applied when you later process the Live Photo using one of the methods listed in Processing an Editing Context's Live Photo.
(Read and Write property)

136.27.12 duration as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The duration, in seconds, of the Live Photo.
Notes: (Read only property)

136.27.13 fullSizeImage as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The unedited still photo content of the Live Photo.
Notes:

Value is CIImageMBS.
Use this property to display the unedited Live Photo's photo content, or to provide still-image previews in your editing UI.

For the best interactive editing performance, use a Metal, OpenGL, or OpenGL ES view and corresponding Core Image context to render editing results. See Processing Images in Core Image Programming Guide for details and examples.

This image does not reflect the Live Photo's orientation metadata. Adjust your rendering based on the orientation property to ensure that the image appears to the user in the correct orientation.
(Read only property)

136.27.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.27.15 orientation as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The image orientation of the Live Photo.
Notes:

This fullSizeImage object does not reflect the Live Photo's orientation metadata. Use this property when displaying that image to ensure that it appears to the user in the correct orientation.
(Read only property)

136.27.16 photoTime as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The offset, in seconds, from the beginning of the Live Photo's duration to the time corresponding to its still photo.
Notes:

To create time-based effects in your frameProcessor block, use this property together with the duration property.
(Read only property)

136.27.17 Delegates

136.27.18 FrameProcessorMBS(frame as PHLivePhotoFrameMBS, byref error as NSErrorMBS, tag as Variant) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate for a block Photos calls to process Live Photo frames.
Notes:

Result of delegate method must be a CIImageMBS object.

To apply edits to a Live Photo, define a block with this signature and assign it to the frameProcessor property of a Live Photo editing context. Then call the initWithLivePhotoEditingInput: to prepare a preview-quality version of your edits for display, or the saveLivePhotoToOutput method to produce full-quality final output. When you call one of those methods, Photos calls your frame processor block repeatedly—processing each frame of the Live Photo's video content as well as its still photo content—to render the output.

This delegates takes the following parameters:

frame: A PHLivePhotoFrameMBS object describing the frame image to be processed.
error: If your delegate cannot successfully process the frame, set this to an error object describing the failure.

Your block should return a CIImageMBS object representing the result of your edits, or nil to indicate that your image processing has failed and the Live Photo edit should be aborted. Use the frame parameter's image property to access the image to be edited.

136.27.19 PrepareLivePhotoForPlaybackCompletedMBS(options as Dictionary, livePhoto as PHLivePhotoMBS, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls on the main queue after processing is complete.
Notes:

livePhoto: The rendered Live Photo, suitable for displaying in a PHLivePhotoViewMBS object.
error: If preparing the edited Live Photo for display succeeds, this parameter is nil. If processing fails, the livePhoto parameter is nil, and this parameter contains an error object describing the failure.

136.27.20 SaveLivePhotoToOutputCompletedMBS(output as PHContentEditingOutputMBS, options as Dictionary, success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls on the main queue after rendering is complete.
Notes:

success: True if rendering succeeds; otherwise false.
error: If rendering succeeds, this parameter is nil. If rendering fails, this parameter contains an error object describing the failure.

136.28 class PHLivePhotoFrameMBS

136.28.1 class PHLivePhotoFrameMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A container that provides image content for a single frame of a Live Photo in an editing context.
Notes:

You don't create classes that implement this protocol. Instead, you provide a frameProcessor block when editing a Live Photo with the PHLivePhotoEditingContextMBS class. When you process your edits for output or display, Photos calls your block repeatedly to process each frame of the Live Photo's video and still photo content. On each call, Photos provides the frame's image content and associated information in an object that adopts this protocol. In that block, you use that object's image property to access the image to be edited, then perform your edits and return another CIImageMBS object representing the result of processing the input image.

Requires macOS 10.12 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.28.2 Methods

136.28.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.12 or newer.

136.28.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

136.28.5 Properties

136.28.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.28.7 Image as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The image content of the frame to be processed.
Notes:

Value is CIImageMBS object.
Core Image provides several ways to perform your adjustments to this image:

- Create a single CIFilterMBS object, or a chain of filters. Set this image as the kCIInputImageKey parameter of the first filter in the chain, and use the last filter's outputImage property to access the result. Each CIFilter object can be a built-in filter or a custom filter subclass that you create.
- Use the imageByApplyingFilter method to conveniently apply one of the many built-in Core Image filters.
- Access pixel buffers directly and apply custom image processing using a custom CIImageProcessorKernelMBS subclass.

In all cases, you obtain another CIImageMBS object representing the result of your adjustments. Return that image from your frameProcessor block. (See the frameProcessor description for example code.)
(Read only property)

136.28.8 renderScale as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The scale factor of the frame image relative to the Live Photo's photo content.
Notes:

Photos calls your frameProcessor block repeatedly, both to process each frame of the Live Photo's video content and to process the Live Photo's still photo content. Video frames can be a different size than still photo content—use this value to scale any of your image processing parameters that depend on the image's size.
(Read only property)

136.28.9 time as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The time offset, in seconds, of this frame relative to the start of the Live Photo.
Notes:

You can use this value to vary your image processing over time, creating animated effects.
(Read only property)

136.28.10 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of image content in this frame.
Notes:

Photos calls your frameProcessor block repeatedly, both to process each frame of the Live Photo's video content and to process the Live Photo's still photo content. Use this property to distinguish photo content from video frames—for example, to add a watermark only to still photo content.
(Read only property)

136.28.11 Constants

136.28.12 TypePhoto = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the identifiers for the type of frame image to be processed. Used with the type property.
Notes: The image is a still photo.

136.28.13 TypeVideo = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the identifiers for the type of frame image to be processed. Used with the type property.
Notes: The image is a single frame from the Live Photo's video content.

136.29 class PHLivePhotoMBS

136.29.1 class PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A displayable representation of a Live Photo—a picture that includes motion and sound from the moments just before and after its capture.
Notes:

In macOS, you can use this class to display edits in progress for Live Photo content in a photo editing extension.

For guidance on how to integrate Live Photos with your app's user experience, see Live Photos in iOS Human Interface Guidelines.

The PHLivePhotoMBS class serves in much the same role for Live Photos as the NSImageMBS class serves for static images. A NSImageMBS object represents not the data file an image is loaded from, but instead a ready-to-use image that can be displayed in a view—similarly, a PHLivePhotoMBS object represents a Live Photo ready to display with motion and sound using a PHLivePhotoViewMBS object, not an entry in the Photos library or the data resources that constitute a Live Photo. (To work with Live Photos as elements of the Photos library, use the PHAsset class. To work with the data files that constitute a Live Photo, use the PHAssetResourceMBS class.)
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.29.2 Methods

136.29.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.12 or newer.

136.29.4 cancelLivePhotoRequestWithRequestID(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an asynchronous request.
Notes:

requestID: The numeric identifier of the request to be canceled.

When you use the requestLivePhotoWithResourceFileURLs method to asynchronously load a Live Photo from resource files, the method returns a numeric identifier for the request. To cancel the request before it completes, provide the identifier when calling the cancelLivePhotoRequestWithRequestID method.

136.29.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

136.29.6 copy as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

136.29.7 PHLivePhotoInfoCancelledKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary in RequestLivePhotoWithResourceFileURLsMBS delegate.
Notes: A Boolean value indicating whether the Live Photo loading request was canceled.

136.29.8 PHLivePhotoInfoErrorKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary in RequestLivePhotoWithResourceFileURLsMBS delegate.
Notes: An error that occurred while attempting to load the requested Live Photo.

136.29.9 PHLivePhotoInfoIsDegradedKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary in RequestLivePhotoWithResourceFileURLsMBS delegate.
Notes:

A Boolean value indicating whether the result Live Photo is a low-quality substitute for the requested Live Photo.

If true, the result parameter of your resultHandler block contains a still or low-quality Live Photo, and Photos will call your result delegate method again to provide the full motion and sound content of the Live Photo. If false, Photos has provided all possible data and will not call your result handler again.

136.29.10 requestLivePhotoWithResourceFileURLs(Files() as FolderItem, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Asynchronously loads a Live Photo from the specified resource files.
Notes:

fileURLs: An array of Folderitems containing the resource URLs that constitute a Live Photo, as obtained using the PHAssetResource class.
image: A static image to represent the Live Photo before its full content has been loaded and validated.
targetSize: The target size of Live Photo to be returned. Pass zero size to obtain the requested Live Photo at its original size.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHLivePhotoMBS class.
See also:

- 136.29.11 requestLivePhotoWithResourceFileURLs(fileURLs() as String, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer 21546

136.29.11 requestLivePhotoWithResourceFileURLs(fileURLs() as String, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Asynchronously loads a Live Photo from the specified resource files.
Notes:

fileURLs: An array of Folderitems containing the resource URLs that constitute a Live Photo, as obtained using the PHAssetResource class.
image: A static image to represent the Live Photo before its full content has been loaded and validated.
targetSize: The target size of Live Photo to be returned. Pass zero size to obtain the requested Live Photo at its original size.

contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHLivePhotoMBS class.
See also:

- 136.29.10 requestLivePhotoWithResourceFileURLs(Files() as FolderItem, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer 21546

136.29.12 Properties

136.29.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.29.14 Height as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The size, in pixels, of the Live Photo.
Notes: (Read only property)

136.29.15 Width as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The size, in pixels, of the Live Photo.
Notes: (Read only property)

136.29.16 Constants

136.29.17 ContentModeAspectFill = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for ContentMode property.
Notes: Scales the image so that it completely fills the target size.

136.29.18 ContentModeAspectFit = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for ContentMode property.
Notes: Scales the image so that its larger dimension fits the target size.

136.29.19 ContentModeDefault = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for ContentMode property.
Notes: Fits the image to the requested size using the default option, ContentModeAspectFit.

136.29.20 RequestIDInvalid = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: The value for an invalid request ID.

136.29.21 Delegates

136.29.22 RequestLivePhotoWithResourceFileURLsMBS(LivePhoto as PHLivePhotoMBS, placeholderImage as NSImageMBS, targetSize as CGSizeMBS, contentMode as Integer, tag as variant, info as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The method called when live photo is loaded.
Notes:

LivePhoto: The requested Live Photo object.
info: A dictionary providing information about the status of the request. See PHLivePhotoMBS class for possible keys and values.

Method may be called twice if there is a low res and high res version.

136.30 class PHLivePhotoRequestOptionsMBS

136.30.1 class PHLivePhotoRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of Live Photo assets you request from an image manager.
Notes:

A Live Photo is a picture that includes movement and sound from the moments just before and after its capture.
Available in MacOS 10.15 or newer.

136.30.2 Methods

136.30.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.30.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.30.5 copy as PHLivePhotoRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the options object.

136.30.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

136.30.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate which Photos calls periodically while downloading the Live Photo.
Notes: If you request a Live Photo whose data is not on the local device, and you have enabled downloading with the PHLivePhotoRequestOptionsMBS property, Photos calls your block periodically to report progress and to allow you to cancel the download.

136.30.8 Properties

136.30.9 DeliveryMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The requested Live Photo quality and delivery priority.
Notes:

Use this property to tell Photos to provide a Live Photo quickly (possibly sacrificing image quality), to provide a high-quality Live Photo (possibly sacrificing speed), or to provide both automatically if needed. See DeliveryMode constants.
(Read and Write property)

136.30.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.30.11 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested Live Photo data from iCloud.
Notes:

If true, and the requested Live Photo data is not stored on the local device, Photos downloads that data from iCloud. To be notified of the download's progress, use the progressHandler property to provide a block that Photos calls periodically while downloading. If false (the default), and the Live Photo data is not on the local device, the PHImageResultIsInCloudKey value in the result handler's info dictionary indicates that the data is not available unless you enable network access.

(Read and Write property)

136.30.12 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate which Photos calls periodically while downloading the Live Photo.
Notes:

If you request a Live Photo whose data is not on the local device, and you have enabled downloading with the PHLivePhotoRequestOptionsMBS property, Photos calls your block periodically to report progress and to allow you to cancel the download.
(Read and Write property)

136.30.13 Version as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The version of the Live Photo to be requested.
Notes:

Use this property to request a version of the Live Photo with or without adjustments. See Version constants.
(Read and Write property)

136.30.14 Constants

136.30.15 DeliveryModeFastFormat = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested image data, used by the deliveryMode property.
Notes: Photos provides only a fast-loading image, possibly sacrificing image quality.

136.30.16 DeliveryModeHighQualityFormat = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested image data, used by the deliveryMode property.
Notes: Photos provides only the highest-quality image available, regardless of how much time it takes to

load.

136.30.17 DeliveryModeOpportunistic = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested image data, used by the deliveryMode property.
Notes: Photos automatically provides one or more results in order to balance image quality and responsiveness.

136.30.18 VersionCurrent = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the version constants.
Notes: Request the most recent version of the image asset (the one that reflects all edits).

136.30.19 VersionOriginal = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the version constants.
Notes: Request the original, highest-fidelity version of the image asset.

136.30.20 VersionUnadjusted = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the version constants.
Notes: Request a version of the image asset without adjustments.

136.30.21 Delegates

136.30.22 ProgressHandlerMBS(progress as double, error as NSErrorMBS, byref stop as boolean, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls periodically while downloading the Live Photo..
Notes:

If you request a Live Photo whose data is not on the local device, and you have enabled downloading with the progressHandler property in PHLivePhotoRequestOptionsMBS class, Photos calls your block periodically to report progress and to allow you to cancel the download.

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates that the download has just started, and a value of 1.0 indicates the download is complete.
error: An NSErrorMBS object describing an error that occurred when attempting to download the image, or nil if no errors have occurred.
stop: A Boolean value. To cancel the download, set stop to true inside the method.
info: A dictionary providing additional information about the status of the image request. See Image Result Info Keys for possible keys and values. For example, a true value for the key PHImageResultIsDegradedKey indicates that Photos may send the full-quality version of the image later, depending on the value of the image request's deliveryMode property.

If this method is dispatched asynchronously to the main thread, the stop property doesn't work.

136.31 class PHObjectChangeDetailsMBS

136.31.1 class PHObjectChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of changes that occurred in an asset or collection object.
Notes:

A PHObjectChangeDetailsMBS object provides detailed information about differences between two states of an asset or collection object—one that you previously obtained and an updated state that would result if you fetched that entity again. You observe changes via events in PHPhotoLibraryMBS object. When Photos notifies your observer of a change, you get change details by passing the object you're interested in to the changeDetailsForObject method.

For an asset collection or collection list, a PHObjectChangeDetailsMBS object describe changes only to the collection's properties. If you are instead interested in changes to the collection's membership, fetch the collection's contents and use the changeDetailsForFetchResult: method to track changes to the fetch result.

Needs macOS 10.13 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.31.2 Methods

136.31.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.31.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

136.31.5 Properties

136.31.6 assetContentChanged as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset's photo or video content has changed.
Notes:

If this value true, you can use the PHImageManagerMBS class to retrieve updated content.
This value is false if the asset has not changed or if the change details do not refer to a PHAssetMBS object.
(Read only property)

136.31.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.31.8 objectAfterChanges as PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that reflects the current state of the asset or collection it represents.
Notes:

Read this object's properties to retrieve updated metadata for the asset or collection. Using this object is equivalent to repeating the same fetch that returned the original object.
(Read only property)

136.31.9 objectBeforeChanges as PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that reflects the original state of the asset or collection it represents.
Notes:

This property's value is the same object you passed to the changeDetailsForObject to request change details.
(Read only property)

136.31.10 objectWasDeleted as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the object has been deleted from the Photos library.
Notes:

If this value is true, the asset or collection has been permanently deleted from the Photos library.

To instead track the removal of assets from collections (or collections from collection lists), fetch the collection's contents and use the changeDetailsForFetchResult method to track changes to the fetch result.
(Read only property)

136.32 class PHObjectMBS

136.32.1 class PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The abstract superclass for Photos model objects (assets and collections).
Notes:

You do not create or use instances of this class directly. Instead, work with instances of its concrete subclasses — PHAssetMBS, PHAssetCollectionMBS, PHCollectionListMBS, and PHObjectPlaceholderMBS.

Because the PHObjectMBS class implements the isEqual and hash methods in terms of its localIdentifier property, you can use techniques that depend on these methods to keep track of asset and collection objects. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.32.2 Methods

136.32.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.32.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

136.32.5 copy as PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

136.32.6 Properties

136.32.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.32.8 localIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A unique string that persistently identifies the object.
Notes:

Use this string to find the object by using the fetchAssetsWithLocalIdentifiers, fetchAssetCollectionsWithLocalIdentifiers, or fetchCollectionListsWithLocalIdentifiers method.
(Read only property)

136.33 class PHObjectPlaceholderMBS

136.33.1 class PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A read-only proxy representing a Photos asset or collection object yet to be created by a change request.
Notes:

You obtain object placeholders when you use change requests to create assets, collections, or collection lists. After the change request completes, you can use the object placeholder to fetch the newly created object. You can also use an object placeholder to make additional change requests involving the object to be created. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.33.2 Methods

136.33.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.33.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

136.33.5 Properties

136.33.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.34 class PHPhotoLibraryMBS

136.34.1 class PHPhotoLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A shared object that manages access and changes to the user's shared photo library.
Notes:

The shared PHPhotoLibraryMBS object represents the entire set of assets and collections managed by the Photos app, including both assets stored on the local device and (if enabled) those stored in iCloud Photos. You use this object for the following tasks:

- Getting or verifying the user's permission for your app to access Photos content.
- Making changes to assets and collections; for example, editing asset metadata or content, inserting new assets, or rearranging the members of a collection.
- Registering for update messages sent when changes are made to the library.

Requires MacOS 10.13 or newer.

136.34.2 Blog Entries

- Show Live Photos in your Xojo application

136.34.3 Videos

- XDC 2020 MBS Plugins Presentation

136.34.4 Blog Entries

- Show Live Photos in your Xojo application

136.34.5 Videos

- XDC 2020 MBS Plugins Presentation

136.34.6 Methods

136.34.7 authorizationStatus as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns information about your app's authorization to access the user's photo library.
Notes:

Returns the current authorization status.

Accessing the photo library always requires explicit permission from the user. The first time your app uses PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, or PHCollectionListMBS methods to fetch content from the library, or uses one of the methods listed in Applying Changes to the Photo Library to request changes to library content, Photos automatically and asynchronously prompts the user to request authorization.

Important
Your app's Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10 will crash if this key is not present.

After the user grants permission, the system remembers the choice for future use in your app, but the user can change this choice at any time using the Settings app. If the user has denied your app photo library access, not yet responded to the permission prompt, or cannot grant access due to restrictions, any attempts to fetch photo library content will return empty PHFetchResultMBS objects, and any attempts to perform changes to the photo library will fail.

Tip
Use the DidChange event to observe photo library changes before fetching content. After the user grants access to the photo library for your app, Photos sends change messages for any empty fetch results you retrieved beforehand, notifying you that library content for those fetches is now available.

If this method returns PHAuthorizationStatusNotDetermined, you can call the requestAuthorization method to prompt the user for photo library access permission.

136.34.8 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.34.9 cloudIdentifiersForLocalIdentifiers(localIdentifiers() as String) as PHCloudIdentifierMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Queries cloud identifiers for local identifiers.

136.34.10 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.34.11 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

136.34.12 localIdentifiersForCloudIdentifiers(cloudIdentifiers() as PHCloudIdentifierMBS) as String()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Queries local identifiers for cloud identifiers.

136.34.13 performChanges(ChangeBlock as ChangeBlockMBS, CompletionHandler as ChangeCompletionHandlerMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Asynchronously runs a block that requests changes to be performed in the photo library.
Notes: We call back to main thread for delegates, so please keep main thread available.

136.34.14 PHLocalIdentifierNotFound as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the error constants.
Notes: The local identifier was not found.

136.34.15 PHPhotosErrorDomain as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The error domain for Photos errors.

136.34.16 requestAuthorization(CompletionHandler as RequestAuthorizationCompletedMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the user's permission, if needed, to access the photo library.
Notes:

CompletionHandler: Photos calls this delegate upon determining your app's authorization to access the photo library.

Accessing the photo library always requires explicit permission from the user. The first time your app uses PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, or PHCollectionListMBS methods to fetch content from the library, or uses one of the methods listed in Applying Changes to the Photo Library to request changes to library content, Photos automatically and asynchronously prompts the user to request authorization. Alternatively, you can call this method to prompt the user at a time of your choosing.

Important:
Your app's Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10 will crash if this key is not present.

After the user grants permission, the system remembers the choice for future use in your app, but the user can change this choice at any time using the Settings app. If the user has denied your app photo library access, not yet responded to the permission prompt, or cannot grant access due to restrictions, any attempts to fetch photo library content will return empty PHFetchResultMBS objects, and any attempts to perform changes to the photo library will fail.

Use the DidChange event to observe photo library changes before fetching content. After the user grants access to the photo library for your app, Photos sends change messages for any empty fetch results you retrieved beforehand, notifying you that library content for those fetches is now available.

This method always returns immediately. If the user has previously granted or denied photo library access permission, it executes the delegate when called; otherwise, it displays an alert and executes the block only after the user has responded to the alert.

136.34.17 sharedPhotoLibrary as PHPhotoLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves the shared photo library object.
Notes: The singleton photo library object.

136.34.18 Properties

136.34.19 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.34.20 unavailabilityReason as NSErrorMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The error object to give reason for unavailability.
Notes: (Read only property)

136.34.21 Events

136.34.22 DidBecomeUnavailable

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The Photos library did become unavailable.

136.34.23 DidChange(changes as PHChangeMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

Tells you that a set of changes has occurred in the Photos library.
Required.
Notes:

change: An object representing the changes.

Use the provided PHChangeMBS object to find out which, if any, of the albums or collections you're interested in have changed and get detailed change information. Call the change object's changeDetailsForObject method to get information about changes to an asset's contents or metadata properties or about a collection's metadata properties. Call the change object's changeDetailsForFetchResult to get information about changes to a collection's list of members (or to any other fetch result).

136.34.24 Constants

136.34.25 PHAuthorizationStatusAuthorized = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the status constants.
Notes: The user has explicitly granted your app access to the photo library.

136.34.26 PHAuthorizationStatusDenied = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the status constants.
Notes: The user has explicitly denied your app access to the photo library.

136.34.27 PHAuthorizationStatusNotDetermined = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the status constants.
Notes: Explicit user permission is required for photo library access, but the user has not yet granted or denied such permission.

136.34.28 PHAuthorizationStatusRestricted = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the status constants.
Notes: Your app is not authorized to access the photo library, and the user cannot grant such permission.

136.34.29 PHPhotosErrorInvalid = -1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Invalid error?

136.34.30 PHPhotosErrorLibraryVolumeOffline = 3114

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Library volume offline.

136.34.31 PHPhotosErrorRelinquishingLibraryBundleToWriter = 3142

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Relinquishing library bundle to writer

136.34.32 PHPhotosErrorSwitchingSystemPhotoLibrary = 3143

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Failed to switch system photo library.

136.34.33 PHPhotosErrorUserCancelled = 3072

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: The user cancelled.

136.34.34 Delegates

136.34.35 ChangeBlockMBS(tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that requests changes to be performed.
Notes: This delegate takes no parameters and has no return value.

136.34.36 ChangeCompletionHandlerMBS(success as boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls after the change block completes and Photos performs the requested changes.
Notes:

success: True if Photos successfully applied the changes requested in the block; otherwise, false.
error: If an error occurs, an NSError object describing the error; otherwise, nil.

136.35 class PHProjectChangeRequestMBS

136.35.1 class PHProjectChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A request to change asset data in a Photos project extension.
Notes:

Make a project change request to alter a project's title or metadata. Respond to project change requests by updating your user interface as assets are added, modified, or removed.

Available in macOS 10.13 or newer.
Subclass of the PHChangeRequestMBS class.

136.35.2 Methods

136.35.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.35.4 Constructor(project as PHProjectMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Creates a change request around the specified project.
Notes: project: The project being changed in the request.

136.35.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The destructor.

136.35.6 removeAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Removes the specified assets from the project.
Notes: assets: A collection of PHAssets to be removed from the project.

136.35.7 Properties

136.35.8 keyAsset as PHAssetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Sets the key asset representing the project.
Notes:

Setting a key asset has been deprecated in macOS 10.14. Use ProjectPreviewImage to provide a rendered preview image instead of designating a key asset.
(Read and Write property)

136.35.9 projectExtensionData as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Compressed project-specific data to use in the change request.
Notes:

The total size of stored data is limited to 1 MB; attempting to store more data will result in an error. Don't include rasterized images that can be locally cached. Limit stored data to compressed project-specific data.
(Read and Write property)

136.35.10 projectPreviewImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The project preview in Photos.
Notes:

When setting, please pass a rendered project preview with dimensions of 1024 x 1024.

PhotoKit requires that you set a project preview in the following situations:

- Whenever the project changes in a way that requires a new preview.
- During or after execution of the beginProjectWithExtensionContext protocol method.
- During or after execution of the resumeProjectWithExtensionContext protocol method.

(Read and Write property)

136.35.11 title as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The title of the change request.
Notes: (Read and Write property)

136.36 class PHProjectMBS

136.36.1 class PHProjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A representation of a Photos app project extension.
Notes:

This class represents the project when extended from macOS Photos. Projects can have the following types:

- Book
- Calendar
- Card
- Prints
- Slideshow
- Wall decor

Users create projects by selecting one or more assets, right-clicking the selection, and grouping the assets, much like an album collection. Your app treats the project as a separate entity, represented as a PHProject. Subclass of the PHAssetCollectionMBS class.

136.36.2 Methods

136.36.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

136.36.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The constructor.

136.36.5 Properties

136.36.6 hasProjectPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A property that indicates whether a project preview was previously set.
Notes:

To set the preview, use ProjectPreviewImage property.
(Read only property)

136.36.7 projectExtensionData as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Data associated with the project extension.
Notes: (Read only property)

136.37 class PHVideoRequestOptionsMBS

136.37.1 class PHVideoRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of video asset data that you request from an image manager.
Notes: Available on MacOS 10.15 or newer.

136.37.2 Methods

136.37.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

136.37.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

136.37.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

136.37.6 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate that Photos calls periodically while downloading the video.
Notes: If you request a video whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.

136.37.7 Properties

136.37.8 DeliveryMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A mode specifying the requested video quality and delivery priority.
Notes:

Use this property to tell Photos to provide a video quickly (possibly sacrificing image quality) or to provide a high-quality video (possibly sacrificing speed). This option applies only when requesting the current version of the video (that is, only when the version property is VersionCurrent).
The default option is DeliveryModeAutomatic. See DeliveryMode.
(Read and Write property)

136.37.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

136.37.10 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested video from iCloud.
Notes:

If true, and the requested video is not stored on the local device, Photos downloads the video from iCloud. To be notified of the download's progress, use the progressHandler property to provide a delegate that Photos calls periodically while downloading the video. If false (the default), and the video is not on the local device, the PHImageResultIsInCloudKey value in the result handler's info dictionary indicates that the video is not available unless you enable network access.
(Read and Write property)

136.37.11 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls periodically while downloading the video.
Notes:

If you request a video whose data is not on the local device, and you have enabled downloading with the

networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.
(Read and Write property)

136.37.12 Version as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The version of the video to request.
Notes:

If a video asset has been edited, use this property to request a video with or without adjustments.
The default option is VersionCurrent. See Version constants.
(Read and Write property)

136.37.13 Constants

136.37.14 DeliveryModeAutomatic = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested video data, used by the deliveryMode property.
Notes: Photos automatically determines which quality of video data to provide based on the request and current conditions.

136.37.15 DeliveryModeFastFormat = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested video data, used by the deliveryMode property.
Notes: Photos provides whatever quality of video can be most quickly loaded.

136.37.16 DeliveryModeHighQualityFormat = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested video data, used by the deliveryMode property.
Notes: Photos provides only the highest quality video available.

136.37.17 DeliveryModeMediumQualityFormat = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested video data, used by the deliveryMode property.
Notes: Photos provides a video of moderate quality unless a higher quality version is locally cached.

136.37.18 VersionCurrent = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for requesting a video asset with or without adjustments, used by the version property.
Notes:

Request the most recent version of the video asset, reflecting all edits.
The resulting video is the rendered output from all previously made adjustments.

136.37.19 VersionOriginal = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for requesting a video asset with or without adjustments, used by the version property.
Notes:

Request a version of the video asset without adjustments.
The resulting video is the originally captured or imported version of the asset, regardless of any edits that have been made.

136.37.20 Delegates

136.37.21 ProgressHandlerMBS(progress as double, tag as Variant, error as NSErrorMBS, byref stop as Boolean, info as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls while downloading asset data from iCloud.
Notes:

If you request a video asset whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and allow canceling

the download.

The method takes the following parameters:

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates the download has just started, and a value of 1.0 indicates the download is complete.
error: An NSErrorMBS object describing an error that occurred when attempting to download the video, or nil if no errors have occurred.
stop: A pointer to a Boolean value. To cancel the download, set stop to true inside the method.
info: A dictionary providing additional information about the status of the video request. See Image Result Info Keys for possible keys and values.

If the event is dispatched asynchronously to main thread, the stop property will not work.

Chapter 137

PHP

137.1 class PHPMBS

137.1.1 class PHPMBS

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the PHP library.
Notes:

For Linux and Mac OS X the PHP library is included in the plugin.
Plugin version 15.3 is built for PHP 5.6.12.

137.1.8 Methods

137.1.9 CallbackArgumentCount as Integer

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of arguments to the callback event.
Notes: Returns 0 on any error.

137.1.10 CallbackArgumentDouble(index as Integer) as Double

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the parameter with the given index to double and returns it.
Notes: Returns 0 on any error.

137.1.11 CallbackArgumentInteger(index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the parameter with the given index to integer and returns it.
Notes: Returns 0 on any error.

137.1.12 CallbackArgumentString(index as Integer) as string

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the parameter with the given index to string and returns it.
Notes: Returns an empty string on any error.

137.1.13 Constructor

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the PHP engine.
Example:

```
const path="php.dll"
call PHPMBS.LoadLibrary(path) // load the dll
dim p as new PHPMBS // initialize

if p.inited then // worked?
msgbox "ok"
end if
```

Notes: In older plugins this work was done by the method Init.

137.1.14 Execute(code as string) as string

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs php code.
Example:

```
dim p as PHPMBS

p=new PHPMBS
MsgBox p.Execute("echo ""Hello"";")
```

Notes: Same as run, but does not call the write event, but return the whole output as one big string.

137.1.15 existsVariable(name as string) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether variable exists or not.
Notes: getVariable returns "" for variables which don't exist, but your variable may just be an empty string so this function lets you know whether the variable actually exists.

137.1.16 getVariable(name as string) as string

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns value of the variable with the given name.
Notes: Returns an empty string if the variable name is wrong.

137.1.17 LoadExtension(Path as string) as boolean

MBS Tools Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an extension.
Notes:

Returns true on success.
Will write errors to stderr which you see in console apps.

137.1.18 LoadLibrary(file as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the PHP shared library.
Notes:

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path.
Returns true on success and false on any error.
It may be possible that your PHP library is not compatible with this way of loading which results in crashes.
See also:

- 137.1.19 LoadLibrary(path as string) as boolean 21583

137.1.19 LoadLibrary(path as string) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the PHP shared library.
Notes:

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path.
Returns true on success and false on any error.
It may be possible that your PHP library is not compatible with this way of loading which results in crashes.
See also:

- 137.1.18 LoadLibrary(file as folderitem) as boolean 21583

137.1.20 Run(code as string) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs PHP code.
Example:

```
dim php as PHPMBS // your php object

if php.run("echo 1+2;") then
// ok
else
// failed
end if
```

Notes:

Returns true on success.
Returns false on any compilation error or the library is not loaded/available.

You need to wrap your code into exception handlers as the plugin will ignore all exceptions and if you want to find errors, you need to catch them yourself.

137.1.21 setVariable(name as string, value as string)

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the variable with the given name to the given value.

137.1.22 Properties

137.1.23 Inited as Boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the PHP library has been initialized.
Notes:

Returns true on success.
(Read only property)

137.1.24 LastErrorFile as String

MBS Tools Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error file name.
Notes: (Read and Write property)

137.1.25 LastErrorLine as Integer

MBS Tools Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error line.
Notes: (Read and Write property)

137.1.26 LastErrorMessage as String

MBS Tools Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.
Notes: (Read and Write property)

137.1.27 LastExitStatus as Integer

MBS Tools Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last exit status.
Notes: (Read and Write property)

137.1.28 Loaded as Boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the PHP library has been loaded.
Notes:

Returns true on success.
(Read only property)

137.1.29 UseUTF8 as Boolean

MBS Tools Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to use UTF-8 text encoding.
Notes:

By default we use ISO Latin1 encoding.
But you can ask for passing UTF-8 to/from PHP.

If enabled and a text is passed back from PHP which is not valid UTF-8, we still returned it marked as Latin1.
(Read and Write property)

137.1.30 INI as String

MBS Tools Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PHP Ini to use.
Notes:

Must be called before initialization.

Default is:
html_errors=0
register_argc_argv=1
implicit_flush=1
output_buffering=0
max_execution_time=0
max_input_time=-1
(Read and Write computed property)

137.1.31 Events

137.1.32 Callback(ArgumentCount as Integer) as Variant

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when you call the php function callXojo()
Notes:

Return a variant with double, float, string or integer value.
Parameters are available using CallbackArgument* functions.

137.1.33 LogMessage(message as string)

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: .

Function: A message for the log file.
Notes: Normally written by apache to the log files.

137.1.34 Write(data as string)

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: .

Function: PHP wants to write some data.
Notes:

This text is normally the result, e.g. the content of the website the php code produces.

If php.ini file is used, you need to disable the output_buffering option to have this callback working.

Chapter 138

Pictures Import and Export

138.1 Globals

138.1.1 BitRotateMBS(Degree as Integer, InputData as Ptr, OutputData as Ptr, Width as Integer, Height as Integer, InputRowBytes as Integer = -1, OutputRowBytes as Integer = -1) as boolean

MBS Images Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Rotates 1bit image in memory.
Notes:

Degree can be -360, -270, -180, -90, 0, 90, 180 or 270 to rotate counter clockwise.
InputData points to an 1bit image with given width and height. InputRowBytes if defined tells how many bytes per row are used in the input image. If <= 0, we calculate it. OutputRowBytes defines row bytes for output image, which is different for 90/270 rotation.
Returns true on success or false on failure.
The function is optimized for 180 degree to be quicker if image size is multiply of 8.
For 90 and 270 degree, there is an optimization if width and height are a multiply of 8.

- 16.6, page 11: News

138.1.4 BMPStringtoPictureMBS(data as string) as picture

MBS Picture Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a BMP picture from a string.
Example:

```
dim p as Picture = LogoMBS(500)
dim s as string = p.BMPDataMBS
dim q as Picture = BMPStringtoPictureMBS(s)
window1.Backdrop = q
```

Notes:

This function is endian safe and supports 1, 4, 8, 16, 24, 32 bit BMP images.
For 32bit images the alpha value is ignored.
Returns nil on any error.
Only uncompressed BMP files are supported.

138.1.6 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Splits a one bit CMYK file into different files.
Notes:

Source file has 1 bit for each channel.
Error code is returned which is 0 for no error.

CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

CallbackTarget can be nil or must be an object with a method with the following declaration: "Progress(RowIndex as Integer, RowCount as Integer)"

Errorcodes:

1	not used
2	Failed to open f
3	Failed to open fc
4	Failed to open fm
5	Failed to open fy
6	Failed to open fk
7	Width<1
8	Height<1
9	Allocating read buffer failed
10	Allocating write buffer failed for c
11	Allocating write buffer failed for m
12	Allocating write buffer failed for y
13	Allocating write buffer failed for k
14	Read failed
15	Write failed for c
16	Write failed for m
17	Write failed for y
18	Write failed for k

See also:

- 138.1.7 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer, ReadLines as Integer, WriteLines as Integer) as Integer 21589

138.1.7 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer, ReadLines as Integer, WriteLines as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Splits a one bit CMYK file into different files.
Notes:

Source file has 1 bit for each channel.
Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

CallbackTarget can be nil or must be an object with a method with the following declaration: "Progress(RowIndex as Integer, RowCount as Integer)"

ReadLines and WriteLines define how many rows to read in one I/O operation.

Errorcodes:

1	not used
2	Failed to open f
3	Failed to open fc
4	Failed to open fm
5	Failed to open fy
6	Failed to open fk
7	Width<1
8	Height<1
9	Allocating read buffer failed
10	Allocating write buffer failed for c
11	Allocating write buffer failed for m
12	Allocating write buffer failed for y
13	Allocating write buffer failed for k
14	Read failed
15	Write failed for c
16	Write failed for m
17	Write failed for y
18	Write failed for k

138.2 class PNGOptimizerMBS

138.2.1 class PNGOptimizerMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class is a wrapper for the OptiPNG command line tool.
Example:

```
dim p as Picture = LogoMBS(500)

dim fi as FolderItem = SpecialFolder.Desktop.Child("test unoptimized.png")
if not fi.SaveAsPNGMBS(p,0) then
MsgBox "Failed to save PNG file."
Return
end if

dim fo as FolderItem = SpecialFolder.Desktop.Child("test optimized.png")
fo.Delete // delete if existed before

dim o as new PNGOptimizerMBS

o.YieldTicks=10 // give time for other threads
o.InputFile=fi
o.OutputFile=fo

if o.Optimize then
MsgBox "OK: Saved "+str(o.BytesSaved)
fo.Launch
else
MsgBox "failed"
end if
```

Notes:

OptiPNG: Advanced PNG optimization program.
http://optipng.sourceforge.net/

Copyright (C) 2001-2008 Cosmin Truta.
OptiPNG is open-source software, and is distributed under the same licensing and warranty terms as libpng.

PNG optimization is described in detail in the PNG-Tech article "A guide to PNG optimization"
http://www.cs.toronto.edu/
textasciitilde cosmin/pngtech/optipng.html

The idea of running multiple compression trials with different PNG filters and zlib parameters is inspired from the pngcrush program by Glenn Randers-Pehrson.
The idea of performing lossless image reductions is inspired from the pngrewrite program by Jason Summers.

138.2.4 Methods

138.2.5 Optimize as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The main optimization function.
Notes: Returns true on success and false on failure.

138.2.6 Properties

138.2.7 BytesSaved as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: After the optimization this property shows how many bytes were saved.
Notes: (Read and Write property)

138.2.8 Debug as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables debug output.
Notes: (Read and Write property)

138.2.9 Fix as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable error recovery.
Notes: (Read and Write property)

138.2.10 Force as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enforce writing of a new output file.
Notes:

If the input image has a digital signature, the library will not optimize the file unless force=true.
(Read and Write property)

138.2.11 full as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to produce a full report on IDAT (might reduce speed).
Notes: (Read and Write property)

138.2.12 InputFile as FolderItem

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file to process.
Notes: (Read and Write property)

138.2.13 interlace as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The interlace type (0-1).
Notes:

Set by default to -1 for undefined.
(Read and Write property)

138.2.14 KeepBackup as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to keep a backup of the modified files.
Notes:

If the file exists and KeepBackup=false an error is reported. If you set KeepBackup=True the old file is renamed.
(Read and Write property)

138.2.15 NoBitDepthReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not do a bit depth reduction.
Notes:

Reducing the bit depth of the image data can reduce the file size.
(Read and Write property)

138.2.16 NoColorTypeReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not do a color type reduction.
Notes:

If your PNG file has only 256 colors in use, the optimizer can use a color palette to save space.
(Read and Write property)

138.2.17 NoIDATRecompression as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not recompress the image data.
Notes: (Read and Write property)

138.2.18 NoPaletteReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not reduce the palette.
Notes:

If not all colors are used, the palette can be reduced in its size.
(Read and Write property)

138.2.19 OptimizationLevel as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The optimization level.
Notes:

A value between 0 and 7.
Default is 2.
(Read and Write property)

138.2.20 OutputFile as FolderItem

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output file.
Notes: (Read and Write property)

138.2.21 Overwrite as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Overwrite existing files.
Notes: (Read and Write property)

138.2.22 Preserve as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to preserve file attributes if possible.
Notes: (Read and Write property)

138.2.23 Quiet as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Run in quiet mode.
Notes: (Read and Write property)

138.2.24 simulate as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the optimization runs only in simulation mode.
Notes:

No file is written in simulation mode.
(Read and Write property)

138.2.25 Snip as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cut one image out of multi-image or animation files.
Notes: (Read and Write property)

138.2.26 StripAll as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Strip metadata objects .
Notes: (Read and Write property)

138.2.27 Verbose as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Run in verbose mode / show copyright and version info.
Notes: (Read and Write property)

138.2.28 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
dim p as new PNGOptimizerMBS
p.YieldTicks=6 // only use 1/10th of a second
```

Notes:

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

138.2.29 Events

138.2.30 Log(message as string)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event to output a message to the log file.
Notes: You may want to show that to your advantaged users.

138.2.31 Panic(message as string)

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Called if something really bad happend and the app needs to quit.

138.2.32 Progress(index as Integer, count as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called for reporting ongoing process in the trials.
Notes: The library will try several PNG settings and report progress so you can update a progress bar.

138.2.33 ProgressBegin

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called before the library starts to optimize.
Notes: You may want to show a progress dialog here.

138.2.34 ProgressEnd

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called after the library finished.
Notes: You may want to hide your progress dialog here.

Chapter 139

PNG

139.1 Globals

139.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture to a PNG string.
Notes:

If the picture has no mask, no alpha channel is written to the file.
Returns "" on any error.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 139.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 21600

- 139.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 21600

- 139.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 21601

139.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a palette based RGB picture as a PNG file.
Notes:

If the picture has no mask, no alpha channel is written to the file.
Colors must be an array with 256 values defining the palette.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

See also:

- 139.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 21599
- 139.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 21600
- 139.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 21601

139.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture to a PNG string.
Notes:

Returns "" on any error.

It uses the mask passed. If nil, no alpha channel is written to the file.
The mask from the picture is ignored.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 139.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 21599
- 139.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 21600
- 139.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 21601

139.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture to a PNG string.
Notes:

Returns "" on any error.

It uses the mask passed. If nil, no alpha channel is written to the file.
The mask from the picture is ignored.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

139.1.5 Blog Entries

- Inside REAL Studio Web Edition

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

See also:

- 139.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 21599
- 139.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 21600
- 139.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 21600

139.1.6 PNGStringToPictureMBS(data as string, gamma as single = 0.0, AllowDamaged as boolean = false) as picture

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads PNG data from a string variable.
Notes:

If the picture has an alpah channel the returned picture will have a mask.

Returns picture on success and nil on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

AllowDamaged: Whether to allow damaged PNG files to return a part of the image as picture.

139.1.7 Blog Entries

- MBS Xojo Plugins, version 18.4pr1

139.1.8 PNGStringToPNGPictureMBS(data as string, gamma as single = 0.0, AllowDamaged as boolean = false) as PNGPictureMBS

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads PNG data from a string variable.
Notes:

Returns PNGPictureMBS object on success and nil on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

AllowDamaged: Whether to allow damaged PNG files to return a part of the image as picture.

139.2 class PNGpictureMBS

139.2.1 class PNGpictureMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a PNG picture.
Notes: Based on LibPNG.

139.2.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr11
- MBS Real Studio Plugins, version 12.5pr8
- MBS Real Studio Plugins, version 11.3pr1

139.2.3 Blog Entries

139.2.4 Methods

139.2.5 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a new picture which is created using the picture and it's mask.
Example:

```
dim t as TiffPictureMBS
' ...
canvas1.backdrop=t.CombinePictureWithMask
```

139.2.6 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the PNG library compiled into the plugin.
Notes: Please ask if you need a newer version.

139.2.7 Properties

139.2.8 height as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture.
Notes: (Read and Write property)

139.2.9 mask as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mask of the picture.
Notes:

May be nil.
(Read and Write property)

139.2.10 pict as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture data of the picture.
Notes:

If this image is all black, you may use a different gamma setting.
(Read and Write property)

139.2.11 width as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture.
Notes: (Read and Write property)

139.2.12 Constants

139.2.13 kDefaultGamma = 0

MBS Images Plugin, Plugin Version: 11.3.

Function: The default gamma constant.
Notes: Pass this value to get the default gamma.

139.2.14 kDefaultNoGamma = -1

MBS Images Plugin, Plugin Version: 20.3.

Function: The no gamma constant.
Notes: Pass this value to not do any gamma correction.

139.3 class PNGReaderMBS

139.3.1 class PNGReaderMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for reading PNG files.
Example:

```
dim Current as PictureMBS // global
dim f as FolderItem

f=GetopenFolderItem(FileTypes.Png)

if f<>Nil then
Current=nil

dim p as new PNGReaderMBS

if p.OpenFile(f) then
if p.ApplyOptions(0) then

Current=new PictureMBS(p.Width,p.Height,PictureMBS.ImageFormatRGB)

dim i,c as Integer

c=p.Height-1
for i=0 to c
Current.RowInFormat(i, PictureMBS.ImageFormatRGBA)=p.ReadRow
next

end if
end if
end if
```

Notes:

Use this class to read PNG files row by row as memoryblock.

Based on LibPNG.

139.3.6 Methods

139.3.7 ApplyOptions(gamma as double = 0.0, ScreenGamma as double = -1.0) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies various options.
Notes:

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

Added ScreenGamma parameter in plugin version 15.2. If you set both gamma and Screengamma to a value >0.0, the plugin will use those gamma values. If both are equal, no gamma correction is made.

16-bit images are always reduced to 8-bit images.

Returns true on success and false on failure. Calls ReadHeader method if needed.

139.3.8 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines the pict and the mask property to a picture with mask.

139.3.9 Open(file as folderitem, data as string) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens either the data string or the file.
Notes: Returns true on success.

139.3.10 OpenData(data as string) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a PNG file from the data string.
Notes: Returns true on success.

139.3.11 OpenFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a file.
Example:

```
Dim p As New PNGReaderMBS
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")

If p.OpenFile(f) Then
If p.ApplyOptions Then
If p.ReadPicture Then
window1.Backdrop = p.Pict
End If
end if
End If
```

Notes: Returns true on success.
See also:

- 139.3.12 OpenFile(Path as String) as boolean 21609

139.3.12 OpenFile(Path as String) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a file.
Example:

```
Dim p As New PNGReaderMBS
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim path As String = f.NativePath

If p.OpenFile(path) Then
If p.ApplyOptions Then
If p.ReadPicture Then
window1.Backdrop = p.Pict
End If
end if
End If
```

Notes: Returns true on success.
See also:

- 139.3.11 OpenFile(file as folderitem) as boolean 21609

139.3.13 OpenSpecialData(data as string) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as OpenData but with special handling of the png data.
Example:

```
dim f as FolderItem = getfolderitem("mbs.png")
dim b as BinaryStream = f.OpenAsBinaryFile(false) // BinaryStream.Open(f) in newer RB versions
dim s as string = b.Read(B.Length)

dim p as new PNGReaderMBS
if p.OpenSpecialData(s) then
if p.ApplyOptions(0) then
if p.ReadPicture then
Backdrop = p.Pict
Title = "OK"
else
Title = "Failed to read picture."
end if
else
Title = "Failed to apply options."
end if
else
Title = "Failed to open picture."
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This function can be used to read PNG files made for the Apple iPhone. The PNG is converted from the Apple format to the normal PNG format and passed to OpenData. In the SourceData property you can get the modified PNG data. Still this modified PNG data has the channels swapped, so you should read the image with the pict property.

On Mac OS X 10.8, the NSImage class also reads iOS optimized PNG files.

Deprecated as it does not read all files and we can't fix this old code. Please use a command line tool to convert instead.

139.3.14 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the PNG library compiled into the plugin.

139.3.15 ReadEXIF(byref exif as string) as boolean

MBS Images Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the EXIF data block.
Notes: Returns true on success or false on failure.

139.3.16 ReadHeader as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads header of PNG.
Notes:

This reads header and fill properties Width, Height, ColorType, OriginalColorType, InterlaceType and BitDepth.
Returns true on success and false on failure.

139.3.17 ReadICCProfile(byref name as string, byref compression as Integer, byref profile as string) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the ICC Profile from the PNG file.
Notes:

Name is the profile name, compression the method used to compress the profile data and profile a string with the content of the profile as binary data.
Returns true on success.

139.3.18 ReadPicture as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the picture into the pict and mask properties.
Notes: Returns true on success.

139.3.19 ReadRow as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next row as a memoryblock.
Example:

```
dim fSource as FolderItem = SpecialFolder.Desktop.Child("test.png") // some png with alpha
dim oPNGInput as new PNGReaderMBS

If oPNGInput.OpenFile(fSource) Then
If oPNGInput.ApplyOptions(0) Then

dim imgSource as New PictureMBS(oPNGInput.Width, oPNGInput.Height, PictureMBS.ImageFormatRGBA)

' Read row by row the file and puts it in a PictureMBS instance

dim nMax as Integer = oPNGInput.Height - 1
For nInd as Integer = 0 To nMax
imgSource.RowInFormat(nInd, PictureMBS.ImageFormatRGBA, true) = oPNGInput.ReadRow()
Next

' show only alpha/mask channel
Backdrop=imgSource.AlphaChannel.CopyPicture

' show Picture without mask
Backdrop=imgSource.CopyPicture

' show picture with mask
Backdrop=imgSource.CopyPictureWithMask

End If
End If
```

Notes:

Returns nil on any error.
Format is RGBA as in the example with 4 bytes per pixel.
See also:

- 139.3.20 ReadRow(mem as memoryblock) as boolean 21613

139.3.20 ReadRow(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next row into the given memoryblock.
Notes:

Returns false on any error and true on success.
Format is RGBA as in the example with 4 bytes per pixel.
Make sure the memoryblock is big enough. Else you risk a crash.

See also PNGReaderMBS.RowBytes.

ReadRow with reusing memoryblock is faster than allocating a new one for each row.
See also:

- 139.3.19 ReadRow as memoryblock 21612

139.3.21 ReadRowAlphaOnly(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next row into the given memoryblock.
Notes:

Returns false on any error and true on success.
Format is alpha channel as in the example with one byte per pixel.
Make sure the memoryblock has size from RowBytes property. Else you risk a crash.
The data in memoryblock is width bytes long, 1/4 of the size of the memoryblock.

See also PNGReaderMBS.RowBytes.

ReadRow with reusing memoryblock is faster than allocating a new one for each row.

139.3.22 ReadRowMaskOnly(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next row into the given memoryblock.
Notes:

Returns false on any error and true on success.
Format is mask (inverse alpha) as in the example with one byte per pixel.
Make sure the memoryblock has size from RowBytes property. Else you risk a crash.

The data in memoryblock is width bytes long, 1/4 of the size of the memoryblock.

See also PNGReaderMBS.RowBytes.
ReadRow with reusing memoryblock is faster than allocating a new one for each row.

139.3.23 ReadsRGBTag(byref file_srgb_intent as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the sRGB tag.
Notes: Returns true if the value was read into the given variable.

139.3.24 RowBytes as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of each row in bytes.

139.3.25 Properties

139.3.26 AllowDamaged as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to return picture for files with damaged content.
Notes:

e.g. a half downloaded PNG file can still be processed and may give you a preview for the file.
(Read and Write property)

139.3.27 BitDepth as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bit depth of the PNG file.
Notes:

The original value from file headers, not updated by ApplyOptions, even if we convert e.g. 1 bit to gray for you.
(Read and Write property)

139.3.28 ChunkCacheMax as UInt32

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum cache size for caching chunks.
Notes:

The PNG specification sets no limit on the number of ancillary chunks allowed in a PNG datastream. By default, libpng imposes a limit of a total of 1000 sPLT, tEXt, iTXt, zTXt, and unknown chunks to be stored. You can change the limit on the total number of such hunks that will be stored, with this property, where & h7fffffff means unlimited.
(Read and Write property)

139.3.29 ChunkMallocMax as UInt64

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum allocation size for one chunk.
Example:

```
dim png as new PNGReaderMBS
png.chunkMallocMax=32 * 1024 * 1024
```

Notes:

Libpng imposes a limit of 8 Megabytes (8,000,000 bytes) on the amount of memory that a compressed chunk other than IDAT can occupy, when decompressed.
You can query or change this limit with with this property.
Any chunks that would cause either of these limits to be exceeded will be ignored.
(Read and Write property)

139.3.30 ColorType as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color type of the PNG file.
Notes:

The value is a combination of this constants:

```
PNG_COLOR_MASK_PALETTE   = 1
PNG_COLOR_MASK_COLOR     = 2
PNG_COLOR_MASK_ALPHA     = 4
```

The PNG library will convert on reading every row into 32bit RGBA, so don't worry about this.

The OriginalColorType property is the color type of the file. ColorType property reports what ApplyOptions changed it to, so you know what ReadRow will put in the MemoryBlock.
(Read and Write property)

139.3.31 CompressionBufferSize as UInt64

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The zlib compression buffer size.
Notes:

You can change the zlib compression buffer size to be used while reading compressed data with this property where the default size is 8192 bytes. Note that the buffer size is changed immediately and the buffer is reallocated immediately, instead of setting a flag to be acted upon later.
(Read and Write property)

139.3.32 ExpandGrayToRGB as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether grayscale images are expanded to RGB.
Notes:

Set before ApplyOptions if you need this option.
Default is true.

Shall set transformations such that the grayscale image is converted to 24-bit RGB.

see png_set_gray_to_rgb function in libpng documentation.
(Read and Write property)

139.3.33 HasTransparency as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a transparency block is included for palette images (tRNS).
Notes:

Set by ReadHeader or ApplyOptions.
(Read only property)

139.3.34 Height as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture in pixels.
Notes: (Read and Write property)

139.3.35 InterlaceType as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The interlace setting.
Notes: (Read and Write property)

139.3.36 Interlacing as Integer

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the png file is interlaced.
Notes:

Value is 1 if not interlaced and 7 if interlaced.
(Read and Write property)

139.3.37 InvertAlpha as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether alpha values should be inverted.
Notes:

Set before ApplyOptions if you need this option.
Default is false.

see png_set_invert_alpha function in libpng documentation.
(Read and Write property)

139.3.38 Mask as Picture

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mask of the picture.
Notes: (Read and Write property)

139.3.39 OriginalColorType as Integer

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original color type of the PNG file.
Notes:

The value is a combination of this constants:

```
PNG_COLOR_MASK_PALETTE   = 1
PNG_COLOR_MASK_COLOR     = 2
PNG_COLOR_MASK_ALPHA     = 4
```

The PNG library will convert on reading every row into 32bit RGBA, so don't worry about this.

The OriginalColorType property is the color type of the file. ColorType property reports what ApplyOptions changed it to, so you know what ReadRow will put in the MemoryBlock.
(Read and Write property)

139.3.40 Pict as Picture

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture read.
Notes: (Read and Write property)

139.3.41 RGBToGray as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to convert RGB to grayscale.
Example:

```
dim png as PNGReaderMBS
```

```
// ask for gray only
png.RGBToGray = True

// avoid extra filler bytes for missing alpha channel
png.UseFiller = false
```

Notes:

Set before ApplyOptions if you need this option.
Default is false.

see png_set_rgb_to_gray function in libpng documentation.
(Read and Write property)

139.3.42 RGBToGrayErrorAction as Integer

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Error handling option for Reduce RGB to grayscale.
Notes:

Can be 1 for none, 2 for warn or 3 for error.
Default is 1.
(Read and Write property)

139.3.43 RGBToGrayGreen as Double

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green coefficient to use for RGB to Gray conversion.
Notes:

Default is -1 for default coefficients.
(Read and Write property)

139.3.44 RGBToGrayRed as Double

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green coefficient to use for RGB to Gray conversion.
Notes:

Default is -1 for default coefficients.
(Read and Write property)

139.3.45 SourceData as String

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source data used in Open functions.
Example:

```
dim p as PNGReaderMBS // your reader

// write data to file
dim fo as FolderItem = SpecialFolder.Desktop.Child("mbsout.png")
dim bo as BinaryStream = fo.CreateBinaryFile("") // BinaryStream.Create(fo,true) in newer RB Versions

bo.Write p.SourceData
```

Notes:

If you used OpenSpecialData, the data here is the PNG without the Apple modifications, but still with swapped colors.
This property is set by the OpenSpecialData, Open and OpenData functions.
(Read and Write property)

139.3.46 SourceFile as FolderItem

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The folderitem passed to the Open functions.
Notes:

This property is set by the Open and OpenFile functions.
(Read and Write property)

139.3.47 SourcePath as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source file path.
Notes: (Read and Write property)

139.3.48 StripAlpha as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to strip alpha.
Notes:

Set before ApplyOptions if you need this option.
Default is false.

see png_set_strip_alpha function in libpng documentation.
(Read and Write property)

139.3.49 SwapRB as Boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to swap red and blue channels.
Example:

```
dim p as new PNGReaderMBS
p.SwapRB = true
```

Notes:

The PNG files for the iPhone have swapped channels so the iPhone does not need to swap them for display.
One of the tricks Apple uses for making the iPhone faster.
This flag is set to true by OpenSpecialData.
(Read and Write property)

139.3.50 UseFiller as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether filler byte is used for RGB.
Notes:

Set by ApplyOptions if needed.
Defines whether RGB is extended to 4 bytes with an extra filler byte if needed.

see png_set_filler function in libpng documentation.
(Read and Write property)

139.3.51 UserHeightMaximum as UInt32

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height maximum.
Notes:

The PNG specification allows the width and height of an image to be as large as 2^31-1 (0x7fffffff), or about 2.147 billion rows and columns.
For safety, libpng imposes a default limit of 1 million rows and columns.
Larger images will be rejected immediately with a png_error() call. If you wish to change these limits, you can use this property to set your own limits (libpng may reject some very wide images anyway because of potential buffer overflow conditions).
(Read and Write property)

139.3.52 UserWidthMaximum as UInt32

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width maximum.
Notes:

The PNG specification allows the width and height of an image to be as large as 2^31-1 (0x7fffffff), or about 2.147 billion rows and columns.
For safety, libpng imposes a default limit of 1 million rows and columns.
Larger images will be rejected immediately with a png_error() call. If you wish to change these limits, you can use this property to set your own limits (libpng may reject some very wide images anyway because of potential buffer overflow conditions).
(Read and Write property)

139.3.53 Width as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture in pixels.
Notes: (Read and Write property)

139.3.54 Events

139.3.55 Error(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The PNG library has an error message for you.

Notes: Processing will stop soon.

139.3.56 Warning(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The PNG library has a warning for you.

139.4 class PNGWriterMBS

139.4.1 class PNGWriterMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to write a PNG file.
Example:

```
dim Current as PictureMBS // your picture
dim f as FolderItem

f=GetsaveFolderItem(FileTypes.Png,"test.png")

if f<>Nil then
const PNG_COLOR_MASK_PALETTE = 1
const PNG_COLOR_MASK_COLOR = 2
const PNG_COLOR_MASK_ALPHA = 4

dim p as new PNGWriterMBS

p.Width=Current.Width
p.Height=Current.Height
p.Type=PNG_COLOR_MASK_COLOR
p.bpc=3
p.Rowbytes=p.Width*p.bpc

if p.OpenWriteDestination(f) then
if p.SetHeader(false, -1) then
if p.SetGamma(0) then
if p.WriteInfo then
dim i,c as Integer

c=p.Height-1
for i=0 to c
p.WriteRow current.RowInFormat(i, Current.ImageFormatRGB)
next

if p.WriteEnd then
MsgBox "OK"
end if
end if
end if
end if
end if
end if
```

Notes:

You can use this class to write PNG files by row.

Based on LibPNG.

139.4.6 Methods

139.4.7 CloseDestination

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the file.

139.4.8 Finish as string

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes the PNG file and returns the PNG file content as string.
Notes: Returns "" on any error.

139.4.9 OpenWriteDestination(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the file to write.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim p As New PNGWriterMBS
Dim pic As Picture = LogoMBS(500)

If p.OpenWriteDestination(f) Then
If p.SetRGBPicture(pic) Then
If p.SetHeader(False, -1) Then
If p.SetGamma(0) Then
If p.WriteInfo Then
If p.WriteRows Then
If p.WriteEnd Then
MsgBox "OK"
End If
End If
End If
End If
End If
End If
End If
```

Notes: If you pass nil for the file, the data is collected in memory and you can get it on the end using the

Finish method.
See also:

- 139.4.10 OpenWriteDestination(Path as String) as boolean 21627

139.4.10 OpenWriteDestination(Path as String) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the file to write.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim path As String = file.NativePath

Dim p As New PNGWriterMBS
Dim pic As Picture = LogoMBS(500)

If p.OpenWriteDestination(path) Then
If p.SetRGBPicture(pic) Then
If p.SetHeader(False, -1) Then
If p.SetGamma(0) Then
If p.WriteInfo Then
If p.WriteRows Then
If p.WriteEnd Then
MsgBox "OK"
End If
End If
End If
End If
End If
End If
End If
```

Notes: If you pass "" for the file, the data is collected in memory and you can get it on the end using the Finish method.
See also:

- 139.4.9 OpenWriteDestination(file as folderitem) as boolean 21626

139.4.11 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the PNG library compiled into the plugin.

139.4.12 SetAlphaData(alphas() as Integer, colors() as color) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the alpha data and the color palette.
Notes:

The array can have up to 256 colors.
The color and the alpha arrays must have the same size.
Returns true on success.

139.4.13 SetAlphas as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the alpha data to the file.
Notes:

You must call SetAlphaData before.
Returns true on success.

139.4.14 SetEXIF(EXIFData as string) as boolean

MBS Images Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the EXIF data block.
Notes: Returns true on success or false on failure.

139.4.15 SetGamma(gamma as Double = 0.0) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the gamma value and other options for the PNG file.
Notes:

Returns on success.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

Default for Mac is 1.8 and for Windows 2.2.

If you use SRGB, the Gamma must be 2.2.

139.4.16 SetGrayPicture(pict as picture, mask as picture = nil) as boolean

MBS Images Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a picture into the internal buffers for writing a Grayscale image file.
Notes:

This method sets width, height, type and bpc properties.
Returns true on success.

Mask can be nil.

139.4.17 SetHeader(Interlace as boolean = false, Filter as Integer = -1, Compression as Integer = -1) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the header options for the PNG file.
Notes:

Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

Compression can be between 0 (none) to 9 (max). Default is 6. Value -1 means the plugin will not change from default of PNG library. Normally you have no better compression for setting higher than 6, but only burn more CPU power.

139.4.18 SetICCProfile(name as string, CompressionType as Integer, Profile as string) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a ICC Profile to the PNG.
Notes:

Name is the profile name as an ASCII string.
CompressionType is always 0 (PNG_COMPRESSION_TYPE_BASE).

139.4.19 SetPalette as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the palette data.
Notes: Returns true on success.

139.4.20 SetPaletteData(colors() as color) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the color palette.
Notes:

The array can have up to 256 colors.
Returns true on success.

139.4.21 SetPalettePicture(pict as picture) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a picture into the internal buffers.
Notes:

You need to define the color palette before calling this method.

This method sets width, height, type and bpc properties.
Returns true on success.

139.4.22 SetResolution(ResolutionHorizontal as Integer, ResolutionVertical as Integer, Unit as Integer) as boolean

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the resolution of the PNG.
Notes:

Unit is ResolutionUnknown, ResolutionMeter or ResolutionDPI.
Internally the PNG saves only in dots per meter, so the plugin converts DPI to DPM for you.

139.4.23 SetRGBPicture(pict as picture, mask as picture = nil) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a picture into the internal buffers.
Example:

```
// Write a RGBA PNG file
dim current as Picture = LogoMBS(500)

// create a mask
dim g as Graphics = current.Mask.Graphics
g.ForeColor = & cFFFFFF
g.FillRect 0,0,500,500
g.ForeColor = & c000000
g.FillOval 0,0,500,500

// show in window
window1.Backdrop = current

// and write to file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")

dim p as new PNGWriterMBS

if p.OpenWriteDestination(f) then // open file
if p.SetRGBPicture(current, current.mask) then // set picture to write
if p.SetHeader(false, -1) then // setup file header
if p.SetGamma(0) then // and default gamma
if p.WriteInfo then // write file header
if p.WriteRows then // write pixels
if p.WriteEnd then // and write file end
p = nil // cleanup
f.Launch
end if
end if
end if
end if
end if
end if
end if
```

Notes:

This method sets width, height, type and bpc properties.
Returns true on success.

Mask can be nil.

139.4.24 SetRows(rows() as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Uses the given memoryblocks for row data.
Notes:

The memory is not copied, so keep the array alive!
This method sets height. You need to set width, bpc, type and rowbytes.
Returns true on success.

139.4.25 SetsRGB(intent as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the sRGB intent.
Notes:

Possible values:

```
const PNG_sRGB_INTENT_PERCEPTUAL   = 0
const PNG_sRGB_INTENT_RELATIVE     = 1
const PNG_sRGB_INTENT_SATURATION   = 2
const PNG_sRGB_INTENT_ABSOLUTE     = 3
```

139.4.26 WriteEnd as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes the writing.
Notes:

Returns true on success.

Do not call if you use WriteRows.

139.4.27 WriteInfo as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the PNG file header.
Notes:

Returns true on success.

Do not call if you use WriteRows.

139.4.28 WriteRow(row as memoryblock)

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes one row of image data.
Notes:

The data must be in the RGBA format with one byte per value.
(4 bytes per Pixel)

Returns true on success.

Do not call if you use WriteRows.

139.4.29 WriteRows as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the picture from memory to the file.
Example:

```
// Write a RGB PNG file
dim current as Picture = LogoMBS(500)
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")

dim p as new PNGWriterMBS

if p.OpenWriteDestination(f) then // open file
if p.SetRGBPicture(current) then // set picture to write
if p.SetHeader(false, -1) then // setup file header
if p.SetGamma(0) then // and default gamma
if p.WriteInfo then // write file header
if p.WriteRows then // write pixels
```

```
if p.WriteEnd then // and write file end
p = nil // cleanup
f.Launch
end if
end if
end if
end if
end if
end if
end if
```

Notes: If you call this method, you need to call SetRGBPicture or SetPalettePicture before and you can't call WriteInfo, WriteRow and WriteEnd.

139.4.30 Properties

139.4.31 bpc as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bytes per pixel.
Notes:

Should be 3 for RGB, 1 for palette pictures and 4 for RGB with Alpha.
(Read and Write property)

139.4.32 Height as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture to write.
Notes: (Read and Write property)

139.4.33 Rowbytes as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bytes per row.
Notes: (Read and Write property)

139.4.34 Type as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color type.
Notes:

The value is a combination of this constants:

```
PNG_COLOR_MASK_PALETTE   = 1
PNG_COLOR_MASK_COLOR     = 2
PNG_COLOR_MASK_ALPHA     = 4
```

(Read and Write property)

139.4.35 Width as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture to write.
Notes: (Read and Write property)

139.4.36 Events

139.4.37 Error(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The PNG library has an error message for you.
Notes: Processing will stop soon.

139.4.38 Warning(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The PNG library has a warning for you.

139.4.39 Constants

139.4.40 ResolutionDPI = 2

MBS Images Plugin, Plugin Version: 10.1.

Function: One of the resolution unit type constants.
Notes: The unit for points per inch.

139.4.41 ResolutionMeter = 1

MBS Images Plugin, Plugin Version: 10.1.

Function: One of the resolution unit type constants.
Notes: The unit for points per meter.

139.4.42 ResolutionUnknown = 0

MBS Images Plugin, Plugin Version: 10.1.

Function: One of the resolution unit type constants.

139.4.43 TypeGray = 0

MBS Images Plugin, Plugin Version: 12.5.

Function: One of the type constants.
Notes: Gray

139.4.44 TypeGrayA = 4

MBS Images Plugin, Plugin Version: 12.5.

Function: One of the type constants.
Notes: Gray with Alpha

139.4.45 TypePalette = 1

MBS Images Plugin, Plugin Version: 12.5.

Function: One of the type constants.
Notes: Palette

139.4.46 TypeRGB = 2

MBS Images Plugin, Plugin Version: 12.5.

Function: One of the type constants.
Notes: RGB

139.4.47 TypeRGBA = 6

MBS Images Plugin, Plugin Version: 12.5.

Function: One of the type constants.
Notes: RGB with Alpha.

Chapter 140

Power

140.1 class IOPMAssertionMBS

140.1.1 class IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for PowerManagement assertions.
Notes: You use this class to block a Mac from sleeping display, disk or whole machine.

140.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr9

140.1.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr9

140.1.4 Methods

140.1.5 AssertionsByProcess as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a dictionary listing all assertions, grouped by their owning process.
Notes:

Notes: One process may have multiple assertions. Several processes may have asserted the same assertion

to different levels.

On success, this returns a dictionary of assertions per process. At the top level, keys to the Dictionary are pids stored as Integer. The value associated with each pid is an array of active assertions. Each entry in the array is an assertion represented as a Dictionary. See the keys kIOPMAssertionTypeKey and kIOPMAssertionLevelKey.

140.1.6 AssertionsStatus as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a list of available assertions and their system-wide levels.
Notes:

The system-wide level is the maximum of all individual assertions' levels.

On success, this returns a Dictionary of all assertions currently available.
The keys in the dictionary are the assertion types, and the value of each is a CFNumber that represents the aggregate level for that assertion.

140.1.7 Constructor(type as string, level as Integer, name as string)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Calls internally CreateWithName function.

140.1.8 CreateWithDescription(AssertionType as string, Name as string, Details as string = "", HumanReadableReason as string = "", LocalizationBundlePath as string = "", Timeout as Double = 0, TimeoutAction as string = "") as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates an IOPMAssertion.
Notes:

This is the preferred API to call to create an assertion. It allows the caller to specify the Name, Details, and HumanReadableReason at creation time. There are other keys that can further describe an assertion, but most developers don't need to use them. Use SetProperty or CreateWithProperties if you need to specify properties that aren't available here.

AssertionType: An assertion type constant. Caller must specify this argument.
Name: A String value to correspond to key kIOPMAssertionNameKey. Caller must specify this argument.
Details: A String value to correspond to key kIOPMAssertionDetailsKey. Caller my pass "", but it helps power users and administrators identify the reasons for this assertion.
HumanReadableReason: A String value to correspond to key kIOPMAssertionHumanReadableReasonKey. Caller may pass "", but if it's specified OS X may display it to users to describe the active assertions on their system.
LocalizationBundlePath: A String value to correspond to key kIOPMAssertionLocalizationBundlePathKey. This bundle path should include a localization for the string HumanReadableReason. Caller may pass "", but this argument is required if caller specifies HumanReadableReason.
Timeout: Specifies a timeout for this assertion. Pass 0 for no timeout.
TimeoutAction: Specifies a timeout action. Caller my pass "". If a timeout is specified but a TimeoutAction is not, the default timeout action is kIOPMAssertionTimeoutActionTurnOff.

On success this function returns a new assertion.

140.1.9 CreateWithHandle(Handle as Integer) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new object with retaining given handle.

140.1.10 CreateWithName(type as string, level as Integer, name as string) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Dynamically requests a system behavior from the power management system.
Notes:

Create is deprecated in favor of CreateWithProperties. Please use that version of this API instead.

No special privileges are necessary to make this call - any process may activate a power assertion. Caller must specify an AssertionName - "" is not a valid input.

Type	The String assertion type to request from the PM system.
Level	Pass kIOPMAssertionLevelOn or kIOPMAssertionLevelOff.
Name	A string that describes the name of the caller and the activity being handled by this assertion (e.g. "Mail Compacting Mailboxes"). Name may be no longer than 128 characters.

On success, returns an IOPMAssertionMBS object.

140.1.11 CreateWithProperties(AssertionProperties as Dictionary) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates an IOPMAssertion with more flexibility than CreateWithDescription.
Notes:

AssertionProperties: Dictionary providing the properties of the assertion that need to be created.
On successful return, returns the assertion.

Create a new PM assertion - the caller must specify the type of assertion, initial level, and its properties as IOPMAssertionDictionaryKeys keys in the AssertionProperties dictionary. The following keys are recommend and/or required to be specified in the AssertionProperties dictionary argument.

- Required kIOPMAssertionTypeKey define the assertion type.
- Required kIOPMAssertionValueKey define an inital value.
- Required kIOPMAssertionNameKey Caller must describe the name for the activity that requires the change in behavior provided by the assertion.
- Optional kIOPMAssertionDetailsKey Caller may describe context-specific data about the assertion.
- Optional kIOPMAssertionHumanReadableReasonKey Caller may describe the reason for creating the assertion in a localizable String. This should be a human readable phrase that describes the actions the calling process is taking while the assertion is held, like "Downloading TV episodes", or "Compiling Projects"
- Optional kIOPMAssertionLocalizationBundlePathKey Caller may provide its bundle's path, where OS X can localize for GUI display the String specified by kIOPMAssertionHumanReadableReasonKey.
- Optional kIOPMAssertionPlugInIDKey if the caller is a plugin with a different identity than the process it's loaded in.
- Optional kIOPMAssertionFrameworkIDKey if the caller is a framework acting on behalf of a process.
- Optional The caller may specify a timeout.

140.1.12 DeclareUserActivity(AssertionName as string, userType as Integer, byref AssertionID as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Declares that the user is active on the system.
Notes:

This causes the display to power on and postpone display sleep up to the user's display sleep Energy Saver settings. If you prefer to hold the display awake for a longer period and you know how long you'd like to hold it, consider taking assertion kIOPMAssertionTypePreventUserIdleDisplaySleep using CreateWithDescription instead.

No special privileges are necessary to make this call - any process may call this API. Caller must specify an AssertionName.

AssertionName: A string that describes the name of the caller and the activity being handled by this assertion (e.g. "Mail Compacting Mailboxes"). Name may be no longer than 128 characters.
userType: This parameter specifies if the active user is located locally in front of the system or connected to the system over the network. Various components of the system are maintained at different power levels depending on user location.

On Success, unique id will be returned in this parameter. Caller may call this function again with the unique id retured previously to report continous user activity. The unique id returned by this function may change on each call depending on how frequently this function call is repeated and the current display sleep timer value. If you make this call more than once, track the returned value for assertionID, and pass it in as an argument on each call.

Returns kIOReturnSuccess (0) on success, any other return indicates PM could not successfully activate the specified assertion.

140.1.13 Properties as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Copies details about an IOPMAssertion.
Notes: Returns a dictionary describing an IOPMAssertion's specifications and current state.

140.1.14 SetProperty(key as string, value as Variant) as boolean

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets a property in the assertion.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
```

```
if a.SetProperty(IOPMAssertionMBS.kIOPMAssertionNameKey, "test") then
MsgBox a.name
end if
```

Notes:

Only the process that created an assertion may change its properties.
key: The string key to modify.
Value: The property to set. It must be a number or string, as specified by the property key named in key.
Returns false on any error and true on success.

140.1.15 Properties

140.1.16 Details as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The details for this assertion.
Notes:

You may provide extra, contextual information about an assertion for admins and for debugging in this key.
Setting this key in an assertion dictionary is optional.

Please name your assertion something unique with kIOPMAssertionNameKey first.
If you have more data to describe this assertion, put it here as a String.

Example: OS X creates an assertion named com.apple.powermanagement.tty to prevent sleep for remote-logged in users. To identify the cause for these assertions, OS X sets kIOPMAssertionDetailsKey to the String device path of the active remote session(s), e.g. "/dev/ttys000" or "/dev/ttys004"

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)
(Read and Write property)

140.1.17 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle to the assertion.
Notes:

Zero is not a valid ID.
(Read only property)

140.1.18 HumanReadableReason as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Optional valie that provides a localizable string for OS X to display PM Assertions in the GUI.
Notes:

The caller should specify this string in CreateWithProperties.
If present, OS X may display this string, localized to the user's language, to explain changes in system behavior caused by the assertion.

If set, the caller must also specify a bundle path for the key kIOPMAssertionLocalizationBundlePathKey.
The bundle at that path should contain localization info for the specified string.
(Read and Write property)

140.1.19 Level as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The assertion level.
Notes: (Read and Write property)

140.1.20 LocalizationBundlePath as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Refers to a string, identifying the path to the caller's bundle, which contains localization info.
Notes: (Read and Write property)

140.1.21 Name as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the assertion.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
MsgBox a.Name
```

Notes:

kIOPMAssertionNameKey describes the the activity the assertion is protecting. The creator should specify a String value for this key in the dictionary passed to CreateWithProperties.

The assertion name is separate from the assertion type's behavior - specify a String like "Checking mail" or "Compiling" that describes the task that this assertion protects.

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)
(Read and Write property)

140.1.22 RetainCount as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The retain count of the object.
Notes: (Read only property)

140.1.23 Timeout as Double

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies an outer bound, in seconds, that this assertion should be asserted.
Notes:

If your application hangs, or is unable to complete its assertion task in a reasonable amount of time, specifying a timeout allows PM to disable your assertion so the system can resume normal activity.
Once a timeout with the kIOPMAssertionTimeoutActionTurnOff assertion fires, the level will be set to kIOPMAssertionTimeoutActionTurnOff. The assertion may be re-armed by calling IOPMAssertionSetLevel.
(Read and Write property)

140.1.24 TimeoutAction as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies the action to take upon timeout expiration.
Notes:

Specifying the timeout action only has meaning if you also specify an kIOPMAssertionTimeoutKey.
If the caller does not specify a timeout action, the default action is kIOPMAssertionTimeoutActionTurnOff.
(Read and Write property)

140.1.25 Type as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The assertion type.
Notes:

The value for this key will be a CFStringRef, with the value of the assertion type specified at creation time. Note that OS X may substitute a support assertion type string if the caller specifies a deprecated assertion type; in that case the value for this key could differ from the caller-provided assertion type.
(Read and Write property)

140.1.26 Constants

140.1.27 kIOPMAssertionDetailsKey = "Details"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes:

You may provide extra, contextual information about an assertion for admins and for debugging in this key. Setting this key in an assertion dictionary is optional.

Please name your assertion something unique with kIOPMAssertionNameKey first.
If you have more data to describe this assertion, put it here as a String.

Example: OS X creates an assertion named com.apple.powermanagement.tty to prevent sleep for remote-logged in users. To identify the cause for these assertions, OS X sets kIOPMAssertionDetailsKey to the String device path of the active remote session(s), e.g. "/dev/ttys000" or "/dev/ttys004"

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)

Describe your assertion as thoroughly as possible. See these other keys that can you can set to add explanation to an assertion:

- Optional kIOPMAssertionNameKey
- Optional kIOPMAssertionHumanReadableReasonKey
- Optional kIOPMAssertionLocalizationBundlePathKey

140.1.28 kIOPMAssertionFrameworkIDKey = "FrameworkBundleID"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.

140.1.29 kIOPMAssertionHumanReadableReasonKey = "HumanReadableReason"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes:

Optional key that provides a localizable string for OS X to display PM Assertions in the GUI.

The caller should specify this string in CreateWithProperties.
If present, OS X may display this string, localized to the user's language, to explain changes in system behavior caused by the assertion.

If set, the caller must also specify a bundle path for the key kIOPMAssertionLocalizationBundlePathKey.
The bundle at that path should contain localization info for the specified string.

This key may be specified in the dictionary passed to CreateWithProperties.
This key may be present in the dictionary returned from Properties.

Describe your assertion as thoroughly as possible. See these other keys that can you can set to add explanation to an assertion:

- Required kIOPMAssertionNameKey
- Optional kIOPMAssertionDetailsKey

140.1.30 kIOPMAssertionLevelKey = "AssertLevel"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes:

The Dictionary key for assertion level in an assertion info dictionary.

The value for this key will be an integer with value kIOPMAssertionLevelOff or kIOPMAssertionLevelOn. The level reflects the assertion's level set at creation, or adjusted via IOPMAssertionSetLevel.

140.1.31 kIOPMAssertionLevelOff = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: Level for a disabled assertion, passed as an argument to Create.

140.1.32 kIOPMAssertionLevelOn = 255

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: Level for an enabled assertion, passed as an argument to Create.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
MsgBox a.Name
```

140.1.33 kIOPMAssertionLocalizationBundlePathKey = "BundlePath"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes: Refers to a string, identifying the path to the caller's bundle, which contains localization info.

140.1.34 kIOPMAssertionNameKey = "AssertName"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
dim d as Dictionary = a.Properties
dim v as String = d.Value(IOPMAssertionMBS.kIOPMAssertionNameKey)
MsgBox v
```

Notes:

The Dictionary key for assertion name. Setting this key is required when you're creating an assertion.

kIOPMAssertionNameKey describes the the activity the assertion is protecting. The creator should specify a String value for this key in the dictionary passed to CreateWithProperties.

The assertion name is separate from the assertion type's behavior - specify a String like "Checking mail" or "Compiling" that describes the task that this assertion protects.

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)

Describe your assertion as thoroughly as possible. See these other keys that can you can also set to add explanation to an assertion:

- Optional kIOPMAssertionDetailsKey
- Optional kIOPMAssertionHumanReadableReasonKey
- Optional kIOPMAssertionLocalizationBundlePathKey

140.1.35 kIOPMAssertionPlugInIDKey = "PlugInBundleID"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.

140.1.36 kIOPMAssertionRetainCountKey = "RetainCount"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes: The retain count of the object.

140.1.37 kIOPMAssertionTimeoutActionKey = "TimeoutAction"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes:

Specifies the action to take upon timeout expiration.
Specifying the timeout action only has meaning if you also specify an kIOPMAssertionTimeoutKey
If the caller does not specify a timeout action, the default action is kIOPMAssertionTimeoutActionTurnOff

This key may be specified in the dictionary passed to CreateWithProperties.
This key may be present in the dictionary returned from Properties.

140.1.38 kIOPMAssertionTimeoutActionLog = "TimeoutActionLog"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the values for kIOPMAssertionTimeoutActionKey.
Notes: When this timeout action is specified, PM will log the timeout event but will not turn off or affect the setting of the assertion in any way.

140.1.39 kIOPMAssertionTimeoutActionRelease = "TimeoutActionRelease"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the values for kIOPMAssertionTimeoutActionKey.
Notes: When a timeout expires with this action, Power Management will log the timeout event, and will release the assertion.

140.1.40 kIOPMAssertionTimeoutActionTurnOff = "TimeoutActionTurnOff"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the values for kIOPMAssertionTimeoutActionKey.
Notes: When a timeout expires with this action, Power Management will log the timeout event, and will set the assertion's level to kIOPMAssertionLevelOff.

140.1.41 kIOPMAssertionTimeoutKey = "TimeoutSeconds"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes:

Specifies an outer bound, in seconds, that this assertion should be asserted.

If your application hangs, or is unable to complete its assertion task in a reasonable amount of time, specifying a timeout allows PM to disable your assertion so the system can resume normal activity.
Once a timeout with the kIOPMAssertionTimeoutActionTurnOff assertion fires, the level will be set to kIOPMAssertionTimeoutActionTurnOff. The assertion may be re-armed by calling IOPMAssertionSetLevel.

This key may be specified in the dictionary passed to CreateWithProperties.
This key may be present in the dictionary returned from Properties.

140.1.42 kIOPMAssertionTypeKey = "AssertType"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
dim d as Dictionary = a.Properties
dim v as String = d.Value(IOPMAssertionMBS.kIOPMAssertionTypeKey)
MsgBox v
```

Notes:

The dictionary key for assertion type in an assertion info dictionary.

The value for this key will be a CFStringRef, with the value of the assertion type specified at creation time. Note that OS X may substitute a support assertion type string if the caller specifies a deprecated assertion type; in that case the value for this key could differ from the caller-provided assertion type.

140.1.43 kIOPMAssertionTypePreventSystemSleep = "PreventSystemSleep"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the assertion types.
Notes:

Prevents the system from sleeping and allows the system to reside in Dark Wake for an arbitrary length of time.

When asserted and set to level kIOPMAssertionLevelOn, the system will prefer to enter the Dark Wake state, or remain in Dark Wake if already there, rather than go to sleep.

Assertions are just suggestions to the OS, and the OS can only honor them to the best of its ability. In the case of low power or a thermal emergency, the system may sleep anyway despite the assertion.

An assertion must publish the AssertionType in its assertion properties dictionary.
The AssertionType should be a key in the properties dictionary, with a value of a CFNumber containing the kCFNumberIntegerType value kIOPMAssertionLevelOff or kIOPMAssertionLevelOn.

140.1.44 kIOPMAssertionTypePreventUserIdleDisplaySleep = "PreventUserIdleDisplaySleep"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the assertion types.
Notes:

Prevents the display from dimming automatically.

When asserted and set to level kIOPMAssertionLevelOn, will prevent the display from turning off due to a period of idle user activity. Note that the display may still sleep from other reasons, like a user closing a portable's lid or the machine sleeping. If the display is already off, this assertion does not light up the display. If display needs to be turned on, then consider calling function IOPMAssertionDeclareUserActivity.
While the display is prevented from dimming, the system cannot go into idle sleep.
This assertion has no effect if the system is in Dark Wake.

140.1.45 kIOPMAssertionTypePreventUserIdleSystemSleep = "PreventUserIdleSystemSleep"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the assertion types.
Notes:

Prevents the system from sleeping automatically due to a lack of user activity.
When asserted and set to level kIOPMAssertionLevelOn, will prevent the system from sleeping due to a period of idle user activity.

The display may dim and idle sleep while kIOPMAssertionTypePreventUserIdleSystemSleep is enabled, but the system may not idle sleep. The system may still sleep for lid close, Apple menu, low battery, or other sleep reasons.

This assertion has no effect if the system is in Dark Wake.

140.1.46 kIOPMAssertPreventDiskIdle = "PreventDiskIdle"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the assertion types.
Notes:

Prevent attached disks from idling into lower power states.

When asserted and set to level kIOPMAssertionLevelOn, will prevent attached disks and optical media from idling into lower power states.
Apps who rely on real-time access to disks should create this assertion to avoid latencies caused by disks changing power states. For example, audio and video performance or recording apps may benefit from this assertion. Most Apps should not take this assertion; preventing disk idle consumes battery life, and most apps don't require the low latency disk access that this provides.
This assertion doesn't increase a disk's power state (it just prevents that device from idling). After creating this assertion, the caller should perform disk I/O on the necessary drives to ensure that they're in a usable power state.
The system may still sleep while this assertion is active. Callers should also take kIOPMAssertionTypePreventUserIdleSystemSleep if necessary, to prevent idle system sleep.

140.1.47 kIOPMUserActiveLocal = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the user activity constants.
Notes: User is local on the system

140.1.48 kIOPMUserActiveRemote = 1

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the user activity constants.
Notes: Remote User connected to the system.

140.2 class IOPMMBS

140.2.1 class IOPMMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The Mac OS X class which can control the energy settings.
Example:

```
dim p as new IOPMMBS

Listbox1.AddRow "EthernetWakeOnLANSettings: "+str(p.EthernetWakeOnLANSettings)
Listbox1.AddRow "GeneralAggressiveness: "+str(p.GeneralAggressiveness)
Listbox1.AddRow "MinutesToDim: "+str(p.MinutesToDim)
Listbox1.AddRow "MinutesToSleep: "+str(p.MinutesToSleep)
Listbox1.AddRow "MinutesToSpinDown: "+str(p.MinutesToSpinDown)
Listbox1.AddRow "MotionSensor: "+str(p.MotionSensor)
Listbox1.AddRow "PowerSource: "+str(p.PowerSource)
Listbox1.AddRow "SetProcessorSpeed: "+str(p.SetProcessorSpeed)
```

Notes: The functions and properties are not described from Apple.

140.2.2 Properties

140.2.3 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference for the power manager.
Notes:

If this value is zero, the properties will not work.
(Read and Write property)

140.2.4 EthernetWakeOnLANSettings as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The setting for whether ethernet wake on LAN.
Notes:

Value is 1 if you enable this option in the energy system control panel and 0 if you disable it.
(Read and Write computed property)

140.2.5 GeneralAggressiveness as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The general aggressiveness.
Notes: (Read and Write computed property)

140.2.6 MinutesToDim as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The minutes until the display is dimmed.
Example:

```
dim p as new IOPMMBS
p.MinutesToDim=10 // dim display in 10 minutes
```

Notes:

This value is the same as in the energy system control panel.
(Read and Write computed property)

140.2.7 MinutesToSleep as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The time in minutes until the Mac goes to sleep.
Example:

```
dim p as new IOPMMBS
p.MinutesToSleep=10 // sleep display in 10 minutes
```

Notes: (Read and Write computed property)

140.2.8 MinutesToSpinDown as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The time in minutes until the hard discs spin down.
Notes:

If you enable the spin down option in the energy system control panel, this value is 10 and if you disable it, it is 180.
(Read and Write computed property)

140.2.9 MotionSensor as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The setting for the motion sensor.
Notes: (Read and Write computed property)

140.2.10 PowerSource as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The power source settings.
Notes:

Constants for this property:

const kIOPMInternalPower = 1
const kIOPMExternalPower = 2
(Read and Write computed property)

140.2.11 SetProcessorSpeed as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The setting for the processor speed.
Notes: (Read and Write computed property)

140.3 class IOPowerSourcesMBS

140.3.1 class IOPowerSourcesMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class to look on all the power sources on a Mac OS X based computer.
Example:

```
dim i as IOPowerSourcesMBS
dim j,n as Integer

i=new IOPowerSourcesMBS

n=i.Count-1
for j=0 to n
CFShowMBS i.Item(j) // Print battery info to console.
next
```

Notes: Requires Mac OS X.

140.3.2 Blog Entries

- MBS Xojo Plugins, version 17.3pr3
- MBS Xojo / Real Studio Plugins, version 16.4pr9

140.3.3 Blog Entries

- MBS Xojo Plugins, version 17.3pr3

140.3.4 Methods

140.3.5 ExternalPowerAdapterDetails as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a CFDictionary that describes the attached (AC) external power adapter (if any external power adapter is attached.
Example:

```
dim d as CFDictionaryMBS = IOPowerSourcesMBS.ExternalPowerAdapterDetails
dim dic as Dictionary = d.Dictionary

dim lines() as string
lines.Append "AdapterRevision: "+dic.Lookup("AdapterRevision", "")
lines.Append "AdapterID: "+dic.Lookup("AdapterID", "")
lines.Append "FamilyCode: "+dic.Lookup("FamilyCode", "")
lines.Append "SerialNumber: "+dic.Lookup("SerialNumber", "")
lines.Append "Watts: "+dic.Lookup("Watts", "")

MsgBox Join(lines, EndOfLine)
```

Notes:

Returns a CFDictionary on success.
If no adapter is attached, or if there's an error, returns nil.

140.3.6 Item(index as Integer) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Ask for the power source description with the given index.
Example:

```
dim i as new IOPowerSourcesMBS
i.Update
MsgBox i.Item(0).XML.Str // shows dictionary for first power source
```

Notes: Indes is from 0 to count-1.

140.3.7 Update

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries for new power sources and updates the item array.
Example:

```
dim i as new IOPowerSourcesMBS
i.Update
MsgBox str(i.Count)
```

140.3.8 Properties

140.3.9 Count as Integer

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of registered power sources.
Example:

```
dim i as new IOPowerSourcesMBS
i.Update
MsgBox str(i.Count)
```

Notes: (Read only property)

140.3.10 Events

140.3.11 Changed

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: .

Function: The state of one power source changed.
Notes: Whenever something changes around the power sources, you are notified with this event.

140.4 class SleepNotificationMBS

140.4.1 class SleepNotificationMBS

MBS MacOSX Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class to listen for sleep notifications on Mac OS X .
Notes:

Uses IOKit.

Your application can use the sleep event to deny idle sleep, i.e. sleep after a period of inactivity. Applications should not deny idle sleep unless absolutely necessary.

The kIOMessage* constants in this class are declared in the Mac OS X headers, but they are not all used by the system.

In the plugins is the WakeNotifierMBS class and the SleepNotificationMBS class. WakeNotifierMBS uses the API coming from Mac OS and it can delay sleep. SleepNotificationMBS works on the lower Next APIs.

- MBS Xojo / Real Studio Plugins, version 14.1pr1

140.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.1pr1

140.4.4 Properties

140.4.5 running as Boolean

MBS MacOSX Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether this notification class is working.
Notes:

Value is true on MachO targets.
(Read and Write property)

140.4.6 Events

140.4.7 Sleep(message as int64) as boolean

MBS MacOSX Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: A message was received.
Notes:

Use the constants to check what message you got.

Return true to deny or false to allow.

On the Can Messages the plugin informs the system about Deny or Allow, but on the Will messages, it will not answer if you return true, so the system will wait for an answer and delay sleep. There seems to be no way to delay more than 30 seconds when the user selects the sleep menu command.

The message parameter is an int64 in Plugin version 9.7 so the integer comparison to the constants works better.

140.4.8 Constants

140.4.9 kIOMessageCanSystemPowerOff = & he0000240

MBS MacOSX Plugin, Plugin Version: 8.0.

Function: One of the message constants.

140.4.10 kIOMessageCanSystemSleep = & he0000270

MBS MacOSX Plugin, Plugin Version: 8.0.

Function: One of the message constants.
Notes:

Idle sleep is about to kick in.
Applications have a chance to prevent sleep by returning true in the sleep event. Most applications should not prevent idle sleep.

Power Management waits up to 30 seconds for you to either allow or deny idle sleep. If you don't acknowledge this power change by returning true or false, the system will wait 30 seconds then go to sleep.

140.4.11 kIOMessageSystemHasPoweredOn = & he0000300

MBS MacOSX Plugin, Plugin Version: 8.0.

Function: One of the message constants.

140.4.12 kIOMessageSystemWillNotPowerOff = & he0000260

MBS MacOSX Plugin, Plugin Version: 8.0.

Function: One of the message constants.

140.4.13 kIOMessageSystemWillNotSleep = & he0000290

MBS MacOSX Plugin, Plugin Version: 8.0.

Function: One of the message constants.

140.4.14 kIOMessageSystemWillPowerOff = & he0000250

MBS MacOSX Plugin, Plugin Version: 8.0.

Function: One of the message constants.

140.4.15 kIOMessageSystemWillPowerOn = & he0000320

MBS MacOSX Plugin, Plugin Version: 8.0.

Function: One of the message constants.

140.4.16 kIOMessageSystemWillRestart = & he0000310

MBS MacOSX Plugin, Plugin Version: 8.0.

Function: One of the message constants.

140.4.17 kIOMessageSystemWillSleep = & he0000280

MBS MacOSX Plugin, Plugin Version: 8.0.

Function: One of the message constants.

140.5 class WakeNotifierMBS

140.5.1 class WakeNotifierMBS

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Notification and statistics about sleeping off a Mac.
Notes:

For Mac OS X 10.5.6 you see the SleepDemand and the WakeUp events when your Mac sleeps and wakes up.

In the plugins is the WakeNotifierMBS class and the SleepNotificationMBS class. WakeNotifierMBS uses the API coming from Mac OS and it can delay sleep. SleepNotificationMBS works on the lower Next APIs.

140.5.2 Properties

140.5.3 CallEvents as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: whether or not to call the events of this class.
Notes:

Default is false.
(Read and Write property)

140.5.4 DisableSleep as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Diabled sleep if a sleep request comes?
Notes:

Not used if you have code in the SleepRequest event handler.
(Read and Write property)

140.5.5 HadSleeped as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sleeped since last reset?
Notes:

You can set this value to false to reset it.
(Read and Write property)

140.5.6 LastSleepTime as Double

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last time in absolute seconds when falled asleep.
Notes:

Changed type from integer to double in version 4.2.
Value is the same as in date.totalseconds.
(Read and Write property)

140.5.7 LastWakeTime as Double

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last time in absolute seconds when waken up.
Notes:

Changed type from integer to double in version 4.2.
Value is the same as in date.totalseconds.
(Read and Write property)

140.5.8 SleepCount as Integer

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Count of sleep demands.
Notes: (Read only property)

140.5.9 SleepEventCount as Integer

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Counts how often the Power Manager calls the sleep notification function.
Notes:

For debugging so you know that sleep requests are handled.
(Read and Write property)

140.5.10 Valid as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns True if the sleep event handler could be installed.
Notes:

False, if no Power Manager is installed.
(Read only property)

140.5.11 WakeCount as Integer

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Count of waking up.
Notes: (Read only property)

140.5.12 Events

140.5.13 SleepDemand

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: .

Function: Called just before falling asleep.

140.5.14 SleepRequest as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: .

Function: Can be go sleeping?
Notes:

Return true to deny sleeping.
Returning nothing or false will put the Mac to sleep.

140.5.15 SleepRevoke

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: .

Function: Called when a sleep request was denied by an application or a device driver.

140.5.16 WakeUp

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: .

Function: Called when the Mac wakes up.

140.6 class WindowsPowerStateMBS

140.6.1 class WindowsPowerStateMBS

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to watch for power changes on a computer using Microsoft Windows as operation system.
Notes:

Not all Windows versions call the same/all events.

This function listens for WM_POWERBROADCAST sent to all applications.

see
https://msdn.microsoft.com/en-us/library/windows/desktop/aa373247(v=vs.85).aspx

140.6.2 Events

140.6.3 BatteryLow

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The BatteryLow event is broadcast to notify applications that battery power is low.
Notes: Support for this event was removed in Windows Vista bei Microsoft.

140.6.4 OEMEvent(eventcode as Integer)

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The OEMEvent event is broadcast when an APM BIOS signals an APM OEM event.
Notes:

eventcode: A DWORD value that specifies the OEM-defined event code that was signaled by the system's APM BIOS. OEM event codes are in the range & h0200 - & h02FF.

Because not all APM BIOS implementations provide OEM event notifications, this event may never be broadcast on some computers.

Support for this event was removed in Windows Vista bei Microsoft.

140.6.5 PowerStatusChange

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The PowerStatusChange event is broadcast when a change in the power status of the computer is detected, such as a switch from battery power to A/C.
Notes: The system also broadcasts this event when remaining battery power slips below the threshold specified by the user or if the battery power changes by a specified percentage.

140.6.6 QueryStandby(PromptUser as boolean) as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The QueryStandby event is broadcast to request permission to set the computer into standby mode.
Notes:

An application that grants permission should carry out preparations for the suspension before returning.

PromptUser: If true, the application can prompt the user for directions on how to prepare for the suspension; otherwise, the application must prepare without user interaction.

Return true to deny the request, false to grant the request.

An application should process this event by first determining whether permission to go to standby mode can be granted. It must not grant permission if doing so would cause a loss of data. The application can prompt the user for directions on how to prepare for suspension only if PromptUser is set.

The system allows approximately 20 seconds for an application to remove the message that is sending the QueryStandby event from the application's message queue. If an application does not remove the message from its queue in less then 20 seconds, the system will assume that the application is in a non-responsive state, and that the application agrees to the sleep request. Applications that do not process their message queues may have their operations interrupted. After it removes the message from the message queue, an application can take as much time as needed to perform any required operations before entering the sleep state. Any operations that could take longer then 20 seconds should be performed at this time, since the system allows only 20 seconds for operations to complete during standby processing.

140.6.7 QueryStandbyFailed

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The QueryStandbyFailed event is broadcast as a notification that permission to go to standby mode was denied.

Notes: This event is broadcast if any application or driver returned false to a previous QueryStandby event.

140.6.8 QuerySuspend(PromptUser as boolean) as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The QuerySuspend event is broadcast to request permission to suspend the computer.
Notes:

An application that grants permission should carry out preparations for the suspension before returning.

PromptUser: If true, the application can prompt the user for directions on how to prepare for the suspension; otherwise, the application must prepare without user interaction.

Return true to deny the request, false to grant the request.

An application should process this event by first determining whether permission to suspend can be granted. It must not grant permission if doing so would cause a loss of data. The application can prompt the user for directions on how to prepare for suspension only if PromptUser is set.

The system allows approximately 20 seconds for an application to remove the message that is sending the QuerySuspend event from the application's message queue. If an application does not remove the message from its queue in less then 20 seconds, the system will assume that the application is in a non-responsive state, and that the application agrees to the sleep request. Applications that do not process their message queues may have their operations interrupted. After it removes the message from the message queue, an application can take as much time as needed to perform any required operations before entering the sleep state. Any operations that could take longer then 20 seconds should be performed at this time, since the system allows only 20 seconds for operations to complete during Suspend processing.

Support for this event was removed in Windows Vista bei Microsoft.

140.6.9 QuerySuspendFailed

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The QuerySuspendFailed event is broadcast as a notification that permission to suspend the computer was denied.
Notes:

This event is broadcast if any application or driver returned false to a previous QuerySuspend event.

Support for this event was removed in Windows Vista bei Microsoft.

140.6.10 ResumeAutomatic

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The ResumeAutomatic event is broadcast when the computer wakes up automatically to handle an event.
Notes: An application will not generally respond unless it is handling the event, because the user is not present.

140.6.11 ResumeCritical

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The ResumeCritical event is broadcast as a notification that the system has resumed operation.
Notes:

This event can indicate that some or all applications did not receive a Suspend event. For example, this event can be broadcast after a critical suspension caused by a failing battery.

Support for this event was removed in Windows Vista bei Microsoft.

140.6.12 ResumeStandby

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The ResumeStandby event is broadcast as a notification that the system has resumed operation after being put to standby.

140.6.13 ResumeSuspend

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The ResumeSuspend event is broadcast as a notification that the system has resumed operation after being suspended.

140.6.14 Standby

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The Standby event is broadcast immediately before the computer enters a standby state.
Notes: This event is typically broadcast when all applications and installable drivers have returned okay to a previous QueryStandby event.

140.6.15 Suspend

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: The Suspend event is broadcast immediately before the computer enters a suspended state.
Notes: This event is typically broadcast when all applications and installable drivers have returned okay to a previous QuerySuspend event.

Chapter 141

Printing

141.1 Globals

141.1.1 NewCPMPageFormatMBS as CPMPageFormatMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new page format object.
Notes: Returns nil on any error.

141.1.2 NewCPMPrintSessionMBS as CPMPrintSessionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new print session object.
Example:

```
'get a print session

// print this PDF
dim pathPrinted as FolderItem=GetFolderItem("test.pdf")

dim thePrintSession as CPMPrintSessionMBS = NewCPMPrintSessionMBS
if thePrintSession = nil then Return

'get default page format and print settings and attach it to the print settings
dim thePageFormat as CPMPageFormatMBS = NewCPMPageFormatMBS
dim thePrintSettings as CPMPrintSettingsMBS = NewCPMPrintSettingsMBS
thePrintSession.DefaultPageFormat thePageFormat
thePrintSession.DefaultPrintSettings thePrintSettings
```

```
'show the print dialog
if not thePrintSession.PrintDialog(thePrintSettings,thePageFormat) then return

'open the file which will be printed
dim thePdfDocument as CGPDFDocumentMBS = pathPrinted.OpenAsCGPDFDocumentMBS

' limit page counts to the one we have
dim LastPage as Integer = thePdfDocument.PageCount
if thePrintSettings.LastPage<lastpage then
lastpage=thePrintSettings.LastPage
end if

' you get better progress bar if you tell how many pages will come
thePrintSettings.LastPage=lastpage

'begin the printing
thePrintSession.BeginDocument(thePrintSettings, thePageFormat)

'loop over the number of copies
for currentCopy as Integer = 1 to thePrintSettings.Copies

'loop over the pages
for currentPage as Integer = thePrintSettings.FirstPage to LastPage

'prepage the page
dim PrintRect as CPMRectMBS =thePageFormat.AdjustedPageSize
dim CGRect as CGRectMBS =CGMakeRectMBS(PrintRect.left, PrintRect.top, PrintRect.Width, Print-
Rect.Height)
thePrintSession.BeginPage(thePageFormat, nil)
dim thePrintContext as CGContextMBS = thePrintSession.PageContext
if thePrintContext = Nil then return

'print the page
thePrintContext.DrawCGPDFDocument thePdfDocument, CGRect, currentPage

'end the page
thePrintContext = nil
thePrintSession.EndPage
next

next

'end the printing
thePrintSession.EndDocument
```

Notes: Returns nil on any error.

141.1.3 NewCPMPrintSettingsMBS as CPMPrintSettingsMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new print settings object.
Notes: Returns nil on any error.

141.2 class CPMLanguageInfoMBS

141.2.1 class CPMLanguageInfoMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a language info.
Notes: Only a data class.

141.2.2 Properties

141.2.3 Level as String

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The level string of the printer.
Notes: (Read and Write property)

141.2.4 Release as String

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The release string of the printer.
Notes: (Read and Write property)

141.2.5 Version as String

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The version string of the printer.
Notes: (Read and Write property)

141.3 class CPMPageFormatMBS

141.3.1 class CPMPageFormatMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a page format.

141.3.2 Methods

141.3.3 AdjustedPageSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The adjusted page size.
Notes: Lasterror is set.

141.3.4 AdjustedPaperSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The adjusted page size.
Notes: Lasterror is set.

141.3.5 Constructor

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new page format object.

141.3.6 CopySettings(Destination as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Copies the settings to another pageformat object.

141.3.7 CreateDataRepresentation(Format as Integer = 0) as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Returns a data representation of a PMPageFormat object as a data string.
Example:

```
dim p as new CPMPageFormatMBS
p.orientation = p.kPMLandscape
dim d as string = p.CreateDataRepresentation
break // check in debugger
```

Notes:

Use CreateWithDataRepresentation to create a CPMPageFormatMBS from a string created by this call. Format can be kPMDataFormatXMLDefault, kPMDataFormatXMLMinimal or kPMDataFormatXMLCompressed.

141.3.8 CreateWithDataRepresentation(Data as String) as CPMPageFormatMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Creates a PMPageFormat object from a data representation created with CreateDataRepresentation.
Example:

```
dim p as new CPMPageFormatMBS
p.orientation = p.kPMLandscape
dim d as string = p.CreateDataRepresentation

dim other as CPMPageFormatMBS = CPMPageFormatMBS.CreateWithDataRepresentation(d)
MsgBox str(other.Orientation)
```

Notes: Returns nil in case of error.

141.3.9 PrinterID as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Obtains the formatting printer for the pageformat.
Notes: Will either return the formatting printer for the pageformat or will return nil if the pageformat doesn't have that information.

141.3.10 UnadjustedPageSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The unadjusted page size.
Notes: Lasterror is set.

141.3.11 UnadjustedPaperSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The unadjusted page size.
Notes: Lasterror is set.

141.3.12 Properties

141.3.13 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The handle for the page format.
Notes:

It's a PMPageFormat which you find in CMTypes.h in the Toolbox.
(Read and Write property)

141.3.14 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The error code from the last command.
Notes:

0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

141.3.15 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: whether the destructor will release the handle.
Notes: (Read and Write property)

141.3.16 Orientation as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The page orientation.
Example:

```
dim p as new CPMPageFormatMBS
p.orientation = p.kPMLandscape
```

Notes:

Lasterror is set.

Possible values:

kPMPortrait	1	
kPMLandscape	2	
kPMReversePortrait	3	will revert to kPortrait for current drivers
kPMReverseLandscape	4	will revert to kLandscape for current drivers

(Read and Write computed property)

141.3.17 Scale as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The page scaling.
Notes:

Lasterror is set.
Value is 100 for 100% .
(Read and Write computed property)

141.3.18 Constants

141.3.19 kPMDataFormatXMLCompressed = 2

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the data formats constants.
Notes: kPMDataFormatXMLCompressed is only compatible and usable with Mac OS X version 10.5 and later. Data in this format can be only be reconsistuted into the equivalent printing manager object with the appropriate PMXXXCreateWithDataRepresentation function. The data representation produced when using kPMDataFormatXMLCompressed is approximately 20 times smaller than kPMDataFormatXMLDefault. This format is a good choice when execution on versions of Mac OS X prior to 10.5 is not necessary and the minimum data size is important.

141.3.20 kPMDataFormatXMLDefault = 0

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the data formats constants.
Notes: Specifies a data format that is compatible with all Mac OS X versions. Data in this format can be used with the PMUnflattenXXX routines present in all versions of Mac OS X prior to 10.5. However, this data representation is much larger than the more modern data representations described below.

141.3.21 kPMDataFormatXMLMinimal = 1

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the data formats constants.
Notes: XMLMinimal is only compatible and usable with Mac OS X version 10.5 and later. Data in this format can be only be reconsistuted into the equivalent printing manager object with the appropriate CreateWithDataRepresentation function. The data representation produced when using kPMDataFormatXMLMinimal is approximately 3-5 times smaller than kPMDataFormatXMLDefault. This format is a good choice when execution on versions of Mac OS X prior to 10.5 is not necessary and an uncompressed XML representation of the data is needed.

141.3.22 kPMLandscape = 2

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the orientation constants.
Notes: Landscape

141.3.23 kPMPortrait = 1

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the orientation constants.

Notes: Portrait

141.3.24 kPMReverseLandscape = 4

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the orientation constants.
Notes: Reverse Landscape

141.3.25 kPMReversePortrait = 3

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the orientation constants.
Notes: Reverse Portrait

141.4 class CPMPrinterMBS

141.4.1 class CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a printer.

141.4.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr5
- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

141.4.3 Blog Entries

- MBS Real Studio Plugins, version 12.3pr5
- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

141.4.4 Methods

141.4.5 Constructor(name as string)

MBS MacCG Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a new printer object given the printer name.
Notes:

Raises exception if lookup fails.
This accepts both CUPS names and the Mac GUI names in printing control panel.

141.4.6 CreateFromPrinterID(PrinterID as String) as CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Create a PMPrinter instance from the supplied printerID.
Example:

```
dim p as CPMPrinterMBS = CPMPrinterMBS.CreateFromPrinterID("Brother_DCP_8085DN")
MsgBox p.name
```

141.4.7 CreateGenericPrinter as CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Creates a generic PMPrinter.

141.4.8 CreateLocalPrinterList as CPMPrinterMBS()

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Queries list of local printers.
Example:

```
dim a() as CPMPrinterMBS = CPMPrinterMBS.CreateLocalPrinterList
for each p as CPMPrinterMBS in a
MsgBox p.Name
next
```

141.4.9 DescriptionURL as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Returns the description URL for this printer.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox printer.DescriptionURL
```

Notes:

Should be the path to a PPD file for a laser printer.
Lasterror is set.

141.4.10 DeviceURI as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Hand back the URI of the printer's device.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox printer.DeviceURI
```

Notes:

On success returns a CFURLMBS object describing the printer's device.
Lasterror is set.

141.4.11 DriverCreator as String

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Returns a 4 letter code for the creator of the printer.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "DriverCreator: "+str(printer.DriverCreator)
```

Notes: Lasterror is set.

141.4.12 DriverReleaseInfo as CPMVersionMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Queries printer driver version.

141.4.13 HostName as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Hand back the host name of the print server hosting the printer's print queue.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "HostName: "+str(printer.HostName)
```

Notes: Lasterror is set.

141.4.14 ID as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the ID of the string.

141.4.15 IndexedPrinterResolution(index as Integer) as CPMResolutionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Returns a printer resolution.
Notes:

Lasterror is set.
Index is from 1 to ResolutionCount.

141.4.16 IsDefault as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Whether this printer is the default printer.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsDefault: "+str(printer.IsDefault)
```

141.4.17 IsFavorite as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Return true if the printer is in the user's favorite printer list.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter
```

```
MsgBox "IsFavorite: "+str(printer.IsFavorite)
```

141.4.18 IsPostScriptCapable as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Can this printer do postscript?
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsPostScriptCapable: "+str(printer.IsPostScriptCapable)
```

Notes: Lasterror is set.

141.4.19 IsPostScriptPrinter as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the result is true if the printer is a PostScript printer.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsPostScriptPrinter: "+str(printer.IsPostScriptPrinter)
```

Notes: A PostScript printer is one whose driver takes PostScript directly.

141.4.20 IsRemote as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Hand back a boolean indicating whether the printer is hosted by remote print server.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter
```

MsgBox "IsRemote: "+str(printer.IsRemote)

Notes:

If result is true, the print queue represents a printer hosted and managed by a remote print server.

If result is false, the print queue represents a directly connected printer, a network printer, or a remote printer that is locally managed. Consult the queue's device URI to determine the type of connection that is used to communicate with the printer.

Whether a printer is remote is derived from the CUPS printer-type attribute for the print queue.

141.4.21 LanguageInfo as CPMLanguageInfoMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Returns language information about the printer.
Notes: Lasterror is set.

141.4.22 Location as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the location of the printer.

141.4.23 MakeAndModelName as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: A string with the name for the model and the maker.
Notes:

Lasterror is set.
Returns "" on any error.

141.4.24 Name as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the name of the string.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox printer.name
```

141.4.25 ResolutionCount as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Returns how much resolutions are supported by the printer.
Notes: Lasterror is set.

141.4.26 SetDefault

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Set the default printer for the current user.
Notes:

It is not typical for an application to set the current default printer for the user; the printing system itself takes care of managing the default printer.
This function should be used only in rare circumstances.

Requires Mac OS X 10.5.

141.4.27 State as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Queries printer state.
Example:

```
dim p as CPMPrinterMBS = CPMPrinterMBS.CreateFromPrinterID("Brother_DCP_8085DN")
MsgBox str(p.State)
```

Notes: Can be kPMPrinterIdle, kPMPrinterProcessing or kPMPrinterStopped.

141.4.28 Properties

141.4.29 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The handle for the printer.
Notes:

It's a PMPrinter which you find in CMTypes.h in the Toolbox.
(Read and Write property)

141.4.30 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The error code from the last command.
Notes:

0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

141.4.31 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: whether the destructor will release the handle.
Notes: (Read and Write property)

141.4.32 Constants

141.4.33 kPMPrinterIdle = 3

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the printer state constants.
Notes: Printer is idle.

141.4.34 kPMPrinterProcessing = 4

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the printer state constants.
Notes: Printer is processing.

141.4.35 kPMPrinterStopped = 5

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the printer state constants.
Notes: Printer is stopped.

141.5 class CPMPrintSessionMBS

141.5.1 class CPMPrintSessionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a print session.
Notes: Works only in Carbon Stuff and can only be used with CGContext which works only on Mac OS X.

141.5.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr5

141.5.3 Blog Entries

- MBS Real Studio Plugins, version 12.3pr5

141.5.4 Methods

141.5.5 BeginDocument(settings as CPMPrintSettingsMBS, pageformat as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Begins a new document with the given settings.
Notes: Lasterror is set.

141.5.6 BeginDocumentNoDialog(settings as CPMPrintSettingsMBS, pageformat as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Begins a new document with the given settings.
Notes:

Doesn't use the print progress dialog.
Lasterror is set.

141.5.7 BeginPage(pageformat as CPMPageFormatMBS, rect as CPMRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Begins a new page.
Notes: Lasterror is set.

141.5.8 BeginPageNoDialog(pageformat as CPMPageFormatMBS, rect as CPMRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Begins a new page.
Notes:

Doesn't use the print progress dialog.
Lasterror is set.

141.5.9 Constructor

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new print session object.

141.5.10 CreatePrinterList(list() as string)

MBS MacCG Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Creates a list of all printers.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS

dim list() as string
session.CreatePrinterList(list)

MsgBox join(list, EndOfLine)
```

Notes:

List is an array of strings with the names of the printers.
Lasterror is set.
See also:

- 141.5.11 CreatePrinterList(list() as string, byref index as Integer, byref currentprinter as CPMPrinterMBS) 21696

141.5.11 CreatePrinterList(list() as string, byref index as Integer, byref currentprinter as CPMPrinterMBS)

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Creates a list of all printers.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS

dim list() as string
dim currentprinter as CPMPrinterMBS
dim index as Integer
session.CreatePrinterList(list, index, currentprinter)

MsgBox join(list, EndOfLine)
```

Notes:

List is an array of strings with the names of the printers.
Index is the index of the current printer inside this list.
CurrentPrinter is the current printer selected.
Lasterror is set.
See also:

- 141.5.10 CreatePrinterList(list() as string) 21695

141.5.12 DefaultPageFormat(pageformat as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Sets the page format object to the default settings.
Notes: Lasterror is set.

141.5.13 DefaultPrintSettings(printsettings as CPMPrintSettingsMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Sets the settings object to the default settings.
Notes: Lasterror is set.

141.5.14 EndDocument

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Ends the current document.
Notes: Lasterror is set.

141.5.15 EndDocumentNoDialog

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Ends the current document.
Notes:

Doesn't use the print progress dialog.
Lasterror is set.

141.5.16 EndPage

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Ends the current page.
Notes: Lasterror is set.

141.5.17 EndPageNoDialog

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Ends the current page.
Notes:

Doesn't use the print progress dialog.
Lasterror is set.

141.5.18 GetDestinationFormat(printsettings as CPMPrintSettingsMBS) as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Returns the destination format value.
Notes: Lasterror is set.

141.5.19 GetDestinationLocation(printsettings as CPMPrintSettingsMBS) as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Returns the destination location value.
Notes: Lasterror is set.

141.5.20 GetDestinationType(printsettings as CPMPrintSettingsMBS) as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Returns the destination type value.
Notes: Lasterror is set.

141.5.21 kPMDocumentFormatDefault as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the document format.

141.5.22 kPMDocumentFormatPDF as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the document format.

141.5.23 kPMDocumentFormatPostScript as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the document format.

141.5.24 kPMGraphicsContextCoreGraphics as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the graphics context.

141.5.25 kPMGraphicsContextDefault as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the graphics context.

141.5.26 PageContext as CGContextMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGContext object for the current page.
Notes: Lasterror is set.

141.5.27 PageSetupDialog(pageformat as CPMPageFormatMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Shows the page setup dialog.
Notes: Lasterror is set.

141.5.28 PrintDialog(settings as CPMPrintSettingsMBS, pageformat as CPMPageFormatMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Shows the print dialog.
Notes: Lasterror is set.

141.5.29 SetDestination(printsettings as CPMPrintSettingsMBS, desttype as Integer, destformat as String, desturl as String)

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Sets a new destination.
Notes:

Some destinations so you may need to specify a format, else you can pass "" for the default format. Some destinations require a URL to a file.

Destination type codes:

kPMDestinationInvalid	0
kPMDestinationPrinter	1
kPMDestinationFile	2
kPMDestinationFax	3
kPMDestinationPreview	4

Destformat strings:

kPMDocumentFormatPDF	application/pdf
kPMDocumentFormatPICT	application/vnd.apple.printing-pict
kPMDocumentFormatPICTPS	application/vnd.apple.printing-pict-ps
kPMDocumentFormatPostScript	application/postscript

Lasterror is set.

141.5.30 UseSheets(docWindow as window)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

Function: Specifies that a printing dialog should be displayed as a sheet.
Notes:

docWindow: The window to which the sheet dialog should be attached.
Lasterror is set. (-1 for the docWindow parameter being nil)

141.5.31 ValidatePageFormat(pageformat as CPMPageFormatMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Validates the page format.
Notes: Lasterror is set.

141.5.32 ValidatePrintSettings(printsettings as CPMPrintSettingsMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Validates the print settings.
Notes: Lasterror is set.

141.5.33 Properties

141.5.34 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The handle for the print session.
Notes:

It's a PMPrintSession which you find in CMTypes.h in the Toolbox.
(Read and Write property)

141.5.35 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The error code from the last command.
Notes:

0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

141.5.36 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: whether the destructor will release the handle.
Notes: (Read and Write property)

141.5.37 SheetTarget as Window

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

Function: The window set by UseSheets.
Notes:

This property is to reference the window used for the sheets so Xojo does not destroy the window too early.
(Read and Write property)

141.5.38 CurrentPrinter as CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The current printer for this session.
Notes:

Lasterror is set.
Setting this can only be done on Mac OS X.
(Read and Write computed property)

141.5.39 CurrentPrinterName as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: The current printer for this session by name.
Notes:

Lasterror is set.
(Read and Write computed property)

141.5.40 Events

141.5.41 SheetDone(WindowHandle as Integer, accepted as boolean)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: .

Function: This event is called for a finished print sheet.
Notes: Accepted is false if the cancel button was used. True if OK was clicked.

141.5.42 Constants

141.5.43 kPMDestinationFax = 3

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the destination types.
Notes: Fax

141.5.44 kPMDestinationFile = 2

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the destination types.
Notes: File

141.5.45 kPMDestinationInvalid = 0

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the destination types.
Notes: Invalid

141.5.46 kPMDestinationPreview = 4

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the destination types.
Notes: Preview

141.5.47 kPMDestinationPrinter = 1

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the destination types.
Notes: Printer

141.5.48 kPMDestinationProcessPDF = 5

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the destination types.
Notes: Process to PDF

141.5.49 kPMDestinationTypeDefault = 1

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the destination types.
Notes: Default is printer.

141.6 class CPMPrintSettingsMBS

141.6.1 class CPMPrintSettingsMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a print session.

141.6.2 Methods

141.6.3 Constructor

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new print settings object.

141.6.4 CopyPrintSettings(dest as CPMPrintSettingsMBS)

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Copes the settings to the other settings.

141.6.5 CreateDataRepresentation(Format as Integer = 0) as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Returns a data representation of a PMPageFormat object as a data string.
Example:

```
dim p as new CPMPrintSettingsMBS
p.Collate = true
p.Duplex = p.kPMDuplexTumble
dim data as string = p.CreateDataRepresentation
Break // check in debugger
```

141.6.6 CreateWithDataRepresentation(Data as String) as CPMPrintSettingsMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Creates a PMPageFormat object from a data representation created with CreateDataRepresentation.

141.6.7 Dictionary as Dictionary

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Represent these print settings as a dictionary.

141.6.8 GetPageRange(byref minPage as UInt32, byref maxPage as UInt32)

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Queries the page range to print.
Notes:

Obtains the valid range of pages that can be printed.
The default page range is 1 - (all pages). The page range is something that is set by the application. It is NOT the first and last page to print. It serves as limits for setting the first and last page.

141.6.9 Keys as String()

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Queries list of keys.
Example:

```
dim p as new CPMPrintSettingsMBS
p.Collate = true
p.Duplex = p.kPMDuplexTumble
dim keys() as string = p.keys
Break // check in debugger
```

141.6.10 SetPageRange(minPage as UInt32, maxPage as UInt32)

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Sets the page range to print.

141.6.11 Properties

141.6.12 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The handle for the print settings.
Notes:

It's a PMPrintSettings which you find in CMTypes.h in the Toolbox.
(Read and Write property)

141.6.13 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The error code from the last command.
Notes:

0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

141.6.14 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: whether the destructor will release the handle.
Notes: (Read and Write property)

141.6.15 Collate as boolean

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The collate setting.
Notes: (Read and Write computed property)

141.6.16 Copies as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The number of copies that the user requests to be printed.
Notes:

Lasterror is set.
(Read and Write computed property)

141.6.17 Duplex as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The duplex setting.
Notes: (Read and Write computed property)

141.6.18 FirstPage as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The number of the first page to print.
Notes:

Lasterror is set.
(Read and Write computed property)

141.6.19 JobName as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the name of a print job.
Notes:

Lasterror is set.
(Read and Write computed property)

141.6.20 LastPage as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The number of the last page to print.
Example:

```
'get a print session

// print this PDF
dim pathPrinted as FolderItem=GetFolderItem("test.pdf")
```

```
dim thePrintSession as CPMPrintSessionMBS = NewCPMPrintSessionMBS
if thePrintSession = nil then Return

'get default page format and print settings and attach it to the print settings
dim thePageFormat as CPMPageFormatMBS = NewCPMPageFormatMBS
dim thePrintSettings as CPMPrintSettingsMBS = NewCPMPrintSettingsMBS
thePrintSession.DefaultPageFormat thePageFormat
thePrintSession.DefaultPrintSettings thePrintSettings

'show the print dialog
if not thePrintSession.PrintDialog(thePrintSettings,thePageFormat) then return

'open the file which will be printed
dim thePdfDocument as CGPDFDocumentMBS = pathPrinted.OpenAsCGPDFDocumentMBS

' limit page counts to the one we have
dim LastPage as Integer = thePdfDocument.PageCount
if thePrintSettings.LastPage<lastpage then
lastpage=thePrintSettings.LastPage
end if

' you get better progress bar if you tell how many pages will come
thePrintSettings.LastPage=lastpage

'begin the printing
thePrintSession.BeginDocument(thePrintSettings, thePageFormat)

'loop over the number of copies
for currentCopy as Integer = 1 to thePrintSettings.Copies

'loop over the pages
for currentPage as Integer = thePrintSettings.FirstPage to LastPage

'prepage the page
dim PrintRect as CPMRectMBS =thePageFormat.AdjustedPageSize
dim CGRect as CGRectMBS =CGMakeRectMBS(PrintRect.left, PrintRect.top, PrintRect.Width, Print-
Rect.Height)
thePrintSession.BeginPage(thePageFormat, nil)
dim thePrintContext as CGContextMBS = thePrintSession.PageContext
if thePrintContext = Nil then return

'print the page
thePrintContext.DrawCGPDFDocument thePdfDocument, CGRect, currentPage

'end the page
thePrintContext = nil
thePrintSession.EndPage
next
```

```
next

'end the printing
thePrintSession.EndDocument
```

Notes:

Lasterror is set.
(Read and Write computed property)

141.6.21 Value(key as String) as Variant

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The value in settings.
Example:

```
dim p as new CPMPrintSettingsMBS
p.Collate = true
dim value as Variant = p.value("com.apple.print.PrintSettings.PMCopyCollate")
Break // check in debugger
```

Notes: (Read and Write computed property)

141.6.22 Constants

141.6.23 kPMDuplexNone = 1

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the duplex mode constants.
Notes: Duplex off.

141.6.24 kPMDuplexNoTumble = 2

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the duplex mode constants.
Notes: Duplex with no tumble.

141.6.25 kPMDuplexTumble = 3

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the duplex mode constants.
Notes: Duplex with tumble.

141.6.26 kPMSimplexTumble = 4

MBS MacCG Plugin, Plugin Version: 15.1.

Function: One of the duplex mode constants.
Notes: No duplex.

141.7 class CPMRectMBS

141.7.1 class CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a rectangle.
Notes: Only a data class.

141.7.2 Properties

141.7.3 Bottom as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The bottom distance to the border.
Notes: (Read and Write property)

141.7.4 Height as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The height of the rectangle.
Notes:

Setting the height changes the bottom property.
(Read and Write property)

141.7.5 Left as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The left distance to the border.
Notes: (Read and Write property)

141.7.6 Right as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The right distance to the border.
Notes: (Read and Write property)

141.7.7 Top as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The top distance to the border.
Notes: (Read and Write property)

141.7.8 Width as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The width of the rectangle.
Notes:

Setting the height changes the right property.
(Read and Write property)

141.8 class CPMResolutionMBS

141.8.1 class CPMResolutionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a resolution.
Notes: Only a data class.

141.8.2 Properties

141.8.3 Horizontal as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The horizontal resolution.
Notes: (Read and Write property)

141.8.4 Vertical as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The vertical resolution.
Notes: (Read and Write property)

141.9 class CPMVersionMBS

141.9.1 class CPMVersionMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for version information.

141.9.2 Properties

141.9.3 CountryCode as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The country code.
Notes: (Read and Write property)

141.9.4 LongVersion as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The long version string.
Notes: (Read and Write property)

141.9.5 ShortVersion as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The short version string.
Notes: (Read and Write property)

141.9.6 VersionMajor as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The major version number.
Notes: (Read and Write property)

141.9.7 VersionMinor as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The minor version number.
Notes: (Read and Write property)

141.9.8 VersionRevision as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The reversion number.
Notes: (Read and Write property)

141.9.9 VersionStage as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The version stage.
Notes: (Read and Write property)

141.10 class WindowsAddPrintJobMBS

141.10.1 class WindowsAddPrintJobMBS

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to send raw data to a printer.
Example:

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

dim w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"

if not w.StartDocPrinter("My Document", w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

dim PostScript as string = "% !PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rect-
fill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

dim BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

Notes:

Perfect for printing postscript data to a postscript printer.
You can use this class in several ways:

1. OpenPrinter, AddJob, WriteJob and ScheduleJob.
2. OpenPrinter, StartDocPrinter, StartPagePrinter, WritePrinter, EndPagePrinter, EndDocPrinter and ClosePrinter.
3. OpenPrinter, StartDocPrinter, WritePrinter, EndDocPrinter and ClosePrinter.

141.10.4 Methods

141.10.5 AddJob as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new print job.
Notes: Returns true on success and false on failure.

141.10.6 ClosePrinter

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes printer connection.

141.10.7 EndDocPrinter as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The EndDocPrinter function ends a print job for the specified printer.
Notes:

If the function succeeds, the return value is a true.

The EndDocPrinter function returns an error if the print job was not started by calling the StartDocPrinter function.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it may fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

141.10.8 EndPagePrinter as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The EndPagePrinter function notifies the print spooler that the application is at the end of a page in a print job.
Notes:

If the function succeeds, the return value is a true.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

141.10.9 OpenPrinter(PrinterName as string) as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens the printer for printing.
Notes:

Returns true on success and false on failure.
PrinterName can be "" for the default printer.

141.10.10 ScheduleJob as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Schedules the printing.
Notes: Returns true on success and false on failure.

141.10.11 StartDocPrinter(DocName as string, Datatype as string) as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The StartDocPrinter function notifies the print spooler that a document is to be spooled for printing.
Example:

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

dim w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"

if not w.StartDocPrinter("My Document", w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)
```

```
call w.StartPagePrinter

dim PostScript as string = "% !PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rectfill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

dim BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

Notes:

DocName: A string that specifies the name of the document.
OutputFile: Optional a path string or a folderitem that specifies the name of an output file. To print to a printer, set this to "" or nil or leave away.
Datatype: A string that identifies the type of data used to record the document.

If the function succeeds, the return value is true and the JobID property is set.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

- 141.10.13 StartDocPrinter(DocName as string, OutputFilePath as string, Datatype as string) as boolean 21722

141.10.12 StartDocPrinter(DocName as string, OutputFile as folderitem, Datatype as string) as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The StartDocPrinter function notifies the print spooler that a document is to be spooled for printing.
Example:

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

dim w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"

// output to a file
dim file as FolderItem = SpecialFolder.Desktop.Child("test.ps")

if not w.StartDocPrinter("My Document", file, w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

dim PostScript as string = "% !PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rect-
fill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

dim BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

Notes:

DocName: A string that specifies the name of the document.
OutputFile: Optional a path string or a folderitem that specifies the name of an output file. To print to a printer, set this to "" or nil or leave away.
Datatype: A string that identifies the type of data used to record the document.

If the function succeeds, the return value is true and the JobID property is set.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

141.10.13 StartDocPrinter(DocName as string, OutputFilePath as string, Datatype as string) as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The StartDocPrinter function notifies the print spooler that a document is to be spooled for printing.
Example:

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

dim w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if
```

```
const DocName = "My Document"

// output to a file
dim file as string = "C:\test.ps"

if not w.StartDocPrinter("My Document", file, w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

dim PostScript as string = "% !PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rectfill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

dim BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

Notes:

DocName: A string that specifies the name of the document.
OutputFile: Optional a path string or a folderitem that specifies the name of an output file. To print to a printer, set this to "" or nil or leave away.
Datatype: A string that identifies the type of data used to record the document.

If the function succeeds, the return value is true and the JobID property is set.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

- 141.10.12 StartDocPrinter(DocName as string, OutputFile as folderitem, Datatype as string) as boolean 21721

141.10.14 StartPagePrinter as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The StartPagePrinter function notifies the spooler that a page is about to be printed on the specified printer.
Notes:

If the function succeeds, the return value is a true.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

141.10.15 WriteJob(data as string) as Integer

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds data to the spool file.
Notes:

You need to pass raw data for the printer, e.g. postscript data.
Returns the number of bytes written.
So lenb(data) should be equal to the result.

Only available between a call to AddJob and ScheduleJob.

141.10.16 WritePrinter(data as string) as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WritePrinter function notifies the print spooler that data should be written to the specified printer.
Notes:

data: The data that should be written to the printer.

If the function succeeds, the return value is a true.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a high-level document (such as an Adobe PDF or Microsoft Word file) or other printer data (such PCL, PS, or HPGL) is sent directly to a printer, the print settings defined in the document take precedent over Windows print settings.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

141.10.17 Properties

141.10.18 JobID as Integer

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The JobID of this print.
Notes:

For information only.

Maybe be useful for the user to find this print job later.
(Read and Write property)

141.10.19 JobPath as String

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file name of the temporary file used.
Notes:

Just for information and only available between a call to AddJob and ScheduleJob.
(Read and Write property)

141.10.20 lastError as Integer

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Zero for no error.
-1 if the plugin has a problem like invalid parameter or called on Mac/Linux.
others are Windows error codes.
(Read and Write property)

141.10.21 lastErrorMessage as String

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized text message for LastError property.
Notes: (Read and Write property)

141.10.22 PrinterHandle as Integer

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle to the printer.
Notes: (Read and Write property)

141.10.23 Constants

141.10.24 kDataFormatRAW = "RAW"

MBS Win Plugin, Plugin Version: 10.3.

Function: One of the data format constants.
Notes: Use this constant if you send to both local and networked printers that use GDI-based printer drivers.

141.10.25 kDataFormatXPS_PASS = "XPS_PASS"

MBS Win Plugin, Plugin Version: 10.3.

Function: One of the data format constants.
Notes: Use this constant to send printer control data directly to printers that use XPSDrv printer drivers.

141.11 class WindowsDeviceModeMBS

141.11.1 class WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for device modue information for a Windows printer.
Example:

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

Basicly this class wraps the Windows DEVMODE structure.

For more information on the DEVMODE structure, visit this website:
http://msdn.microsoft.com/en-us/library/dd183565(VS.85).aspx

141.11.8 Methods

141.11.9 ApplyToSetupString(SetupString as String) as string

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Applies current device mode to the given setup string.
Example:

```
dim p as new PrinterSetup

if p.PageSetupDialog then

dim w as WindowsDeviceModeMBS = WindowsDeviceModeMBS.FromSetupString(s)

w.Copies = 3
w.Fields = BitwiseOr(w.Fields, w.DM_COPIES)

dim s as string = w.SetupString
dim t as string = w.ApplyToSetupString(s)

Break // check

end if
```

Notes:

The setup string contains a device mode and we replace the one from Xojo with our own.
The other information is kept the same.

141.11.10 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new empty device mode.
Notes: Size is set for you to default name of the data structure.

141.11.11 FromRawData(data as memoryblock, Unicode as boolean = true) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new WindowsDeviceModeMBS object with given data.
Notes:

The data is expected to the in format of DEVMODEW structure with some extra data and the right values inside.
If Unicode is true, we use DEVMODEW and if Unicode is false, we use DEVMODEA structure.
See also:

- 141.11.12 FromRawData(data as string, Unicode as boolean = true) as WindowsDeviceModeMBS 21731

141.11.12 FromRawData(data as string, Unicode as boolean = true) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new WindowsDeviceModeMBS object with given data.
Notes:

The data is expected to the in format of DEVMODEW structure with some extra data and the right values inside.
If Unicode is true, we use DEVMODEW and if Unicode is false, we use DEVMODEA structure.
See also:

- 141.11.11 FromRawData(data as memoryblock, Unicode as boolean = true) as WindowsDeviceModeMBS 21730

141.11.13 FromSetupString(SetupString as String) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 14.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initialized DevMode object from setup string.
Example:

```
dim p as new PrinterSetup

// setup something
call p.PageSetupDialog

// now we have nice setupstring
dim ss as string = p.SetupString

// parse it in device mode
dim d as WindowsDeviceModeMBS = WindowsDeviceModeMBS.FromSetupString(ss)

// duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// change printer
d.DeviceName = "Deskjet 2540 series# :2"
```

```
// enable duplex
d.Fields = BitwiseOr(d.Fields, d.DM_DUPLEX)
d.Duplex = d.DMDUP_HORIZONTAL

// now duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// get back as setup string
dim da as string = d.SetupString

if da = "" then
MsgBox "failed to create setup string"
Return
end if

// assign back
p.SetupString = da

// take a look
call p.PageSetupDialog

// and print something
dim g as Graphics = OpenPrinter(p)

g.DrawString "Page 1", 20, 20
g.NextPage
g.DrawString "Page 2", 20, 20
```

Notes:

You can pass string from PrinterSetup.SetupString.

Supports Xojo 2017r1 with 17.3 plugins.

141.11.14 RawData(Unicode as boolean = true) as memoryblock

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copies the raw data of the WindowsDeviceModeMBS class.
Notes:

Returns nil on any error.
If Unicode is true, we use DEVMODEW and if Unicode is false, we use DEVMODEA structure.

141.11.15 SetupString(ActualHorizontalResolution as integer, ActualVerticalResolution as integer, MaxHorizontalResolution as integer, MaxVerticalResolution as integer, MarginLeft as integer = 2500, MarginRight as integer = 2500, MarginTop as integer = 2500, MarginBottom as integer = 2500, MinMarginLeft as integer = 0, MinMarginRight as integer = 0, MinMarginTop as integer = 0, MinMarginBottom as integer = 0, PageSetupFlags as integer = 8) as string

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a setup string from devmode.
Notes:

This setupstring is empty on error.
If not empty, you can assign to PrinterSetup.SetupString.

Please pass reasonable flags.
Check existing SetupStrings from Xojo for possible values.
Resolution parameters can e.g. bei 72.

Supports Xojo 2017r1 with 17.3 plugins.
See also:

- 141.11.16 SetupString(Margin as Integer = 2500) as string 21733

141.11.16 SetupString(Margin as Integer = 2500) as string

MBS Win Plugin, Plugin Version: 14.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a setup string from devmode.
Example:

```
dim p as new PrinterSetup

// setup something
call p.PageSetupDialog

// now we have nice setupstring
dim ss as string = p.SetupString

// parse it in device mode
dim d as WindowsDeviceModeMBS = WindowsDeviceModeMBS.FromSetupString(ss)

// duplex is?
MsgBox "Duplex: "+str(d.Duplex)
```

```
// change printer
d.DeviceName = "Deskjet 2540 series# :2"

// enable duplex
d.Fields = BitwiseOr(d.Fields, d.DM_DUPLEX)
d.Duplex = d.DMDUP_HORIZONTAL

// now duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// get back as setup string
dim da as string = d.SetupString

if da = "" then
MsgBox "failed to create setup string"
Return
end if

// assign back
p.SetupString = da

// take a look
call p.PageSetupDialog

// and print something
dim g as Graphics = OpenPrinter(p)

g.DrawString "Page 1", 20, 20
g.NextPage
g.DrawString "Page 2", 20, 20
```

Notes:

This setupstring is empty on error.
If not empty, you can assign to PrinterSetup.SetupString.

Supports Xojo 2017r1 with 17.3 plugins.
See also:

- 141.11.15 SetupString(ActualHorizontalResolution as integer, ActualVerticalResolution as integer, MaxHorizontalResolution as integer, MaxVerticalResolution as integer, MarginLeft as integer = 2500, MarginRight as integer = 2500, MarginTop as integer = 2500, MarginBottom as integer = 2500, MinMarginLeft as integer = 0, MinMarginRight as integer = 0, MinMarginTop as integer = 0, MinMarginBottom as integer = 0, PageSetupFlags as integer = 8) as string 21733

141.11.17 Properties

141.11.18 Collate as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies whether collation should be used when printing multiple copies.
Notes:

(This member is ignored unless the printer driver indicates support for collation by setting the dmFields member to DM_COLLATE.) This member can be one of the following values.

Value	Meaning
DMCOLLATE_TRUE	Collate when printing multiple copies.
DMCOLLATE_FALSE	Do not collate when printing multiple copies.

(Read and Write property)

141.11.19 Color as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Switches between color and monochrome on color printers.
Notes:

The following are the possible values:
DMCOLOR_COLOR
DMCOLOR_MONOCHROME
(Read and Write property)

141.11.20 Copies as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Selects the number of copies printed if the device supports multiple-page copies.
Example:

```
dim w as WindowsDeviceModeMBS // your device mode object

w.Copies = 3
w.Fields = BitwiseOr(w.Fields, w.DM_COPIES)
```

Notes: (Read and Write property)

141.11.21 Data as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The raw data pointer to the DEVMODEW structure.
Notes: (Read only property)

141.11.22 DefaultSource as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the paper source.
Notes:

Use the DMBIN_* constants.
(Read and Write property)

141.11.23 DeviceName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the "friendly" name of the printer or display; for example, "PCL/HP LaserJet" in the case of PCL/HP LaserJet.
Notes:

This string is unique among device drivers. Note that this name may be truncated to fit in the dmDeviceName field.
(Read and Write property)

141.11.24 DitherType as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies how dithering is to be done.
Notes:

The member can be one of the following predefined values, or a driver-defined value greater than or equal to the value of DMDITHER_USER.

Value	Meaning
DMDITHER_NONE	No dithering.
DMDITHER_COARSE	Dithering with a coarse brush.
DMDITHER_FINE	Dithering with a fine brush.
DMDITHER_LINEART	Line art dithering, a special dithering method that produces well defined borders between black, white, and gray scaling. It is not suitable for images that include continuous graduations in intensity and hue, such as scanned photographs.
DMDITHER_GRAYSCALE	Device does gray scaling.

(Read and Write property)

141.11.25 DriverExtra as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Contains the number of bytes of private driver-data that follow this structure. If a device driver does not use device-specific information, set this member to zero.
Notes: (Read and Write property)

141.11.26 DriverVersion as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The driver version number assigned by the driver developer.
Notes: (Read and Write property)

141.11.27 Duplex as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Selects duplex or double-sided printing for printers capable of duplex printing.
Notes:

Following are the possible values.

Value	Meaning
DMDUP_SIMPLEX	Normal (nonduplex) printing.
DMDUP_HORIZONTAL	Short-edge binding, that is, the long edge of the page is horizontal.
DMDUP_VERTICAL	Long-edge binding, that is, the long edge of the page is vertical.

(Read and Write property)

141.11.28 Fields as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies whether certain properties have been initialized.
Notes:

If a property is initialized, its corresponding bit is set, otherwise the bit is clear. A driver supports only those properties that are appropriate for the printer or display technology.

Use the DM_* constants which match by name their property. So the DM_ORIENTATION bit value is related to the Orientation property.
(Read and Write property)

141.11.29 FormName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string array that specifies the name of the form to use; for example, "Letter" or "Legal".
Notes:

A complete set of names can be retrieved by using the GetPrinterFormats function on the WindowsPrinterListMBS class.
(Read and Write property)

141.11.30 ICMIntent as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies which color matching method, or intent, should be used by default.
Notes:

This member is primarily for non-ICM applications. ICM applications can establish intents by using the ICM functions. This member can be one of the following predefined values, or a driver defined value greater than or equal to the value of DMICM_USER.

(Read and Write property)

Value	Meaning
DMICM_ABS_COLORIMETRIC	Color matching should optimize to match the exact color requested without white point mapping. This value is most appropriate for use with proofing.
DMICM_COLORIMETRIC	Color matching should optimize to match the exact color requested. This value is most appropriate for use with business logos or other images when an exact color match is desired.
DMICM_CONTRAST	Color matching should optimize for color contrast. This value is the most appropriate choice for scanned or photographic images when dithering is desired.
DMICM_SATURATE	Color matching should optimize for color saturation. This value is the most appropriate choice for business graphs when dithering is not desired.

141.11.31 ICMMethod as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies how ICM is handled.
Notes:

For a non-ICM application, this member determines if ICM is enabled or disabled. For ICM applications, the system examines this member to determine how to handle ICM support. This member can be one of the following predefined values, or a driver-defined value greater than or equal to the value of DMICMMETHOD_USER.

Value	Meaning
DMICMMETHOD_NONE	Specifies that ICM is disabled.
DMICMMETHOD_SYSTEM	Specifies that ICM is handled by Windows.
DMICMMETHOD_DRIVER	Specifies that ICM is handled by the device driver.
DMICMMETHOD_DEVICE	Specifies that ICM is handled by the destination device.

The printer driver must provide a user interface for setting this member. Most printer drivers support only the DMICMMETHOD_SYSTEM or DMICMMETHOD_NONE value. Drivers for PostScript printers support all values.
(Read and Write property)

141.11.32 LogPixels as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of pixels per logical inch.
Notes:

Printer drivers do not use this member.
(Read and Write property)

141.11.33 MediaType as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the type of media being printed on.
Notes:

The member can be one of the following predefined values, or a driver-defined value greater than or equal to the value of DMMEDIA_USER.

Value	Meaning
DMMEDIA_STANDARD	Plain paper.
DMMEDIA_GLOSSY	Glossy paper.
DMMEDIA_TRANSPARENCY	Transparent film.

(Read and Write property)

141.11.34 Nup as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies where the NUP is done.
Notes:

It can be one of the following.

Value	Meaning
DMNUP_SYSTEM	The print spooler does the NUP.
DMNUP_ONEUP	The application does the NUP.

(Read and Write property)

141.11.35 Orientation as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printer devices only, selects the orientation of the paper.
Example:

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
```

```
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

This member can be either DMORIENT_PORTRAIT (1) or DMORIENT_LANDSCAPE (2).
(Read and Write property)

141.11.36 PaperLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printer devices only, overrides the length of the paper specified by the PaperSize member, either for custom paper sizes or for devices such as dot-matrix printers that can print on a page of arbitrary length.
Notes:

These values, along with all other values in this structure that specify a physical length, are in tenths of a millimeter.
(Read and Write property)

141.11.37 PaperSize as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printer devices only, selects the size of the paper to print on.
Notes:

This member can be set to zero if the length and width of the paper are both set by the PaperLength and PaperWidth members. Otherwise, the PaperSize member can be set to a device specific value greater than or equal to DMPAPER_USER or to one of the following predefined values with DMPAPER_* constants.
(Read and Write property)

141.11.38 PaperWidth as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printer devices only, overrides the width of the paper specified by the PaperSize member.
Notes:

Unit is tenths of a millimeter.
(Read and Write property)

141.11.39 PrintQuality as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the printer resolution.
Notes:

There are four predefined device-independent values:

DMRES_HIGH
DMRES_MEDIUM
DMRES_LOW
DMRES_DRAFT

If a positive value is specified, it specifies the number of dots per inch (DPI) and is therefore device dependent.
(Read and Write property)

141.11.40 Scale as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the factor by which the printed output is to be scaled.
Notes:

The apparent page size is scaled from the physical page size by a factor of Scale /100. For example, a letter-sized page with a dmScale value of 50 would contain as much data as a page of 17- by 22-inches because the output text and graphics would be half their original height and width.
(Read and Write property)

141.11.41 Size as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the size, in bytes, of the DEVMODE structure, not including any private driver-specific data that might follow the structure's public members.
Notes:

You don't need to set this field normally as the plugin does that for you.
(Read and Write property)

141.11.42 SpecVersion as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The version number of the initialization data specification on which the structure is based.
Notes:

You don't need to set this field normally as the plugin does that for you.
(Read and Write property)

141.11.43 TTOption as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies how TrueType fonts should be printed.
Notes:

This member can be one of the following values:

Value	Meaning
DMTT_BITMAP	Prints TrueType fonts as graphics. This is the default action for dot-matrix printers.
DMTT_DOWNLOAD	Downloads TrueType fonts as soft fonts. This is the default action for Hewlett-Packard printers that use Printer Control Language (PCL).
DMTT_DOWNLOAD_OUTLINE	Downloads TrueType fonts as outline soft fonts.
DMTT_SUBDEV	Substitutes device fonts for TrueType fonts. This is the default action for PostScript printers.

(Read and Write property)

141.11.44 YResolution as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the y-resolution, in dots per inch, of the printer.
Notes:

If the printer initializes this member, the PrintQuality member specifies the x-resolution, in dots per inch, of the printer.
(Read and Write property)

141.11.45 Constants

141.11.46 DMBIN_AUTO = 7

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Auto

141.11.47 DMBIN_CASSETTE = 14

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Cassette

141.11.48 DMBIN_ENVELOPE = 5

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Envelope

141.11.49 DMBIN_ENVMANUAL = 6

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Envelope Manual.

141.11.50 DMBIN_FORMSOURCE = 15

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Form Source.

141.11.51 DMBIN_LARGECAPACITY = 11

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Large Capacity

141.11.52 DMBIN_LARGEFMT = 10

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Large Format

141.11.53 DMBIN_LOWER = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Lower

141.11.54 DMBIN_MANUAL = 4

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Manual

141.11.55 DMBIN_MIDDLE = 3

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Middle

141.11.56 DMBIN_ONLYONE = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Only One.

141.11.57 DMBIN_SMALLFMT = 9

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Small Format

141.11.58 DMBIN_TRACTOR = 8

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Tractor

141.11.59 DMBIN_UPPER = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: Upper

141.11.60 DMBIN_USER = 256

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the source bin constants.
Notes: User

141.11.61 DMCOLLATE_FALSE = 0

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the collate mode constants.
Notes: Do not collate when printing multiple copies.

141.11.62 DMCOLLATE_TRUE = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the collate mode constants.
Notes: Collate when printing multiple copies.

141.11.63 DMCOLOR_COLOR = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the color mode constants.
Notes: Color

141.11.64 DMCOLOR_MONOCHROME = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the color mode constants.
Notes: Monochrome.

141.11.65 DMDITHER_COARSE = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the dither constants.
Notes: Dithering with a coarse brush.

141.11.66 DMDITHER_ERRORDIFFUSION = 5

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the dither constants.

141.11.67 DMDITHER_FINE = 3

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the dither constants.
Notes: Dithering with a fine brush.

141.11.68 DMDITHER_GRAYSCALE = 10

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the dither constants.
Notes: Device does gray scaling.

141.11.69 DMDITHER_LINEART = 4

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the dither constants.
Notes: Line art dithering, a special dithering method that produces well defined borders between black, white, and gray scaling. It is not suitable for images that include continuous graduations in intensity and hue, such as scanned photographs.

141.11.70 DMDITHER_NONE = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the dither constants.
Notes: No dithering.

141.11.71 DMDITHER_RESERVED6 = 6

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the dither constants.

141.11.72 DMDITHER_RESERVED7 = 7

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the dither constants.

141.11.73 DMDITHER_RESERVED8 = 8

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the dither constants.

141.11.74 DMDITHER_RESERVED9 = 9

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the dither constants.

141.11.75 DMDITHER_USER = 256

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the dither constants.

141.11.76 DMDUP_HORIZONTAL = 3

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the duplex mode constants.
Notes: Horizontal duplex.

141.11.77 DMDUP_SIMPLEX = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the duplex mode constants.
Notes: No duplex = simplex.

141.11.78 DMDUP_VERTICAL = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the duplex mode constants.
Notes: Vertical duplex.

141.11.79 DMICMMETHOD_DEVICE = 4

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the ICM method constants.
Notes: Specifies that ICM is handled by the destination device.

141.11.80 DMICMMETHOD_DRIVER = 3

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the ICM method constants.
Notes: Specifies that ICM is handled by the device driver.

141.11.81 DMICMMETHOD_NONE = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the ICM method constants.
Notes: Specifies that ICM is disabled.

141.11.82 DMICMMETHOD_SYSTEM = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the ICM method constants.
Notes: Specifies that ICM is handled by Windows.

141.11.83 DMICMMETHOD_USER = 256

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the ICM method constants.

141.11.84 DMICM_ABS_COLORIMETRIC = 4

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the ICM intent constants.
Notes: Color matching should optimize to match the exact color requested without white point mapping. This value is most appropriate for use with proofing.

141.11.85 DMICM_COLORIMETRIC = 3

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the ICM intent constants.
Notes: Color matching should optimize to match the exact color requested. This value is most appropriate for use with business logos or other images when an exact color match is desired.

141.11.86 DMICM_CONTRAST = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the ICM intent constants.
Notes: Color matching should optimize for color contrast. This value is the most appropriate choice for scanned or photographic images when dithering is desired.

141.11.87 DMICM_SATURATE = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the ICM intent constants.
Notes: Color matching should optimize for color saturation. This value is the most appropriate choice for business graphs when dithering is not desired.

141.11.88 DMICM_USER = 256

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the ICM intent constants.

141.11.89 DMMEDIA_GLOSSY = 3

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the media type constants.
Notes: Glossy paper.

141.11.90 DMMEDIA_STANDARD = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the media type constants.
Notes: Plain paper.

141.11.91 DMMEDIA_TRANSPARENCY = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the media type constants.
Notes: Transparent film.

141.11.92 DMMEDIA_USER = 256

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the media type constants.

141.11.93 DMNUP_ONEUP = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the NUP constants.
Notes: The application does the NUP.

141.11.94 DMNUP_SYSTEM = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the NUP constants.
Notes: The print spooler does the NUP.

141.11.95 DMORIENT_LANDSCAPE = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the orientation constants.
Example:

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_LANDSCAPE

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Landscape mode.

141.11.96 DMORIENT_PORTRAIT = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the orientation constants.
Example:

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
```

```
MsgBox "Failed"
end if
```

Notes: Portrait mode.

141.11.97 DMPAPER_10x11 = 45

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: 10- by 11-inch sheet

141.11.98 DMPAPER_10x14 = 16

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: 10- by 14-inch sheet

141.11.99 DMPAPER_11X17 = 17

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: 11- by 17-inch sheet

141.11.100 DMPAPER_12X11 = 90

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: 12- by 11-inch sheet

141.11.101 DMPAPER_15X11 = 46

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: 15- by 11-inch sheet

141.11.102 DMPAPER_9X11 = 44

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: 9- by 11-inch sheet

141.11.103 DMPAPER_A2 = 66

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A2 sheet, 420 x 594-millimeters

141.11.104 DMPAPER_A3 = 8

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A3 sheet, 297- by 420-millimeters

141.11.105 DMPAPER_A3_EXTRA = 63

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A3 Extra 322 x 445-millimeters

141.11.106 DMPAPER_A3_EXTRA_TRANSVERSE = 68

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A3 Extra Transverse 322 x 445-millimeters

141.11.107 DMPAPER_A3_ROTATED = 76

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A3 rotated sheet, 420- by 297-millimeters

141.11.108 DMPAPER_A3_TRANSVERSE = 67

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A3 Transverse 297 x 420-millimeters

141.11.109 DMPAPER_A4 = 9

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A4 sheet, 210- by 297-millimeters

141.11.110 DMPAPER_A4_EXTRA = 53

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A4 sheet, 9.27 x 12.69 inches

141.11.111 DMPAPER_A4_PLUS = 60

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A4 Plus 210 x 330-millimeters

141.11.112 DMPAPER_A4_ROTATED = 77

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A4 rotated sheet, 297- by 210-millimeters

141.11.113 DMPAPER_A4_SMALL = 10

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A4 small sheet, 210- by 297-millimeters

141.11.114 DMPAPER_A4_TRANSVERSE = 55

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A4 Transverse 210 x 297 millimeters

141.11.115 DMPAPER_A5 = 11

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A5 sheet, 148- by 210-millimeters

141.11.116 DMPAPER_A5_EXTRA = 64

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A5 Extra 174 x 235-millimeters

141.11.117 DMPAPER_A5_ROTATED = 78

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A5 rotated sheet, 210- by 148-millimeters

141.11.118 DMPAPER_A5_TRANSVERSE = 61

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A5 Transverse 148 x 210-millimeters

141.11.119 DMPAPER_A6 = 70

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A6 sheet, 105- by 148-millimeters

141.11.120 DMPAPER_A6_ROTATED = 83

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: A6 rotated sheet, 148- by 105-millimeters

141.11.121 DMPAPER_A_PLUS = 57

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: SuperA/A4 227 x 356 -millimeters

141.11.122 DMPAPER_B4 = 12

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: B4 sheet, 250- by 354-millimeters

141.11.123 DMPAPER_B4_JIS_ROTATED = 79

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: B4 (JIS) rotated sheet, 364- by 257-millimeters

141.11.124 DMPAPER_B5 = 13

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: B5 sheet, 182- by 257-millimeter paper

141.11.125 DMPAPER_B5_EXTRA = 65

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: B5 (ISO) Extra 201 x 276-millimeters

141.11.126 DMPAPER_B5_JIS_ROTATED = 80

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: B5 (JIS) rotated sheet, 257- by 182-millimeters

141.11.127 DMPAPER_B5_TRANSVERSE = 62

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.

141.11.128 DMPAPER_B6_JIS = 88

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: B6 (JIS) sheet, 128- by 182-millimeters

141.11.129 DMPAPER_B6_JIS_ROTATED = 89

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: B6 (JIS) rotated sheet, 182- by 128-millimeters

141.11.130 DMPAPER_B_PLUS = 58

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: SuperB/A3 305 x 487-millimeters

141.11.131 DMPAPER_CSHEET = 24

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: C Sheet, 17- by 22-inches

141.11.132 DMPAPER_DBL_JAPANESE_POSTCARD = 69

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the paper format constants.
Notes: Double Japanese Postcard, 200- by 148-millimeters

141.11.133 DMPAPER_DBL_JAPANESE_POSTCARD_ROTATED = 82

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the true type option mode constants.
Notes: Substitutes device fonts for TrueType fonts. This is the default action for PostScript printers.

141.11.224 DM_BITSPERPEL = & h00040000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the BitsperPel property.

141.11.225 DM_COLLATE = & h00008000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Collate property.

141.11.226 DM_COLOR = & h00000800

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Color property.

141.11.227 DM_COPIES = & h00000100

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Copies property.

141.11.228 DM_DEFAULTSOURCE = & h00000200

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the DefaultSource property.

141.11.229 DM_DISPLAYFLAGS = & h00200000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the DisplayFlags property.

141.11.230 DM_DISPLAYFREQUENCY = & h00400000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the DisplayFrequency property.

141.11.231 DM_DITHERTYPE = & h04000000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the DitherType property.

141.11.232 DM_DUPLEX = & h00001000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Duplex property.

141.11.233 DM_FORMNAME = & h00010000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Formname property.

141.11.234 DM_ICMINTENT = & h01000000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the ICMIntent property.

141.11.235 DM_ICMMETHOD = & h00800000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the ICMMethod property.

141.11.236 DM_LOGPIXELS = & h00020000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the LogPixels property.

141.11.237 DM_MEDIATYPE = & h02000000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the MediaType property.

141.11.238 DM_NUP = & h00000040

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the NUP property.

141.11.239 DM_ORIENTATION = & h00000001

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Example:

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: This value is related to the Orientation property.

141.11.240 DM_PANNINGHEIGHT = & h10000000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Panningheight property.

141.11.241 DM_PANNINGWIDTH = & h08000000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Panningwidth property.

141.11.242 DM_PAPERLENGTH = & h00000004

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Paperlength property.

141.11.243 DM_PAPERSIZE = & h00000002

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Papersize property.

141.11.244 DM_PAPERWIDTH = & h00000008

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Paperwidth property.

141.11.245 DM_PELSHEIGHT = & h00100000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Pelsheight property.

141.11.246 DM_PELSWIDTH = & h00080000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Pelswidth property.

141.11.247 DM_POSITION = & h00000020

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Position property.

141.11.248 DM_PRINTQUALITY = & h00000400

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the PrintQuality property.

141.11.249 DM_SCALE = & h00000010

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the Scale property.

141.11.250 DM_TTOPTION = & h00004000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the TTOption property.

141.11.251 DM_YRESOLUTION = & h00002000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants to use with the fields property.
Notes: This value is related to the YResolution property.

141.12 class WindowsGraphicsInfoMBS

141.12.1 class WindowsGraphicsInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class gives information for Windows Device contexts.
Example:

```
dim g as Graphics = OpenPrinter
dim info as WindowsGraphicsInfoMBS = g.WindowsGraphicsInfoMBS

MsgBox _
"Printer physical page size: "+str(info.PhysicalWidth)+" "+str(info.PhysicalHeight)+_
EndOfLine+_
"Useable paper size: "+str(info.ResolutionX)+ " x "+str(info.ResolutionY)+_
EndOfLine+_
"Paper size: "+str(info.SizeX)+" x "+str(info.Sizey)+" mm"
```

Notes: Main use currently is to learn about native resolution of a printer graphics object.

141.12.6 Methods

141.12.7 Constructor

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initializes properties for main screen.
See also:

- 141.12.8 Constructor(c as control) 21784
- 141.12.9 Constructor(g as graphics) 21784
- 141.12.10 Constructor(p as Picture) 21785
- 141.12.11 Constructor(w as window) 21785

141.12.8 Constructor(c as control)

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop only.

Function: Initializes properties for this control object.
See also:

- 141.12.7 Constructor 21784
- 141.12.9 Constructor(g as graphics) 21784
- 141.12.10 Constructor(p as Picture) 21785
- 141.12.11 Constructor(w as window) 21785

141.12.9 Constructor(g as graphics)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Initializes properties for this graphics object.
See also:

- 141.12.7 Constructor 21784
- 141.12.8 Constructor(c as control) 21784
- 141.12.10 Constructor(p as Picture) 21785
- 141.12.11 Constructor(w as window) 21785

141.12.10 Constructor(p as Picture)

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop only.

Function: Initializes properties for this picture object.
See also:

- 141.12.7 Constructor 21784
- 141.12.8 Constructor(c as control) 21784
- 141.12.9 Constructor(g as graphics) 21784
- 141.12.11 Constructor(w as window) 21785

141.12.11 Constructor(w as window)

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop only.

Function: Initializes properties for this window object.
See also:

- 141.12.7 Constructor 21784
- 141.12.8 Constructor(c as control) 21784
- 141.12.9 Constructor(g as graphics) 21784
- 141.12.10 Constructor(p as Picture) 21785

141.12.12 Properties

141.12.13 AspectX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Relative width of a device pixel used for line drawing.
Notes: (Read and Write property)

141.12.14 AspectXY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Diagonal width of the device pixel used for line drawing.
Notes: (Read and Write property)

141.12.15 AspectY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Relative height of a device pixel used for line drawing.
Notes: (Read and Write property)

141.12.16 BitsPerPixel as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of adjacent color bits for each pixel.
Example:

```
dim p as new Picture(200, 200, 32)
dim info as new WindowsGraphicsInfoMBS(p.Graphics)

MsgBox "Color Depth: "+str(info.BitsPerPixel)
```

Notes:

As example gives a display device context, the bits per pixel is the screen depth.
(Read and Write property)

141.12.17 BrushesCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of device-specific brushes.
Notes: (Read and Write property)

141.12.18 ColorCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of entries in the device's color table, if the device has a color depth of no more than 8 bits per pixel.
Notes:

For devices with greater color depths, 1 is returned.
(Read and Write property)

141.12.19 DesktopResolutionX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Horizontal width of entire desktop in pixels.
Example:

```
dim p as new Picture(200, 200, 32)
dim info as new WindowsGraphicsInfoMBS(p.Graphics)

MsgBox "Size of Windows Desktop: "+str(info.DesktopResolutionX)+ " x "+str(info.DesktopResolutionY)
```

Notes: (Read and Write property)

141.12.20 DesktopResolutionY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Vertical height of entire desktop in pixels.
Example:

```
dim p as new Picture(200, 200, 32)
dim info as new WindowsGraphicsInfoMBS(p.Graphics)

MsgBox "Size of Windows Desktop: "+str(info.DesktopResolutionX)+ " x "+str(info.DesktopResolutionY)
```

Notes: (Read and Write property)

141.12.21 DriverVersion as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device driver version.
Notes: (Read and Write property)

141.12.22 FontCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of device-specific fonts.
Notes: (Read and Write property)

141.12.23 LogPixelsX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of pixels per logical inch along the screen width.
Example:

```
dim g as Graphics = OpenPrinter
dim info as WindowsGraphicsInfoMBS = g.WindowsGraphicsInfoMBS

MsgBox "Printer resolution: "+str(info.LogPixelsX)+" x "+str(info.LogPixelsY)
```

Notes:

In a system with multiple display monitors, this value is the same for all monitors.
(Read and Write property)

141.12.24 LogPixelsY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of pixels per logical inch along the screen height.
Example:

```
dim g as Graphics = OpenPrinter
dim info as WindowsGraphicsInfoMBS = g.WindowsGraphicsInfoMBS

MsgBox "Printer resolution: "+str(info.LogPixelsX)+" x "+str(info.LogPixelsY)
```

Notes:

In a system with multiple display monitors, this value is the same for all monitors.
(Read and Write property)

141.12.25 MakersCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of markers the device has.
Notes: (Read and Write property)

141.12.26 PenCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of device-specific pens.
Notes: (Read and Write property)

141.12.27 PhysicalHeight as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printing devices: the height of the physical page, in device units.
Notes:

For example, a printer set to print at 600 dpi on 8.5-by-11-inch paper has a physical height value of 6600 device units. Note that the physical page is almost always greater than the printable area of the page, and never smaller.
(Read and Write property)

141.12.28 PhysicalOffsetX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printing devices: the distance from the left edge of the physical page to the left edge of the printable area, in device units.
Notes:

For example, a printer set to print at 600 dpi on 8.5-by-11-inch paper, that cannot print on the leftmost 0.25-inch of paper, has a horizontal physical offset of 150 device units.
(Read and Write property)

141.12.29 PhysicalOffsetY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printing devices: the distance from the top edge of the physical page to the top edge of the printable area, in device units.
Notes:

For example, a printer set to print at 600 dpi on 8.5-by-11-inch paper, that cannot print on the topmost 0.5-inch of paper, has a vertical physical offset of 300 device units.

(Read and Write property)

141.12.30 PhysicalWidth as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printing devices: the width of the physical page, in device units.
Notes:

For example, a printer set to print at 600 dpi on 8.5-x11-inch paper has a physical width value of 5100 device units. Note that the physical page is almost always greater than the printable area of the page, and never smaller.
(Read and Write property)

141.12.31 Planes as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of color planes.
Notes: (Read and Write property)

141.12.32 ResolutionX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Width, in pixels, of the screen; or for printers, the width, in pixels, of the printable area of the page.
Notes: (Read and Write property)

141.12.33 ResolutionY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Height, in raster lines, of the screen; or for printers, the height, in pixels, of the printable area of the page.
Notes: (Read and Write property)

141.12.34 ScalingFactorX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Scaling factor for the x-axis of the printer.
Notes: (Read and Write property)

141.12.35 ScalingFactorY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Scaling factor for the y-axis of the printer.
Notes: (Read and Write property)

141.12.36 SizeX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Width, in millimeters, of the physical screen.
Notes: (Read and Write property)

141.12.37 SizeY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Height, in millimeters, of the physical screen.
Notes: (Read and Write property)

141.12.38 Technology as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Device technology. It can be any one of the kTechnology* constants.
Notes: (Read and Write property)

141.12.39 VRefresh as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For display devices: the current vertical refresh rate of the device, in cycles per second (Hz).
Notes: (Read and Write property)

141.12.40 Constants

141.12.41 kTechnologyCharStream = 4

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the technology constants.
Notes: Character stream

141.12.42 kTechnologyDisplayFile = 6

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the technology constants.
Notes: Display file

141.12.43 kTechnologyMetaFile = 5

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the technology constants.
Notes: Metafile

141.12.44 kTechnologyPlotter = 0

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the technology constants.
Notes: Vector plotter

141.12.45 kTechnologyRasterCamera = 3

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the technology constants.
Notes: Raster camera

141.12.46 kTechnologyRasterDisplay = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the technology constants.
Notes: Raster display

141.12.47 kTechnologyRasterPrinter = 2

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the technology constants.
Notes: Raster printer

141.13 class WindowsPageFormatMBS

141.13.1 class WindowsPageFormatMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a page format.
Example:

```
// change the printer name to your printer's name
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)
dim formats(-1) as WindowsPageFormatMBS = w.GetPrinterFormats

for each p as WindowsPageFormatMBS in formats
MsgBox p.Name
next
```

Notes:

This class wraps the FORM_INFO_1 structure. You can find more information here:
http://msdn.microsoft.com/en-us/library/dd144836(v=VS.85).aspx

141.13.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

141.13.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

141.13.4 Properties

141.13.5 DisplayName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The form's display name in the language specified by LangId.
Notes:

Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

141.13.6 Flags as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The flags for this page format.
Notes:

The following values are defined.

Value	Meaning
FORM_USER	If this bit flag is set, the form has been defined by the user. Forms with this flag set are defined in the registry.
FORM_BUILTIN	If this bit-flag is set, the form is part of the spooler. Form definitions with this flag set do not appear in the registry.
FORM_PRINTER	If this bit flag is set, the form is associated with a certain printer, and its definition appears in the registry.

(Read and Write property)

141.13.7 ImageableAreaBottom as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

141.13.8 ImageableAreaHeight as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

141.13.9 ImageableAreaLeft as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

141.13.10 ImageableAreaRight as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

141.13.11 ImageableAreaTop as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

141.13.12 ImageableAreaWidth as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

141.13.13 Keyword as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A non-localizable string identifier of the form.
Notes:

When passed to AddForm or SetForm, this gives the caller a means of identifying the form in all locales.
Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

141.13.14 LangId as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The language of the DisplayName.
Notes:

Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

141.13.15 Mode as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The mode.
Notes:

Value can be 1 (Windows 2000 and newer) or 2 (Windows Vista and newer).
(Read and Write property)

141.13.16 MuiDll as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Multilingual User Interface localized resource DLL that contains the localized display name.
Notes:

Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

141.13.17 Name as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the form.
Notes: (Read and Write property)

141.13.18 ResourceId as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The resource ID of the form's display name in MuiDll.
Notes:

Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

141.13.19 SizeHeight as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

141.13.20 SizeWidth as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

141.13.21 StringType as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies how a localized display name for the form is obtained at runtime.
Notes:

The following values are defined. Only one can be set in any given call to AddForm or SetForm. Both STRING_MUIDLL and STRING_LANGPAIR can be set in the WindowsPageFormatMBS (s) returned by GetForm or GetPrinterFormats.

Can be STRING_LANGPAIR, STRING_MUIDLL or STRING_NONE.
Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

141.13.22 Constants

141.13.23 FORM_BUILTIN = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants.
Notes: If this bit-flag is set, the form is part of the spooler. Form definitions with this flag set do not appear in the registry.

141.13.24 FORM_PRINTER = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants.
Notes: If this bit flag is set, the form is associated with a certain printer, and its definition appears in the registry.

141.13.25 FORM_USER = 0

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the flag constants.
Notes: If this bit flag is set, the form has been defined by the user. Forms with this flag set are defined in the registry.

141.13.26 STRING_LANGPAIR = 4

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the StringType property.
Notes: The display name and language ID are provided directly by DisplayName and the language is specified by LangId.

141.13.27 STRING_MUIDLL = 2

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the StringType property.
Notes: The display name is extracted from the Multilingual User Interface localized resources DLL specified in MuiDll. The ID is in the ResourceId member.

141.13.28 STRING_NONE = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the StringType property.
Notes: There is no localized display name.

141.14 class WindowsPageSetupDialogMBS

141.14.1 class WindowsPageSetupDialogMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The class to run the Windows Page Setup dialog.

141.14.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr7

141.14.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr7

141.14.4 Methods

141.14.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The constructor.

141.14.6 GetDevNames(byref DriverName as string, byref DeviceName as string, byref OutputName as string, byref flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Queries the strings that identify the driver, device, and output port names for a printer.
Notes:

Returns true if values are available and false if not.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the

flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

141.14.7 PageSetupDialog as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Creates a Page Setup dialog box that enables the user to specify the attributes of a printed page.
Notes:

These attributes include the paper size and source, the page orientation (portrait or landscape), and the width of the page margins.

If the user clicks the OK button, the return value is true. The members of the object indicate the user's selections.
If the user cancels or closes the Page Setup dialog box or an error occurs, the return value is false. To get extended error information, use the lasterror property.

Starting with Windows Vista, the PageSetupDialog does not contain the Printer button. To switch printer selection other functions.

141.14.8 SetDevNames(DriverName as string, DeviceName as string, OutputName as string, flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Sets the strings that identify the driver, device, and output port names for a printer.
Notes:

Returns true on success and false on failure.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

141.14.9 Properties

141.14.10 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The device mode object.
Notes:

On input, if an object is specified, the values in the corresponding DEVMODE structure are used to initialize the controls in the dialog box. On output, the dialog box sets DevMode to a new object that contains values specifying the user's selections. If the user's selections are not available, the dialog box sets DevMode to nil.
(Read and Write property)

141.14.11 Flags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: A set of bit flags that you can use to initialize the Page Setup dialog box.
Notes:

When the dialog box returns, it sets these flags to indicate the user's input.
See the PSD_* constants for possible values.
(Read and Write property)

141.14.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The last error code.
Notes: (Read and Write property)

141.14.13 MarginBottom as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The widths of the bottom margin.
Notes:

If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

141.14.14 MarginLeft as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The widths of the left margin.
Notes:

If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

141.14.15 MarginRight as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The widths of the right margin.
Notes:

If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

141.14.16 MarginTop as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The widths of the top margin.
Notes:

If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

141.14.17 MinMarginBottom as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The minimum allowable widths for the bottom margin.
Notes:

The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES

or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

141.14.18 MinMarginLeft as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The minimum allowable widths for the left margin.
Notes:

The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

141.14.19 MinMarginRight as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The minimum allowable widths for the right margin.
Notes:

The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

141.14.20 MinMarginTop as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The minimum allowable widths for the top margin.
Notes:

The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

141.14.21 PaperSizeX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The dimensions of the paper selected by the user.
Notes:

The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

141.14.22 PaperSizeY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The dimensions of the paper selected by the user.
Notes:

The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

141.14.23 Parent as Window

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The window that owns the dialog box.
Notes:

This member can be any valid window, or it can be nil if the dialog box has no owner.
(Read and Write property)

141.14.24 Constants

141.14.25 DN_DEFAULTPRN = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: The flag for default printer on the SetDevNames/GetDevNames flag parameter.

141.14.26 PSD_DEFAULTMINMARGINS = & h00000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes: Sets the minimum values that the user can specify for the page margins to be the minimum margins

allowed by the printer. This is the default. This flag is ignored if the PSD_MARGINS and PSD_MINMARGINS flags are also specified.

141.14.27 PSD_DISABLEMARGINS = & h00000010

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes: Disables the margin controls, preventing the user from setting the margins.

141.14.28 PSD_DISABLEORIENTATION = & h00000100

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes: Disables the orientation controls, preventing the user from setting the page orientation.

141.14.29 PSD_DISABLEPAPER = & h00000200

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes: Disables the paper controls, preventing the user from setting page parameters such as the paper size and source.

141.14.30 PSD_DISABLEPRINTER = & h00000020

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes:

Obsolete.
Windows XP/2000: Disables the Printer button, preventing the user from invoking a dialog box that contains additional printer setup information.

141.14.31 PSD_INHUNDREDTHSOFMILLIMETERS = & h00000008

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes: Indicates that hundredths of millimeters are the unit of measurement for margins and paper size. The values in the Margin, MinMargin, and PaperSize members are in hundredths of millimeters. You can set this flag on input to override the default unit of measurement for the user's locale. When the function returns, the dialog box sets this flag to indicate the units used.

141.14.32 PSD_INTHOUSANDTHSOFINCHES = & h00000004

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes: Indicates that thousandths of inches are the unit of measurement for margins and paper size. The values in the Margin, MinMargin, and PaperSize members are in thousandths of inches. You can set this flag on input to override the default unit of measurement for the user's locale. When the function returns, the dialog box sets this flag to indicate the units used.

141.14.33 PSD_MARGINS = & h00000002

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes: Causes the system to use the values specified in the Margin members as the initial widths for the left, top, right, and bottom margins. If PSD_MARGINS is not set, the system sets the initial widths to one inch for all margins.

141.14.34 PSD_MINMARGINS = & h00000001

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes: Causes the system to use the values specified in the MinMargin members as the minimum allowable widths for the left, top, right, and bottom margins. The system prevents the user from entering a width that is less than the specified minimum. If PSD_MINMARGINS is not specified, the system sets the minimum allowable widths to those allowed by the printer.

141.14.35 PSD_NONETWORKBUTTON = & h00200000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes: Hides and disables the Network button.

141.14.36 PSD_NOWARNING = & h00000080

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes: Prevents the system from displaying a warning message when there is no default printer.

141.14.37 PSD_RETURNDEFAULT = & h00000400

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes: PageSetupDialog does not display the dialog box. Instead, it sets the DevNames and DevMode members to objects that are initialized for the system default printer. PageSetupDlg returns an error if either DevNames or DevMode is not nil.

141.14.38 PSD_SHOWHELP = & h00000800

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flag constants.
Notes: Causes the dialog box to display the Help button. The hwndOwner member must specify the window to receive the HELPMSGSTRING registered messages that the dialog box sends when the user clicks the Help button.

141.15 class WindowsPrintDialogMBS

141.15.1 class WindowsPrintDialogMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The class for showing the windows print dialog.

141.15.2 Blog Entries

- MBS Xojo Plugins, version 21.3pr2
- MBS Real Studio Plugins, version 12.1pr7

141.15.3 Blog Entries

- MBS Xojo Plugins, version 21.3pr2
- MBS Real Studio Plugins, version 12.1pr7

141.15.4 Methods

141.15.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The constructor.

141.15.6 GetDevNames(byref DriverName as string, byref DeviceName as string, byref OutputName as string, byref flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Queries the strings that identify the driver, device, and output port names for a printer.
Notes:

Returns true if values are available and false if not.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning

message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

141.15.7 getPageRange(index as Integer, byref fromPage as Integer, byref toPage as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Queries a page range entry.

141.15.8 PrintDialog as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Displays a Print Dialog Box or a Print Setup dialog box.
Notes:

The Print dialog box enables the user to specify the properties of a particular print job.

If the user clicks the OK button, the return value is true. The members of the object indicate the user's selections.

If the user canceled or closed the Print or Printer Setup dialog box or an error occurred, the return value is zero. To get extended error information, use the lasterror property. If the user canceled or closed the dialog box, lasterror returns zero.

This is the older function. PrintDialogEx is the newer function.
see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms646940(v=vs.85).aspx

141.15.9 PrintDialogEx as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Displays a Print property sheet that enables the user to specify the properties of a particular print job.
Notes:

Changed from Boolean to Integer in v21.3 to allow you to distinguish between different different results.

Result is either 0 for OK or an COM error code.

A Print property sheet has a General page that contains controls similar to the Print dialog box. The property sheet can also have additional application-specific and driver-specific property pages as well as the General page.
If the function succeeds, the return value is S_OK (0) and the ResultAction member contains one of the following values.

Constant	Value	Description
PD_RESULT_APPLY	2	The user clicked the Apply button and later clicked the Cancel button. This indicates that the user wants to apply the changes made in the property sheet, but does not yet want to print. The WindowsPrintDialogMBS contains the information specified by the user at the time the Apply button was clicked.
PD_RESULT_CANCEL	0	The user clicked the Cancel button. The information in the WindowsPrintDialogMBS is unchanged.
PD_RESULT_PRINT	1	The user clicked the Print button. The WindowsPrintDialogMBS contains the information specified by the user.

Lasterror is set.
The values of DevMode and DevNames in WindowsPrintDialogMBS may change when they are passed into PrintDialog. This is because these members are filled on both input and output.
If PD_RETURNDC is set but PD_USEDEVMODECOPIESANDCOLLATE flag is not set, the PrintDialog functions return incorrect number of copies. To get the correct number of copies, ensure that the calling application always uses PD_USEDEVMODECOPIESANDCOLLATE with PD_RETURNDC.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms646942(v=vs.85).aspx

141.15.10 SetDevNames(DriverName as string, DeviceName as string, OutputName as string, flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Sets the strings that identify the driver, device, and output port names for a printer.
Notes:

Returns true on success and false on failure.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the

Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

141.15.11 setPageRange(index as Integer, fromPage as Integer, toPage as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Sets a page range entry.
Notes: Index from 0 to 19.

141.15.12 Properties

141.15.13 Copies as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Contains the initial number of copies for the Copies edit control if DevMode is nil; otherwise, the Copies member of the DEVMODE contains the initial value.
Notes:

When PrintDlgEx returns, nCopies contains the actual number of copies the application must print. This value depends on whether the application or the printer driver is responsible for printing multiple copies. If the PD_USEDEVMODECOPIESANDCOLLATE flag is set in the Flags member, nCopies is always 1 on return, and the printer driver is responsible for printing multiple copies. If the flag is not set, the application is responsible for printing the number of copies specified by nCopies. For more information, see the description of the PD_USEDEVMODECOPIESANDCOLLATE flag.
(Read and Write property)

141.15.14 DC as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The device context or an information context, depending on whether the Flags member specifies the PD_RETURNDC or PC_RETURNIC flag.
Notes:

If neither flag is specified, the value of this member is undefined. If both flags are specified, PD_RETURNDC has priority.
(Read and Write property)

141.15.15 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The device mode object.
Notes:

On input, if an object is specified, the values in the corresponding DEVMODE structure are used to initialize the controls in the dialog box. On output, the dialog box sets DevMode to a new object that contains values specifying the user's selections. If the user's selections are not available, the dialog box sets DevMode to nil.
(Read and Write property)

141.15.16 ExclusionFlags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: A set of bit flags that can exclude items from the printer driver property pages in the Print property sheet.
Notes:

This value is used only if the PD_EXCLUSIONFLAGS flag is set in the Flags member. Exclusion flags should be used only if the item to be excluded will be included on either the General page or on an application-defined page in the Print property sheet. This member can specify the following flag.
PD_EXCL_COPIESANDCOLLATE: Excludes the Copies and Collate controls from the printer driver property pages in a Print property sheet. This flag should always be set when the application uses the default Copies and Collate controls provided by the lower portion of the General page of the Print property sheet.
(Read and Write property)

141.15.17 Flags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: A set of bit flags that you can use to initialize the Print property sheet.
Notes:

When the PrintDialog function returns, it sets these flags to indicate the user's input. This member can be one or more of the following values.

To ensure that PrintDialog returns the correct values in the Copies and Collate members of the DeviceMode, set PD_RETURNDC = TRUE and PD_USEDEVMODECOPIESANDCOLLATE = TRUE. In so doing, the Copies member of the PRINTDLG structure is always 1 and PD_COLLATE is always false.

To ensure that PrintDialog returns the correct values in nCopies and PD_COLLATE, set PD_RETURNDC = TRUE and PD_USEDEVMODECOPIESANDCOLLATE = FALSE. In so doing, dmCopies is always 1

and dmCollate is always FALSE.
Starting with Windows Vista, when you call PrintDlg or PrintDlgEx with PD_RETURNDC set to TRUE and PD_USEDEVMODECOPIESANDCOLLATE set to FALSE, the PrintDlg or PrintDlgEx function sets the number of copies in the nCopies member of the PRINTDLG structure, and it sets the number of copies in the structure represented by the hDC member of the PRINTDLG structure.
When making calls to GDI, you must ignore the value of nCopies, consider the value as 1, and use the returned hDC to avoid printing duplicate copies.
(Read and Write property)

141.15.18 FromPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The initial value for the starting page edit control.
Notes:

When PrintDialog returns, nFromPage is the starting page specified by the user. If the Pages radio button is selected when the user clicks the Okay button, PrintDialog sets the PD_PAGENUMS flag and does not return until the user enters a starting page value that is within the minimum to maximum page range.
If the input value for either FromPage or nToPage is outside the minimum/maximum range, PrintDlg returns an error only if the PD_PAGENUMS flag is specified; otherwise, it displays the dialog box but changes the out-of-range value to the minimum or maximum value.
This is only for PrintDialog, not for PrintDialogEx.
(Read and Write property)

141.15.19 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The last error code.
Notes:

Typical errors:
E_OUTOFMEMORY = & h8007000E // Insufficient memory.
E_INVALIDARG = & h80070057 // One or more arguments are invalid.
E_POINTER = & h80000005 // Invalid pointer.
E_HANDLE = & h80000006 // Invalid handle.
E_FAIL = & h80000008 // Unspecified error.
(Read and Write property)

141.15.20 MaxPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The maximum value for the page ranges specified in the Pages edit control.
Notes:

If the PD_NOPAGENUMS flag is specified, this value is not valid.
(Read and Write property)

141.15.21 MaxPageRanges as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The size, in array elements, of the PageRanges buffer.
Notes:

This value indicates the maximum number of page ranges that can be stored in the array. If the PD_NOPAGENUMS flag is specified, this value is not valid. If the PD_NOPAGENUMS flag is not specified, this value must be greater than zero.
The plugin supports up to 20 page ranges.
(Read and Write property)

141.15.22 MinPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The minimum value for the page ranges specified in the Pages edit control.
Notes:

If the PD_NOPAGENUMS flag is specified, this value is not valid.
(Read and Write property)

141.15.23 PageRanges as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: On input, set this member to the initial number of page ranges specified.
Notes:

When the PrintDialog function returns, PageRanges indicates the number of user-specified page ranges. If the PD_NOPAGENUMS flag is specified, this value is not valid. Use getPageRange to query page ranges or setPageRange to set them.
(Read and Write property)

141.15.24 Parent as Window

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The window that owns the dialog box.
Notes:

The window that owns the property sheet. This member must be a valid window handle; it cannot be nil.
(Read and Write property)

141.15.25 ResultAction as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: If the PrintDlgEx function returns S_OK (0), ResultAction contains the outcome of the dialog.
Notes:

If PrintDialog returns an error, this member should be ignored. The ResultAction member can be one of the following values:

PD_RESULT_APPLY	The user clicked the Apply button and later clicked the Cancel button. This indicates that the user wants to apply the changes made in the property sheet, but does not want to print yet. The PRINTDLGEX structure contains the information specified by the user at the time the Apply button was clicked.
PD_RESULT_CANCEL	The user clicked the Cancel button. The information in the PRINTDLGEX structure is unchanged.
PD_RESULT_PRINT	The user clicked the Print button. The PRINTDLGEX structure contains the information specified by the user.

(Read and Write property)

141.15.26 StartPanel as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The property page that is initially displayed.
Notes:

To display the General page, specify START_PAGE_GENERAL. For consistency, it is recommended that the property sheet always be started on the General page.
The plugin sets START_PAGE_GENERAL for default value.
(Read and Write property)

141.15.27 ToPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The initial value for the ending page edit control.
Notes:

When PrintDialog returns, ToPage is the ending page specified by the user. If the Pages radio button is selected when the use clicks the Okay button, PrintDialog sets the PD_PAGENUMS flag and does not return until the user enters an ending page value that is within the minimum to maximum page range.
This is only for PrintDialog, not for PrintDialogEx.
(Read and Write property)

141.15.28 Constants

141.15.29 PD_ALLPAGES = 0

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes:

The default flag that indicates that the All radio button is initially selected.
This flag is used as a placeholder to indicate that the PD_PAGENUMS, PD_SELECTION, and PD_CURRENTPAGE flags are not specified.

141.15.30 PD_COLLATE = & h00000010

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes:

If this flag is set, the Collate check box is selected.
If this flag is set when the PrintDlgEx function returns, the application must simulate collation of multiple copies. For more information, see the description of the PD_USEDEVMODECOPIESANDCOLLATE flag.
See PD_NOPAGENUMS.

141.15.31 PD_CURRENTPAGE = & h00400000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes: If this flag is set, the Current Page radio button is selected. If none of the PD_PAGENUMS,

PD_SELECTION, or PD_CURRENTPAGE flags is set, the All radio button is selected.

141.15.32 PD_DISABLEPRINTTOFILE = & h00080000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes: Disables the Print to File check box.

141.15.33 PD_EXCLUSIONFLAGS = & h01000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes:

Indicates that the ExclusionFlags member identifies items to be excluded from the printer driver property pages.
If this flag is not set, items will be excluded by default from the printer driver property pages. The exclusions prevent the duplication of items among the General page, any application-specified pages, and the printer driver pages.

141.15.34 PD_EXCL_COPIESANDCOLLATE = & h00008100

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes: Excludes the Copies and Collate controls from the printer driver property pages in a Print property sheet. This flag should always be set when the application uses the default Copies and Collate controls provided by the lower portion of the General page of the Print property sheet.

141.15.35 PD_HIDEPRINTTOFILE = & h00100000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes: Hides the Print to File check box.

141.15.36 PD_NOCURRENTPAGE = & h00800000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes: Disables the Current Page radio button.

141.15.37 PD_NONETWORKBUTTON = & h00200000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes: Hides and disables the Network button.

141.15.38 PD_NOPAGENUMS = 8

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes:

Disables the Pages radio button and the associated edit controls.
Also, it causes the Collate check box to appear in the dialog.

141.15.39 PD_NOSELECTION = 4

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes: Disables the Selection radio button.

141.15.40 PD_NOWARNING = & h00000080

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes: Prevents the warning message from being displayed when an error occurs.

141.15.41 PD_PAGENUMS = 2

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes: If this flag is set, the Pages radio button is selected. If none of the PD_PAGENUMS, PD_SELECTION, or PD_CURRENTPAGE flags is set, the All radio button is selected. If this flag is set when the PrintDialog function returns, the PageRanges member indicates the page ranges specified by the user.

141.15.42 PD_PRINTSETUP = & h00000040

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes: Causes the system to display the Print Setup dialog box rather than the Print dialog box.

141.15.43 PD_PRINTTOFILE = & h00000020

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes:

If this flag is set, the Print to File check box is selected.
If this flag is set when PrintDialog returns, the OutputName of DevNames contains the string "FILE:". When you call the StartDoc function to start the printing operation, specify this "FILE:" string in the Output parameter member of the DOCINFO structure. Specifying this string causes the print subsystem to query the user for the name of the output file.
StartDoc is available in our plugins through StartDocPrinter in WindowsAddPrintJobMBS class.

141.15.44 PD_RESULT_APPLY = 2

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the ResultAction value constants.
Notes: The user clicked the Apply button and later clicked the Cancel button. This indicates that the user wants to apply the changes made in the property sheet, but does not yet want to print. The WindowsPrintDialogMBS contains the information specified by the user at the time the Apply button was clicked.

141.15.45 PD_RESULT_CANCEL = 0

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the ResultAction value constants.
Notes: The user clicked the Cancel button. The information in the WindowsPrintDialogMBS is unchanged.

141.15.46 PD_RESULT_PRINT = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the ResultAction value constants.
Notes: The user clicked the Print button. The WindowsPrintDialogMBS contains the information specified by the user.

141.15.47 PD_RETURNDC = & h00000100

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes:

Causes PrintDialog to return a device context matching the selections the user made in the property sheet. The device context is returned in DC property.

141.15.48 PD_RETURNDEFAULT = & h00000400

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes:

If this flag is set, the PrintDialog function does not display the property sheet.
Instead, it sets the DevNames and DevMode members to the default for the system default printer. Both DevNames and DevMode must be empty, or PrintDialog returns an error.

141.15.49 PD_RETURNIC = & h00000200

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes:

Similar to the PD_RETURNDC flag, except this flag returns an information context rather than a device context.
If neither PD_RETURNDC nor PD_RETURNIC is specified, hDC is undefined on output.

141.15.50 PD_SELECTION = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes:

If this flag is set, the Selection radio button is selected.
If none of the PD_PAGENUMS, PD_SELECTION, or PD_CURRENTPAGE flags is set, the All radio button is selected.

141.15.51 PD_SHOWHELP = & h00000800

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes: Causes the dialog box to display the Help button.

141.15.52 PD_USEDEVMODECOPIES = & h00040000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes: Same as PD_USEDEVMODECOPIESANDCOLLATE.

141.15.53 PD_USEDEVMODECOPIESANDCOLLATE = & h00040000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the constants for the flags property.
Notes:

This flag indicates whether your application supports multiple copies and collation.
Set this flag on input to indicate that your application does not support multiple copies and collation. In this case, the Copies member of the class always returns 1, and PD_COLLATE is never set in the Flags member.
If this flag is not set, the application is responsible for printing and collating multiple copies. In this case, the Copies property indicates the number of copies the user wants to print, and the PD_COLLATE flag in the Flags member indicates whether the user wants collation.
Regardless of whether this flag is set, an application can determine from Copies and PD_COLLATE how many copies to render and whether to print them collated.
If this flag is set and the printer driver does not support multiple copies, the Copies edit control is disabled. Similarly, if this flag is set and the printer driver does not support collation, the Collate check box is disabled.

The Copies and Collate members of the WindowsDeviceModeMBS object contain the copies and collate information used by the printer driver. If this flag is set and the printer driver supports multiple copies, the Copies member indicates the number of copies requested by the user. If this flag is set and the printer driver supports collation, the Collate member of the WindowsDeviceModeMBS object indicates whether the user wants collation. If this flag is not set, the dmCopies member always returns 1, and the Collate member is always zero.

In Windows versions prior to Windows Vista, if this flag is not set by the calling application and the dmCopies member of the WindowsDeviceModeMBS object is greater than 1, use that value for the number of copies; otherwise, use the value of the Copies member of this class.

141.15.54 START_PANEL_GENERAL = & hffffffff

MBS Win Plugin, Plugin Version: 12.1.

Function: Special value for StartPanel property to select general panel.

141.16 class WindowsPrinterInfoMBS

141.16.1 class WindowsPrinterInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for details on printer information.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName
next
```

Notes:

This class wraps the PRINTER_INFO_2 structure on windows which you find documented here:
http://msdn.microsoft.com/en-us/library/dd162845(VS.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

141.16.2 Blog Entries

- Print to Printer in Xojo on Windows
- MBS Xojo / Real Studio Plugins, version 15.2pr6
- MBS Real Studio Plugins, version 12.1pr6

141.16.3 Blog Entries

- Print to Printer in Xojo on Windows
- MBS Xojo / Real Studio Plugins, version 15.2pr6
- MBS Real Studio Plugins, version 12.1pr6

141.16.4 Methods

141.16.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

141.16.6 LocalPrinters as WindowsPrinterInfoMBS()

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the printers as an array.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName
next
```

Notes: On any error the array will be empty.

141.16.7 OpenPrinter(admin as boolean = false) as WindowsPrinterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens the printer so you can operate on it.
Example:

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
MsgBox p.PrinterName
```

Notes:

Admin: whether you want to get permissions to administrate.
Returns nil on any error.

141.16.8 Printers(flags as Integer, Name as Variant = nil) as WindowsPrinterInfoMBS()

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Printers function enumerates available printers, print servers, domains, or print providers.
Notes:

If you call this with flags = kPrinterFlagsLocal + kPrinterFlagsConnections and name = nil, you get same as LocalPrinters function.

see also

https://msdn.microsoft.com/en-us/library/windows/desktop/dd162692(v=vs.85).aspx

141.16.9 Properties

141.16.10 AttributeFlags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the printer attributes.
Notes:

This member can be one of the following values:

PRINTER_ATTRIBUTE_QUEUED	& h00000001	
PRINTER_ATTRIBUTE_DIRECT	& h00000002	
PRINTER_ATTRIBUTE_DEFAULT	& h00000004	(Windows 95)
PRINTER_ATTRIBUTE_SHARED	& h00000008	
PRINTER_ATTRIBUTE_NETWORK	& h00000010	
PRINTER_ATTRIBUTE_HIDDEN	& h00000020	
PRINTER_ATTRIBUTE_LOCAL	& h00000040	
PRINTER_ATTRIBUTE_ENABLE_DEVQ	& h00000080	
PRINTER_ATTRIBUTE_KEEPPRINTEDJOBS	& h00000100	
PRINTER_ATTRIBUTE_DO_COMPLETE_FIRST	& h00000200	
PRINTER_ATTRIBUTE_WORK_OFFLINE	& h00000400	(Windows 95)
PRINTER_ATTRIBUTE_ENABLE_BIDI	& h00000800	(Windows 95)
PRINTER_ATTRIBUTE_RAW_ONLY	& h00001000	
PRINTER_ATTRIBUTE_PUBLISHED	& h00002000	(Windows 2000) Indicates whether the printer is published in the directory service.

Renamed Attributes parameter to AttributeFlags in plugin version 8.2.
(Read and Write property)

141.16.11 AveragePPM as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the average number of pages per minute that have been printed on the printer.
Notes: (Read and Write property)

141.16.12 Comment as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that provides a brief description of the printer.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.Comment
next
```

Notes: (Read and Write property)

141.16.13 CountJobs as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the number of print jobs that have been queued for the printer.
Notes: (Read and Write property)

141.16.14 Datatype as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the data type used to record the print job.
Notes: (Read and Write property)

141.16.15 DefaultPriority as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the default priority value assigned to each print job.
Notes: (Read and Write property)

141.16.16 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WindowsDeviceModeMBS object that defines default printer data such as the paper orientation and the resolution.
Notes: (Read and Write property)

141.16.17 DriverName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the name of the printer driver.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.DriverName
next
```

Notes: (Read and Write property)

141.16.18 Location as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the physical location of the printer.
Notes:

for example, "Bldg. 38, Room 1164".
(Read and Write property)

141.16.19 Parameters as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the default print-processor parameters.
Notes: (Read and Write property)

141.16.20 PortName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that identifies the port(s) used to transmit data to the printer.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.PortName
```

next

Notes:

If a printer is connected to more than one port, the names of each port must be separated by commas (for example, "LPT1:,LPT2:,LPT3:").
(Read and Write property)

141.16.21 PrinterName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the name of the printer.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName
next
```

Notes: (Read and Write property)

141.16.22 PrintProcessor as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the name of the print processor used by the printer.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrintProcessor
next
```

Notes: (Read and Write property)

141.16.23 Priority as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies a priority value that the spooler uses to route print jobs.
Notes:

Possible values:

NO_PRIORITY	0
MAX_PRIORITY	99
MIN_PRIORITY	1
DEF_PRIORITY	1

(Read and Write property)

141.16.24 SeparatorPageFile as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the name of the file used to create the separator page.
Notes:

This page is used to separate print jobs sent to the printer.
(Read and Write property)

141.16.25 ServerName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string identifying the server that controls the printer.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.ServerName
next
```

Notes:

If this string is "", the printer is controlled locally.
(Read and Write property)

141.16.26 ShareName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that identifies the sharepoint for the printer.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.ShareName
next
```

Notes:

This string is used only if the PRINTER_ATTRIBUTE_SHARED constant was set for the Attributes member.
(Read and Write property)

141.16.27 StartTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the earliest time at which the printer will print a job.
Notes:

This value is expressed as minutes elapsed since 12:00 A.M. GMT (Greenwich Mean Time).
(Read and Write property)

141.16.28 Status as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the printer status.
Notes:

This member can be one of the following values:

Windows 95: The PRINTER_STATUS_PAGE_PUNT value specifies that the page is being "punted" (that is, not printed) because it is too complex for the printer to print.
(Read and Write property)

PRINTER_STATUS_PAUSED	& h00000001
PRINTER_STATUS_ERROR	& h00000002
PRINTER_STATUS_PENDING_DELETION	& h00000004
PRINTER_STATUS_PAPER_JAM	& h00000008
PRINTER_STATUS_PAPER_OUT	& h00000010
PRINTER_STATUS_MANUAL_FEED	& h00000020
PRINTER_STATUS_PAPER_PROBLEM	& h00000040
PRINTER_STATUS_OFFLINE	& h00000080
PRINTER_STATUS_IO_ACTIVE	& h00000100
PRINTER_STATUS_BUSY	& h00000200
PRINTER_STATUS_PRINTING	& h00000400
PRINTER_STATUS_OUTPUT_BIN_FULL	& h00000800
PRINTER_STATUS_NOT_AVAILABLE	& h00001000
PRINTER_STATUS_WAITING	& h00002000
PRINTER_STATUS_PROCESSING	& h00004000
PRINTER_STATUS_INITIALIZING	& h00008000
PRINTER_STATUS_WARMING_UP	& h00010000
PRINTER_STATUS_TONER_LOW	& h00020000
PRINTER_STATUS_NO_TONER	& h00040000
PRINTER_STATUS_PAGE_PUNT	& h00080000
PRINTER_STATUS_USER_INTERVENTION	& h00100000
PRINTER_STATUS_OUT_OF_MEMORY	& h00200000
PRINTER_STATUS_DOOR_OPEN	& h00400000
PRINTER_STATUS_SERVER_UNKNOWN	& h00800000
PRINTER_STATUS_POWER_SAVE	& h01000000

141.16.29 UntilTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the latest time at which the printer will print a job.
Notes:

This value is expressed as minutes elapsed since 12:00 A.M. GMT (Greenwich Mean Time).
Status
(Read and Write property)

141.16.30 Constants

141.16.31 kPrinterFlagsConnections = 4

MBS Win Plugin, Plugin Version: 15.2.

Function: One of the flags for Printer function.
Notes: The function enumerates the list of printers to which the user has made previous connections.

141.16.32 kPrinterFlagsDefault = 1

MBS Win Plugin, Plugin Version: 15.2.

Function: One of the flags for Printer function.
Notes: Default printer.

141.16.33 kPrinterFlagsLocal = 2

MBS Win Plugin, Plugin Version: 15.2.

Function: One of the flags for Printer function.
Notes: If the kPrinterFlagsName flag is not also passed, the function ignores the Name parameter, and enumerates the locally installed printers. If kPrinterFlagsName is also passed, the function enumerates the local printers on Name.

141.16.34 kPrinterFlagsName = 8

MBS Win Plugin, Plugin Version: 15.2.

Function: One of the flags for Printer function.
Notes: The function enumerates the printer identified by Name. This can be a server, a domain, or a print provider. If Name is nil, the function enumerates available print providers.

141.16.35 kPrinterFlagsNetwork = 64

MBS Win Plugin, Plugin Version: 15.2.

Function: One of the flags for Printer function.
Notes: Network printers?

141.16.36 kPrinterFlagsRemote = 16

MBS Win Plugin, Plugin Version: 15.2.

Function: One of the flags for Printer function.
Notes: Remote (non Local) printers?

141.16.37 kPrinterFlagsShared = 32

MBS Win Plugin, Plugin Version: 15.2.

Function: One of the flags for Printer function.
Notes: The function enumerates printers that have the shared attribute. Cannot be used in isolation; use an OR operation to combine with another constants.

141.17 class WindowsPrinterJobMBS

141.17.1 class WindowsPrinterJobMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for Windows print job information.

141.17.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr4

141.17.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr4

141.17.4 Properties

141.17.5 Datatype as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The type of data used to record the print job.
Notes: (Read and Write property)

141.17.6 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device-initialization and environment data for the printer driver.
Notes: (Read and Write property)

141.17.7 Document as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the user who owns the print job.
Notes: (Read and Write property)

141.17.8 DriverName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the printer driver that should be used to process the print job.
Notes: (Read and Write property)

141.17.9 JobID as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A job identifier value.
Notes: (Read and Write property)

141.17.10 MachineName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the machine that created the print job.
Notes: (Read and Write property)

141.17.11 NotifyName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the user who should be notified when the job has been printed or when an error occurs while printing the job.
Notes: (Read and Write property)

141.17.12 PagesPrinted as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of pages that have printed.
Notes:

This value may be zero if the print job does not contain page delimiting information.
(Read and Write property)

141.17.13 Parameters as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Print-processor parameters.
Notes: (Read and Write property)

141.17.14 Position as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The job's position in the print queue.
Notes: (Read and Write property)

141.17.15 PrinterName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the printer for which the job is spooled.
Notes: (Read and Write property)

141.17.16 PrintProcessor as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the print processor that should be used to print the job.
Notes: (Read and Write property)

141.17.17 Priority as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The job priority.
Notes:

This member can be one of the following values or in the range between 1 through 99 (kPriorityMin through kPriorityMax).
(Read and Write property)

141.17.18 Size as Int64

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size, in bytes, of the job.
Notes: (Read and Write property)

141.17.19 StartTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The earliest time that the job can be printed.
Notes: (Read and Write property)

141.17.20 Status as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The job status.
Notes:

Check kJobStatus* constants for possible values.
(Read and Write property)

141.17.21 StatusString as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The status of the print job.
Notes:

This member should be checked prior to Status and, if StatusString is "", the status is defined by the contents of the Status member.
(Read and Write property)

141.17.22 Submitted as Date

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time when the job was submitted.
Notes:

This time value is in Universal Time Coordinate (UTC) format.
(Read and Write property)

141.17.23 Time as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The total time, in milliseconds, that has elapsed since the job began printing.
Notes: (Read and Write property)

141.17.24 TotalPages as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of pages required for the job.
Notes:

This value may be zero if the print job does not contain page delimiting information.
(Read and Write property)

141.17.25 UntilTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The latest time that the job can be printed.
Notes: (Read and Write property)

141.17.26 UserName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the user who owns the print job.
Notes: (Read and Write property)

141.17.27 Constants

141.17.28 kJobStatusBlockedDeviceQueue = & h200

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: The driver cannot print the job.

141.17.29 kJobStatusComplete = & h1000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes:

The job is sent to the printer, but may not be printed yet.
(Windows XP and later)

141.17.30 kJobStatusDeleted = & h100

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: Job has been deleted.

141.17.31 kJobStatusDeleting = 4

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: Job is being deleted.

141.17.32 kJobStatusError = 2

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: An error is associated with the job.

141.17.33 kJobStatusOffline = & h20

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: Printer is offline.

141.17.34 kJobStatusPaperOut = & h40

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: Printer is out of paper.

141.17.35 kJobStatusPaused = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: Job is paused.

141.17.36 kJobStatusPrinted = & h80

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: Job has printed.

141.17.37 kJobStatusPrinting = & h10

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: Job is printing.

141.17.38 kJobStatusRenderingLocally = & h4000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: Rendering.

141.17.39 kJobStatusRestart = & h800

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: Job has been restarted.

141.17.40 kJobStatusRetained = & h2000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes:

The job has been retained in the print queue following printing.
(Windows XP and later)

141.17.41 kJobStatusSpooling = 8

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: Job is spooling.

141.17.42 kJobStatusUserIntervention = & h400

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the job status constants.
Notes: Printer has an error that requires the user to do something.

141.17.43 kPriorityDefault = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the priority constants.
Notes: Default priority.

141.17.44 kPriorityMax = 99

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the priority constants.
Notes: Maximum priority.

141.17.45 kPriorityMin = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the priority constants.
Notes: Minimum priority.

141.17.46 kPriorityNo = 0

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the priority constants.
Notes: No priority.

141.18 class WindowsPrinterMBS

141.18.1 class WindowsPrinterMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for an open connection to a windows printer.
Notes:

Objects of this class can operate on printers.
Some operations need administrative permissions. If you don't have them, lasterror is set to 5.

141.18.4 Methods

141.18.5 AddForm(form as WindowsPageFormatMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The AddForm function adds a form to the list of available forms that can be selected for the specified printer.
Example:

```
// query default printer
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

dim form as new WindowsPageFormatMBS

form.Mode = 1
form.Name = "MyTest"
form.DisplayName = "MyTest"
form.Flags = 0
form.SizeHeight = 100000
form.SizeWidth = 100000
form.ImageableAreaLeft = 0
form.ImageableAreaTop = 0
form.ImageableAreaRight = 100000
form.ImageableAreaBottom = 100000

if w.AddForm(form) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

Form.Mode gives level of the data. Must be either 1 (old version) or 2 (newer version).

Form: The form details.

Returns true if the function succeeds and false if the function fails.

Note: This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

An application can determine which forms are available for a printer by calling the GetPrinterFormats function.
If form points to a Mode 2 form, then AddForm will fail if either a form with the specified name already exists or the Keyword value already exists.

141.18.6 AdvancedDocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, parent as window = nil) as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Displays a printer-configuration dialog box for the specified printer, allowing the user to configure that printer.
Notes:

This function is a special case of the DocumentProperties function.

parent: The parent window of the printer-configuration dialog box.

OutputDevMode: The device mode structure that will contain the configuration data specified by the user.
InputDevMode: The device mode structure that contains the configuration data used to initialize the controls of the printer-configuration dialog box.

If the DocumentProperties function with these parameters is successful, the return value of AdvancedDocumentProperties is 1. Otherwise, the return value is zero.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

This function can only display the printer-configuration dialog box so a user can configure it. For more control, use DocumentProperties.

141.18.7 AllJobs as WindowsPrinterJobMBS()

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all jobs for the printer.
Example:

```
dim w as new WindowsPrinterMBS( WindowsPrinterMBS.GetDefaultPrinter)
dim jobs() as WindowsPrinterJobMBS = w.AllJobs
MsgBox str(UBound(jobs)+1)+" jobs"
```

Notes: PrinterName property must be set, so the function knows which printer.

141.18.8 CanPrinterPassThroughPostScript as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this printer can pass through postscript data.
Notes:

Returns true for Postscript printers and false for other printers.

For more information on this function, visit this website:
http://msdn.microsoft.com/en-us/library/dd162831(v=VS.85).aspx

141.18.9 ChangePrinterSettings(value as WindowsDeviceModeMBS, Mode as Integer=2) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Changes printer settings.
Notes:

This function opens the printer, queries current settings using GetPrinter, applies all your changes, calls DocumentProperties to verify those settings are valid for the printer and uses SetPrinter to apply the changes.
To indicate which fiels in the WindowsDeviceModeMBS object are set by you, use the fields integer value with a combination of the DM_* constants.
Returns true on success and false on failure.

Mode can be 2 (general printer information), 8 (global settings) or 9 (user settings).

For more information on the GetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd144911(VS.85).aspx

For more information on the SetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd145082(VS.85).aspx

For more information on the DocumentProperties function, check this website:

http://msdn.microsoft.com/en-us/library/dd183576(VS.85).aspx

Even if you change printer settings, other parts of the application, e.g. Xojo framework may not care.

141.18.10 ConfigurePort(name as string = """, parent as window = nil, PortName as string = """) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Displays the port-configuration dialog box for a port on the specified server.
Notes:

Name: The name of the server on which the specified port exists. If this parameter is """, the port is local.
parent: The parent window of the port-configuration dialog box.
PortName: The name of the port to be configured.

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

Before calling the ConfigurePort function, an application should call the EnumPorts function to determine valid port names.

141.18.11 ConnectToPrinterDialog(parent as window = nil) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box that lets users browse and connect to printers on a network.
Notes:

If the user selects a printer, the function attempts to create a connection to it; if a suitable driver is not installed on the server, the user is given the option of creating a printer locally.

parent: Specifies the parent window of the dialog box.

If the function succeeds and the user selects a printer, this object points to the new printer and return value is true.
If the function fails, or the user cancels the dialog box without selecting a printer, the return value is true.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

The ConnectToPrinterDialog function attempts to create a connection to the selected printer. However, if the server on which the printer resides does not have a suitable driver installed, the function offers the user the option of creating a printer locally.

An application should call DeletePrinter to delete a local printer. An application should call DeletePrinterConnection to delete a connection to a printer.

141.18.12 Constructor(PrinterName as string, admin as boolean = false)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens the printer so you can operate on it.
Notes:

Admin: whether you want to get permissions to administrate.
Raises exception if printer can't be opened. Use OpenPrinter function to avoid exception.

141.18.13 DeleteForm(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DeleteForm function removes a form name from the list of supported forms.
Notes:

name: The form name to be removed.

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

DeleteForm can only delete form names that were added by using the AddForm function.

141.18.14 DeleteJob(JobID as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Delete the print job.
Notes: Returns true on success and false on failure.

141.18.15 DeletePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Deletes the specified printer object.
Notes:

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

If there are print jobs remaining to be processed for the specified printer, DeletePrinter marks the printer for pending deletion, and then deletes it when all the print jobs have been printed. No print jobs can be added to a printer that is marked for pending deletion.
A printer marked for pending deletion cannot be held, but its print jobs can be held, resumed, and restarted. If the printer is held and there are jobs for the printer, DeletePrinter fails with ERROR_ACCESS_DENIED.

Lasterror is set.

141.18.16 DeletePrinterConnection(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Deletes a connection to a printer that was established by a call to AddPrinterConnection or ConnectToPrinterDialog.
Notes:

name: The name of the printer connection to delete.
Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a

thread that manages interaction with the user interface could make the application appear to be unresponsive.

The DeletePrinterConnection function does not delete any printer driver files that were copied to the server to which the printer is attached.

141.18.17 DocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, Prompt as boolean = false, parent as window = nil) as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The DocumentProperties function retrieves or modifies printer initialization information or displays a printer-configuration property sheet for the specified printer.
Example:

```
// get default printer
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(WindowsPrinterMBS.GetDefaultPrinter)

// ask for printer settings
dim s as new WindowsDeviceModeMBS
dim n as Integer = p.DocumentProperties(nil, s, true, window1)
```

Notes:

Printername property must be set.

parent: The parent window of the printer-configuration property sheet. Can be nil.
Prompt: Whether to show dialog.

OutputDevMode: Devmode variable that receives the printer configuration data specified by the user.
InputDevMode: Optional input data which the operating system uses to initialize the property sheet controls.
Prompt: Whether the function presents the printer driver's Print Setup property sheet and then changes the settings in the printer's DeviceMode data structure to those values specified by the user.

If you provide object for InputDevMode, the function will read settings from there. If you don't pass an object (nil) or you pass incomplete settings, default settings are used to complete.
If prompt is true, the dialog is shown and user can change settings.
On the end, the current new data is stored in OutputDevMode where you can find it.

If the function displays the property sheet, the return value is either IDOK (1) or IDCANCEL (2), depending on which button the user selects.

If the function does not display the property sheet and is successful, the return value is IDOK (1).
If the function fails, the return value is less than zero.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation-factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd183576(v=vs.85).aspx

141.18.18 GetDefaultPrinter as string

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetDefaultPrinter function retrieves the printer name of the default printer for the current user on the local computer.
Example:

msgbox WindowsPrinterMBS.GetDefaultPrinter

Notes:

For more details on the GetDefaultPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd144876(VS.85).aspx

Returns an empty string on any error.

141.18.19 GetForm(name as string) as WindowsPageFormatMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetForm function retrieves information about a specified form.
Example:

```
// query default printer
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

// get a page format
dim f as WindowsPageFormatMBS = w.GetForm("Letter")

// and show details
```

```
MsgBox f.DisplayName+" "+str(F.SizeWidth/10000,"0.0")+" x "+str(f.SizeHeight/10000,"0.0")
```

Notes:

name: The string that specifies the name of the form. To get the names of the forms supported by the printer, call the GetPrinterFormats function.

On failure returns nil, on success the form details.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

If the caller is remote, and the Form Mode is 2, the StringType value of the returned WindowsPageFormatMBS will always be STRING_LANGPAIR.

141.18.20 GetJob(JobID as Integer) as WindowsPrinterJobMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Query job with given ID from printer.
Notes:

Returns nil on any error.
PrinterName property must be set, so the function knows which printer.

141.18.21 GetPrinterFormats as WindowsPageFormatMBS()

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the page formats supported by this printer.
Notes:

On failure the array is empty.

This function uses the EnumForms for which you can find more information on this website:
http://msdn.microsoft.com/en-us/library/dd162624(v=VS.85).aspx

141.18.22 GetPrinterSettings(Mode as Integer=2) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries printer settings.
Example:

```
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)
dim dm as WindowsDeviceModeMBS = w.GetPrinterSettings
```

Notes:

Mode can be 2 (general printer information), 8 (global settings) or 9 (user settings).

For more information on the GetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd144911(VS.85).aspx

141.18.23 GetPrinterTechnology as string

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the printer technology.
Example:

```
dim w as new WindowsPrinterMBS("my printer")
msgbox w.GetPrinterTechnology
```

Notes:

Opens the printer, queries the print technology and returns that string.
For postscript printers the string should contain the word "postscript".
Returns an empty string on any error.

For details on this function, check the following website:
http://msdn.microsoft.com/en-us/library/dd144931(VS.85).aspx

141.18.24 OpenPrinter(PrinterName as string, admin as boolean = false) as WindowsPrinterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens the printer so you can operate on it.

Notes:

Admin: whether you want to get permissions to administrate.
Returns nil on any error.

141.18.25 PauseJob(JobID as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pause the print job.
Notes: Returns true on success and false on failure.

141.18.26 PausePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pauses the printer.
Example:

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, true)

if p.PausePrinter then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage+" "+str(p.Lasterror)
end if
```

Notes:

Requires application to be run by administrator and printer opened with admin option. Else you get error 5.
Returns true on success and false on failure.

141.18.27 PrinterProperties(parent as window = nil) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The PrinterProperties function displays a printer-properties property sheet for the specified printer.
Example:

```
// get default printer
```

```
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

// open properties dialog
if w.PrinterProperties(window1) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

Returns true on success (dialog shows) or false on error.
Parent is the parent window for the new dialog. Can be nil.

141.18.28 PurgePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Purges the printer.
Example:

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, true)

if p.PurgePrinter then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage+" "+str(p.Lasterror)
end if
```

Notes:

Requires application to be run by administrator and printer opened with admin option. Else you get error 5.
Returns true on success and false on failure.

141.18.29 ResumeJob(JobID as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resume a paused print job.
Notes: Returns true on success and false on failure.

141.18.30 ResumePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resumes the printer.
Example:

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, true)

if p.ResumePrinter then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage+" "+str(p.Lasterror)
end if
```

Notes:

Requires application to be run by administrator and printer opened with admin option. Else you get error 5.
Returns true on success and false on failure.

141.18.31 SetDefaultPrinter(PrinterName as string) as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Changes the default printer to the given one.
Example:

```
call WindowsPrinterMBS.SetDefaultPrinter("My Printer")
```

Notes:

Returns a Windows error code. (0 for success)

For details on the Windows SetDefaultPrinter method, check here:
http://msdn.microsoft.com/en-us/library/dd162971(VS.85).aspx

141.18.32 SetForm(name as string, form as WindowsPageFormatMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetForm function sets the form information for the specified printer.

Notes:

name: The string that specifies the form name for which the form information is set.
Form: The form data. Mode property must be either 1 (older format) or 2 (newer format).

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

SetForm can be called multiple times for an existing WindowsPageFormatMBS, each call adding additional pairs of DisplayName and LangId values. All languages versions of the form will get the Size and ImageableArea values of the WindowsPageFormatMBS in the most recent call to SetForm.
If the caller is remote and the form's Mode is 2, the StringType value of the WindowsPageFormatMBS cannot be STRING_MUIDLL.

141.18.33 SetJob(JobID as Integer, job as WindowsPrinterJobMBS) as boolean

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets job parameters.
Example:

```
dim w as new WindowsPrinterMBS( WindowsPrinterMBS.GetDefaultPrinter, true)
dim jobs() as WindowsPrinterJobMBS = w.AllJobs
MsgBox str(UBound(jobs)+1)+" jobs"

// pick first
dim j as WindowsPrinterJobMBS = jobs(0)
j.Document = "Hello World"

// write back values
call w.SetJob(j.JobID, j)

// error?
if w.Lasterror<>0 then
MsgBox w.LasterrorMessage
end if
```

Notes:

see also

http://msdn.microsoft.com/en-us/library/windows/desktop/dd162978(v=vs.85).aspx

141.18.34 SetPrinterSettings(value as WindowsDeviceModeMBS, Mode as Integer=2) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets printer settings.
Example:

```
// switch default printer to A5 landscape paper

dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, false)
dim d as WindowsDeviceModeMBS = p.GetPrinterSettings(9)

if d = nil then
MsgBox p.LasterrorMessage
else
d.PaperSize = d.DMPAPER_A5
d.Fields = BitwiseOr(d.Fields, d.DM_PAPERSIZE)
d.Orientation = d.DMORIENT_LANDSCAPE
d.Fields = BitwiseOr(d.Fields, d.DM_ORIENTATION)

if p.SetPrinterSettings(d, 9) then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage
end if
end if
```

Notes:

Mode can be 2 (general printer information), 8 (global settings) or 9 (user settings).

For more information on the GetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd145082(v=vs.85).aspx

141.18.35 Properties

141.18.36 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle to the printer.
Notes: (Read and Write property)

141.18.37 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last windows error code.
Notes: (Read and Write property)

141.18.38 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text message for the last error code.
Notes: (Read and Write property)

141.18.39 PrinterName as String

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the open printer in this object.
Example:

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
MsgBox p.PrinterName
```

Notes: (Read and Write property)

Chapter 142

Process

142.1 class Application

142.1.1 class Application

Platforms: macOS, Windows, Targets: Desktop only.

Function: Extends the Application class inside Xojo.

142.1.2 Methods

142.1.3 ApplicationCreatorCodeMBS as string

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the Creator Code of the application.
Example:

msgbox "Hi. This application has the creator code "+app.ApplicationCreatorCodeMBS

Deprecated: This item is deprecated and should no longer be used. **Notes:**

Only useful on Mac OS.
If you run your app inside the Xojo IDE it will return "RBv2" which is Xojo's Creator code sind Xojo 2.0.

142.1.4 Blog Entries

- MBS Xojo Plugins, version 19.4pr1

142.1.5 ApplicationFileMBS as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Gives a folderitem to the applications file.
Example:

msgbox "Hi. The file of this application is named "+app.ApplicationFileMBS.name

Deprecated: This item is deprecated and should no longer be used. You can use ExecutableFile instead.
Notes:

Inside Xojo points to the Xojo application.

This item may go in the future. Please use app.executablefile in new Xojo versions.

142.1.6 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Xojo Plugins, version 19.4pr1

142.1.7 Xojo Developer Magazine

- 3.1, page 42: Register Document File Types, Fill and Query the Registry by Christian Schmitz

142.1.8 ApplicationNameMBS as string

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the name of the application.
Example:

msgbox "Hi. This application is named "+app.ApplicationNameMBS

Notes: This may not be the exact same name than the filename.

142.1.9 ArgumentsMBS as String()

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries arguments of process.
Notes:

Returns nil in case of any error (low memory).
First entry in result is path to current app.
Other entries are parameters, without any quotes.

142.1.10 BundleFolderMBS as folderitem

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns a folderitem to the bundle's mail folder.

142.1.11 Blog Entries

- MBS Real Studio Plugins, version 13.0pr9

142.1.12 BundleLocalizedStringMBS(key as string) as string

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the localized string for the given key from the default table.
Notes: A short version for BundleLocalizedString which uses the default table.
See also:

- 142.1.13 BundleLocalizedStringMBS(key as string,fromtable as string) as string 21863

142.1.13 BundleLocalizedStringMBS(key as string,fromtable as string) as string

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the localized string for the given key and table.
Example:

```
// You may make yourself a function to look up for the key and return
// This function was not tested in a real application. May contain a bug.

function Localize(key as string, default as string) as string
dim s as string
```

```
s=app.BundleLocalizedStringMBS(key)
if s="" then
s=default // For Mac OS Classic and Windows
elseif s=key then // returns key for not localized items
msgbox "For developer: the key """+key+""" was not localized for any language."
end if

return s
end sub

// use like this
FileOpen.text=Localize("FileOpenLabel", "Open...")
```

Notes:

The table parameter is optional to specify which ".strings"-file to use.
without table or table="" the "Localizable.strings" file is used by Mac OS X.

Returns "" (empty string) on Mac OS Classic or Windows.
See also:

- 142.1.12 BundleLocalizedStringMBS(key as string) as string 21863

142.1.14 BundleResourceFolderItemLocalizedMBS(ResourceName as string, ResourceType as string, SubDirectory as string) as folderitem

MBS Util Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop only.

Function: Searches inside the application bundle for a file.
Example:

```
dim f as FolderItem
f=app.BundleResourceFolderItemLocalizedMBS("logo","jpg","")
MsgBox f.NativePath
```

Notes:

ResourceName is the filename of the resource file.
ResourceType is the file extension.
SubDirectory is the name of the directory.
This function will take care for localization folders.

142.1.15 BundleResourceFolderMBS as folderitem

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns a folderitem to the resource file inside the bundle.
Example:

```
Dim f As FolderItem = App.BundleResourceFolderMBS

If f = Nil Then
MsgBox "Failed?"
Else
MsgBox f.NativePath
End If
```

142.1.16 Blog Entries

- MBS Xojo Plugins, version 21.4pr2
- MBS Real Studio Plugins, version 13.0pr9

142.1.17 HideMeMBS as boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Hides the current application.
Notes:

Returns true if the current application was hidden.
Returns false on Carbon running on Mac OS 9 or Windows.

142.1.18 HideOthersMBS as boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Hides all applications except the current one.
Notes:

Returns true if the other applications were hidden.
Returns false on Carbon running on Mac OS 9 of Windows.

142.1.19 LaunchTimeMBS as Double

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the the ticks value at launch time.
Example:

```
dim d as date

d=new date
d.totalSeconds=d.totalSeconds-(ticks-app.launchTimeMBS)/60

msgbox d.longdate+" "+d.longtime
```

Notes:

This value must be converted to the secondsvalue like in the example.
-1 on Windows.
For Mac OS X see the DarwinResourceUsageMBS class.

142.1.20 MainBundleMBS as CFBundleMBS

MBS MacCF Plugin, Platform: macOS, Targets: Desktop only.

Function: If your application is a bundle, this function returns your own bundle.
Notes:

Returns nil on any error.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

142.1.21 NSApplicationMBS as NSApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns the shared NSApplication object.
Notes:

This method gives easy access to the NSApplicationMBS class.

The plugin makes sure that there is only one application object by returning the same object each time.
Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication

and Application class.

142.1.22 OverlayApplicationDockTileImageMBS(pic as CGImageMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop only.

Function: Adds a picture on top of the application dock title.
Example:

```
static n as Integer // global property
dim p as picture
dim m as picture
dim g as graphics
dim s as string
dim w,h,x as Integer

n=n+1 // add one
s=str(n)
m=New Picture(128,128,32)
p=New Picture(128,128,32)

g=p.graphics
g.textsize=24
w=g.stringwidth(s)
h=g.stringheight(s,0)
x=125-w-10
g.foreColor=rgb(255,0,0)
g.fillRoundRect x,10,10+w,10+h,20,20
g.foreColor=rgb(0,0,0)
g.drawstring s,x+5,15+g.textascent

g=m.graphics
g.foreColor=rgb(0,0,0)
g.fillRoundRect x,10,10+w,10+h,20,20

if app.OverlayApplicationDockTileImageMBS(CGCreateImageMBS(p,m)) then
end if
```

Notes:

Changed in MBS Plugin 2.7 to use CGImages directly.
Added support for 64-bit in plugin version 16.0.

142.1.23 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.5pr2

142.1.24 ProcessTimeMBS as Double

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the current CPU time for the process.
Example:

```
msgbox "I got "+format(app.ProcessTimeMBS/100,"0.00")+" seconds CPU time till now."
```

Notes:

On Mac OS X, the OS counts how much CPU time in given to the current process.
On Mac OS 9 you can get this information for any process using the ProcessMBS class.
Returns -1 in case of an error.

You can do this function yourself if you like:

```
dim s as SoftDeclareMBS

s=new SoftDeclareMBS

if s.LoadLibrary("System.Framework") then
if s.LoadFunction("clock") then
if s.Call(0,nil) then
MsgBox "clock: "+str(s.Result)+chr(13)+"app.ProcessTime: "+str(app.ProcessTime)
end if
end if
end if
```

You may need to add Error Checking code.

142.1.25 RestoreApplicationDockTileImageMBS as boolean

MBS MacCG Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop only.

Function: Restores the application dock tile image.
Example:

```
if app.RestoreApplicationDockTileImageMBS then
// ok
```

```
end if
```

Notes: Added support for 64-bit in plugin version 16.0.

142.1.26 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.5pr2

142.1.27 SetApplicationDockTileImageMBS(pic as CGImageMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop only.

Function: Sets the application dock tile image.
Example:

```
dim p as CGImageMBS = CGImageMBS.CreateImage(LogoMBS(500))

if app.SetApplicationDockTileImageMBS(p) then
// ok
end if
```

Notes:

Changed in MBS Plugin 2.7 to use CGImages directly.
Added support for 64-bit in plugin version 16.0.

142.1.28 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.5pr2

142.1.29 Properties

142.1.30 FrontmostMBS as boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns true if the application is frontmost.
Example:

```
app.frontmostmbs=True 'bring app to front
```

Notes:

This property is for read and write. Writing to it brings the app to front.
Setting this property to false does nothing.

If you need to make some other application frontmost, you can use app.HideMeMBS or use the ProcessMBS class.

Implemented for Windows in version 19.2. When querying, we check if the front window belongs to our application. When setting the plugin builds a list of all FileMaker windows. Than we activate the top most of them and move all other windows in z order behind.
(Read and Write computed property)

142.2 class BackgroundThreadMBS

142.2.1 class BackgroundThreadMBS

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The thread subclass we use for the CallMethodOnThreadMBS functions.
Example:

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** Subclass of the Thread class.

142.3.4 Methods

142.3.5 CallDelegateOnMainThreadMBS(m as _delegateMBS)

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a delegate on the main thread.
Example:

```
CallDelegateOnMainThreadMBS AddressOf testString, "Hello"
CallDelegateOnMainThreadMBS AddressOf testNumbers, 5, 6
CallDelegateOnMainThreadMBS AddressOf TestNoParameters
CallDelegateOnMainThreadMBS AddressOf Test, "4th call", 4
```

Notes:

We call the delegate on the main thread later with passing a parameter
Our plugin supports various combinations of up to 2 parameters of type string, variant, boolean, double, integer and object.
If you need more, please contact us.
Only supported on Xojo 2013r1 and newer.

If the method you call has optional parameters, you must pass all values or Xojo will throw a compile error.

142.4 Globals

142.4.1 CallMethodLaterMBS(target as object, name as string, afterDelay as Double) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a method on the target object on the main thread after the given delay in seconds.
Example:

```
if CallMethodLaterMBS(window1, "Test", 5.0) then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with no parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread after the given delay in seconds.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.
See also:

- 142.4.2 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant) as boolean 21873
- 142.4.3 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant) as boolean 21874
- 142.4.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 21875

142.4.2 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a method on the target object on the main thread after the given delay in seconds.
Example:

```
if CallMethodLaterMBS(window1, "Test", 4.0, "Hello") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with one variant parameter and no return values.

The method will be called later (Asyncronously) on the main thread after the given delay in seconds. Useful for performing non thread safe stuff like GUI functions on the main thread.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.
See also:

- 142.4.3 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant) as boolean 21874
- 142.4.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 21875

142.4.3 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a method on the target object on the main thread after the given delay in seconds.
Example:

```
if CallMethodLaterMBS(window1, "Test", 3.0, "Hello", "World") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with two variant parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread after the given delay in seconds.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.
See also:

- 142.4.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 21875

142.4.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a method on the target object on the main thread after the given delay in seconds.
Example:

```
if CallMethodLaterMBS(window1, "Test", 3.0, "Hello", "World", 5) then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with three variant parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread after the given delay in seconds.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.

- 142.4.18 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant) as boolean 21883
- 142.4.19 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 21884

142.4.18 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a method on the target object on a new thread.
Example:

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test", "Hello", "World") then
msgbox "OK"
else
```

```
msgbox "Failed"
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

The method must be declared on the given class for the target object with two variant parameters and no return values.

Pass in "new BackgroundThreadMBS" for the thread to use. Execution will be done later (Asynchronously) on that thread. Useful for perform some code in the background without creating a thread yourself.

Returns true on success and false on failure.
See also:

- 142.4.16 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string) as boolean 21882
- 142.4.17 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant) as boolean 21883
- 142.4.19 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 21884

142.4.19 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a method on the target object on a new thread.
Example:

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test", "Hello", "World", 5) then
msgbox "OK"
else
msgbox "Failed"
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

The method must be declared on the given class for the target object with three variant parameters and no return values.

Pass in "new BackgroundThreadMBS" for the thread to use. Execution will be done later (Asynchronously)

on that thread. Useful for perform some code in the background without creating a thread yourself.

Returns true on success and false on failure.

142.4.21 GetDarwinVMStatisticsMBS as DarwinVMStatisticsMBS

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: Returns information about the current memory status on Mac OS X.
Example:

```
dim d as DarwinVMStatisticsMBS

d=GetDarwinVMStatisticsMBS

if d=nil then
msgBox "No Darwin running :-("
quit
else
dim lines(-1) as string

lines.Append format(d.pageins,"0")+" pageins"
lines.Append format(d.pageouts,"0")+" pageouts"
lines.Append format(d.pagesize,"0")+" pagesize"
lines.Append format(d.freepages,"0")+" freepages"
lines.Append format(d.activepages,"0")+" activepages"
lines.Append format(d.inactivepages,"0")+" inactivepages"
```

```
lines.Append format(d.wiredpages,"0")+" wiredpages"
lines.Append format(d.zerofillpages,"0")+" zerofillpages"
lines.Append format(d.reactivations,"0")+" reactivations"
lines.Append format(d.faults,"0")+" faults"
lines.Append format(d.cowfaults,"0")+" cowfaults"
lines.Append format(d.lookups,"0")+" lookups"
lines.Append format(d.hits,"0")+" hits"

MsgBox Join(lines,EndOfLine)
end if
```

142.4.22 GetDarwinResourceUsageMBS as DarwinResourceUsageMBS

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Get information about resource utilization.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralMaxResidentSetSize)
```

Notes:

Returns nil on any error.
For more information type "man getrusage" in the Mac OS X Terminal.

142.4.23 SetThreadNameMBS(name as string)

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the name of current thread.
Example:

```
SetThreadNameMBS "SQL Query Thread"
```

Notes: This is useful to see thread name in crash reports or sample reports.

142.4.24 Blog Entries

- MBS Xojo plug-ins in version 16.0

- Thread Names
- MBS Xojo / Real Studio Plugins, version 15.5pr2

142.4.25 CountProcessesMBS as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Counts how many processes are running.
Notes:

Short for this function:

```
function CountProcesses as Integer
dim n as Integer
dim p as ProcessMBS

p=new ProcessMBS
p.getfirstProcess
n=1
while p.getnextProcess
n=n+1
wend

return n
end if
```

142.4.26 GetWindowsVMStatisticsMBS as WindowsVMStatisticsMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns information about the current memory status on Windows.
Example:

```
dim w as WindowsVMStatisticsMBS

w=GetWindowsVMStatisticsMBS
if w<>nil then

list.AddRow format(w.pagesize,"0")
list.AddRow format(w.memoryLoad,"0")
list.AddRow format(w.availablePageFileMemory,"0")
list.AddRow format(w.availablePhysicalMemory,"0")
list.AddRow format(w.availableVirtualMemory,"0")
list.AddRow format(w.totalPageFileMemory,"0")
list.AddRow format(w.totalPhysicalMemory,"0")
```

```
list.AddRow format(w.totalVirtualMemory,"0")

else

msgBox "No Windows memory statistics..."
quit
end if
```

142.5 class ConsoleApplication

142.5.1 class ConsoleApplication

Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Console only.

Function: Extends the ConsoleApplication class inside Xojo.

142.5.2 Methods

142.5.3 ArgumentsMBS as String()

MBS Util Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Console only.

Function: Queries arguments of process.
Notes:

Returns nil in case of any error (low memory).
First entry in result is path to current app.
Other entries are parameters, without any quotes.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

142.5.4 Blog Entries

- Console and GUI in one project
- MBS Releases the MBS Xojo / Real Studio plug-ins in version 15.2
- MBS Xojo / Real Studio Plugins, version 15.2pr1

142.5.5 Xojo Developer Magazine

- 13.5, page 8: News

142.5.6 LaunchTimeMBS as double

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Console only.

Function: Returns the the ticks value at launch time.
Example:

```
dim d as date

d=new date
d.totalSeconds=d.totalSeconds-(ticks-app.launchTimeMBS)/60

msgbox d.longdate+" "+d.longtime
```

Notes:

This value must be converted to the secondsvalue like in the example.
-1 on Windows.
For Mac OS X see the DarwinResourceUsageMBS class.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

142.5.7 MainBundleMBS as CFBundleMBS

MBS MacCF Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Console only.

Function: If your application is a bundle, this function returns your own bundle.
Notes:

Returns nil on any error.
For console application, returns the bundle referencing the console app file.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

142.5.8 NSApplicationMBS as NSApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Console only.

Function: Returns the shared NSApplication object.
Notes:

This method gives easy access to the NSApplicationMBS class.

The plugin makes sure that there is only one application object by returning the same object each time. Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

142.5.9 ProcessTimeMBS as double

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Console only.

Function: Returns the current CPU time for the process.
Example:

```
msgbox "I got "+format(app.ProcessTimeMBS/100,"0.00")+" seconds CPU time till now."
```

Notes:

On Mac OS X, the OS counts how much CPU time in given to the current process.
On Mac OS 9 you can get this information for any process using the ProcessMBS class.
Returns -1 in case of an error.

You can do this function yourself if you like:

```
dim s as SoftDeclareMBS

s=new SoftDeclareMBS

if s.LoadLibrary("System.Framework") then
if s.LoadFunction("clock") then
if s.Call(0,nil) then
MsgBox "clock: "+str(s.Result)+chr(13)+"app.ProcessTime: "+str(app.ProcessTime)
end if
end if
end if
```

You may need to add Error Checking code.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

142.6 class DarwinGroupListMBS

142.6.1 class DarwinGroupListMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The list of Groups on a Mac OS X system.
Example:

```
dim l as new DarwinGroupListMBS
MsgBox str(l.Count)+" groups"
```

142.6.2 Methods

142.6.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The effective user ID of the calling process.
Example:

```
dim l as new DarwinGroupListMBS
MsgBox str(l.CurrentEffectiveUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

142.6.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real group ID of the calling process.
Example:

```
dim l as new DarwinGroupListMBS
MsgBox "CurrentGroupID: "+str(l.CurrentGroupID)
```

Notes: The real group ID is specified at login time.

142.6.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real user ID of the calling process.
Example:

```
dim l as new DarwinGroupListMBS
MsgBox "CurrentUserID: "+str(l.CurrentUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

142.6.6 Group(index as Integer) as DarwinGroupMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the Group with the given index.
Example:

```
dim l as new DarwinGroupListMBS
dim c as Integer = l.Count-1
dim names(-1) as string
for i as Integer = 0 to c
dim g as DarwinGroupMBS = l.Group(i)
names.Append g.Name
next
MsgBox Join(names,EndOfLine)
```

142.6.7 Properties

142.6.8 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The number of Groups on this Mac OS X system.
Example:

```
dim l as new DarwinGroupListMBS
MsgBox str(l.Count)+" groups"
```

Notes: (Read only property)

142.7 class DarwinGroupMBS

142.7.1 class DarwinGroupMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class with information about a Group on Mac OS X.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox g.Name
```

142.7.2 Blog Entries

- MBS Xojo Plugins, version 19.4pr1

142.7.3 Blog Entries

- MBS Xojo Plugins, version 19.4pr1

142.7.4 Methods

142.7.5 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The effective user ID of the calling process.
Example:

```
dim g as new DarwinGroupMBS
MsgBox "CurrentEffectiveUserID: "+str(G.CurrentEffectiveUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

142.7.6 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real group ID of the calling process.
Example:

```
dim g as new DarwinGroupMBS
MsgBox "CurrentGroupID: "+str(G.CurrentGroupID)
```

Notes: The real group ID is specified at login time.

142.7.7 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real user ID of the calling process.
Example:

```
dim g as new DarwinGroupMBS
MsgBox "CurrentUserID: "+str(G.CurrentUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

142.7.8 LoadGroupByID(Groupid as Integer)

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Fills the properties of this class with the values for the Group with the given ID.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox g.Name
```

142.7.9 LoadGroupByName(name as string)

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Fills the properties of this class with the values for the given Group.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByName "staff"
MsgBox g.Name
```

142.7.10 UserName(index as Integer) as string

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The Group ID of this Group.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID

dim c as Integer = g.UserCount-1
for i as Integer = 0 to c
MsgBox g.UserName(i)
next
```

142.7.11 Properties

142.7.12 GroupID as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The group ID of the Group.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox "GroupID: "+str(G.GroupID)
```

Notes: (Read only property)

142.7.13 Name as string

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The name of the Group.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox "Name: "+g.Name
```

Notes: (Read only property)

142.7.14 Password as string

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The password for this group.
Notes: (Read only property)

142.7.15 Ready as Boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: whether the values in this class were filled correctly.
Notes: (Read only property)

142.7.16 UserCount as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The number of users in this group.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox "UserCount: "+str(G.UserCount)
```

Notes: (Read only property)

142.8 class DarwinResourceUsageMBS

142.8.1 class DarwinResourceUsageMBS

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: A class for information about resource utilization.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralMaxResidentSetSize)
```

Notes: For more information type "man getrusage" in the Mac OS X Terminal.

142.8.4 Properties

142.8.5 BlockInputOperations as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of block input operations.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.BlockInputOperations)
```

Notes: (Read only property)

142.8.6 BlockOutputOperations as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of block output operations.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.BlockOutputOperations)
```

Notes: (Read only property)

142.8.7 IntegralMaxResidentSetSize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Integral max resident set size.
Example:

```
dim u as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
dim t as new DarwinTaskInfoMBS

MsgBox "Application Resident Size: "+str(t.ResidentSize)+EndOfLine+_
"Application Virtual Size: "+str(t.VirtualSize)+EndOfLine+_
"Application Integral Max Resident Size: "+str(u.IntegralMaxResidentSetSize)
```

Notes:

Maximum memory usage of this app.
(Read only property)

142.8.8 IntegralSharedTextMemorySize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Integral shared text memory size.

Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralSharedTextMemorySize)
```

Notes: (Read only property)

142.8.9 IntegralUnsharedDataSize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Integral unshared data size.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralUnsharedDataSize)
```

Notes: (Read only property)

142.8.10 IntegralUnsharedStackSize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Integral unshared stack size.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralUnsharedStackSize)
```

Notes: (Read only property)

142.8.11 InvoluntaryContextSwitches as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of involuntary context switches.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.InvoluntaryContextSwitches)
```

Notes: (Read only property)

142.8.12 MessagesReceived as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of messages received.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.MessagesReceived)
```

Notes: (Read only property)

142.8.13 MessagesSent as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of messages sent.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.MessagesSent)
```

Notes: (Read only property)

142.8.14 PageFaults as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of page faults.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.PageFaults)
```

Notes: (Read only property)

142.8.15 PageReclaims as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of page reclaims.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.PageReclaims)
```

Notes: (Read only property)

142.8.16 SignalsReceived as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of signals received.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.SignalsReceived)
```

Notes: (Read only property)

142.8.17 Swaps as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of swaps.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.Swaps)
```

Notes: (Read only property)

142.8.18 SystemTimeUsed as Double

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Seconds of system time used.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.SystemTimeUsed)
```

Notes: (Read only property)

142.8.19 UserTimeUsed as Double

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Seconds of user time used.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.UserTimeUsed)
```

Notes: (Read only property)

142.8.20 VoluntaryContextSwitches as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of voluntary context switches.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.VoluntaryContextSwitches)
```

Notes: (Read only property)

142.9 class DarwinTaskInfoMBS

142.9.1 class DarwinTaskInfoMBS

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: A class for your applications memory/resource usage.
Example:

```
dim u as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
dim t as new DarwinTaskInfoMBS

MsgBox "Application Resident Size: "+str(t.ResidentSize)+EndOfLine+_
"Application Virtual Size: "+str(t.VirtualSize)+EndOfLine+_
"Application Integral Max Resident Size: "+str(u.IntegralMaxResidentSetSize)
```

142.9.2 Xojo Developer Magazine

- 3.6, page 6: News

142.9.3 Xojo Developer Magazine

- 3.6, page 6: News

142.9.4 Methods

142.9.5 Update as boolean

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Updates the values and returns true on success.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.UserTime)
call d.Update
MsgBox str(d.UserTime)
```

Notes: The constructor updates the values on creation of the object.

142.9.6 Properties

142.9.7 ContextSwitches as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of context switches.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.ContextSwitches)
```

Notes: (Read and Write property)

142.9.8 COWFaults as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of copy-on-write faults.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.COWFaults)
```

Notes: (Read and Write property)

142.9.9 Faults as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of page faults.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.Faults)
```

Notes: (Read and Write property)

142.9.10 MessagesReceived as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of messages received.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.MessagesReceived)
```

Notes: (Read and Write property)

142.9.11 MessagesSent as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of messages sent.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.MessagesSent)
```

Notes: (Read and Write property)

142.9.12 PageIns as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of actual pageins.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.PageIns)
```

Notes: (Read and Write property)

142.9.13 ResidentSize as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of resident pages.
Example:

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS
MsgBox "This application uses "+Format(d.ResidentSize,"0")+" Bytes of physical memory."
```

Notes: (Read and Write property)

142.9.14 SuspendCount as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Suspend count for task.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.SuspendCount)
```

Notes: (Read and Write property)

142.9.15 SystemCallsMach as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of mach system calls.
Example:

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has done so far "+Format(d.SystemCallsMach,"0")+" system calls using the Mach Interface."
```

Notes: (Read and Write property)

142.9.16 SystemCallsUnix as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of unix system calls.
Example:

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has done so far "+Format(d.SystemCallsUnix,"0")+" system calls using the Unix Interface."
```

Notes: (Read and Write property)

142.9.17 SystemTime as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Total system run time.
Example:

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has used so far "+Format(d.SystemTime,"0")+" seconds of CPU time."
```

Notes: (Read and Write property)

142.9.18 UserTime as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Total user run time.
Example:

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has used so far "+Format(d.UserTime,"0")+" seconds of CPU time."
```

Notes: (Read and Write property)

142.9.19 VirtualSize as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of virtual pages.
Example:

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS
MsgBox "This application uses "+Format(d.VirtualSize,"0")+" Bytes of the 4 GB address space."
```

Notes: (Read and Write property)

142.10 class DarwinUserListMBS

142.10.1 class DarwinUserListMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The list of users on a Mac OS X system.
Example:

```
// find the short user name
dim d as DarwinUserListMBS
dim u as string
dim p as DarwinUserMBS
dim uid,i,c as Integer

// requires MachO target
declare function getuid lib "System" () as Integer

uid=getuid

d=new DarwinUserListMBS

c=d.Count-1
for I=0 to c
p=d.User(i)
if p.UserID=uid then
MsgBox p.Name
end if
next
```

142.10.2 Methods

142.10.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The effective user ID of the calling process.
Example:

```
dim l as new DarwinUserListMBS
MsgBox "CurrentEffectiveUserID: "+str(l.CurrentEffectiveUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to de-

termine the real-user-id of the calling process.

142.10.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real group ID of the calling process.
Example:

```
dim l as new DarwinUserListMBS
MsgBox "CurrentGroupID: "+str(l.CurrentGroupID)
```

Notes: The real group ID is specified at login time.

142.10.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real user ID of the calling process.
Example:

```
dim l as new DarwinUserListMBS
MsgBox "CurrentUserID: "+str(l.CurrentUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

142.10.6 User(index as Integer) as DarwinUserMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the user with the given index.
Example:

```
// find short user name
dim d as DarwinUserListMBS
dim u as string
dim p as DarwinUserMBS
dim uid,i,c as Integer
```

```
u=SystemInformationMBS.Username
d=new DarwinUserListMBS

c=d.Count-1
for I=0 to c
p=d.User(i)
if p.LongName=u then
MsgBox p.Name
end if
next
```

142.10.7 Properties

142.10.8 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The number of users on this Mac OS X system.
Example:

```
dim l as new DarwinUserListMBS
MsgBox "Number of users: "+str(l.Count)
```

Notes: (Read only property)

142.11 class DarwinUserMBS

142.11.1 class DarwinUserMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A class with information about a user on Mac OS X.
Example:

```
dim l as new DarwinUserMBS
l.LoadUserByID l.CurrentUserID
MsgBox l.Name+": "+l.LongName
```

142.11.2 Methods

142.11.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The effective user ID of the calling process.
Example:

```
dim l as new DarwinUserMBS
MsgBox str(l.CurrentEffectiveUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

142.11.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real group ID of the calling process.
Example:

```
dim l as new DarwinUserMBS
MsgBox str(l.CurrentGroupID)
```

Notes: The real group ID is specified at login time.

142.11.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real user ID of the calling process.
Example:

```
dim l as new DarwinUserMBS
MsgBox str(l.CurrentUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

142.11.6 LoadUserByID(userid as Integer)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Fills the properties of this class with the values for the user with the given ID.
Example:

```
dim l as new DarwinUserMBS

l.LoadUserByID l.CurrentUserID

MsgBox l.Name
```

142.11.7 LoadUserByName(name as string)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Fills the properties of this class with the values for the given user.
Example:

```
dim l as new DarwinUserMBS

l.LoadUserByName "cs"

MsgBox l.LongName
```

142.11.8 Properties

142.11.9 AccountExpireTime as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The time when the account will expire.
Notes: (Read only property)

142.11.10 GroupID as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The group ID of the user.
Example:

```
dim l as new DarwinUserMBS
l.LoadUserByID l.CurrentUserID
MsgBox str(l.GroupID)
```

Notes: (Read only property)

142.11.11 HomePath as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The home path of the user.
Example:

```
dim l as new DarwinUserMBS

l.LoadUserByName "cs"

MsgBox l.HomePath
```

Notes: (Read only property)

142.11.12 LastPasswordChangeTime as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The last time when the user changed the password.
Notes: (Read only property)

142.11.13 LongName as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The long name of the user.
Example:

```
dim l as new DarwinUserMBS

l.LoadUserByName "cs"

MsgBox l.LongName
```

Notes: (Read only property)

142.11.14 Name as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The short name of the user.
Example:

```
dim l as new DarwinUserListMBS

dim c as Integer = l.Count-1
for i as Integer = 0 to c
dim u as DarwinUserMBS = l.User(i)
if u.UserID = l.CurrentUserID then
MsgBox "our user name: "+u.Name
end if
next
```

Notes: (Read only property)

142.11.15 Ready as Boolean

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: whether the values in this class were filled correctly.
Notes: (Read only property)

142.11.16 Shell as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The path to the default shell for this user.
Example:

```
dim l as new DarwinUserMBS

l.LoadUserByID l.CurrentUserID

MsgBox l.Shell
```

Notes: (Read only property)

142.11.17 UserID as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The user ID of this user.
Example:

```
dim l as new DarwinUserMBS

l.LoadUserByID l.CurrentUserID

MsgBox str(l.UserID)
```

Notes: (Read only property)

142.12 class DarwinVMStatisticsMBS

142.12.1 class DarwinVMStatisticsMBS

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: Holds information about the current Mac OS X memory status.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.pageins)+" page ins"
```

142.12.2 Properties

142.12.3 ActivePages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The total number of pages currently in use and pageable.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.ActivePages)
```

Notes: (Read only property)

142.12.4 CowFaults as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The number of faults that caused a page to be copied (generally caused by copy-on-write faults).
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CowFaults)
```

Notes: (Read only property)

142.12.5 CPUTicksIdle as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The number of time slices used by the Idle process.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksIdle)
```

Notes:

Calculate deltas like in the example to see usage of CPU time.
(Read only property)

142.12.6 CPUTicksNice as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The number of time slices used by the task switcher process.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksNice)
```

Notes:

Calculate deltas like in the example to see usage of CPU time.
(Read only property)

142.12.7 CPUTicksSystem as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The number of time slices used by the system processes.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksSystem)
```

Notes:

Calculate deltas like in the example to see usage of CPU time.
(Read only property)

142.12.8 CPUTicksUser as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The number of time slices used by the user application processes.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksUser)
```

Notes:

Calculate deltas like in the example to see usage of CPU time.
(Read only property)

142.12.9 Faults as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The number of times the "vm_fault" routine has been called.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Faults)
```

Notes: (Read only property)

142.12.10 FreePages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The total number of free pages in the system.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.FreePages)
```

Notes: (Read only property)

142.12.11 Hits as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The hit count.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Hits)
```

Notes: (Read only property)

142.12.12 InactivePages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The total number of pages on the inactive list.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.InactivePages)
```

Notes: (Read only property)

142.12.13 Lookups as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The count of lookups.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Lookups)
```

Notes: (Read only property)

142.12.14 PageIns as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The number of requests for pages from a pager (such as the inode pager).
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.pageins)
```

Notes: (Read only property)

142.12.15 PageOuts as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The number of pages that have been paged out.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.PageOuts)
```

Notes: (Read only property)

142.12.16 Pagesize as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The size of one memory page in memory.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Pagesize)
```

Notes:

On PowerPC CPUs, it should be 4096 Bytes.
(Read only property)

142.12.17 Reactivations as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: the total number of pages that have been moved from the inactive list to the active list (reactivated).
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Reactivations)
```

Notes: (Read only property)

142.12.18 WiredPages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The total number of pages wired down. That is, pages that cannot be paged out.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.WiredPages)
```

Notes: (Read only property)

142.12.19 ZeroFillPages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The total number of pages that have been zero-filled on demand.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.ZeroFillPages)
```

Notes: (Read only property)

142.13 class EnvironmentMBS

142.13.1 class EnvironmentMBS

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Allows you to access system wide environment properties.

142.13.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr3

142.13.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr3

142.13.4 Methods

142.13.5 Add(name as string,value as string) as boolean

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Add a property to the list.
Example:

```
dim e as EnvironmentMBS

e=new EnvironmentMBS
if e.add("authorname","Christian") then
msgbox "ok"
else
msgbox "fail"
end if
```

Notes: Setting this value to some new value will currently only change this value for your application and all child applications.

142.13.6 Get(name as string) as string

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Returns the value for a named property.
Example:

```
dim e as EnvironmentMBS

e=new EnvironmentMBS
msgbox e.get("windir") // normally c:\windows
```

142.13.7 Lines as string()

MBS Util Plugin, Plugin Version: 12.1, Platform: Windows, Targets: All.

Function: Returns array of definition lines of environment variables.
Example:

```
dim e as new EnvironmentMBS
msgbox join(e.lines, endofline)
```

Notes: Returned strings are in format "name=value".

142.13.8 Name(Index as Integer) as string

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Returns the name of the environment propertie number n.

142.13.9 Names as string()

MBS Util Plugin, Plugin Version: 12.1, Platform: Windows, Targets: All.

Function: Returns array of names of environment variables.
Example:

```
dim e as new EnvironmentMBS
msgbox join(e.lines, endofline)
```

142.13.10 Update

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Updates the object to the current environment properties.
Notes: This method is called by the constructor and the methods which change the environment properties.

142.13.11 Properties

142.13.12 Count as Integer

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Returns the number of environment properties.
Example:

```
dim e as EnvironmentMBS

e=new EnvironmentMBS
msgbox str(e.count)
```

Notes: (Read only property)

142.13.13 Value(Index as Integer) as string

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Returns the value of the environment propertie number n.
Notes:

Setting this value to some new value will currently only change this value for your application and all child applications.
(Read and Write computed property)

142.14 class MutexMBS

142.14.1 class MutexMBS

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a mutex.
Notes:

This is the mutex class the threadMBS class is using internally.
A mutex is not locked by default.

142.14.4 Methods

142.14.5 Lock

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Locks the mutex.
Example:

```
dim m as new MutexMBS

m.Lock
MsgBox "Got mutex."

m.Unlock
```

```
MsgBox "Released mutex."
```

Notes:

The function returns as soon as it has access to the mutex.

Always use Lock and Unlock in a pair.

142.14.6 TryLock as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Locks the mutex if possible.
Example:

```
dim m as new MutexMBS

if m.TryLock then
MsgBox "Got mutex."

m.Unlock
else
MsgBox "Failed to get mutex."
end if
```

Notes:

Returns true if we got a lock and false if not.
Always use Lock and Unlock in a pair.

142.14.7 Unlock

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unlocks the mutex.
Example:

```
dim m as new MutexMBS

m.Lock
MsgBox "Got mutex."
```

```
m.Unlock
MsgBox "Released mutex."
```

Notes: Always use Lock and Unlock in a pair.

142.14.8 Properties

142.14.9 Handle as Integer

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal used reference to the native mutex object.
Example:

```
dim m as new MutexMBS
MsgBox "Handle: "+hex(m.Handle)
```

Notes:

Windows Mutex or PThread Mutex.
(Read and Write property)

142.14.10 Tag as Variant

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: An object reference for your use.
Notes:

Just for convenience.
This property was added so you can use this property for a reference so you won't need to subclass this class and add custom properties.
(Read and Write property)

142.15 class NamedMutexMBS

142.15.1 class NamedMutexMBS

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a named mutex.
Notes:

Using a mutex on Windows and a semaphore on MacOS and Linux.

Raises UnsupportedOperationException exceptions if something fails.

142.15.2 Blog Entries

142.15.4 Methods

142.15.5 Constructor(Name as string)

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create a new mutex.
Notes:

Name should be a simple text, but unique, so we recommend reverse domain notation.
The name should not contain a slash.
If mutex exists already, we open it. The mutex lives until the last application closed it.

If name matches the name of an existing event, semaphore, waitable timer, job, or file-mapping object, the function fails.
Raises an UnsupportedOperationException on failure.

You can open the same mutex twice and get different Xojo objects from the plugin for both.

142.15.6 Lock

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Locks the mutex.
Notes:

Blocks until mutex is locked.
Please call Unlock later to unlock.

To avoid you looking up the app, we limit locking to one minute. After that you get a timeout error.

142.15.7 TryLock as boolean

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tries to lock the mutex.
Notes:

Returns true if locked or false if the lock can't be set.
If false is returned another app may have a lock currently.
Please call Unlock later to unlock if you get back true.

142.15.8 Unlock

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unlocks the mutex.

142.15.9 Properties

142.15.10 Handle as Integer

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

142.15.11 Name as String

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the mutex.
Notes: (Read only property)

142.15.12 Tag as Variant

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes:

You can use it as you like to store whatever value is needed.
(Read and Write property)

142.16 class NSProcessInfoActivityMBS

142.16.1 class NSProcessInfoActivityMBS

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The class for an activity.
Example:

```
dim Activity as NSProcessInfoActivityMBS // property in your window, control, thread, app
dim AllowAppNap as boolean // allow or not?

dim ProcessInfo as NSProcessInfoMBS = NSProcessInfoMBS.processInfo
if AllowAppNap then
Activity = nil
else
// disable sleep to let us make something...
Activity = ProcessInfo.beginActivity(NSProcessInfoMBS.NSActivityBackground, "Backup running")
end if
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

142.16.2 Methods

142.16.3 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Private constructor.

142.16.4 Destructor

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The destructor.
Notes: If you missed to call endActivity, the destructor will do it.

142.16.5 Properties

142.16.6 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

142.16.7 Options as Integer

MBS MacCocoa Plugin, Plugin Version: 15.2, Platform: macOS, Targets: All.

Function: The options used to create activity.
Notes: (Read and Write property)

142.16.8 Reason as String

MBS MacCocoa Plugin, Plugin Version: 15.2, Platform: macOS, Targets: All.

Function: The reason used to create the activity.
Notes: (Read and Write property)

142.17 class NSProcessInfoMBS

142.17.1 class NSProcessInfoMBS

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: The NSProcessInfo class provides methods to access information about the current process.
Notes:

Each process has a single, shared NSProcessInfo object, known as process information agent.

The process information agent can return such information as the arguments, environment variables, host name, or process name. The processInfo class method returns the shared agent for the current process—that is, the process whose object sent the message. For example, the following line returns the NSProcessInfo object, which then provides the name of the current process:

```
dim processInfo as new NSProcessInfoMBS
dim processName as string = processInfo.processName
```

The NSProcessInfo class also includes the operatingSystem method, which returns an enum constant identifying the operating system on which the process is executing.

NSProcessInfo objects attempt to interpret environment variables and command-line arguments in the user's default C string encoding if they cannot be converted to Unicode as UTF-8 strings. If neither conversion works, these values are ignored by the NSProcessInfo object.

142.17.6 Methods

142.17.7 argument(index as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Returns the command-line argument for the process with the given index.
Example:

```
dim p as new NSProcessInfoMBS

dim i,c as Integer

c=p.argumentCount-1
for i=0 to c
MsgBox p.argument(i)
next
```

142.17.8 arguments as string()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns the command-line arguments for the process.
Notes: Returns array of strings with the process's command-line arguments.

142.17.9 beginActivity(options as Integer, reason as string) as NSProcessInfoActivityMBS

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Begin an activity using the given options and reason.
Example:

```
dim Activity as NSProcessInfoActivityMBS // property in your window, control, thread, app
dim AllowAppNap as boolean // allow or not?

dim ProcessInfo as NSProcessInfoMBS = NSProcessInfoMBS.processInfo
if AllowAppNap then
Activity = nil
else
// disable sleep to let us make something...
Activity = ProcessInfo.beginActivity(NSProcessInfoMBS.NSActivityBackground, "Backup running")
end if
```

Notes:

options: Options for the activity. See constants for possible values.
reason: A string used in debugging to indicate the reason the activity began.

Returns an object token representing the activity.

Indicate completion of the activity by calling endActivity passing the returned object as the argument.
Available in OS X v10.9 and later.

142.17.10 Constructor

MBS MacCocoa Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The constructor.

142.17.11 disableAutomaticTermination(Reason as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Decrement the counter tracking the number of automatic quit opt-out requests.
Notes:

When this counter is greater than zero, the app will be considered 'active' and ineligible for automatic ter-

mination.
An example of using this would be disabling autoquitting when the user of an instant messaging application signs on, due to it requiring a background connection to be maintained even if the app is otherwise inactive.
Each pair of calls should have a matching "reason" argument, which can be used to easily track why an application is or is not automatically terminable.
A given reason can be used more than once at the same time (for example: two files are transferring over the network, each one disables automatic termination with the reason "file transfer in progress")

142.17.12 disableSuddenTermination

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Disables the application for quickly klling using sudden termination.
Notes:

This method increments the sudden termination counter. When the termination counter reaches 0 the application allows sudden termination.

By default the sudden termination counter is set to 1. This can be overriden in your application Info.plist. See "Sudden Termination" for more information and debugging suggestions.

Available in Mac OS X v10.6 and later.

142.17.13 enableAutomaticTermination(Reason as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Increment the counter tracking the number of automatic quit opt-out requests.
Notes:

When this counter is greater than zero, the app will be considered 'active' and ineligible for automatic termination.
An example of using this would be disabling autoquitting when the user of an instant messaging application signs on, due to it requiring a background connection to be maintained even if the app is otherwise inactive.
Each pair of calls should have a matching "reason" argument, which can be used to easily track why an application is or is not automatically terminable.
A given reason can be used more than once at the same time (for example: two files are transferring over the network, each one disables automatic termination with the reason "file transfer in progress")

142.17.14 enableSuddenTermination

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Enables the application for quick killing using sudden termination.
Notes:

This method decrements the sudden termination counter. When the termination counter reaches 0 the application allows sudden termination.

By default the sudden termination counter is set to 1. This can be overriden in your application Info.plist. See "Sudden Termination" for more information and debugging suggestions.

Available in Mac OS X v10.6 and later.

142.17.15 endActivity(activity as NSProcessInfoActivityMBS)

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Ends the given activity.
Notes:

activity: An activity object returned by beginActivity.
Available in OS X v10.9 and later.

142.17.16 NSActivityLatencyCritical as UInt64

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: One of the activity option constants.
Notes:

Flag to indicate the activity requires the highest amount of timer and I/O precision available.
Important: Very few applications should need to use this constant.
Available in OS X v10.9 and later.
Value is & hFF00000000.

142.17.17 NSProcessInfoThermalStateDidChangeNotification as String

MBS MacCocoa Plugin, Plugin Version: 15.2, Platform: macOS, Targets: All.

Function: The notification name to use with NSNotificationObserverMBS.
Notes:

This notification is posted once the thermal state of the system has changed. Once the notification is posted, use the thermalState property to retrieve the current thermal state of the system.

You can use this opportunity to take corrective action in your application to help cool the system down. Work that could be done in the background or at opportunistic times should be using the Quality of Service levels in NSOperation or the NSBackgroundActivityScheduler API.

This notification is posted on the global dispatch queue. Register for it using the default notification center. The object associated with the notification is NSProcessInfoMBS.processInfo.

142.17.18 operationSystemVersion(byref Major as Integer, byref Minor as Integer, byref Patch as Integer)

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Queries operation system version.
Notes: One call to get all three parts.

142.17.19 processInfo as NSProcessInfoMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns the process information agent for the process.

142.17.20 Properties

142.17.21 activeProcessorCount as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Provides the number of active processing cores available on the computer.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox str(p.activeProcessorCount)
```

Notes:

Available in Mac OS X v10.5 and later.
(Read only property)

142.17.22 argumentsCount as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: The number of the command-line arguments.
Example:

```
dim p as new NSProcessInfoMBS

dim i,c as Integer

c=p.argumentCount-1
for i=0 to c
MsgBox p.argument(i)
next
```

Notes: (Read only property)

142.17.23 automaticTerminationSupportEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Marks the calling app as supporting automatic termination.
Notes:

Without calling this or setting the equivalent Info.plist key (NSSupportsAutomaticTermination), the above methods (disableAutomaticTermination/enableAutomaticTermination) have no effect, although the counter tracking automatic termination opt-outs is still kept up to date to ensure correctness if this is called later. Currently, passing false has no effect.
This should be called during applicationDidFinishLaunching or earlier.
(Read and Write property)

142.17.24 environment as dictionary

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Returns the variable names and their values in the environment from which the process was launched.
Example:

```
dim p as new NSProcessInfoMBS
dim d as Dictionary = p.environment
MsgBox str(d.Count)
```

Notes: (Read only property)

142.17.25 globallyUniqueString as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Returns a global unique identifier for the process.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox p.globallyUniqueString // shows for example "072EC09A-4825-11DD-BDC0-001D4F46F5E0-18405-00000CA853EB5B46"
```

Notes:

Returns the Global ID for the process. The ID includes the host name, process ID, and a time stamp, which ensures that the ID is unique for the network.

This method generates a new string each time it is invoked, so it also uses a counter to guarantee that strings created from the same process are unique.
(Read only property)

142.17.26 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: The internal reference to the NSProcessInfo object.
Notes: (Read and Write property)

142.17.27 hostName as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Returns the name of the host computer.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox p.hostName // for example "iMac.local"
```

Notes: (Read only property)

142.17.28 isiOSAppOnMac as Boolean

MBS MacCocoa Plugin, Plugin Version: 21.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value that indicates whether the process is an iPhone or iPad app running on a Mac.
Notes:

The value of this property is true only when the process is an iOS app running on a Mac. The value of the property is false for all other apps on the Mac, including Mac apps built using Mac Catalyst. The property is also false for processes running on platforms other than macOS.
(Read only property)

142.17.29 isLowPowerModeEnabled as Boolean

MBS MacCocoa Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieve the current setting of the system for the low power mode setting.
Notes:

On systems where the low power mode is unknown or unsupported, the value returned from the lowPowerModeEnabled property is always false.
Returns true if low power mode is enabled for macOS 12 or iOS 9 and newer.
(Read only property)

142.17.30 operatingSystem as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Returns a constant to indicate the operating system on which the process is executing.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox str(p.operatingSystem) // shows 5 = NSMACHOperatingSystem
```

Notes:

Operating system identifier. See "Constants" for a list of possible values. In Mac OS X, it's NSMACHOp-

eratingSystem.
(Read only property)

142.17.31 operatingSystemName as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Returns a string containing the name of the operating system on which the process is executing.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox p.operatingSystemName // shows "NSMACHOperatingSystem"
```

Notes:

Operating system name. In Mac OS X, it's "NSMACHOperatingSystem"
(Read only property)

142.17.32 operatingSystemVersionString as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Returns a string containing the version of the operating system on which the process is executing.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox p.operatingSystemVersionString // "Version 10.5.4 (Build 9E17)"
```

Notes:

Returns the Operating system version. This string is human readable, localized, and is appropriate for displaying to the user. This string is not appropriate for parsing.
(Read only property)

142.17.33 operationSystemVersionMajor as Integer

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Queries major OS version.

Notes: (Read only property)

142.17.34 operationSystemVersionMinor as Integer

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Queries minor OS version.
Notes: (Read only property)

142.17.35 operationSystemVersionPatch as Integer

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Queries OS version patch level.
Notes: (Read only property)

142.17.36 physicalMemory as UInt64

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Provides the amount of physical memory on the computer.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox str(p.physicalMemory)
```

Notes:

Available in Mac OS X v10.5 and later.
(Read only property)

142.17.37 processIdentifier as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Returns the identifier of the process.
Example:

```
dim p as new NSProcessInfoMBS
```

MsgBox str(p.processIdentifier)

Notes: (Read only property)

142.17.38 processName as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: The name of the process.
Example:

dim p as new NSProcessInfoMBS

MsgBox p.processName

Notes:

The process name is used to register application defaults and is used in error messages. It does not uniquely identify the process.

You can assign a new value, but:
User defaults and other aspects of the environment might depend on the process name, so be very careful if you change it. Setting the process name in this manner is not thread safe.
(Read and Write property)

142.17.39 processorCount as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

Function: Provides the number of processing cores available on the computer.
Example:

dim p as new NSProcessInfoMBS

MsgBox str(p.processorCount)

Notes:

Available in Mac OS X v10.5 and later.
(Read only property)

142.17.40 systemUptime as Double

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the how long it has been since the computer has been restarted.
Notes:

Returns an NSTimeInterval indicating how long system the computer has been restarted.
Available in Mac OS X v10.6 and later.
(Read only property)

142.17.41 thermalState as Integer

MBS MacCocoa Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Retrieve the current thermal state of the system.
Example:

```
dim n as NSProcessInfoMBS = NSProcessInfoMBS.processInfo

Select case n.thermalState
case n.NSProcessInfoThermalStateNominal
MsgBox "Thermal State: Nominal"
case n.NSProcessInfoThermalStateFair
MsgBox "Thermal State: Fair"
case n.NSProcessInfoThermalStateSerious
MsgBox "Thermal State: Serious"
case n.NSProcessInfoThermalStateCritical
MsgBox "Thermal State: Critical"
else
MsgBox "Thermal State: Unknown"
end Select
```

Notes:

On systems where thermal state is unknown or unsupported, the value returned from the thermalState property is always NSProcessInfoThermalStateNominal.

Available in Mac OS X 10.10.3 and newer.
Returns -1 if function is called on older Mac OS X versions, Linux or Windows.
(Read only property)

142.17.42 Constants

142.17.43 NSActivityAutomaticTerminationDisabled = & h8000

MBS MacCocoa Plugin, Plugin Version: 13.5.

Function: One of the activity option constants.
Notes:

Flag to prevent automatic termination.
Available in OS X v10.9 and later.

142.17.44 NSActivityBackground = & h000000FF

MBS MacCocoa Plugin, Plugin Version: 13.5.

Function: One of the activity option constants.
Notes:

Flag to indicate the app has initiated some kind of work, but not as the direct result of user request.
Available in OS X v10.9 and later.

142.17.45 NSActivityIdleDisplaySleepDisabled = & h10000000000

MBS MacCocoa Plugin, Plugin Version: 13.5.

Function: One of the activity option constants.
Notes:

Flag to require the screen to stay powered on.
Available in OS X v10.9 and later.

142.17.46 NSActivityIdleSystemSleepDisabled = & h100000

MBS MacCocoa Plugin, Plugin Version: 13.5.

Function: One of the activity option constants.
Notes:

Flag to prevent idle sleep.
This is included in NSActivityUserInitiatedAllowingIdleSystemSleep.
Available in OS X v10.9 and later.

142.17.47 NSActivitySuddenTerminationDisabled = & h4000

MBS MacCocoa Plugin, Plugin Version: 13.5.

Function: One of the activity option constants.
Notes:

Flag to prevent sudden termination.
This is included in NSActivityUserInitiatedAllowingIdleSystemSleep.
Available in OS X v10.9 and later.

142.17.48 NSActivityUserInitiated = & h00FFFFFF

MBS MacCocoa Plugin, Plugin Version: 13.5.

Function: One of the activity option constants.
Notes:

Flag to indicate the app is performing a user-requested action.
Available in OS X v10.9 and later.

142.17.49 NSActivityUserInitiatedAllowingIdleSystemSleep = & h00EFFFFF

MBS MacCocoa Plugin, Plugin Version: 13.5.

Function: One of the activity option constants.
Notes:

Flag to indicate the app is performing a user-requested action, but that the system can sleep on idle.
Available in OS X v10.9 and later.

142.17.50 NSHPUXOperatingSystem=4

MBS MacCocoa Plugin, Plugin Version: 8.4.

Function: One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Notes: Indicates the HP UX operating system.

142.17.51 NSMACHOperatingSystem=5

MBS MacCocoa Plugin, Plugin Version: 8.4.

Function: One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox str(p.operatingSystem) // shows 5 = NSMACHOperatingSystem
```

Notes: Indicates the Mac OS X operating system.

142.17.52 NSOSF1OperatingSystem=7

MBS MacCocoa Plugin, Plugin Version: 8.4.

Function: One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Notes: Indicates the OSF/1 operating system.

142.17.53 NSProcessInfoThermalStateCritical = 3

MBS MacCocoa Plugin, Plugin Version: 15.1.

Function: One of the constants describing the current thermal state of the system.
Notes: System performance is significantly impacted and the Mac needs to cool down. Recommendation: reduce application's usage of CPU, GPU, and I/O to the minimum level needed to respond to user actions. Consider stopping use of camera and other peripherals if your application is using them.

142.17.54 NSProcessInfoThermalStateFair = 1

MBS MacCocoa Plugin, Plugin Version: 15.1.

Function: One of the constants describing the current thermal state of the system.
Notes: The system has reached a state where fans may become audible.

142.17.55 NSProcessInfoThermalStateNominal = 0

MBS MacCocoa Plugin, Plugin Version: 15.1.

Function: One of the constants describing the current thermal state of the system.
Notes: No corrective action is needed.

142.17.56 NSProcessInfoThermalStateSerious = 2

MBS MacCocoa Plugin, Plugin Version: 15.1.

Function: One of the constants describing the current thermal state of the system.
Notes: Fans are running at maximum speed, system performance maybe impacted. Recommendation: reduce application's usage of CPU, GPU and I/O, if possible. Switch to lower quality visual effects, reduce frame rates.

142.17.57 NSSolarisOperatingSystem=3

MBS MacCocoa Plugin, Plugin Version: 8.4.

Function: One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Notes: Indicates the Solaris operating system.

142.17.58 NSSunOSOperatingSystem=6

MBS MacCocoa Plugin, Plugin Version: 8.4.

Function: One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Notes: Indicates the Sun OS operating system.

142.17.59 NSWindows95OperatingSystem=2

MBS MacCocoa Plugin, Plugin Version: 8.4.

Function: One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Notes: Indicates the Windows 95 operating system.

142.17.60 NSWindowsNTOperatingSystem=1

MBS MacCocoa Plugin, Plugin Version: 8.4.

Function: One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.

Notes: Indicates the Windows NT operating system.

142.18 class NSRunningApplicationMBS

142.18.1 class NSRunningApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: NSRunningApplication is a class to manipulate and provide information for a single instance of an application.
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.localizedName
```

Notes:

Only user applications are tracked; this does not provide information about every process on the system.
Some properties of an application are fixed, such as the bundle identifier. Other properties may vary over time, such as whether the app is hidden. Properties that vary can be observed with key-value observing, in which case the description comment for the method notes this capability.
Properties that vary over time are inherently race-prone. For example, a hidden app may unhide itself at any time. To ameliorate this, properties persist until the next turn of the main run loop in a common mode. For example, if you repeatedly poll an unhidden app for its hidden property without allowing the run loop to run, it will continue to return false, even if the app hides, until the next turn of the run loop.
NSRunningApplication is thread safe, in that its properties are returned atomically. However, it is still subject to the main run loop policy described above. If you access an instance of NSRunningApplication from a background thread, be aware that its time-varying properties may change from under you as the main run loop runs (or not).
An NSRunningApplication instance remains valid after the application exits. However, most properties lose their significance, and some properties may not be available on a terminated application.

Requires Mac OS X 10.6.

142.18.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr5
- MBS Real Studio Plugins, version 11.3pr9

142.18.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr5
- MBS Real Studio Plugins, version 11.3pr9

142.18.4 Methods

142.18.5 activateWithOptions(options as Integer) as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Attempts to activate the application using the specified options.
Notes:

options: The options to use when activating the application. See "NSApplicationActivationOptions" for the possible values.

Returns true if the application was activated successfully, otherwise false.

This method will return false if the application has quit, or is not a type of application than can be activated.

Available in Mac OS X v10.6 and later.

142.18.6 Constructor

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.localizedName
```

Notes:

Initializes the object with the current application.
Available in Mac OS X v10.6 and later.

142.18.7 currentApplication as NSRunningApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an NSRunningApplication representing this application.
Example:

```
dim n as NSRunningApplicationMBS = NSRunningApplicationMBS.currentApplication
```

```
MsgBox n.localizedName
```

Notes: Available in Mac OS X v10.6 and later.

142.18.8 forceTerminate as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Attempts to force the receiver to quit.
Notes:

Returns true if the application successfully terminated, otherwise false.

This method will return false if the application is no longer running when the forceTerminate message is sent to the receiver.

This method may return before the receiver exits; you should observe the terminated property to determine when the application terminates.

Available in Mac OS X v10.6 and later.

142.18.9 hide as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Attempts to hide or the application.
Example:

```
dim n as NSRunningApplicationMBS = NSRunningApplicationMBS.currentApplication

MsgBox str(n.hide) // hide me
```

Notes:

The property of this value will be false if the application has already quit, or if of a type that is unable to be hidden.
Available in Mac OS X v10.6 and later.

142.18.10 runningApplications as NSRunningApplicationMBS()

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of NSRunningApplication representing the running applications.
Example:

```
dim n(-1) as NSRunningApplicationMBS = NSRunningApplicationMBS.runningApplications
dim s(-1) as string

for each r as NSRunningApplicationMBS in n
s.Append r.localizedName
next

MsgBox Join(s,EndOfLine)
```

Notes:

Returns an array of NSRunningApplication instances.

The order of the array is unspecified, but it is stable, meaning that the relative order of particular applications will not change across multiple calls to runningApplications. See NSRunningApplication Class Reference for more information on NSRunningApplication.
Similar to the NSRunningApplication classes's properties, this property will only change when the main run loop is run in a common mode. Instead of polling, use key-value observing to be notified of changes to this array property.
This property is thread safe, in that it may be called from background threads and the result is returned atomically.

This list is not updated in a tight loop. For receiving updates, you need to have the runloop run (e.g. check regularly in a timer).

142.18.11 runningApplicationsWithBundleIdentifier(bundleID as string) as NSRunningApplicationMBS()

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of currently running applications with the specified bundle identifier.
Example:

```
dim n(-1) as NSRunningApplicationMBS = NSRunningApplicationMBS.runningApplicationsWithBundleIdentifier("com.apple.iTunes")

if UBound(n)>=0 then
MsgBox n(0).localizedName
```

```
else
MsgBox "iTunes is not running?"
end if
```

Notes:

An array of NSRunningApplications, or an empty array if no applications match the bundle identifier.
Available in Mac OS X v10.6 and later.

142.18.12 runningApplicationWithProcessIdentifier(pid as Integer) as NSRunningApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the running application with the given process identifier, or nil if no application has that pid.
Example:

```
dim n as NSRunningApplicationMBS
dim pid as Integer

while n=nil
pid=pid+1
n=NSRunningApplicationMBS.runningApplicationWithProcessIdentifier(pid)
wend

MsgBox n.localizedName+" has PID "+str(pid)
```

Notes:

pid: The process identifier.

Returns an instance of NSRunningApplication for the specified pid, or nil if the application has no process identifier.

Applications that do not have PIDs cannot be returned from this method.
Available in Mac OS X v10.6 and later.

142.18.13 terminate as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Attempts to quit the receiver normally.
Notes:

Returns true if the application successfully terminated, otherwise false.

This method will return false if the application is no longer running when the terminate message is sent to the receiver.
This method may return before the receiver exits; you should observe the terminated property to determine when the application terminates.

Available in Mac OS X v10.6 and later.

142.18.14 unhide as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Attempts to unhide or the application.
Notes:

Returns true if the application was successfully shown, otherwise false.

The property of this value will be false if the application has already quit, or if of a type that is unable to be hidden.

Available in Mac OS X v10.6 and later.

142.18.15 Properties

142.18.16 activationPolicy as Integer

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates the activation policy of the application. (read-only)
Notes:

The value returned by this property is usually fixed, but it may change through a call to activateWithOptions.
Available in Mac OS X v10.6 and later.
(Read only property)

142.18.17 active as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates whether the application is currently frontmost. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox str(n.active)
```

Notes:

Available in Mac OS X v10.6 and later.
(Read only property)

142.18.18 bundleIdentifier as string

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates the CFBundleIdentifier of the application. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.bundleIdentifier
```

Notes:

The value of this property will be nil if the application does not have an Info.plist.
(Read only property)

142.18.19 bundleURL as string

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates the URL to the application's bundle. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.bundleURL
```

Notes:

Available in Mac OS X v10.6 and later.
(Read only property)

142.18.20 executableArchitecture as Integer

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates the URL to the application's executable. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox str(n.executableArchitecture) // shows 7
```

Notes:

Available in Mac OS X v10.6 and later.
(Read only property)

142.18.21 executableURL as string

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates the URL to the application's executable. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.executableURL
```

Notes:

Available in Mac OS X v10.6 and later.
(Read only property)

142.18.22 finishedLaunching as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates whether the receiver's process has finished launching, (read-only)
Notes:

The value of this property corresponds to the running application having received an NSApplicationDidFinishLaunchingNotification notification internally. Some applications do not post this notification (applications that do not rely on NSApplication) and so are never reported as finished launching.
Available in Mac OS X v10.6 and later.
(Read only property)

142.18.23 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the NSRunningApplication object.
Notes: (Read and Write property)

142.18.24 hidden as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates whether the application is currently hidden. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox str(n.hidden)
```

Notes:

Available in Mac OS X v10.6 and later.
(Read only property)

142.18.25 icon as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the icon for the receiver's application. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

dim i as NSImageMBS = n.icon
```

```
// without this call the size is 32x32 Pixel
i.setSize 512,512

Backdrop = i.CopyPictureWithMask
```

Notes:

Available in Mac OS X v10.6 and later.
(Read only property)

142.18.26 launchDate as date

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates the date when the application was launched. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.launchDate.ShortTime
```

Notes:

This property is not available for all applications. Specifically, it is not available for applications that were launched not launched by LaunchServices.
Available in Mac OS X v10.6 and later.
(Read only property)

142.18.27 launchDateTime as DateTime

MBS MacCocoa Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates the date when the application was launched. (read-only)
Notes:

This property is not available for all applications. Specifically, it is not available for applications that were launched not launched by LaunchServices.
Available in Mac OS X v10.6 and later.
(Read only property)

142.18.28 localizedName as string

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates the localized name of the application. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.localizedName
```

Notes:

The value of this property is dependent on the current localization of the application and is suitable for presentation to the user.
Available in Mac OS X v10.6 and later.
(Read only property)

142.18.29 ownsMenuBar as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns whether the application owns the current menu bar.
Example:

```
// put in a timer...
dim r as NSRunningApplicationMBS = NSRunningApplicationMBS.currentApplication
window1.Title = str(r.ownsMenuBar)
```

Notes:

Available in Mac OS X v10.7 and later.
(Read only property)

142.18.30 processIdentifier as Integer

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates the process identifier (pid) of the application. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox str(n.processIdentifier)
```

Notes:

Not all applications have a pid. Applications without a return a value of -1.
Do not rely on this for comparing processes, instead compare NSRunningApplication instances using isEqual:.
Available in Mac OS X v10.6 and later.
(Read only property)

142.18.31 terminated as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates that the receiver's application has terminated. (read-only)
Notes:

The value of terminated is true if the receiver's application has terminated, otherwise false.
This property is observable using key-value observing.
Available in Mac OS X v10.6 and later.
(Read only property)

142.18.32 Constants

142.18.33 NSApplicationActivateAllWindows = 1

MBS MacCocoa Plugin, Plugin Version: 9.7.

Function: One of the flag constants for activateWithOptions.
Notes:

By default, activation brings only the main and key windows forward. If you specify NSApplicationActivateAllWindows, all of the application's windows are brought forward.
Available in Mac OS X v10.6 and later.

142.18.34 NSApplicationActivateIgnoringOtherApps = 2

MBS MacCocoa Plugin, Plugin Version: 9.7.

Function: One of the flag constants for activateWithOptions.
Notes:

By default, activation deactivates the calling app (assuming it was active), and then the new app is activated only if there is no currently active application. This prevents the new app from stealing focus from the user,

if the app is slow to activate and the user has switched to a different app in the interim. However, if you specify NSApplicationActivateIgnoringOtherApps, the application is activated regardless of the currently active app, potentially stealing focus from the user. You should rarely pass this flag because stealing key focus produces a very bad user experience.
Available in Mac OS X v10.6 and later.

142.18.35 NSApplicationActivationPolicyAccessory = 1

MBS MacCocoa Plugin, Plugin Version: 9.7.

Function: One of the constants used for following activation policies.
Notes:

The application does not appear in the Dock and does not have a menu bar, but it may be activated programmatically or by clicking on one of its windows. This corresponds to value of the LSUIElement key in the application's Info.plist being 1.
Available in Mac OS X v10.6 and later.

142.18.36 NSApplicationActivationPolicyProhibited = 2

MBS MacCocoa Plugin, Plugin Version: 9.7.

Function: One of the constants used for following activation policies.
Notes:

The application does not appear in the Dock and may not create windows or be activated. This corresponds to the value of the LSBackgroundOnly key in the application's Info.plist being 1. This is also the default for unbundled executables that do not have Info.plists.
Available in Mac OS X v10.6 and later.

142.18.37 NSApplicationActivationPolicyRegular = 0

MBS MacCocoa Plugin, Plugin Version: 9.7.

Function: One of the constants used for following activation policies.
Notes:

The application is an ordinary app that appears in the Dock and may have a user interface. This is the default for bundled apps, unless overridden in the Info.plist.
Available in Mac OS X v10.6 and later.

142.19 class NSXPCConnectionMBS

142.19.1 class NSXPCConnectionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The NSXPCConnection class provides a bi-directional communication channel between two processes.
Notes:

This class is the primary means of creating and configuring the communication mechanism between two processes. Each process has one instance of this class to represent the endpoint in the communication channel.

Requires a setup with info.plist entries, correct permissions and code signing.

142.19.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr1

142.19.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr1

142.19.4 Methods

142.19.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.

142.19.6 CallMethod(name as string, tag as Variant, params() as Variant)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calls method and passes parameters.
Notes: Returns array of variant.

142.19.7 Close

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Closes the connection.

142.19.8 Constructor(endpoint as NSXPCListenerEndpointMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Initializes an NSXPCConnection object to connect to an NSXPCListener object in another process, identified by an NSXPCListenerEndpoint object.
Notes:

endpoint: The desired listener endpoint for the service.
Available in OS X v10.8 and later.
See also:

- 142.19.9 Constructor(MachOServiceName as string, flags as Integer) 21968
- 142.19.10 Constructor(ServiceName as string) 21969

142.19.9 Constructor(MachOServiceName as string, flags as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes an NSXPCConnection object to connect to a LaunchAgent or LaunchDaemon with a name advertised in a launchd.plist.
Notes:

For example, if an agent is managed with launchd and has a launchd.plist in
textasciitilde /Library/LaunchAgents, this method would create a connection to that agent. The agent should use NSXPCListener to wait for new connections.

If the connection is being made to a process that is running in a privileged Mach bootstrap context (for example, a daemon started by a launchd property list in /Library/LaunchDaemons), then pass the NSXPC-ConnectionPrivileged option.

Available in OS X v10.8 and later.
See also:

- 142.19.8 Constructor(endpoint as NSXPCListenerEndpointMBS) 21968
- 142.19.10 Constructor(ServiceName as string) 21969

142.19.10 Constructor(ServiceName as string)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Initializes an NSXPCConnection object to connect to an NSXPCListener object in an XPC service, identified by a service name.
Notes:

XPC services are helper processes that are usually part of your application bundle. The service should use NSXPCListener to wait for new connections.
Available in OS X v10.8 and later.
See also:

- 142.19.8 Constructor(endpoint as NSXPCListenerEndpointMBS) 21968
- 142.19.9 Constructor(MachOServiceName as string, flags as Integer) 21968

142.19.11 Destructor

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The destructor.

142.19.12 invalidate

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Invalidates the connection.
Notes: When you call this method, all outstanding reply blocks, error handling blocks, and invalidation blocks are called on the message handling queue. The connection must be invalidated before it is deallocated. After a connection is invalidated, no more messages may be sent or received.

142.19.13 resume

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Starts or resumes handling of messages on a connection.
Notes:

All connections start suspended. You must resume them before they start processing received messages or sending messages through the remoteObjectProxy object.
Available in OS X v10.8 and later.

142.19.14 suspend

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suspends the connection.
Notes:

Suspends and resumes must be balanced before the connection may be invalidated.
Available in OS X v10.8 and later.

142.19.15 Properties

142.19.16 auditSessionIdentifier as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The BSM audit session identifier for the connecting process.
Notes:

This attribute may be used by the listener delegate to accept or reject connections.
(Read only property)

142.19.17 effectiveGroupIdentifier as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The effective group ID (EGID) of the connecting process.
Notes:

This attribute may be used by the listener delegate to accept or reject connections.
(Read only property)

142.19.18 effectiveUserIdentifier as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The effective user ID (EUID) of the connecting process.
Notes:

This attribute may be used by the listener delegate to accept or reject connections.
(Read only property)

142.19.19 endpoint as NSXPCListenerEndpointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: If the connection was created with an NSXPCListenerEndpoint object, returns the endpoint object used.
Notes: (Read only property)

142.19.20 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

142.19.21 processIdentifier as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The process ID (PID) of the connecting process.
Notes:

This attribute may be used by the listener delegate to accept or reject connections.
Available in OS X v10.8 and later.
(Read only property)

142.19.22 serviceName as String

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The name of the XPC service that this connection was configured to connect to.
Notes: (Read only property)

142.19.23 Events

142.19.24 CallMethodReturned(name as string, tag as Variant, Parameters() as Variant, Results() as Variant)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: The event called when method returns.

142.19.25 ErrorHandler(error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: The error event for errors happening when calling method.

142.19.26 InterruptionHandler

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: The event is called if the remote process exits or crashes.
Notes: It may be possible to re-establish the connection by simply sending another message. The handler is invoked on the same queue as reply messages and other handlers, and it is always executed after any other messages or reply block handlers (except for the invalidation handler).

142.19.27 InvalidationHandler

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: This event is invoked on the same queue as reply messages and other handlers, and is always executed last (after the interruption handler, if required).
Notes: You may not send messages over the connection from within an invalidation handler block.

142.19.28 Constants

142.19.29 NSXPCConnectionPrivileged = 1

MBS MacFrameworks Plugin, Plugin Version: 14.2.

Function: One of the options that you can pass to a connection.
Notes:

Use this option if connecting to a service in the privileged Mach bootstrap (for example, a daemon with a launchd.plist in /Library/LaunchDaemons).
Available in OS X v10.8 and later.

142.20 class NSXPCListenerEndpointMBS

142.20.1 class NSXPCListenerEndpointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Class that "names" a specific NSXPCListener object.
Notes:

An instance may be retrieved from an NSXPCListener and sent over existing NSXPCConnections. A process may then use it to create a new NSXPCConnection to the original NSXPCListener.

This pattern is useful if you have a service which multiplexes work to other services. The service can act as an intermediate helper. The requesting application does not need to know specifically which service it is connecting to, just that it implements a known NSXPCInterface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo / Real Studio Plugins, version 14.2pr1

142.20.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr1

142.20.4 Methods

142.20.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.

142.20.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

142.20.7 Properties

142.20.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

142.21 class NSXPCListenerMBS

142.21.1 class NSXPCListenerMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The NSXPCListener class and its delegate are responsible for waiting for new incoming connections, configuring them, and accepting or rejecting them.
Notes:

Each XPC service, launchd agent, or launchd daemon typically has at least one NSXPCListener object that listens for connections to a specified service name.
When the listener receives a new connection request, it creates a new NSXPCConnection object, then asks the delegate to inspect, configure, and resume the connection object by calling the delegate's shouldAcceptNewConnection event.

142.21.4 Methods

142.21.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.

142.21.6 Close

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Closes listener.

142.21.7 Constructor(Anonymous as boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new listener connection.
Notes:

If Anonymous is true: Initializes with a new anonymous listener connection.
If false: Initializes with the singleton listener used to listen for incoming connections in an XPC service.

see also:
https://developer.apple.com/library/mac/documentation/Foundation/Reference/NSXPCListener_reference/translated_content/NSXPCListener.html
See also:

- 142.21.8 Constructor(Name as string) 21976

142.21.8 Constructor(Name as string)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes a listener in a LaunchAgent or LaunchDaemon which has a name advertised in a launchd.plist file.
Notes:

For example, you might use this in an agent launched by launchd with a launchd.plist contained in textasciitilde /Library/LaunchAgents, or a daemon launched by launchd with a launchd.plist contained in /Library/LaunchDaemons.

Available in OS X v10.8 and later.
See also:

- 142.21.7 Constructor(Anonymous as boolean = false) 21975

142.21.9 Destructor

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The destructor.

142.21.10 invalidate

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Invalidates the listener.
Notes:

After calling this method, no more connections are created. Once a listener is invalidated it may not be resumed or suspended.

Available in OS X v10.8 and later.

142.21.11 resume

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Starts processing of incoming requests.
Notes:

All listeners start suspended and must be resumed before they begin processing incoming requests.

If called on the serviceListener object, this method never returns. Therefore, you should call it as the last step inside the XPC service's main function after setting up any desired initial state and configuring the listener itself.

If called on any other NSXPCListener, the connection is resumed, and the method returns immediately.
Available in OS X v10.8 and later.

142.21.12 suspend

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suspends the listener.
Notes:

Suspends and resumes must be balanced before the listener may be invalidated.
Available in OS X v10.8 and later.

142.21.13 Properties

142.21.14 endpoint as NSXPCListenerEndpointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an endpoint object that may be sent over an existing connection.
Notes:

The receiver of the endpoint can use this object to create a new connection to this NSXPCListener object.
The resulting NSXPCListenerEndpoint object uniquely names this listener object across connections.
(Read only property)

142.21.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

142.21.16 Events

142.21.17 CallMethod(Name as string, Parameters() as Variant) as Variant()

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Called on the listener side when a method was called on the connection.
Notes: Return array of variant for the results.

142.21.18 shouldAcceptNewConnection(newConnection as NSXPCConnection-MBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Accepts or rejects a new connection to the listener.
Notes:

To accept the connection, first configure the connection if desired, then call resume on the new connection, then return true.
To reject the connect, return a value of false. This causes the connection object to be invalidated.
In this method, you can also set up properties on the connection object, such as its exported object and interfaces. Be sure to call resume when you are finished configuring the connection object and are ready for it to receive messages.

142.22 class ProcessMBS

142.22.1 class ProcessMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Adds the class ProcessMBS to Xojo to get details about all running applications.
Example:

```
// Shows how to use the processInformationCFDictionary function to
// decide on Mac OS X whether an application is a background only one.

dim myProcess as ProcessMBS
dim myCFDictionary as CFDictionaryMBS
dim myCFBoolean as CFBooleanMBS
dim myCFObject as CFObjectMBS

myProcess=new ProcessMBS
myProcess.GetCurrentProcess
myCFDictionary = CFDictionaryMBS(myProcess.processInformationCFDictionary)
myCFObject = myCFDictionary.Value(newcfstringmbs("LSBackgroundOnly"))
myCFBoolean=CFBooleanMBS(myCFObject)

if myCFBoolean.Value then
MsgBox "is background"
else
MsgBox "is not background"
end if
```

Notes:

Requires Windows 95 or Windows 2000 to run on Windows.

To find all windows on Windows, use the WindowsListMBS class.
To find all windows on Mac OS X, use the CGSWindowListMBS class.

For newer code on Mac, please check NSRunningApplicationMBS class.

142.22.4 Methods

142.22.5 Bundle as folderitem

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the bundle path.
Notes:

Maybe nil if not available.
Returns on Mac OS X the path to the main bundle of the process.

142.22.6 BundleID as string

MBS Util Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the bundle identifier.
Notes:

Maybe "" if not available.
Returns on Mac OS X the identifier to the main bundle of the process.

142.22.7 CurrentProcessID as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the process ID of the application.
Example:

```
MsgBox str(ProcessMBS.CurrentProcessID)
```

142.22.8 GetCurrentProcess

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Load the current Process' information into the class.
Notes: This should always be your Xojo application.

142.22.9 GetfirstProcess

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Load the first Process into the class.
Example:

```
dim p as ProcessMBS
p=new ProcessMBS
p.GetfirstProcess ' get first
do
msgBox p.name
loop until not p.GetNextProcess ' get next till no more
```

142.22.10 GetFrontProcess

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Load the frontmost Process' information into the class.

142.22.11 GetNextProcess as boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Load the next Process into the class.
Example:

```
dim p as ProcessMBS
p=new ProcessMBS
p.GetfirstProcess ' get first
do
msgBox p.name
loop until not p.GetNextProcess ' get next till no more
```

Notes: Returns true if successfull.

142.22.12 GetProcess(serial as memoryblock)

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Load the process information for the process with the given serial.

142.22.13 KillProcess as Integer

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Kills a Process on Mac OS X or Windows.
Example:

```
dim p as ProcessMBS
p=new ProcessMBS
p.getcurrentprocess
msgbox str(p.killprocess)
```

Notes:

Returns -1 if function is not available. Else returns a Mac OS error code where 0 equals "no error".

Sets the lasterror property.

Lasterror codes on Windows:
0 - failed
1 - normal exit
2 - forced exit

If you kill the main process of a task, this can kill the sub processes, too.
See also:

- 142.22.14 KillProcess(ProcessID as Integer, timeout as Integer) as Integer 21983
- 142.22.15 KillProcess(timeoutms as Integer) as Integer 21983

142.22.14 KillProcess(ProcessID as Integer, timeout as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Kills a Process on Mac OS X or Windows.
Example:

```
const pid = 12345 // put the PID here
call ProcessMBS.KillProcess pid, 100
```

Notes:

Returns -1 if function is not available. Else returns a Mac OS error code where 0 equals "no error".

Returns on Windows:
0 - failed
1 - normal exit
2 - forced exit

The timeout is in milliseconds.
If you kill the main process of a task, this can kill the sub processes, too.
See also:

- 142.22.13 KillProcess as Integer 21982
- 142.22.15 KillProcess(timeoutms as Integer) as Integer 21983

142.22.15 KillProcess(timeoutms as Integer) as Integer

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Kills a Process on Mac OS X or Windows.
Example:

```
dim p as ProcessMBS
p=new ProcessMBS
p.getcurrentprocess
msgbox str(p.killprocess)
```

Notes:

Returns -1 if function is not available. Else returns a Mac OS error code where 0 equals "no error".

Sets the lasterror property.

Lasterror codes on Windows:
0 - failed
1 - normal exit
2 - forced exit

The timeout is in milliseconds. If you don't specify a timeout, 1000 ms are used.
If you kill the main process of a task, this can kill the sub processes, too.
See also:

- 142.22.13 KillProcess as Integer 21982
- 142.22.14 KillProcess(ProcessID as Integer, timeout as Integer) as Integer 21983

142.22.16 MacProcessSerial as memoryblock

MBS Util Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the serial number for this process as a memoryblock with binary content.
Notes:

On Mac OS every process as its own unique ID. (If you launch one application two times, they may have everything equal except the process serial.)

The serial itself is a 8byte long memoryblock (two integer).

Returns nil on any error.

142.22.17 ProcessInformationCFDictionary as object

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a CFDictionaryMBS object with the properties of the process.
Example:

```
dim p as ProcessMBS
dim d as CFDictionaryMBS
```

```
p=new ProcessMBS

p.GetCurrentProcess

d=CFDictionaryMBS(p.ProcessInformationCFDictionary)

if d=nil then
MsgBox "This example works only on Mac OS X 10.2!"
else
// use information in dictionary
end if
```

Notes:

Only available on Mac OS X 10.2 or newer.
(And in Mac OS X 10.2 is a bug which may lead into a crash by using this function. Fixed in Mac OS X 10.3)
The function returns a CFDictionaryMBS, but to avoid plugin dependencies, the function is declared as Object, so RB 4.5 don't crash when an application uses the process plugin and dosn't use the CF Plugin.

Result:
An immutable CFDictionary containing these keys and their values. Keys marked with an '*' are optional. Over time more keys may be added.

142.22.18 QuitProcess as Integer

MBS Util Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Quits a Process on Mac OS.
Example:

```
dim p as ProcessMBS
p=new ProcessMBS
p.getcurrentprocess
msgbox str(p.QuitProcess)
```

Notes:

Returns -1 if function is not available. Else returns a Mac OS error code where 0 equals "no error".
Sets the lasterror property.

Key Name	Type
"PSN"	CFNumber, kCFNumberLongLongType
"Flavor"	CFNumber, kCFNumberSInt32
"Attributes"	CFNumber, kCFNumberSInt32
"ParentPSN"	CFNumber, kCFNumberLongLong
"FileType"	CFString, file type
"FileCreator"	CFString, file creator
"pid"	CFNumber, kCFNumberLongType
"LSBackgroundOnly"	CFBoolean
"LSUIElement"	CFBoolean
"IsHiddenAttr"	CFBoolean
"IsCheckedInAttr"	CFBoolean
"RequiresClassic"	CFBoolean
"RequiresCarbon"	CFBoolean
"LSUserQuitOnly"	CFBoolean
"LSUIPresentationMode"	CFNumber, kCFNumberShortType
"BundlePath"	CFString
kIOBundleExecutableKey	CFString
kIOBundleNameKey	CFString
kIOBundleIdentifierKey	CFString

142.22.19 SameAs(other as ProcessMBS) as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if two ProcessMBS objects have the same Process.

142.22.20 SetFrontProcessWithOptions(options as Integer)

MBS Util Plugin, Plugin Version: 4.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Moves the current process to the front.
Example:

```
dim p as ProcessMBS

// move my front window to the front
p=new ProcessMBS
p.GetCurrentProcess
p.SetFrontProcessWithOptions 1
```

Notes:

If you pass 0 in the options parameter, the process is activated and all process windows are brought forward.

If you pass kSetFrontProcessFrontWindowOnly (value 1), the process is activated and the frontmost non-floating window is brought forward. (Mac OS X only)

142.22.21 SetServiceMode(ismode as boolean) as boolean

MBS Util Plugin, Plugin Version: 2.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: If an application is a service, it is not listed inside the Windows force quit window.
Notes: Works only on Windows 95, 98 and ME.

142.22.22 TransformProcessType(mode as Integer) as Integer

MBS Util Plugin, Plugin Version: 15.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Changes the 'type' of the process specified in the psn parameter.
Notes:

Given a psn for an application, this call transforms that application into the given type. Foreground applications have a menu bar and appear in the Dock. Background applications do not appear in the Dock, do not have a menu bar (and should not have windows or other user interface). UIElement applications do not have a menu bar, do not appear in the dock, but may in limited circumstances present windows and user interface. If a foreground application is frontmost when transformed into a background application, it is first hidden and another application is made frontmost. A UIElement or background-only application which is transformed into a foreground application is not brought to the front (use SetFrontProcess() after the transform if this is required) nor will it be shown if it is hidden (even if hidden automatically by being transformed into a background-only application), so the caller should use ShowHideProcess() to show the application after it is transformed into a foreground application. Applications can only transform themselves; this call cannot change the type of another application.

Returns error code (0 for success).

142.22.23 TransformToForegroundApplication as Integer

MBS Util Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Transforms a background application to a foreground application.
Notes:

Returns a Mac OS error code. Returns -1 if the function is not available. You need to select a process first with Get*Process functions.
Requires Mac OS X 10.3.

You can use this call to transform a background-only application into a foreground application. A foreground application appears in the Dock (and in the Force Quit dialog) and contains a menu bar. This function does not cause the application to be brought to the front; you must set FrontProcess=true to do so.

While available starting in 10.3 "Panther," calling TransformProcessType on a UIElement application in 10.3 or 10.4 will return paramErr (-50), rendering it only usable on a full BackgroundOnly? application. Leopard supports foregrounding both UIElement and BackgroundOnly? applications.

142.22.24 Update

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Updates the classes information.
Notes: Use it if you want the current CPUTime value after some time.

142.22.25 WinFullProcessImagePath as string

MBS Util Plugin, Plugin Version: 9.6, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the full name of the executable image for the specified process.
Notes:

Returns empty string on any error like missing permissions.
The path is in the device style "Device\Harddisk0\Partition1\WINNT\System32\test.exe".

Requires Windows Vista or Windows Server 2008 or newer.

142.22.26 WinGetPriorityClass(ProcessID as Integer) as Integer

MBS Util Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the priority class for the specified process.
Notes:

You can pass ProcessID -1 to get the current process.
This value, together with the priority value of each thread of the process, determines each thread's base priority level.

If the function succeeds, the return value is the priority class of the specified process.

The process's priority class is one of the following values:

Name	Value	Description
ABOVE_NORMAL_PRIORITY_CLASS	& h00008000	Process that has priority above NORMAL_PRIORITY_CLASS but below HIGH_PRIORITY_CLASS.
BELOW_NORMAL_PRIORITY_CLASS	& h00004000	Process that has priority above IDLE_PRIORITY_CLASS but below NORMAL_PRIORITY_CLASS.
HIGH_PRIORITY_CLASS	& h00000080	Process that performs time-critical tasks that must be executed immediately for it to run correctly. The threads of a high-priority class process preempt the threads of normal or idle priority class processes. An example is the Task List, which must respond quickly when called by the user, regardless of the load on the operating system. Use extreme care when using the high-priority class, because a high-priority class CPU-bound application can use nearly all available cycles.
IDLE_PRIORITY_CLASS	& h00000040	Process whose threads run only when the system is idle and are preempted by the threads of any process running in a higher priority class. An example is a screen saver. The idle priority class is inherited by child processes.
NORMAL_PRIORITY_CLASS	& h00000020	Process with no special scheduling needs.
REALTIME_PRIORITY_CLASS	& h00000100	Process that has the highest possible priority. The threads of a real-time priority class process preempt the threads of all other processes, including operating system processes performing important tasks. For example, a real-time process that executes for more than a very brief interval can cause disk caches not to flush or cause the mouse to be unresponsive.

Every thread has a base priority level determined by the thread's priority value and the priority class of its process. The operating system uses the base priority level of all executable threads to determine which thread gets the next slice of CPU time. Threads are scheduled in a round-robin fashion at each priority level, and only when there are no executable threads at a higher level will scheduling of threads at a lower level take place.
For a table that shows the base priority levels for each combination of priority class and thread priority value, see Scheduling Priorities.
Priority class is maintained by the executive, so all processes have a priority class that can be queried.

For Mac and Linux, please use Priority.

142.22.27 WinModulePath as string

MBS Util Plugin, Plugin Version: 9.6, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the path the first code file in this process.
Notes:

Returns empty string on any error like missing permissions.
The path is in the typical style "C:\path\name.exe".

142.22.28 WinProcessImagePath as string

MBS Util Plugin, Plugin Version: 9.6, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the name of the executable file for the specified process.
Notes:

Returns empty string on any error like missing permissions.
The path is in the device style "Device\Harddisk0\Partition1\WINNT\System32\test.exe".

Requires Windows XP or Windows Server 2003 or newer.

142.22.29 WinSetPriorityClass(ProcessID as Integer, PriorityClass as Integer) as Integer

MBS Util Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the priority class for the specified process.
Notes:

You can pass ProcessID -1 to get the current process.
This value together with the priority value of each thread of the process determines each thread's base priority level.

The process's priority class is one of the following values:

Name	Value	Description
ABOVE_NORMAL_PRIORITY_CLASS	& h00008000	Process that has priority above NORMAL_PRIORITY_CLASS but below HIGH_PRIORITY_CLASS.
BELOW_NORMAL_PRIORITY_CLASS	& h00004000	Process that has priority above IDLE_PRIORITY_CLASS but below NORMAL_PRIORITY_CLASS.
HIGH_PRIORITY_CLASS	& h00000080	Process that performs time-critical tasks that must be executed immediately for it to run correctly. The threads of a high-priority class process preempt the threads of normal or idle priority class processes. An example is the Task List, which must respond quickly when called by the user, regardless of the load on the operating system. Use extreme care when using the high-priority class, because a high-priority class CPU-bound application can use nearly all available cycles.
IDLE_PRIORITY_CLASS	& h00000040	Process whose threads run only when the system is idle and are preempted by the threads of any process running in a higher priority class. An example is a screen saver. The idle priority class is inherited by child processes.
NORMAL_PRIORITY_CLASS	& h00000020	Process with no special scheduling needs.
REALTIME_PRIORITY_CLASS	& h00000100	Process that has the highest possible priority. The threads of a real-time priority class process preempt the threads of all other processes, including operating system processes performing important tasks. For example, a real-time process that executes for more than a very brief interval can cause disk caches not to flush or cause the mouse to be unresponsive.

Every thread has a base priority level determined by the thread's priority value and the priority class of its process. The operating system uses the base priority level of all executable threads to determine which thread gets the next slice of CPU time. Threads are scheduled in a round-robin fashion at each priority level, and only when there are no executable threads at a higher level will scheduling of threads at a lower level take place.

For a table that shows the base priority levels for each combination of priority class and thread priority value, see Scheduling Priorities.
Priority class is maintained by the executive, so all processes have a priority class that can be queried.

Every thread has a base priority level determined by the thread's priority value and the priority class of its process. The system uses the base priority level of all executable threads to determine which thread gets the next slice of CPU time. The SetThreadPriority function enables setting the base priority level of a thread relative to the priority class of its process. For more information, see Scheduling Priorities.
The *_PRIORITY_CLASS values affect the CPU scheduling priority of the process. For processes that perform background work such as file I/O, network I/O, or data processing, it is not sufficient to adjust the CPU scheduling priority; even an idle CPU priority process can easily interfere with system responsiveness when it uses the disk and memory. Processes that perform background work should use the PROCESS_MODE_BACKGROUND_BEGIN and PROCESS_MODE_BACKGROUND_END values to adjust their resource scheduling priorities; processes that interact with the user should not use PROCESS_MODE_BACKGROUND_BEGIN.
If a process is in background processing mode, the new threads it creates will also be in background processing mode. When a thread is in background processing mode, it should minimize sharing resources such as critical sections, heaps, and handles with other threads in the process, otherwise priority inversions can occur. If there are threads executing at high priority, a thread in background processing mode may not be scheduled promptly, but it will never be starved.
Each thread can enter background processing mode independently using SetThreadPriority. Do not call SetPriorityClass to enter background processing mode after a thread in the process has called SetThreadPriority to enter background processing mode. After a process ends background processing mode, it resets all threads in the process; however, it is not possible for the process to know which threads were already in background processing mode.

On any error the value is zero.
For Mac and Linux, please use Priority.

142.22.30 Properties

142.22.31 CPUTime as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the number of the ticks this Process did get to calculate.
Notes:

Unit is 1/60 of a second.
On Mac OS X this value is not available and normally 0.
(Read only property)

142.22.32 CurrentProcess as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if the application is in the current Process.
Notes:

This should always be true because you are running Xojo as the current ProcessMBS while you ask for this. (Read only property)

142.22.33 flags as Integer

MBS Util Plugin, Plugin Version: 4.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The flags for this process on Mac OS.
Example:

```
Sub Open()
// List all visible processes

dim s as string
dim p as ProcessMBS
dim d As CFDictionaryMBS
dim LSBackgroundOnly, LSUIElement As CFStringMBS
dim b As CFBooleanMBS
dim obj As CFObjectMBS
dim visible as Boolean

const modeOnlyBackground=& h00000400

LSUIElement=NewCFStringMBS("LSUIElement")
LSBackgroundOnly = NewCFStringMBS("LSBackgroundOnly")

p = new ProcessMBS
p.getfirstProcess

do
visible=True

// Mac OS X
d = CFDictionaryMBS(p.ProcessInformationCFDictionary)

if d <>nil Then
obj = d.Value(LSBackgroundOnly)
if obj isa CFBooleanMBS then
b=CFBooleanMBS(obj)
```

```
if b.value Then
visible=false
end
end if

obj= d.Value(LSUIElement)
if obj isa CFBooleanMBS then
b=CFBooleanMBS(obj)

if b.value Then
visible=false
end
end if
end if

// Mac OS 9

if BitwiseAnd(p.Flags,modeOnlyBackground)<>0 then
visible=False
end if

if visible then
ListBox1.AddRow p.Name
end if

loop until not p.GetNextProcess
End Sub
```

Notes:

Returns 0 on any error.

Process mode flags. These flags indicate whether the process is an application or desk accessory. For applications, this field also returns information specified in the application's 'SIZE' resource. This information is returned as flags. You can refer to these flags by using these constants:

(Read only property)

142.22.34 FrontProcess as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if the application is in the front of all others.
Example:

modeDeskAccessory	& h00020000
modeMultiLaunch	& h00010000
modeNeedSuspendResume	& h00004000
modeCanBackground	& h00001000
modeDoesActivateOnFGSwitch	& h00000800
modeOnlyBackground	& h00000400
modeGetFrontClicks	& h00000200
modeGetAppDiedMsg	& h00000100
mode32BitCompatible	& h00000080
modeHighLevelEventAware	& h00000040
modeLocalAndRemoteHLEvents	& h00000020
modeStationeryAware	& h00000010
modeUseTextEditServices	& h00000008

```
dim p as new ProcessMBS
p.GetCurrentProcess
p.FrontProcess=true 'bring app to front
```

Notes:

This property is for read and write. Writing to it brings the Process to front.
(Read and Write property)

142.22.35 lasterror as Integer

MBS Util Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

As this property is introduced with MBS Plugin 3.1, only a few functions set it.
0 means no error, -1 means not available and anything else is a Mac OS error code.
(Read and Write property)

142.22.36 LaunchProcess as ProcessMBS

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the application which launched the current one.
Notes:

For some applications like the "loginwindow" it is nil, because there was no app to launch it other than the system itself.
(Read only property)

142.22.37 MacCreator as string

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the Mac Creator code for the application.
Notes: (Read only property)

142.22.38 MacType as string

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the Mac Type code for the application.
Notes:

Possible values:

"APPL"	normal application
"appe"	background application (Classic)
"APPC"	Control panel application (Classic)
"APPD"	Desktop Accessory (Classic)
"FNDR"	Finder

others may be possible.
(Read only property)

142.22.39 MemoryFree as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the size of the free space in the Process' memory partition.
Notes:

On Mac OS X normally 0.
(Read only property)

142.22.40 MemorySize as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns size of the Process' memory partition.
Notes:

On Mac OS X normally 0.
(Read only property)

142.22.41 Name as string

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the name of this application.
Notes:

Added Windows support in MBS Plugin 2.7 for this property.
(Read only property)

142.22.42 Path as folderitem

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the path of the Process' executable file.
Notes:

Maybe nil if not available.
Use this folderitem to get an icon for the Process.
(and this icon may be nil!)
(Read only property)

142.22.43 ProcessID as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the PID of the process for use in unix command line tools.
Example:

```
Function LoginWindowPID() as Integer
// returns Process ID of Loginwindow on Mac OS X.
// or 0 on error

dim p as ProcessMBS

p=new ProcessMBS
p.GetFirstProcess

do
```

```
if p.Name="loginwindow" then
Return p.ProcessID
end if
loop until not p.GetNextProcess
End Function
```

Notes:

Works only on Mac OS X.
See the "CPU Focus" application for an example.

Note that this call does not make sense for Classic applications, since they all share a single UNIX process ID.
(Read only property)

142.22.44 Visible as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if the application is visible.
Example:

```
// hide iTunes

dim p as new ProcessMBS

p.GetFirstProcess
do
if p.BundleID="com.apple.iTunes" then
p.Visible=false
exit
end if
loop until not p.GetNextProcess
```

Notes:

Works only on Mac OS X.
Returns false if not supported.

Sets the lasterror property.
(Read and Write property)

142.22.45 Priority as Integer

MBS Util Plugin, Plugin Version: 10.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The priority of the process.
Example:

```
dim p as new ProcessMBS

p.GetCurrentProcess

MsgBox str(p.priority) // shows 0

p.priority = 5

MsgBox str(p.priority) // shows 5
```

Notes:

20 (least) to -20 (max). Setting the value may be limited due to permissions.
(Read and Write computed property)
See also:

- 142.22.46 Priority(ProcessID as Integer) as Integer 21998

142.22.46 Priority(ProcessID as Integer) as Integer

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Sets or gets priority for a process on Mac and Linux.
Notes:

Value is in the range -20 to 20. The default priority is 0; lower priorities cause more favorable scheduling.
For Windows, please use WinSetPriorityClass and WinGetPriorityClass.
(Read and Write computed property)
See also:

- 142.22.45 Priority as Integer 21998

142.22.47 Constants

142.22.48 kProcessTransformToBackgroundApplication = 2

MBS Util Plugin, Plugin Version: 15.2.

Function: One of the process transformation types.
Notes:

Turn application in a background application.
functional in Mac OS X 10.7 and later

142.22.49 kProcessTransformToForegroundApplication = 1

MBS Util Plugin, Plugin Version: 15.2.

Function: One of the process transformation types.
Notes: Turn application in a foreground application.

142.22.50 kProcessTransformToUIElementApplication = 4

MBS Util Plugin, Plugin Version: 15.2.

Function: One of the process transformation types.
Notes:

Turn application in a user interface element application.
functional in Mac OS X 10.7 and later

142.23 class WindowsProcessMemoryInfoMBS

142.23.1 class WindowsProcessMemoryInfoMBS

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to get information about the memory usage of a process on Windows.

142.23.2 Blog Entries

- MBS Xojo Plugins, version 17.1pr2

142.23.3 Blog Entries

- MBS Xojo Plugins, version 17.1pr2

142.23.4 Methods

142.23.5 Constructor

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor which fills the values into the properties.
Example:

```
dim w as new WindowsProcessMemoryInfoMBS
msgbox "This application uses currently "+str(w.WorkingSetSize)+" Bytes of memory."
```

Notes: Queries the current process memory information.
See also:

- 142.23.6 Constructor(ProcessID as Integer) 22000

142.23.6 Constructor(ProcessID as Integer)

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor which fills the values into the properties.
Notes: Queries the process memory information of the process with the given ID.
See also:

- 142.23.5 Constructor 22000

142.23.7 Properties

142.23.8 PageFaultCount as Integer

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of page faults.
Notes: (Read only property)

142.23.9 PagefileUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current space allocated for the pagefile, in bytes. Those pages may or may not be in memory.
Notes: (Read only property)

142.23.10 PeakPagefileUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The peak space allocated for the pagefile, in bytes.
Notes: (Read only property)

142.23.11 PeakWorkingSetSize as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The peak working set size, in bytes.
Notes: (Read only property)

142.23.12 ProcessID as Integer

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The process ID of the process queried.
Notes:

Value is 0 if the query failed.
(Read only property)

142.23.13 QuotaNonPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The peak nonpaged pool usage, in bytes.
Notes: (Read only property)

142.23.14 QuotaPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current paged pool usage, in bytes.
Notes: (Read only property)

142.23.15 QuotaPeakNonPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current nonpaged pool usage, in bytes.
Notes: (Read only property)

142.23.16 QuotaPeakPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The peak paged pool usage, in bytes.
Notes: (Read only property)

142.23.17 WorkingSetSize as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current working set size, in bytes.
Notes:

This is the memory your application uses.
(Read only property)

142.24 class WindowsProcessStatisticsMBS

142.24.1 class WindowsProcessStatisticsMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to get information about process statistics on Windows.
Example:

```
dim c as new WindowsProcessStatisticsMBS
MsgBox str(C.PeakWorkingSetSize)
```

142.24.4 Methods

142.24.5 Constructor(ProcessID as Integer = -1, Mode as Integer = 255)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new object for given process and with given mode.
Example:

```
dim pid as Integer = -1
dim c as new WindowsProcessStatisticsMBS(pid, WindowsProcessStatisticsMBS.ModeMemoryCounters)
MsgBox str(C.PeakWorkingSetSize)
```

Notes:

If ProcessID is -1, the current process is queried.
Mode can be a combination of the Mode* constants you want to query. The Mode property will later contain the Mode* constants combination of the values which are valid.

142.24.6 Properties

142.24.7 CreationTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A file time that receives the creation time of the process.
Notes:

Property is valid if Mode contains ModeTimes.
(Read only property)

142.24.8 CycleTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The sum of the cycle time of all threads of the specified process.
Notes:

Property is valid if Mode contains ModeTimes.
This value can only be queried on Windows Vista or newer.
(Read only property)

142.24.9 ExitTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A file time that receives the exit time of the process. If the process has not exited, the content of this structure is undefined.
Notes:

Property is valid if Mode contains ModeTimes.
(Read only property)

142.24.10 HandleCount as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of handles in use by the process.
Example:

```
dim w as new WindowsProcessStatisticsMBS
dim n1 as Integer = w.HandleCount

dim x as new window1 // make a new window

w = new WindowsProcessStatisticsMBS
dim n2 as Integer = w.HandleCount

MsgBox str(n2)+" handles in used, "+str(n2-n1)+" used by second window"
```

Notes:

Value is -1 on an error.
(Read only property)

142.24.11 KernelTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A file time structure that receives the amount of time that the process has executed in kernel mode.
Notes:

The time that each of the threads of the process has executed in kernel mode is determined, and then all of those times are summed together to obtain this value.
Property is valid if Mode contains ModeTimes.
(Read only property)

142.24.12 Mode as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Which values have been queried.
Notes:

This value is a combination of the Mode* constants.
(Read only property)

142.24.13 OtherOperationCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of I/O operations performed, other than read and write operations.
Notes:

Property is valid if Mode contains ModeIOCounters.
(Read only property)

142.24.14 OtherTransferCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of bytes transferred during operations other than read and write operations.
Notes:

Property is valid if Mode contains ModeIOCounters.
(Read only property)

142.24.15 PageFaultCount as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of page faults.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

142.24.16 PagefileUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current space allocated for the pagefile, in bytes. Those pages may or may not be in memory.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

142.24.17 PeakPagefileUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The peak space allocated for the pagefile, in bytes.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

142.24.18 PeakWorkingSetSize as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The peak working set size, in bytes.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

142.24.19 ProcessID as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The process ID of the process queried.
Notes: (Read only property)

142.24.20 QuotaNonPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The peak nonpaged pool usage, in bytes.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

142.24.21 QuotaPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current paged pool usage, in bytes.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

142.24.22 QuotaPeakNonPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current nonpaged pool usage, in bytes.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

142.24.23 QuotaPeakPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The peak paged pool usage, in bytes.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

142.24.24 ReadOperationCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of read operations performed.
Notes:

Property is valid if Mode contains ModeIOCounters.
(Read only property)

142.24.25 ReadTransferCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of bytes read.
Notes:

Property is valid if Mode contains ModeIOCounters.
(Read only property)

142.24.26 TotalIdleTime as UInt64

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The amount of time that the system has been idle.
Notes: (Read only property)

142.24.27 TotalKernelTime as UInt64

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The amount of time that the system has spent executing in Kernel mode (including all threads in all processes, on all processors).
Notes:

This time value also includes the amount of time the system has been idle. So you may want to subtract idle time to get real kernel time.
(Read only property)

142.24.28 TotalUserTime as UInt64

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The amount of time that the system has spent executing in User mode (including all threads in all processes, on all processors).
Notes:

If you need to know what is the percentage of the CPU time spent for user applications, you need to read this value two times and calculate the delta.
(Read only property)

142.24.29 UserTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A file time structure that receives the amount of time that the process has executed in user mode.
Notes:

The time that each of the threads of the process has executed in user mode is determined, and then all of those times are summed together to obtain this value.
Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

142.24.30 WorkingSetSize as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current working set size, in bytes.
Notes:

This is the memory your application uses.
Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

142.24.31 WriteOperationCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of write operations performed.
Notes:

Property is valid if Mode contains ModeIOCounters.
(Read only property)

142.24.32 WriteTransferCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of bytes written.
Notes:

Property is valid if Mode contains ModeIOCounters.
(Read only property)

142.24.33 Constants

142.24.34 ModeCycleTime = 8

MBS Win Plugin, Plugin Version: 10.3.

Function: One of the mode constants.
Notes: Whether to query the cycle time.

142.24.35 ModeHandles = 32

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the mode constants.
Notes: Whether to query the handle count.

142.24.36 ModeIOCounters = 2

MBS Win Plugin, Plugin Version: 10.3.

Function: One of the mode constants.
Notes: Whether to query the IOCounters.

142.24.37 ModeMemoryCounters = 1

MBS Win Plugin, Plugin Version: 10.3.

Function: One of the mode constants.
Notes: Whether to query the memory counters.

142.24.38 ModeTimes = 4

MBS Win Plugin, Plugin Version: 10.3.

Function: One of the mode constants.
Notes: Whether to query the time values.

142.24.39 ModeTotalTime = 16

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the mode constants.
Notes:

Whether to query the total CPU time values.
Requires Windows XP with SP1.

142.25 class WindowsVMStatisticsMBS

142.25.1 class WindowsVMStatisticsMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Holds information about the current Windows memory status.

142.25.2 Blog Entries

142.25.4 Methods

142.25.5 Constructor

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new statistics object with current values.
Example:

```
// show values in a listbox:
dim w as new WindowsVMStatisticsMBS

list.AddRow "Pagesize: "+format(w.Pagesize,"0")
list.AddRow "MemoryLoad: "+format(w.MemoryLoad,"0")
list.AddRow "AvailablePageFileMemory: "+format(w.AvailablePageFileMemory,"0")
list.AddRow "AvailablePhysicalMemory: "+format(w.AvailablePhysicalMemory,"0")
list.AddRow "AvailableVirtualMemory: "+format(w.AvailableVirtualMemory,"0")
list.AddRow "TotalPageFileMemory: "+format(w.TotalPageFileMemory,"0")
list.AddRow "TotalPhysicalMemory: "+format(w.TotalPhysicalMemory,"0")
list.AddRow "TotalVirtualMemory: "+format(w.TotalVirtualMemory,"0")
```

142.25.6 Properties

142.25.7 AllocationGranularity as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The granularity for the starting address at which virtual memory can be allocated.
Notes:

Typically 64 KB.
(Read only property)

142.25.8 AvailablePageFileMemory as Int64

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the number of bytes available in the paging file.
Notes: (Read only property)

142.25.9 AvailablePhysicalMemory as Int64

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the number of bytes of physical memory available.
Notes: (Read only property)

142.25.10 AvailableVirtualMemory as Int64

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the number of bytes of unreserved and uncommitted memory in the user mode portion of the virtual address space of the calling process.
Notes: (Read only property)

142.25.11 Memoryload as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies a number between 0 and 100 that gives a general idea of current memory utilization, in which 0 indicates no memory use and 100 indicates full memory use.
Notes: (Read only property)

142.25.12 Pagesize as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of one memory page in memory.
Notes:

On Intel 80386 or newer CPUs, it should be 4096 Bytes.
(Read only property)

142.25.13 TotalPageFileMemory as Int64

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the total number of bytes that can be stored in the paging file. Note that this number does not represent the actual physical size of the paging file on disk.
Notes: (Read only property)

142.25.14 TotalPhysicalMemory as Int64

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the total number of bytes of physical memory.
Notes: (Read only property)

142.25.15 TotalVirtualMemory as Int64

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the total number of bytes that can be described in the user mode portion of the virtual address space of the calling process.
Notes:

Value is 0 on any error.
(Read only property)

Chapter 143

Quartz Composer

143.1 class QCCompositionMBS

143.1.1 class QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The composition class.
Notes:

The QCComposition class represents a Quartz Composer composition that either:

- comes from the system-wide composition repository (/Library/Compositions and textasciitilde /Library/Compositions) where it can be accessed by any application through the methods of the QCCompositionRepository class
- is created from an arbitrary source (typically a file on disk) using one of its methods

This class cannot be subclassed.

A QCComposition object has the following information associated with it and that you can obtain by using the appropriate method of the QCComposition class:

- Attributes include the name and description of the composition, copyright information, and whether or not its provided by OS X (built-in).
- The protocols that the composition conforms to. A composition protocol defines a set of required and optional input parameters and output results.

Many methods of the QCRenderer, QCCompositionLayer, and QCView classes take a QCComposition object as a parameter.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

143.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr2

143.1.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr2

143.1.4 Methods

143.1.5 compositionWithData(data as MemoryBlock) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a composition object initialized with the contents of a Quartz Composer composition file.
Example:

```
dim data as MemoryBlock // composition file content in MemoryBlock variable
dim q as QCCompositionMBS = QCCompositionMBS.compositionWithData(data)
```

Notes:

data: The contents of a file created with the Quartz Composer developer tool.

Returns a Quartz Composer composition object or nil if there is an error.
See also:

- 143.1.6 compositionWithData(data as string) as QCCompositionMBS 22016

143.1.6 compositionWithData(data as string) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a composition object initialized with the contents of a Quartz Composer composition file.
Example:

```
dim data as string // composition file content in string variable
dim q as QCCompositionMBS = QCCompositionMBS.compositionWithData(data)
```

Notes:

data: The contents of a file created with the Quartz Composer developer tool.

Returns a Quartz Composer composition object or nil if there is an error.
See also:

- 143.1.5 compositionWithData(data as MemoryBlock) as QCCompositionMBS 22016

143.1.7 compositionWithFile(file as folderitem) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a composition object initialized with a Quartz Composer composition file.
Example:

```
dim file as folderitem // your folderitem
dim q as QCCompositionMBS = QCCompositionMBS.compositionWithFile(file)
```

Notes:

file: A path to a file created with the Quartz Composer developer tool (.qtz extension).

Returns a Quartz Composer composition object or nil if there is an error.
See also:

- 143.1.8 compositionWithFile(path as string) as QCCompositionMBS 22017

143.1.8 compositionWithFile(path as string) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a composition object initialized with a Quartz Composer composition file.
Example:

```
dim path as string = "/System/Library/Compositions/Rollercoaster.qtz" // your path
dim q as QCCompositionMBS = QCCompositionMBS.compositionWithFile(path)
```

Notes:

file: A path to a file created with the Quartz Composer developer tool (.qtz extension).

Returns a Quartz Composer composition object or nil if there is an error.
See also:

- 143.1.7 compositionWithFile(file as folderitem) as QCCompositionMBS 22017

143.1.9 Constructor

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

143.1.10 copy as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a copy of the composition.

143.1.11 getAttributes as dictionary

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the attributes of the composition.

143.1.12 inputKeys as string()

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array listing the keys that identify the input ports of the root patch of the composition.

143.1.13 outputKeys as string()

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array listing the keys that identify the output ports of the root patch of the composition.

143.1.14 protocols as string()

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the list of protocols to which the composition conforms.

143.1.15 QCCompositionAttributeBuiltInKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard attribute names.
Example:

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
dim d as Dictionary = c.getattributes
dim b as Boolean = d.Value(c.QCCompositionAttributeBuiltInKey)
MsgBox str(b)
```

Notes:

The key for the composition origin. The associated value is a Boolean value.
True indicates the composition is built-in (provided by OS X).

143.1.16 QCCompositionAttributeCategoryKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard attribute names.
Example:

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
dim d as Dictionary = c.getattributes
dim b as string = d.Lookup(c.QCCompositionAttributeCategoryKey, "?")
MsgBox b
```

Notes: The composition category. The associated value is a category constant. See Categories.

143.1.17 QCCompositionAttributeCopyrightKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard attribute names.
Example:

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
dim d as Dictionary = c.getattributes
dim b as string = d.Value(c.QCCompositionAttributeCopyrightKey)
MsgBox b
```

Notes:

The key for composition copyright information.
The associated value is a string.

143.1.18 QCCompositionAttributeDescriptionKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard attribute names.
Notes:

The key for the composition description.
The associated value is a string.

143.1.19 QCCompositionAttributeHasConsumersKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard attribute names.
Notes:

The key for a composition that has consumer patches. The associated value is a Boolean value.
True indicates that the composition has consumers.

143.1.20 QCCompositionAttributeIsTimeDependentKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard attribute names.

Notes: The key for the composition time dependency. The associated value is a Boolean value. True indicates that the composition is time dependent.

143.1.21 QCCompositionAttributeNameKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard attribute names.
Example:

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
dim d as Dictionary = c.getattributes
MsgBox d.Value(c.QCCompositionAttributeNameKey)
```

Notes:

The key for the composition name.
The associated value is a string.

143.1.22 QCCompositionCategoryDistortion as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the category names.
Notes: A composition that produces a distortion effect.

143.1.23 QCCompositionCategoryStylize as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the category names.
Notes: A composition that produces a stylize effect.

143.1.24 QCCompositionCategoryUtility as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the category names.
Notes: A utility composition.

143.1.25 QCCompositionInputAudioPeakKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: A number input port whose key is inputAudioPeak. The value must be in the [0,1] range as a mono signal with no decay applied.

143.1.26 QCCompositionInputAudioSpectrumKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: A structure input port whose key is inputAudioSpectrum. The structure must contain 16 values in the [0,1] range representing 16 spectrum bands of the mono signal from low to high frequencies with no decay applied.

143.1.27 QCCompositionInputDestinationImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: An image input port whose key is inputDestinationImage.

143.1.28 QCCompositionInputImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: An image input port whose key is inputImage.

143.1.29 QCCompositionInputPaceKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: A number input port whose key is inputPace. The value must be in the [0,1] range.

143.1.30 QCCompositionInputPreviewModeKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: A Boolean input port whose key is inputPreviewMode. When the value of this input port is set to TRUE, the composition that provides this port must be able to run in a low-quality mode that produces a preview of the composition.

143.1.31 QCCompositionInputPrimaryColorKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: A color input port whose key is inputPrimaryColor.

143.1.32 QCCompositionInputScreenImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: An image input port whose key is inputScreenImage.

143.1.33 QCCompositionInputSecondaryColorKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: A color input port whose key is inputSecondaryColor.

143.1.34 QCCompositionInputSourceImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: An image input port whose key is inputSourceImage.

143.1.35 QCCompositionInputTrackInfoKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: A structure input port whose key is inputTrackInfo. The structure contains optional entries, such as "name", "artist", "album", "duration", "artwork", and so on.

143.1.36 QCCompositionInputTrackPositionKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: A number input port whose key is inputTrackPosition. The value must be expressed in seconds.

143.1.37 QCCompositionInputTrackSignalKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: A Boolean input port whose key is inputTrackSignal.

143.1.38 QCCompositionInputXKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: A number input port whose key is inputX. The value must be normalized to the image width with the origin on the left.

143.1.39 QCCompositionInputYKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard input key names.
Notes: A number input port whose key is inputY. The value must be normalized to the image height with the origin at the bottom.

143.1.40 QCCompositionOutputImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard output key names.
Notes: An image output port whose key is outputImage.

143.1.41 QCCompositionOutputWebPageURLKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard output key names.
Notes: A string output port whose key is outputWebPageURL.

143.1.42 QCCompositionProtocolGraphicAnimation as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard protocol names.
Notes:

A composition that renders a generic graphical animation. It has the option to use QCCompositionInputPrimaryColorKey for the primary color of the animation, QCCompositionInputSecondaryColorKey for the secondary color of the animation, QCCompositionInputPaceKey for the global pace of the animation, and QCCompositionInputPreviewModeKey to indicate if the animation should run in lower-quality for preview purposes.

Available in OS X v10.5 and later.

143.1.43 QCCompositionProtocolGraphicTransition as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard protocol names.
Notes: A composition that performs a transition between two images, using a transition time in range of 0 to 1. A conforming composition must use the input keys QCCompositionInputSourceImageKey for the starting image and QCCompositionInputDestinationImageKey for the image to transition to. The composition can optionally use QCCompositionInputPreviewModeKey to indicate if the animation should run in lower-quality for preview purposes.

143.1.44 QCCompositionProtocolImageFilter as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard protocol names.
Notes: A composition that applies an effect to a source image. A conforming composition must use the input key QCCompositionInputImageKey for the source image and QCCompositionOutputImageKey for the

output image. The composition can optionally use QCCompositionInputXKey to specify the X position of the center point of the effect, QCCompositionInputYKey to specify the Y position of the center point of the effect, andQCCompositionInputPreviewModeKey to indicate if the animation should run in lower-quality for preview purposes.

143.1.45 QCCompositionProtocolMusicVisualizer as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard protocol names.
Notes:

A composition that acts as a visualizer for music. A conforming composition must use the input key QCCompositionInputAudioPeakKey for the instantaneous audio peak and the QCCompositionInputAudioSpectrumKey for the instantaneous audio spectrum. It can optionally use the QCCompositionInputTrackInfoKey to indicate it receives information about the current track and the QCCompositionInputTrackSignalKey to indicate the start of a new track.

Available in OS X v10.5 and later.

143.1.46 QCCompositionProtocolScreenSaver as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the standard protocol names.
Notes:

A composition that can be used as a screen saver. The composition has the option to use QCCompositionInputScreenImageKey for a screenshot image of the screen that the screen saver runs on, QCCompositionInputPreviewModeKey to indicate if the animation should run in lower-quality for preview purposes, and QCCompositionOutputWebPageURLKey for a URL to open in the default web browser when screen saver exits (only allowed if screen saver password is disabled).

Available in OS X v10.5 and later.

143.1.47 Properties

143.1.48 Description as String

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The description for the composition.

Notes: (Read only property)

143.1.49 Handle as Integer

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

143.1.50 identifier as String

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the composition.
Example:

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim a() As QCCompositionMBS = r.allCompositions
MsgBox a(0).identifier
```

Notes:

The unique identifier for the composition if it comes from the composition repository; "" otherwise.
(Read only property)

143.1.51 Name as String

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name for the composition.
Example:

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
MsgBox c.name
```

Notes: (Read only property)

143.2 class QCCompositionRepositoryMBS

143.2.1 class QCCompositionRepositoryMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The system-wide Quartz Composer composition repository.
Example:

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim a() As QCCompositionMBS = r.allCompositions
MsgBox str(a.Ubound+1)+" compositions installed"
```

Notes:

The QCCompositionRepository class represents a system-wide centralized repository of built-in and installed Quartz Composer compositions (/Library/Compositions and
textasciitilde /Library/Compositions). The QCCompositionRepository class cannot be subclassed.

Compositions in the repository are represented by the QCComposition class. You can use the methods of the QCCompositionRepository class to fetch all compositions or only those that meet specific criteria.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

143.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr6
- MBS Xojo / Real Studio Plugins, version 15.1pr2

143.2.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr6
- MBS Xojo / Real Studio Plugins, version 15.1pr2

143.2.4 Methods

143.2.5 allCompositions as QCCompositionMBS()

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array that contains all compositions currently in the composition repository.
Example:

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim a() As QCCompositionMBS = r.allCompositions
MsgBox str(a.Ubound+1)+" compositions installed"
```

143.2.6 Compositions(protocols() as String = nil, attributes as Dictionary = nil) as QCCompositionMBS()

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of compositions that match a set of criteria.
Example:

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim a() As QCCompositionMBS = r.Compositions( array( QCCompositionMBS.QCCompositionProtocolImageFilter))
MsgBox str(a.Ubound+1)+" compositions found"
```

Notes:

protocols: The protocols that you want compositions to conform to. Pass nil if you don't want to filter based on the protocol. You can pass any of these protocols: QCCompositionProtocolAnimation, QCCompositionProtocolImageProducer, QCCompositionProtocolImageFilter, QCCompositionProtocolImageCompositor, QCCompositionProtocolImageTransition, and QCCompositionProtocolScreenSaverRSS.
attributes: A dictionary that contains the attributes, and their associated values, that you want compositions to match. Pass nil if you don't want to filter based on the attributes. For example, you can pass any of these attributes: QCCompositionAttributeNameKey, QCCompositionAttributeDescriptionKey, QCCompositionAttributeCopyrightKey, QCCompositionAttributeBuiltInKey, and QCCompositionAttributeTimeDependentKey.

Returns an array of QCComposition objects that meet the supplied criteria.

143.2.7 compositionWithIdentifier(identifier as string) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the composition that corresponds to the identifier.
Example:

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim c as QCCompositionMBS = r.compositionWithIdentifier("/swing")
MsgBox c.Name
```

Notes:

identifier: A string that uniquely identifies the composition to retrieve.

Returns the composition identified by the provided string, or nil if there is no composition with that identifier in the composition repository.

143.2.8 Constructor

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

143.2.9 loadPlugIn(file as folderitem) as Boolean

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Attempts to load a Quartz Composer plug-in from a .plugin bundle at the specified path and returns true on success.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.plugin")
dim r as Boolean = QCCompositionRepositoryMBS.loadPlugIn(f)

if r then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: This method will do nothing if the plug-in was already loaded.
See also:

- 143.2.10 loadPlugIn(path as string) as Boolean 22030

143.2.10 loadPlugIn(path as string) as Boolean

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Attempts to load a Quartz Composer plug-in from a .plugin bundle at the specified path and returns true on success.

Notes: This method will do nothing if the plug-in was already loaded.
See also:

- 143.2.9 loadPlugIn(file as folderitem) as Boolean 22030

143.2.11 QCCompositionRepositoryDidUpdateNotification as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The new of the notification which is posted whenever the list of compositions in the composition repository is updated.

143.2.12 sharedCompositionRepository as QCCompositionRepositoryMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the shared instance of the composition repository.

143.2.13 Properties

143.2.14 Handle as Integer

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

143.3 control QCViewControlMBS

143.3.1 control QCViewControlMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The control to host a QCView properly.

143.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr2

143.3.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr2

143.3.4 Properties

143.3.5 View as QCViewMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The QCView in use by this control.
Notes:

Please use this property to access the actual view and make your settings and load the data to render.
(Read only property)

143.3.6 Events

143.3.7 BoundsChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

143.3.8 DidStartRendering

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: .

Function: Rendering did start notification.

143.3.9 DidStopRendering

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: .

Function: Rendering did stop notification.

143.3.10 EnableMenuItems

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event where you can enable menu items.

143.3.11 FrameChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

143.3.12 GotFocus

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

143.3.13 LostFocus

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

143.3.14 MenuAction(HitItem as MenuItem) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

143.3.15 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

143.3.16 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

143.3.17 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

143.3.18 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

143.4 class QCViewMBS

143.4.1 class QCViewMBS

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: The QCView class is a custom NSView class that loads, plays, and controls Quartz Composer compositions.
Notes:

It is an autonomous view that is driven by an internal timer running on the main thread.

The view can be set to render a composition automatically when it is placed onscreen. The view stops rendering when it is placed offscreen. When not rendering, the view is filled with the current erase color. The rendered composition automatically synchronizes to the vertical retrace of the monitor.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

143.4.4 Methods

143.4.5 Constructor

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new Quartz composer view with size 100/100 and position 0/0
Example:

```
dim t as new QCViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 143.4.6 Constructor(Handle as Integer) 22037
- 143.4.7 Constructor(left as Double, top as Double, width as Double, height as Double) 22037

143.4.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Creates an object based on the given QCView handle.
Example:

```
dim t as new QCViewMBS(0, 0, 100, 100)
dim v as new QCViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a QCView and the plugin retains this handle.
See also:

- 143.4.5 Constructor 22036
- 143.4.7 Constructor(left as Double, top as Double, width as Double, height as Double) 22037

143.4.7 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new Quartz composer view with the given size and position.
Example:

```
dim x as new QCViewMBS(0, 0, 100, 100)
```

Notes: On success the handle property is not zero.
See also:

- 143.4.5 Constructor 22036
- 143.4.6 Constructor(Handle as Integer) 22037

143.4.8 erase

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Clears the view using the current erase color.

143.4.9 getAttributes as dictionary

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Returns the attributes of the composition associated with the renderer.
Notes:

Returns a dictionary that contains the attributes that describe the composition, including the input and output ports of the root patch.

The dictionary can define any of the attributes that are specified by the composition attribute keys. See QCCompositionAttributeNameKey, QCCompositionAttributeDescriptionKey, and QCCompositionAttributeCopyrightKey.

The dictionary can also contain dictionaries that correspond to the keys that identify the input and output ports of the root patch of the composition. See QCPortAttributeTypeKey, QCPortAttributeNameKey, QCPortAttributeMinimumValueKey, QCPortAttributeMaximumValueKey, and QCPortAttributeMenuItemsKey.

Available in Mac OS X v10.4 and later.

143.4.10 inputKeys as string()

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array that contains the keys that identify the input ports of the root patch of the composition.

143.4.11 loadComposition(composition as QCCompositionMBS) as boolean

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Loads a QCComposition object into the view.
Notes:

Returns true if successful; otherwise false.
If unsuccessful, any composition that's already loaded in the view remains loaded.

143.4.12 loadCompositionFromData(data as MemoryBlock) as boolean

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Loads the composition from memoryblock.
Notes:

If unsuccessful, returns false; any composition that's already loaded in the view remains loaded.
Available in Mac OS X v10.4 and later.
See also:

- 143.4.13 loadCompositionFromData(data as string) as boolean 22039

143.4.13 loadCompositionFromData(data as string) as boolean

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Loads the composition from data string.
Notes:

If unsuccessful, returns false; any composition that's already loaded in the view remains loaded.
Available in Mac OS X v10.4 and later.
See also:

- 143.4.12 loadCompositionFromData(data as MemoryBlock) as boolean 22039

143.4.14 loadCompositionFromFile(file as folderitem) as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Loads the composition file located at the specified path.
Notes:

file: A folderitem that specifies the location of a Quartz Composer composition file.

If unsuccessful, returns false; any composition that's already loaded in the view remains loaded.

Available in Mac OS X v10.4 and later.
See also:

• 143.4.15 loadCompositionFromFile(filepath as string) as boolean 22040

143.4.15 loadCompositionFromFile(filepath as string) as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Loads the composition file located at the specified path.
Notes:

filepath: A string that specifies the location of a Quartz Composer composition file.

If unsuccessful, returns false; any composition that's already loaded in the view remains loaded.

Available in Mac OS X v10.4 and later.
See also:

• 143.4.14 loadCompositionFromFile(file as folderitem) as boolean 22039

143.4.16 outputKeys as string()

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Returns an array that contains the keys that identify the output ports of the root patch of the composition.

143.4.17 pauseRendering

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Pauses rendering in the view.
Notes:

You can nest calls to this method.
Available in Mac OS X v10.5 and later.

143.4.18 resumeRendering

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Resumes rendering a paused composition.
Notes:

You can nest calls to this method.
Available in Mac OS X v10.5 and later.

143.4.19 setValueForInputKey(value as Variant, key as string) as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Sets the value for an input port of a composition.
Notes:

value: The value to set for the input port. The input port must be at the root patch of the composition. The data type of the value argument must match the input port.
key: The key associated with the input port of the composition. This method throws an exception if key is invalid.

Returns false if it cannot set the value.
Available in Mac OS X v10.4 and later.

143.4.20 startRendering as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Starts rendering the composition that is in the view.
Notes:

Returns false if the composition fails to start rendering; true otherwise.
Available in Mac OS X v10.4 and later.

143.4.21 stopRendering

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Stops rendering the composition that is in the view.
Notes: Available in Mac OS X v10.4 and later.

143.4.22 unloadComposition

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Unloads the composition from the view.
Notes:

If necessary, this method calls stopRendering prior to unloading the composition.
Available in Mac OS X v10.5 and later.

143.4.23 valueForInputKey(key as string) as Variant

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Returns the value for an input port of a composition.
Notes:

key: The key associated with an input port for the root patch of a composition. This method throws an exception if key is invalid.

Returns the value. The data type of returned value depends on the type of the input port.
Available in Mac OS X v10.4 and later.

143.4.24 valueForOutputKey(key as string) as Variant

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Returns the value for an output port of a composition.
Notes:

key
The key associated with an output port for the root patch of a composition. This method throws an exception if key is invalid.

Returns the value as Xojo variant. The data type of returned value depends on the type of the output port.

143.4.25 Properties

143.4.26 autostartsRendering as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Whether the composition that is in the view starts rendering automatically when the view is put on the screen.
Notes:

Available in Mac OS X v10.4 and later.
(Read and Write property)

143.4.27 eraseColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: The color used to erase the view.
Notes:

Available in Mac OS X v10.4 and later.
(Read and Write property)

143.4.28 eventForwardingMask as Integer

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: The mask used to filter which types of events are forwarded from the view to the composition during rendering.
Notes:

mask: An event filtering mask. The mask can be a combination of any of the mask constants listed in Table below (defined in NSEventMBS) or the constant NSAnyEventMask.

Constant	Description
NSLeftMouseDownMask	The user pressed the left button.
NSLeftMouseDraggedMask	The user moved the mouse with the left button down.
NSLeftMouseUpMask	The user released the left button.
NSRightMouseDownMask	The user pressed the right button.
NSRightMouseDraggedMask	The user moved the mouse with the right button down.
NSRightMouseUpMask	The user released the right button.
NSOtherMouseDownMask	The user pressed the middle button, or some button other than the left or right button.
NSOtherMouseDraggedMask	The user moved the mouse with the middle button down, or some button other than the left or right button.
NSOtherMouseUpMask	The user released the middle button, or some button other than the left or right button.
NSMouseMovedMask	The user moved the mouse without holding down a mouse button.
NSScrollWheelMask	The user moved the mouse scroll wheel.
NSKeyDownMask	The user generated a character or characters by pressing a key.
NSKeyUpMask	The user released a key.
NSFlagsChangedMask	The user pressed or released a modifier key, or toggled the Caps Lock key.

(Read and Write property)

143.4.29 isPausedRendering as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Returns whether or not the rendering in the view is paused.
Notes:

True if the rendering is paused; otherwise false.
Available in Mac OS X v10.5 and later.
(Read only property)

143.4.30 isRendering as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Checks whether a composition is rendering in the view.
Notes:

Returns true if a composition is rendering in the view; false otherwise.
Available in Mac OS X v10.5 and later.
(Read only property)

143.4.31 loadedComposition as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Returns the composition loaded in the view.
Notes: (Read only property)

143.4.32 maxRenderingFrameRate as Double

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: The maximum rendering frame rate.
Notes:

Pass 0.0 to specify that there is no limit.
Available in Mac OS X v10.4 and later.
(Read and Write property)

143.4.33 snapshotImage as NSImageMBS

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Returns an NSImage object of the current image in the view.
Notes:

Available in Mac OS X v10.5 and later.
(Read only property)

Chapter 144

QuickLook

144.1 class QLPreviewPanelMBS

144.1.1 class QLPreviewPanelMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The QLPreviewPanel class implements the Preview Panel - a user interface object that displays the preview of a list of items.
Notes:

Every application only has on instance of QLPreviewPanel.
Subclass of the NSPanelMBS class.

144.1.2 Blog Entries

144.1.4 Methods

144.1.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Whether this panel is available.
Notes: Returns true on Snow Leopard.

144.1.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The constructor for a new panel.

144.1.7 currentPreviewItem as folderitem

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The currently previewed item in the preview panel or nil if there is none.

144.1.8 enterFullScreenMode(screen as NSScreenMBS)

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Enters full screen mode.
Notes: If panel is not on-screen, the panel will go directly to full screen mode.

144.1.9 exitFullScreenMode

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Exits full screen mode.

144.1.10 refreshCurrentPreviewItem

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Asks the Preview Panel to recompute the preview of the currently previewed item.

144.1.11 reloadData

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Asks the Preview Panel to reload its data from its data source.
Notes: This method does not refresh the visible item if it has not changed.

144.1.12 updateController

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Asks the Preview Panel to update its current controller.
Notes: The Preview Panel automatically updates its controller (by searching the responder chain) whenever the main or key window changes. Invoke updateController if the responder chain changes without explicit notice.

144.1.13 Properties

144.1.14 currentPreviewItemIndex as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The index of the currently previewed item in the preview panel or NSNotFound (-1) if there is none.
Notes: (Read and Write property)

144.1.15 inFullScreenMode as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: True if the panel is currently open and in full screen mode.
Notes: (Read only property)

144.1.16 PreviewView as QLPreviewViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Returns the preview view in the panel.
Notes: (Read only property)

144.1.17 Events

144.1.18 didLoadPreviewItem(file as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: This event is called after an item has been loaded.

144.1.19 handleEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

Function: Invoked by the preview panel when it receives an event it doesn't handle.
Notes: Returns true if you did not handle this event.

144.1.20 numberOfPreviewItems as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

Function: The event called to ask you for the number of items that the preview panel should preview.

144.1.21 previewItemAtIndex(index as Integer) as folderitem

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

Function: The event is called to ask you for the item with the given index.

144.1.22 sourceFrameOnScreenForPreviewItem(file as folderitem) as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

Function: Invoked when the preview panel opens or closes to provide a zoom effect.
Notes: Return a zero rect if there is no origin point, this will produce a fade of the panel. The coordinates are screen based.

144.1.23 transitionImageForPreviewItem(file as folderitem, byref contentRect as NSRectMBS) as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

Function: Called to ask you for the transition image for a given preview item.
Notes:

Invoked when the preview panel opens or closes to provide a smooth transition when zooming.

contentRect: The rect within the image that actually represents the content of the document. For example, for icons the actual rect is generally smaller than the icon itself.

Return an image the panel will crossfade with when opening or closing. You can specify the actual "document" content rect in the image in contentRect.

144.1.24 willLoadPreviewItem(file as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: This event is called before an item is loaded.

144.2 control QLPreviewViewControlMBS

144.2.1 control QLPreviewViewControlMBS

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a QLPreviewViewMBS.

144.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

144.2.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

144.2.4 Properties

144.2.5 View as QLPreviewViewMBS

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: The view this control shows.
Notes: (Read only property)

144.2.6 Events

144.2.7 BoundsChanged

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

144.2.8 EnableMenuItems

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event where you can enable menu items.

144.2.9 FrameChanged

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

144.2.10 GotFocus

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

144.2.11 LostFocus

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

144.2.12 MenuAction(HitItem as MenuItem) As Boolean

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

144.2.13 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.

- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

144.2.14 MouseDrag(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

144.2.15 MouseUp(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

144.2.16 ScaleFactorChanged(NewFactor as Double)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

144.3 class QLPreviewViewMBS

144.3.1 class QLPreviewViewMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The class for using a preview view from QuickLook in Xojo.
Notes:

If you want to show previews of files in your application, use this view. For example if you not just want to show previews of pictures, but also from Movies, PDF, Office and iWork files.
Requires Mac OS X 10.6 or newer.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

144.3.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr8

144.3.3 Blog Entries

- MBS Real Studio Plugins, version 11.2pr8

144.3.4 Methods

144.3.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Returns true on Mac OS X 10.6 or newer.

144.3.6 close

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Closes the receiver, releasing the current preview item.
Notes:

Once the receiver has closed, it will no longer accept preview items.

The application is required to call close when the receiver is no longer needed if shouldCloseWithWindow is false.
The close method will be called automatically when the window closes if shouldCloseWithWindow is true.

144.3.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Creates a new quicklook preview view with size 100/100 and position 0/0
Example:

```
dim t as new QLPreviewViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 144.3.8 Constructor(Handle as Integer) 22056
- 144.3.9 Constructor(left as Double, top as Double, width as Double, height as Double) 22057
- 144.3.10 Constructor(left as Double, top as Double, width as Double, height as Double, style as Integer) 22057

144.3.8 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Creates an object based on the given QLPreviewView handle.
Example:

```
dim t as new QLPreviewViewMBS(0, 0, 100, 100)
dim v as new QLPreviewViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a QLPreviewView and the plugin retains this handle.
See also:

- 144.3.7 Constructor 22056
- 144.3.9 Constructor(left as Double, top as Double, width as Double, height as Double) 22057
- 144.3.10 Constructor(left as Double, top as Double, width as Double, height as Double, style as Integer) 22057

144.3.9 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Creates a new QuickLook preview view with the given size and position.
Example:

```
dim x as new QLPreviewViewMBS(0, 0, 100, 100)
```

Notes: On success the handle property is not zero.
See also:

- 144.3.7 Constructor 22056
- 144.3.8 Constructor(Handle as Integer) 22056
- 144.3.10 Constructor(left as Double, top as Double, width as Double, height as Double, style as Integer) 22057

144.3.10 Constructor(left as Double, top as Double, width as Double, height as Double, style as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Creates a new QuickLook preview view with the given size and position.
Example:

```
dim view as new QLPreviewViewMBS(0, 0, 200, 200, QLPreviewViewMBS.StyleCompact)
```

Notes:

On success the handle property is not zero.

On Mac OS X 10.7 or later we use the new style parameter to create a Preview view with the given style.
See also:

- 144.3.7 Constructor 22056
- 144.3.8 Constructor(Handle as Integer) 22056
- 144.3.9 Constructor(left as Double, top as Double, width as Double, height as Double) 22057

144.3.11 refreshPreviewItem

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Asks the Preview view to recompute the preview of the currently previewed item.

144.3.12 Properties

144.3.13 autostarts as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether playback of audio/video files automatically starts.
Notes: (Read and Write computed property)

144.3.14 previewItem as folderitem

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The current visible item in the view.
Notes: (Read and Write computed property)

144.3.15 shouldCloseWithWindow as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Set whether the receiver closes when its window closes.
Notes:

See close method.
(Read and Write computed property)

144.3.16 Constants

144.3.17 StyleCompact = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the style constants.
Notes: Use in inspectors.

144.3.18 StyleNormal = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the style constants.
Notes: Use in full previews.

Chapter 145

QuickTime

145.1 class QTAudioChannelDescriptionMBS

145.1.1 class QTAudioChannelDescriptionMBS

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: All.

Function: The description for an audio channel.

145.1.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr8

145.1.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr8

145.1.4 Properties

145.1.5 ChannelFlags as UInt32

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Flags that control the interpretation of Coordinates.
Notes: (Read and Write property)

145.1.6 ChannelLabel as UInt32

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: The AudioChannelLabel that describes the channel.
Notes: (Read and Write property)

145.1.7 Coordinates(index as Integer) as Double

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: An ordered triple that specifies a precise speaker location.
Notes:

Index from 0 to 2.
(Read and Write computed property)

145.1.8 Constants

145.1.9 kAudioChannelCoordinates_Azimuth = 0

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the constants for indexing the Coordinates array.
Notes: For spherical coordinates, 0 is front center, positive is right, negative is left. This is measured in degrees.

145.1.10 kAudioChannelCoordinates_BackFront = 1

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the constants for indexing the Coordinates array.
Notes: For rectangulare coordinates, negative is back and positive is front.

145.1.11 kAudioChannelCoordinates_Distance = 2

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the constants for indexing the Coordinates array.
Notes: For spherical coordinates, the units are described by flags.

145.1.12 kAudioChannelCoordinates_DownUp = 2

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the constants for indexing the Coordinates array.
Notes: For rectangulare coordinates, negative is below ground level, 0 is ground level, and positive is above ground level.

145.1.13 kAudioChannelCoordinates_Elevation = 1

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the constants for indexing the Coordinates array.
Notes: For spherical coordinates, +90 is zenith, 0 is horizontal, -90 is nadir. This is measured in degrees.

145.1.14 kAudioChannelCoordinates_LeftRight = 0

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the constants for indexing the Coordinates array.
Notes: For rectangulare coordinates, negative is left and positive is right.

145.1.15 kAudioChannelFlags_AllOff = 0

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the constants for the ChannelFlags property.
Notes: All flags off.

145.1.16 kAudioChannelFlags_Meters = 4

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the constants for the ChannelFlags property.
Notes: Set to indicate the units are in meters, clear to indicate the units are relative to the unit cube or unit sphere.

145.1.17 kAudioChannelFlags_RectangularCoordinates = 1

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the constants for the ChannelFlags property.
Notes: The channel is specified by the cartesioan coordinates of the speaker position. This flag is mutally exclusive with kAudioChannelFlags_SphericalCoordinates.

145.1.18 kAudioChannelFlags_SphericalCoordinates = 2

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the constants for the ChannelFlags property.
Notes: The channel is specified by the spherical coordinates of the speaker position. This flag is mutally exclusive with kAudioChannelFlags_RectangularCoordinates.

145.1.19 kAudioChannelLabel_Ambisonic_W = 200

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.20 kAudioChannelLabel_Ambisonic_X = 201

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.21 kAudioChannelLabel_Ambisonic_Y = 202

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.22 kAudioChannelLabel_Ambisonic_Z = 203

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.23 kAudioChannelLabel_Center = 3

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.24 kAudioChannelLabel_CenterSurround = 9

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: WAVE: "Back Center" or plain "Rear Surround"

145.1.25 kAudioChannelLabel_CenterSurroundDirect = 44

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: back center, non diffuse

145.1.26 kAudioChannelLabel_ClickTrack = 304

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.27 kAudioChannelLabel_DialogCentricMix = 43

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.28 kAudioChannelLabel_Discrete = 400

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.29 kAudioChannelLabel_Discrete_0 = & h10000

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.30 kAudioChannelLabel_Discrete_1 = & h10001

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.31 kAudioChannelLabel_Discrete_10 = & h1000A

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.32 kAudioChannelLabel_Discrete_11 = & h1000B

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.33 kAudioChannelLabel_Discrete_12 = & h1000C

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.34 kAudioChannelLabel_Discrete_13 = & h1000D

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.35 kAudioChannelLabel_Discrete_14 = & h1000E

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.36 kAudioChannelLabel_Discrete_15 = & h1000F

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.37 kAudioChannelLabel_Discrete_2 = & h10002

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.38 kAudioChannelLabel_Discrete_3 = & h10003

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Example:

```
// build 2 channels to go on channel 3& 4
dim d1 as new QTAudioChannelDescriptionMBS
dim d2 as new QTAudioChannelDescriptionMBS

d1.ChannelFlags = QTAudioChannelDescriptionMBS.kAudioChannelFlags_AllOff
d1.ChannelLabel = QTAudioChannelDescriptionMBS.kAudioChannelLabel_Discrete_3
d2.ChannelFlags = QTAudioChannelDescriptionMBS.kAudioChannelFlags_AllOff
d2.ChannelLabel = QTAudioChannelDescriptionMBS.kAudioChannelLabel_Discrete_4

dim a as new QTAudioChannelLayoutMBS

a.NumberChannelDescriptions = 2
a.ChannelDescriptions(0) = d1
a.ChannelDescriptions(1) = d2
a.ChannelLayoutTag = QTAudioChannelLayoutMBS.kAudioChannelLayoutTag_DiscreteInOrder + 2
```

145.1.39 kAudioChannelLabel_Discrete_4 = & h10004

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.40 kAudioChannelLabel_Discrete_5 = & h10005

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.41 kAudioChannelLabel_Discrete_6 = & h10006

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.42 kAudioChannelLabel_Discrete_65535 = & h1FFFF

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.43 kAudioChannelLabel_Discrete_7 = & h10007

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.44 kAudioChannelLabel_Discrete_8 = & h10008

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.45 kAudioChannelLabel_Discrete_9 = & h10009

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.46 kAudioChannelLabel_ForeignLanguage = 305

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.47 kAudioChannelLabel_Haptic = 45

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.48 kAudioChannelLabel_HeadphonesLeft = 301

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.49 kAudioChannelLabel_HeadphonesRight = 302

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.50 kAudioChannelLabel_HearingImpaired = 40

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.51 kAudioChannelLabel_Left = 1

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.52 kAudioChannelLabel_LeftCenter = 7

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.53 kAudioChannelLabel_LeftSurround = 5

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: WAVE: "Back Left"

145.1.54 kAudioChannelLabel_LeftSurroundDirect = 10

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: WAVE: "Side Left"

145.1.55 kAudioChannelLabel_LeftTotal = 38

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: matrix encoded 4 channels

145.1.56 kAudioChannelLabel_LeftWide = 35

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.57 kAudioChannelLabel_LFE2 = 37

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.58 kAudioChannelLabel_LFEScreen = 4

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.59 kAudioChannelLabel_Mono = 42

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.60 kAudioChannelLabel_MS_Mid = 204

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.61 kAudioChannelLabel_MS_Side = 205

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.62 kAudioChannelLabel_Narration = 41

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.63 kAudioChannelLabel_RearSurroundLeft = 33

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.64 kAudioChannelLabel_RearSurroundRight = 34

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.65 kAudioChannelLabel_Right = 2

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.66 kAudioChannelLabel_RightCenter = 8

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.67 kAudioChannelLabel_RightSurround = 6

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: WAVE: "Back Right"

145.1.68 kAudioChannelLabel_RightSurroundDirect = 11

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: WAVE: "Side Right"

145.1.69 kAudioChannelLabel_RightTotal = 39

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: matrix encoded 4 channels

145.1.70 kAudioChannelLabel_RightWide = 36

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.71 kAudioChannelLabel_TopBackCenter = 17

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.72 kAudioChannelLabel_TopBackLeft = 16

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.73 kAudioChannelLabel_TopBackRight = 18

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.74 kAudioChannelLabel_TopCenterSurround = 12

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.75 kAudioChannelLabel_Unknown = & hFFFFFFFF

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: Unknown or unspecified other use.

145.1.76 kAudioChannelLabel_Unused = 0

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: Channel is present, but has no intended use or destination.

145.1.77 kAudioChannelLabel_UseCoordinates = 100

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: Channel is described by the Coordinates fields.

145.1.78 kAudioChannelLabel_VerticalHeightCenter = 14

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: WAVE: "Top Front Center"

145.1.79 kAudioChannelLabel_VerticalHeightLeft = 13

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: WAVE: "Top Front Left"

145.1.80 kAudioChannelLabel_VerticalHeightRight = 15

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.
Notes: WAVE: "Top Front Right"

145.1.81 kAudioChannelLabel_XY_X = 206

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.1.82 kAudioChannelLabel_XY_Y = 207

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel label constants.

145.2 class QTAudioChannelLayoutMBS

145.2.1 class QTAudioChannelLayoutMBS

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: All.

Function: The class is used to specify channel layouts in files and hardware.
Notes:

This class does not use QuickTime functions as it only wraps data structures. And it can be used with Mac App Store and AVFoundation.

Some channel abbreviations used for the constants:

- L - left
- R - right
- C - center
- Ls - left surround
- Rs - right surround
- Cs - center surround
- Rls - rear left surround
- Rrs - rear right surround
- Lw - left wide
- Rw - right wide
- Lsd - left surround direct
- Rsd - right surround direct
- Lc - left center
- Rc - right center
- Ts - top surround
- Vhl - vertical height left
- Vhc - vertical height center
- Vhr - vertical height right
- Lt - left matrix total. for matrix encoded stereo.
- Rt - right matrix total. for matrix encoded stereo.

145.2.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr8

145.2.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr8

145.2.4 Methods

145.2.5 GetNumberOfChannels(layoutTag as UInt32) as UInt32

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Function to get the number of channels out of an AudioChannelLayoutTag.
Notes: The low 16 bits of an AudioChannelLayoutTag gives the number of channels except for kAudioChannelLayoutTag_UseChannelDescriptions and kAudioChannelLayoutTag_UseChannelBitmap.

145.2.6 Memory as Memoryblock

MBS Main Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns the audio channel layout as memoryblock, so you can pass it for declares.

145.2.7 Properties

145.2.8 ChannelBitmap as UInt32

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: If ChannelLayoutTag is set to kAudioChannelLayoutTag_UseChannelBitmap, this field is the channel usage bitmap.
Notes: (Read and Write property)

145.2.9 ChannelLayoutTag as UInt32

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: The AudioChannelLayoutTag that indicates the layout.
Notes: (Read and Write property)

145.2.10 NumberChannelDescriptions as UInt32

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: The number of items in the ChannelDescriptions array.
Notes: (Read and Write property)

145.2.11 ChannelDescriptions(index as Integer) as QTAudioChannelDescriptionMBS

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: An array of AudioChannelDescriptions that describe the layout.
Notes:

Index from 0 to NumberChannelDescriptions-1.
(Read and Write computed property)

145.2.12 Constants

145.2.13 kAudioChannelBit_Center = 4

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel bitmap constants.

145.2.14 kAudioChannelBit_CenterSurround = 256

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel bitmap constants.
Notes: WAVE: "Back Center"

145.2.15 kAudioChannelBit_Left = 1

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel bitmap constants.

145.2.16 kAudioChannelBit_LeftCenter = 64

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel bitmap constants.

145.2.17 kAudioChannelBit_LeftSurround = 16

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel bitmap constants.
Notes: WAVE: "Back Left"

145.2.18 kAudioChannelBit_LeftSurroundDirect = 512

MBS Main Plugin, Plugin Version: 11.3.

Function: One of the channel bitmap constants.
Notes: WAVE: "Side Left"

145.2.19 kAudioChannelBit_LFEScreen = 8

MBS Main Plugin, Plugin Version: 11.3.

145.3.4 Methods

145.3.5 AttachToAudioUnitComponent(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Attaches the Sound Output component to a given Audio Unit component.
Notes:

Returns the error code. (0 for success)
You may call AudioUnitInitialize and AudioOutputUnitStart after this to start the output unit.
See also:

- 145.3.6 AttachToAudioUnitComponent(componenthandle as Integer, element as Integer) as Integer 22105

145.3.6 AttachToAudioUnitComponent(componenthandle as Integer, element as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Attaches the Sound Output component to a given Audio Unit component.
Notes:

Returns the error code. (0 for success)
You may call AudioUnitInitialize and AudioOutputUnitStart after this to start the output unit.
See also:

- 145.3.5 AttachToAudioUnitComponent(componenthandle as Integer) as Integer 22105

145.3.7 AudioOutputUnitStart(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Starts the output unit.
Notes: Returns a Mac OS errro code (0 for success).

145.3.8 AudioUnitInitialize(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Initializes the output unit.
Notes: Returns a Mac OS errro code (0 for success).

145.3.9 closeComponent

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Closes the Sound Output component.

145.3.10 InitComponent

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Initializes the sound output component.
Notes: Allocates memory for example.

145.3.11 OpenComponent

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Opens the SoundOutput component.

145.3.12 OpenDefaultAudioUnitOutputComponent as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Opens the default audio unit component and returns the handle.
Notes:

Returns 0 on any error.
The component is only available on Mac OS X, so this function will return 0 on all other platforms.

145.3.13 Properties

145.3.14 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The component handle.
Notes: (Read and Write property)

145.3.15 IsOpen as Boolean

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Whether the sound output component has been opened yet.
Notes:

Returns false on any error.
(Read only property)

145.3.16 IsStreamActive as Boolean

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: True in case the stream is active.
Notes:

Returns false on any error.
(Read only property)

145.3.17 PostsStatusNotifications as Boolean

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Whether status notificiations should be posted.
Notes: (Read and Write property)

145.3.18 Release as Boolean

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Whether the constructor should release the handle.
Notes: (Read and Write property)

145.3.19 SoundOutputComponentHandle as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The handle of the used component instance.
Notes: (Read only property)

146.1.4 Methods

146.1.5 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

146.1.6 Destructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

146.1.7 Properties

146.1.8 AppId as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The app-id.
Notes: (Read and Write property)

146.1.9 ClusterId as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The cluster ID.
Notes: (Read and Write property)

146.1.10 ContentEncoding as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The content-encoding.
Notes: (Read and Write property)

146.1.11 ContentType as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The content-type.
Notes: (Read and Write property)

146.1.12 CorrelationId as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The correlation-id.
Notes: (Read and Write property)

146.1.13 DeliveryMode as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delivery-mode.
Notes: (Read and Write property)

146.1.14 Expiration as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The expiration.
Notes: (Read and Write property)

146.1.15 Flags as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Bit-mask of set fields.
Notes: (Read and Write property)

146.1.16 HasAppId as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagAppId.
Notes: (Read and Write property)

146.1.17 HasClusterId as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagClusterId.
Notes: (Read and Write property)

146.1.18 HasContentEncoding as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagContentEncoding.
Notes: (Read and Write property)

146.1.19 HasContentType as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagContentType.
Notes: (Read and Write property)

146.1.20 HasCorrelationId as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagCorrelationId.
Notes: (Read and Write property)

146.1.21 HasDeliveryMode as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagDeliveryMode.
Notes: (Read and Write property)

146.1.22 HasExpiration as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagExpiration.
Notes: (Read and Write property)

146.1.23 HasHeaders as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagHeaders.
Notes: (Read and Write property)

146.1.24 HasMessageId as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagMessageId.
Notes: (Read and Write property)

146.1.25 HasPriority as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagPriority.
Notes: (Read and Write property)

146.1.26 HasReplyTo as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagReplyTo.
Notes: (Read and Write property)

146.1.27 HasTimestamp as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagTimestamp.
Notes: (Read and Write property)

146.1.28 HasType as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagType.
Notes: (Read and Write property)

146.1.29 HasUserId as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience property to set/get Flags with kFlagUserId.
Notes: (Read and Write property)

146.1.30 Headers as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Dictionary with headers.
Notes: (Read and Write property)

146.1.31 MessageId as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The message ID.
Notes: (Read and Write property)

146.1.32 Priority as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The priority.
Notes: (Read and Write property)

146.1.33 ReplyTo as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The reply to field.
Notes: (Read and Write property)

146.1.34 Timestamp as UInt64

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The timestamp.
Notes: (Read and Write property)

146.1.35 Type as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The type field.
Notes: (Read and Write property)

146.1.36 UserId as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The user id.
Notes: (Read and Write property)

146.1.37 Constants

146.1.38 kDeliveryNonPersistent = 1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the delivery modes.
Notes: Non-persistent message.

146.1.39 kDeliveryPersistent = 2

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the delivery modes.
Notes: Persistent message

146.1.40 kFlagAppId = 8

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: AppID field is set.

146.1.41 kFlagClusterId = 4

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: ClusterId field is set.

146.1.42 kFlagContentEncoding = 16384

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: ContentEncoding field is set.

146.1.43 kFlagContentType = 32768

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: ContentType field is set.

146.1.44 kFlagCorrelationId = 1024

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: CorrelationId field is set.

146.1.45 kFlagDeliveryMode = 4096

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: DeliveryMode field is set.

146.1.46 kFlagExpiration = 256

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: Expiration field is set.

146.1.47 kFlagHeaders = 8192

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: Headers field is set.

146.1.48 kFlagMessageId = 128

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: MessageId field is set.

146.1.49 kFlagPriority = 2048

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: Priority field is set.

146.1.50 kFlagReplyTo = 512

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: ReplyTo field is set.

146.1.51 kFlagTimestamp = 64

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: Timestamp field is set.

146.1.52 kFlagType = 32

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: Type field is set.

146.1.53 kFlagUserId = 16

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the flags to indicate a field is set.
Notes: UserId field is set.

146.2 class RabbitMQConnectionInfoMBS

146.2.1 class RabbitMQConnectionInfoMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class ot parse an URL.

- 146.2.6 Constructor(URL as String) 22120

146.2.6 Constructor(URL as String)

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Parse a connection URL.
Notes:

An amqp connection url takes the form:

amqp:// [$ USERNAME [:$ PASSWORD] @] $ HOST [:$ PORT] / [$ VHOST]

Examples:
amqp://guest:guest@localhost:5672//
amqp://guest:guest@localhost/myvhost

Any missing parts of the URL will be set to the defaults specified in other Constructor. For amqps: URLs the default port will be set to 5671 instead of 5672 for non-SSL URLs.

We raise UnsupportedOperationException if parsing failes.
See also:

- 146.2.5 Constructor 22119

146.2.7 Destructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

146.2.8 Properties

146.2.9 Host as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The hostname of the broker.
Notes: (Read only property)

146.2.10 Password as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The password to authenticate with the broker.
Notes:

default on most brokers is 'guest'
(Read only property)

146.2.11 Port as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The port that the broker is listening on.
Notes:

default on most brokers is 5672.
(Read only property)

146.2.12 SSL as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to use SSL.
Notes: (Read only property)

146.2.13 User as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The username to authenticate with the broker.
Notes:

default on most broker is 'guest'
(Read only property)

146.2.14 VHost as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The virtual host on the broker to connect to.
Notes:

a good default is "/"
(Read only property)

146.3 class RabbitMQConnectionMBS

146.3.1 class RabbitMQConnectionMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a RabbitMQ connection to a server.
Notes: Our plugin converts from dictionary/array/variant to/from the encoded representation used in MQ automatically.

146.3.4 Methods

146.3.5 BasicAck(channel as Integer, deliveryTag as UInt64, multiple as Boolean = false) as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Acknowledges a message.
Notes:

Does a basic.ack on a received message.

channel: the channel identifier
deliveryTag: the delivery tag of the message to be ack'd.
multiple: if true, ack all messages up to this delivery tag, if false ack only this delivery tag.

Returns error code, 0 on success, 0 >on failing to send the ack to the broker. this will not indicate failure if something goes wrong on the broker.

146.3.6 BasicCancel(channel as Integer, consumerTag as String) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Cancels a channel.

146.3.7 BasicConsume(channel as Integer, queue as String, consumerTag as String, noLocal as Boolean, noAck as Boolean, exclusive as Boolean, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Basic consume.

146.3.8 BasicGet(channel as Integer, queue as String, noAck as Boolean) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Do a basic.get.
Notes:

Synchronously polls the broker for a message in a queue, and retrieves the message if a message is in the queue.

channel: the channel identifier to use
queue: the queue name to retrieve from
noAck: if true the message is automatically ack'ed if false BasicAck() should be called once the message retrieved has been processed

Returns RabbitMQRPCReplyMBS object indicating success or failure

146.3.9 BasicNAck(channel as Integer, deliveryTag as UInt64, multiple as Boolean = false, requeue as Boolean = false) as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Do a basic.nack.
Notes:

Actively reject a message, this has the same effect as BasicReject() however, BasicNAck() can negatively acknowledge multiple messages with one call much like BasicAck() can acknowledge mutliple messages with

one call.

channel: the channel identifier
deliveryTag the delivery tag of the message to reject
multiple: if set to 1 negatively acknowledge all unacknowledged messages on this channel.
requeue: indicate to the broker whether it should requeue the message or dead-letter it.

Returns error code, kStatusOK on success, an status constant value otherwise.

146.3.10 BasicPublish(channel as Integer, exchange as String, routingKey as String, mandatory as Boolean, immediate as Boolean, properties as RabbitMQBasicPropertiesMBS, body as String) as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Publish a message to the broker.
Notes:

Publish a message on an exchange with a routing key.

Note that at the AMQ protocol level basic.publish is an async method:
this means error conditions that occur on the broker (such as publishing to
a non-existent exchange) will not be reflected in the return value of this
function.

channel: the channel identifier
exchange: the exchange on the broker to publish to
routingKey: the routing key to use when publishing the message mandatory indicate to the broker that the message MUST be routed to a queue. If the broker cannot do this it should respond with a basic.return method.
immediate: indicate to the broker that the message MUST be delivered to a consumer immediately. If the broker cannot do this it should respond with a basic.return method.
properties: the properties associated with the message
body: the message body

kStatusOK on success, other kStatus values on failure. Note that basic.publish is an async method, the return value from this function only indicates that the message data was successfully transmitted to the broker. It does not indicate failures that occur on the broker, such as publishing to a non-existent exchange.

Possible error values:

- kStatusTimerFailure: system timer facility returned an error the message was not sent.

- kStatusHeartbeatTimeout: connection timed out waiting for a heartbeat from the broker. The message was not sent.
- kStatusNoMemory: memory allocation failed. The message was not sent.
- kStatusTableTooBig: a table in the properties was too large to fit in a single frame. Message was not sent.
- kStatusConnectionClosed: the connection was closed
- kStatusSSLError: a SSL error occurred.
- kStatusTCPError: a TCP error occurred. errno or WSAGetLastError() may provide more information.

146.3.11 BasicQOS(channel as Integer, prefetchSize as Integer, prefetchCount as Integer, isGlobal as boolean) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Basic QOS.

146.3.12 BasicRecover(channel as Integer, requeue as Boolean) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Recover a channel.

146.3.13 BasicReject(channel as Integer, deliveryTag as UInt64, requeue as Boolean = false) as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Do a basic.reject.
Notes:

Actively reject a message that has been delivered

channel: the channel identifier
deliveryTag the delivery tag of the message to reject
requeue: indicate to the broker whether it should requeue the message or just discard it.

Returns error code, 0 on success, 0 >on failing to send the reject method to the broker.
This will not indicate failure if something goes wrong on the broker.

146.3.14 ChannelClose(Channel as Integer, Code as Integer = 200) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Closes an channel.
Notes:

channel: the channel identifier
code: the reason for closing the channel, kReplySuccess is a good default.

Returns RabbitMQRPCReplyMBS object indicating success or failure

146.3.15 ChannelFlow(channel as Integer, active as Boolean) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Channel Flow control.

146.3.16 ChannelOpen(Channel as Integer) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Opens a channel.

146.3.17 ConfirmSelect(channel as Integer) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Confirm select.

146.3.18 ConnectionClose(Code as Integer = 200) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Closes a connection.

146.3.19 ConstantIsHardError(constantNumber as Integer) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks to see if a constant is a hard error.
Notes:

A hard error occurs when something severe enough happens that the connection must be closed.

Returns true if its a hard error, false otherwise.

146.3.20 ConstantName(constantNumber as Integer) as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get constant name string from constant.

146.3.21 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
Notes: Allocate and initialize a new connection object.

146.3.22 ConsumeMessage(byref envelope as RabbitMQEnvelopeMBS, timeoutValue as double = 30, flags as Integer = 0) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Wait for and consume a message.
Notes:

Waits for a basic.deliver method on any channel, upon receipt of basic.deliver it reads that message, and returns. If any other method is received before basic.deliver, this function will return an RabbitMQRPCReplyMBS with ReplyType = ResponseTypeLibraryException, and Reply.LibraryError = kStatusUnexpectedState. The caller should then call WaitFrame() to read this frame and take appropriate action.

This function should be used after starting a consumer with the BasicConsume() function

Envelope receives new object.
Timeout is in seconds.

flags: pass in 0. Currently unused.

Returns RabbitMQRPCReplyMBS, which may contain error information.
Type of the object is RabbitMQRPCReplyMBS.ResponseTypeNormal on success.

146.3.23 Destructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.
Notes:

Closes the entire connection.

Implicitly closes all channels and informs the broker the connection
is being closed, after receiving acknowledgment from the broker it closes
the socket.

146.3.24 ErrorString(ErrorCode as Integer) as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the error string for the given error code.
Notes: Get an error string associated with an error code.

146.3.25 ExchangeBind(channel as Integer, destination as String, source as String, routingKey as String, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds an exchange.

146.3.26 ExchangeDeclare(channel as Integer, exchange as String, type as String, passive as Boolean, durable as Boolean, autoDelete as Boolean, internal as Boolean, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Declare an exchange.

146.3.27 ExchangeDelete(channel as Integer, exchange as String, ifUsed as Boolean) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Deletes an exchange.

146.3.28 ExchangeUnbind(channel as Integer, destination as String, source as String, routingKey as String, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Unbinds an exchange.

146.3.29 LoginExternal(vhost as String, channelMax as Integer, frameMax as Integer, heartbeat as Integer, Identity as String, properties as Dictionary = nil) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Login with external SASL.
Notes:

Login to the broker passing an optional properties table.

vhost: the virtual host to connect to on the broker. The default on most brokers is "/".
channelMax: the limit for the number of channels for the connection.
0 means no limit, and is a good default (kDefaultMaxChannels) Note that the maximum number of channels the protocol supports is 65535 (2^16, with the 0-channel reserved). The server can set a lower channelMax and then the client will use the lowest of the two.
frameMax: the maximum size of an AMQP frame ont he wire to request of the broker for this connection. 4096 is the minimum size, 2^31-1 is the maximum, a good default is 131072 (128KB), or kDefaultFrameSize.
heartbeat: the number of seconds between heartbeat frame to request of the broker. A value of 0 disables heartbeats. Note rabbitmq-c only has partial support for hearts, as of v0.4.0 heartbeats are only serviced during BasicPublish(), and SimpleWaitFrame() properties a table of properties to send the broker.
sasl_method the SASL method to authenticate with the properties.

Returns error code indicating success or failure via RabbitMQRPCReplyMBS object.

- Reply.Type = kResponseNormal. Login completed successfully
- Reply.Type = kResponseLibraryException. In most cases errors from the broker when logging in will be represented by the broker closing the socket. In this case r.libraryError will be set to kStatus-

ConnectionClosed. This error can represent a number of error conditions including: invalid vhost, authentication failure.

- Reply.Type = kResponseServerException. The broker returned an exception:
- If Reply.MethodId = kChannelCloseMethod a channel exception occurred, check decoded properties to see details of the exception. The client should SendMethod() a kChannelCloseOkMethod. The channel must be re-opened before it can be used again. Any resources associated with the channel (auto-delete exchanges, auto-delete queues, consumers) are invalid and must be recreated before attempting to use them again.
- If Reply.MethodId = kConnectionCloseMethod a connection exception occurred, check decoded properties to see details of the exception. The client SendMethod() a kConnectionCloseOkMethod and disconnect from the broker.

146.3.30 LoginPlain(vhost as String, channelMax as Integer, frameMax as Integer, heartbeat as Integer, Username as String, Password as String, properties as Dictionary = nil) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Login with plain SASL.
Notes:

Login to the broker passing an optional properties table.

vhost: the virtual host to connect to on the broker. The default on most brokers is "/".
channelMax: the limit for the number of channels for the connection.
0 means no limit, and is a good default (kDefaultMaxChannels) Note that the maximum number of channels the protocol supports is 65535 (2^16, with the 0-channel reserved). The server can set a lower channelMax and then the client will use the lowest of the two.
frameMax: the maximum size of an AMQP frame ont he wire to request of the broker for this connection. 4096 is the minimum size, 2^31-1 is the maximum, a good default is 131072 (128KB), or kDefaultFrameSize.
heartbeat: the number of seconds between heartbeat frame to request of the broker. A value of 0 disables heartbeats. Note rabbitmq-c only has partial support for hearts, as of v0.4.0 heartbeats are only serviced during BasicPublish(), and SimpleWaitFrame() properties a table of properties to send the broker.
sasl_method the SASL method to authenticate with the properties.

Returns error code indicating success or failure via RabbitMQRPCReplyMBS object.

- Reply.Type = kResponseNormal. Login completed successfully
- Reply.Type = kResponseLibraryException. In most cases errors from the broker when logging in will be represented by the broker closing the socket. In this case r.libraryError will be set to kStatusConnectionClosed. This error can represent a number of error conditions including: invalid vhost, authentication failure.

- Reply.Type = kResponseServerException. The broker returned an exception:

- If Reply.MethodId = kChannelCloseMethod a channel exception occurred, check decoded properties to see details of the exception. The client should SendMethod() a kChannelCloseOkMethod. The channel must be re-opened before it can be used again. Any resources associated with the channel (auto-delete exchanges, auto-delete queues, consumers) are invalid and must be recreated before attempting to use them again.

- If Reply.MethodId = kConnectionCloseMethod a connection exception occurred, check decoded properties to see details of the exception. The client SendMethod() a kConnectionCloseOkMethod and disconnect from the broker.

146.3.31 MaybeReleaseBuffers

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Release connection owned memory.
Notes:

Release memory owned by the connection object related to any channel, allowing reuse by the library. Use of any memory returned by the library before this function is called with result in undefined behavior.

Internally rabbitmq-c tries to reuse memory when possible. As a result its possible calling this function may not have a noticeable effect on memory usage.

146.3.32 MaybeReleaseBuffersOnChannel(channel as Integer)

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Release connection owned memory related to a channel.
Notes:

Release memory owned by the amqp_connection_state_t object related to the specified channel, allowing reuse by the library. Use of any memory returned the library for a specific channel will result in undefined behavior.

Internally rabbitmq-c tries to reuse memory when possible. As a result its possible calling this function may not have a noticeable effect on memory usage.

146.3.33 MethodHasContent(constantNumber as Integer) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks whether such a method has content.
Notes: Returns true if content is expected.

146.3.34 MethodName(constantNumber as Integer) as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get method name string from method number.
Notes: Returns method name string.

146.3.35 NewTCPSocket(UseSSL as boolean = false) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates new socket.
Notes:

Optional uses OpenSSL to create a SSL socket if UseSSL is passed with value true.
Returns true on success.

146.3.36 OpenSocket(Host as String, Port as Integer, TimeOut as Double = 10) as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Open a socket connection.
Notes:

This function opens a socket connection returned created with NewTCPSocket(). This function should be called after setting socket options.
Returns error code.

host: Connect to this host.
port: Connect on this remote port.
timeout: Max allowed time to spent on opening.

146.3.37 QueueBind(channel as Integer, queue as String, exchange as String, routingKey as String, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Binds an exchange.

146.3.38 QueueDeclare(channel as Integer, queue as String, passive as Boolean, durable as Boolean, exclusive as Boolean, autoDelete as Boolean, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Declare a queue.

146.3.39 QueueDelete(channel as Integer, queue as String, ifUnused as Boolean, ifEmpty as Boolean) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Delete a queue.

146.3.40 QueuePurge(channel as Integer, queue as String) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Purge a queue.

146.3.41 QueueUnbind(channel as Integer, queue as String, exchange as String, routingKey as String, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Unbind a queue.

146.3.42 ReadMessage(channel as Integer, byref message as RabbitMQMessageMBS, flags as Integer = 0) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reads the next message on a channel
Notes:

Reads a complete message (header + body) on a specified channel. This function is intended to be used with amqp_basic_get() or when an AMQP_BASIC_DELIVERY_METHOD method is received.

channel: the channel on which to read the message from
message: The parameter receiving the message.
flags: currently unused.

Returns RabbitMQRPCReplyMBS, which may contain error information.
Type of the object is RabbitMQRPCReplyMBS.ResponseTypeNormal on success.

146.3.43 SendHeader as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Send initial AMQP header to the broker.
Notes:

This is a low level function intended for those who want to interact with the broker at a very low level. Use of this function without understanding what it does will result in AMQP protocol errors.

This function sends the AMQP protocol header to the broker.

Returns error code, kStatusOK on success, a negative value on failure. Possible error codes:

- kStatusConnectionClosed: the connection to the broker was closed.
- kStatusSocketError: a socket error occurred. It is likely the underlying socket has been closed. errno or WSAGetLastError() may provide further information.
- kStatusSSLError: a SSL error occurred. The connection to the broker was closed.

146.3.44 SetCACert(File as FolderItem) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets CACert file with root certificates.
Notes: Returns true on success and false on failure.
See also:

- 146.3.45 SetCACert(Path as String) as Boolean

146.3.45 SetCACert(Path as String) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets CACert file with root certificates.
Notes: Returns true on success and false on failure.
See also:

- 146.3.44 SetCACert(File as FolderItem) as Boolean 22134

146.3.46 SetKey(CertFile as FolderItem, KeyFile as FolderItem) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets SSL key with certificate file path and key file path.
Notes: Returns true on success and false on failure.
See also:

- 146.3.47 SetKey(CertPath as String, KeyPath as String) as Boolean 22135

146.3.47 SetKey(CertPath as String, KeyPath as String) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets SSL key with certificate file path and key file path.
Notes: Returns true on success and false on failure.
See also:

- 146.3.46 SetKey(CertFile as FolderItem, KeyFile as FolderItem) as Boolean 22135

146.3.48 SetKeyData(CertFile as FolderItem, KeyData as String) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets SSL key with certificate file and key data as PEM.
Notes: Returns true on success and false on failure.
See also:

- 146.3.49 SetKeyData(CertPath as String, KeyData as String) as Boolean 22135

146.3.49 SetKeyData(CertPath as String, KeyData as String) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets SSL key with certificate file and key data as PEM.
Notes: Returns true on success and false on failure.
See also:

- 146.3.48 SetKeyData(CertFile as FolderItem, KeyData as String) as Boolean 22135

146.3.50 SimpleWaitFrame(byref Frame as RabbitMQFrameMBS, timeoutValue as double = 30) as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Read a single frame with a timeout.
Notes:

Waits for the next frame to be read from the broker, up to a timespan specified by tv. The function will return kStatusTimeout if the timeout is reached. The tv value is not modified by the function.

The library may buffer frames. When an connection object has frames buffered calling SimpleWaitFrame_noblock() will return an frame without entering a blocking read(). You can test to see if an connection object has frames buffered by calling the FramesEnqueued() function.

The library has a socket read buffer. When there is data in an connection read buffer, SimpleWaitFrame() may return an frame without entering a blocking read(). You can test to see if an connection object has data in its read buffer by calling the DataInBuffer() function.

This function does not return heartbeat frames. When enabled, heartbeating is handed internally internally by the library.

Frame: receives decoded frame the frame
timeoutValue: the maximum time to wait for a frame to be read in seconds. Setting to 0 will do a non-blocking read.

Returns kStatusOK on success. An kStatus value is returned otherwise. Possible errors include:

- kStatusTimeout the timeout was reached while waiting for a frame from the broker.
- kStatusInvalidParameter the tv parameter contains an invalid value.
- kStatusNoMemory failure in allocating memory. The library is likely in an indeterminate state making recovery unlikely. Client should note the error and terminate the application
- kStatusBadAMQPData bad AMQP data was received. The connection should be shutdown immediately

- kStatusUnknownMethod: an unknown method was received from the broker. This is likely a protocol error and the connection should be shutdown immediately
- kStatusUnknownClass: a properties frame with an unknown class was received from the broker. This is likely a protocol error and the connection should be shutdown immediately
- kStatusHeartbeatTimeout: timed out while waiting for heartbeat from the broker. The connection has been closed.
- kStatusTimerFailure: system timer indicated failure.
- kStatusSocketError: a socket error occurred. The connection has been closed
- kStatusSSLError: a SSL socket error occurred. The connection has been closed.

146.3.51 TXCommit(channel as Integer) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Commit.

146.3.52 TXRollback(channel as Integer) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Rollback.

146.3.53 TXSelect(channel as Integer) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Select.

146.3.54 Properties

146.3.55 ClientProperties as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the client properties table
Notes:

Get the properties that were passed to the broker on connection.
(Read only property)

146.3.56 DataInBuffer as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Check to see if there is data left in the receive buffer.
Notes:

Can be used to see if there is data still in the buffer, if so calling SimpleWaitFrame will not immediately enter a blocking read.

Returns true if there is data in the recieve buffer, false otherwise.
(Read only property)

146.3.57 FramesEnqueued as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks to see if there are any incoming frames ready to be read.
Notes:

Checks to see if there are any frame objects buffered by the connection object. Having one or more frames buffered means that SimpleWaitFrame() will return a frame without potentially blocking on a read() call.

Returns true if there are frames enqueued, false otherwise.
(Read only property)

146.3.58 Handle as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

146.3.59 HandshakeTimeout as Double

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get or set the login handshake timeout.
Notes:

Login performs the login handshake with the broker. This function sets the timeout associated with completing this operation from the client side.

The timeout must be set before Login is called to change from the default timeout.

Note that the RabbitMQ broker has a configurable timeout for completing the login handshake, the default is 10 seconds. rabbitmq-c has a default of 12 seconds.
(Read and Write property)

146.3.60 Heartbeat as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the number of seconds between heartbeats of the connection.
Notes:

The number of seconds between heartbeats is set when connection negotiation takes place in Login.

Returns the number of seconds between heartbeats.
(Read only property)

146.3.61 MaximumChannel as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the maximum number of channels the connection can handle.
Notes:

The maximum number of channels is set when connection negotiation takes
place in Login.

Returns the maximum number of channels. 0 if there is no limit.
(Read only property)

146.3.62 MaximumFrameSize as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the maximum size of an frame the connection can handle.
Notes:

The maximum size of an frame is set when connection negotiation takes place in Login.

Return the maximum size in bytes of an frame.
(Read only property)

146.3.63 RPCReply as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the last global RPCReply
Notes:

The API methods corresponding to most synchronous AMQP methods return a pointer to the decoded method result. Upon error, they return nil, and we need some way of discovering what, if anything, went wrong. RPCReply() returns the most recent RabbitMQRPCReplyMBS instance corresponding to such an API operation for the given connection.

Only use it for operations that do not themselves return RabbitMQRPCReplyMBS; operations that do return RabbitMQRPCReplyMBS generally do NOT update this per-connection-global RabbitMQRPCReplyMBS instance.

Returns the most recent RabbitMQRPCReplyMBS object:

- Reply.Type = kResponseNormal. Login completed successfully
- Reply.Type = kResponseLibraryException. In most cases errors from the broker when logging in will be represented by the broker closing the socket. In this case r.libraryError will be set to kStatusConnectionClosed. This error can represent a number of error conditions including: invalid vhost, authentication failure.
- Reply.Type = kResponseServerException. The broker returned an exception:
- If Reply.MethodId = kChannelCloseMethod a channel exception occurred, check decoded properties to see details of the exception. The client should SendMethod() a kChannelCloseOkMethod. The channel must be re-opened before it can be used again. Any resources associated with the channel (auto-delete exchanges, auto-delete queues, consumers) are invalid and must be recreated before attempting to use them again.
- If Reply.MethodId = kConnectionCloseMethod a connection exception occurred, check decoded properties to see details of the exception. The client SendMethod() a kConnectionCloseOkMethod and disconnect from the broker.

(Read only property)

146.3.64 RPCTimeout as Double

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The RPC timeout.
Notes:

Get or set the RPC timeout.

Sets the timeout for any RPC-style AMQP command (e.g., QueueDeclare).
This timeout may be changed at any time by calling this function with a new timeout. The timeout applies individually to each RPC that is made.

The default value is 0, or an infinite timeout.

When an RPC times out, the function will return an error kStatusTimeout, and the connection will be closed.

RPC-timeouts are an advanced feature intended to be used to detect dead connections quickly when the rabbitmq-c implementation of heartbeats does not work. Do not use RPC timeouts unless you understand the implications of doing so.
(Read and Write property)

146.3.65 ServerProperties as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the broker properties table.
Notes:

Returns a dictionary containing the properties advertised by the broker on connection.
(Read only property)

146.3.66 SocketFileDescriptor as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the socket descriptor in use by a socket object.
Notes:

Retrieve the underlying socket descriptor. This function can be used to perform low-level socket operations that aren't supported by the socket interface. Use with caution!
(Read only property)

146.3.67 SSLCACertPath as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The CA certificate file path.
Notes:

cacert Path to the CA cert file in PEM format.
(Read only property)

146.3.68 SSLCertPath as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The certificate file path.
Notes:

Cert file in PEM format.
(Read only property)

146.3.69 SSLKeyData as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The client key.
Notes:

A buffer containing client key in PEM format.
(Read only property)

146.3.70 SSLKeyPath as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The file path to the SSL key.
Notes: (Read only property)

146.3.71 SSLMaxVersion as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Maximum allowed SSL version.
Notes:

Defaults to latest TLS version.
(Read and Write property)

146.3.72 SSLMinVersion as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Minimum allowed SSL version.
Notes:

Defaults to TLS v1.0.
(Read and Write property)

146.3.73 SSLVerifyHostname as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Enable or disable hostname verification.
Notes:

Hostname verification checks the broker cert for a CN or SAN that matches the hostname that OpenSocket() is presented.
Peer verification is controlled by SSLVerifyPeer property.
(Read and Write property)

146.3.74 SSLVerifyPeer as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Enable or disable peer verification.
Notes:

Peer verification validates the certificate chain that is sent by the broker.
Hostname validation is controlled by SSLVerifyHostname.
(Read and Write property)

146.3.75 Version as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries version number of the library.
Notes:

Returns the rabbitmq-c version as a string.
(Read only property)

146.3.76 VersionNumber as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries version number of the library.
Notes:

Returns the rabbitmq-c version as a packed integer.

first byte is major, second byte minor, third byte patch level and last release counter.
Value = ((((Major * 256) + Minor) * 256 + Patch) * 256 + Release)
(Read only property)

146.3.77 Constants

146.3.78 kDefaultFrameSize = 131072

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: Default frame size (128Kb)

146.3.79 kDefaultHeartbeat = 0

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: Default heartbeat interval (0, heartbeat disabled)

146.3.80 kDefaultVHost = "/"

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: Default RabbitMQ vhost: "/".

146.3.81 kMaxChannels = 2047

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: Default maximum number of channels (2047, RabbitMQ default limit of 2048, minus 1 for channel 0).
Notes: RabbitMQ set a default limit of 2048 channels per connection in v3.7.5 to prevent broken clients from leaking too many channels.

146.3.82 kProtocolPort = 5672

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: Default AMQP Port.

146.3.83 kProtocolVersionMajor = 0

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: AMQP protocol version major

146.3.84 kProtocolVersionMinor = 9

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: AMQP protocol version minor.

146.3.85 kProtocolVersionRevision = 1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: AMQP protocol version revision.

146.3.86 kStatusBadAmqpData = -2

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: Incorrect or corrupt data was received from the broker. This is a protocol error.

146.3.87 kStatusBadUrl = -8

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: malformed AMQP URL

146.3.88 kStatusBrokerUnsupportedSaslMethod = -19

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: Broker does not support the requested SASL mechanism.

146.3.89 kStatusConnectionClosed = -7

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: The connection to the broker has been closed.

146.3.90 kStatusHeartbeatTimeout = -15

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: Timed out waiting for heartbeat.

146.3.91 kStatusHostnameResolutionFailed = -5

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: Unable to resolve the hostname.

146.3.92 kStatusIncompatibleAmqpVersion = -6

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: The broker advertised an incompaible AMQP version.

146.3.93 kStatusInvalidParameter = -10

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: An invalid parameter was passed into the function.

146.3.94 kStatusNoMemory = -1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: Memory allocation failed.

146.3.95 kStatusOk = 0

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: Operation successful.

146.3.96 kStatusSocketClosed = -17

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: Underlying socket is closed.

146.3.97 kStatusSocketError = -9

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: A socket error occurred.

146.3.98 kStatusSocketInuse = -18

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: Underlying socket is already open.

146.3.99 kStatusSslConnectionFailed = -515

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: SSL handshake failed.

146.3.100 kStatusSslError = -512

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: A generic SSL error occurred.

146.3.101 kStatusSslHostnameVerifyFailed = -513

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: SSL validation of hostname against peer certificate failed.

146.3.102 kStatusSslPeerVerifyFailed = -514

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: SSL validation of peer certificate failed.

146.3.103 kStatusTableTooBig = -11

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: The dictionary object cannot be serialized because the output buffer is too small.

146.3.104 kStatusTcpError = -256

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: A generic TCP error occurred.

146.3.105 kStatusTcpSocketlibInitError = -257

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: An error occurred trying to initialize the socket library

146.3.106 kStatusTimeout = -13

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: Operation timed out.

146.3.107 kStatusTimerFailure = -14

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: The underlying system timer facility failed.

146.3.108 kStatusUnexpectedState = -16

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: Unexpected protocol state

146.3.109 kStatusUnknownClass = -3

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: An unknown AMQP class was received. This is a protocol error.

146.3.110 kStatusUnknownMethod = -4

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: An unknown AMQP method was received. This is a protocol error.

146.3.111 kStatusUnsupported = -20

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: Parameter is unsupported in this version.

146.3.112 kStatusWrongMethod = -12

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the status constants.
Notes: The wrong method was received.

146.3.113 kTLSv10 = 1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the TLS version constants.
Notes: TLS v1.0

146.3.114 kTLSv11 = 2

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the TLS version constants.
Notes: TLS v1.1

146.3.115 kTLSv12 = 3

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the TLS version constants.
Notes: TLS v1.2

146.3.116 kTLSvLatest = 65535

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the TLS version constants.
Notes: Latest TLS version available.

146.4 class RabbitMQEnvelopeMBS

146.4.1 class RabbitMQEnvelopeMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Envelope object.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

146.4.4 Methods

146.4.5 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

146.4.6 Destructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

146.4.7 Properties

146.4.8 Channel as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Channel message was delivered on.
Notes: (Read and Write property)

146.4.9 ConsumerTag as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The consumer tag the message was delivered to .
Notes: (Read and Write property)

146.4.10 DeliveryTag as UInt64

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The messages delivery tag.
Notes: (Read and Write property)

146.4.11 Exchange as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The exchange this message was published to.
Notes: (Read and Write property)

146.4.12 Message as RabbitMQMessageMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The message.
Notes: (Read and Write property)

146.4.13 Redelivered as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Flag indicating whether this message is being redelivered.
Notes: (Read and Write property)

146.4.14 RoutingKey as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The routing key this message was published with.
Notes: (Read and Write property)

146.5 class RabbitMQFrameMBS

146.5.1 class RabbitMQFrameMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: An AMQP frame.

146.5.4 Methods

146.5.5 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

146.5.6 Destructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

146.5.7 Properties

146.5.8 BodyFragment as MemoryBlock

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The body fragment.
Notes:

Only set if FrameType is kFrameBody.
(Read and Write property)

146.5.9 BodyFragmentSize as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The size of the body fragment in bytes.
Notes:

Only set if FrameType is kFrameBody.
(Read and Write property)

146.5.10 BodySize as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Size of the body in bytes.
Notes:

Only set if FrameType is kFrameHeader.
(Read and Write property)

146.5.11 Channel as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The channel the frame was received on.
Notes: (Read and Write property)

146.5.12 ClassID as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for the properties.
Notes:

Only set if FrameType is kFrameHeader.
(Read and Write property)

146.5.13 FrameType as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The frame type.
Notes:

See kFrameMethod, kFrameHeader and kFrameBody.
(Read and Write property)

146.5.14 MethodDecoded as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The decoded method content.
Notes:

MBS Plugin has code to translate over 60 types of method structures into Xojo dictionary.
Only set if FrameType is kFrameMethod.
(Read and Write property)

146.5.15 MethodID as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The method ID.
Notes:

Only set if FrameType is kFrameMethod.
(Read and Write property)

146.5.16 PropertiesDecoded as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The decoded properties.
Notes:

MBS Plugin has code to translate over several types of properties structures into Xojo dictionary.
Only set if FrameType is kFrameHeader.
(Read and Write property)

146.5.17 Raw as MemoryBlock

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Amqp-encoded properties structure.
Notes:

Only set if FrameType is kFrameHeader.
(Read and Write property)

146.5.18 RawSize as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The size of the Raw data.
Notes:

Only set if FrameType is kFrameHeader.
(Read and Write property)

Function: One of the method identifiers.

146.5.44 kChannelOpenMethod = & h0014000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.45 kChannelOpenOkMethod = & h0014000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.46 kClassAccess = & h001E

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the class ID for a property class.
Notes: access class id

146.5.47 kClassBasic = & h003C

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the class ID for a property class.
Notes: basic class id

146.5.48 kClassChannel = & h0014

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the class ID for a property class.
Notes: channel class id

146.5.49 kClassConection = & h000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the class ID for a property class.
Notes: connection class id

146.5.50 kClassConfirm = & h0055

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the class ID for a property class.
Notes: confirm class id

146.5.51 kClassExchange = & h0028

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the class ID for a property class.
Notes: exchange class id

146.5.52 kClassQueue = & h0032

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the class ID for a property class.
Notes: queue class id

146.5.53 kClassTX = & h005A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the class ID for a property class.
Notes: tx class id

146.5.54 kConfirmSelectMethod = & h0055000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.55 kConfirmSelectOkMethod = & h0055000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.56 kConnectionBlockedMethod = & h000A003C

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.57 kConnectionCloseMethod = & h000A0032

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.58 kConnectionCloseOkMethod = & h000A0033

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.59 kConnectionOpenMethod = & h000A0028

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.60 kConnectionOpenOkMethod = & h000A0029

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.61 kConnectionSecureMethod = & h000A0014

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.62 kConnectionSecureOkMethod = & h000A0015

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.63 kConnectionStartMethod = & h000A000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.64 kConnectionStartOkMethod = & h000A000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.65 kConnectionTuneMethod = & h000A001E

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.66 kConnectionTuneOkMethod = & h000A001F

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.67 kConnectionUnblockedMethod = & h000A003D

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.68 kExchangeBindMethod = & h0028001E

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.69 kExchangeBindOkMethod = & h0028001F

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.70 kExchangeDeclareMethod = & h0028000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.71 kExchangeDeclareOkMethod = & h0028000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.72 kExchangeDeleteMethod = & h00280014

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.73 kExchangeDeleteOkMethod = & h00280015

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.74 kExchangeUnbindMethod = & h00280028

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.75 kExchangeUnbindOkMethod = & h00280033

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.76 kFrameBody = 3

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the frame type constants.
Notes: The BodyFragment and BodyFragmentSize properties are set.

146.5.77 kFrameEnd = 206

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the frame type constants.
Notes: Frame end type.

146.5.78 kFrameHeader = 2

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the frame type constants.
Notes: ClassID, BodySize, PropertiesDecoded, Raw and RawSize properties are set.

146.5.79 kFrameHeartbeat = 8

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the frame type constants.
Notes: Heartbeat frame type.

146.5.80 kFrameMethod = 1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the frame type constants.
Notes: The MethodDecoded and MethodID properties are set.

146.5.81 kFrameMinSize = 4096

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: Minimum frame size.

146.5.82 kQueueBindMethod = & h00320014

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.83 kQueueBindOkMethod = & h00320015

Function: One of the method identifiers.

146.5.84 kQueueDeclareMethod = & h0032000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.85 kQueueDeclareOkMethod = & h0032000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.86 kQueueDeleteMethod = & h00320028

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.87 kQueueDeleteOkMethod = & h00320029

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.88 kQueuePurgeMethod = & h0032001E

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.89 kQueuePurgeOkMethod = & h0032001F

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.90 kQueueUnbindMethod = & h00320032

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.91 kQueueUnbindOkMethod = & h00320033

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.92 kTxCommitMethod = & h005A0014

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.93 kTxCommitOkMethod = & h005A0015

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.94 kTxRollbackMethod = & h005A001E

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.95 kTxRollbackOkMethod = & h005A001F

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.96 kTxSelectMethod = & h005A000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.5.97 kTxSelectOkMethod = & h005A000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the method identifiers.

146.6 class RabbitMQMessageMBS

146.6.1 class RabbitMQMessageMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a message.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

146.6.4 Methods

146.6.5 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private construtor.

146.6.6 Properties

146.6.7 Body as MemoryBlock

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The message body.
Notes: (Read only property)

146.6.8 Properties as RabbitMQBasicPropertiesMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The message properties.
Notes: (Read only property)

146.6.9 Constants

146.6.10 ResponseTypeLibraryException = 2

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the response type constants.
Notes: Library error, an error occurred in the library, examine the library error.

146.6.11 ResponseTypeNone = 0

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the response type constants.
Notes: The library got an EOF from the socket.

146.6.12 ResponseTypeNormal = 1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the response type constants.
Notes: Response normal, the RPC completed successfully.

146.6.13 ResponseTypeServerException = 3

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the response type constants.
Notes: Server exception, the broker returned an error, check reply.

146.7 class RabbitMQRPCReplyMBS

146.7.1 class RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reply from a RPC method on the broker.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

146.7.4 Methods

146.7.5 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

146.7.6 Destructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

146.7.7 Properties

146.7.8 LibraryError as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The library error code.
Notes:

in case of ResponseTypeLibraryException this field will be set to an error code.
An error string can be retrieved using ErrorString().
(Read only property)

146.7.9 MethodDecoded as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The decoded data for the method.
Notes:

MBS Plugin has code to translate over 60 types of method structures into Xojo dictionary.
(Read only property)

146.7.10 MethodId as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The method ID.
Notes: (Read only property)

146.7.11 Type as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The response type.
Notes:

See ResponseTypeLibraryException, ResponseTypeServerException, ResponseTypeNone and ResponseTypeNormal.
(Read only property)

146.7.12 Constants

146.7.13 kAccessRefused = 403

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.14 kChannelError = 504

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.15 kCommandInvalid = 503

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.16 kConnectionForced = 320

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.17 kContentTooLarge = 311

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.18 kFrameError = 501

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.19 kInternalError = 541

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.20 kInvalidPath = 402

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.21 kNoConsumers = 313

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.22 kNoRoute = 312

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.23 kNotAllowed = 530

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.24 kNotFound = 404

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.25 kNotImplemented = 540

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.26 kPreconditionFailed = 406

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.27 kReplySuccess = 200

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.
Notes: Success

146.7.28 kResourceError = 506

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.29 kResourceLocked = 405

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.30 kSyntaxError = 502

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.31 kUnexpectedFrame = 505

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the error codes.

146.7.32 ResponseTypeLibraryException = 2

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the response type constants.
Notes: The library encountered an error, check the LibraryError field.

146.7.33 ResponseTypeNone = 0

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the response type constants.
Notes: Invalid state.

146.7.34 ResponseTypeNormal = 1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the response type constants.
Notes: The RPC completed successfully.

146.7.35 ResponseTypeServerException = 3

MBS RabbitMQ Plugin, Plugin Version: 21.2.

Function: One of the response type constants.
Notes: The broker returned an exception, check the reply field.

Chapter 147

RAMStream

147.1 class RAMStreamMBS

147.1.1 class RAMStreamMBS

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows you to use a memory bases stream.
Notes:

If you need to concat lot's of streams, just make a RAMstream and write to it.

In the example folder is a project called "test ramstream speed" which tests the speed on concating 10000 strings which each 1000 bytes in length.

On my G4 Dual 1000 Mhz, I get this result:
String only: 22063 ticks
RAMStream: 18 ticks

147.1.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr2

147.1.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr2

147.1.4 Methods

147.1.5 close

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

147.1.6 Constructor(InitialSize as Integer=0)

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new RAMStream.
Example:

```
dim r as RAMStreamMBS
r=new RAMStreamMBS(1000000)
r.write "Hello"
```

Notes:

To avoid memory fragmentation the memory grows in 32 KByte chunks.

The parameter you give is the size for the first allocation. So if you only need 2 KByte, you just pass 2048. If you don't know the size, you can pass 0 or a negative number to get the default initial size which is 32 KByte.

You can change the GrowSize property to use a different growing size.
Performance is better if resizing the memory buffer is minimized.

The stream can grow to around 2 GB.
On low memory, the initial resize will fail and length will be 0.

147.1.7 Look(count as Integer) as string

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads bytes, but does not move the current position.
Example:

```
dim r as RamStreamMBS // your stream
```

```
dim s as string
s=r.look(100)
```

Notes: Like the lookahead property in a socket.

147.1.8 LookBlock(count as Integer) as memoryblock

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads bytes into a memoryblock, but leaves the current position untouched.
Example:

```
dim b as RAMStreamMBS
dim s as memoryblock
'...
s=b.LookBlock(5)
```

147.1.9 LookByte as Integer

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a byte, but leaves the current position untouched.

147.1.10 LookLong as Integer

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an integer, but leaves the current position untouched.

147.1.11 LookShort as Integer

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a short, but leaves the current position untouched.

147.1.12 Read(count as Integer) as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads bytes into a string.
Example:

```
dim b as RAMStreamMBS
dim s as string
'...
s=b.read(5)
```

147.1.13 ReadBlock(count as Integer) as memoryblock

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads bytes into a memoryblock.
Example:

```
dim b as RAMStreamMBS
dim s as memoryblock
'...
s=b.ReadBlock(5)
```

147.1.14 Readbyte as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an 8bit Byte from the stream.
Example:

```
dim b as RAMStreamMBS
dim i as Integer
'...
i=B.readbyte
```

147.1.15 ReadLong as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a signed 32bit Integer from the stream.

Example:

```
dim b as RAMStreamMBS
dim i as Integer
'...
i=B.readlong
```

Notes: This function is affected by the LittleEndian Setting.

147.1.16 ReadShort as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a signed 16bit Integer from the stream.
Example:

```
dim b as RAMStreamMBS
dim i as Integer
'...
i=B.readshort
```

Notes: This function is affected by the LittleEndian Setting.

147.1.17 Write(data as string)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes bytes from a string to file.

147.1.18 WriteBlock(data as memoryblock,count as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes count bytes from a memoryblock to file.
Example:

```
dim b as RAMStreamMBS
dim m as memoryblock
'...
b.writeblock m,m.size
```

147.1.19 WriteByte(data as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a byte to file.

147.1.20 WriteLong(data as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes an 32bit integer to file.
Notes: This method is affected by the LittleEndian Setting.

147.1.21 WriteShort(data as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes an 16bit integer to file.
Notes: This method is affected by the LittleEndian Setting.

147.1.22 Properties

147.1.23 EOF as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if you are at the end of the stream.
Notes: (Read only property)

147.1.24 GrowSize as Integer

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size in bytes used to grow the ramstream backbuffer.
Notes:

Default is 32 Kilobytes.
If the value is bigger than zero, it will be used as the allocation increase. Else the default value is used.

(Read and Write property)

147.1.25 Length as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current length of the stream.
Notes:

You can truncate the stream by setting this property.
(Read and Write property)

147.1.26 LittleEndian as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decides whether to convert integers read or wrote to the file.
Notes:

See Xojos binarystream for more details.
For native platform you may set "littleendian=targetwin32".
(Read and Write property)

147.1.27 MemoryUsed as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much memory is currently used for this Stream.
Notes: (Read and Write property)

147.1.28 Position as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns current position.
Notes:

You can set the current file stream position using this property.
(Read and Write property)

147.2 Globals

147.2.1 CreateRamStreamMBS(InitialSize as Integer = 0) as RamStreamMBS

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new RAMStream.
Example:

```
dim r as RAMStreamMBS
r=CreateRamStreamMBS(1000000)
r.write "Hello"
```

Notes:

To avoid memory fragmentation the memory grows in 32 KByte chunks.

The parameter you give is the size for the first allocation. So if you only need 2 KByte, you just pass 2048. If you don't know the size, you can pass 0 or a negative number to get the default initial size which is 32 KByte.

You can change the GrowSize property to use a different growing size.
Performance is better if resizing the memory buffer is minimized.

The stream can grow to around 2 GB.
Returns nil on low memory.

Chapter 148

RaspberryPiCamera

148.1 class RaspberryPiCameraFormatDescriptionMBS

148.1.1 class RaspberryPiCameraFormatDescriptionMBS

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for a format description.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

148.1.2 Methods

148.1.3 Constructor

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The private constructor.

148.1.4 Properties

148.1.5 Description as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The format description.
Notes: (Read only property)

148.1.6 Flags as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The flags.
Notes:

Currently can be 1 for compressed and 2 for emulated.
(Read only property)

148.1.7 Index as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Format number.
Notes: (Read only property)

148.1.8 Pixelformat as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The pixel format.
Notes: (Read only property)

148.1.9 PixelformatString as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The pixel format as text.
Notes: (Read only property)

148.1.10 Type as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The buffer type.
Notes:

Usually 1 for video capture.
(Read only property)

148.2 class RaspberryPiCameraFormatMBS

148.2.1 class RaspberryPiCameraFormatMBS

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for format settings.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

148.2.2 Methods

148.2.3 Constructor

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The private constructor.

148.2.4 Properties

148.2.5 BytesPerRow as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The number of bytes per row.
Notes:

For padding, zero if unused.
(Read and Write property)

148.2.6 ColorSpace as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The colorspace.
Example:

```
// ITU-R 601 – broadcast NTSC/PAL
const V4L2_COLORSPACE_SMPTE170M = 1

// 1125-Line (US) HDTV
const V4L2_COLORSPACE_SMPTE240M = 2
```

```
// HD and modern captures.
const V4L2_COLORSPACE_REC709 = 3

// broken BT878 extents (601, luma range 16-253 instead of 16-235)
const V4L2_COLORSPACE_BT878 = 4

// These should be useful. Assume 601 extents.
const V4L2_COLORSPACE_470_SYSTEM_M = 5
const V4L2_COLORSPACE_470_SYSTEM_BG = 6

// I know there will be cameras that send this. So, this is
// unspecified chromaticities and full 0-255 on each of the
// Y'CbCr components
const V4L2_COLORSPACE_JPEG = 7

// For RGB colourspaces, this is probably a good start.
const V4L2_COLORSPACE_SRGB = 8
```

Notes:

Normally zero for default.
(Read and Write property)

148.2.7 Field as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The field.
Example:

```
const V4L2_FIELD_ANY = 0
// driver can choose from none, top, bottom, interlaced
// depending on whatever it thinks is approximate ...
const V4L2_FIELD_NONE = 1
// this device has no fields ...
const V4L2_FIELD_TOP = 2
// top field only
const V4L2_FIELD_BOTTOM = 3
// bottom field only
const V4L2_FIELD_INTERLACED = 4
// both fields interlaced
const V4L2_FIELD_SEQ_TB = 5
// both fields sequential into one
// buffer, top-bottom order
const V4L2_FIELD_SEQ_BT = 6
```

```
// same as above + bottom-top order
const V4L2_FIELD_ALTERNATE = 7
// both fields alternating into separate buffers
const V4L2_FIELD_INTERLACED_TB = 8
// both fields interlaced, top field
// first and the top field is transmitted first
const V4L2_FIELD_INTERLACED_BT = 9
// both fields interlaced, top field
// first and the bottom field is transmitted first
```

Notes: (Read and Write property)

148.2.8 Height as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The height of image in pixels.
Notes: (Read and Write property)

148.2.9 Pixelformat as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The pixel format.
Notes: (Read and Write property)

148.2.10 PixelformatString as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The pixel format as text.
Notes: (Read only property)

148.2.11 SizeImage as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The size of image.
Notes: (Read and Write property)

148.2.12 Type as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The type of data stream.
Notes:

With plugin we always use 1 for video capture (V4L2_BUF_TYPE_VIDEO_CAPTURE).
(Read and Write property)

148.2.13 Width as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The width of image in pixels.
Notes: (Read and Write property)

148.3 class RaspberryPiCameraMBS

148.3.1 class RaspberryPiCameraMBS

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class to get pictures from Raspberry Pi camera and similar Linux cameras.

148.3.2 Blog Entries

- MBS Plugin classes for use on Raspberry Pi
- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.0
- MBS Xojo Plugins, version 17.6pr3
- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

148.3.3 Videos

- Presentation from London conference about MBS Plugins.

148.3.4 Blog Entries

- MBS Plugin classes for use on Raspberry Pi
- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.0
- MBS Xojo Plugins, version 17.6pr3
- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

148.3.5 Videos

- Presentation from London conference about MBS Plugins.

148.3.6 Methods

148.3.7 AvailableFormats as RaspberryPiCameraFormatDescriptionMBS()

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries available formats.
Notes:

Lasterror and ErrorMessage are set.
Can return nil in case of error.

148.3.8 Capture(WithPicture as boolean = true) as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Captures a new picture.
Notes:

If WithPicture is true and pixel format is compatible (RGB 24 or 32bit), we set the picture property.
If capturing JPEG, we copy the JPEG data into the JPEG property.

Returns true on success.
Lasterror and ErrorMessage are set.

148.3.9 Close

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Closes camera device.
Notes: Lasterror and ErrorMessage are set.

148.3.10 Constructor

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The constructor.

148.3.11 CurrentFormat as RaspberryPiCameraFormatMBS

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries current format.
Notes:

Returns nil in case of error.
Lasterror and ErrorMessage are set.

148.3.12 InitBuffer as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Initializes buffer.
Notes:

This is done automatically if you capture.

Returns true on success.
Lasterror and ErrorMessage are set.

148.3.13 Open(Device as string = "/dev/video0") as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Opens the camera device.
Notes:

You need

- a Raspberry Pi computer
- to attach the camera module
- to enable the video camera
- run a command: sudo modprobe bcm2835-v4l2
- to check if you see /dev/video0 in file system.

Returns true on success.
Lasterror and ErrorMessage are set.

148.3.14 SetCurrentFormat(format as RaspberryPiCameraFormatMBS) as boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Sets current format.
Notes:

This allows to use any format, even if we can't transform it to picture for you.

Returns true on success.
Lasterror and ErrorMessage are set.

148.3.15 SetJPEGSize(Width as Integer, Height as Integer) as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Sets size and format to capture.
Notes:

Sets JPEG format with given size.

Returns true on success.
Lasterror and ErrorMessage are set.

148.3.16 SetSize(Width as Integer, Height as Integer) as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Sets size and format to capture.
Notes:

Sets to capture RGB picture with given size.

Returns true on success.
Lasterror and ErrorMessage are set.

148.3.17 Properties

148.3.18 AutoExposureBias as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
e.g. 12.
(Read and Write property)

148.3.19 AutoFocusRange as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

See kAutoFocusRange* constants
(Read and Write property)

148.3.20 AutoFocusStart as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.21 AutoFocusStatus as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

See kAutoFocusStatus* constants
(Read and Write property)

148.3.22 AutoFocusStop as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.23 AutoNPresetWhiteBalance as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

See kWhiteBalance* constants.
e.g. value is 1 for kWhiteBalanceAuto.

(Read and Write property)

148.3.24 Buffer as Ptr

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The pointer to the buffer.
Notes:

For the case you want to convert yourself pixel values to a picture.
(Read only property)

148.3.25 BufferLength as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The length of the buffer.
Notes: (Read only property)

148.3.26 BusInfo as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device bus info.
Notes:

e.g. "PCI:test"
(Read only property)

148.3.27 BytesPerRow as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The bytes per row for current image.
Notes: (Read only property)

148.3.28 CanCapture as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether the device can capture video.
Notes:

This is queried by checking if bitwiseAnd(capabilities,1) = 1.
(Read only property)

148.3.29 Capabilities as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Device capabilities bitmap.
Notes: (Read only property)

148.3.30 Card as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The name of the card.
Notes:

e.g. "Hauppauge WinTV"
(Read only property)

148.3.31 Driver as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The name of the driver.
Notes:

e.g. "bttv"
(Read only property)

148.3.32 ErrorMessage as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The error message for lasterror property.
Notes: (Read only property)

148.3.33 ExposureAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
e.g. 1000
(Read and Write property)

148.3.34 ExposureAuto as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

See kExposure* constants.
Value is e.g. 0 for kExposureAuto.
(Read and Write property)

148.3.35 ExposureAutoPriority as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.36 ExposureMetering as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

See kExposureMetering* constants
(Read and Write property)

148.3.37 FocusAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
May not work if you don't have a controllable focus on the camera.
(Read and Write property)

148.3.38 FocusAuto as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
May not work if you don't have a controllable focus on the camera.
(Read and Write property)

148.3.39 FocusRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
May not work if you don't have a controllable focus on the camera.
(Read and Write property)

148.3.40 Handle as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The internal file handle.
Notes: (Read only property)

148.3.41 Height as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The height in pixel used for capture.
Notes: (Read only property)

148.3.42 ImageStabilization as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.43 IrisAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
May not work if you don't have a controllable iris on the camera.
(Read and Write property)

148.3.44 IrisRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
May not work if you don't have a controllable iris on the camera.
(Read and Write property)

148.3.45 IsoSensitivity as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.46 IsoSensitivityAuto as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

See kISOSensitivity* constants.
Usually set to kISOSensitivityAuto for auto mode (1).
(Read and Write property)

148.3.47 JPEG as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The last JPEG image data block.
Notes: (Read only property)

148.3.48 LastError as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read only property)

148.3.49 Lock3A as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

See kLock* constants.
(Read and Write property)

148.3.50 Opened as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether device is opened.
Notes: (Read only property)

148.3.51 PanAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.52 PanRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.53 PanReset as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.54 PanSpeed as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.55 Picture as Picture

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The last captured picture.
Notes: (Read only property)

148.3.56 PixelFormat as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The pixel format.
Notes: (Read only property)

148.3.57 PixelformatString as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The pixel format as text.
Notes: (Read only property)

148.3.58 Privacy as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.59 Recording as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether we are recording currently.
Notes: (Read only property)

148.3.60 SceneMode as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

See kSceneMode* constants
(Read and Write property)

148.3.61 TiltAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.62 TiltRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.63 TiltReset as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.64 TiltSpeed as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.65 Version as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The version of the driver.
Notes: (Read only property)

148.3.66 WideDynamicRange as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.67 Width as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The width in pixel used for capture.
Notes: (Read only property)

148.3.68 ZoomAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.69 ZoomContinuous as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.70 ZoomRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

148.3.71 Constants

148.3.72 kAutoFocusRangeAuto = 0

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoFocusRange property.

148.3.73 kAutoFocusRangeInfinity = 3

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoFocusRange property.

148.3.74 kAutoFocusRangeMacro = 2

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoFocusRange property.

148.3.75 kAutoFocusRangeNormal = 1

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoFocusRange property.

148.3.76 kAutoFocusStatusBusy = 1

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoFocusStatus property.

148.3.77 kAutoFocusStatusFailed = 4

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoFocusStatus property.

148.3.78 kAutoFocusStatusIdle = 0

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoFocusStatus property.

148.3.79 kAutoFocusStatusReached = 2

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoFocusStatus property.

148.3.80 kExposureAperturePriority = 3

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ExposureAuto property.

148.3.81 kExposureAuto = 0

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ExposureAuto property.

148.3.82 kExposureManual = 1

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ExposureAuto property.

148.3.83 kExposureMeteringAverage = 0

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ExposureMetering property.

148.3.84 kExposureMeteringCenterWeighted = 1

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ExposureMetering property.

148.3.85 kExposureMeteringMatrix = 3

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ExposureMetering property.

148.3.86 kExposureMeteringSpot = 2

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ExposureMetering property.

148.3.87 kExposureShutterPriority = 2

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ExposureAuto property.

148.3.88 kISOSensitivityAuto = 1

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for IsoSensitivityAuto property.

148.3.89 kISOSensitivityManual = 0

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for IsoSensitivityAuto property.

148.3.90 kLockExposure = 1

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for Lock3A property.

148.3.91 kLockFocus = 4

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for Lock3A property.

148.3.92 kLockWhiteBalance = 2

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for Lock3A property.

148.3.93 kSceneModeBacklight = 1

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.94 kSceneModeBeachSnow = 2

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.95 kSceneModeCandleLight = 3

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.96 kSceneModeDawnDusk = 4

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.97 kSceneModeFallColors = 5

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.98 kSceneModeFireworks = 6

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.99 kSceneModeLandscape = 7

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.100 kSceneModeNight = 8

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.101 kSceneModeNone = 0

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.102 kSceneModePartyIndoor = 9

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.103 kSceneModePortrait = 10

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.104 kSceneModeSports = 11

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.105 kSceneModeSunset = 12

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.106 kSceneModeText = 13

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for ScreenMode property.

148.3.107 kWhiteBalanceAuto = 1

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoNPresetWhiteBalance property.

148.3.108 kWhiteBalanceCloudy = 8

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoNPresetWhiteBalance property.

148.3.109 kWhiteBalanceDaylight = 6

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoNPresetWhiteBalance property.

148.3.110 kWhiteBalanceFlash = 7

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoNPresetWhiteBalance property.

148.3.111 kWhiteBalanceFluorescent = 3

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoNPresetWhiteBalance property.

148.3.112 kWhiteBalanceFluorescentH = 4

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoNPresetWhiteBalance property.

148.3.113 kWhiteBalanceHorizon = 5

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoNPresetWhiteBalance property.

148.3.114 kWhiteBalanceIncandescent = 2

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoNPresetWhiteBalance property.

148.3.115 kWhiteBalanceManual = 0

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoNPresetWhiteBalance property.

148.3.116 kWhiteBalanceShade = 9

MBS Linux Plugin, Plugin Version: 18.0.

Function: One of the constants for AutoNPresetWhiteBalance property.

Chapter 149

Registration

149.1 module MBS

149.1.1 module MBS

MBS Main Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module with version details.

149.1.2 Methods

149.1.3 Target as string

MBS Main Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the target where the plugin was compiled for.
Example:

MsgBox mbs.Target

Notes: Can be Win32, Linux, Carbon, Carbon-PPC or Cocoa.

149.1.4 Constants

149.1.5 BuildNumber = 20613

MBS Main Plugin, Plugin Version: 9.5.

Function: The build number of the plugins.
Example:

```
# if mbs.BuildNumber>15000 then

// use some new MBS feature

MsgBox "OK"

# endif
```

Notes: The constant value is not in this documentation as it changes too often.

149.1.6 CompileDate = "Sep 5 2021"

MBS Main Plugin, Plugin Version: 9.5.

Function: The compilation date of the plugin.
Notes: The constant value is not in this documentation as it changes too often.

149.1.7 CompileTime = "16:27:33"

MBS Main Plugin, Plugin Version: 9.5.

Function: The compilation time of the plugin.
Example:

```
MsgBox mbs.CompileTime
```

Notes: The constant value is not in this documentation as it changes too often.

149.1.8 ComputerName = "MyMac"

MBS Main Plugin, Plugin Version: 14.0.

Function: The computer the IDE was launched on for building an app.
Example:

MsgBox mbs.ComputerName

Notes:

Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

149.1.9 Copyright = "© 2021 by Monkeybread Software"

MBS Main Plugin, Plugin Version: 9.5.

Function: The plugin copyright string.
Example:

MsgBox mbs.Copyright

149.1.10 HasAudioPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Audio plugin is installed.
Example:

```
# if MBS.HasAudioPlugin then
MsgBox "Audio Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.11 HasAVFoundationPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the AVFoundation plugin is installed.

Example:

```
# if MBS.HasAVFoundationPlugin then
MsgBox "AVFoundation Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.12 HasBarcodePlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Barcode plugin is installed.
Example:

```
# if MBS.HasBarcodePlugin then
MsgBox "Barcode Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.13 HasCanonEOSDigitalPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the CanonEOSDigital plugin is installed.
Example:

```
# if MBS.HasCanonEOSDigitalPlugin then
MsgBox "CanonEOSDigital Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.14 HasChartDirectorPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the ChartDirector plugin is installed.
Example:

```
# if MBS.HasChartDirectorPlugin then
MsgBox "ChartDirector Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.15 HasCocoaBasePlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the CocoaBase plugin is installed.
Example:

```
# if MBS.HasCocoaBasePlugin then
MsgBox "CocoaBase Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.16 HasCocoaControlsPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the CocoaControls plugin is installed.
Example:

```
# if MBS.HasCocoaControlsPlugin then
MsgBox "CocoaControls Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.17 HasCocoaExtrasPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the CocoaExtras plugin is installed.
Example:

```
# if MBS.HasCocoaExtrasPlugin then
MsgBox "CocoaExtras Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.18 HasCocoaPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Cocoa plugin is installed.
Example:

```
# if MBS.HasCocoaPlugin then
MsgBox "Cocoa Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.19 HasCompressionPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Compression plugin is installed.
Example:

```
# if MBS.HasCompressionPlugin then
MsgBox "Compression Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.20 HasComputerControlPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the ComputerControl plugin is installed.
Example:

```
# if MBS.HasComputerControlPlugin then
MsgBox "ComputerControl Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.21 HasControlsPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Controls plugin is installed.
Example:

```
# if MBS.HasControlsPlugin then
MsgBox "Controls Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.22 HasCUPSPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the CUPS plugin is installed.
Example:

```
# if MBS.HasCUPSPlugin then
MsgBox "CUPS Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.23 HasCURLPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the CURL plugin is installed.
Example:

```
# if MBS.HasCURLPlugin then
MsgBox "CURL Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.24 HasDataTypesPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the DataTypes plugin is installed.
Example:

```
# if MBS.HasDataTypesPlugin then
MsgBox "DataTypes Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.25 HasDirectShowPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the DirectShow plugin is installed.
Example:

```
# if MBS.HasDirectShowPlugin then
MsgBox "DirectShow Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.26 HasDonglePlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Dongle plugin is installed.
Example:

```
# if MBS.HasDonglePlugin then
MsgBox "Dongle Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.27 HasDynaPDFPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the DynaPDF plugin is installed.
Example:

```
# if MBS.HasDynaPDFPlugin then
MsgBox "DynaPDF Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.28 HasEncryptionPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Encryption plugin is installed.
Example:

```
# if MBS.HasEncryptionPlugin then
MsgBox "Encryption Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.29 HasGIFPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the GIF plugin is installed.
Example:

```
# if MBS.HasGIFPlugin then
MsgBox "GIF Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.30 HasGraphicsMagickPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the GraphicsMagick plugin is installed.
Example:

```
# if MBS.HasGraphicsMagickPlugin then
MsgBox "GraphicsMagick Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.31 HasImageMagickPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the ImageMagick plugin is installed.
Example:

```
# if MBS.HasImageMagickPlugin then
MsgBox "ImageMagick Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.32 HasJavaPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Java plugin is installed.
Example:

```
# if MBS.HasJavaPlugin then
MsgBox "Java Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.33 HasJPEGPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the JPEG plugin is installed.
Example:

```
# if MBS.HasJPEGPlugin then
MsgBox "JPEG Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.34 HasLargePicturePlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the LargePicture plugin is installed.
Example:

```
# if MBS.HasLargePicturePlugin then
MsgBox "LargePicture Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.35 HasLCMS2Plugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the LCMS2 plugin is installed.
Example:

```
# if MBS.HasLCMS2Plugin then
MsgBox "LCMS2 Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.36 HasLCMSPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the LCMS plugin is installed.
Example:

```
# if MBS.HasLCMSPlugin then
MsgBox "LCMS Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.37 HasLeopardPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Leopard plugin is installed.
Example:

```
# if MBS.HasLeopardPlugin then
MsgBox "Leopard Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.38 HasLinuxPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Linux plugin is installed.
Example:

```
# if MBS.HasLinuxPlugin then
MsgBox "Linux Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.39 HasLionPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Lion plugin is installed.
Example:

```
# if MBS.HasLionPlugin then
MsgBox "Lion Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.40 HasMac64bitPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Mac64bit plugin is installed.
Example:

```
# if MBS.HasMac64bitPlugin then
MsgBox "Mac64bit Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.41 HasMacOSXCFPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the MacOSXCF plugin is installed.
Example:

```
# if MBS.HasMacOSXCFPlugin then
MsgBox "MacOSXCF Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.42 HasMacOSXCGPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the MacOSXCG plugin is installed.
Example:

```
# if MBS.HasMacOSXCGPlugin then
MsgBox "MacOSXCG Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.43 HasMacOSXPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the MacOSX plugin is installed.
Example:

```
# if MBS.HasMacOSXPlugin then
MsgBox "MacOSX Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.44 HasMacPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Mac plugin is installed.
Example:

```
# if MBS.HasMacPlugin then
MsgBox "Mac Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.45 HasMainPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Main plugin is installed.
Example:

```
# if MBS.HasMainPlugin then
MsgBox "Main Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.46 HasMarkDownPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the MarkDown plugin is installed.
Example:

```
# if MBS.HasMarkDownPlugin then
MsgBox "MarkDown Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.47 HasMavericksPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Mavericks plugin is installed.
Example:

```
# if MBS.HasMavericksPlugin then
MsgBox "Mavericks Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.48 HasMountainLionPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the MountainLion plugin is installed.
Example:

```
# if MBS.HasMountainLionPlugin then
MsgBox "MountainLion Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.49 HasNetworkPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Network plugin is installed.
Example:

```
# if MBS.HasNetworkPlugin then
MsgBox "Network Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.50 HasNikonCameraPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the NikonCamera plugin is installed.
Example:

```
# if MBS.HasNikonCameraPlugin then
MsgBox "NikonCamera Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.51 HasOCRPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the OCR plugin is installed.
Example:

```
# if MBS.HasOCRPlugin then
MsgBox "OCR Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.52 HasOverlayPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Overlay plugin is installed.
Example:

```
# if MBS.HasOverlayPlugin then
MsgBox "Overlay Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.53 HasPHPPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the PHP plugin is installed.
Example:

```
# if MBS.HasPHPPlugin then
MsgBox "PHP Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.54 HasPicturePlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Picture plugin is installed.
Example:

```
# if MBS.HasPicturePlugin then
MsgBox "Picture Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.55 HasPNGPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the PNG plugin is installed.
Example:

```
# if MBS.HasPNGPlugin then
MsgBox "PNG Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.56 HasQTKitPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the QTKit plugin is installed.
Example:

```
# if MBS.HasQTKitPlugin then
MsgBox "QTKit Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.57 HasQuickTimePlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the QuickTime plugin is installed.
Example:

```
# if MBS.HasQuickTimePlugin then
MsgBox "QuickTime Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.58 HasRegExPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the RegEx plugin is installed.
Example:

```
# if MBS.HasRegExPlugin then
MsgBox "RegEx Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.59 HasSmartCardPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the SmartCard plugin is installed.
Example:

```
# if MBS.HasSmartCardPlugin then
MsgBox "SmartCard Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.60 HasSnowLeopardPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the SnowLeopard plugin is installed.
Example:

```
# if MBS.HasSnowLeopardPlugin then
MsgBox "SnowLeopard Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.61 HasSQLPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the SQL plugin is installed.
Example:

```
# if MBS.HasSQLPlugin then
MsgBox "SQL Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.62 HasTAPIPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the TAPI plugin is installed.
Example:

```
# if MBS.HasTAPIPlugin then
MsgBox "TAPI Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.63 HasTidyPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Tidy plugin is installed.
Example:

```
# if MBS.HasTidyPlugin then
MsgBox "Tidy Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.64 HasTiffPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Tiff plugin is installed.
Example:

```
# if MBS.HasTiffPlugin then
MsgBox "Tiff Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.65 HasTwainPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Twain plugin is installed.
Example:

```
# if MBS.HasTwainPlugin then
MsgBox "Twain Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.66 HasUSBPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the USB plugin is installed.
Example:

```
# if MBS.HasUSBPlugin then
MsgBox "USB Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.67 HasUtilPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Util plugin is installed.
Example:

```
# if MBS.HasUtilPlugin then
MsgBox "Util Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.68 HasVLCPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the VLC plugin is installed.
Example:

```
# if MBS.HasVLCPlugin then
MsgBox "VLC Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.69 HasWIAPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the WIA plugin is installed.
Example:

```
# if MBS.HasWIAPlugin then
MsgBox "WIA Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.70 HasWinDragDropPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the WinDragDrop plugin is installed.
Example:

```
# if MBS.HasWinDragDropPlugin then
MsgBox "WinDragDrop Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.71 HasWinICMPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the WinICM plugin is installed.
Example:

```
# if MBS.HasWinICMPlugin then
MsgBox "WinICM Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.72 HasWinPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the Win plugin is installed.
Example:

```
# if MBS.HasWinPlugin then
MsgBox "Win Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.73 HasXLPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the XL plugin is installed.
Example:

```
# if MBS.HasXLPlugin then
MsgBox "XL Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.74 HasXMPPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

Function: Whether the XMP plugin is installed.
Example:

```
# if MBS.HasXMPPlugin then
MsgBox "XMP Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

149.1.75 HostName = "MyMac.lan"

MBS Main Plugin, Plugin Version: 14.0.

Function: The host the IDE was launched on for building an app.
Example:

MsgBox mbs.HostName

Notes:

Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

149.1.76 IsPrerelease = false

MBS Main Plugin, Plugin Version: 20.0.

Function: Wether this is a prerelease version of the plugin.
Notes: Value is true for beta versions and false for release.

149.1.77 UserName = "Christian Schmitz"

MBS Main Plugin, Plugin Version: 14.0.

Function: The user name of the user who launched the IDE.
Example:

MsgBox mbs.UserName

Notes:

Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

149.1.78 Version = "MBS Xojo Plugin 21.4 (build 20613) Sun Sep 5 14:03:38 2021 (GMT)"

MBS Main Plugin, Plugin Version: 9.5.

Function: The plugin version string.
Example:

MsgBox mbs.Version

149.1.79 VersionNumber = 21.4

MBS Main Plugin, Plugin Version: 19.5.

Function: The plugin version as number.
Example:

```
# if MBS.VersionNumber >20.0
// use newer code
# else
// use older code
# endif
```

149.1.80 VersionString = "21.4"

MBS Main Plugin, Plugin Version: 11.1.

Function: The plugin version string (only, the number part).
Example:

```
MsgBox mbs.VersionString
```

Notes: e.g. "11.1"

149.1.81 Website = "http://www.monkeybreadsoftware.de"

MBS Main Plugin, Plugin Version: 9.5.

Function: The URL for the Monkeybread Software website.
Notes: ShowURL mbs.Website

149.1.82 Year = 2021

MBS Main Plugin, Plugin Version: 9.5.

Function: The year of the plugin.
Example:

```
MsgBox str(mbs.Year)
```

149.2 Globals

149.2.1 LogoMBS(size as Integer = 0, WithAlphaChannel as boolean = false) as Picture

MBS Main Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the MBS logo picture.
Example:

window1.Backdrop = LogoMBS(500)

Notes:

Best size is 500 pixel.
This function exists to provide a sample picture for examples.
If WithAlphaChannel is true and alpha channel pictures are supported, the plugin returns a picture with alpha channel. (Cocoa, Windows or Linux target on Xojo 2011r4).

Due to a bug in console runtime from Real Software this function can only produce useful pictures with 500 pixel size in console or web applications.

149.2.3 Xojo Developer Magazine

- 18.2, page 68: Drawing PDFs, Draw in a PDF like in a Graphics element by Stefanie Juchmes

149.2.4 MBSPluginCompileDate as string

MBS Main Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compilation date of the plugins.
Example:

MsgBox MBSPluginCompileDate

Notes:

e.g. "Aug 27 2006"
Actually the compilation date of the Version Plugin part which defines this function.

149.2.5 MBSPluginCompileTime as string

MBS Main Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compilation Time of the plugins.
Example:

MsgBox MBSPluginCompileTime

Notes:

e.g. "19:40:16"
Actually the compilation date of the Version Plugin part which defines this function.

149.2.6 MBSPluginVersion as string

MBS Main Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a version string from the plugin.
Example:

MsgBox "Build with Xojo "+RBVersionString+" and "+MBSPluginVersion

Notes: You can show that in your about box so your users can tell you which plugin they use.

149.2.7 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as string) as boolean

MBS Main Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function to register the plugins.
Example:

```
const name = "Joe Smith"
const serialnumber = "123456"
const enddate = 200710

if not RegisterMBSPlugin(name, "MBS Complete", enddate, serialnumber) then
msgBox "something wrong with the serial number of the plugins!"
end if
```

Notes:

Returns true if name and serial number is accepted.

While you are running your project in Xojo (or Xojo) you don't need to register, but if you compile for any target, you should or nice popup windows will show that the app is not registered.

Register in an application subclass to make registering as early as possible.

In case you get this message: "RegisterMBSPlugin()', giving the message "This
item conflicts with another item of the same name" you have something else in your plugins folder, e.g. a html file.

Possible reasons for this failing:
- The calculations you make on the strings or serial number do not create the same value on every machine (Intel vs. PPC, e.g. endian problems)
- You use MBS functions before calling registration function (e.g. you register in window.open event and use the plugin for a control.)
- You mix different plugin versions in your Xojo folder.

This function works only for 2015 and newer serial numbers.

149.2.8 SetRegistrationMessageMBS(ID as Integer, message as string)

MBS Main Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines what messages to show.

Example:

SetRegistrationMessageMBS(0, "This application is broken. Please reinstall!")

Notes:

ID currently can only be 0 and is reserved for future flags.

Currently this changes the message which is shown if plugins of different versions are found.
This typically happens if installers mix old and new libraries in an app and the user should be asked to reinstall the application.

149.2.9 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr9

149.3 class RegistrationEngineMBS

149.3.1 class RegistrationEngineMBS

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: An engine to add serial number generation to your application.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```

Notes:

If you want to add serial numbers to your application, you can use this class to write yourself a serial number generator application.
You can later in your application use this class to verify the serial number.

You may want to design your application that the serial number is written to your preferences file so you can verify it every time your application is launched. But if you do this, also save some computer related value there so you can avoid people cloning the system. For example the MAC ID, the user name,

the systemfolder creation date. This way you detect whenever a preferences file is copied to another machine.

For generate and later verify serial numbers the setup of the class must match. So carefully check how your serial number should look like. A format like "MA-1234-5678-9012-V1" can be good. Use a prefix and suffix so make serial numbers from different products and different major versions look different. 12 letters are normally enough for a serial number. Especially if you use alpha numeric characters. You can of course change the alphabet string and use lower case letters.

149.3.4 Methods

149.3.5 Calc as string

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the serial number.

149.3.6 Verify(s as string) as boolean

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies the serial number.
Example:

```
Dim r As New RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

Dim key As String = r.Calc

If r.Verify(key) Then
MsgBox "OK"
Else
MsgBox "Failed"
End If
```

Notes:

If you only use upper case letter for your serial numbers, use a function like uppercase before calling verify. This way you avoid that a serial number "abc" is invalid because it is not "ABC".
Returns true on success and false on failure.

149.3.7 Properties

149.3.8 Alphabet as String

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The characters to use for serial numbers.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

r.Alphabet="ABC123"
MsgBox r.Calc // shows: A1AC-2312-12CC

r.Alphabet="0123456789"
MsgBox r.Calc // shows: 4308-2905-4013
```

Notes:

Must have at least two characters.
Characters must be unique.
Default is "0123456789ABCDEFGHIJKLMNOPQRSTUVWXYZ".
(Read and Write property)

149.3.9 BlockLength as Integer

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Length of the blocks in the serial number.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

r.NumberLength=10
r.BlockLength=5
MsgBox r.Calc // shows: ICYRR-ES4UX

r.NumberLength=16
r.BlockLength=4
MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```

Notes:

If this value is 0, no delimeters are used.
(Read and Write property)

149.3.10 Delimiter as String

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The delimiter string to use for separating blocks in the serial number.
Notes:

Default is "-".
(Read and Write property)

149.3.11 Mode as Integer

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mode of operation.
Notes:

Currently always 0.
Set to 1 to use 128bit instead of 64bit number.
(Read and Write property)

149.3.12 NumberLength as Integer

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum length of the number.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

r.NumberLength=10
r.BlockLength=5
MsgBox r.Calc // shows: ICYRR-ES4UX

r.NumberLength=16
r.BlockLength=4
MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```

Notes: (Read and Write property)

149.3.13 Platform as Integer

MBS Util Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which platform to use for platform specific keys.
Notes:

Value is set in the constructor to current platform, but you can change it if you want to run the key generator on a different platform.

Values are:

1 Mac
2 Windows
3 Linux

All other values behave like PlatformSpecificKeys is false.
This value is only used if PlatformSpecificKeys is true.
(Read and Write property)

149.3.14 PlatformSpecificKeys as Boolean

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether you want platform specific keys.
Notes:

Set to false if you want to have Windows, Mac OS X and Linux all use the same serial numbers.
Set to true if you want to different serial numbers depending on the platform.

Default is false.
(Read and Write property)

149.3.15 Prefix as String

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The prefix for the serial number string.
Notes: (Read and Write property)

149.3.16 Seed as Integer

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A seed value you can set to get your serial number more unique.
Notes: (Read and Write property)

149.3.17 Suffix as String

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The suffix for the serial number string.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="Xojo"
r.suffix="-RB600CPFUSA-MAC"

r.BlockLength=8
r.NumberLength=32

MsgBox r.Calc
// shows: EV6GG9P2-DI533EV6-GG9P2DI5-33EV6GG9-RB600CPFUSA-MAC
// looks like a Xojo serial number ;-)
```

Notes: (Read and Write property)

149.3.18 Field(index as Integer) as string

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data fields you can use for personalized serial numbers.
Notes:

Fill this fields with all the values you want to use for personalized serial numbers. You should use the name of the user, maybe the postal address. You can use hardware values like the MAC address or software values like the system folder creation date.
Also you may have serial numbers different between version 1.x and 2.x of your application. So you pass version information like "1" or "2". Do not pass values like "1.2.3" as this serial number won't work on "1.2.4".

Index is from 0 to 7.
(Read and Write computed property)

Chapter 150

Regular Expressions

150.1 class RegExMBS

150.1.1 class RegExMBS

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for fast Regular Expression Search in a perl compatible way.
Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then

dim s as string="Hello World"

dim start as Integer = 0
while r.Execute(s,start)>0

dim p as Integer = r.OffsetCharacters(0)
dim l as Integer = r.OffsetCharacters(1)-r.OffsetCharacters(0)

MsgBox "Found "+searchString+" on position "+str(p)+" with length "+str(l)+" in """+s+"""

start = r.Offset(1)
wend

else
MsgBox "failed to compile"
end if
```

Notes:

uses the PCRE library. You may check the PCRE documentation.

The RegExMBS class has different defaults as the built in RegEx class in Xojo.

You may want to set options like this:

RB: CaseSensitive = false
MBS: CompileOptionCaseLess = true

RB: DotMatchAll = false
MBS: CompileOptionDotAll = false

RB: Greedy = true
MBS: CompileOptionUngreedy = false

RB: LineEndType = 0
MBS: CompileOptionNewLineAnyCRLF = true and ExecuteOptionNewLineAnyCRLF = true

RB: MatchEmpty = true
MBS: ExecuteOptionNotEmpty = false

and you want to set CompileOptionMultiline to true for multi line match.

150.1.6 Methods

150.1.7 Compile(pattern as string) as boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compiles a pattern.
Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"
```

```
if r.Compile(searchString) then
msgbox "OK"
else
MsgBox "failed to compile"
end if
```

Notes:

Some predefined patterns like \b do not support Unicode well, so you may work around that by using your own pattern.

Returns true on success and false on failure.
ErrorMessage, Lasterror, ErrorOffset and Handle are set.

The following table lists the error codes than may be returned by Compile(), along with the error messages that may be returned by both compiling functions.

150.1.8 CompileMemory(pattern as memoryblock, ByteOffset as Integer) as boolean

MBS Tools Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compiles a pattern.
Notes:

Same as Compile, but the text is stored in a memoryblock and must be a 0 terminated C string.
Be careful to use valid UTF8 input and provide offset in byte units and not in characters.

150.1.9 ConfigBSR as boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an integer whose value indicates what character sequences the \R escape sequence matches by default.
Notes: A value of 0 means that \R matches any Unicode line ending sequence; a value of 1 means that \R matches only CR, LF, or CRLF. The default can be overridden when a pattern is compiled or matched.

150.1.10 ConfigLinkSize as Integer

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an integer that contains the number of bytes used for internal linkage in compiled regular expressions.
Notes: The value is 2, 3, or 4. Larger values allow larger regular expressions to be compiled, at the expense of slower matching. The default value of 2 is sufficient for all but the most massive patterns, since it allows the compiled pattern to be up to 64K in size.

150.1.11 ConfigMallocThreshold as Integer

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output is an integer that contains the threshold above which the POSIX interface uses malloc() for output vectors.

150.1.12 ConfigMatchLimit as Integer

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an integer that gives the default limit for the number of internal matching function calls in a Execute execution.

150.1.13 ConfigMatchLimitRecursion as Integer

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an integer that gives the default limit for the depth of recursion when calling the internal matching function in a Execute() execution.

150.1.14 ConfigNewLine as Integer

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: What newline character is used as default.
Notes: The output is an integer whose value specifies the default character sequence that is recognized as meaning ”newline”. The four values that are supported are: 10 for LF, 13 for CR, 3338 for CRLF, -2 for ANYCRLF, and -1 for ANY. Though they are derived from ASCII, the same values are returned in EBCDIC environments. The default should normally correspond to the standard sequence for your operating system.

150.1.15 ConfigStackRecurse as boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an integer that is set to one if internal recursion when running Execute() is implemented by recursive function calls that use the stack to remember their state.
Notes: This is the usual way that PCRE is compiled. The output is zero if PCRE was compiled to use blocks of data on the heap instead of recursive function calls. In this case, malloc and free are called to manage memory blocks on the heap, thus avoiding the use of the stack.

150.1.16 ConfigUnicodeProperties as boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if unicode properties are available.
Notes: Should be true for the plugin.

150.1.17 ConfigUTF8 as boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether UTF8 is supported.
Notes: If this ever is false, please complain. This plugin is designed to work only on UTF8 strings for best performance.

150.1.18 Constructor(VecSize as Integer = 0)

MBS Tools Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes:

You pass here the internal vector size which limits how many substrings you can find.
For 20 substrings, you need to pass (20+1)*3 for vector size.

150.1.19 Escape(text as string) as string

MBS Tools Plugin, Plugin Version: 7.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Escapes the string.
Example:

```
dim r as new RegExMBS

dim s as string = "Hello [ ] "
dim e as string = r.Escape(s)
MsgBox e // shows Hello \[ \]

dim d as string = r.Unescape(e)
MsgBox d // shows original string
```

Notes:

The string is converted to UTF8 and all the RegEx special characters are escaped.
Returns "" on low memory.

150.1.20 Execute(start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a search with the compiled pattern again.
Notes: You can use this variant of execute to continue a search in the same string/memoryblock at a new starting offset.
See also:

- 150.1.21 Execute(text as string, start as Integer = 0) as Integer 22265

150.1.21 Execute(text as string, start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a search with the compiled pattern.
Example:

```
dim r as RegExMbs
dim s as string
dim c as Integer

s="123 ABC 456"

r=new RegExMBS
if r.Compile(" \D+ ") then
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 3 8
// 1 for number of results
// 3 for 3 bytes before the matched pattern
```

```
// 8 for the 8 bytes before the end of the matched pattern
end if
```

Notes:

Returns the number of found offsets.
text must be in UTF-8 text encoding.
Start must be 0 for the first character and the byte offset for other chacters. Do not pass values from OffsetCharacters here!

Return values from Execute:
If Execute() fails, it returns a negative number. The following are defined in the header file:

See also:

- 150.1.20 Execute(start as Integer = 0) as Integer 22265

150.1.22 ExecuteMemory(text as memoryblock, ByteOffset as Integer = 0, ByteLength as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a search with the compiled pattern.
Notes:

Same as Execute, but the text is stored in a memoryblock.
Be careful to use valid UTF8 input and provide offset and length in byte units and not in characters.
If ByteLength is zero, we take the length of the memoryblock.

150.1.23 ExecuteMemoryMT(text as memoryblock, ByteOffset as Integer = 0, ByteLength as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a search with the compiled pattern.
Notes:

Same as ExecuteMemory, but more thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

150.1.24 ExecuteMT(start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a search with the compiled pattern.
Notes:

Same as Execute, but more thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 150.1.25 ExecuteMT(text as string, start as Integer = 0) as Integer 22267

150.1.25 ExecuteMT(text as string, start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a search with the compiled pattern.
Notes:

Same as Execute, but more thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 150.1.24 ExecuteMT(start as Integer = 0) as Integer 22267

150.1.26 InfoNameEntry(Index as Integer) as string

MBS Tools Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a name entry in the list of captures.
Notes: Only valid after pattern was compiled.

150.1.27 IsASCIIText(text as string) as boolean

MBS Tools Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether text in string is only ASCII.
Example:

```
Dim s As String = "Hello World"

If RegExMBS.IsASCIIText(s) Then
MessageBox "Only 7 bit ASCII"
Else
MessageBox "Not ASCII. Some 8 bit encoding like ANSI or UTF-8."
End If
```

Notes: Does checks bytes of text, so doesn't look on encoding property.

150.1.28 Match(text as string) as boolean

MBS Tools Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if current search pattern matches against given text.
Example:

```
dim r as new RegExMBS

if r.Compile("e.l") then

if r.Match("Hello") then
MsgBox "match"
end if

if r.Match("Helro") then
MsgBox "wrong match"
end if
end if
```

Notes:

Returns true if text matches.

Does not set properties like Execute, so subString() won't work.
See also:

- 150.1.29 Match(text() as string, inverse as boolean = false) as string() 22269
- 150.1.30 Match(text() as Variant, inverse as boolean = false) as string() 22269

150.1.29 Match(text() as string, inverse as boolean = false) as string()

MBS Tools Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if current search pattern matches against given text array.
Example:

```
dim r as new RegExMBS

r.CompileOptionCaseLess = true

if r.Compile("e.l") then

dim t() as string = array("Hello", "World", "Xojo", "test")

dim match1() as string = r.Match(t)
dim match2() as string = r.Match(t, true)

MsgBox "Matching: "+Join(match1, ", ")+EndOfLine+"Other: "+Join(match2, ", ")
end if
```

Notes:

Returns the list of matching values.
If inverse is set to true, it returns the list of non matching values.
See also:

- 150.1.28 Match(text as string) as boolean 22268
- 150.1.30 Match(text() as Variant, inverse as boolean = false) as string() 22269

150.1.30 Match(text() as Variant, inverse as boolean = false) as string()

MBS Tools Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if current search pattern matches against given variant array.
Example:

```
dim r as new RegExMBS

r.CompileOptionCaseLess = true

if r.Compile("e.l") then

dim dic as new Dictionary
dic.Value("Hello") = 1
dic.Value("World") = 2
```

```
dic.Value("Xojo") = 3
dic.Value("Test") = 4

dim match1() as string = r.Match(dic.keys)
dim match2() as string = r.Match(dic.keys, true)

MsgBox "Matching: "+Join(match1, ", ")+EndOfLine+"Other: "+Join(match2, ", ")
end if
```

Notes:

The variant array should have entries which convert well to string.
Returns the list of matching values.
If inverse is set to true, it returns the list of non matching values.
See also:

- 150.1.28 Match(text as string) as boolean 22268
- 150.1.29 Match(text() as string, inverse as boolean = false) as string() 22269

150.1.31 Offset(index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the offset in the offset list with given index in bytes.
Example:

```
dim r as RegExMbs
dim s as string
dim c as Integer

s="123 äöü ABC 456"

r=new RegExMBS
if r.Compile(".ö.") then
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 4 10
// 1 for ubound of the offset array
// 4 for 4 bytes before the matched pattern
// 10 for the 10 bytes before the end of the matched pattern
end if

r=new RegExMBS
if r.Compile(".\xF6.") then // finds ö using Unicode codepoint
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
```

```
// shows: 1 4 10
// 1 for ubound of the offset array
// 4 for 4 bytes before the matched pattern
// 10 for the 10 bytes before the end of the matched pattern
end if
```

Notes:

If you found a pattern in a string you get here:

Invalid indexes return 0.
Count is the number of entries here.

150.1.32 OffsetCharacters(index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the offset in the offset list with given index in characters.
Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then

dim s as string="äöü Hello World"

if r.Execute(s,0)>0 then
dim lines(-1) as string

lines.Append str(R.Count)+" offset found."
lines.Append "In Bytes:"
lines.Append " Start of matched patern: "+str(R.Offset(0))
lines.Append " End of matched patern: "+str(R.Offset(1))
lines.Append " Length of matched patern: "+str(R.Offset(1)-r.Offset(0))

lines.Append "In Characters:"
lines.Append " Start of matched patern: "+str(R.OffsetCharacters(0))
lines.Append " End of matched patern: "+str(R.OffsetCharacters(1))
lines.Append " Length of matched patern: "+str(R.OffsetCharacters(1)-r.OffsetCharacters(0))

MsgBox Join(lines,EndOfLine)
end if

else
```

```
MsgBox "failed to compile"
end if
```

Notes:

This function is identical to Offset(), but returns characters instead of bytes.
Works only with valid UTF-8 strings as input.
Value is calculated on each function call based on Offset(index) and current text.

If you found a pattern in a string you get here:

Invalid indexes return 0.
Count is the number of entries here.

Please note that if you just need offsets for calling Mid() function, you can get better performance by using just Offset and MidB function. Than neither Mid and OffsetCharacters need to calculate the character offset.

150.1.33 Replace(NewText as string) as string

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the text on the current found position and returns the complete new text.
Notes:

You need to call Execute before.
Lasterror is set.
NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\with \.

150.1.34 ReplaceAll(Target as string, NewText as string = "") as string

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the target string for current pattern and replaces all occurrences with the new text.
Notes:

You need to call Compile before to initialize the pattern and you should call Study before to optimize the pattern.
Lasterror is set.
Target and NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\with \.

150.1.35 ReplaceSelection(NewText as string) as string

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the text on the current found position and returns new text for that selection.
Notes:

This method is for text editors where you will store result in editfield.seltext to replace the current selection.
Lasterror is set.
You need to call Execute before.
NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\with \.

150.1.36 StringNumber(name as string) as Integer

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This convenience function finds the number of a named substring capturing parenthesis in a compiled pattern.
Notes:

name: Name whose number is required
The yield of the function is the number of the parenthesis if the name is found, or PCRE_ERROR_NOSUBSTRING otherwise.

150.1.37 Study as boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: After you compiled a pattern study can optimize it.
Notes:

Only useful if you use Execute several times.
In that case you call one time Compile, one time Study and several times Execute.
Errormessage is set.

150.1.38 Substring(index as Integer) as string

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the subexpression found with the given index.
Notes:

Returns "" on any error.
Lasterror is set.
See also:

- 150.1.39 Substring(name as string) as string 22274

150.1.39 Substring(name as string) as string

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the subexpression found with the given name.
Notes:

Returns "" on any error.
Lasterror is set.
See also:

- 150.1.38 Substring(index as Integer) as string 22274

150.1.40 Unescape(text as string) as string

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unescapes the string.
Example:

```
dim r as new RegExMBS

dim s as string = "Hello [ ] "
dim e as string = r.Escape(s)
MsgBox e // shows Hello \[ \]

dim d as string = r.Unescape(e)
MsgBox d // shows original string
```

Notes:

The string is converted to UTF8 and all the RegEx special characters are escaped.
Returns "" on low memory.

150.1.41 Version as string

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the PCRE library as an ASCII string.

150.1.42 Properties

150.1.43 CompileOptionAnchored as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Compile: Force pattern anchoring
Notes: (Read and Write property)

150.1.44 CompileOptionAutoCallOut as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Compile: Compile automatic callouts
Notes: (Read and Write property)

150.1.45 CompileOptionBSRAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option and CompileOptionBSRUnicode (which are mutually exclusive) control what the \R escape sequence matches.
Notes:

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

150.1.46 CompileOptionBSRUnicode as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option and CompileOptionBSRAnyCRLF (which are mutually exclusive) control what the \R escape sequence matches.
Example:

```
dim rg As new RegExMBS
rg.CompileOptionUngreedy = false
rg.CompileOptionBSRUnicode = true

dim ts as string = "one" + EndOfLine.UNIX + "test" + chr(& h2028) + "more"

// replace all end lines with #
if rg.Compile("\R+") then

ts = rg.ReplaceAll(ts,"# ")

end if

MsgBox ts
```

Notes:

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

150.1.47 CompileOptionCaseLess as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Compile: Do caseless matching
Example:

```
dim r as new RegExMBS
dim searchString as string = "hello"

r.CompileOptionCaseLess=True

if r.Compile(searchString) then

dim s as string="äöü Hello World"

if r.Execute(s,0)>0 then
MsgBox "Found: "+mid(s, r.OffsetCharacters(0)+1, r.OffsetCharacters(1)-r.OffsetCharacters(0))
else
MsgBox "nothing found"
end if

else
```

```
MsgBox "failed to compile"
end if
```

Notes: (Read and Write property)

150.1.48 CompileOptionDollarEndOnly as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Compile: $ not to match newline at end
Notes: (Read and Write property)

150.1.49 CompileOptionDotAll as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Compile: . matches anything including endofline
Example:

```
dim r as new RegExMBS
dim searchString as string = "<.+>"

r.CompileOptionDotAll = false // finds only if true

if r.Compile(searchString) then

dim s as string="<Step enable=""True""+EndOfLine.unix+"id=""93"" name=""Beep""/>"

if r.Execute(s,0)>0 then
MsgBox "Found: "+mid(s, r.OffsetCharacters(0)+1, r.OffsetCharacters(1)-r.OffsetCharacters(0))
else
MsgBox "nothing found"
end if

else
MsgBox "failed to compile"
end if
```

Notes: (Read and Write property)

150.1.50 CompileOptionDuplicateNames as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If this bit is set, names used to identify capturing subpatterns need not be unique.
Notes:

This can be helpful for certain types of pattern when it is known that only one instance of the named subpattern can ever be matched. There are more details of named subpatterns below; see also the pcrepattern documentation.
(Read and Write property)

150.1.51 CompileOptionExtended as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Compile: Ignore whitespace and # comments
Notes: (Read and Write property)

150.1.52 CompileOptionFirstLine as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Compile: Force matching to be before newline
Notes: (Read and Write property)

150.1.53 CompileOptionJavaScriptCompat as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If this option is set, PCRE's behaviour is changed in some ways so that it is compatible with JavaScript rather than Perl.
Notes:

The changes are as follows:

(1) A lone closing square bracket in a pattern causes a compile-time error, because this is illegal in JavaScript (by default it is treated as a data character). Thus, the pattern AB] CD becomes illegal when this option is set.

(2) At run time, a back reference to an unset subpattern group matches an empty string (by default this causes the current matching alternative to fail). A pattern such as (\1)(a) succeeds when this option is set (assuming it can find an "a" in the subject), whereas it fails by default, for Perl compatibility.

(Read and Write property)

150.1.54 CompileOptionMultiline as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Compile: ^and $ match newlines within data
Example:

```
dim r as RegExMBS
dim n,i,c as Integer
dim s as string

s=ReplaceLineEndings(EditField1.text,EndOfLine.UNIX)

r=new RegExMBS

'r.CompileOptionFirstLine=True
r.CompileOptionMultiline=True

if r.Compile("^....$ ") then
n=0
do
c=r.Execute(s,n)

if c>0 then
MsgBox r.Substring(0)
n=r.Offset(1)
end if

loop until c=0
end if
```

Notes: (Read and Write property)

150.1.55 CompileOptionNewLineAny as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option override the default newline definition that was chosen when PCRE was built.
Notes:

Setting CompileOptionNewLineCR or CompileOptionNewLineLF specifies that a newline is indicated by a single character (CR or LF, respectively). Setting CompileOptionNewLineCRLF specifies that a newline

is indicated by the two-character CRLF sequence. Setting CompileOptionNewLineAnyCRLF specifies that any of the three preceding sequences should be recognized. Setting CompileOptionNewLineAny specifies that any Unicode newline sequence should be recognized. The Unicode newline sequences are the three just mentioned, plus the single characters VT (vertical tab, U+000B), FF (formfeed, U+000C), NEL (next line, U+0085), LS (line separator, U+2028), and PS (paragraph separator, U+2029). The last two are recognized only in UTF-8 mode.
The newline setting in the options word uses three bits that are treated as a number, giving eight possibilities. Currently only six are used (default plus the five values above). This means that if you set more than one newline option, the combination may or may not be sensible. For example, CompileOptionNewLineCR with CompileOptionNewLineLF is equivalent to CompileOptionNewLineCRLF, but other combinations may yield unused numbers and cause an error.

The only time that a line break in a pattern is specially recognized when compiling is when PCRE_EXTENDED is set. CR and LF are whitespace characters, and so are ignored in this mode. Also, an unescaped # outside a character class indicates a comment that lasts until after the next line break sequence. In other circumstances, line break sequences in patterns are treated as literal data.
(Read and Write property)

150.1.56 CompileOptionNewLineAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option override the default newline definition that was chosen when PCRE was built.
Notes:

See CompileOptionNewLineAny for more details.
(Read and Write property)

150.1.57 CompileOptionNewLineCR as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option override the default newline definition that was chosen when PCRE was built.
Notes:

See CompileOptionNewLineAny for more details.
(Read and Write property)

150.1.58 CompileOptionNewLineCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option override the default newline definition that was chosen when PCRE was built.

Notes:

See CompileOptionNewLineAny for more details.
(Read and Write property)

150.1.59 CompileOptionNewLineLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option override the default newline definition that was chosen when PCRE was built.
Notes:

See CompileOptionNewLineAny for more details.
(Read and Write property)

150.1.60 CompileOptionNoAutoCapture as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Compile: Disable numbered capturing parentheses (named ones available)
Notes: (Read and Write property)

150.1.61 CompileOptionNoStartOptimize as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is an option that acts at matching time; that is, it is really an option for Execute.
Notes:

If it is set at compile time, it is remembered with the compiled pattern and assumed at matching time.
(Read and Write property)

150.1.62 CompileOptionNoUTF8Check as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Compile: Do not check the pattern for UTF-8 validity.
Notes: (Read and Write property)

150.1.63 CompileOptions as Integer

MBS Tools Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal value of all the compile options.
Notes:

You can get and set the bits using the CompileOption* Boolean properties.
(Read and Write property)

150.1.64 CompileOptionUngreedy as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Compile: Invert greediness of quantifiers.
Notes:

Basicly this is about whether to find the next matching item or the last matching item in the whole string. Matching the next item is always much faster.
(Read and Write property)

150.1.65 CompileOptionUnicodeCodePoints as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to support unicode code points for character classes.
Notes:

This option changes the way PCRE processes \B, \b, \D, \d, \S, \s, \W, \w, and some of the POSIX character classes. By default, only ASCII characters are recognized, but if PCRE_UCP is set, Unicode properties are used instead to classify characters. More details are given in the section on generic character types in the pcrepattern page. If you set PCRE_UCP, matching one of the items it affects takes much longer. The option is available only if PCRE has been compiled with Unicode property support.
(Read and Write property)

150.1.66 CompileOptionUTF8 as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Compile: Run in UTF-8 mode.
Notes: (Read and Write property)

150.1.67 Count as Integer

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of offsets found.
Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then

dim s as string="äöü Hello World"

if r.Execute(s,0)>0 then
dim lines(-1) as string

lines.Append str(R.Count)+" offset found."
lines.Append "In Bytes:"
lines.Append " Start of matched patern: "+str(R.Offset(0))
lines.Append " End of matched patern: "+str(R.Offset(1))
lines.Append " Length of matched patern: "+str(R.Offset(1)-r.Offset(0))

lines.Append "In Characters:"
lines.Append " Start of matched patern: "+str(R.OffsetCharacters(0))
lines.Append " End of matched patern: "+str(R.OffsetCharacters(1))
lines.Append " Length of matched patern: "+str(R.OffsetCharacters(1)-r.OffsetCharacters(0))

MsgBox Join(lines,EndOfLine)
end if

else
MsgBox "failed to compile"
end if
```

Notes: (Read only property)

150.1.68 ErrorMessage as String

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last message reported.
Notes:

Set by Study and Compile.
(Read only property)

150.1.69 ErrorOffset as Integer

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error offset from the compile function.
Notes: (Read only property)

150.1.70 ExecuteOptionAnchored as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Execute: Match only at the first position
Notes: (Read and Write property)

150.1.71 ExecuteOptionBSRAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option and ExecuteOptionBSRUnicode (which are mutually exclusive) control what the \R escape sequence matches.
Notes:

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

150.1.72 ExecuteOptionBSRUnicode as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option and ExecuteOptionBSRAnyCRLF (which are mutually exclusive) control what the \R escape sequence matches.
Example:

```
dim rg As new RegExMBS
rg.CompileOptionUngreedy = false
rg.ExecuteOptionBSRUnicode = true

dim ts as string = "one" + EndOfLine.UNIX + "test" + chr(& h2028) + "more"
```

```
// replace all end lines with #
if rg.Compile("\R+") then

ts = rg.ReplaceAll(ts,"# ")

end if

MsgBox ts
```

Notes:

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

150.1.73 ExecuteOptionNewLineAny as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option override the default newline definition that was chosen when PCRE was built.
Notes:

Setting ExecuteOptionNewLineCR or ExecuteOptionNewLineLF specifies that a newline is indicated by a single character (CR or LF, respectively). Setting ExecuteOptionNewLineCRLF specifies that a newline is indicated by the two-character CRLF sequence. Setting ExecuteOptionNewLineAnyCRLF specifies that any of the three preceding sequences should be recognized. Setting ExecuteOptionNewLineAny specifies that any Unicode newline sequence should be recognized. The Unicode newline sequences are the three just mentioned, plus the single characters VT (vertical tab, U+000B), FF (formfeed, U+000C), NEL (next line, U+0085), LS (line separator, U+2028), and PS (paragraph separator, U+2029). The last two are recognized only in UTF-8 mode.
The newline setting in the options word uses three bits that are treated as a number, giving eight possibilities. Currently only six are used (default plus the five values above). This means that if you set more than one newline option, the combination may or may not be sensible. For example, ExecuteOptionNewLineCR with ExecuteOptionNewLineLF is equivalent to ExecuteOptionNewLineCRLF, but other combinations may yield unused numbers and cause an error.

The only time that a line break in a pattern is specially recognized when compiling is when PCRE_EXTENDED is set. CR and LF are whitespace characters, and so are ignored in this mode. Also, an unescaped # outside a character class indicates a comment that lasts until after the next line break sequence. In other circumstances, line break sequences in patterns are treated as literal data.
(Read and Write property)

150.1.74 ExecuteOptionNewLineAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option override the default newline definition that was chosen when PCRE was built.
Notes:

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

150.1.75 ExecuteOptionNewLineCR as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option override the default newline definition that was chosen when PCRE was built.
Notes:

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

150.1.76 ExecuteOptionNewLineCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option override the default newline definition that was chosen when PCRE was built.
Notes:

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

150.1.77 ExecuteOptionNewLineLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option override the default newline definition that was chosen when PCRE was built.
Notes:

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

150.1.78 ExecuteOptionNoStartOptimize as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: There are a number of optimizations that Execute uses at the start of a match, in order to speed up the process.
Notes:

For example, if it is known that an unanchored match must start with a specific character, it searches the subject for that character, and fails immediately if it cannot find it, without actually running the main matching function. This means that a special item such as (*COMMIT) at the start of a pattern is not considered until after a suitable starting point for the match has been found. When callouts or (*MARK) items are in use, these "start-up" optimizations can cause them to be skipped if the pattern is never actually used. The start-up optimizations are in effect a pre-scan of the subject that takes place before the pattern is run.
The ExecuteOptionNoStartOptimize option disables the start-up optimizations, possibly causing performance to suffer, but ensuring that in cases where the result is "no match", the callouts do occur, and that items such as (*COMMIT) and (*MARK) are considered at every possible starting position in the subject string. If ExecuteOptionNoStartOptimize is set at compile time, it cannot be unset at matching time.

Setting ExecuteOptionNoStartOptimize can change the outcome of a matching operation. Consider the pattern

(*COMMIT)ABC
When this is compiled, PCRE records the fact that a match must start with the character "A". Suppose the subject string is "DEFABC". The start-up optimization scans along the subject, finds "A" and runs the first match attempt from there. The (*COMMIT) item means that the pattern must match the current starting position, which in this case, it does. However, if the same match is run with ExecuteOptionNoStartOptimize set, the initial scan along the subject string does not happen. The first match attempt is run starting from "D" and when this fails, (*COMMIT) prevents any further matches being tried, so the overall result is "no match". If the pattern is studied, more start-up optimizations may be used. For example, a minimum length for the subject may be recorded. Consider the pattern
(*MARK:A)(X | Y)
The minimum length for a match is one character. If the subject is "ABC", there will be attempts to match "ABC", "BC", "C", and then finally an empty string. If the pattern is studied, the final attempt does not take place, because PCRE knows that the subject is too short, and so the (*MARK) is never encountered. In this case, studying the pattern does not affect the overall match result, which is still "no match", but it does affect the auxiliary information that is returned.
(Read and Write property)

150.1.79 ExecuteOptionNotBOL as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Execute: Subject is not the beginning of a line
Notes: (Read and Write property)

150.1.80 ExecuteOptionNotEmpty as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Execute: An empty string is not a valid match
Notes: (Read and Write property)

150.1.81 ExecuteOptionNotEmptyAtStart as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the options.
Notes:

This is like ExecuteOptionNotEmpty, except that an empty string match that is not at the start of the subject is permitted. If the pattern is anchored, such a match can occur only if the pattern contains \K.
Perl has no direct equivalent of ExecuteOptionNotEmpty or ExecuteOptionNotEmptyAtStart, but it does make a special case of a pattern match of the empty string within its split() function, and when using the /g modifier. It is possible to emulate Perl's behaviour after matching a null string by first trying the match again at the same offset with ExecuteOptionNotEmptyAtStart and ExecuteOptionAnchored, and then if that fails, by advancing the starting offset (see below) and trying an ordinary match again. There is some code that demonstrates how to do this in the pcredemo sample program. In the most general case, you have to check to see if the newline convention recognizes CRLF as a newline, and if so, and the current character is CR followed by LF, advance the starting offset by two characters instead of one.
(Read and Write property)

150.1.82 ExecuteOptionNotEOL as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Execute: Subject is not the end of a line
Notes: (Read and Write property)

150.1.83 ExecuteOptionNoUTF8Check as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Execute: Do not check the subject for UTF-8 validity
Notes: (Read and Write property)

150.1.84 ExecuteOptionPartial as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Option for Execute: Return PCRE_ERROR_PARTIAL for a partial match
Notes: (Read and Write property)

150.1.85 ExecuteOptionPartialHard as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option (and ExecuteOptionPartial) turn on the partial matching feature.
Notes:

A partial match occurs if the end of the subject string is reached successfully, but there are not enough subject characters to complete the match. If this happens when ExecuteOptionPartial (but not ExecuteOptionPartialHard) is set, matching continues by testing any remaining alternatives. Only if no complete match can be found is ErrorPartial returned instead of PCRE_ERROR_NOMATCH. In other words, ExecuteOptionPartial says that the caller is prepared to handle a partial match, but only if no complete match can be found.
If ExecuteOptionPartialHard is set, it overrides ExecuteOptionPartial. In this case, if a partial match is found, Execute() immediately returns ErrorPartial, without considering any other alternatives. In other words, when ExecuteOptionPartialHard is set, a partial match is considered to be more important that an alternative complete match.

In both cases, the portion of the string that was inspected when the partial match was found is set as the first matching string. There is a more detailed discussion of partial and multi-segment matching, with examples, in the pcrepartial documentation.
(Read and Write property)

150.1.86 ExecuteOptions as Integer

MBS Tools Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal value of all the execute options.
Notes:

You can get and set the bits using the CompileOption* Boolean properties.
(Read and Write property)

150.1.87 Handle as Integer

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle to the pattern data structure.
Notes: (Read only property)

150.1.88 InfoCaptureCount as Integer

MBS Tools Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of captures defined in the pattern.
Notes:

Only valid after pattern was compiled.
(Read only property)

150.1.89 InfoNameCount as Integer

MBS Tools Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of names defined in the pattern.
Notes:

Only valid after pattern was compiled.
(Read only property)

150.1.90 InfoSize as Integer

MBS Tools Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the size of the compiled pattern.
Notes:

Only valid after pattern was compiled.
(Read only property)

150.1.91 InfoStudySize as Integer

MBS Tools Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the study details size.
Notes:

Only valid after calling Study.
(Read only property)

150.1.92 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported.
Notes:

0 is no error and -1 is some parameter error.
See Error* constants for other values.
(Read only property)

150.1.93 MatchLimit as Integer

MBS Tools Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The match limit.
Notes:

You can set it to a limit value. If set to zero, the plugin will use the default.

The default value for the limit can be set when PCRE is built; the default default is 10 million, which handles all but the most extreme cases. You can override the default by setting this property.
(Read and Write property)

150.1.94 MatchLimitRecursion as Integer

MBS Tools Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The limit for recursion.
Notes:

The MatchLimitRecursion field is similar to MatchLimit, but instead of limiting the total number of times that match() is called, it limits the depth of recursion. The recursion depth is a smaller number than the total number of calls, because not all calls to match() are recursive. This limit is of use only if it is set smaller than MatchLimit.

Limiting the recursion depth limits the amount of stack that can be used.

The default value for MatchLimitRecursion can be set when PCRE is built; the default default is the same value as the default for MatchLimit. You can override the default by setting this property. If value is zero, the plugin uses the default.
(Read and Write property)

150.1.95 Text as String

MBS Tools Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text used for the last successfull compile call.
Notes: (Read only property)

150.1.96 TextMemory as Memoryblock

MBS Tools Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text used for the last successfull compiletext call.
Notes: (Read only property)

150.1.97 VectorSize as Integer

MBS Tools Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal vector size.
Notes: (Read only property)

150.1.98 Constants

150.1.99 ErrorBadCount = -15

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: This error is given if the value of the ovecsize argument is negative.

150.1.100 ErrorBadMagic = -4

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: PCRE stores a 4-byte "magic number" at the start of the compiled code, to catch the case when it is passed a junk pointer and to detect when a pattern that was compiled in an environment of one endianness is run in an environment with the other endianness. This is the error that PCRE gives when the magic number is not present.

150.1.101 ErrorBadNewLine = -23

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: An invalid combination of Newline options was given.

150.1.102 ErrorBadOffset = -24

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: The value of startoffset was negative or greater than the length of the subject, that is, the value in length.

150.1.103 ErrorBadOption = -3

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: An unrecognized bit was set in the options argument.

150.1.104 ErrorBadPartial = -13

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: This code is no longer in use. It was formerly returned when the PCRE_PARTIAL option was used with a compiled pattern containing items that were not supported for partial matching. From release 8.00 onwards, there are no restrictions on partial matching.

150.1.105 ErrorBadUTF8 = -10

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: A string that contains an invalid UTF-8 byte sequence was passed as a subject. However, if PCRE_PARTIAL_HARD is set and the problem is a truncated UTF-8 character at the end of the subject, ErrorShortUTF8 is used instead.

150.1.106 ErrorBadUTF8Offset = -11

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: The UTF-8 byte sequence that was passed as a subject was valid, but the value of startoffset did not point to the beginning of a UTF-8 character or the end of the subject.

150.1.107 ErrorCallOut = -9

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.

150.1.108 ErrorDFARecurse = -20

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.

0 no error
1 \at end of pattern
2 \c at end of pattern
3 unrecognized character follows \
4 numbers out of order in { } quantifier
5 number too big in { } quantifier
6 missing terminating] for character class
7 invalid escape sequence in character class
8 range out of order in character class
9 nothing to repeat
10 operand of unlimited repeat could match the empty string
11 internal error: unexpected repeat
12 unrecognized character after (?
13 POSIX named classes are supported only within a class
14 missing)
15 reference to non-existent subpattern
16 erroffset passed as NULL
17 unknown option bit(s) set
18 missing) after comment
19 parentheses nested too deeply
20 regular expression too large
21 failed to get memory
22 unmatched parentheses
23 internal error: code overflow
24 unrecognized character after (?<
25 lookbehind assertion is not fixed length
26 malformed number after (?(
27 conditional group contains more than two branches
28 assertion expected after (?(
29 (?R or (?digits must be followed by)
30 unknown POSIX class name
31 POSIX collating elements are not supported
32 this version of PCRE is not compiled with PCRE_UTF8 support
33 spare error
34 character value in \x { ... } sequence is too large
35 invalid condition (?(0)
36 \C not allowed in lookbehind assertion
37 PCRE does not support \L, \l, \N, \U, or \u
38 number after (?C is >255
39 closing) for (?C expected
40 recursive call could loop indefinitely
41 unrecognized character after (?P
42 syntax error after (?P
43 two named groups have the same name
44 invalid UTF-8 string
45 support for \P, \p, and \X has not been compiled
46 malformed \P or \p sequence
47 unknown property name after \P or \p

PCRE_ERROR_NOMATCH	-1	The subject string did not match the pattern.
PCRE_ERROR_NULL	-2	Either code or subject was passed as ””.
PCRE_ERROR_BADOPTION	-3	An unrecognized bit was set in the options argument.
PCRE_ERROR_BADMAGIC	-4	PCRE stores a 4-byte ”magic number” at the start of the compiled code, to catch the case when it is passed a junk pointer and to detect when a pattern that was compiled in an environment of one endianness is run in an environment with the other endianness. This is the error that PCRE gives when the magic number is not present.
PCRE_ERROR_UNKNOWN_NODE	-5	While running the pattern match, an unknown item was encountered in the compiled pattern. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.
PCRE_ERROR_NOMEMORY	-6	If a pattern contains back references, but the ovector that is passed to Execute() is not big enough to remember the referenced substrings, PCRE gets a block of memory at the start of matching to use for this purpose. If the call via pcre_malloc() fails, this error is given. The memory is automatically freed at the end of matching.
PCRE_ERROR_MATCHLIMIT	-8	The backtracking limit, as specified by the match_limit field in a pcre_extra structure (or defaulted) was reached.
PCRE_ERROR_RECURSIONLIMIT	-21	The internal recursion limit, as specified by the match_limit_recursion field in a pcre_extra structure (or defaulted) was reached.
PCRE_ERROR_CALLOUT	-9	This error is never generated by Execute() itself. It is provided for use by callout functions that want to yield a distinctive error code. See the pcrecallout documentation for details.
PCRE_ERROR_BADUTF8	-10	A string that contains an invalid UTF-8 byte sequence was passed as a subject.
PCRE_ERROR_BADUTF8_OFFSET	-11	The UTF-8 byte sequence that was passed as a subject was valid, but the value of startoffset did not point to the beginning of a UTF-8 character.
PCRE_ERROR_PARTIAL	-12	The subject string did not match, but it did match partially. See the pcrepartial documentation for details of partial matching.
PCRE_ERROR_BADPARTIAL	-13	The PCRE_PARTIAL option was used with a compiled pattern containing items that are not supported for partial matching. See the pcrepartial documentation for details of partial matching.
PCRE_ERROR_INTERNAL	-14	An unexpected internal error has occurred. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.
PCRE_ERROR_BADCOUNT	-15	This error is given if the value of the ovecsize argument is negative.

index	offset
0	start of matched pattern
1	end of matched pattern
2	start of subexpression 1
3	end of subexpression 1
2*n	start of subexpression n
2*n+1	end of subexpression n

index	offset
0	start of matched pattern
1	end of matched pattern
2	start of subexpression 1
3	end of subexpression 1
2*n	start of subexpression n
2*n+1	end of subexpression n

150.1.109 ErrorDFAUCond = -17

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.

150.1.110 ErrorDFAUItem = -16

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.

150.1.111 ErrorDFAUMLimit = -18

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.

150.1.112 ErrorDFAWSSize = -19

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.

150.1.113 ErrorInternal = -14

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: An unexpected internal error has occurred. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.

150.1.114 ErrorMatchLimit = -8

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: The backtracking limit, as specified by the match_limit field in a pcre_extra structure (or defaulted) was reached.

150.1.115 ErrorNoMatch = -1

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: The subject string did not match the pattern.

150.1.116 ErrorNoSubstring = -7

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: This error is used by the substring functions.

150.1.117 ErrorNull = -2

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: Either code or subject was passed as "", or ovector was "" and ovecsize was not zero.

150.1.118 ErrorNullWSLimit = -22

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.

150.1.119 ErrorPartial = -12

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: The subject string did not match, but it did match partially.

150.1.120 ErrorPlugin = -99

MBS Tools Plugin, Plugin Version: 13.1.

Function: One of the RegEx error constants.
Notes:

Generic error for something wrong with the plugin state.
Like no current regex object internally or wrong function parameters.

150.1.121 ErrorRecursionLimit = -21

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: The internal recursion limit, as specified by the match_limit_recursion field in a pcre_extra structure (or defaulted) was reached. See the description above.

150.1.122 ErrorShortUTF8 = -25

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: The subject string ended with an incomplete (truncated) UTF-8 character, and the PCRE_PARTIAL_HARD option was set. Without this option, ErrorBadUTF8 is returned in this situation.

150.1.123 ErrorUnknownNode = -6

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.

150.1.124 ErrorUnknownOpcode = -5

MBS Tools Plugin, Plugin Version: 11.2.

Function: One of the RegEx error constants.
Notes: While running the pattern match, an unknown item was encountered in the compiled pattern. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.

Chapter 151

Remote Control

151.1 class GammaFadeMBS

151.1.1 class GammaFadeMBS

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: A class to perform gamma fades on Mac OS X and Windows.
Notes: On Mac OS X a system API is used. On Windows the GammaMBS class is used internally.

151.1.2 Blog Entries

- MonkeyBread Software Releases the MBS REALbasic plug-ins 8.4

151.1.3 Blog Entries

- MonkeyBread Software Releases the MBS REALbasic plug-ins 8.4

151.1.4 Methods

151.1.5 Constructor

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Initializes the gamma fade class and queries the current gamma values.
Notes:

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
See also:

- 151.1.6 Constructor(mainwindow as window) 22302

151.1.6 Constructor(mainwindow as window)

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop only.

Function: Initializes the gamma fade class and queries the current gamma values.
Notes:

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
See also:

- 151.1.5 Constructor 22301

151.1.7 GammaFadeIn(seconds as Double) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Fades back to the normal screen.
Notes:

Seconds is the duration of the fade in seconds. Typical 0.3 seconds.
Returns true on success and false on failure.

151.1.8 GammaFadeOut(seconds as Double) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Fades to a solid color.
Notes:

Seconds is the duration of the fade in seconds. Typical 0.5 seconds.
Returns true on success and false on failure.

151.1.9 Properties

151.1.10 Available as Boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Whether the constructor was successful.
Notes:

True if the initialization code worked.

On Mac OS X the constructor fails to get access if there is another gamma fade running.
On Windows the access to the gamma controls can fail if you don't provide a window, the hardware can't do gamma fades (e.g. running in VMWare) or DirectX is not available.
(Read and Write property)

151.1.11 FadeColor as Color

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The color to use for the fade.
Example:

```
dim g as new GammaFadeMBS
g.FadeColor=& c0000FF // blue
```

Notes:

Default is black.
(Read and Write property)

151.2 class GammaMBS

151.2.1 class GammaMBS

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: A class to change the gamma settings of the display.
Notes:

You can use that class to change the gamma table. For example to invert the screen or increase/decrease one of the colors.

Works on Mac OS X and Windows.

151.2.6 Methods

151.2.7 Constructor(mainwindow as window = nil, displayIndex as Integer = 0)

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop only.

Function: Initializes the gamma class and queries the current gamma values.
Notes:

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
Added displayIndex parameter in plugin version 14.1 to specify on Mac which display to handle.

151.2.8 SetGamma(gammaScale as Double = 1.0) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Sets the gamma values.
Notes:

The current table assigned to the main screen.
All values are multiplied with gammaScale

151.2.9 Properties

151.2.10 Available as Boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Whether the constructor was successful.
Notes:

True if the initialization code worked.

On Mac OS X the constructor fails to get access if it does not find a display with gamma controls.

On Windows the access to the gamma controls can fail if you don't provide a window, the hardware can't do gamma fades (e.g. running in VMWare) or DirectX is not available.
(Read and Write property)

151.2.11 Lasterror as Integer

MBS ComputerControl Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

151.2.12 Size as Integer

MBS ComputerControl Plugin, Plugin Version: 14.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The number of entries in the gamma table.
Notes:

Should be 256 for Windows.
And 256 or 1024 for Mac.
(Read only property)

151.2.13 Blue(Index as Integer) as Double

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The blue value with the given index.
Notes:

Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

151.2.14 Green(Index as Integer) as Double

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The green value with the given index.
Notes:

Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

151.2.15 Red(Index as Integer) as Double

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The red value with the given index.
Notes:

Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

151.3 class KeyCodesMBS

151.3.1 class KeyCodesMBS

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

Function: A class for translating between key codes and ASCII characters.
Notes:

This class is outdated, please use RemoteControlMBS module.

The list of key codes on a Mac is the same as the one used in the RB documentation for the sprite surface. Some special keys:

Modifier keys

kVirtualCapsLockKey	& h039
kVirtualShiftKey	& h038
kVirtualControlKey	& h03B
kVirtualOptionKey	& h03A
kVirtualCommandKey	& h037

Editing/utility keys

kVirtualHelpKey	& h072
kVirtualDeleteKey	& h033
kVirtualTabKey	& h030
kVirtualEnterKey	& h04C
kVirtualReturnKey	& h024
kVirtualEscapeKey	& h035
kVirtualForwardDeleteKey	& h075

Navigation keys

kVirtualHomeKey	& h073
kVirtualEndKey	& h002
kVirtualPageUpKey	& h074
kVirtualPageDownKey	& h079
kVirtualLeftArrowKey	& h07B
kVirtualRightArrowKey	& h07C
kVirtualUpArrowKey	& h07E
kVirtualDownArrowKey	& h07D

Key codes for Windows:

151.3.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

- MBS Real Studio Plugins, version 11.3pr14

151.3.3 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6
- MBS Real Studio Plugins, version 11.3pr14

151.3.4 Methods

151.3.5 AsciiToKeyCode(ascii as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns the keycode which is needed to be pressed to create this ASCII character.
Notes: You get the main key, not any modifier which may also be pressed.

151.3.6 KeyCodeToAscii(keycode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns the ASCII code which matches the key code.
Example:

```
dim k as KeyCodesMBS

k=new KeyCodesMBS

// makes a big A on a german keyboard:
MsgBox chr(k.KeyCodeToAsciiWithSecondKeyCode(0+512))
```

Notes:

Note on a Mac:
Bit 0 to 6 are the keycode, bit 7 is 1 if key goes up and 0 if key goes down.
Bit 8 to 15 are modifier keys:

Constants for the modifier keys:

Not available in 64-bit.
See MacTextForKeyCode method in RemoteControlMBS module.

151.3.7 KeyCodeToAsciiWithSecondKeyCode(keycode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 3.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns the ASCII code which matches the key code with the current state.
Example:

```
dim k as KeyCodesMBS

k=new KeyCodesMBS

MsgBox str(k.KeyCodeToAscii(& h0A))
MsgBox chr(k.KeyCodeToAsciiWithSecondKeyCode(0))

// gives â on a German Keyboard
```

Notes:

On the first call of KeyCodeToAscii you get the ASCII char, but if you call KeyCodeToAsciiWithSecondKeyCode and the state property is not changed, you can get what the user gets if he presses several keys.
KeyCodeToAscii resets state to 0 before calling.
On Windows, KeyCodeToAscii and KeyCodeToAsciiWithSecondKeyCode are equal.

Note on a Mac:
Bit 0 to 6 are the keycode, bit 7 is 1 if key goes up and 0 if key goes down.
Bit 8 to 15 are modifier keys:

Constants for the modifier keys:

Not available in 64-bit.

151.3.8 TestForAsciiKeyDown(ascii as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns true if the key with the given ascii code is pressed.

151.3.9 TestForKeyDown(keycode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns true if the key with the given key code is pressed.

Example:

```
Dim k As New KeyCodesMBS

Const VK_SHIFT = &h10 // for Windows
If k.TestForKeyDown(VK_SHIFT) Then
MsgBox "shift"
Else
MsgBox "no shift"
End If
```

151.3.10 Update

MBS ComputerControl Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Updates the layout so it is the current one.

151.3.11 Properties

151.3.12 LastError as Integer

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

Function: The last error code.
Notes:

The last function was successfull if lasterror is 0.
If the last function was not available on this machine, the value is set to -1.
Other values are Mac OS error codes.
(Read and Write property)

151.3.13 Name as String

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

Function: The name for the current keyboard layout.
Notes:

On Mac OS 9 e.g. "Deutsch".
On Mac OS X e.g. "German".
On Windows 98 e.g. "00020407".
(Read only property)

151.3.14 State as Integer

MBS ComputerControl Plugin, Plugin Version: 3.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The last state.
Notes:

The function KeyCodeToAscii stores a code here which the function KeyCodeToAsciiWithSecondKeyCode will use on further calls.
(Read and Write property)

VK_LBUTTON	& h01
VK_RBUTTON	& h02
VK_CANCEL	& h03
VK_MBUTTON	& h04
VK_XBUTTON1	& h05 (Windows 2000 and newer)
VK_XBUTTON2	& h06 (Windows 2000 and newer)
VK_BACK	& h08
VK_TAB	& h09
VK_CLEAR	& h0C
VK_RETURN	& h0D
VK_SHIFT	& h10

151.4 class PresskeyMBS

151.4.1 class PresskeyMBS

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: This class allows you to simulate keyboard activity.
Deprecated: This item is deprecated and should no longer be used. You can use RemoteControlMBS instead. **Notes:** This class is deprecated, please use RemoteControlMBS module.

151.4.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

151.4.3 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

151.4.4 Methods

151.4.5 clear

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Resets this object.

151.4.6 mouseclick(down as boolean)

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Clicks the mouse button.
Notes:

Clicks the mouse at current position.
Left button is used.
If you forget the mouseup you may loose control about a Mac with Mac OS X, but if you have enabled external terminal login you can login via SSH and quit Xojo from outside.

The Mac version sets the lasterror property.
See also:

- 151.4.7 MouseClick(down as boolean, rightdown as boolean) 22316

151.4.7 MouseClick(down as boolean, rightdown as boolean)

MBS ComputerControl Plugin, Plugin Version: 8.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Clicks the mouse with the given buttons.
Notes: Same as MouseClick, but with an additional rightdown parameter.
See also:

- 151.4.6 mouseclick(down as boolean) 22315

151.4.8 MouseMove(globalx as Integer,globaly as Integer)

MBS ComputerControl Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Moves the mouse.
Example:

```
dim x,y as Integer
dim p as PresskeyMBS
p=new PresskeyMBS
x=system.mousex
y=system.mousey+10 // move ten pixels down
p.mousemove x,y
```

Notes:

Moves the mouse on screen.
The destination must be specified in global screen coordinates.
Requires Mac OS 8.5 or newer for Mac OS Classic.

151.4.9 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean)

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Moves the mouse.
Notes:

Moves the mouse on screen and clicks.
The destination must be specified in global screen coordinates.
Requires Mac OS 8.5 or newer for Mac OS Classic.

The Mac version sets the lasterror property.

Mac OS X only:
Based on the values entered, the appropriate mouse-down, mouse-up, mouse-move, or mouse-drag events are generated, by comparing the new state with the current state.
See also:

- 151.4.10 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean, rightdown as boolean) 22317

151.4.10 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean, rightdown as boolean)

MBS ComputerControl Plugin, Plugin Version: 8.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Moves the mouse cursor and clicks the mouse with the given buttons.
Notes: Same as MouseMoveClick, but with an additional rightdown parameter.
See also:

- 151.4.9 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean) 22316

151.4.11 press

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Presses a key.
Example:

```
' example for Mac OS X:
dim p as PresskeyMBS

p=new PresskeyMBS
p.shift=true
p.charcode=asc("H")
p.keycode=4
p.press 'press H
p.shift=false
p.charcode=asc("e")
p.keycode=14
p.press 'press e
p.charcode=asc("l")
p.keycode=37
p.press 'press l
p.press 'press l
p.charcode=asc("o")
p.keycode=31
p.press 'press o
```

```
' example for Windows:

editfield1.setfocus 'so we get something in it!

p=new PresskeyMBS
p.shift=true
p.charcode=asc("H")
p.virtualCode=-1 'automatically try to get this code
p.press 'press H
p.shift=false
p.virtualCode=-1 'after a call you find the virtualCode there
p.charcode=asc("e")
p.press 'press e
p.virtualCode=-1
p.charcode=asc("l")
p.press 'press l
p.press 'press l
p.virtualCode=-1
p.charcode=asc("o")
p.press 'press o
```

Notes:

Simulates a keypress and handles the Settings for Shift, Control, Command and Option key.
Command shows no reaction in my tests for Mac OS Classic
On Windows, if you set virtualcode=-1 this method will set it to the code matching the charcode property.

The Mac version sets the lasterror property.

151.4.12 pressraw(down as boolean)

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Presses a key.
Example:

```
' Works perfectly on Mac OS X but Shift can't be done Raw on Mac OS 9:
dim p as PresskeyMBS

p=new PresskeyMBS

p.charcode=0
p.keycode=& h38
p.pressraw true 'shift down
```

```
p.charcode=asc("H")
p.keycode=4
p.pressraw true 'press H
p.pressraw false

p.charcode=0
p.keycode=& h38
p.pressraw false 'shift up

p.charcode=asc("e")
p.keycode=14
p.pressraw true 'press e
p.pressraw false
p.charcode=asc("l")
p.keycode=37
p.pressraw true 'press l
p.pressraw false
p.pressraw true 'press l
p.pressraw false
p.charcode=asc("o")
p.keycode=31
p.pressraw true 'press o
p.pressraw false
```

Notes:

Simulates a keypress and doesn't handle the Settings for Shift, Control, Command and Option key.
On Windows, if you set virtualcode=-1 this method will set it to the code matching the charcode property.

The Mac version sets the lasterror property.

151.4.13 Properties

151.4.14 Charcode as Integer

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The character you want to press.
Example:

```
dim p as PresskeyMBS

p=new PresskeyMBS
p.charcode=8
p.keycode=& h33
```

```
p.press // press backspace on Mac OS
```

Notes:

On Mac OS Classic the final printed charcode inside an editfield is the one you pass.
(Read and Write property)

151.4.15 Command as boolean

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Tells the Press method to press down command key before and release it after it simulates the key press.
Example:

```
dim p as new PresskeyMBS
p.command=True
```

Notes:

It looks like the command key is not working for Mac OS Classic.
On Windows the control key is pressed if control or command properties are true.
(Read and Write property)

151.4.16 Control as boolean

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Tells the Press method to press down control key before and release it after it simulates the key press.
Example:

```
dim p as new PresskeyMBS
p.Control=True
```

Notes:

On Windows the control key is pressed if control or command properties are true.
(Read and Write property)

151.4.17 Keycode as Integer

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: For Mac OS the number of the key on the keyboard which is pressed.
Example:

```
dim p as PresskeyMBS
p=new PresskeyMBS
p.keycode=2
p.charcode=asc("d")
p.press 'shows a "d" on Mac OS
```

Notes:

You find this codes in that nice tables for the codes of the Spritesurface in the Xojo books.
(Read and Write property)

151.4.18 Lasterror as Integer

MBS ComputerControl Plugin, Plugin Version: 3.3, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Not all functions of this class fill this property!
(Read and Write property)

151.4.19 Option as boolean

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Tells the Press method to press down option key before and release it after it simulates the key press.
Example:

```
dim p as PresskeyMBS
p.option=True
```

Notes: (Read and Write property)

151.4.20 Shift as boolean

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Tells the Press method to press down shift before and release it after it simulates the key press.
Example:

```
dim p as PresskeyMBS

p=new PresskeyMBS
p.shift=true
p.charcode=asc("1")
p.keycode=18
p.press 'press !
```

Notes: (Read and Write property)

151.4.21 VirtualCode as Integer

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The virtual keycode to press.
Example:

```
dim p as PresskeyMBS
p=new PresskeyMBS
p.charcode=asc("m")
p.virtualcode=-1
p.press ' makes a "m" on Windows.
```

Notes:

If you don't know this code, just pass -1 and this value will be filled automatically using the charcode property.
After you call press or pressraw you'll find the matching virtualcode in this property.
(Read and Write property)

151.5 module RemoteControlMBS

151.5.1 module RemoteControlMBS

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This module collects methods for simulating user input with mouse and keyboard.
Notes:

You can use this class for GUI scripting.
Requires libXtst.so.6 on Linux to be installed.

151.5.4 Methods

151.5.5 LinuxConvertCase(keysymbol as Integer, byref lowerSymbol as Integer, byref upperSymbol as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Converts the case of the given keysymbol.
Notes:

In lowerSymbol you will receive the key symbol for a lower case key and in upperSymbol the uppercase keys.

So passing in the key symbol of "a" or "A" will both return "a" and "A".

151.5.6 LinuxKeyCodeToKeySymbol(keycode as Integer, index as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Returns from the keyboard mapping tables the key symbol for the given key code.
Notes: Index is the offset in the tables. 0 for the first key symbol and 1 for the second. If the user presses shift the keyboard driver uses index=1 to access the capital letters.

151.5.7 LinuxKeyNameToKeySymbol(keyname as string) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Searches the key mapping list for the key symbol for a given name.
Notes: Returns 0 on failure.

151.5.8 LinuxKeySymbolToKeyCode(keysymbol as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Searches the hardware dependend key code for the given key symbol.
Notes: Returns 0 on any error.

151.5.9 LinuxKeySymbolToKeyName(keysymbol as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Returns the name of the key symbol.
Notes: Can return "" on an invalide keysymbol value.

151.5.10 LinuxMouseClick(ButtonID as Integer, ButtonDown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Simulates a mouse click with the given button.
Notes:

ButtonID=1 is the left mouse button.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.

151.5.11 LinuxMousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries the current mouse position.

151.5.12 LinuxMousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries the current mouse position.

151.5.13 LinuxMoveMouse(x as Integer, y as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Moves the mouse to the given position.
Notes: Returns true on success.

151.5.14 LinuxPressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Presses the ctrl key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

151.5.15 LinuxPressKey(Keycode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Presses the key with the given keycode.
Notes:

Performs a key down and a key up event.
Returns true on success.
See also:

- 151.5.16 LinuxPressKey(Keycode as Integer, ButtonDown as boolean) as boolean 22326

151.5.16 LinuxPressKey(Keycode as Integer, ButtonDown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Performs a key event.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 151.5.15 LinuxPressKey(Keycode as Integer) as boolean 22326

151.5.17 LinuxPressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Presses the alt key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

151.5.18 LinuxPressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Presses the shift key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

151.5.19 LinuxSupported as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether the functions are available for simulation of keyboard and mouse events.
Notes: Returns true if the Xtest extension is installed.

151.5.20 MacCurrentProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the process ID of your application.
Notes: Returns 0 on any error.

151.5.21 MacCurrentProcessName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the name of the current process.
Example:

msgbox RemoteControlMBS.MacCurrentProcessName

Notes: This is the name of your application.

151.5.22 MacDescriptionForKeyCode(keycode as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Translates a keycode to a string for displaying.
Notes: Keycodes which match a special key like "Return", "F1" or "Backspace" are returned as descriptive strings.

151.5.23 MacDisplayNameForKeyCode(keycode as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Translates a keycode to a string for displaying.
Notes: Same as MacTextForKeyCode(keycode, 4)

151.5.24 MacForegroundProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the process ID of the application in the foreground.
Notes: Returns 0 on any error.

151.5.25 MacFrontProcessName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the front process.
Example:

```
RemoteControlMBS.MacFrontProcessName="iChat" // move iChat to front
```

Notes: (Read and Write computed property)

151.5.26 MacKeyboardLocalizedName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The localized name of the current keyboard layout.
Notes: Returns "" on any error.

151.5.27 MacKeyboardName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the current keyboard layout.
Notes:

Returns "" on any error.

Added 64-bit support for version 17.0.

151.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Clicks the mouse buttons on the given position.
Example:

```
// doing a context menu click with control key:

dim x,y as Integer
x=System.MouseX
y=System.MouseY

call RemoteControlMBS.PressControlKey true
call RemoteControlMBS.MacMouseClick x, y, true, true
call RemoteControlMBS.MacMouseClick x, y, true, false
call RemoteControlMBS.PressControlKey false
```

Notes:

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So

always call this method another time to release the mouse buttons.
See also:

- 151.5.29 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 22330

- 151.5.30 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 22331

151.5.29 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Clicks the mouse buttons on the given position.
Example:

```
// do a right click:

dim x,y as Integer
x=System.MouseX
y=System.MouseY

call RemoteControlMBS.MacMouseClick x, y, true, false, true
call RemoteControlMBS.MacMouseClick x, y, true, false, false
```

Notes:

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 151.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean 22329

- 151.5.30 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 22331

151.5.30 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Clicks the mouse buttons on the given position.
Notes:

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 151.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean 22329
- 151.5.29 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 22330

151.5.31 MacMousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the current mouse position.

151.5.32 MacMousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the current mouse position.

151.5.33 MacMouseWheel(wheel1 as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Performs a wheel event.
Example:

```
call RemoteControlMBS.MacMouseWheel 1
```

Notes:

Returns true on success.
A typical value for the wheel changes are in range from -10 to 10.
See also:

- 151.5.34 MacMouseWheel(wheel1 as Integer, wheel2 as Integer) as boolean 22332

151.5.34 MacMouseWheel(wheel1 as Integer, wheel2 as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Performs a wheel event.
Example:

```
call RemoteControlMBS.MacMouseWheel 10,5
```

Notes:

Returns true on success.
A typical value for the wheel changes are in range from -10 to 10.
See also:

- 151.5.33 MacMouseWheel(wheel1 as Integer) as boolean 22331

151.5.35 MacMoveMouse(x as Double, y as Double) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Moves the mouse to the given position.
Example:

```
call RemoteControlMBS.MacMoveMouse(100,100)
```

Notes:

Returns true on success.
On Mac does not generate mouse events.

151.5.36 MacPressCommandKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Presses the command key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

151.5.37 MacPressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Presses the ctrl key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

151.5.38 MacPressKey(keychar as Integer, virtualkey as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Presses the given key.
Notes:

keychar is the ASCII code of the key you press and virtualkey is the key code.
Returns true on success.
Peforms a key down and a key up event.
See also:

- 151.5.39 MacPressKey(keychar as Integer, virtualkey as Integer, keydown as boolean) as boolean 22333

151.5.39 MacPressKey(keychar as Integer, virtualkey as Integer, keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Presses the given key.
Notes:

keychar is the ASCII code of the key you press and virtualkey is the key code.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 151.5.38 MacPressKey(keychar as Integer, virtualkey as Integer) as boolean 22333

151.5.40 MacPressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Presses the option key. (labeled with alt)
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

151.5.41 MacPressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Presses the shift key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

151.5.42 MacProcessCount as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Counts the high level processes.
Example:

msgBox str(remoteControlMBS.macprocessCount)

151.5.43 MacProcessName(index as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the process with the given index.
Example:

```
dim i,c as Integer

// search iChat and make it visible
c=remoteControlMBS.macprocesscount
for i=0 to c-1
if remoteControlMBS.macprocessname(i)="iChat" then
remoteControlMBS.macprocessVisible(i)=true
end if
next
```

Notes: Index is from 0 to MacProcessCount-1.

151.5.44 MacProcessVisible(index as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether a process is visible or not.
Example:

```
dim i,c as Integer

// search Safari and make it invisible
c=remoteControlMBS.macprocesscount
for i=0 to c-1
if remoteControlMBS.macprocessname(i)="Safari" then
remoteControlMBS.macprocessVisible(i)=false
end if
next
```

Notes:

Index is from 0 to MacProcessCount-1.
(Read and Write computed property)

151.5.45 MacTextForKeyCode(keycode as Integer, KeyAction as Integer, ModifierState as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Translates a keycode to a string.
Example:

```
// try some keycodes like e, E, € or é
dim key as string = "@"

const kCommandKey = 1
const kShift = 2
const kCapsLock = 4
const kOption = 8
const kControl = 16

// with no modifiers
for i as Integer = 0 to 127

dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, 0)

if StrComp(key, s, 0) = 0 then
MsgBox "Found with keycode "+str(i)
Return
end if

next

// with shift
for i as Integer = 0 to 127

dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, kShift)

if StrComp(key, s, 0) = 0 then
MsgBox "Found with keycode "+str(i)+" with Shift"
Return
end if

next

// with option
for i as Integer = 0 to 127

dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, kOption)

if StrComp(key, s, 0) = 0 then
MsgBox "Found with keycode "+str(i)+" with Option"
```

```
Return
end if

next
```

Notes:

Works only with Unicode keyboard layouts which need Mac OS X 10.5.

Modifier values:

Command Key	1
Shift	2
CapsLock	4
Option	8
Control	16

Possible constants for the Key Action:

kUCKeyActionDown	0	The user is pressing the key.
kUCKeyActionUp	1	The user is releasing the key.
kUCKeyActionAutoKey	2	The user has the key in an "auto-key" pressed state that is, the user is holding down the key for an extended period of time and is thereby generating multiple key strokes from the single key.
kUCKeyActionDisplay	3	The user is requesting information for key display, as in the Key Caps application.

151.5.46 MouseClick(x as Integer, y as Integer, down as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Performs a mouse click.
Notes:

The mouse cursor is moved to the given position and the first mouse button is pressed.
Returns true on success.

151.5.47 MousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the current mouse position.

151.5.48 MousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the current mouse position.

151.5.49 MoveMouse(x as Integer, y as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the mouse to the given location.
Notes:

Returns true on success.
On Mac does not generate mouse events.

151.5.50 PressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Presses the ctrl key.
Notes: Returns true on success.

151.5.51 PressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Presses the option key.
Notes: Returns true on success.

151.5.52 PressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Presses the shift key.
Notes: Returns true on success.

151.5.53 WinBringProcessToTop(ProcessID as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Brings all windows of process to the front.
Notes: Returns true if function found at least one window.

151.5.54 WinBringWindowToTop(WindowHandle as Integer, SetFocus as boolean = true) as boolean

MBS ComputerControl Plugin, Plugin Version: 13.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Brings a given window to front.
Example:

```
dim h as Integer = RemoteControlMBS.WinFindWindow("", "Calculator")
call RemoteControlMBS.WinBringWindowToTop h
```

Notes:

Pass any window handle, including windows from other applications.
If SetFocus is true, we also set the focus.
Returns true on success.

151.5.55 WinCurrentProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the process ID of your application.
Notes: Returns 0 on any error.

151.5.56 WinFindWindow(ClassName as string, WindowName as string) as Integer

MBS ComputerControl Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds a window based on the classname and/or the window name.
Example:

```
dim h as Integer = RemoteControlMBS.WinFindWindow("SciCalc","")
msgbox hex(h)
```

Notes:

One of the names can be an empty string so only the other name is used. Normally you should prefer the class name as it is not localized. The WindowsListMBS class can help you finding the class name of a window.
Returns 0 on any error.

151.5.57 WinForegroundProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the process ID of the application which owns the foreground window.
Notes: Returns 0 on any error.

151.5.58 WinFrontWindowTitle as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The title of the window which has the focus.
Example:

```
title=remoteControlMBS.winfrontWindowTitle
```

Notes: May return "" on any error.

151.5.59 WinIsWindowMinimized(WindowHandle as Integer) as Boolean

MBS ComputerControl Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether the specified window is minimized.
Notes:

Returns true if minimized.
Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

151.5.60 WinIsWindowVisible(WindowHandle as Integer) as Boolean

MBS ComputerControl Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks the visibility state of the specified window.
Notes:

Returns true if visible or false if not.
Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

151.5.61 WinKeyboardName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the name of the current Windows keyboard layout.

151.5.62 WinKeyIsDown(virtualkey as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Tests whether a given key is currently pressed.

151.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Peforms a mouse click on the given position.
Deprecated: This item is deprecated and should no longer be used. You can use WinMouseClick with integer parameters instead. **Notes:**

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 151.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 22342
- 151.5.65 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 22342
- 151.5.66 WinMouseClick(x as integer, y as integer, AbsolutePosition as boolean, MouseButton1 as Integer, MouseButton2 as Integer, MouseButton3 as Integer) as boolean 22343

151.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Peforms a mouse click on the given position.
Deprecated: This item is deprecated and should no longer be used. You can use WinMouseClick with integer parameters instead. **Notes:**

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.

Deprecated. Please use the version taking integers, so you can click only one button without others.
See also:

- 151.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean 22341
- 151.5.65 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 22342
- 151.5.66 WinMouseClick(x as integer, y as integer, AbsolutePosition as boolean, MouseButton1 as Integer, MouseButton2 as Integer, MouseButton3 as Integer) as boolean 22343

151.5.65 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Peforms a mouse click on the given position.
Deprecated: This item is deprecated and should no longer be used. You can use WinMouseClick with integer parameters instead. **Notes:**

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.

Deprecated. Please use the version taking integers, so you can click only one button without others.
See also:

- 151.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean 22341
- 151.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 22342
- 151.5.66 WinMouseClick(x as integer, y as integer, AbsolutePosition as boolean, MouseButton1 as Integer, MouseButton2 as Integer, MouseButton3 as Integer) as boolean 22343

151.5.66 WinMouseClick(x as integer, y as integer, AbsolutePosition as boolean, MouseButton1 as Integer, MouseButton2 as Integer, MouseButton3 as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Peforms a mouse click on the given position.
Example:

```
Const x = 100
Const y = 100

// press right mouse button

Dim success1 As Boolean = RemoteControlMBS.WinMouseClick(x, y, True, -1, 1, -1)

// and up
Dim success2 As Boolean = RemoteControlMBS.WinMouseClick(x, y, True, -1, 0, -1)
```

Notes:

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
Pass 1 to click mouse button down, 0 to release it or -1 to not touch the button.
See also:

- 151.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean 22341
- 151.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 22342
- 151.5.65 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 22342

151.5.67 WinMousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the current mouse position.

151.5.68 WinMousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the current mouse position.

151.5.69 WinMoveMouse(x as Integer, y as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Moves the mouse cursor to the given position.
Notes:

Returns true on success.
Internally the coordinates are converted to normalized absolute coordinates which can lead to have the mouse one pixel off the requested position due to rounding.

151.5.70 WinPressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Presses the ctrl key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

151.5.71 WinPressKey(ScanCode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Performs a key event with the given data.
Notes:

This methods creates a keydown and a keyup event.
Returns true on success.
See also:

- 151.5.72 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean 22345
- 151.5.73 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean 22346
- 151.5.74 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean 22346

151.5.72 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Performs a key event with the given data.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 151.5.71 WinPressKey(ScanCode as Integer) as boolean 22345
- 151.5.73 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean 22346
- 151.5.74 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean 22346

151.5.73 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Performs a key event with the given data.
Notes:

This methods creates a keydown and a keyup event.
Returns true on success.
See also:

- 151.5.71 WinPressKey(ScanCode as Integer) as boolean 22345
- 151.5.72 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean 22345
- 151.5.74 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean 22346

151.5.74 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Performs a key event with the given data.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 151.5.71 WinPressKey(ScanCode as Integer) as boolean 22345
- 151.5.72 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean 22345
- 151.5.73 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean 22346

151.5.75 WinPressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Presses the alt key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

151.5.76 WinPressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Presses the shift key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

151.5.77 WinScanCodeToVirtualKeyCode(ScanCode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Searches the virtual key code for the given scancode.
Notes:

Each key has a hardware dependend scan code. For each scancode you can get the virtual key code which is hardware independend.

Returns 0 on failure.

151.5.78 WinSendMessage(Win as window, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop only.

Function: Sends a Windows message to a given window.
Example:

```
const WM_CLOSE = & h0010

call RemoteControlMBS.WinSendMessage(window1, WM_CLOSE, 0, 0)
```

Notes: The result depends on the message command.
See also:

- 151.5.79 WinSendMessage(WindowHandle as Integer, Msg as Integer, lParam as Integer, WParam as Integer) as Integer 22348

151.5.79 WinSendMessage(WindowHandle as Integer, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a Windows message to a given window.
Example:

```
const WM_CLOSE = & h0010
dim h as Integer = RemoteControlMBS.WinFindWindow("SciCalc","")

call RemoteControlMBS.WinSendMessage(h, WM_CLOSE, 0, 0) // Closes Calc
```

Notes: The result depends on the message command.
See also:

- 151.5.78 WinSendMessage(Win as window, Msg as Integer, lParam as Integer, WParam as Integer) as Integer 22347

151.5.80 WinShowWindow(WindowHandle as Integer, CmdShow as Integer) as Boolean

MBS ComputerControl Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows or hides a window.
Notes:

CmdShow can be:

Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

151.5.81 WinVirtualKeyCodeToCharCode(VirtualKeyCode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the char code for a virtual key code.
Notes: Returns 0 on failure.

151.5.82 WinVirtualKeyCodeToScanCode(VirtualKeyCode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds the scan code to match the given virtual key code.
Notes: Returns 0 on failure.

151.5.83 WinVirtualKeyForASCII(Character as Integer, byref VirtualKeyCode as Integer, Byref ShiftKey as boolean, byref ControlKey as Boolean, byref AltKey as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns for a given character which combination of key code and modifiers created the character.
Notes:

For Character, you should use asc(string), but you may need to convert the string to Windows ANSI text encoding.

Returns 0 on failure.

Chapter 152

Resolution

152.1 class DisplayMBS

152.1.1 class DisplayMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Defines a class for accessing the displays of the screen.

152.1.6 Methods

152.1.7 CanDepth(depth as Integer) As Boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns true if the monitor supports the given color depth at the current ResolutionMBS.
Notes: none.

152.1.8 FadeGamma(intensity as Integer, col As Color)

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets the gamma of the DisplayMBS
Notes:

Intensity has to be between 0 and 1000. 1000 is normal, when it is 0, the whole DisplayMBS is in the color GammaColor.
Direct color display modes do not use color lookup tables and are usually 16, 24, or 32 bit. Not all direct color video boards support loadable gamma ramps.

See the NativeGamma documentation for more details on Windows Gamma details.

152.1.9 FadeGammaTo(intensity as Integer, col As Color, ticks as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Fades the intensity and color of the gamma slowly in the given number of milliseconds.
Notes:

Intensity has to be between 0 and 1000. 1000 is normal, when it is 0, the whole display is in the color GammaColor.
Direct color display modes do not use color lookup tables and are usually 16, 24, or 32 bit. Not all direct color video boards support loadable gamma ramps.
See the NativeGamma documentation for more details on Windows Gamma details.

152.1.10 GetBestResolution(width as Integer, height as Integer, depth as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Searches for the best matching resolution.
Notes:

Returns the best resolution which size is not smaller that the dimensions given, which has the given depth and, if safe is true, which is safe. If safe is not true, be sure that the frequency works, if you want to switch to it (for example by asking the user).
On Mac OS X till now no resolution can be called safe.
See also:

- 152.1.11 GetBestResolution(width as Integer, height as Integer, safe As Boolean) As ResolutionMBS 22353

152.1.11 GetBestResolution(width as Integer, height as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Searches for the best matching resolution.
Notes:

Returns the best resolution which size is not smaller that the dimensions given, which has the highest depth and, if safe is true, which is safe. If safe is not true, be sure that the frequency works, if you want to switch to it (for example by asking the user).
On Mac OS X till now no resolution can be called safe.
See also:

- 152.1.10 GetBestResolution(width as Integer, height as Integer, depth as Integer, safe As Boolean) As ResolutionMBS 22353

152.1.12 GetCurrentResolution As ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns the current resolution.
Notes: Returns the resolution the display is currently set to. This is useful if you want to switch back to the old resolution after you switched to another resolution.

152.1.13 GetLargestResolution(depth as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Searches for the largest resolution with the given depth.
Notes:

The same as GetBestResolution(width, height, depth, safe), the only difference is that it does not search for the smallest resolution but for the biggest one.
On Mac OS X till now no resolution can be called safe.
See also:

- 152.1.14 GetLargestResolution(safe As Boolean) As ResolutionMBS 22354

152.1.14 GetLargestResolution(safe As Boolean) As ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Searches for the largest resolution.
Notes:

If safe is true, this method returns only safe resolutions.
On Mac OS X till now no resolution can be called safe.
See also:

- 152.1.13 GetLargestResolution(depth as Integer, safe As Boolean) As ResolutionMBS 22354

152.1.15 GetResolution(num as Integer) As ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns a resolution.
Notes: Num has to be between 0 and ResolutionCount(safe)-1.

152.1.16 ResolutionCount(depth as Integer, safe As Boolean) as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns the number of resolutions for a given depth.
Notes:

This method returns the number of resolutions that have the given depth and, if safe is true, which are safe.
On Mac OS X till now no ResolutionMBS can be called safe.
See also:

- 152.1.17 ResolutionCount(safe As Boolean) as Integer 22355

152.1.17 ResolutionCount(safe As Boolean) as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns the number of resolutions.
Notes:

This method returns the total number of resolutions this monitor supports and, if safe is true, which are safe. Safe resolutions are resolutions which will always work.
On Mac OS X till now no ResolutionMBS can be called safe.
See also:

- 152.1.16 ResolutionCount(depth as Integer, safe As Boolean) as Integer 22355

152.1.18 SetDepth(depth as Integer) As Boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Switches the color depth to the depth given. Returns true if attempt was successful.
Notes: none.

152.1.19 SwitchTo(width as Integer, height as Integer, depth as Integer, safe As Boolean) As Boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Switches to the given ResolutionMBS if possible.
Notes:

This method tries to switch directly to the best ResolutionMBS which size is bigger or the same as the given dimensions and which depth is the same as the given parameter. It returnes true if it was successful. Try this function first with safe set to true. If that fails, try again with false, but after that show a dialog asking the user if that ResolutionMBS is okay. If the user presses escape or clicks cancel, you should immediatly

switch back to the old ResolutionMBS.
On Mac OS X till now no ResolutionMBS can be called safe.

152.1.20 Update

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Updates the properties in this class.
Notes:

Call it whenever you detect a screen resolution change to update the content of this class.
In general you should not keep DisplayMBS classes around too long because the display described may go away (one a Powerbook the external display).

152.1.21 Properties

152.1.22 Depth as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Depth of the DisplayMBS.
Notes:

Can be 8, 16 or 32. Other screen depths are not well supported.
(Read only property)

152.1.23 displaynum as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: DisplayNum is the number of the DisplayMBS
Notes:

The number is always between 0 and DisplayCount-1, where 0 is the main monitor.
(Read only property)

152.1.24 GammaColor as color

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: The color for fading the DisplayMBS.
Notes:

This property is read-only. To change it, use the methods of the DisplayMBS class and the Switch method of the ResolutionMBS class.
There is no fading for Windows.
(Read only property)

152.1.25 GammaIntensity as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: GammaIntensity is the intensity of the monitor.
Notes:

1000 is normal, if it is 0, the whole DisplayMBS is in the color GammaColor.
This property is read-only. To change it, use the methods of the DisplayMBS class and the Switch method of the ResolutionMBS class.
There is no fading for Windows.
(Read only property)

152.1.26 Height as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Height of the monitor.
Notes: (Read only property)

152.1.27 hz as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: frequency in Hz of that DisplayMBS
Example:

```
dim d as DisplayMBS

d=GetDisplayMBS(0)

msgBox str(d.Hz)
```

Notes:

On Windows:
Sometimes Hz is 0, this is when Windows itself does not know the frequency (at least it is so in my emulation, Virtual PC 3.0 with Win95).

The value should never be greater as the real frequency, so you can just ignore this.
(Read only property)

152.1.28 Left as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: The relative left offset to the other monitors.
Notes:

Should be 0 for the main monitor.
(Read only property)

152.1.29 Top as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: The relative top offset to the other monitors.
Notes:

Should be 0 for the main monitor.
(Read only property)

152.1.30 Width as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Width of this screen.
Notes: (Read only property)

152.1.31 NativeGamma as memoryblock

MBS Util Plugin, Plugin Version: 3.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: The native gamma values.
Example:

```
dim d as DisplayMBS // your display
d.nativegamma=newmemoryblock(3072) // all black
```

Notes:

3072 bytes big is this array a 256 RGB values saved in 3 single properties.

Some notes for SetDeviceGammaRamp, which is the Windows function used by the plugin:

SetDeviceGammaRamp doesn't allow all gamma ramps. It checks the gamma ramp; if it is too complex, such as the red flash when the player is shot in Quake, it rejects it.
SetDeviceGammaRamp will not currently make use of a gamma calibrator. This may change in future versions of Image Color Management (ICM), but for Windows 2000, only the DirectDraw API supports the gamma calibrators.
The existing gamma entry points is already used by GetDeviceGammaRamp and SetDeviceGammaRamp. Therefore, the display driver doesn't need to do anything special to support this new interface, as long as it already supports the Win32 Get/SetDeviceGammaRamp functions.
In addition to getting and setting gamma ramps, the new DirectDraw interface allows the new gamma ramp to be calibrated—if a gamma calibrator is installed. The mechanism that DirectDraw uses to register and communicate with the gamma calibrator is an interim mechanism that will be changed in future releases.
DirectDraw looks for an installed software calibrator and passes the gamma value to the software calibrator; the software calibrator in turn adjusts the gamma ramp according to the measured response of the monitor. The calibrator passes the gamma ramp back to DirectDraw, which passes it to the SetDeviceGammaRamp device driver interface (DDI). The result is that the game looks as intended.
For DirectDraw to use the gamma calibrator, the calibrator must register itself with DirectDraw using a registry key; DirectDraw will call it if the application wants the gamma ramp to be calibrated.
In the future, both the method by which DirectDraw communicates with the gamma calibrator, through the DDI, and the method gamma calibrators use to register themselves in the registry will change. But every part of the DirectDraw API is permanent.
ICM is the color management system in Windows; all system-level color management should be handled by ICM. For this reason, downloadable gamma ramp support will be rolled into ICM in the future, making current solutions for gamma calibrators obsolete. Until such time, we have provided a method by which applications can take advantage of the installed base of software calibrators and graphics adapters that support downloadable gamma ramps.
(Read and Write computed property)

152.2 Globals

152.2.1 DisplayCountMBS as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: DisplayCount returns the number of displays connected.
Example:

```
msgbox "You have "+str(DisplayCountMBS)+" screens."
```

152.2.2 GetDisplayMBS(num as Integer) As DisplayMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns an object of class DisplayMBS for the given DisplayMBS.
Example:

```
dim d as DisplayMBS

d=GetDisplayMBS(0)
msgBox str(d.width)+" x "+str(d.height)+" @ "+str(pow(2,d.depth))+" colors"
```

Notes: num must be: 0 <= num <displaycount

152.2.3 ResolutionLibraryPresentMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns true if the DisplayManager library file was found.
Example:

```
if not ResolutionLibraryPresentMBS then
msgbox "I'm missing the shared library 'DisplayManager'."
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This library should be present on all Mac OS Classic versions. (It is in the system suitcase.)
Returns always true on Windows.

152.2.4 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

152.2.5 UpdateDisplayCountMBS

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Rebuilds the display list.
Notes: If new displays are attached or removed, this method needs to be called.

152.3 class ResolutionMBS

152.3.1 class ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Defines a class for accessing the resolutions a screen.

152.3.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr4

152.3.3 Blog Entries

- MBS REALbasic Plugins, version 10.4pr4

152.3.4 Methods

152.3.5 Switch As Boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: This function switches the DisplayMBS to the ResolutionMBS and returns true if the attempt was successful.
Notes:

If IsSafe is false, show a dialog after the switch asking the user if that ResolutionMBS is okay. If the user presses escape or clicks cancel, you should immediatly switch back to the old ResolutionMBS. Especially on

VGA-Monitors not all listed frequencies work.
On Mac OS X till now no ResolutionMBS can be called safe.

152.3.6 Properties

152.3.7 Depth as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Depth of the ResolutionMBS.
Notes:

Can be 8, 16 or 32. Other screen depths are not well supported.
(Read only property)

152.3.8 displaynum as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: DisplayNum is the number of the DisplayMBS
Notes:

The number is always between 0 and DisplayCount-1, where 0 is the main monitor.
(Read only property)

152.3.9 Height as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Height of the ResolutionMBS.
Notes: (Read only property)

152.3.10 hz as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: frequency in Hz of that ResolutionMBS
Notes:

Sometimes Hz is 0, this is when Windows itself does not know the frequency (at least it is so in my emulation, Virtual PC 3.0 with Win95).

(Read only property)

152.3.11 issafe as boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Is it a safe ResolutionMBS?
Notes:

On Mac OS X till now no ResolutionMBS can be called safe.
(Read only property)

152.3.12 Left as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: The relative left offset to that ResolutionMBS.
Notes:

Should be 0 for the main monitor.
(Read only property)

152.3.13 ResolutionNum as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: DisplayNum is the number of the DisplayMBS.
Notes:

ResolutionNum is the number of the DisplayMBS which always is between 0 and GetDisplayMBS(DisplayNum).ResolutionCount(false)-1.

On Windows: dis.GetCurrentResolution.resolutionNum is sometimes also -1.
(Read only property)

152.3.14 Top as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: The relative top offset to the other monitors.
Notes:

Should be 0 for the main monitor.
(Read only property)

152.3.15 Width as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Width of this ResolutionMBS.
Notes: (Read only property)

Chapter 153

RFC

153.1 class RFCClassDescriptionMBS

153.1.1 class RFCClassDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a class description.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.1.2 Methods

153.1.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

153.1.4 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

153.1.5 Properties

153.1.6 AttributesCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries attribute count for class.
Notes: (Read only property)

153.1.7 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The connection owning this object.
Notes: (Read only property)

153.1.8 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

153.1.9 ImplementedInterfacesCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of implemented interfaces.
Notes: (Read only property)

153.1.10 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the class.
Notes: (Read only property)

153.1.11 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent object.
Notes: (Read only property)

153.1.12 ParentClassesCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of parent classes.
Notes: (Read only property)

153.2 class RFCConnectionAttributesMBS

153.2.1 class RFCConnectionAttributesMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for information about the partner system on the other side of this RFC connection.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.2.2 Methods

153.2.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

153.2.4 Properties

153.2.5 client as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Client ("Mandant")
Notes: (Read only property)

153.2.6 codepage as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Own code page.
Notes: (Read only property)

153.2.7 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The connection used to get this information.
Notes: (Read only property)

153.2.8 cpicConvId as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: CPI-C Conversation ID.
Notes: (Read only property)

153.2.9 dest as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: RFC destination.
Notes: (Read only property)

153.2.10 host as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Own host name.
Notes: (Read only property)

153.2.11 isoLanguage as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: 2-byte ISO-Language
Notes: (Read only property)

153.2.12 kernelRel as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Partner kernel release.
Notes: (Read only property)

153.2.13 language as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Language.
Notes: (Read only property)

153.2.14 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent object for this object.
Notes: (Read only property)

153.2.15 partnerBytesPerChar as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bytes per character in the backend's current codepage.
Notes:

Note this is different from the semantics of the PCS parameter.
(Read only property)

153.2.16 partnerCodepage as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Partner code page.
Notes: (Read only property)

153.2.17 partnerHost as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Partner host name.
Notes: (Read only property)

153.2.18 partnerIP as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Partner IP.
Notes: (Read only property)

153.2.19 partnerIPv6 as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Partner IPv6.
Notes: (Read only property)

153.2.20 partnerRel as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Partner system release.
Notes: (Read only property)

153.2.21 partnerSystemCodepage as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Partner system code page.
Notes: (Read only property)

153.2.22 partnerType as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Partner type.
Notes:

2/3/E/R: R/2,R/3,Ext,Reg.Ext
(Read only property)

153.2.23 progName as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the calling APAB program (report, module pool)
Notes: (Read only property)

153.2.24 rel as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: My system release.
Notes: (Read only property)

153.2.25 rfcRole as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RFC role.
Notes:

C/S: RFC Client / RFC Server.
(Read only property)

153.2.26 sysId as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: R/3 system ID.
Notes: (Read only property)

153.2.27 sysNumber as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: R/3 system number.
Notes: (Read only property)

153.2.28 trace as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trace level (0-3)
Notes: (Read only property)

153.2.29 type as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type.
Notes:

2/3/E/R: R/2,R/3,Ext,Reg.Ext
(Read only property)

153.2.30 user as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: User name.
Notes: (Read only property)

153.3 class RFCConnectionMBS

153.3.1 class RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for RFC connection to a SAP system.
Example:

```
// connect code from a sample project:

dim loginParams As New Dictionary
if app.LogOnData.SARouterString.IsEmpty then // LogOn with server (IP-Address)
loginParams.Value("ashost") = app.LogOnData.Anwendungsserver
else // LogOn with Servername and Router-String
loginParams.Value("ashost") = app.LogOnData.SARouterString+"/H/"+app.LogOnData.Anwendungsserver
end if
loginParams.Value("sysnr") = app.LogOnData.InstanzNr.ToText
loginParams.Value("client") = app.LogOnData.Mandant
loginParams.Value("user") = app.LogOnData.SAPBenutzer
loginParams.Value("passwd") = app.LogOnData.SAPPasswort
loginParams.Value("lang") = app.LogOnData.Sprache

app.ConnectionToSAP = New RFCConnectionMBS(loginParams)
```

153.3.4 Methods

153.3.5 CachedClassDescription(repositoryID as String, Name as String) as RFCClassDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks for a cached class description.
Notes:

This API should be used with care and is only for special scenarios, for example: 1. You know for sure, that a class description has already been cached via ClassDescription(), and don't want to open an extra rfcHandle that will never be used. In this case simply use the SAP System ID as the repositoryID. 2. You have created a hard-coded repository via RfcAddClassDesc(), which contains classes that do not exist in the backend's DDIC.

If repositoryID is "", the "default repository" is used.

repositoryID: System ID of R/3 System, for which this class description has been cached, or "" in case you want to look for it in the default repository.
Name: Name of the class.

153.3.6 CachedFunctionDescription(repositoryID as String, Name as String) as RFCFunctionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks for a cached function description.
Notes:

This API should be used with care and is only for special scenarios, for example: 1. You know for sure, that a function description has already been cached via FunctionDescription(), and don't want to open an extra rfcHandle that will never be used. In this case simply use the SAP System ID as the repositoryID. 2. You have created a hard-coded repository via AddFunctionDesc(), which contains function modules that do not exist in the backend's DDIC.

If repositoryID is "", the "default repository" is used.

153.3.7 CachedTypeDescription(repositoryID as String, Name as String) as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks for a cached structure/table description.
Notes:

Similar to TypeDescription(), but it only looks into the cache. Again it should almost never be necessary to get a metadata description of a single structure.

repositoryID: System ID of R/3 System, for which this type description has been cached, or "" in case you

want to look for it in the default repository.
Name: Name of the DDIC structure/table.

153.3.8 Cancel

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cancels the RFC call which is currently being called over the given RFC connection and closes the connection.
Notes: Can be used only on an RFC client connection and needs to be called from a different thread than the one currently executing the RFC call.

153.3.9 ClassDescription(Name as String) as RFCClassDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the class description that is valid for the system to which connection points to.
Notes:

If the class description is already in the repository cache for that system ID, it will be returned immediately (from the cache), otherwise it will be looked up in the system's DDIC using the rfcHandle. The result from the DDIC lookup will then be placed into the cache for later use.

The RFC Runtime maintains a cache for every R/3 System ID, as the meta data could be different from R/3 release to R/3 release. This is the main API that should be used.

Name: Name of the class to look up.

153.3.10 ClearRepository(repositoryID as String)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes all metadata from the repository cache of the specified R/3 System.
Notes: If repositoryID is "", the "default repository" is cleared.

153.3.11 Constructor(LoginParams as Dictionary)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an RFC client connection for invoking ABAP function modules in an R/3 backend.
Example:

```
Dim loginParams As New Dictionary
loginParams.Value("ashost") = "hostname"
loginParams.Value("sysnr") = "05"
loginParams.Value("client") = "800"
loginParams.Value("user") = "user"
loginParams.Value("passwd") = "****"
loginParams.Value("lang") = "EN"

Dim connection As New RFCConnectionMBS(loginParams)
```

Notes:

Opens a client connection to an SAP System. The connectionParams may contain the following name-value pairs:

client, user, passwd, lang, trace and additionally one of

1. Direct application server logon: ashost, sysnr.
2. Logon with load balancing: mshost, msserv, sysid, group.

msserv is needed only, if the service of the message server is not defined as sapms<SYSID>in /etc/services.

When logging on with SNC, user& passwd are to be replaced by

snc_qop, snc_myname, snc_partnername and optionally snc_lib.
(If snc_lib is not specified, the underlying SNC layer uses the "global" GSS library defined via environment variable SNC_LIB or SNC_LIB_64.)

When logging on with SSO Ticket, you can use mysapsso2 instead of user& passwd. The old SSO format (mysapsso) is no longer supported.

Alternatively the connection parameters can be defined in the config file sapnwrfc.ini. In this case you just pass the parameter dest=... and all parameters that are missing in the sapnwrfc.ini entry into RfcOpenConnection().

For a complete list of logon parameters to be used in connectionParams as well as in the sapnwrfc.ini file, see the sample sapnwrfc.ini file in the SDK's demo folder.

If the logon was ok, constructor returns with a new object, otherwise an exception is raised.

153.3.12 CreateFunction(Name as String) as RFCFunctionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a data container that can be used to execute function calls in the backend via Invoke.
Notes: The importing parameters can be set using the Value() properties. After the RfcInvoke call returned successfully, the exporting parameters can be read from this data container via the Value() properties.

153.3.13 CreateTransaction(TransactionID as String, QueueName as String) as RFCTransactionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a container for executing a (multi-step) transactional call.
Notes:

TransactionID: trasanction ID used to identify the transaction;
queueName: queue name associated with the transaction. If it is "" or empty, the transaction is for tRfc

153.3.14 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: Closes an RFC connection.

153.3.15 FunctionDescription(Name as String) as RFCFunctionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the function description that is valid for the system to which connection points to.
Example:

```
Dim fd As RFCFunctionDescriptionMBS = connection.FunctionDescription("BAPI_COMPANY_GETDETAIL")
```

Notes: If the function description is already in the repository cache for that system ID, it will be returned immediately (from the cache), otherwise it will be looked up in the system's DDIC using the connection. The result from the DDIC lookup will then be placed in the cache. The RFC Runtime maintains a cache for every SAP System ID, as the meta data may be different depending on the SAP release. This is the main API that should be used.

153.3.16 isConnected as Boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if we are connected.
Notes: Same as Ping, but returns boolean and does not raise exception.

153.3.17 Ping

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Ping the remote communication partner through the passed connection handle.
Notes: Sends a ping to the backend in order to check, whether the connection is still alive. Can be used on both, client connections as well as server connections.

153.3.18 ResetServerContext

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the SAP server context ("user context / ABAP session context") associated with the given client connection, but does not close the connection.

153.3.19 TransactionID as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves a unique 24-digit transaction ID from the backend.

153.3.20 TypeDescription(Name as String) as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the structure description that is valid for the system to which connection points to.
Notes:

If the structure description is already in the repository cache for that system ID, it will be returned immediately (from the cache), otherwise it will be looked up in the system's DDIC using the rfcHandle. The result from the DDIC lookup will then be placed into the cache for later use.

The RFC Runtime maintains a cache for every R/3 System ID, as the meta data could be different from R/3 release to R/3 release.

Note
Normally it should not be necessary to lookup separate structure descriptions. They are already looked up as part of the function module, in which they are used.

Name: Name of a DDIC structure or table.

153.3.21 Properties

153.3.22 ConnectionAttributes as RFCConnectionAttributesMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns details about the current client or server connection.
Notes: (Read only property)

153.3.23 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

153.4 class RFCContainerMBS

153.4.1 class RFCContainerMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a container in a RFC connection.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.4.2 Methods

153.4.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

153.4.4 DescribeType as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the metadata description of the given structure or table.

153.4.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

153.4.6 StringLength(Index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries string length for field by index.
See also:

- 153.4.7 StringLength(Name as String) as Integer 22382

153.4.7 StringLength(Name as String) as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries string length for field by name.
See also:

- 153.4.6 StringLength(Index as Integer) as Integer 22381

153.4.8 Value(Index as Integer) as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience method to get value as variant.
Notes:

When reading, we lookup data type for the property referred by index and return a matching value via variant.

Char, String, Num, Date, Time, BCD, DecF16 and DecF34 are returned as text.
Float is returned as double value.
Long, Second, Minute and Int8 is returned as Int64.
DTDay, DTWeek, DTMonth, TSecond, TMinute, CDeay, Int1, Int2 and Int values are retuned as Integer.
Table is returned as RFCTableMBS object.
Structure is returned as RFCStructureMBS object.
Byte data is returned as MemoryBlock.

For Null, ABAPObject, XMLData, BOX types we return nil.
See also:

- 153.4.9 Value(Name as String) as Variant 22382

153.4.9 Value(Name as String) as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience method to get value as variant.
Notes:

When reading, we lookup data type for the property referred by name and return a matching value via variant.

Char, String, Num, Date, Time, BCD, DecF16 and DecF34 are returned as text.
Float is returned as double value.
Long, Second, Minute and Int8 is returned as Int64.
DTDay, DTWeek, DTMonth, TSecond, TMinute, CDeay, Int1, Int2 and Int values are retuned as Integer.
Table is returned as RFCTableMBS object.
Structure is returned as RFCStructureMBS object.

Byte data is returned as MemoryBlock.

For Null, ABAPObject, XMLData, BOX types we return nil.
See also:

- 153.4.8 Value(Index as Integer) as Variant 22382

153.4.10 Properties

153.4.11 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The connection this object belongs to.
Notes: (Read only property)

153.4.12 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

153.4.13 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent object for this container.
Notes: (Read only property)

153.4.14 Values as Dictionary

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience property to see all values in debugger.
Notes: (Read only property)

153.4.15 BytesValue(Index as Integer) as Memoryblock

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set BYTE value with MemoryBlock by index.
Notes:

When you get or set, we copy the data.
(Read and Write computed property)
See also:

- 153.4.16 BytesValue(Name as String) as Memoryblock 22384

153.4.16 BytesValue(Name as String) as Memoryblock

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set BYTE value with MemoryBlock by name.
Notes:

When you get or set, we copy the data.
(Read and Write computed property)
See also:

- 153.4.15 BytesValue(Index as Integer) as Memoryblock 22383

153.4.17 CharsValue(Index as Integer, Size as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set chars value by name.
Notes:

This is for fixed size char values, so you pass in size.
Please use StringValue() to benefit from plugin querying size for you of existing value.
(Read and Write computed property)
See also:

- 153.4.18 CharsValue(Name as String, Size as Integer) as String 22384

153.4.18 CharsValue(Name as String, Size as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set chars value by index.
Notes:

This is for fixed size char values, so you pass in size.
Please use StringValue() to benefit from plugin querying size for you of existing value.
(Read and Write computed property)
See also:

• 153.4.17 CharsValue(Index as Integer, Size as Integer) as String 22384

153.4.19 DateValue(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set date value by index.
Notes:

Format is always 8 character string with format YYYYMMDD.
(Read and Write computed property)
See also:

• 153.4.20 DateValue(Name as String) as String 22385

153.4.20 DateValue(Name as String) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set date value by name.
Notes:

Format is always 8 character string with format YYYYMMDD.
(Read and Write computed property)
See also:

• 153.4.19 DateValue(Index as Integer) as String 22385

153.4.21 FloatValue(Index as Integer) as Double

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set float value by index.
Notes: (Read and Write computed property)
See also:

• 153.4.22 FloatValue(Name as String) as Double 22385

153.4.22 FloatValue(Name as String) as Double

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set float value by name.
Notes: (Read and Write computed property)
See also:

- 153.4.21 FloatValue(Index as Integer) as Double 22385

153.4.23 Int16Value(Index as Integer) as Int16

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set UInt16 value by index.
Notes: (Read and Write computed property)
See also:

- 153.4.24 Int16Value(Name as String) as Int16 22386

153.4.24 Int16Value(Name as String) as Int16

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set UInt16 value by name.
Notes: (Read and Write computed property)
See also:

- 153.4.23 Int16Value(Index as Integer) as Int16 22386

153.4.25 Int32Value(Index as Integer) as Int32

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set UInt32 value by index.
Notes: (Read and Write computed property)
See also:

- 153.4.26 Int32Value(Name as String) as Int32 22386

153.4.26 Int32Value(Name as String) as Int32

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set UInt32 value by name.
Notes: (Read and Write computed property)
See also:

- 153.4.25 Int32Value(Index as Integer) as Int32 22386

153.4.27 Int64Value(Index as Integer) as Int64

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set Int64 value by index.
Notes: (Read and Write computed property)
See also:

- 153.4.28 Int64Value(Name as String) as Int64 22387

153.4.28 Int64Value(Name as String) as Int64

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set Int64 value by name.
Notes: (Read and Write computed property)
See also:

- 153.4.27 Int64Value(Index as Integer) as Int64 22387

153.4.29 NumberValue(Index as Integer, Size as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set numeric value by index.
Notes:

The value of the specified field as num-char array (digits only).
Please pass length. If you don't know, please try StringValue/StringLength.
(Read and Write computed property)
See also:

- 153.4.30 NumberValue(Name as String, Size as Integer) as String 22387

153.4.30 NumberValue(Name as String, Size as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set numeric value by name.
Notes:

The value of the specified field as num-char array (digits only).
Please pass length. If you don't know, please try StringValue/StringLength.
(Read and Write computed property)
See also:

- 153.4.29 NumberValue(Index as Integer, Size as Integer) as String 22387

153.4.31 StringValue(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set string value by index.
Notes: (Read and Write computed property)
See also:

- 153.4.32 StringValue(Name as String) as String 22388

153.4.32 StringValue(Name as String) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set string value by name.
Example:

```
Dim fd As RFCFunctionDescriptionMBS = connection.FunctionDescription("BAPI_COMPANY_GETDE-
TAIL")
Dim f As RFCFunctionMBS = fd.CreateFunction

f.StringValue("COMPANYID") = "000007"
f.Invoke

Dim s As RFCStructureMBS = f.StructureValue("RETURN")
Dim t As String = s.StringValue("MESSAGE")

MsgBox t
```

Notes: (Read and Write computed property)
See also:

- 153.4.31 StringValue(Index as Integer) as String 22388

153.4.33 StructureValue(Index as Integer) as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set structure value with RFCStructureMBS object by index.
Notes: (Read and Write computed property)
See also:

- 153.4.34 StructureValue(Name as String) as RFCStructureMBS 22389

153.4.34 StructureValue(Name as String) as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set structure value with RFCStructureMBS object by name.
Notes: (Read and Write computed property)
See also:

- 153.4.33 StructureValue(Index as Integer) as RFCStructureMBS 22388

153.4.35 TableValue(Index as Integer) as RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set table value with RFCTableMBS object by index.
Notes: (Read and Write computed property)
See also:

- 153.4.36 TableValue(Name as String) as RFCTableMBS 22389

153.4.36 TableValue(Name as String) as RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set table value with RFCTableMBS object by name.
Notes: (Read and Write computed property)
See also:

- 153.4.35 TableValue(Index as Integer) as RFCTableMBS 22389

153.4.37 TimeValue(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set time value by index.
Notes:

Format is always 6 character string with format HHMMSS.
(Read and Write computed property)
See also:

- 153.4.38 TimeValue(Name as String) as String 22389

153.4.38 TimeValue(Name as String) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set time value by name.
Notes:

Format is always 6 character string with format HHMMSS.
(Read and Write computed property)
See also:

- 153.4.37 TimeValue(Index as Integer) as String 22389

153.4.39 UInt8Value(Index as Integer) as UInt8

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set UInt8 value by index.
Notes: (Read and Write computed property)
See also:

- 153.4.40 UInt8Value(Name as String) as UInt8 22390

153.4.40 UInt8Value(Name as String) as UInt8

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set UInt8 value by name.
Notes: (Read and Write computed property)
See also:

- 153.4.39 UInt8Value(Index as Integer) as UInt8 22390

153.5 class RFCErrorExceptionMBS

153.5.1 class RFCErrorExceptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception class to report any error.
Notes: Subclass of the RuntimeException class.

153.6 class RFCExceptionDescriptionMBS

153.6.1 class RFCExceptionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an exception description.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.6.2 Methods

153.6.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

153.6.4 Properties

153.6.5 Key as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exception key
Notes: (Read only property)

153.6.6 Message as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Error message (exception text as defined in SE37)
Notes: (Read only property)

153.7 class RFCFieldDescriptionMBS

153.7.1 class RFCFieldDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a field description.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.7.2 Methods

153.7.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

153.7.4 Properties

153.7.5 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The connection for this field.
Notes: (Read only property)

153.7.6 decimals as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the field is of type "packed number" (BCD), this member gives the number of decimals.
Notes: (Read only property)

153.7.7 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field name.
Notes: (Read only property)

153.7.8 nucLength as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field length in bytes in a 1-byte-per-SAP_CHAR system.
Notes: (Read only property)

153.7.9 nucOffset as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field offset in bytes in a 1-byte-per-SAP_CHAR system.
Notes: (Read only property)

153.7.10 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent object.
Notes: (Read only property)

153.7.11 Type as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field data type.
Notes: (Read only property)

153.7.12 TypeDescription as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the type description for this field.
Notes: (Read only property)

153.7.13 TypeString as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type as string.
Notes:

Convenience property so you can see type in debugger.
(Read only property)

153.7.14 ucLength as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field length in bytes in a 2-byte-per-SAP_CHAR system.
Notes: (Read only property)

153.7.15 ucOffset as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field offset in bytes in a 2-byte-per-SAP_CHAR system.
Notes: (Read only property)

153.8 class RFCFunctionDescriptionMBS

153.8.1 class RFCFunctionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a function description.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.8.2 Methods

153.8.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

153.8.4 CreateFunction as RFCFunctionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a data container that can be used to execute function calls in the backend via Invoke.
Notes: The importing parameters can be set using the Value() properties. After the RfcInvoke call returned successfully, the exporting parameters can be read from this data container via the Value() properties.

153.8.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

153.8.6 ExceptionDescription(Index as Integer) as RFCExceptionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception description by index.
See also:

- 153.8.7 ExceptionDescription(Name as String) as RFCExceptionDescriptionMBS

153.8.7 ExceptionDescription(Name as String) as RFCExceptionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception description by name.
See also:

- 153.8.6 ExceptionDescription(Index as Integer) as RFCExceptionDescriptionMBS 22396

153.8.8 ExceptionDescriptions as RFCExceptionDescriptionMBS()

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all exception descriptions.

153.8.9 ParameterDescription(Index as Integer) as RFCParameterDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries parameter description by index.
See also:

- 153.8.10 ParameterDescription(Name as String) as RFCParameterDescriptionMBS 22397

153.8.10 ParameterDescription(Name as String) as RFCParameterDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries parameter description by name.
See also:

- 153.8.9 ParameterDescription(Index as Integer) as RFCParameterDescriptionMBS 22397

153.8.11 ParameterDescriptions as RFCParameterDescriptionMBS()

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all parameter description as array.

153.8.12 Properties

153.8.13 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent connection.
Notes: (Read only property)

153.8.14 ExceptionCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of exceptions.
Notes: (Read only property)

153.8.15 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

153.8.16 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the function.
Notes: (Read only property)

153.8.17 ParameterCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of parameters for this function.
Notes: (Read only property)

153.8.18 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent object.
Notes: (Read only property)

153.9 class RFCFunctionMBS

153.9.1 class RFCFunctionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a function in a RFC connection.
Notes:

Please use values to set parameters and then call invoke.
Subclass of the RFCContainerMBS class.

153.9.2 Methods

153.9.3 Constructor(typeDescription as RFCFunctionDescriptionMBS)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a data container that can be used to execute function calls in the backend via Invoke.
Notes: The importing parameters can be set using the Value() properties. After the RfcInvoke call returned successfully, the exporting parameters can be read from this data container via the Value() properties.

153.9.4 DescribeFunction as RFCFunctionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the function description that is valid for the system to which connection points to.
Notes: If the function description is already in the repository cache for that system ID, it will be returned immediately (from the cache), otherwise it will be looked up in the system's DDIC using the connection. The result from the DDIC lookup will then be placed in the cache. The RFC Runtime maintains a cache for every SAP System ID, as the meta data may be different depending on the SAP release. This is the main API that should be used.

153.9.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

153.9.6 Invoke

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a function module in the backend system so far.
Example:

```
Dim fd As RFCFunctionDescriptionMBS = connection.FunctionDescription("BAPI_COMPANY_GETDETAIL")
Dim f As RFCFunctionMBS = fd.CreateFunction

f.StringValue("COMPANYID") = "000007"
f.Invoke

Dim s As RFCStructureMBS = f.StructureValue("RETURN")
Dim t As String = s.StringValue("MESSAGE")

MsgBox t
```

153.9.7 Properties

153.9.8 ParameterActive(Name as String) as Boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a parameter is active.
Notes:

This is particularly useful for BAPIs which have many large tables, in which you are not interested. Deactivate those and leave only those tables active, in which you are interested. This reduces network traffic and memory consumption in your application considerably.

This functionality can be used for input and output parameters. If the parameter is an input, no data for that parameter will be sent to the backend. If it's an output, the backend will be informed not to return data for that parameter.
(Read and Write computed property)

153.10 module RFCModuleMBS

153.10.1 module RFCModuleMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for globals in RFC API.
Notes:

You can use this module and related classes to connect Xojo to SAP applications and databases.
We support MacOS, Windows and Linux.

You need to get a SAP login (maybe become SAP developer) and download SAP NetWeaver RFC SDK 7.50.
You need SAP license for user and maybe a developer license yourself.

Please read SAP documentation for various RFC functions to get more details.
MBS Plugin manages memory for you, does reference counting and makes API easier to use for Xojo developers.

153.10.2 Blog Entries

- Connect Xojo to SAP via RFC

153.10.3 Blog Entries

- Connect Xojo to SAP via RFC

153.10.4 Methods

153.10.5 LoadLibrary(file as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the sapnwrfc library.
Example:

```
# If TargetWin32
Const path = "sapnwrfc.dll"
# Else
Dim path As FolderItem = GetFolderItem("libsapnwrfc.dylib")
Dim LibPath As String = path.parent.NativePath

Call RFCModuleMBS.SetCurrentWorkingDirectory(libPath)
# EndIf
```

```
If RFCModuleMBS.LoadLibrary(path) Then
MsgBox "Library loaded."
Else
MsgBox "Failed to load library"+EndOfLine+EndOfLine+RFCModuleMBS.LibraryLoadErrorMessage
quit
End If
```

Notes:

Pass path to sapnwrfc.dll on Windows or libsapnwrfc.dylib on MacOS or libsapnwrfc.so on Linux.
If file is installed in system path, you may just pass file name.

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 153.10.6 LoadLibrary(path as string) as boolean 22403

153.10.6 LoadLibrary(path as string) as boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the sapnwrfc library.
Notes:

Pass path to sapnwrfc.dll on Windows or libsapnwrfc.dylib on MacOS or libsapnwrfc.so on Linux.
If file is installed in system path, you may just pass file name.

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 153.10.5 LoadLibrary(file as folderitem) as boolean 22402

153.10.7 LocalTransactionID as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves a unique 24-digit transaction ID.
Notes: The API will attempt to generate a TID locally using the operating system's UUID.

153.10.8 ReloadIniFile

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the contents of the sapnwrfc.ini file into memory.
Notes: Searches the directory given by IniPath (or the current working directory) for the file sapnwrfc.ini and loads its contents into memory.

153.10.9 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory.
Example:

```
Dim path As FolderItem = GetFolderItem("libsapnwrfc.dylib")
Dim LibPath As String = path.parent.NativePath

Call RFCModuleMBS.SetCurrentWorkingDirectory(libPath)
```

Notes: This is often useful to make sure the DLLs in that folder are found.
See also:

- 153.10.10 SetCurrentWorkingDirectory(path as String) as boolean 22404

153.10.10 SetCurrentWorkingDirectory(path as String) as boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory.
Notes: This is often useful to make sure the DLLs in that folder are found.
See also:

- 153.10.9 SetCurrentWorkingDirectory(path as folderitem) as boolean 22404

153.10.11 Properties

153.10.12 IniPath as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The directory in which to search for the sapnwrfc.ini file.
Notes:

By default the sapnwrfc library searches for the sapnwrfc.ini in the current working directory of the process. If you want to keep it in a different directory, use this function to tell the sapnwrfc library about the new path.

Note
After you have changed the directory, the NW RFC lib automatically loads the contents of the new sapnwrfc.ini file from that directory.

Pass the full (absolute) path of the directory, in which the sapnwrfc library should look for the sapnwrfc.ini file. A path relative to the current working directory of the process also works.
(Read and Write property)

153.10.13 LibraryLoadError as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The load error code.
Notes: (Read only property)

153.10.14 LibraryLoadErrorMessage as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The load error message.
Notes: (Read only property)

153.10.15 Loaded as Boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the library is loaded.
Notes:

Returns true if the library contains the required functions.
(Read only property)

153.10.16 MajorVersion as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get information about currently loaded sapnwrfc library.
Notes:

Major version, e.g. 7500.
(Read only property)

153.10.17 MinorVersion as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get information about currently loaded sapnwrfc library.
Notes:

Minor version.
(Read only property)

153.10.18 PatchLevel as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get information about currently loaded sapnwrfc library.
Notes:

Patch level of the version.
(Read only property)

153.10.19 TraceDir as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the directory where the NW RFC lib should write trace files.
Notes:

This function has the same effect as the sapnwrfc.ini parameter RFC_TRACE_DIR. See the documentation of that parameter in the sample ini file contained in the /demo directory of the NW RFC SDK.

Note
This API call affects only new trace files that will be opened after the call. The directory of already existing trace files is not changed in order to prevent confusion and garbage data...

Pass the new directory. Can be an absolute or relative path name. The directory needs to exist prior to calling this API. The NW RFC lib will not attempt to create non-existing directories.
(Read and Write property)

153.10.20 TraceEncoding as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the character encoding to be used in trace files.
Notes:

This function has the same effect as the sapnwrfc.ini parameter RFC_TRACE_ENCODING. See the documentation of that parameter in the sample ini file contained in the /demo directory of the NW RFC SDK.

Note
This API call affects only new trace files that will be opened after the call. The character encoding of already existing trace files is not changed in order to prevent confusion and garbage data...

Pass the new encoding. Possible values are "UTF-16", "UTF-8" and "DEFAULT". On Windows UTF-16 is recommended for faster performance. "DEFAULT" corresponds to the operating system's default character encoding, which is CP1252 or ISO-8859-1 on most Windows systems and UTF-8 on most Linux systems.
(Read and Write property)

153.10.21 TraceType as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the way the NW RFC lib writes trace files.
Notes:

This function has the same effect as the sapnwrfc.ini parameter RFC_TRACE_TYPE. See the documentation of that parameter in the sample ini file contained in the /demo directory of the NW RFC SDK.

Note
This API call closes currently open trace files and then changes to "one file per process" or one "file per thread". If the NW RFC lib is already using the given trace type, it does nothing.

Must be either "PROCESS" or "THREAD".
(Read and Write property)

153.10.22 Version as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get information about currently loaded sapnwrfc library.
Notes:

Version as text to show to user.

(Read only property)

153.10.23 Constants

153.10.24 kErrorAbapClassException = 27

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: The called function module raised a class based exception

153.10.25 kErrorAbapException = 5

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: The called function module raised an Exception (RAISE or MESSAGE ... RAISING)

153.10.26 kErrorAbapMessage = 4

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: The called function module raised an E-, A- or X-Message

153.10.27 kErrorAbapRuntimeFailure = 3

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: SAP system runtime error (SYSTEM_FAILURE): Shortdump on the backend side

153.10.28 kErrorAuthorizationFailure = 29

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Authorization check error

153.10.29 kErrorBufferTooSmall = 23

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: The given buffer was to small to hold the entire parameter. Data has been truncated.

153.10.30 kErrorCanceled = 7

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: No longer used

153.10.31 kErrorClosed = 6

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Connection closed by the other side

153.10.32 kErrorCodepageConversionFailure = 21

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Codepage conversion error

153.10.33 kErrorCommunicationFailure = 1

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Error in Network & Communication layer

153.10.34 kErrorConversionFailure = 22

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Error while converting a parameter to the correct data type

153.10.35 kErrorExecuted = 16

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Inbound tRFC Call already executed (needs to be returned from RFC_ON_CHECK_TRANSACTION in case the TID is already known and successfully processed before.)

153.10.36 kErrorExternalFailure = 15

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Error in external custom code. (E.g. in the function handlers or tRFC handlers.) Results in SYSTEM_FAILURE

153.10.37 kErrorIllegalState = 19

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: The operation is not supported on that handle at the current point of time (e.g. trying a callback on a server handle, while not in a call)

153.10.38 kErrorInvalidHandle = 13

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: An invalid handle was passed to an API call

153.10.39 kErrorInvalidParameter = 20

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: An invalid parameter was passed to an API call, (e.g. invalid name, type or length)

153.10.40 kErrorInvalidProtocol = 11

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: The received data has an unsupported format

153.10.41 kErrorLogonFailure = 2

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Unable to logon to SAP system. Invalid password, user locked, etc.

153.10.42 kErrorMemoryInsufficient = 9

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Memory insufficient

153.10.43 kErrorNotFound = 17

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Function or structure definition not found (Metadata API)

153.10.44 kErrorNotSupported = 18

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: The operation is not supported on that handle

153.10.45 kErrorOk = 0

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Everything O.K. Used by every function. (no exception)

153.10.46 kErrorRetry = 14

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: ListenAndDispatch did not receive an RFC request during the timeout period

153.10.47 kErrorSerializationFailure = 12

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: A problem while serializing or deserializing RFM parameters

153.10.48 kErrorStartSapguiFailure = 26

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Failed to start and attach SAPGUI to the RFC connection.

153.10.49 kErrorTableMoveBof = 24

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Trying to move the current position before the first row of the table.

153.10.50 kErrorTableMoveEof = 25

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Trying to move the current position after the last row of the table.

153.10.51 kErrorTimeout = 8

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Time out

153.10.52 kErrorUnknownError = 28

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: ”Something” went wrong, but I don’t know what...

153.10.53 kErrorVersionMismatch = 10

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Version mismatch

153.11 class RFCParameterDescriptionMBS

153.11.1 class RFCParameterDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a parameter description.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.11.2 Methods

153.11.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor

153.11.4 Properties

153.11.5 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent connection.
Notes: (Read only property)

153.11.6 decimals as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gives the number of decimals in case of a packed number (BCD)
Notes: (Read only property)

153.11.7 defaultValue as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default value as defined in SE37.
Notes: (Read only property)

153.11.8 Direction as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies whether the parameter is an input, output or bi-directional parameter.
Notes: (Read only property)

153.11.9 isOptional as Boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies whether this parameter is defined as optional in SE37.
Notes:

True is optional, false non-optional.
(Read only property)

153.11.10 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parameter name.
Notes: (Read only property)

153.11.11 nucLength as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parameter length in bytes in a 1-byte-per-SAP_CHAR system.
Notes: (Read only property)

153.11.12 parameterText as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Description text of the parameter as defined in SE37.
Notes: (Read only property)

153.11.13 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent object.
Notes: (Read only property)

153.11.14 Type as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parameter data type.
Notes: (Read only property)

153.11.15 TypeDescription as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The structure definition in case this parameter is a structure or table.
Notes:

May be nil for other parameter types.
(Read only property)

153.11.16 TypeString as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type as string.
Notes:

Convenience property so you can see type in debugger.
(Read only property)

153.11.17 ucLength as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parameter length in bytes in a 2-byte-per-SAP_CHAR system.
Notes: (Read only property)

153.11.18 Constants

153.11.19 kDirectionChanging = 3

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the direction mode constants.
Notes: Import and export parameter. This corresponds to ABAP CHANGING parameter.

153.11.20 kDirectionExport = 2

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the direction mode constants.
Notes: Export parameter. This corresponds to ABAP EXPORTING parameter.

153.11.21 kDirectionImport = 1

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the direction mode constants.
Notes: Import parameter. This corresponds to ABAP IMPORTING parameter.

153.11.22 kDirectionTable = 7

MBS Tools Plugin, Plugin Version: 20.2.

Function: One of the direction mode constants.
Notes: Table parameter. This corresponds to ABAP TABLES parameter.

153.12 class RFCStructureMBS

153.12.1 class RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a structure in a RFC connection.
Notes: Subclass of the RFCContainerMBS class.

153.12.2 Methods

153.12.3 Clone as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the given structure and returns the handle to the new object.

153.12.4 Constructor(typeDescription as RFCTypeDescriptionMBS)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an internal structure data object and returns the handle to the structure object.

153.12.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

153.13 class RFCTableMBS

153.13.1 class RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a table in a RFC connection.
Notes: Subclass of the RFCContainerMBS class.

153.13.2 Methods

153.13.3 AppendNewRow as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new row and appends it at the end of the table.

153.13.4 AppendNewRows(numRows as Integer)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Appends a set of new empty rows at the end of the table and moves the table cursor to the first new row.

153.13.5 AppendRow(row as RFCStructureMBS)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Appends the given structure at the end of the table.

153.13.6 Clone as RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the given table and returns the handle to the new table.

153.13.7 Constructor(TypeDescription as RFCTypeDescriptionMBS)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a internal table object and returns the handle to the table.

153.13.8 CurrentRow as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the structure handle to the current row.

153.13.9 DeleteAllRows

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes all rows from the table.

153.13.10 DeleteCurrentRow

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the current row from the table.

153.13.11 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

153.13.12 InsertNewRow as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new row and inserts it at the current position of the table cursor.

153.13.13 InsertRow(row as RFCStructureMBS)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts the given structure at the current position of the table cursor.

153.13.14 MoveTo(row as Integer)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the cursor from the current position to the position specified by the index.

153.13.15 MoveToFirstRow

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the current position to the first row of the table.

153.13.16 MoveToLastRow

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the current position to the last row of the table.

153.13.17 MoveToNextRow

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the cursor from the current position to the next row.

153.13.18 MoveToPreviousRow

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the cursor from the current position to the previours row.

153.13.19 ReserveCapacity(numRows as Integer)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reserves memory without changing the size of a table so that new rows can be appended without new memory allocation.

153.13.20 Properties

153.13.21 RowCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the number of the rows contained in the table.
Notes: (Read only property)

153.13.22 RowType as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the type descriptor of the table rows.
Notes: (Read only property)

153.14 class RFCTransactionMBS

153.14.1 class RFCTransactionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a transaction.

153.14.2 Methods

153.14.3 ConfirmTransaction

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: After SubmitTransaction has finally succeeded, ConfirmTransaction cleans up the transaction handling table in the backend.
Notes:

Caution:
After this call the backend is no longer protected against this TID. So another SubmitTransaction would result in a duplicate.

153.14.4 Constructor(connection as RFCConnectionMBS, TransactionID as String, QueueName as String)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a container for executing a (multi-step) transactional call.
Notes:

TransactionID: trasanction ID used to identify the transaction;
queueName: queue name associated with the transaction. If it is "" or empty, the transaction is for tRfc

153.14.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

153.14.6 InvokeInTransaction(funcHandle as RFCFunctionMBS)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Puts a tRfc or qRfc call into the given transaction.
Notes:

Can be used multiple times within one transaction handle.
funcHandle: function handle that identifies the Rfc function;

153.14.7 SubmitTransaction

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes all function modules in the backend system, that have accumulated in the transaction so far.
Notes: This step can be repeated until it finally succeeds (RFC_OK). The transaction handling in the backend system protects against duplicates.

153.14.8 Properties

153.14.9 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

153.14.10 TransactionID as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves a unique 24-digit transaction ID from the SAP backend system.
Notes: (Read only property)

153.15 class RFCTypeDescriptionMBS

153.15.1 class RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a type definition.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.15.2 Methods

153.15.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

153.15.4 CreateStructure as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an internal structure data object and returns the handle to the structure object.

153.15.5 CreateTable as RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a internal table object and returns the handle to the table.

153.15.6 FieldDescription(Index as Integer) as RFCFieldDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the field description of the structure's indexth field.
See also:

- 153.15.7 FieldDescription(Name as String) as RFCFieldDescriptionMBS 22426

153.15.7 FieldDescription(Name as String) as RFCFieldDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the field description of a field given by name.
See also:

- 153.15.6 FieldDescription(Index as Integer) as RFCFieldDescriptionMBS 22425

153.15.8 FieldDescriptions as RFCFieldDescriptionMBS()

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads all the field descriptions.

153.15.9 Properties

153.15.10 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The connection owning this object.
Notes: (Read only property)

153.15.11 FieldCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of fields for this type.
Notes: (Read only property)

153.15.12 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

153.15.13 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the type.
Notes: (Read only property)

153.15.14 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent object.
Notes: (Read only property)

Chapter 154

SATSolver

154.1 class LGLAbortedExceptionMBS

154.1.1 class LGLAbortedExceptionMBS

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The exception used to report fatal errors in SAT Solver.
Notes: Subclass of the RuntimeException class.

154.1.2 Blog Entries

- MBS Xojo Plugins, version 21.3pr6

154.1.3 Blog Entries

- MBS Xojo Plugins, version 21.3pr6

154.2 class LGLMBS

154.2.1 class LGLMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the SAT Solver from lingeling.
Notes:

Based on lingeling project here:
https://github.com/arminbiere/lingeling
and
http://fmv.jku.at/lingeling/

154.2.8 Methods

154.2.9 Add(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value.

154.2.10 Assume(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Assume single units.

154.2.11 CAssume(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Assume clause (at most one)

154.2.12 Clone as LGLMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the object.
Notes: Both 'Cloning' and 'Forking' can be used to implement 'Push & Pop', but the asymmetric forking is more similar to the classical way of implementing it, needs less resources since for instance eliminated variables do not occupy any memory in the children, but requires lifting back satisfying assignments explicitly (through the whole parent chain). If these full satisfying assignments are really needed actually cloning could be more space efficient too. Assume you want to split the solver into two instances, one with a literal set to false, the other one to true. Then cloning allows you to produce two independent branches, while for forking you need three, since the root / top solver still has to be kept for lifting back a potential assignment.

154.2.13 Constructor

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Creates new empty object.

154.2.14 DefaultOption(Name as String) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries default value for an option.

154.2.15 Deref(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value.
Notes:

neg=false, pos=true
Returns -1 if lit is bigger then MaxVar.

154.2.16 Failed(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks failed flag for given item.
Notes:

neg=false, pos=true
for assumptions.

154.2.17 Fixate

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add assumptions as units

154.2.18 Fixed(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks fixed flag.
Notes:

neg=false, pos=true
Toplevel

154.2.19 FlushCache

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush all learned clauses.

154.2.20 FlushTimers

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush timers.

154.2.21 Fork as LGLMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Forks the object.
Notes:

'Forking' copies only irredundant clauses and also uses internal variable indices of the parent as external variable indices. Thus 'parent' and the forked off 'child' do neither exactly work the same way, nor do they use from the API point of view the same set of variables. They are satisfiability equivalent. If the child becomes unsatisfiable the parent can be assumed to be unsatisfiable too and thus 'join' would just add the empty clause to the parent. If the child produces a satisfying assignment, this assignment is turned into an assignment of the parent by 'join'. Parents can be forked multiple times. A child has exactly one parent. Parents and children can be released independently. Between 'Fork' and 'Join' no other operations but further 'Fork' are allowed. The effect ot multiple 'Join' with the same parent is unclear at this point. The same memory manager is use for the child and the parent. Options, prefix, output file and the callbacks for 'getime' and 'Abort' are copied too (if set).

Both 'Cloning' and 'Forking' can be used to implement 'Push & Pop', but the asymmetric forking is more similar to the classical way of implementing it, needs less resources since for instance eliminated variables do not occupy any memory in the children, but requires lifting back satisfying assignments explicitly (through

the whole parent chain). If these full satisfying assignments are really needed actually cloning could be more space efficient too. Assume you want to split the solver into two instances, one with a literal set to false, the other one to true. Then cloning allows you to produce two independent branches, while for forking you need three, since the root / top solver still has to be kept for lifting back a potential assignment.

154.2.22 Freeze(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Freezes the given item.

154.2.23 Frozen(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries frozen state.

154.2.24 GetOptionMinMax(Name as String, byref min as Integer, byref max as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current value, minimum and maximum values.

154.2.25 HasOption(Name as String) as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if the given option is set.

154.2.26 IncVar as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Increases variables by one.

154.2.27 Join(Child as LGLMBS) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins back forked child.

154.2.28 LibVersion as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries library version.
Example:

Print "LGL "+LGLMBS.LibVersion

154.2.29 Lookahead as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a good look ahead literal or zero if all potential literals have been eliminated or have been used as blocking literals in blocked clause elimination.
Notes: Zero is also returned if the formula is already inconsistent. The lookahead literal is made usable again, for instance if it was not frozen during a previous SAT call and thus implicitly became melted. Therefore it can be added in a unit clause.

154.2.30 Melt(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Melts a literal.

154.2.31 MeltAll

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Melt all literals.

154.2.32 ParseFile(File as FolderItem, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses data file.
Notes: Returns empty text on success or error message from parser.
See also:

- 154.2.33 ParseFile(File as FolderItem, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 22436

154.2.33 ParseFile(File as FolderItem, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses data file.
Notes: Returns empty text on success or error message from parser.
See also:

- 154.2.32 ParseFile(File as FolderItem, force as boolean = false) as String 22436

154.2.34 ParseFileMT(File as FolderItem, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses data file.
Notes:

Returns empty text on success or error message from parser.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 154.2.35 ParseFileMT(File as FolderItem, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 22436

154.2.35 ParseFileMT(File as FolderItem, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses data file.
Notes:

Returns empty text on success or error message from parser.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 154.2.34 ParseFileMT(File as FolderItem, force as boolean = false) as String 22436

154.2.36 ParsePath(Path as String, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses data file given by path.
Notes:

Returns empty text on success or error message from parser.

On MacOS and Linux, if file has the following extensions, the file will be decompressed with command line tool and then parsed:

.gz	gzip
.xz	xz
.bz2	bzip2
.zip	unzip
.7z	7x

See also:

- 154.2.37 ParsePath(Path as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 22437

154.2.37 ParsePath(Path as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses data file given by path.
Notes:

Returns empty text on success or error message from parser.

On MacOS and Linux, if file has the following extensions, the file will be decompressed with command line tool and then parsed:

.gz	gzip
.xz	xz
.bz2	bzip2
.zip	unzip
.7z	7x

See also:

- 154.2.36 ParsePath(Path as String, force as boolean = false) as String 22437

154.2.38 ParsePathMT(Path as String, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses data file given by path.
Notes:

Returns empty text on success or error message from parser.

On MacOS and Linux, if file has the following extensions, the file will be decompressed with command line tool and then parsed:

.gz	gzip
.xz	xz
.bz2	bzip2
.zip	unzip
.7z	7x

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 154.2.39 ParsePathMT(Path as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 22439

154.2.39 ParsePathMT(Path as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses data file given by path.
Notes:

Returns empty text on success or error message from parser.

On MacOS and Linux, if file has the following extensions, the file will be decompressed with command line tool and then parsed:

.gz	gzip
.xz	xz
.bz2	bzip2
.zip	unzip
.7z	7x

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 154.2.38 ParsePathMT(Path as String, force as boolean = false) as String 22438

154.2.40 ParseString(Data as String, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses data file given it as text.
Notes:

Returns empty text on success or error message from parser.
Please pass text with data separated with unix line endings (endofline.unix), so you may need to use ReplaceLineEndings function.
See also:

- 154.2.41 ParseString(Data as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 22440

154.2.41 ParseString(Data as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses data file given it as text.
Notes:

Returns empty text on success or error message from parser.
Please pass text with data separated with unix line endings (endofline.unix), so you may need to use ReplaceLineEndings function.
See also:

- 154.2.40 ParseString(Data as String, force as boolean = false) as String 22439

154.2.42 ParseStringMT(Data as String, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses data file given it as text.
Notes:

Returns empty text on success or error message from parser.
Please pass text with data separated with unix line endings (endofline.unix), so you may need to use ReplaceLineEndings function.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 154.2.43 ParseStringMT(Data as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 22440

154.2.43 ParseStringMT(Data as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses data file given it as text.
Notes:

Returns empty text on success or error message from parser.
Please pass text with data separated with unix line endings (endofline.unix), so you may need to use ReplaceLineEndings function.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 154.2.42 ParseStringMT(Data as String, force as boolean = false) as String 22440

154.2.44 Print(File as FolderItem = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Print system to file or stdout.
Notes:

Pass nil to use stdout.
Remaining in DIMACS format

154.2.45 PrintAll(File as FolderItem = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prints all values.
Notes:

Including units & equivs.
Pass nil to use stdout.

154.2.46 PrintBanner(Name as String, Prefix as String, File as FolderItem = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prints banner including version of library.
Notes:

Pass nil to use stdout.

see lglbnr function.

154.2.47 PrintOptions(prefix as string, IgnoreSome as boolean)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Print all options to stdout.

154.2.48 PrintPCS(mixed as boolean)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prints PCS file.

154.2.49 PrintRangeOptions

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Print range options to stdout.

154.2.50 PrintSizes

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prints data structure sizes.

154.2.51 PrintStats

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prints statistics to stdout.

154.2.52 PrintUsage

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Print usage ”-h”.

154.2.53 ReadOptionFile(File as FolderItem) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the option file.

154.2.54 Reconstk(byref Start as Ptr, byref Top as Ptr)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set Start and Top to the 'start' and 'top' of the reconstruction stack, which is used in BCE, BVE and CCE for reconstructing a solution after eliminating variables or clauses.
Notes: These pointers are only valid until the next Sat or Simp call.

154.2.55 ReduceCache

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reset cache size.

154.2.56 Representative(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return representative from equivalence class if literal is not top-level assigned nor eliminated.

154.2.57 ResetPhase(lit as integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set default phase of a literal.
Notes: Stop forcing phase in decisions.

154.2.58 Reusable(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if item can be reused.
Notes: If a literal was not frozen at the last call to Sat (or Simp) it becomes 'unusable' after the next call even though it might not have been used as blocking literal etc.

154.2.59 Reuse(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reuses an item.
Notes: If a literal was not frozen at the last call to Sat (or Simp) it becomes 'unusable' after the next call even though it might not have been used as blocking literal etc.

154.2.60 Sat as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the system.
Notes: May output messages to stdout.

154.2.61 SatMT as Integer

MBS Tools Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the system.
Notes:

May output messages to stdout.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

154.2.62 SetAPITraceFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a text file and let the library output to this file.
Notes: Logs API calls to the library.

154.2.63 SetID(tid as Integer, tids as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set individual ids for logging and statistics.

154.2.64 SetImportant(lit as integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prefer decisions on 'important' variables.

154.2.65 SetOutputFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an output file and let the library output to this file.
Notes: Sets output file for report.

154.2.66 SetPhase(lit as integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set default phase of a literal.
Notes: Any decision on this literal will always try this phase. Note, that this function does not have any effect on eliminated variables. Further equivalent variables share the same forced phase and thus if they are set to different default phases, only the last set operation will be kept.

154.2.67 SetPhases

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the phases.
Notes: Assume the solver is in the SATISFIABLE state (after Sat or Simp), then calling SetPhases will copy the current assignment as default phases.

154.2.68 SetTraceFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a text file and let the library output to this file.
Notes:

Set trace output file.
Logs trace calls to the library.

154.2.69 Simp(iterations as integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the system.
Notes: Iterations must be >= 0.

154.2.70 TraverseAllClauses

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loops over all clauses and calls TraverseAllClauses event for each.
Notes: Internally calls TraverseUnits, TraverseEquivalences and TraverseRemainingClauses.
See also:

- 154.2.96 TraverseAllClauses(Lit as Integer) 22451

154.2.71 TraverseEquivalences

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loops over equivalences and calls TraverseEquivalences event for each.
See also:

- 154.2.97 TraverseEquivalences(Lit as Integer, Representation as Integer) 22451

154.2.72 TraverseRemainingClauses

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loops over remaining clauses and calls TraverseRemainingClauses event for each.
See also:

- 154.2.98 TraverseRemainingClauses(Lit as Integer) 22451

154.2.73 TraverseUnits

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loops over units and calls TraverseUnits event for each.
See also:

- 154.2.99 TraverseUnits(Unit as Integer) 22451

154.2.74 Unclone(Child as LGLMBS) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unclones the object.

154.2.75 Usable(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an item is usable.
Notes: If a literal was not frozen at the last call to Sat (or Simp) it becomes 'unusable' after the next call even though it might not have been used as blocking literal etc.

154.2.76 Properties

154.2.77 Aborted as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The aborted status.
Notes:

We set this to true when the processing is aborted due to an error.
See AbortMessage property for the message.
(Read and Write property)
See also:

- 154.2.95 Aborted 22450

154.2.78 AbortMessage as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The abort reason message.
Notes: (Read only property)

154.2.79 Bytes as Int64

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current size in bytes.
Notes: (Read only property)

154.2.80 Changed as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Model changed.
Notes: (Read only property)

154.2.81 Confs as Int64

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of conflicts.
Notes: (Read only property)

154.2.82 Decs as Int64

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of decisions.
Notes: (Read only property)

154.2.83 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

154.2.84 Inconsistent as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Contains empty clause?
Notes: (Read only property)

154.2.85 MaxMegaBytes as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum memory usage in megabytes.
Notes: (Read only property)

154.2.86 MaxVar as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries maximum index of variables.
Notes: (Read only property)

154.2.87 MegaBytes as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current size in memory as megabytes.
Notes: (Read only property)

154.2.88 Options as Dictionary

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all options with values.
Notes: (Read only property)

154.2.89 Prefix as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The prefix for messages.
Notes: (Read and Write property)

154.2.90 ProcessTime as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries CPU usage time used.
Notes:

Value is -1 on Windows as we don't have the unix functions there.
(Read only property)

154.2.91 Props as Int64

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of propagations.
Notes: (Read only property)

154.2.92 Seconds as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns time needed.
Notes: (Read only property)

154.2.93 Option(Name as String) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries or sets option value.
Notes: (Read and Write computed property)

154.2.94 Events

154.2.95 Aborted

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when processing is aborted due to an error.
Notes:

Errors are printed to stdout.
See AbortMessage property for the message.
See also:

- 154.2.77 Aborted as Boolean 22447

154.2.96 TraverseAllClauses(Lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called for TraverseAllClauses method.
See also:

- 154.2.70 TraverseAllClauses 22446

154.2.97 TraverseEquivalences(Lit as Integer, Representation as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called for TraverseEquivalences method.
See also:

- 154.2.71 TraverseEquivalences 22446

154.2.98 TraverseRemainingClauses(Lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called for TraverseRemainingClauses method.
See also:

- 154.2.72 TraverseRemainingClauses 22446

154.2.99 TraverseUnits(Unit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called for TraverseUnits method.
See also:

- 154.2.73 TraverseUnits 22446

154.2.100 Constants

154.2.101 LGL_SATISFIABLE = 10

MBS Tools Plugin, Plugin Version: 20.0.

Function: One of the SAT result values.
Notes: The system is satisfiable.

154.2.102 LGL_UNKNOWN = 0

MBS Tools Plugin, Plugin Version: 20.0.

Function: One of the SAT result values.
Notes: It is not known whether it is satisfiable.

154.2.103 LGL_UNSATISFIABLE = 20

MBS Tools Plugin, Plugin Version: 20.0.

Function: One of the SAT result values.
Notes: The system is not satisfiable.

Chapter 155

SceneKit

155.1 class SCNAccelerationConstraintMBS

155.1.1 class SCNAccelerationConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A SCNAccelerationConstraint caps the acceleration and velocity of a node.

155.1.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

155.1.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

155.1.4 Methods

155.1.5 accelerationConstraint as SCNAccelerationConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNAccelerationConstraint object.

155.1.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNAccelerationConstraint object.

155.1.7 Properties

155.1.8 damping as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the damping factor of the receiver.
Notes:

Optionally reduce the body's linear velocity each frame to simulate fluid/air friction. Value should be zero or greater. Defaults to 0.1. Animatable.
(Read and Write property)

155.1.9 decelerationDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Controls the distance at which the node should start decelerating.
Notes:

Defaults to 0. Animatable.
(Read and Write property)

155.1.10 maximumLinearAcceleration as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Controls the maximum linear acceleration. Defaults to MAXFLOAT. Animatable.
Notes:

The maximum linear acceleration is in m.s^-2
(Read and Write property)

155.1.11 maximumLinearVelocity as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Controls the maximum linear velocity. Defaults to MAXFLOAT. Animatable.
Notes:

The maximum linear velocity is in m.s
(Read and Write property)

155.2 class SCNActionMBS

155.2.1 class SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A simple, reusable animation that changes attributes of any node you attach it to.
Notes:

You use actions most often to change the structure and content of the SCNNodeMBS object to which they are attached, but you can also use actions make other changes to the scene. In SceneKit, actions provide an easy way to implement animated behaviors that frequently change in response to user input.

see also
https://developer.apple.com/documentation/scenekit/scnaction
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

155.2.6 Methods

155.2.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

155.2.8 copy as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the action.

155.2.9 fadeIn(duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that changes the opacity of the node to 1.0.
Notes:

duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's opacity property animates from its current value to 1.0.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.fadeOut(Duration)

155.2.10 fadeOpacityBy(factor as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that adjusts the opacity of a node by a relative value.
Notes:

factor: The amount to change the node's opacity by.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's opacity property animates to its new value.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.fadeOpacityBy(-factor, duration)

155.2.11 fadeOpacityTo(opacity as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that adjusts the opacity of a node to a new value.
Notes:

opacity: The new opacity value of the node.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's opacity property animates to its new value.
This action is not reversible; the reverse of this action has the same duration but does not change anything.

155.2.12 fadeOut(duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that changes the opacity of the node to 0.0.
Notes:

duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's opacity property animates from its current value to 0.0.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.fadeIn(duration)

155.2.13 group(actions() as SCNActionMBS) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that runs a collection of actions in parallel.
Notes:

actions: An array of SCNActionMBS objects.

Returns a new group action object.

When the action executes, the actions that make up the group all start immediately and run in parallel. The duration of the group action is the longest duration among the collection of actions. If an action in the group has a duration less than the group's duration, the action completes and then idles until the group completes the remaining actions. This matters most when creating a repeating action that repeats a group. This action is reversible; it creates a new group action that contains the reverse of each action specified in the group.

155.2.14 hide as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that hides a node.
Notes:

When the action executes, the node's hidden property is set to true.
This action is reversible; the reverse is equivalent to the unhide action.

155.2.15 javaScriptActionWithScript(script as string, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that executes a JavaScript script periodically over a specified duration.
Notes:

script: A string containing JavaScript source code.
seconds: The duration of the action, in seconds.

SceneKit exposes its classes, methods, and functions in the JavaScript context that runs the script—see the SCNJavaScript.h header file for details.

When the action executes, SceneKit runs the script repeatedly until the action's duration expires. Each time SceneKit runs the script, it computes the elapsed time since the action began executing (as a fraction of the

action's duration between 0.0 and 1.0) and makes it available to the script as a variable named elapsedTime. The script can also reference the SCNNode object running the action as a variable named node.
This action is not reversible; the reverse action executes the same script.

155.2.16 moveBy(delta as SCNVector3MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that moves a node relative to its current position.
Notes:

delta: A vector that describes the change to be applied to the node's position.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's position property animates from its current position to its new position.
This action is reversible; the reverse is created as if the following code had been executed:

dim reverseDelta as SCNVector3MBS = SCNVector3MBS.Vector(-delta.x, -delta.y, -delta.z)
SCNActionMBS.moveBy(reverseDelta, duration)
See also:

- 155.2.17 moveBy(deltaX as double, deltaY as double, deltaZ as double, duration as double) as SCNActionMBS 22460

155.2.17 moveBy(deltaX as double, deltaY as double, deltaZ as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that moves a node relative to its current position.
Notes:

deltaX: The distance to move the node in the X direction of its parent node's local coordinate space.
deltaY: The distance to move the node in the Y direction of its parent node's local coordinate space.
deltaZ: The distance to move the node in the Z direction of its parent node's local coordinate space.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's position property animates from its current position to its new position.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.moveBy(-deltaX, -deltaY, -deltaZ, duration)
See also:

- 155.2.16 moveBy(delta as SCNVector3MBS, duration as double) as SCNActionMBS 22460

155.2.18 moveTo(location as SCNVector3MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that moves a node to a new position.
Notes:

location: The coordinates for the node's new position in its parent node's local coordinate space.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's position property animates from its current position to its new position.
This action is not reversible; the reverse of this action has the same duration but does not move the node.

155.2.19 removeFromParentNode as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that removes the node from its parent.
Notes:

When the action executes, the node is immediately removed from its parent.
This action is not reversible; the reverse of this action is the same action.

155.2.20 repeatAction(action as SCNActionMBS, count as integer) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that repeats another action a specified number of times.
Notes:

action: The action to be executed.
count: The number of times to execute the action.

Returns a new action object.

When the action executes, the associated action runs to completion and then repeats, until the count is reached.
This action is reversible; it creates a new action that is the reverse of the specified action and then repeats it the same number of times.

155.2.21 repeatActionForever(action as SCNActionMBS) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that repeats another action forever.
Notes:

action: The action to execute.

Returns a new action object.

When the action executes, the associated action runs to completion and then repeats.
This action is reversible; it creates a new action that is the reverse of the specified action and then repeats it forever.
Note
The action to be repeated must have a non-instantaneous duration.

155.2.22 reversedAction as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that reverses the behavior of another action.
Notes: This method always returns an action object; however, not all actions are reversible. When reversed, some actions return an object that either does nothing or performs the same action as the original action. For details on how an action is reversed, see the description of the class method used to create that action.

155.2.23 rotateBy(xAngle as double, yAngle as double, zAngle as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that rotates the node in each of the three principal axes by angles relative to its current orientation.
Notes:

xAngle: The amount to rotate the node counterclockwise around the x-axis of its local coordinate space, in radians.
yAngle: The amount to rotate the node counterclockwise around the y-axis of its local coordinate space, in radians.
zAngle: The amount to rotate the node counterclockwise around the z-axis of its local coordinate space, in radians.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's rotation property animates to the new angle.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.rotateBy(-xAngle, -yAngle, -zAngle, duration)

155.2.24 rotateByAngle(angle as double, axis as SCNVector3MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that rotates the node by an angle around a specified axis.
Notes:

angle: The amount to rotate the node counterclockwise around the specified axis, in radians.
axis: A vector in the node's local coordinate space whose direction specifies the axis of rotation.
duration: The duration, in seconds, of the animation.

Return a new action object.

When the action executes, the node's rotation property animates to the new angle.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.rotateByAngle(-angle, axis, duration)

155.2.25 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that rotates the node to absolute angles in each of the three principal axes.
Notes:

xAngle: The amount to rotate the node counterclockwise around the x-axis of its local coordinate space, in radians.
yAngle: The amount to rotate the node counterclockwise around the y-axis of its local coordinate space, in radians.
zAngle: The amount to rotate the node counterclockwise around the z-axis of its local coordinate space, in radians.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's rotation property animates to the new angle. Calling this method is equivalent to calling rotateTo() and passing false for the shortestUnitArc parameter.
This action is not reversible; the reverse of this action has the same duration but does not change anything.
See also:

- 155.2.26 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double, shortestUnitArc as boolean) as SCNActionMBS 22464

155.2.26 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double, shortestUnitArc as boolean) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that rotates the node to absolute angles in each of the three principal axes.
Notes:

xAngle: The amount to rotate the node counterclockwise around the x-axis of its local coordinate space, in radians.
yAngle: The amount to rotate the node counterclockwise around the y-axis of its local coordinate space, in radians.
zAngle: The amount to rotate the node counterclockwise around the z-axis of its local coordinate space, in radians.
duration: The duration, in seconds, of the animation.
shortestUnitArc: If false (the default), the animation interpolates each component of the node's rotation between its current value and the new value. If true, the animation makes the most direct rotation possible from the node's current orientation to the new orientation.

Returns a new action object.

When the action executes, the node's rotation property animates to the new angle.
This action is not reversible; the reverse of this action has the same duration but does not change anything.
See also:

- 155.2.25 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double) as SCNActionMBS 22464

155.2.27 rotateToAxisAngle(axisAngle as SCNVector4MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that rotates the node to an absolute angle around a specified axis.
Notes:

axisAngle: A four-component vector whose first three components are a vector in the node's local coordinate space specifying an axis and whose fourth component is the amount to rotate the node counterclockwise around that axis, in radians.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's rotation property animates to the new angle.
This action is not reversible; the reverse of this action has the same duration but does not change anything.

155.2.28 runBlock(del as SCNActionRunBlockMBS, tag as variant = nil) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that executes run the given method.
Notes:

When the action executes, SceneKit calls the delegate method. This action takes place instantaneously.
This action is not reversible; the reverse action executes the same delegate method.

155.2.29 scaleBy(scale as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that uniformly changes the scale factor of a node by a relative value.
Notes:

scale: The amount of change to make to all three components of the node's scale.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's scale property animates to the new value.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.scaleBy(-scale, duration)

155.2.30 scaleTo(scale as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that uniformly changes the scale factor of a node to an absolute value.
Notes:

scale: The new value for all three components of the node's scale.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's scale property animates to the new value.
This action is not reversible; the reverse of this action has the same duration but does not change anything.

155.2.31 sequence(actions() as SCNActionMBS) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that runs a collection of actions sequentially.
Notes:

actions: An array of SCNActionMBS objects.
Returns a new sequence action object.

When the action executes, the first action in the sequence starts and runs to completion. Subsequent actions in the sequence run in a similar fashion until all of the actions in the sequence have executed. The duration of the sequence action is the sum of the durations of the actions in the sequence.

This action is reversible; it creates a new sequence action that reverses the order of the actions. Each action in the reversed sequence is itself reversed.

155.2.32 unhide as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that ensures a node is not hidden.
Notes:

When the action executes, the node's hidden property is set to false.
This action is reversible; the reverse is equivalent to the hide action.

155.2.33 wait(duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an action that idles for a specified period of time.
Notes:

When the action executes, the action waits for the specified amount of time and then ends. This is typically used as part of a sequence of actions to insert a delay between two other actions. You might also use it in conjunction with the runAction method to trigger code that needs to run at a later time.
This action is not reversible; the reverse of this action is the same action.

155.2.34 Properties

155.2.35 duration as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The duration required to complete an action.
Notes:

This is the expected duration of an action's animation. The actual time an action takes to complete is modified by the action's timingMode property.
(Read and Write property)

155.2.36 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object references.
Notes: (Read and Write property)

155.2.37 speed as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A speed factor that modifies how fast an action runs.
Notes:

The speed factor adjusts how fast an action's animation runs. For example, a speed factor of 2.0 means the animation runs twice as fast.
(Read and Write property)

155.2.38 timingMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The timing mode used to execute an action.
Notes:

For possible values, see TimingMode constants. The default value is TimingModeLinear.
(Read and Write property)

155.2.39 Constants

155.2.40 TimingModeEaseIn = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants affecting the animation curve of an action, used by the timingMode property.
Notes: Ease-in pacing. The animation begins slowly, and then speeds up as it progresses.

155.2.41 TimingModeEaseInEaseOut = 3

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants affecting the animation curve of an action, used by the timingMode property.
Notes: Ease-in ease-out pacing. The animation begins slowly, accelerates through the middle of its duration, and then slows again before completing.

155.2.42 TimingModeEaseOut = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants affecting the animation curve of an action, used by the timingMode property.
Notes: Ease-out pacing. The animation begins quickly, and then slows as it completes.

155.2.43 TimingModeLinear = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants affecting the animation curve of an action, used by the timingMode property.
Notes: Linear pacing. The animation progresses evenly throughout its duration.

155.2.44 Delegates

155.2.45 SCNActionRunBlockMBS(node as SCNNodeMBS, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: The delegate for the runBlock method.

155.3 class SCNAvoidOccluderConstraintMBS

155.3.1 class SCNAvoidOccluderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A SCNAvoidOccluderConstraint constraints place the receiver at a position that prevent nodes with the specified category to occlude the target.
Notes: The target node and it's children are ignored as potential occluders.

155.3.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

155.3.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

155.3.4 Methods

155.3.5 avoidOccluderConstraintWithTarget(target as SCNNodeMBS) as SCNAvoidOccluderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNAvoidOccluderConstraint object.

155.3.6 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNAvoidOccluderConstraint object.

155.3.7 Properties

155.3.8 bias as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines the bias the apply after moving the receiver to avoid occluders.
Notes:

Defaults to 10e-5.
A positive bias will move the receiver closer to the target.
(Read and Write property)

155.3.9 occluderCategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines the category of node to consider as occluder.
Notes:

Defaults to 1.
(Read and Write property)

155.3.10 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines the target node.
Notes: (Read and Write property)

155.4 class SCNBillboardConstraintMBS

155.4.1 class SCNBillboardConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A constraint that orients a node to always point toward the current camera.
Notes:

An SCNBillboardConstraint object automatically adjusts a node's orientation so that its local z-axis always points toward the pointOfView node currently being used to render the scene. For example, you can use a billboard constraint to efficiently render parts of a scene using two-dimensional sprite images instead of three-dimensional geometry—by mapping sprites onto planes affected by a billboard constraint, the sprites maintain their orientation with respect to the viewer. To attach constraints to an SCNNodeMBS object, use its constraints property.
Subclass of the SCNConstraintMBS class.

155.4.4 Methods

155.4.5 billboardConstraint as SCNBillboardConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNBillboardConstraint constraint.
Notes: A billboard constraint forces the receiver to look into the direction of the current point of view.

155.4.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNBillboardConstraint constraint.
Notes: A billboard constraint forces the receiver to look into the direction of the current point of view.

155.4.7 Properties

155.4.8 freeAxes as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the axes on which the billboarding orientation operates. Defaults to SCNBillboardAxisAll.
Notes: (Read and Write property)

155.4.9 Constants

155.4.10 SCNBillboardAxisAll = 7

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the options for locking the orientation of nodes affected by a billboard constraint.
Notes:

Align an affected node such that its orientation always matches that of the view.
This is the default option for newly created billboard constraints.

155.4.11 SCNBillboardAxisX = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the options for locking the orientation of nodes affected by a billboard constraint.
Notes: Align an affected node such that its x-axis is always parallel to that of the view, leaving it free to rotate otherwise.

155.4.12 SCNBillboardAxisY = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the options for locking the orientation of nodes affected by a billboard constraint.
Notes: Align an affected node such that its y-axis is always parallel to that of the view, leaving it free to rotate otherwise.

155.4.13 SCNBillboardAxisZ = 4

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the options for locking the orientation of nodes affected by a billboard constraint.
Notes: Align an affected node such that its z-axis is always perpendicular to the viewing plane, leaving it free to rotate otherwise.

155.5 class SCNBoxMBS

155.5.1 class SCNBoxMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: SCNBox represents a box with rectangular sides and optional chamfers.
Notes: Subclass of the SCNGeometryMBS class.

155.5.6 Methods

155.5.7 box(width as double, height as double, length as double, chamferRadius as double) as SCNBoxMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a box with given width, height, length and chamfer radius.
Notes:

width: The width of the box.
height: The height of the box.

length: The length of the box.
chamferRadius: The chamfer radius of the box.

155.5.8 Constructor(width as double, height as double, length as double, chamferRadius as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a box with given width, height, length and chamfer radius.
Notes:

width: The width of the box.
height: The height of the box.
length: The length of the box.
chamferRadius: The chamfer radius of the box.

155.5.9 Properties

155.5.10 chamferRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The chamfer radius. Animatable.
Notes:

If the value is strictly less than 0, the geometry is empty. The default value is 0.
(Read and Write property)

155.5.11 chamferSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of chamfer subdivisions. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 10.
(Read and Write property)

155.5.12 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the box. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

155.5.13 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

155.5.14 length as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The length of the box. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

155.5.15 lengthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the Z axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

155.5.16 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The width of the box. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

155.5.17 widthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the X axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

155.6 class SCNCameraControllerMBS

155.6.1 class SCNCameraControllerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a camera controller.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

155.6.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

155.6.3 Blog Entries

155.6.4 Methods

155.6.5 clearRoll

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Clear the camera roll if any.

155.6.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

155.6.7 dollyToTarget(delta as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Zoom by moving the camera along the axis from the camera position to the target.

155.6.8 rollAroundTarget(delta as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Rotate the camera around the axis from the camera position to the target.
Notes: Delta is in degrees.

155.6.9 rotate(deltaX as double, deltaY as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Rotate delta is in degrees.

155.6.10 stopInertia

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Stop current inertia.

155.6.11 translateInCameraSpace(x as double, y as double, z as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Translate the camera along the local X/Y/Z axis.

155.6.12 Properties

155.6.13 automaticTarget as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Automatically update the target in beginInteraction.
Notes:

Defaults to false.
(Read and Write property)

155.6.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

155.6.15 inertiaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Set to true to enable inertia on endInteraction.
Notes:

Defaults to false.
(Read and Write property)

155.6.16 inertiaFriction as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The friction coefficient applied to the inertia.
Notes:

Defaults to 0.05.
(Read and Write property)

155.6.17 inertiaRunning as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if inertia is running.
Notes: (Read only property)

155.6.18 maximumHorizontalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Minimum and maximum horizontal view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
Notes:

The angle constraints is not enforced if both horizontal angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.
The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [-180, 180] .

Defaults to 0.0.
(Read and Write property)

155.6.19 maximumVerticalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Minimum and maximum vertical view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
Notes:

The angle constraints is not enforced if both vertical angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.
The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [-90, 90] .
Defaults to 0.0.
For example: set to minimum to 0 and maximum to 90 to only allow orbit around the top hemisphere.
(Read and Write property)

155.6.20 minimumHorizontalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Minimum and maximum horizontal view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
Notes:

The angle constraints is not enforced if both horizontal angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.
The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [-180, 180] .
Defaults to 0.0.
(Read and Write property)

155.6.21 minimumVerticalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Minimum and maximum vertical view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
Notes:

The angle constraints is not enforced if both vertical angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.

The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [-90, 90] .
Defaults to 0.0.
For example: set to minimum to 0 and maximum to 90 to only allow orbit around the top hemisphere.
(Read and Write property)

155.6.22 pointOfView as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The node describing the point of view.
Notes: (Read and Write property)

155.6.23 target as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The camera target in world space for orbit rotation.
Notes: (Read and Write property)

155.6.24 worldUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The up vector in world space used as reference for SCNInteractionModeFly and SCNInteraction-ModeOrbitTurntable camera modes.
Notes:

Defaults to (0, 1, 0).
(Read and Write property)

155.7 class SCNCameraMBS

155.7.1 class SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A set of camera attributes that can be attached to a node to provide a point of view for displaying the scene.
Notes:

To display a scene, you must designate a node whose camera property contains a camera object as the point of view.

The SCNNode object containing a camera defines a point of view—that is, the position and orientation of the camera. A camera's direction of view is always along the negative z-axis of the node's local coordinate system. To point the camera at different parts of your scene, use the position, rotation, or transform property of the node containing it. (Alternatively, to ensure that a camera always points at a particular element of your scene even when that element moves, attach a SCNLookAtConstraint object to the node containing the camera.)

An SCNCamera object itself defines the shape and, in part, the appearance of the rendered scene as seen from its point of view. By default, a camera defines a perspective projection, whose field of view (FOV) and near and far visibility limits you control using the properties listed in Adjusting Camera Perspective and illustrated below.

155.7.2 Blog Entries

155.7.3 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

155.7.4 Methods

155.7.5 camera as SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new camera object.
Notes: To use the camera to display a scene, attach it to the camera property of a node and then select that node using the pointOfView property of the view (or layer or renderer) rendering the scene.

155.7.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new camera object.
Notes: To use the camera to display a scene, attach it to the camera property of a node and then select that node using the pointOfView property of the view (or layer or renderer) rendering the scene.

155.7.7 copy as SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the camera.

155.7.8 Properties

155.7.9 ApertureBladeCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The number of physical camera aperture blades simulated by SceneKit for depth-of-field effects.
Notes:

When the wantsDepthOfField setting is enabled, SceneKit renders scenes using the camera with a depth-of-field blur (also called bokeh) effect modeled after those created by a real-world physical camera. One feature of real-world camera bokeh effects is the tendency of distant bright points to blur into larger shapes based on the shape of the aperture between the camera's lens and its imaging plane (film or sensor). Physical cameras control aperture using a mechanism that moves several flat blades in or out to create a smaller or larger opening, so the natural bokeh effect in traditional photography produces polygon-shaped blur effects. This property controls the number of blades in the simulated camera aperture, and thus the polygon shape seen in the resulting bokeh effect. For example, a blade count of 6 (the default) causes distant bright points to blur into hexagon shapes. Increasingly large blade counts result in the bokeh effect appearing more circular, as shown below.
(Read and Write property)

155.7.10 AutomaticallyAdjustsZRange as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the camera automatically adjusts its zNear and zFar depth limits.
Notes:

The default value of this property is false, specifying that the camera's zNear and zFar properties control

its depth limits. If you change this property's value to true, SceneKit automatically adjusts the depth limits at render time to fit the bounding box of the scene. Changing the values of the zNear and zFar properties automatically resets this property's value to false.
(Read and Write property)

155.7.11 averageGray as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The luminance level to use as the midpoint of a tone mapping curve.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with this property which serves as a constant estimate of scene luminance.
The default value is 0.18. By setting this property to a higher or lower value, you can compensate for scenes with darker or brighter content. Alternatively, by setting the wantsExposureAdaptation property, you can allow SceneKit to automatically adjust exposure as the visible contents of the scene change.
This property has no effect if the wantsHDR value is false. If the exposureAdaptationDarkeningSpeedFactor value is true, SceneKit ignores this property, and instead computes the average luminance currently visible to the camera during rendering.
(Read and Write property)

155.7.12 bloomBlurRadius as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The radius, in pixels, for the blurring portion of the bloom effect applied to highlights in the rendered scene. Animatable.
Notes:

A bloom effect adds a soft glow to highlights (areas of bright color) in the rendered scene, simulating the way bright highlights appear to the human eye or a physical camera in a real-world scene. The bloom effect combines selective brightening and blurring effects; this property controls the blur portion of the effect. A value of zero effectively disables the bloom effect, and higher values result in a broader, softer glow. The default value is 4.0 pixels.
You can animate changes to this property's value. See Animating SceneKit Content.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

155.7.13 bloomIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The magnitude of bloom effect to apply to highlights in the rendered scene. Animatable.
Notes:

A bloom effect adds a soft glow to highlights (areas of bright color) in the rendered scene, simulating the way bright highlights appear to the human eye or a physical camera in a real-world scene. This property controls the strength of the bloom effect; lower values result in a subtle effect, and higher values create very bright glow. The default value is 0.0, resulting in no bloom effect.
You can animate changes to this property's value. See Animating SceneKit Content.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

155.7.14 bloomThreshold as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The brightness threshold at which to apply a bloom effect to highlights in the rendered scene. Animatable.
Notes:

A bloom effect adds a soft glow to highlights (areas of bright color) in the rendered scene, simulating the way bright highlights appear to the human eye or a physical camera in a real-world scene. This property controls the brightness level required to trigger the bloom effect; lower values apply the effect to more of the scene, and higher values apply the effect only to the brightest white areas. The default value is 1.0.
You can animate changes to this property's value. See Animating SceneKit Content.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

155.7.15 colorFringeIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The blend factor for fading the color fringing effect applied to the rendered scene.
Notes:

Color fringing applies an effect that separately blurs the color components of each rendered pixel, adding subtle rainbow edge effects to the rendered scene that simulate the effects of chromatic aberration in a physical camera. Higher values for this property result in brighter, more vivid color fringing, and lower values create a subtler effect. The default value of 1.0 leaves the color fringing effect at its most vivid.
This property controls a fade between the color fringing effect and the otherwise-normally-rendered image. The colorFringeStrength property controls the breadth of the color fringing effect.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

155.7.16 colorFringeStrength as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The magnitude of color fringing effect to apply to the rendered scene.
Notes:

Color fringing applies an effect that separately blurs the color components of each rendered pixel, adding subtle rainbow edge effects to the rendered scene that simulate the effects of chromatic aberration in a physical camera. Higher values create a more pronounced color shift, creating wider rainbow fringes; lower values spread colors across shorter distances, creating a subtler effect. The default value of 0.0 disables the color fringing effect entirely.
This property controls the breadth of color fringing. The colorFringeIntensity property controls the blend factor between the color-fringed and the otherwise-normally-rendered image.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

155.7.17 colorGrading as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A texture for applying color grading effects to the entire rendered scene.
Notes:

The contents value for this material property must be a 3D color lookup table, or a 2D texture image that represents such a table arranged in a horizontal strip.

see also
https://developer.apple.com/documentation/scenekit/scncamera/1644114-colorgrading
(Read only property)

155.7.18 contrast as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: An adjustment factor to apply to the overall visual contrast of the rendered scene.
Notes:

A value of 0.0 (the default) leaves the rendered scene unchanged. Positive values increase contrast between bright and dark areas, and negative values reduce contrast, shifting the rendered scene towards a uniform gray.
To enable this behavior, you must first enable the wantsHDR setting.

(Read and Write property)

155.7.19 exposureAdaptationBrighteningSpeedFactor as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The relative duration of automatically animated exposure transitions from dark to bright areas.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. When the wantsExposureAdaptation property is enabled, SceneKit automatically adjusts the tone mapping curve based on the average luminance currently visible to the camera, and creates automatic transitions between exposure levels.
SceneKit automatically determines the overall duration of exposure-level animations based on the values of this property and the exposureAdaptationDarkeningSpeedFactor property. The default value is 0.4, resulting in brightening animations that are slightly faster than darkening animations.
This property has no effect if either of the wantsHDR or wantsExposureAdaptation values is false.
(Read and Write property)

155.7.20 exposureAdaptationDarkeningSpeedFactor as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The relative duration of automatically animated exposure transitions from bright to dark areas.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. When the wantsExposureAdaptation property is enabled, SceneKit automatically adjusts the tone mapping curve based on the average luminance currently visible to the camera, and creates automatic transitions between exposure levels.
SceneKit automatically determines the overall duration of exposure-level animations based on the values of this property and the exposureAdaptationDarkeningSpeedFactor property. The default value is 0.6, resulting in darkening animations that are slightly faster than brighting animations.
This property has no effect if either of the wantsHDR or wantsExposureAdaptation values is false.
(Read and Write property)

155.7.21 exposureOffset as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A logarithmic bias that adjusts the results of SceneKit's tone mapping operation, brightening or darkening the visible scene.

Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
Use this property to bias the tone mapping curve. The default exposure offset is zero, specifying no bias. Positive values result in a brighter scene, and negative values result in a darker scene.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

155.7.22 FieldOfView as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The vertical or horizontal viewing angle of the camera.
Notes:

The projectionDirection property determines whether this fieldOfView property measures the camera's vertical or horizontal viewing angle, and SceneKit automatically calculates the viewing angle in the other direction to match the aspect ratio of the view displaying the scene. For example, a fieldOfView of 60 and the default SCNCameraProjectionDirectionVertical projection, presented fullscreen on a 16:9 display in portrait orientation, results in a vertical viewing angle of 60° and a horizontal viewing angle of 33.75°.
You can choose to specify viewing angle either directly, using this fieldOfView property, or in terms that model a physical camera, using the sensorHeight and focalLength properties. Setting the fieldOfView property causes SceneKit to automatically recalculate the focalLength value, and setting the sensorHeight or focalLength property recalculates fieldOfView.
(Read and Write property)

155.7.23 FocalBlurSampleCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The number of pixel samples SceneKit uses to create depth-of-field blur effects.
Notes:

When the wantsDepthOfField setting is enabled, SceneKit renders depth-of-field blur (also called bokeh) effects using a blur filter that samples multiple points in the image. Sampling a larger number of points produces a higher quality visual effect at a higher performance cost, and vice versa. The default sample count is 25.
(Read and Write property)

155.7.24 FocalLength as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The camera's focal length, in millimeters.
Notes:

The sensorHeight and focalLength properties determine the camera's horizontal and vertical viewing angles using terms that model physical camera devices. (Alternatively, you can work with viewing angle directly though the fieldOfView property.) For example, with the default sensor height of 24 mm and default focal length of 50 mm, the vertical field of view is 60°.
Setting the fieldOfView property causes SceneKit to automatically recalculate the focalLength value, and setting the sensorHeight or focalLength property recalculates fieldOfView.
(Read and Write property)

155.7.25 focusDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The distance from the camera at which objects appear in sharp focus. Animatable.
Notes:

Objects at this distance from the camera appear perfectly focused. Objects nearer to or farther from the camera than this distance appear increasingly blurred, with the behavior of the blur effect depending on the fStop, apertureBladeCount and focalBlurSampleCount properties. The default focus distance is 2.5.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.7.26 fStop as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The physical camera aperture simulated by SceneKit for depth-of-field effects. Animatable.
Notes:

F-stop numbers describe the light-gathering area of a physical camera's imaging system, and are typically expressed as the denominator of a ratio including the camera's focal length f, such as f/2 or f/5.6. A larger denominator indicates a smaller aperture, allowing less light to pass from the camera's lens through to the imaging plane (sensor or film), and a smaller denominator indicates a larger aperture that lets more light through.
SceneKit uses aperture measurements to simulate depth-of-field blur effects (also called bokeh) approximating those produced by a physical camera. A larger fStop number (or aperture denominator) causes most of the scene to appear in focus, with extremely close or far depths showing slight blurring; a smaller number results in only a narrow range of depths appearing in focus, and a more pronounced blur effect for the rest of the scene. The default fStop value is 5.6.
You can animate changes to this property's value. See Animating SceneKit Content.

(Read and Write property)

155.7.27 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

155.7.28 maximumExposure as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum exposure value to use in tone mapping.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
Exposure values are exponential: a value of 1.0 doubles brightness, a value of 2.0 quadruples brightness, a value of -1.0 halves brightness, and so on. The default value is 15.0. Decreasing the value causes brighter portions of the scene to become over-exposed (uniformly white, losing definition). Increasing the value adds more dynamic range for brighter portions of the scene; however, a greater breadth of difference between the minimum and maximum exposures decreases contrast.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

155.7.29 minimumExposure as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum exposure value to use in tone mapping.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
Exposure values are exponential: a value of 1.0 doubles brightness, a value of 2.0 quadruples brightness, a value of -1.0 halves brightness, and so on. The default value is -15.0. Increasing the value causes darker portions of the scene to become under-exposed (uniformly black, losing definition). Decreasing the value adds more dynamic range for darker portions of the scene; however, a greater breadth of difference between the minimum and maximum exposures decreases contrast.

This property has no effect if the wantsHDR value is false.
(Read and Write property)

155.7.30 motionBlurIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A factor that determines the intensity of motion blur effects. Animatable.
Notes:

The default intensity of zero results in no motion blur effect. Higher values (toward a maximum of 1.0) create more pronounced motion blur effects.
Motion blur is not supported when wide-gamut color rendering is enabled. Wide-gamut rendering is enabled by default on supported devices; to opt out, set the SCNDisableWideGamut key in your app's Info.plist file.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.7.31 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A name associated with the camera object.
Notes:

You can provide a descriptive name for a camera object to make managing your scene graph easier. Cameras loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the SCNSceneSourceMBS class to examine cameras in a scene file without loading its scene graph.
(Read and Write property)

155.7.32 orthographicScale as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the camera's magnification factor when using an orthographic projection.
Notes:

In an orthographic projection, equally sized objects appear equally sized regardless of their distance from the camera. To switch between orthographic and perspective projections, see the usesOrthographicProjection property.
(Read and Write property)

155.7.33 ProjectionDirection as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The axis used to determine field of view or orthographic scale.
Notes:

The fieldOfView property measures view angle in a single primary direction, determined by this projectionDirection property. For the other direction, SceneKit automatically adjusts field of view depending on the aspect ratio of the view presenting the scene.
For example, with the default projection direction of SCNCameraProjectionDirectionVertical, setting fieldOfView to 60 results in a vertical view angle of 60°. If the scene appears on a display with a 4:3 aspect ratio, the horizontal view angle is 80°. However, if the scene appears on a 16:9 display, the horizontal view angle is 106°.
This property has a similar effect on scaling for orthographic projections. The orthographicScale property measures the scale factor in the direction of the projectionDirection property, and SceneKit automatically calculates scale factor in the other direction according to aspect ratio.
(Read and Write property)

155.7.34 projectionTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The camera's projection transformation.
Notes:

This transformation expresses the combination of all the camera's geometric properties: projection type (perspective or orthographic), field of view, depth limits, and orthographic scale (if applicable). SceneKit uses this transformation to convert points in the camera node's coordinate space to the renderer's 2D space when rendering and processing events.
You can use this transformation directly if your app needs to convert between view and renderer coordinates for other purposes. Alternatively, if you compute your own projection transform matrix, you can set this property to override the transformation synthesized from the camera's geometric properties.
(Read and Write property)

155.7.35 saturation as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: An adjustment factor to apply to the overall color saturation of the rendered scene.
Notes:

A value of 1.0 (the default) leaves scene colors unchanged. Greater values result in oversaturated colors, and a value of 0.0 makes the rendered scene entirely grayscale.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

155.7.36 screenSpaceAmbientOcclusionBias as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: An offset for modulating ambient occlusion effects.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
This screenSpaceAmbientOcclusionBias value is used in an intermediate stage of calculating the SSAO effect, and measures a distance in scene units. Increasing or decreasing this value from its default of 0.03 can help to offset unrealistic effects produced by changing other SSAO settings.
(Read and Write property)

155.7.37 screenSpaceAmbientOcclusionDepthThreshold as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum depth difference, in units of scene space, at which to apply ambient occlusion effects.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
This screenSpaceAmbientOcclusionDepthThreshold property controls the effect of relative distance from the camera on SSAO effects. Higher values create more shadowing effects between foreground and background elements of the scene, but this can result in unrealistic dark halos around foreground elements that are far from the background. Lower values avoid dark halo effects, but create less visual separation between scene elements at different distances from the camera. The default value is 0.2 units.
(Read and Write property)

155.7.38 screenSpaceAmbientOcclusionIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The intensity of the screen-space ambient occlusion effect applied in camera rendering.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
The default value of this property is zero, disabling SSAO effects. Increasing the intensity value creates deeper, bolder shadows.
(Read and Write property)

155.7.39 screenSpaceAmbientOcclusionNormalThreshold as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The magnitude of the blur effect applied to create ambient occlusion shadows.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
SSAO shadowing includes a blur effect to realistically soften differences in shadow between adjacent pixels, which depends on both the smoothness of scene geometry and this factor. Larger blur factors create a softer, more spread-out blur; smaller factors create coarser shadowing effects.
(Read and Write property)

155.7.40 screenSpaceAmbientOcclusionRadius as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The distance, in units of scene space, at which ambient occlusion takes effect.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
SSAO effects work by storing relevant scene geometry information for each pixel, and using that information to produce per-pixel shading effects. This screenSpaceAmbientOcclusionRadius property determines the area in scene space to consider around each pixel for determining the amount of incoming ambient light blocked by surrounding geometry (and thus the amount of shadow effect to apply). The default value is 5; smaller values cause SSAO effects to apply only to finer geometry details, while larger values affect coarser details.
(Read and Write property)

155.7.41 SensorHeight as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The vertical size of the camera's imaging plane, in millimeters.
Notes:

The sensorHeight and focalLength properties determine the camera's horizontal and vertical viewing angles using terms that model physical camera devices. (Alternatively, you can work with viewing angle directly though the fieldOfView property.) For example, with the default sensor height of 24 mm and default focal length of 50 mm, the vertical field of view is 60°.
Setting the fieldOfView property causes SceneKit to automatically recalculate the focalLength value, and setting the sensorHeight or focalLength property recalculates fieldOfView.
(Read and Write property)

155.7.42 UsesOrthographicProjection as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the camera uses an orthographic projection.
Notes:

The default value of this property is false, specifying a perspective projection. In a perspective projection, equally sized objects nearer to the camera appear larger than those farther away.
Set the value of this property to true to specify an orthographic projection. In an orthographic projection, equally sized objects appear equally sized regardless of distance from the camera.
To control the magnification factor of an orthographic camera, use its orthographicScale property.
(Read and Write property)

155.7.43 vignettingIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The magnitude of vignette (darkening around edges) effect to apply to the rendered scene.
Notes:

A vignette effect darkens the edges and corners of the rendered scene, simulating the effect of lens and barrel shape on the image produced by a physical camera. Higher values result in more darkening, and lower values result in a subtler effect. The default value of 0.0 results in no vignetting effect.
This property controls the level of darkening applied; the vignettingPower property controls the area of the rendered image to be darkened.
To enable this behavior, you must first enable the wantsHDR setting.

(Read and Write property)

155.7.44 vignettingPower as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of the rendered scene to darken with a vignette effect.
Notes:

A vignette effect darkens the edges and corners of the rendered scene, simulating the effect of lens and barrel shape on the image produced by a physical camera. Higher values result apply the darkening effect to a broader area around the edges of the rendered image, and lower values apply the effect to a smaller area, leaving more of the rendered image at full brightness. The default value of 0.0 results in no vignetting effect. This property controls the area of the rendered image to be darkened; the vignettingIntensity property controls the level of darkening applied to those areas.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

155.7.45 WantsDepthOfField as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether SceneKit renders depth-of-field blur effects for the camera.
Notes:

This value is false by default, disabling depth-of-field effects.
Enabling this property causes SceneKit to render blur effects that model those created by a physical camera device (also known as bokeh). That is, objects in the scene appear more or less blurry depending on their distance from the camera and the camera's focusDistance, and the intensity and style of the blur effect depend on the fStop and apertureBladeCount properties.

Note
For best results, also enable the wantsHDR property when using depth-of-field effects. High Dynamic Range rendering provides high contrast for distant bright points in the scene, creating more pronounced bokeh effects.
(Read and Write property)

155.7.46 WantsExposureAdaptation as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether SceneKit automatically adjusts the exposure level.

Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. One measure of tone mapping is the exposure value, whose effect on the output is similar to that of the shutter speed (or exposure time) of a real-world camera—lower exposure values result in a darker image, and higher exposures result in a brighter image. You cannot adjust exposure value directly—instead, SceneKit determines a tone mapping curve (including the exposure level) from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties along with a measure of scene luminance.

If this property's value is true (the default), SceneKit automatically measures the current luminance visible to the camera during rendering, and adjusts the exposure level accordingly. Additionally, when the scene luminance changes, SceneKit automatically animates a transition to the new exposure level (see the exposureAdaptationBrighteningSpeedFactor and exposureAdaptationDarkeningSpeedFactor properties).

Note
The visual effect of automatic exposure is similar to how human visual perception adjusts to changes in environmental lighting. For example, consider a game scene where the player moves from a darkened area into full daylight. At first, the exposure value is low, allowing for visible detail in the darkened area, but no detail in the white daylight outside. As the player moves into the daylight, the entire view becomes blindingly bright, but over a brief time the player's vision adapts: detail becomes visible in the bright area, and the darkened area loses detail.

If this property's value is false, SceneKit's tone mapping effect is constant. Instead of responding to scene luminance, SceneKit uses the averageGray property to determine the tone mapping curve.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

155.7.47 WantsHDR as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether SceneKit applies High Dynamic Range (HDR) post-processing effects to a scene.
Notes:

When this property's value is false (the default), SceneKit performs lighting calculations in a color space whose brightness range is similar to that of the output display. This approach limits the ability to perform realistic rendering of scenes with fine details in brightness levels.
When you enable HDR rendering for a camera, SceneKit calculates lighting in a much deeper color space, preserving fine details in contrast regardless of brightness, then applies a post-processing effect called tone mapping to translate luminance values from that space to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve (including the exposure level) from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties along with a measure

of scene luminance. The wantsExposureAdaptation property determines whether tone mapping effects are static or dynamically respond when the luminance visible to the camera changes.
The default value is false.
(Read and Write property)

155.7.48 whitePoint as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The luminance level to use as the upper end of a tone mapping curve.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
The default value is 1.0. By setting this property to a higher or lower value, you can produce more gradual or more abrupt transitions between shadows and highlights.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

155.7.49 zFar as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The camera's far depth limit. Animatable.
Notes:

The far value determines the maximal distance between the camera and a visible surface. If a surface is farther from the camera than this distance, the surface is clipped and does not appear. The default far value is 100.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.7.50 zNear as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The camera's near depth limit. Animatable.
Notes:

The near value determines the minimal distance between the camera and a visible surface. If a surface is closer to the camera than this distance, the surface is clipped and does not appear. The near value must not be zero. The default near value is 1.0.

You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.7.51 Constants

155.7.52 kProjectionDirectionHorizontal = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the options for the axis used to determine field of view or orthographic projection.
Notes: The camera's field of view or orthographic scale are measured horizontally.

155.7.53 kProjectionDirectionVertical = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the options for the axis used to determine field of view or orthographic projection.
Notes: The camera's field of view or orthographic scale are measured vertically.

155.8 class SCNCapsuleMBS

155.8.1 class SCNCapsuleMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: SCNCapsule represents a capsule with controllable height and cap radius.
Notes: Subclass of the SCNGeometryMBS class.

155.8.6 Methods

155.8.7 capsule(capRadius as double, height as double) as SCNCapsuleMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a capsule with given radius and height.
Notes:

capRadius: The radius of the capsule.
height: The height of the capsule.

155.8.8 Constructor(capRadius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a capsule with given radius and height.
Notes:

capRadius: The radius of the capsule.
height: The height of the capsule.

155.8.9 Properties

155.8.10 capRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The cap radius of the capsule. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

155.8.11 capSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions in the cap. Animatable.
Notes:

If the value is less than 2, the behavior is undefined. The default value is 24.
(Read and Write property)

155.8.12 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the capsule. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 2.
(Read and Write property)

155.8.13 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

155.8.14 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the radial coordinate. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

155.9 class SCNConeMBS

155.9.1 class SCNConeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: SCNCone represents a cone with controllable height, top radius and bottom radius.
Notes: Subclass of the SCNGeometryMBS class.

155.9.2 Blog Entries

155.9.6 Methods

155.9.7 cone(topRadius as double, bottomRadius as double, height as double) as SCNConeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a cone with given top radius, bottom radius and height.
Notes:

topRadius: The radius at the top of the cone.
bottomRadius: The radius at the bottom of the cone.
height: The height of the cone.

155.9.8 Constructor(topRadius as double, bottomRadius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a cone with given top radius, bottom radius and height.
Notes:

topRadius: The radius at the top of the cone.
bottomRadius: The radius at the bottom of the cone.
height: The height of the cone.

155.9.9 Properties

155.9.10 bottomRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The radius at the bottom of the cone. Animatable.
Notes:

If the value is less than 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

155.9.11 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the cone. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

155.9.12 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

155.9.13 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the radial coordinate. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

155.9.14 topRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The radius at the top of the cone. Animatable.
Notes:

If the value is less than 0, the geometry is empty. The default value is 0.
(Read and Write property)

155.10 class SCNConstraintMBS

155.10.1 class SCNConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The abstract superclass for objects that automatically adjust the position, rotation, or scale of a node based on specified rules.
Notes:

To control the transform (position, rotation, and scale) of one or more SCNNodeMBS objects with constraints, create and configure instances of the SCNConstraint subclass that provides the behavior you want, then add those constraint objects to each node's constraints array.

When SceneKit prepares to render a scene, it examines the list of constraints attached to each node to determine the transform for that node, then applies the new transformation before displaying the scene.

155.10.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

155.10.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

155.10.4 Methods

155.10.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

155.10.6 copy as SCNConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the constraint object.

155.10.7 Properties

155.10.8 Enabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Determines whether the constraint is enabled or not.
Notes:

Defaults to true.
(Read and Write property)

155.10.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

155.10.10 Incremental as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies whether or not the contraint should applies incrementally and have it's effect being cumulated over the rendered frames.
Notes:

Defaults to true on macOS 10.13, iOS 11, tvOS 11 and watchOS 4. Defaults to false in earlier versions.
(Read and Write property)

155.10.11 influenceFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The influence of the constraint on the node's transformation.
Notes:

Use this property to relax the effect of a constraint on the nodes it applies to. For example, consider a node containing a spotlight, constrained by an SCNLookAtConstraintMBS object to point toward another node containing a moving game character. If the constraint's influence factor is 1.0, SceneKit adjusts the spotlight node to point directly at the game character each time it renders a frame. If you reduce the influence factor to 0.5, each time SceneKit renders a frame it moves the spotlight halfway from its current orientation to the target orientation. As a result, the spotlight continues to follow the moving character, but with a slight lag.

The default influence factor is 1.0, specifying that SceneKit apply the full effect of the constraint every frame. An influence factor of 0.0 means the constraint has no effect.

This property has no effect on SCNTransformConstraintMBS objects.
(Read and Write property)

155.11 control SCNControlMBS

155.11.1 control SCNControlMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a SCNViewMBS.
Notes:

This control embeds a special SCNView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

155.11.6 Properties

155.11.7 View as SCNViewMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

155.11.8 Events

155.11.9 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

155.11.10 EnableMenuItems

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

Function: The event where you can enable menu items.

155.11.11 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

155.11.12 GotFocus

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

155.11.13 LostFocus

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

155.11.14 MenuAction(HitItem as MenuItem) As Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

155.11.15 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown.
If you return False, the system handles the MouseDown so the above event handlers do not get called.

155.11.16 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

155.11.17 MouseUp(x As Integer, y As Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

155.11.18 rendererDidApplyAnimations(time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Tells the control to perform any updates that need to occur after actions and animations are evaluated.
Notes:

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this method exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this method to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to "batch" your changes).

155.11.19 rendererDidApplyConstraints(time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Invoked on the control once the scene renderer did apply the constraints.
Notes:

time The time at which the constraints were simulated.

All modifications done within this method don't go through the transaction model, they are directly applied on the presentation tree.

155.11.20 rendererDidRenderScene(scene as SCNSceneMBS, time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Tells the control that the renderer has rendered the scene.
Notes:

scene: The scene object that was rendered.
time: The current system time, in seconds. If your custom rendering involves animation, use this parameter to compute your own animation state.

Implement this method to perform custom drawing after SceneKit has rendered a scene—for example, to draw overlay content on top of SceneKit content. You should only execute Metal or OpenGL drawing commands (and any setup required to perform them) in this method—the results of modifying SceneKit objects in this method are undefined.

- To render using Metal, use the renderer parameter to retrieve the scene renderer's currentRenderCommandEncoder object and encode your own drawing commands. If you need to reference other Metal state, see the properties listed in SCNSceneRenderer.
- To render using OpenGL, simply call the relevant OpenGL drawing commands—SceneKit automatically makes its OpenGL context the current context before calling this method. If you need to reference the OpenGL context being rendered into, examine the context property of the renderer parameter.

You must draw using the appropriate graphics technology for the view currently being rendered. Use the renderingAPI property of the renderer object to determine whether Metal or OpenGL is in use.

155.11.21 rendererDidSimulatePhysics(time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Tells the control to perform any updates that need to occur after physics simulations are performed.
Notes:

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this event exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this event to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to "batch" your changes).

This event is the last opportunity SceneKit provides for you to change the scene graph before rendering.

155.11.22 rendererUpdate(time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Tells the control to perform any updates that need to occur before actions, animations, and physics are evaluated.
Notes:

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this method exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this event to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to "batch" your changes).

155.11.23 rendererWillRenderScene(scene as SCNSceneMBS, time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Tells the control that the renderer has cleared the viewport and is about to render the scene.
Notes:

scene: The SCNSceneMBS object to be rendered.
time: The current system time, in seconds. If your custom rendering involves animation, use this parameter to compute your own animation state.

Implement this event to perform custom drawing before SceneKit renders a scene—for example, to draw backdrop content underneath SceneKit content. You should only execute Metal or OpenGL drawing commands (and any setup required to perform them) in this event—the results of modifying SceneKit objects during this event are undefined.

To render using Metal, use the renderer parameter to retrieve the scene renderer's currentRenderCommandEncoder object and encode your own drawing commands. If you need to reference other Metal state, see the properties listed in SCNSceneRenderer.
To render using OpenGL, simply call the relevant OpenGL drawing commands—SceneKit automatically makes its OpenGL context the current context before calling this event. If you need to reference the OpenGL context being rendered into, examine the context property of the renderer parameter.

You must draw using the appropriate graphics technology for the view currently being rendered. Use the renderingAPI property of the renderer object to determine whether Metal or OpenGL is in use.

155.11.24 ScaleFactorChanged(NewFactor as double)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

155.12 class SCNCylinderMBS

155.12.1 class SCNCylinderMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: SCNCylinder represents a cylinder with controllable height and radius.
Notes: Subclass of the SCNGeometryMBS class.

155.12.6 Methods

155.12.7 Constructor(radius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a cylinder with given radius and height.

155.12.8 cylinder(radius as double, height as double) as SCNCylinderMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a cylinder with given radius and height.

155.12.9 Properties

155.12.10 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the cylinder. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

155.12.11 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

155.12.12 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the radial coordinate. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

155.12.13 radius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The radius of the cylinder. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

155.13 class SCNDistanceConstraintMBS

155.13.1 class SCNDistanceConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A SCNDistanceConstraint ensure a minimum/maximum distance with a target node.
Notes: Subclass of the SCNConstraintMBS class.

155.13.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

155.13.3 Blog Entries

155.13.4 Methods

155.13.5 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNDistanceConstraint constraint.

155.13.6 distanceConstraintWithTarget(target as SCNNodeMBS) as SCNDistanceConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNDistanceConstraint constraint.

155.13.7 Properties

155.13.8 maximumDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum distance.
Notes:

Defaults to MAXFLOAT. Animatable.
(Read and Write property)

155.13.9 minimumDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum distance.
Notes:

Defaults to 0. Animatable.
(Read and Write property)

155.13.10 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines the target node to keep distance with.
Notes: (Read and Write property)

155.14 class SCNFloorMBS

155.14.1 class SCNFloorMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: SCNFloor represents an infinite plane geometry.
Notes: Subclass of the SCNGeometryMBS class.

155.14.2 Blog Entries

155.14.4 Methods

155.14.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a floor.
Notes: A floor is an infinite plane.

155.14.6 floor as SCNFloorMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a floor.
Notes: A floor is an infinite plane.

155.14.7 Properties

155.14.8 length as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The floor extent along the Z axis. Animatable.
Notes:

If the value is equal to 0, the floor is infinite on the Z axis. The default value is 0.
(Read and Write property)

155.14.9 reflectionCategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Determines the node categories to reflect. Defaults to all bits set.
Notes: (Read and Write property)

155.14.10 reflectionFalloffEnd as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the distance from the floor where the falloff finishes. Animatable.
Notes:

If the value is 0 then there is no falloff. The default value is 0.
(Read and Write property)

155.14.11 reflectionFalloffStart as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the distance from the floor where the falloff begins. Animatable.
Notes:

The default value is 0.
(Read and Write property)

155.14.12 reflectionResolutionScaleFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the resolution scale factor of the buffer used to render the reflection.
Notes:

Defaults to 1.0.
(Read and Write property)

155.14.13 reflectivity as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the reflectivity of the floor. Animatable.
Notes:

If the value is greater than zero then the surface will reflect other objects in the scene. The default value is 0.25.
(Read and Write property)

155.14.14 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The floor extent along the X axis. Animatable.
Notes:

If the value is equal to 0, the floor is infinite on the X axis. The default value is 0.
(Read and Write property)

155.15 class SCNGeometryElementMBS

155.15.1 class SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: A container for index data describing how vertices connect to define a three-dimensional object, or geometry.
Notes:

You use geometry elements together with SCNGeometrySourceMBS objects to define custom SCNGeometryMBS objects or to inspect the data that composes an existing geometry. You create a custom geometry using a three-step process:

1. Create one or more SCNGeometrySource objects, each of which defines per-vertex information such as position, surface normal, or texture coordinates for all vertices in the geometry.
2. Create at least one SCNGeometryElement object, containing an array of indices identifying vertices in the geometry sources and describing the drawing primitive that SceneKit uses to connect the vertices when rendering the geometry.
3. Create an SCNGeometry instance from the geometry sources and geometry elements.

When SceneKit renders a geometry, each geometry element corresponds to a drawing command sent to the GPU. Because different rendering states require separate drawing commands, you can define a geometry using multiple geometry elements. For example, the teapot geometry shown below has four geometry elements, so you can assign up to four SCNMaterial objects in order to render each element with a different appearance. But because each drawing command incurs a CPU time overhead when rendering, minimizing the number of elements in a custom geometry can improve rendering performance.

155.15.4 Methods

155.15.5 Constructor(data as MemoryBlock, PrimitiveType as Integer, primitiveCount as Integer, bytesPerIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a geometry element from the specified data and options.
Notes:

data: The data describing the element.
primitiveType: The drawing primitive that connects vertices when rendering the geometry element. For possible values, see SCNGeometryPrimitiveType.
primitiveCount: The number of primitives in the element.
bytesPerIndex: The number of bytes that represent a single index value in the data.

Returns a new geometry element object.

An element's data is an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers (whose size is specified by the bytesPerIndex parameter), and then connects the vertices in the order specified by this array, arranged according to the primitiveType parameter. To create a custom SCNGeometryMBS object from the geometry element, use the geometryWithSources() method.

155.15.6 geometryElementWithData(data as MemoryBlock, PrimitiveType as Integer, primitiveCount as Integer, bytesPerIndex as Integer) as SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a geometry element from the specified data and options.
Notes:

data: The data describing the element.
primitiveType: The drawing primitive that connects vertices when rendering the geometry element. For possible values, see SCNGeometryPrimitiveType.
primitiveCount: The number of primitives in the element.
bytesPerIndex: The number of bytes that represent a single index value in the data.

Returns a new geometry element object.

An element's data is an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers (whose size is specified by the bytesPerIndex parameter), and then connects the vertices in the order specified by this array, arranged according to the primitiveType parameter. To create a custom SCNGeometryMBS object from the geometry element, use the geometryWithSources() method.

155.15.7 Properties

155.15.8 bytesPerIndex as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The number of bytes that represent each index value in the element's data.
Notes:

An element's data property holds an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers, whose size is specified by the bytesPerIndex property.
(Read only property)

155.15.9 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The data describing the geometry element.
Notes:

An element's data is an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers, whose size is specified by the bytesPerIndex property.
(Read only property)

155.15.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

155.15.11 maximumPointScreenSpaceRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The largest radius, measured in screen points, at which to render any point in the geometry element.
Notes:

Some visual effects call for rendering a geometry as a collection of individual points—that is, a point cloud, not a solid surface or wireframe mesh. When you use this option, SceneKit can render each point as a small 2D surface that always faces the camera. By applying a texture or custom shader to that surface, you can efficiently render many small objects at once.

To render a geometry element as a point cloud, you must set three properties: pointSize, minimumPointScreenSpaceRadius, and maximumPointScreenSpaceRadius. Use pointSize to determine how large each point appears in world space, so that points farther away appear as smaller 2D surfaces. Use the minimum and maximum radius properties to ensure that the on-screen rendering of each point fits within a certain range of pixel sizes.
For example, to render a point cloud where each point is always one pixel wide (like a field of stars), set both the minimum and maximum sizes to one pixel. To render a group of objects whose screen sizes vary with perspective (like a set of images representing planets), set the minimum size to one pixel and the maximum size to a much larger value.
(Read and Write property)

155.15.12 minimumPointScreenSpaceRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The smallest radius, measured in screen points, at which to render any point in the geometry element.
Notes:

Some visual effects call for rendering a geometry as a collection of individual points—that is, a point cloud, not a solid surface or wireframe mesh. When you use this option, SceneKit can render each point as a small 2D surface that always faces the camera. By applying a texture or custom shader to that surface, you can efficiently render many small objects at once.
To render a geometry element as a point cloud, you must set three properties: pointSize, minimumPointScreenSpaceRadius, and maximumPointScreenSpaceRadius. Use pointSize to determine how large each point appears in world space, so that points farther away appear as smaller 2D surfaces. Use the minimum and maximum radius properties to ensure that the on-screen rendering of each point fits within a certain range of pixel sizes.
For example, to render a point cloud where each point is always one pixel wide (like a field of stars), set both the minimum and maximum sizes to one pixel. To render a group of objects whose screen sizes vary with perspective (like a set of images representing planets), set the minimum size to one pixel and the maximum size to a much larger value.
(Read and Write property)

155.15.13 pointSize as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The width of each point in the geometry element, as measured in the geometry's local 3D coordinate space.
Notes:

Some visual effects call for rendering a geometry as a collection of individual points—that is, a point cloud, not a solid surface or wireframe mesh. When you use this option, SceneKit can render each point as a small 2D surface that always faces the camera. By applying a texture or custom shader to that surface, you can

efficiently render many small objects at once.
To render a geometry element as a point cloud, you must set three properties: pointSize, minimumPointScreenSpaceRadius, and maximumPointScreenSpaceRadius. Use pointSize to determine how large each point appears in world space, so that points farther away appear as smaller 2D surfaces. Use the minimum and maximum radius properties to ensure that the on-screen rendering of each point fits within a certain range of pixel sizes.
(Read and Write property)

155.15.14 primitiveCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The number of primitives in the element.
Notes: (Read only property)

155.15.15 primitiveRange as NSRangeMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The range of primitives from the geometry element to render.
Notes:

The default value for this property is an NSRangeMBS whose location is NSNotFound (-1) and length is zero, indicating that, by default, SceneKit renders the entire set of primitives specified by a geometry element's data buffer.
You can change a geometry without redefining it by choosing to render only a subset of the primitives specified by a geometry element. To do so, set this property to a subrange of primitive indexes.
(Read and Write property)

155.15.16 primitiveType as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The drawing primitive that connects vertices when rendering the geometry element.
Notes: (Read only property)

155.15.17 Constants

155.15.18 PrimitiveTypeLine = 2

MBS Mac64bit Plugin, Plugin Version: 19.3.

Function: One of the primitive types.
Notes: The geometry element's data is a sequence of line segments, with each line segment described by two new vertices.

155.15.19 PrimitiveTypePoint = 3

MBS Mac64bit Plugin, Plugin Version: 19.3.

Function: One of the primitive types.
Notes: The geometry element's data is a sequence of unconnected points.

155.15.20 PrimitiveTypePolygon = 4

MBS Mac64bit Plugin, Plugin Version: 19.3.

Function: One of the primitive types.
Notes:

The geometry element's data is a sequence of arbitrary polygons.
see
https://developer.apple.com/documentation/scenekit/scngeometryprimitivetype/scngeometryprimitivetype-polygon?language=objc

155.15.21 PrimitiveTypeTriangles = 0

MBS Mac64bit Plugin, Plugin Version: 19.3.

Function: One of the primitive types.
Notes: The geometry element's data is a sequence of triangles, with each triangle described by three new vertices.

155.15.22 PrimitiveTypeTriangleStrip = 1

MBS Mac64bit Plugin, Plugin Version: 19.3.

Function: One of the primitive types.
Notes: The geometry element's data is a sequence of triangles, with each triangle described by one new vertex and two vertices from the previous triangle.

155.16 class SCNGeometryMBS

155.16.1 class SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A three-dimensional shape (also called a model or mesh) that can be displayed in a scene, with attached materials that define its appearance.
Notes:

In SceneKit, geometries attached to SCNNode objects form the visible elements of a scene, and SCNMaterial objects attached to a geometry determine its appearance.

Working with Geometry Objects

You control a geometry's appearance in a scene with nodes and materials. A geometry object provides only the form of a visible object rendered by SceneKit. You specify color and texture for a geometry's surface, control how it responds to light, and add special effects by attaching materials (for details, see the methods in Managing a Geometry's Materials). You position and orient a geometry in a scene by attaching it to an SCNNode object. Multiple nodes can reference the same geometry object, allowing it to appear at different positions in a scene.

You can easily copy geometries and change their materials. A geometry object manages the association between immutable vertex data and a mutable assignment of materials. To make a geometry appear more than once in the same scene with a different set of materials, use its inherited copy method. The copy shares the underlying vertex data of the original, but can be assigned materials independently. You can thus make many copies of a geometry without incurring a significant cost to rendering performance.

You can animate a geometry object. The vertex data associated with a geometry is immutable, but SceneKit provides several ways to animate geometry. You can use a SCNMorpher or SCNSkinner object to deform a geometry's surface, or run animations created in an external 3D authoring tool and loaded from a scene file. You can also use methods in the SCNShadable protocol to add custom GLSL shader programs that alter SceneKit's rendering of a geometry.

Obtaining a Geometry Object

SceneKit provides several ways to introduce geometry objects to your app:

Action	For further information
Load from a scene file created using external 3D authoring tools	SCNScene, SCNSceneSource
Use and customize SceneKit's built-in primitive shapes	SCNPlane, SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, SCNCapsule, SCNTube, and SCNTorus
Create 3D geometry from 2D text or Bézier curves	SCNText, SCNShape
Create a custom geometry from vertex data	SCNGeometrySource, SCNGeometryElement, geometryWithSources.

155.16.6 Methods

155.16.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new geometry object with no content (or default content).
Notes:

This method creates a geometry with no visible content. You can use an empty geometry with another geometry's levelsOfDetail property to make the geometry disappear when it is too far away from the camera to usefully render.
SceneKit's SCNGeometryMBS subclasses use this method to create geometry instances with default contents. For example, if you call this method on the SCNSphereMBS class, it creates a sphere geometry whose radius property has the default value of 0.5.
You cannot add geometry sources or elements to a geometry object after creating it. To create a custom geometry from your own source and element data, use the geometryWithSources method.

155.16.8 copy as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the geometry.

155.16.9 geometry as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new geometry object with no content (or default content).
Notes:

This method creates a geometry with no visible content. You can use an empty geometry with another geometry's levelsOfDetail property to make the geometry disappear when it is too far away from the camera to usefully render.
SceneKit's SCNGeometryMBS subclasses use this method to create geometry instances with default contents. For example, if you call this method on the SCNSphereMBS class, it creates a sphere geometry whose radius property has the default value of 0.5.
You cannot add geometry sources or elements to a geometry object after creating it. To create a custom geometry from your own source and element data, use the geometryWithSources method.

155.16.10 geometryElementAtIndex(index as Integer) as SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the geometry element at a specified index.
Notes: Each SCNGeometryElementMBS object describes how vertices from the geometry's sources are combined into polygons to create the geometry's shape. Visible geometries contain at least one element.

155.16.11 geometryElements as SCNGeometryElementMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of geometry elements that describe the geometry's shape.
Notes:

Each SCNGeometryElementMBS object describes how vertices from the geometry's sources are combined into polygons to create the geometry's shape. Visible geometries contain at least one element.
For geometries with multiple elements, you can use the materials property to attach different materials to each element.

155.16.12 geometrySources as SCNGeometrySourceMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of geometry sources that provide vertex data for the geometry.
Notes: Each SCNGeometrySourceMBS object describes an attribute of all vertices in the geometry (such as vertex position, surface normal vector, color, or texture mapping coordinates) identified by the source's semantic property. A geometry always has at least one source (for the SCNGeometrySourceSemanticVertex

semantic), typically has additional sources for use in lighting and shading, and may have other sources for skeletal animation or surface subdivision information.

155.16.13 geometrySourcesForSemantic(semantic as String) as SCNGeometrySourceMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the geometry sources for a specified semantic.
Notes:

semantic: A constant identifying a semantic for which to return geometry sources. See Geometry Semantic Identifiers for possible values.

Returns an array of SCNGeometrySource objects, or nil if the geometry has no source for the specified semantic.

Each SCNGeometrySourceMBS object describes an attribute of all vertices in the geometry (such as vertex position, surface normal vector, color, or texture mapping coordinates) identified by the source's semantic property. A geometry always has at least one source, for the SCNGeometrySourceSemanticVertex semantic, typically has additional sources for use in lighting and shading, and may have other sources for skeletal animation or surface subdivision information.
The vertex, normal, and color semantics each refer to at most one source. A geometry may have multiple sources for the SCNGeometrySourceSemanticTexcoord semantic—in this case, indices in the returned array correspond to values for the mappingChannel property used when attaching textures to materials.

155.16.14 geometryWithSources(sources() as SCNGeometrySourceMBS, elements() as SCNGeometryElementMBS) as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new geometry built from the specified geometry sources and elements.
Notes:

sources: An array of SCNGeometrySourceMBS objects describing vertices in the geometry and their attributes.
elements: An array of SCNGeometryElementMBS objects describing how to connect the geometry's vertices.

A geometry's visible content comes from the combination of geometry sources, which contain data describing its vertices, with geometry elements, which contain data describing how the vertices connect to form a surface.
Each SCNGeometrySourceMBS object describes an attribute of all vertices in the geometry (vertex position, surface normal vector, color, or texture mapping coordinates) identified by the source's semantic property. To create a custom geometry you must provide at least one source, for the SCNGeometrySourceSemanticVer-

tex semantic. Typically, you also provide sources for normals and texture coordinates for use in lighting and shading.
Sources for the vertex, normal, and color semantics must be unique—if multiple objects in the sources array have the same semantic, SceneKit uses only the first. A geometry may have multiple sources for the SCNGeometrySourceSemanticTexcoord semantic—the order of texture coordinate sources in the sources array determines the value to use for the mappingChannel property when attaching materials.
Each SCNGeometryElementMBS object describes how vertices from the geometry sources are combined into polygons to create the geometry's shape. Creating a custom geometry requires at least one element. If the elements array contains multiple objects, their order determines the arrangement of the geometry's materials—for details, see the discussion of the materials property.

155.16.15 insertMaterial(Material as SCNMaterialMBS, Index as Integer)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Insert a material in the materials array at the specified index.
Notes:

material: The material to insert.
index: Index in the materials array to insert the new material.

155.16.16 levelsOfDetail as SCNLevelOfDetailMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: An array of SCNLevelOfDetail objects for managing the geometry's appearance when viewed from far away.
Notes: Because rendering a complex geometry incurs a performance cost, you can use level-of-detail objects to substitute simpler geometries in its place as its distance from the point of view camera increases (or its apparent size decreases). For details, see SCNLevelOfDetailMBS.

155.16.17 materials as SCNMaterialMBS()

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the receiver's materials array.
Notes: Each geometry element can be rendered using a different material. The index of the material used for a geometry element is equal to the index of that element modulo the number of materials.

155.16.18 materialWithName(name as string) as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Return the first material from the materials array of the receiver with the specified name.
Notes: name: The name of the material to retrieve.

155.16.19 removeMaterial(Index as Integer)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Remove the material at the specified index from the materials array.
Notes: index: The index of the material to remove from the 'materials' array.

155.16.20 replaceMaterial(Index as Integer, Material as SCNMaterialMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Remove the material at the index 'index' from the materials array of the receiver and insert 'material' in its position.
Notes:

index: The index of the material to replace in the materials array.
material: The new material that will replace the previous one.

155.16.21 setLevelsOfDetail(LevelsOfDetails() as SCNLevelOfDetailMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Sets an array of SCNLevelOfDetail objects for managing the geometry's appearance when viewed from far away.
Notes: Value can be nil to clear it.

155.16.22 setMaterials(materials() as SCNMaterialMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the materials.

155.16.23 Properties

155.16.24 edgeCreasesElement as SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The geometry element identifying which edges of the geometry's surface should remain sharp after subdivision.
Notes:

This geometry element's primitiveType value must be SCNGeometryPrimitiveTypeLine. The geometry element's data is an array of vertex indices, each pair of which defines a line segment identifying an edge to be treated as a crease during subdivision. Use the edgeCreasesSource property to specify the smoothness or sharpness of each crease.
(Read and Write property)

155.16.25 edgeCreasesSource as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The geometry source specifying the smoothness or sharpness of edges after surface subdivision.
Notes:

This geometry source's semantic value must be SCNGeometrySourceSemanticEdgeCrease. Its data is an array of scalar values (that is, the source's componentsPerVector value is 1). The value at an index in the geometry source determines the smoothness or sharpness of the edge identified by the primitive at the corresponding index in the edgeCreasesElement geometry element: a value of 0.0 specifies a completely smoothed edge, and a value of 10.0 or greater specifies an infinitely sharp edge.
(Read and Write property)

155.16.26 firstMaterial as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Determines the first material of the geometry. Returns nil if the geometry has no material.
Notes:

This method is here for convenience. It is equivalent to the first object in the "materials" array above.
(Read and Write property)

155.16.27 geometryElementCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the number of geometry elements owned by the geometry.
Notes: (Read only property)

155.16.28 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

155.16.29 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A name associated with the geometry object.
Notes:

You can provide a descriptive name for a geometry object to make managing your scene graph easier. Geometries loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the SCNSceneSourceMBS class to examine geometries in a scene file without loading its scene graph.

Geometry names are saved when you export a scene to a file using its writeToURL method. They also appear in the Xcode scene editor.
(Read and Write property)

155.16.30 subdivisionLevel as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the subdivision level of the receiver.
Notes:

Defaults to 0.
A subdivision level of 0 means no subdivision. When the ‘tessellator‘ property of the receiver is not nil, the refinement is done on the GPU.
(Read and Write property)

155.16.31 tessellator as SCNGeometryTessellatorMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies how the geometry should be tessellated at render time on the GPU.
Notes:

Defaults to nil.
(Read and Write property)

155.16.32 wantsAdaptiveSubdivision as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies if the subdivision is adaptive or uniform.
Notes:

Defaults to true.
Adaptive subdivision requires that the ‘tessellator‘ property of the receiver is not nil.
(Read and Write property)

155.17 class SCNGeometrySourceMBS

155.17.1 class SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: A container for vertex data forming part of the definition for a three-dimensional object, or geometry.
Notes:

You use geometry sources together with SCNGeometryElement objects to define custom SCNGeometry objects or to inspect the data that composes an existing geometry.

see
https://developer.apple.com/documentation/scenekit/scngeometrysource

155.17.4 Methods

155.17.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

155.17.6 geometrySourceWithData(data as MemoryBlock, Semantic as String, vectorCount as Integer, floatComponents as boolean, componentsPerVector as Integer, bytesPerComponent as Integer, dataOffset as Integer, dataStride as Integer) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a geometry source from the specified data and options.
Notes:

data: The data for the geometry source.
semantic: The semantic value (or attribute) that the geometry source describes for each vertex. See Geometry Semantic Identifiers for available values.
vectorCount: The number of geometry source vectors.
floatComponents: A Boolean value that indicates whether vector components are floating-point values. Specify true for floating-point values, or false for integer values.
componentsPerVector: The number of scalar components in each vector.
bytesPerComponent: The size, in bytes, of each vector component.
offset: The offset, in bytes, from the beginning of the data to the first vector component to be used in the geometry source.
stride: The number of bytes from each vector to the next in the data.

Returns a new geometry source object.

sA geometry source's data is an array of vectors, each of which represents a particular attribute (or semantic) of a vertex in the geometry. The other parameters determine how SceneKit interprets this data. For example, an array of vertex positions may have three 32-bit floating-point components per vector, but an array of texture coordinates may have two 8-bit integer coponents per vector. You can use the offset and stride parameters together to interleave data for multiple geometry sources in the same array, improving rendering performance. See SCNGeometrySourceMBS for details.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources method.

155.17.7 geometrySourceWithNormals(Normals() as SCNVector3MBS) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a geometry source from an array of normal vectors.
Notes:

normals: An array of three-component vectors, each of which represents a surface normal for the geometry source.

A new geometry source whose SCNGeometrySource property is SCNGeometrySourceSemanticNormal.

SceneKit converts this data to its own format to optimize rendering performance. To read the converted data, examine the properties of the created SCNGeometrySourceMBS object.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources method.
See also:

- 155.17.8 geometrySourceWithNormals(texcoord() as CGPointMBS) as SCNGeometrySourceMBS 22543

155.17.8 geometrySourceWithNormals(texcoord() as CGPointMBS) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a geometry source from an array of texture coordinate points.
Notes:

texcoord: An array of points, each of which represents a texture coordinate pair for the geometry source.

A new geometry source whose SCNGeometrySource property is SCNGeometrySourceSemanticTexcoord.

SceneKit converts this data to its own format to optimize rendering performance. To read the converted data, examine the properties of the created SCNGeometrySourceMBS object.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources:elements: method.
See also:

- 155.17.7 geometrySourceWithNormals(Normals() as SCNVector3MBS) as SCNGeometrySourceMBS 22542

155.17.9 geometrySourceWithVertices(vertices() as SCNVector3MBS) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a geometry source from an array of vertex positions.
Notes:

vertices: An array of three-component vectors, each of which represents a vertex position for the geometry source.

Returns a new geometry source whose SCNGeometrySource property is SCNGeometrySourceSemanticVertex.

SceneKit converts this data to its own format to optimize rendering performance. To read the converted data, examine the properties of the created SCNGeometrySourceMBS object.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources method.

155.17.10 SCNGeometrySourceSemanticBoneIndices as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The semantic for bone index data, used for skeletal animation of skinned surfaces.
Notes:

For a geometry source, this semantic identifies data containing skeletal animation data for each vertex in the geometry. SceneKit uses this information to determine which bone nodes in the skeleton affect the behavior of each vertex.
For a custom shader program, you use this semantic to bind SceneKit's bone index data to an input attribute of the shader.
For details on skeletal animation, see SCNSkinnerMBS.

155.17.11 SCNGeometrySourceSemanticBoneWeights as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The semantic for bone weight data, used for skeletal animation of skinned surfaces.
Notes:

For a geometry source, this semantic identifies data containing skeletal animation data for each vertex in the geometry. SceneKit uses this information to determine how much a vertex's position is influenced by the positions of bone nodes in the skeleton.
For a custom shader program, you use this semantic to bind SceneKit's bone weight data to an input attribute of the shader.
For details on skeletal animation, see SCNSkinnerMBS.

155.17.12 SCNGeometrySourceSemanticColor as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The semantic for per-vertex color data.
Notes:

For a geometry source, this semantic identifies data containing a color for each vertex in the geometry. SceneKit interpolates per-vertex colors across a surface to produce smooth shading. Per-vertex colors modulate those produced by lighting and a geometry's materials, if applicable.
For a custom shader program, you use this semantic to bind SceneKit's vertex color data to an input attribute of the shader.
Vertex color data is typically an array of three- or four-component vectors.

155.17.13 SCNGeometrySourceSemanticEdgeCrease as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The semantic for edge crease data, used for subdividing surfaces.
Notes:

For a geometry source, this semantic identifies data containing crease data for each vertex in the geometry. SceneKit uses this information to determine the sharpness of edges and smoothness of surfaces when you change a geometry's subdivisionLevel property.
For a custom shader program, you use this semantic to bind SceneKit's edge crease data to an input attribute of the shader.
Edge crease data is an array of scalar floating-point values, where each value determines the smoothness or sharpness of the edge identified by the primitive at the corresponding index in the geometry's SceneKit Constants geometry element: A value of 0.0 specifies a completely smoothed edge, and a value of 10.0 or greater specifies an infinitely sharp edge.

155.17.14 SCNGeometrySourceSemanticNormal as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The semantic for surface normal data.
Notes:

For a geometry source, this semantic identifies data containing the surface normal vector at each vertex in the geometry. SceneKit uses this information to compute lighting effects on the surface.
For a custom shader program, you use this semantic to bind SceneKit's vertex normal data to an input attribute of the shader.
Vertex normal data is typically an array of three- or four-component vectors.

155.17.15 SCNGeometrySourceSemanticTangent as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The semantic for surface tangent vector data.
Notes:

For a geometry source, this semantic identifies data containing the surface tangent vector at each vertex in the geometry. SceneKit uses this information to compute advanced lighting effects on the surface.
For a custom shader program, you use this semantic to bind SceneKit's vertex tangent data to an input attribute of the shader.
Vertex tangent data is typically an array of three- or four-component vectors.

155.17.16 SCNGeometrySourceSemanticTexcoord as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The semantic for texture coordinate data.
Notes:

For a geometry source, this semantic identifies data containing texture mapping coordinates for each vertex in the geometry. Unlike other semantics, a geometry may contain multiple sources for texture coordinates—each corresponds to a separate mappingChannel number that you can use when associating textured materials.
For a custom shader program, you use this semantic to bind SceneKit's texture coordinate data to one or more input attributes of the shader.
Texture coordinate data is typically an array of two-component vectors.

155.17.17 SCNGeometrySourceSemanticVertex as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The semantic for vertex position data.
Notes:

For a geometry source, this semantic identifies data containing the positions of each vertex in the geometry. If you create a custom geometry using the geometryWithSources method, you must provide a geometry source for this semantic.
For a custom shader program, you use this semantic to bind SceneKit's vertex position data to an input attribute of the shader.
Vertex position data is typically an array of three- or four-component vectors.

155.17.18 SCNGeometrySourceSemanticVertexCrease as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The semantic for vertex crease data, used for subdividing surfaces.
Notes:

For a geometry source, this semantic identifies data containing crease data for each vertex in the geometry. SceneKit uses this information to determine the sharpness of corners and smoothness of surfaces when you change a geometry's subdivisionLevel property.
For a custom shader program, you use this semantic to bind SceneKit's vertex crease data to an input attribute of the shader.
Vertex crease data is an array of scalar floating-point values, where each value determines the smoothness or sharpness of the corresponding vertex: A value of 0.0 specifies a completely smoothed corner, and a value of 10.0 or greater specifies an infinitely sharp point.

155.17.19 Properties

155.17.20 bytesPerComponent as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The size, in bytes, of each vector component.
Notes: (Read only property)

155.17.21 componentsPerVector as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The number of scalar components in each vector.
Notes: (Read only property)

155.17.22 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The data for the geometry source.
Notes:

A geometry source's data is an array of vectors, each of which represents a particular attribute (or semantic) of a vertex in the geometry. The other properties of the geometry source determine how SceneKit interprets this data. For example, an array of vertex positions may have three 32-bit floating-point components per vector, but an array of texture coordinates may have two 8-bit integer coponents per vector.
(Read only property)

155.17.23 dataOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The offset, in bytes, from the beginning of the data to the first vector component to be used in the geometry source.
Notes:

You can use the dataOffset and dataStride parameters can be used together to interleave data for multiple geometry sources in the same array, improving rendering performance. See SCNGeometrySourceMBS for details.
(Read only property)

155.17.24 dataStride as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The number of bytes from a vector to the next one in the data.
Notes:

You can use the dataOffset and dataStride parameters can be used together to interleave data for multiple geometry sources in the same array, improving rendering performance. See SCNGeometrySourceMBS for details.
(Read only property)

155.17.25 floatComponents as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether vector components are floating-point values.
Notes:

If true, SceneKit interprets the geometry source's data as an array of vectors whose components are floating-point values. The type of floating-point value is determined by the SCNGeometrySourceMBS property: 4 bytes for float values or 8 bytes for double values.
If false, SceneKit interprets the geometry source's data as an array of vectors whose components are integer values. The type of integer value is determined by the SCNGeometrySourceMBS property; for example, 2 bytes for unsigned short values or 4 bytes for unsigned int values.
(Read only property)

155.17.26 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

155.17.27 semantic as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The semantic value (or attribute) the geometry source describes for each vertex.
Notes:

A semantic describes an attribute for each vertex, such as position, color, surface normal vector, or texture coordinates.
See Geometry Semantic Identifiers for available values.

(Read only property)

155.17.28 vectorCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The number of vectors in the data.
Notes: (Read only property)

155.18 class SCNGeometryTessellatorMBS

155.18.1 class SCNGeometryTessellatorMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: A geometry tessellator describes how a more detailed surface is calculated from the geometry's initial surface.

155.18.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

155.18.3 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

155.18.4 Methods

155.18.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

155.18.6 copy as SCNGeometryTessellatorMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

155.18.7 Properties

155.18.8 Adaptive as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies if the tessellation should be uniform or adaptive.
Notes:

Defaults to false.
(Read and Write property)

155.18.9 edgeTessellationFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the edge tessellation factor.
Notes:

Defaults to 1.
This has no effect for adaptive subdivision.
(Read and Write property)

155.18.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

155.18.11 insideTessellationFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the inside tessellation factor.
Notes:

Defaults to 1.
This has no effect for adaptive subdivision
(Read and Write property)

155.18.12 maximumEdgeLength as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the maximum edge length.
Notes:

Defaults to 1.
This has no effect for non-adaptive subdivision
(Read and Write property)

155.18.13 ScreenSpace as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies if the level of tessellation should be adapted in screenSpace.
Notes:

Defaults to false.
(Read and Write property)

155.18.14 smoothingMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The smoothing mode.
Notes:

Defaults to SmoothingModeNone.
(Read and Write property)

155.18.15 tessellationFactorScale as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the scale factor applied to the per-patch tessellation factors.
Notes:

Defaults to 1.
(Read and Write property)

155.18.16 tessellationPartitionMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the tessellation partition mode.
Notes:

Defaults to TessellationPartitionModeInteger.

see also
https://developer.apple.com/documentation/metal/mtltessellationpartitionmode?language=objc
(Read and Write property)

155.18.17 Constants

155.18.18 SmoothingModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 19.3.

Function: One of the smoothing modes.

155.18.19 SmoothingModePhong = 2

MBS Mac64bit Plugin, Plugin Version: 19.3.

Function: One of the smoothing modes.

155.18.20 SmoothingModePNTriangles = 1

MBS Mac64bit Plugin, Plugin Version: 19.3.

Function: One of the smoothing modes.

155.18.21 TessellationPartitionModeFractionalEven = 3

MBS Mac64bit Plugin, Plugin Version: 19.3.

Function: One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
Notes: A fractional even partitioning mode.

155.18.22 TessellationPartitionModeFractionalOdd = 2

MBS Mac64bit Plugin, Plugin Version: 19.3.

Function: One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
Notes: A fractional odd partitioning mode.

155.18.23 TessellationPartitionModeInteger = 1

MBS Mac64bit Plugin, Plugin Version: 19.3.

Function: One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
Notes: An integer partitioning mode.

155.18.24 TessellationPartitionModePow2 = 0

MBS Mac64bit Plugin, Plugin Version: 19.3.

Function: One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
Notes: A power of two partitioning mode.

155.19 class SCNHitTestResultMBS

155.19.1 class SCNHitTestResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Information about the result of a scene-space or view-space search for scene elements.
Notes:

Hit-testing is the process of finding elements of a scene located at a specified point, or along a specified line segment (or ray). An SCNHitTestResult object provides details about one result from a hit-test search. There are three ways to perform a hit-test search. Use the hitTest method of an SCNViewMBS object (or other scene renderer), the hitTestWithSegment method of a node, or the rayTestWithSegment method of your scene's physics world.

When you perform a hit-test search, SceneKit looks for SCNGeometryMBS objects along the ray you specify. For each intersection between the ray and and a geometry, SceneKit creates a hit-test result to provide information about both the SCNNodeMBS object containing the geometry and the location of the intersection on the geometry's surface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

155.19.6 Methods

155.19.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

155.19.8 SCNHitTestBackFaceCullingKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An option to ignore faces not oriented toward the camera.
Notes: The value for this key is a Boolean value. The default value is true, specifying that back-facing polygons will not be returned as hit-test results.

155.19.9 SCNHitTestBoundingBoxOnlyKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An option to search for objects by bounding box only.
Notes: The value for this key is a Boolean value. The default value is false, specifying that hit-testing searches should test against node geometry. Specifying true for this option increases search performance at the expense of geometric accuracy.

155.19.10 SCNHitTestClipToZRangeKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An option to search for objects only within the depth range of the current point of view.
Notes:

The value for this key is a Boolean value. The default value is true, specifying that hit-testing searches only objects between the zNear and zFar distances of the pointOfView camera. Specify false to include objects outside this depth range in the search.
This option is valid only when hit-testing in the screen space of an SCNSceneRenderer object with the hitTest method.

155.19.11 SCNHitTestIgnoreChildNodesKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An option to ignore child nodes when searching.
Notes: The value for this key is a Boolean value. The default value is false, specifying that hit-testing may return objects from any portion of the node hierarchy. Specify true to search only the node specified by the SCNHitTestRootNodeKey key.

155.19.12 SCNHitTestIgnoreHiddenNodesKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An option to ignore hidden nodes when searching.
Notes: The value for this key is a Boolean value. The default value is true, specifying that hit-testing should not return nodes whose hidden property value is true. Specify false to search nodes regardless of their visibility.

155.19.13 SCNHitTestOptionCategoryBitMask as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An option to search only for objects matching a specified bitmask.
Notes: The value for this key is an integer value. If present, the search will return only nodes that both satisfy the hit test and have a categoryBitMask value overlapping this bitmask.

155.19.14 SCNHitTestOptionSearchMode as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An option for the number and order of hit test results to provide.
Notes: The value for this key is an raw integer value of an SCNHitTestSearchMode constant.

155.19.15 SCNHitTestRootNodeKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The root of the node hierarchy to be searched.
Notes: The value for this key is an SCNNodeMBS object. Hit-testing searches only the child node hierarchy under this node. When hit-testing takes place in the screen space of an SCNSceneRenderer object with the hitTest() method, the default value is the presented scene's root node. When hit-testing is in a node using its hitTestWithSegment(), the default value is the node.

155.19.16 Properties

155.19.17 boneNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The hit bone.
Notes:

Only available if the node hit has a SCNSkinnerMBS attached.
(Read only property)

155.19.18 faceIndex as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The index of the primitive in the geometry element intersected by the search ray.
Notes: (Read only property)

155.19.19 geometryIndex as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The index of the geometry element whose surface the search ray intersects.
Notes:

Every SCNGeometryMBS object contains one or more SCNGeometryElementMBS objects that define how its vertices connect to form a surface. This property provides the index of the geometry element intersecting the search ray. For more information about that geometry element, use the geometry's geometryElementAtIndex method.
(Read only property)

155.19.20 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

155.19.21 localCoordinates as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The point of intersection between the geometry and the search ray, in the local coordinate system of the node containing the geometry.
Notes: (Read only property)

155.19.22 localNormal as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The surface normal vector at the point of intersection, in the local coordinate system of the node containing the geometry intersected by the search ray.
Notes: (Read only property)

155.19.23 modelTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The world transform matrix of the node containing the intersection.
Notes:

Use this matrix to transform vectors from the local coordinate space of the node whose geometry is intersected by the search ray to the scene's world coordinate system.
(Read only property)

155.19.24 node as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The node whose geometry intersects the search ray.
Notes: (Read only property)

155.19.25 worldCoordinates as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The point of intersection between the geometry and the search ray, in the scene's world coordinate system.
Notes: (Read only property)

155.19.26 worldNormal as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The surface normal vector at the point of intersection, in the scene's world coordinate system.
Notes: (Read only property)

155.19.27 Constants

155.19.28 SCNHitTestSearchModeAll = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the possible values for the SCNHitTestOptionSearchMode option used with hit-testing methods.
Notes: The hit test should return all possible results, sorted from nearest to farthest.

155.19.29 SCNHitTestSearchModeAny = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the possible values for the SCNHitTestOptionSearchMode option used with hit-testing methods.
Notes: The hit test should return only the first object found, regardless of distance.

155.19.30 SCNHitTestSearchModeClosest = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the possible values for the SCNHitTestOptionSearchMode option used with hit-testing methods.
Notes: The hit test should return only the closes object found.

155.20 class SCNIKConstraintMBS

155.20.1 class SCNIKConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A constraint that applies inverse kinematics to make a chain of nodes "reach" toward a target point.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnikconstraint
Subclass of the SCNConstraintMBS class.

155.20.4 Methods

155.20.5 Constructor(chainRootNode as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNIKConstraint object with the specified parameter.
Notes:

chainRootNode The root node of the kinematic chain.
"chainRootNode" must be an ancestor of the node on which the constraint is applied.

155.20.6 inverseKinematicsConstraintWithChainRootNode(chainRootNode as SCNNodeMBS) as SCNIKConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNIKConstraint object with the specified parameter.
Notes:

chainRootNode The root node of the kinematic chain.
”chainRootNode” must be an ancestor of the node on which the constraint is applied.

155.20.7 Properties

155.20.8 chainRootNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the root node of the kinematic chain.
Notes: (Read only property)

155.20.9 targetPosition as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the target position (in world space coordinates) of the end joint (i.e the node that owns the IK constraint).
Notes:

Defaults to (0,0,0). Animatable.
(Read and Write property)

155.21 control SCNIOSControlMBS

155.21.1 control SCNIOSControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The Xojo control for a SCNViewMBS.
Notes:

This control embeds a special SCNView subclass.
Designed for Xojo 2020r2 and newer.
Please use view property to access the underlaying object and set properties.

To learn about rendering events, please check here:
https://developer.apple.com/documentation/scenekit/scnscenerendererdelegate?language=objc

155.21.6 Properties

155.21.7 View as SCNViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

155.21.8 Events

155.21.9 GotFocus

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

155.21.10 LostFocus

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

155.21.11 rendererDidApplyAnimations(time as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control to perform any updates that need to occur after actions and animations are evaluated.
Notes:

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this method exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this method to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to "batch" your changes).

155.21.12 rendererDidApplyConstraints(time as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked on the control once the scene renderer did apply the constraints.
Notes:

time The time at which the constraints were simulated.

All modifications done within this method don't go through the transaction model, they are directly applied on the presentation tree.

155.21.13 rendererDidRenderScene(scene as SCNSceneMBS, time as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that the renderer has cleared the viewport and is about to render the scene.
Notes:

scene: The SCNSceneMBS object to be rendered.
time: The current system time, in seconds. If your custom rendering involves animation, use this parameter to compute your own animation state.

Implement this event to perform custom drawing before SceneKit renders a scene—for example, to draw backdrop content underneath SceneKit content. You should only execute Metal or OpenGL drawing commands (and any setup required to perform them) in this event—the results of modifying SceneKit objects during this event are undefined.

To render using Metal, use the renderer parameter to retrieve the scene renderer's currentRenderCommandEncoder object and encode your own drawing commands. If you need to reference other Metal state, see the properties listed in SCNSceneRenderer.
To render using OpenGL, simply call the relevant OpenGL drawing commands—SceneKit automatically makes its OpenGL context the current context before calling this event. If you need to reference the OpenGL context being rendered into, examine the context property of the renderer parameter.

You must draw using the appropriate graphics technology for the view currently being rendered. Use the renderingAPI property of the renderer object to determine whether Metal or OpenGL is in use.

155.21.14 rendererDidSimulatePhysics(time as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control to perform any updates that need to occur after physics simulations are performed.
Notes:

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this event exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this event to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to "batch" your changes).

This event is the last opportunity SceneKit provides for you to change the scene graph before rendering.

155.21.15 rendererUpdate(time as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control to perform any updates that need to occur before actions, animations, and physics are evaluated.
Notes:

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this method exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this event to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to "batch" your changes).

155.21.16 rendererWillRenderScene(scene as SCNSceneMBS, time as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that the renderer has rendered the scene.
Notes:

scene: The scene object that was rendered.
time: The current system time, in seconds. If your custom rendering involves animation, use this parameter to compute your own animation state.

Implement this method to perform custom drawing after SceneKit has rendered a scene—for example, to draw overlay content on top of SceneKit content. You should only execute Metal or OpenGL drawing commands (and any setup required to perform them) in this method—the results of modifying SceneKit objects in this method are undefined.

- To render using Metal, use the renderer parameter to retrieve the scene renderer's currentRenderCommandEncoder object and encode your own drawing commands. If you need to reference other Metal state, see the properties listed in SCNSceneRenderer.
- To render using OpenGL, simply call the relevant OpenGL drawing commands—SceneKit automatically makes its OpenGL context the current context before calling this method. If you need to reference the OpenGL context being rendered into, examine the context property of the renderer parameter.

You must draw using the appropriate graphics technology for the view currently being rendered. Use the renderingAPI property of the renderer object to determine whether Metal or OpenGL is in use.

155.22 class SCNLevelOfDetailMBS

155.22.1 class SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: An alternate resolution for a geometry that SceneKit automatically substitutes to improve rendering performance.
Notes:

You use level-of-detail objects when you have a detailed geometry that appears at several apparent sizes in a scene. For example, the teapot model on the the left in the figure below has 256 polygons, the model at center has 1024 polygons, and the model on the right has 14,400 polygons. If all three models appear close to the camera, filling most of the rendered view, the difference in detail between them is clearly visible—but if they appear far away, taking up a small area of the view, the difference is much less obvious. Rendering higher-resolution geometries incurs a higher performance cost.

When you associate one or more level-of-detail objects with a SCNGeometryMBS object using its levelsOfDetail property, SceneKit automatically substitutes alternate geometries when appropriate. For example, the two lower-resolution teapot models seen above can be added as levels of detail for the high-resolution model. For each level of detail, you specify either a world-space distance or a screen-space radius. The measure you specify determines the threshold where SceneKit automatically renders that level of detail's alternate geometry instead of the original geometry. If you specify a distance, the alternate geometry appears when the node containing the geometry is moved that distance away from the camera. If you specify a radius, the alternate geometry appears when the pixel area covered by the rendered by the geometry is smaller than a circle of that radius.
The geometries associated with lower levels of detail need not share all attributes of the original geometry. For example, you can use different materials for levels of detail that only appear when far away from the camera, disabling expensive features such as per-pixel lighting, reflection mapping, or custom shader programs.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

155.22.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

155.22.3 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

155.22.4 Methods

155.22.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

155.22.6 copy as SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

155.22.7 levelOfDetailWithGeometryAndScreenSpaceRadius(geo as SCNGeometryMBS, screenSpaceRadius as Double) as SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a level of detail with the specified geometry and threshold pixel radius.
Notes:

geometry: The geometry to render for this level of detail.
radius: The maximum radius (in pixels) of the geometry's bounding sphere for this level of detail to appear.

Returns a level-of-detail object. You associate levels of detail with a SCNGeometry object using its levelsOfDetail property.

When rendering a geometry with associated levels of detail, SceneKit calculates the radius in pixels of the circle covered by a geometry's bounding sphere, then renders the geometry for the SCNLevelOfDetail object with the largest radius parameter smaller than that circle.
If you pass nil for the geometry parameter, SceneKit renders no geometry for the level of detail. Creating a level-of-detail object with no geometry allows you to skip rendering costs entirely for an object when it would appear very far away or very small.

155.22.8 levelOfDetailWithGeometryAndWorldSpaceDistance(geo as SCNGeometryMBS, worldSpaceDistance as Double) as SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a level of detail with the specified geometry and threshold camera distance.
Notes:

geometry: The geometry to render for this level of detail, or nil if SceneKit should render no geometry at this level of detail.
distance: The minimum distance from the current point of view for this level of detail to appear.

Returns a level-of-detail object. You associate levels of detail with a SCNGeometry object using its levelsOfDetail property.

When rendering a geometry with associated levels of detail, SceneKit calculates the distance from the current point of view to the geometry's parent node, then renders the geometry for the SCNLevelOfDetail object with the smallest distance parameter greater than that distance.
If you pass nil for the geometry parameter, SceneKit renders no geometry for the level of detail. Creating a level-of-detail object with no geometry allows you to skip rendering costs entirely for an object when it would appear very far away or very small.

155.22.9 Properties

155.22.10 geometry as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The geometry associated with this level of detail.
Notes:

SceneKit renders this geometry instead of the original geometry when the level of detail is appropriate. Generally, levels of detail with larger worldSpaceDistance values or smaller screenSpaceRadius values should contain less complex geometries.
If the value of this property is nil, SceneKit renders no geometry at this level of detail.
(Read only property)

155.22.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object handle.
Notes: (Read and Write property)

155.22.12 screenSpaceRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum radius (in pixels) of the geometry's bounding sphere for this level of detail to appear.

Notes:

When rendering a geometry with associated levels of detail, SceneKit calculates the radius in pixels of the circle covered by a geometry's bounding sphere, then renders the geometry for the SCNLevelOfDetail object with the smallest radius parameter larger than that circle.
(Read only property)

155.22.13 worldSpaceDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum distance from the current point of view for this level of detail to appear.
Notes:

When rendering a geometry with associated levels of detail, SceneKit calculates the distance from the current point of view to the geometry's parent node, then renders the geometry for the SCNLevelOfDetailMBS object with the largest distance parameter less than that distance.
(Read only property)

155.23 class SCNLightMBS

155.23.1 class SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A light source that can be attached to a node to illuminate the scene.
Notes:

You illuminate your scene by attaching lights to SCNNode objects using their light property.

You set a light's type using its type property. Depending on a light's type, its position and direction may affect its behavior—you control the light's position and direction through the node that the light is attached to. The direction of a light, if applicable to its type, is along the negative z-axis of its node's local coordinate system.

A light's other properties affect how it illuminates a scene. All lights have a color property, which interacts with SCNMaterial objects to produce the pixel colors in a rendered scene. Other properties, such as attenuation, shadowing, and spot angle, can affect the behavior of certain types of lights.

The number and type of lights in a scene is a key factor in SceneKit's rendering performance. For efficient rendering, follow these tips:

- Use SceneKit lights only for dynamic light sources or lights that affect moving objects. For statically lit portions of your scene, create a light map texture in an external 3D authoring tool (also known as baked lighting) and apply it to objects in the scene using the multiply material property.
- Minimize the number of lights on each element of the scene. You can achieve most common lighting effects using no more than three lights, and you only need a single ambient light source. SceneKit only uses up to eight light sources per node when rendering, ignoring any additional lights. If you set the attenuationEndDistance property on a spotlight or omnidirectional light to limit its area of effect, SceneKit ignores the light (and its performance cost) when rendering objects outside that area. You can also use the categoryBitMask property to choose which nodes are illuminated by a light.

Requires MacOS 10.8 or newer.

155.23.2 Blog Entries

- Basic Forms in MBS Xojo SceneKit Plugin

155.23.3 Blog Entries

- Basic Forms in MBS Xojo SceneKit Plugin
- MBS Xojo Plugins, version 18.5pr3

155.23.4 Methods

155.23.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new light object.

155.23.6 copy as SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the light.

155.23.7 light as SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new light object.

155.23.8 SCNLightTypeAmbient as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A light that illuminates all objects in the scene from all directions.
Notes: Because the intensity of light from an ambient source is the same everywhere in the scene, its position and direction have no effect. Attenuation, spotlight angle, and shadow attributes do not apply to ambient lights.

155.23.9 SCNLightTypeDirectional as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A light source with a uniform direction and constant intensity.
Notes: Because a directional light illuminates all objects in the scene from the same direction and with

the same intensity, so the position of the node containing the light has no effect. Attenuation and spotlight angle attributes do not apply to directional lights.

155.23.10 SCNLightTypeIES as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A light source whose shape, direction, and intensity of illumination is determined by a photometric profile.
Notes:

The intensity of a photometric light varies in different directions from the light source, much like the illumination from a real-world light source. The position of the containing node determines the location of the light source, and the orientation of the node determines the relative directions specified by the photometric profile. Spotlight angle attributes do not apply to photometric lights.
For more information about photometric lights, see the IESProfileURL property.

155.23.11 SCNLightTypeOmni as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: An omnidirectional light, also known as a point light.
Notes: Because an omnidirectional light casts equal illumination in all directions, the orientation of the node containing the light has no effect. Spotlight angle and shadow attributes do not apply to directional lights.

155.23.12 SCNLightTypeProbe as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A sample of the environment around a point in a scene to be used in environment-based lighting.
Notes:

A light probe describes a point in a scene in terms of the variations in color and intensity of the illumination it receives from all directions. This information can then be used in shading of materials based on their location in the scene. For example, a white object placed near blue and red walls will appear bluish on surfaces facing the blue wall and reddish on surfaces facing the red wall.
You can place light probes in a scene and generate their lighting contributions using the Xcode scene editor, or import light probes from scene file formats that support them. Lighting-related properties of the SCNLight class do not apply to light probes; their contribution to scene rendering depends entirely on the light probe content generated in Xcode.

155.23.13 SCNLightTypeSpot as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A light source that illuminates a cone-shaped area.
Notes: The position and orientation of the node containing the light determines the area lit by the spotlight, and all lighting attributes affect its appearance.

155.23.14 Properties

155.23.15 attenuationEndDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The distance from the light at which its intensity is completely diminished. Animatable.
Notes:

You can apply attenuation to omnidirectional lights and spotlights, causing their intensity to diminish over a specified range of distances. At distances less than the start distance, the light's illumination is at full intensity. At distances greater than the end distance, the light provides no illumination. At distances in between the start and end distance, the attenuationFalloffExponent property defines the transition from full illumination to no illumination.
The default value is 0.0, specifying no attenuation (the light's intensity is the same at all distances).
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.23.16 attenuationFalloffExponent as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The transition curve for the light's intensity between its attenuation start and end distances. Animatable.
Notes:

You can apply attenuation to omnidirectional lights and spotlights, causing their intensity to diminish over a specified range of distances. At distances in between the start and end distance, the light's intensity transitions from full to no illumination according to the value of this property.
A value of 0.0 specifies no attenuation—the light's intensity is the same at all distances. A value of 1.0 specifies a linear transition, and a value of 2.0 (the default) specifies a quadratic transition curve. Higher values have little visible effect.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.23.17 attenuationStartDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The distance from the light at which its intensity begins to diminish. Animatable.
Notes:

You can apply attenuation to omnidirectional lights and spotlights, causing their intensity to diminish over a specified range of distances. At distances less than the start distance, the light's illumination is at full intensity. At distances greater than the end distance, the light provides no illumination. At distances in between the start and end distance, the attenuationFalloffExponent property defines the transition from full illumination to no illumination.
The default value is 0.0, specifying no attenuation (the light's intensity is the same at all distances).
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.23.18 automaticallyAdjustsShadowProjection as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies if the shadow map projection should be done automatically or manually by the user.
Notes:

Defaults to true.
(Read and Write property)

155.23.19 CastsShadow as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the light casts shadows.
Notes:

Geometries illuminated by the light cast shadows only if the value of this property is true and the type property of the light is SCNLightTypeSpot or SCNLightTypeDirectional. The default value is false.
(Read and Write property)

155.23.20 Color as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The color of the light. Animatable.
Notes:

The value of this property is an NSColorMBS object. The default color is white.

You can animate changes to this property's value.

See Animating SceneKit Content:
https://developer.apple.com/documentation/scenekit/animation/animating_scenekit_content
(Read and Write property)

155.23.21 ForcesBackFaceCasters as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

155.23.22 gobo as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An image or other visual content affecting the shape and color of a light's illuminated area.
Notes:

In photographic and stage lighting terminology, a gobo (also known as a flag or cookie) is a stencil, gel, or other object placed just in front of a light source, shaping or coloring the beam of light.
You alter the appearance of a spotlight by changing the contents property of the object permanently assigned to this property. As with other material properties, you can use a color or image, or a Core Animation layer containing animated content, as a lighting gobo.
This property applies only to lights whose type property is spot.
(Read only property)

155.23.23 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

155.23.24 Intensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The luminous flux, in lumens, or total brightness of the light. Animatable.
Notes:

When working with photometric lights (see the IESProfileURL property) or physically-based rendering (see SCNLightingModelPhysicallyBased), you can leave the color property at its default white color and use the intensity and temperature to control the light using realistic parameters. When working with physically-based materials, this value the luminous flux of the light source. The default value is 1000 lumens.
When not using physically-based rendering, this value (divided by 1000) serves as a multiplier for the the color property. The default value of of 1000 leaves the light color unmodulated; you can use higher values, for example, to brighten a light whose color is already the maximum red value.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.23.25 maximumShadowDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the maximum distance from the viewpoint from which the shadows for the receiver light won't be computed.
Notes:

Defaults to 100.0.
(Read and Write property)

155.23.26 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A name associated with the light.
Notes:

You can provide a descriptive name for a light to make managing your scene graph easier. Lights loaded from a scene file may have names assigned by an artist using a 3D authoring tool. To examine lights in a scene file without loading its scene graph, use the SCNSceneSourceMBS class.
(Read and Write property)

155.23.27 OrthographicScale as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The orthographic scale SceneKit uses when rendering the shadow map for a directional light.
Notes:

SceneKit draws a shadow map image by rendering the scene from the point of view of the node containing the light. Directional lights ignore the position property of the node containing them because their light has a constant direction. Therefore, rendering a shadow map for a directional light requires an orthographic projection. Like the orthographicScale property of a camera object, this property specifies the extent of the

scene "visible to" the light when rendering the shadow map.
This property applies only if the light's type property is SCNLightTypeDirectional.
(Read and Write property)

155.23.28 SampleDistributedShadowMaps as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Use the sample distribution of the main rendering to better fit the shadow frusta.
Notes:

Defaults to false.
(Read and Write property)

155.23.29 ShadowBias as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of correction to apply to the shadow to prevent rendering artifacts.
Notes:

Rendering shadows from a shadow map can result in artifacts where the shadow color does not appear on all pixels in a shadowed surface as intended. (This effect is typically called shadow acne.) This property specifies the error margin SceneKit uses to correct such artifacts.
The default value is 1.0.
(Read and Write property)

155.23.30 ShadowCascadeCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the number of distinct shadow maps that will be computed for the receiver light.
Notes:

Defaults to 1. Maximum is 4.
(Read and Write property)

155.23.31 ShadowCascadeSplittingFactor as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies a factor to interpolate between linear splitting (0) and logarithmic splitting (1).
Notes:

Defaults to 0.15.
(Read and Write property)

155.23.32 shadowColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The color of shadows cast by the light. Animatable.
Notes:

The value of this property is an NSColorMBS object. SceneKit blends the light's color with other colors in the rendered image to produce a shadow effect. The color's opacity (alpha value) determines the intensity of the shadows. The default shadow color is black with 50% opacity.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.23.33 ShadowMode as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The mode SceneKit uses to render shadows.
Notes:

The default mode is SCNShadowModeForward in iOS and in macOS 10.10 or later. In OS X v10.9 or earlier, the default mode is SCNShadowModeDeferred.
(Read and Write property)

155.23.34 ShadowRadius as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A number that specifies the amount of blurring around the edges of shadows cast by the light. Animatable.
Notes:

SceneKit produces soft-edged shadows by rendering the silhouettes of geometry into a 2D shadow map and then using several weighted samples from the shadow map to determine the strength of the shadow at each pixel in the rendered scene. This property controls the radius of shadow map sampling. Lower numbers result in shadows with sharply defined, pixelated edges; higher numbers result in blurry shadows.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.23.35 ShadowSampleCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The number of samples from the shadow map that SceneKit uses to render each pixel.
Notes:

SceneKit produces soft-edged shadows by rendering the silhouettes of scene geometry into a 2D shadow map and then using several weighted samples from the shadow map to determine the strength of the shadow at each pixel in the rendered scene. This property controls the number of samples from the shadow map used to render each pixel. Higher numbers result in smoother edges; lower numbers increase rendering performance. The default value is 16 in macOS and 1 on iOS.
(Read and Write property)

155.23.36 spotInnerAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The angle, in degrees, of the area fully lit by a spotlight. Animatable.
Notes:

You define the cone-shaped illuminated area of a spotlight with a position and direction (from the node containing the light) and an angle specifying the cone's width. Additionally, the illuminated area can smoothly transition from full illumination to no illumination. This property determines the width of the fully illuminated area.
The default value is 0.0, specifying that only the center of the area illuminated by the spotlight is lit at full intensity.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.23.37 spotOuterAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The angle, in degrees, of the area partially lit by a spotlight. Animatable.
Notes:

You define the cone-shaped illuminated area of a spotlight with a position and direction (from the node containing the light) and with an angle specifying the cone's width. Additionally, the illuminated area can smoothly transition from full illumination to no illumination. This property determines the width of the transition area.
The default value is 45.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.23.38 Temperature as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The color temperature, in degrees Kelvin, of the light source. Animatable.
Notes:

SceneKit determines the actual color of the light by multiplying the color value by a color corresponding to the light's temperature. The default value of 6500 K represents a pure white light (leaving the color unmodulated); lower values (down to a minimum of zero) add a "warmer" yellow or orange effect to the light source, and higher values (up to a maximum of 40000) add a "cooler" blue effect.
This property affects all light types, but is especially useful when working with photometric lights (see the IESProfileURL property) or physically-based rendering (see SCNLightingModelPhysicallyBased). You can leave the color property at its default white color and use the intensity and temperature properties to control the light using realistic parameters.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.23.39 Type as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: A constant identifying the general behavior of the light.
Notes:

A light's type determines the shape and directionality of illumination provided by the light, as well as the set of attributes available for modifying the light's behavior. For example, light types include omnidirectional lights and spotlights. See Light Types for the full set of types and their behaviors.

see also
https://developer.apple.com/documentation/scenekit/scnlighttype
(Read and Write property)

155.23.40 zFar as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum distance between the light and a visible surface for casting shadows.
Notes:

A spotlight casts shadows if its castsShadow property is true. If a surface is farther from the light than this distance, shadows are not cast against the surface.
The default value is 100.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.23.41 zNear as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum distance between the light and a visible surface for casting shadows. Animatable.
Notes:

A spotlight casts shadows if its castsShadow property is true. If a surface is closer to the light than this distance, shadows are not cast against the surface.
The default value is 1.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.23.42 Constants

155.23.43 kShadowModeDeferred = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the shadow modes.
Notes:

SceneKit renders shadows in a postprocessing pass.
In the mode, SceneKit blends shadows into the final image after the main rendering pass, so shadows can be of any color.

155.23.44 kShadowModeForward = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the shadow modes.
Notes:

SceneKit renders shadows during lighting computations.
In this mode, the color components of the light's shadowColor property do not apply. The color's alpha component determines the intensity of shadows.

155.23.45 kShadowModeModulated = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the shadow modes.
Notes:

SceneKit renders shadows by projecting the light's gobo image. The light does not illuminate the scene.

Typically, you use this mode to create a low-accuracy, high-performance shadow under a game character or similar scene element: Use an image of a radial gradient (black to white) for the light's gobo property, and use categoryBitMask properties to prevent the shadow image from appearing on the character.

155.24 class SCNLookAtConstraintMBS

155.24.1 class SCNLookAtConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A SCNLookAtConstraint applies on a node's orientation so that it always look at another node.
Notes: Subclass of the SCNConstraintMBS class.

155.24.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

155.24.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

155.24.4 Methods

155.24.5 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNLookAtConstraint object with the specified target.
Notes: target: The target node to look at.

155.24.6 lookAtConstraintWithTarget(target as SCNNodeMBS) as SCNLookAtConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNLookAtConstraint object with the specified target.
Notes: target: The target node to look at.

155.24.7 Properties

155.24.8 gimbalLockEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies whether the receiver enables the gimbal lock. Defaults to false.
Notes:

Enabling the gimbal lock prevents the receiver from rotating the constrained node around to roll axis.
(Read and Write property)

155.24.9 localFront as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Front direction in the constraint owner local space. Defaults to - [SCNNode localFront] . Animatable
Notes: (Read and Write property)

155.24.10 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines the target node to look at.
Notes: (Read and Write property)

155.24.11 targetOffset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Offset look at position in target space. Defaults to zero. Animatable
Notes: (Read and Write property)

155.24.12 worldUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Up reference direction in world space. Defaults to - [SCNNode localUp] . Animatable
Notes: (Read and Write property)

155.25 class SCNMaterialMBS

155.25.1 class SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A set of shading attributes that define the appearance of a geometry's surface when rendered.
Notes:

When you create a material, you define a collection of visual attributes and their options, which you can then reuse for multiple geometries in a scene.

A material has several visual properties, each of which defines a different part of SceneKit's lighting and shading process. Each visual property is an instance of the SCNMaterialPropertyMBS class that provides a solid color, texture, or other 2D content for that aspect of SceneKit's rendering. The material's lightingModelName property then determines the formula SceneKit uses to combine the visual properties with the lights in the scene to produce the final color for each pixel in the rendered scene. For more details on the rendering process, see SCNLightingModelMBS.

You attach one or more materials to an instance of the SCNGeometryMBS class using its firstMaterial or materials property. Multiple geometries can reference the same material. In this case, changing the attributes of the material changes the appearance of every geometry that uses it.

155.25.4 Methods

155.25.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new material.

155.25.6 copy as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the material.

155.25.7 material as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new material object.
Notes: A newly created material contains an SCNMaterialPropertyMBS object for each of its eight visual properties. You change a material's appearance by setting the contents of each visual property. For information on each visual property's default contents and how it affects a material's appearance, see Visual Properties for Special Effects.

155.25.8 SCNLightingModelBlinn as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Shading that incorporates ambient, diffuse, and specular properties, where specular highlights are calculated using the Blinn-Phong formula.
Notes:

see
https://developer.apple.com/documentation/scenekit/scnlightingmodelblinn

155.25.9 SCNLightingModelConstant as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Uniform shading that incorporates ambient lighting only.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodelconstant

155.25.10 SCNLightingModelLambert as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Shading that incorporates ambient and diffuse properties only.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodellambert

155.25.11 SCNLightingModelPhong as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Shading that incorporates ambient, diffuse, and specular properties, where specular highlights are calculated using the Phong formula.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodelphong

155.25.12 SCNLightingModelPhysicallyBased as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Shading based on a realistic abstraction of physical lights and materials.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodelphysicallybased

155.25.13 Properties

155.25.14 ambient as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that manages the material's response to ambient lighting.
Notes:

The ambient property specifies the amount of ambient light to reflect. This property has no visual impact on scenes that have no ambient light. Setting the ambient has no effect if locksAmbientWithDiffuse is set to true.
(Read only property)

155.25.15 ambientOcclusion as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that provides color values to be multiplied with the ambient light affecting the material.
Notes:

Use this property to assign an ambient occlusion texture map to a surface. This property has no effect if there is no ambient light in the scene. If this property is not nil, SceneKit ignores the ambient property. When using physically-based shading (see SCNLightingModelPhysicallyBased), ambient occlusion approximates large-scale surface details that obscure global illumination.
(Read only property)

155.25.16 blendMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The mode that determines how pixel colors rendered using this material blend with other pixel colors in the rendering target.
Notes:

With the default blend mode of SCNBlendModeAlpha, materials blend according to their alpha (opacity) values—a pixel rendered with a higher alpha value appears more opaque than one with a lower alpha value. Change this property to create special effects. For example, the SCNBlendModeAdd mode can make objects appear to glow.
(Read and Write property)

155.25.17 colorBufferWriteMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Determines whether the receiver writes to the color buffer when rendered.
Notes:

Defaults to SCNColorMaskAll.
(Read and Write property)

155.25.18 cullMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The mode determining which faces of a surface SceneKit renders. Animatable.
Notes:

The vertex data and normal vectors in a geometry designate which side of each polygon is to be considered

its front face, and the geometry's orientation with respect to the camera determines which front surfaces are currently visible. Typically, back-facing surfaces are found only on the interior of a closed geometry, obscured by front-facing surfaces, so rendering these surfaces has a performance cost but no visible effect.
This property's default value is SCNCullBack, specifying that SceneKit should cull, or not render, back-facing surfaces. You can change this property's value to cause SceneKit to render only the back surfaces of a material instead. See SCNCullMode for available values.
You can animate changes to this property's value. See Animating SceneKit Content. Animating this property fades between the results of rendering with each state
(Read and Write property)

155.25.19 diffuse as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that manages the material's diffuse response to lighting.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnmaterial/1462589-diffuse
(Read only property)

155.25.20 displacement as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The displacement property specifies how vertex are translated in tangent space.
Notes:

Pass a grayscale image for a simple 'elevation' or rgb image for a vector displacement.
(Read only property)

155.25.21 DoubleSided as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether SceneKit should render both front and back faces of a surface. Animatable.
Notes:

When this property's value is false (the default), SceneKit renders a surface using the material from one side. The vertex data and normal vectors in a geometry designate which side of each polygon is to be considered its front face, and the geometry's orientation with respect to the camera determines which front surfaces are currently visible.
If you change this property's value to true, SceneKit renders both the front and back surfaces of every poly-

gon. SceneKit assumes the surface normals a back face to be the negative of the front face's normal vector. You can animate changes to this property's value. See Animating SceneKit Content. Animating this property fades between the results of rendering with each state
(Read and Write property)

155.25.22 emission as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that defines the color emitted by each point on a surface.
Notes:

The emission property specifies the amount of light the material emits. This emission does not light up other surfaces in the scene.
(Read only property)

155.25.23 fillMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Determines of to how to rasterize the receiver's primitives.
Notes:

Defaults to SCNFillModeFill.
(Read and Write property)

155.25.24 fresnelExponent as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A factor affecting the material's reflectivity. Animatable.
Notes:

The Fresnel exponent of a material interacts with its reflective property to determine the intensity of reflections in a surface based on its angle relative to the viewer. A higher Fresnel exponent increases the visibility of reflections when the material is viewed from a shallow angle.
(Read and Write property)

155.25.25 lightingModelName as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The lighting formula that SceneKit uses to render the material.
Notes:

SceneKit provides several different lighting models, each of which combines information from a material's visual properties with the lights and other contents of a scene. For details on how each lighting model affects rendering, see Lighting Models. For details on the contribution from each visual property, see Visual Properties for Special Effects.
(Read and Write property)

155.25.26 LitPerPixel as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether SceneKit performs lighting calculations per vertex or per pixel. Animatable.
Notes:

When this property's value is true (the default), SceneKit performs lighting calculations independently for each rendered pixel. This approach provides better rendering quality, but can adversely impact rendering performance.
If you change this property's value to false, SceneKit performs lighting calculations for each vertex in a geometry, and allows the GPU to interpolate lighting results across the pixels in between vertices. Depending on the shape and vertex count of a geometry's surface and the material properties being rendered, this approach may improve rendering performance without much noticeable impact on visual quality.
You can animate changes to this property's value. See Animating SceneKit Content. Animating this property fades between the results of rendering with each state.
(Read and Write property)

155.25.27 locksAmbientWithDiffuse as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the material responds identically to both ambient and diffuse lighting. Animatable.
Notes:

Makes the ambient property automatically match the diffuse property. Defaults to false on 10.9 and before, defaults to true otherwise. Animatable.
(Read and Write property)

155.25.28 metalness as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that provides color values to determine how metallic the material's surface appears.
Notes:

This property measures only the total intensity of color values; texture contents are best defined in grayscale. This property generally approximates aspects of a physical surface—such as index of refraction, tendency to produce sharp reflections, and tendency to produce Fresnel reflections at grazing angles—that together produce an overall metallic or nonmetallic (also called dielectric) appearance. Lower values (darker colors) cause the material to appear more like a dielectric surface. Higher values (brighter colors) cause the surface to appear more metallic.
This property applies only when the material's lightingModelName value is SCNLightingModelPhysically-Based.
(Read only property)

155.25.29 multiply as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that provides color values that are multiplied with pixels in a material after all other shading is complete.
Notes:

The multiply property specifies a color or an image used to multiply the output fragments with. The computed fragments are multiplied with the multiply value to produce the final fragments. This property may be used for shadow maps, to fade out or tint 3d objects.
(Read only property)

155.25.30 name as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A name associated with the material.
Notes:

You can provide a descriptive name for a material to make managing your scene graph easier. Materials loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the SCNSceneSourceMBS class to examine materials in a scene file without loading its scene graph.

Material names are saved when you export a scene to a file using its writeToURL method, and appear in the Xcode scene editor.
(Read and Write property)

155.25.31 normal as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that defines the nominal orientation of the surface at each point for use in lighting.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnmaterial/1462542-normal
(Read only property)

155.25.32 readsFromDepthBuffer as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Determines whether the receiver reads from the depth buffer when rendered.
Notes:

Defaults to true.
(Read and Write property)

155.25.33 reflective as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that defines the reflected color for each point on a surface.
Notes:

The reflective property specifies the reflectivity of the surface. The surface will not actually reflect other objects in the scene. This property may be used as a sphere mapping to reflect a precomputed environment.
(Read only property)

155.25.34 roughness as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that provides color values to determine the apparent smoothness of the surface.
Notes:

This property measures only the total intensity of color values; texture contents are best defined in grayscale. This property approximates the level of microscopic detail—for example tiny bumps and cracks—in a surface. By approximating these "microfacets" as a single term, this property helps produce lighting calculations that resemble the energy-conserving laws of real-world physics, resulting in more realistic variation between matte and shiny surfaces. Lower values (darker colors) cause the material to appear shiny, with well-defined specular highlights. Higher values (brighter colors) cause specular highlights to spread out and the diffuse

color of the material to become more retroreflective.
This property applies only when the material's lightingModelName value is SCNLightingModelPhysically-Based.
(Read only property)

155.25.35 selfIllumination as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that provides color values representing the global illumination of the surface.
Notes:

Self-illumination applies to all materials, but is especially useful for those using physically-based shading (see SCNLightingModelPhysicallyBased). Physically-based materials work best with environment-based lighting (see the SCNSceneMBS property lightingEnvironment), but for some materials it can be useful to let a surface itself define part of its lighting—for example, an object whose position obscures it from the "sky" that provides the main lighting environment. When you assign contents to this property, they override the environmental lighting contribution to diffuse shading, but environmental lighting still contributes to specular effects.
(Read only property)

155.25.36 shininess as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The sharpness of specular highlights. Animatable.
Notes:

The shininess of a material interacts with its specular property and the lighting in a scene to produce bright highlights on a surface. A higher value produces more sharply defined highlights, making a surface appear more smooth and glossy.
(Read and Write property)

155.25.37 specular as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that manages the material's specular response to lighting.
Notes:

The specular property specifies the amount of light to reflect in a mirror-like manner. The specular intensity increases when the point of view lines up with the direction of the reflected light.
(Read only property)

155.25.38 transparency as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The uniform transparency of the material. Animatable.
Notes:

SceneKit determines the total opacity of each rendered pixel in a surface by multiplying the color from the material's transparent property by the value of this property. Then, the material's transparencyMode property determines how pixels from the material are blended into the scene.
You can also uniformly adjust the opacity of all content attached to a node using its opacity property.
(Read and Write property)

155.25.39 transparencyMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The mode SceneKit uses to calculate transparency for the material.
Notes:

The default transparency mode is SCNTransparencyModeAOne. See SCNTransparencyMode for available values and their effects.
(Read and Write property)

155.25.40 transparent as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that determines the opacity of each point in a material.
Notes:

The transparent property specifies the transparent areas of the material.
(Read only property)

155.25.41 writesToDepthBuffer as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether SceneKit produces depth information when rendering the material.
Notes:

Determines whether the receiver writes to the depth buffer when rendered. Defaults to true.
(Read and Write property)

155.25.42 Constants

155.25.43 SCNBlendModeAdd = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes:

Blend by adding the source color to the destination color.
This mode results in a brightening effect that can be useful for making objects appear to glow relative to their surroundings.

155.25.44 SCNBlendModeAlpha = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes:

Blend by multiplying source and destination color values by their corresponding alpha values.
This mode is the default value of the blendMode property.

155.25.45 SCNBlendModeMax = 6

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes: Max

155.25.46 SCNBlendModeMultiply = 3

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes:

Blend by multiplying the source color with the background color.
This mode results in colors that are at least as dark as either of the two contributing colors.

155.25.47 SCNBlendModeReplace = 5

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes: Blend by replacing the destination color with the source color, ignoring alpha.

155.25.48 SCNBlendModeScreen = 4

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes:

Blend by multiplying the inverse of the source color with the inverse of the destination color.
This mode results in colors that are at least as light as either of the two contributing colors.

155.25.49 SCNBlendModeSubtract = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes: Blend by subtracting the source color from the destination color.

155.25.50 SCNCullModeBack = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes SceneKit uses to determine which polygons to render in a surface, used by the cullMode property.
Notes: The mode for culling back-facing polygons (and rendering only front-facing polygons).

155.25.51 SCNCullModeFront = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes SceneKit uses to determine which polygons to render in a surface, used by the cullMode property.

Notes: The mode for culling front-facing polygons (and rendering only back-facing polygons).

155.25.52 SCNFillModeFill = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the file mode constants.
Notes: Fill

155.25.53 SCNFillModeLines = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the file mode constants.
Notes: Lines

155.25.54 SCNTransparencyModeAOne = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes: SceneKit derives transparency information from the alpha channel of colors. The value 1.0 is opaque.

155.25.55 SCNTransparencyModeDefault = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes: Default

155.25.56 SCNTransparencyModeDualLayer = 3

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes: Dual layer.

155.25.57 SCNTransparencyModeRGBZero = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes:

SceneKit derives transparency information from the luminance of colors. The value 0.0 is opaque.
When using this mode, SceneKit ignores the alpha value of colors in the material's transparent property. SceneKit calculates the luminance of a color from its red, green, and blue channels and uses the resulting value to determine the material's opacity.

155.25.58 SCNTransparencyModeSingleLayer = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes: Single layer.

155.26 class SCNMaterialPropertyMBS

155.26.1 class SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A container for the color or texture of one of a material's visual properties.
Notes:

A material has several visual properties that together determine its appearance under lighting and shading. SceneKit renders each pixel in the scene by combining the information from material properties with the locations, intensities, and colors of lights.
A material property's contents can be either a color, which provides a uniform effect across the surface of a material, or a texture, which SceneKit maps across the surface of a material using texture coordinates provided by the geometry object the material is attached to. A texture, in turn, can come from any of several sources, such as an image object, a URL to an image file, a specially formatted image or set of images for use as a cube map, or even animated content provided by Core Animation, SpriteKit, or AVFoundation—for the full set of options, see the contents property.

155.26.4 Methods

155.26.5 Constructor(content as Variant)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new material property with given content.

155.26.6 materialPropertyWithColor(color as NSColorMBS) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new material property object with the specified color.

155.26.7 materialPropertyWithContents(content as Variant) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new material property object with the specified contents.
Notes:

contents: The visual contents of the material property—a color, image, or source of animated content. For details, see the discussion of the contents property.

Returns a new material property object.

Newly created SCNMaterialMBS objects contain SCNMaterialPropertyMBS instances for all of their visual properties. To change a material's visual properties, you modify those instances rather than creating new material property objects.
You create new SCNMaterialPropertyMBS instances to provide textures for use with custom GLSL shaders—for details, see SCNShadableMBS.

155.26.8 materialPropertyWithImage(image as NSImageMBS) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new material property object with the specified image.

155.26.9 materialPropertyWithLayer(layer as CALayerMBS) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new material property object with the specified layer.

155.26.10 materialPropertyWithPicture(picture as Picture) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new material property object with the specified picture.

155.26.11 Properties

155.26.12 borderColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A color used to fill in areas of a material's surface not covered by the material property's image contents.
Notes:

When the material property's contents are a texture image and its texture wrapping properties are set to SCNWrapModeClampToBorder, the border color appears in areas of a textured geometry not covered by the texture image, as shown in .
(Read and Write property)

155.26.13 contents as Variant

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The visual contents of the material property—a color, image, or source of animated content. Animatable.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnmaterialproperty/1395372-contents
(Read and Write property)

155.26.14 contentsTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The transformation applied to the material property's visual contents. Animatable.
Notes:

SceneKit applies this transformation to the texture coordinates provided by the geometry object the material is attached to, then uses the resulting coordinates to map the material property's contents across the surface of the material. (This transformation has no effect if the material property's contents object is a constant color.)
(Read and Write property)

155.26.15 intensity as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A number between 0.0 and 1.0 that modulates the effect of the material property. Animatable.
Notes:

The default intensity is 1.0. Reducing the intensity fades out the contents of the material property, causing different effects depending on which visual property of an SCNMaterialMBS object it represents:

- For the normal property, intensity varies the apparent roughness of the normal-mapped surface. Reducing intensity makes the surface appear more smooth.
- For the multiply property, reducing intensity blends the material property's colors with white, effectively reducing the strength of the color multiplication effect.
- For all other properties, reducing intensity dims the material property's contents.

(Read and Write property)

155.26.16 magnificationFilter as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Texture filtering for rendering the material property's image contents at a size larger than that of the original image.
Notes:

Texture filtering determines the appearance of a material property's contents when portions of the material surface appear larger or smaller than the original texture image. For example, the texture coordinates at a point near the camera may correspond to a small fraction of a pixel in the texture image. SceneKit uses the magnification filter to determine the color of the sampled texel at that point.
The default magnification filter is SCNFilterModeLinear.
(Read and Write property)

155.26.17 mappingChannel as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The source of texture coordinates for mapping the material property's image contents.
Notes:

A geometry can have multiple independent sources of texture coordinates, each of which defines a unique mapping channel number. You can use these channels to map different visual properties of a material in different ways. For example, a geometry representing a picture frame might use one set of texture coordinates

for mapping the materials of the frame itself, and another set of texture coordinates for placing a picture into the frame.
For information about creating geometries with multiple texture mapping channels, see SCNGeometryMBS.
(Read and Write property)

155.26.18 maxAnisotropy as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of anisotropic texture filtering to be used when rendering the material property's image contents.
Notes:

see
https://developer.apple.com/documentation/scenekit/scnmaterialproperty/1395402-maxanisotropy
(Read and Write property)

155.26.19 minificationFilter as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Texture filtering for rendering the material property's image contents at a size smaller than that of the original image.
Notes:

Texture filtering determines the appearance of a material property's contents when portions of the material surface appear larger or smaller than the original texture image. For example, the texture coordinates at a point far from the camera may correspond to an area of several pixels in the texture image. SceneKit uses the minification filter to determine the color of the sampled texel at that point.
The default minification filter is SCNFilterModeLinear. See constants for available modes and their effects.
(Read and Write property)

155.26.20 mipFilter as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Texture filtering for using mipmaps to render the material property's image contents at a size smaller than that of the original image.
Notes:

see
https://developer.apple.com/documentation/scenekit/scnmaterialproperty/1395398-mipfilter
(Read and Write property)

155.26.21 wrapS as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The wrapping behavior for the S texture coordinate.
Notes:

Wrapping modes determine texture mapping behavior for cases where a material's texture coordinates extend outside the range from 0.0 to 1.0. For example, if you use the contentsTransform property to shrink a texture relative to the surface of a geometry, you use the wrap mode properties to determine whether the texture repeats across the surface.
The S texture coordinate measures the horizontal axis of a texture image, increasing from 0.0 at the left edge of the image to 1.0 at the right edge.
The default wrap mode is SCNWrapModeClamp. See constants for available modes and their effects.
(Read and Write property)

155.26.22 wrapT as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The wrapping behavior for the T texture coordinate.
Notes:

Wrapping modes determine texture mapping behavior for cases where a material's texture coordinates extend outside the range from 0.0 to 1.0. For example, if you use the contentsTransform property to shrink a texture relative to the surface of a geometry, you use the wrap mode properties to determine whether the texture repeats across the surface.
The T texture coordinate measures the vertical axis of a texture image, increasing from 0.0 at the bottom of the image to 1.0 at the top.
The default wrap mode is SCNWrapModeClamp.
(Read and Write property)

155.26.23 Constants

155.26.24 SCNFilterModeLinear = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the Texture filtering modes, used by the minificationFilter, magnificationFilter, and mipFilter properties.
Notes: Texture filtering sample texels from the neighborhood of the coordinates being sampled and linearly interpolates their colors.

155.26.25 SCNFilterModeNearest = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the Texture filtering modes, used by the minificationFilter, magnificationFilter, and mipFilter properties.
Notes: Texture filtering returns the color from only one texel, whose location is nearest to the coordinates being sampled.

155.26.26 SCNFilterModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the Texture filtering modes, used by the minificationFilter, magnificationFilter, and mipFilter properties.
Notes:

No texture filtering is applied.
Only valid for the mipFilter property, specifying that SceneKit should not use mip mapping.

155.26.27 SCNWrapModeClamp = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
Notes:

Texture coordinates are clamped to the range from 0.0 to 1.0, inclusive.
Texture sampling in areas whose texture coordinates would fall outside this range produces texel colors from the nearest edge of the texture image.

155.26.28 SCNWrapModeClampToBorder = 3

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
Notes:

Texture sampling uses texture colors for coordinates in the range from 0.0 to 1.0 (inclusive) and the material property's borderColor value otherwise.

Texture sampling in areas whose texture coordinates would fall outside this range uses the borderColor property instead of texel colors from the texture image.

155.26.29 SCNWrapModeMirror = 4

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
Notes:

Texture sampling of texture coordinates outside range from 0.0 to 1.0 should behave as if the range reverses before repeating.

Texture sampling in areas of the material whose texture coordinates would fall outside from 0.0 to 1.0 results in tiling both texture image and its mirror image across the surface using the material.

155.26.30 SCNWrapModeRepeat = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
Notes:

Texture sampling uses only the fractional part of texture coordinates, passing through the range from 0.0 to (but not including) 1.0.

Texture sampling in areas of the material whose texture coordinates would fall outside from 0.0 to 1.0 results in tiling the texture image across the surface using the material.

155.27 class SCNMatrix4MBS

155.27.1 class SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A representation of a 4 x 4 matrix.
Notes: SceneKit uses matrices to represent coordinate space transformations, which in turn can represent the combined position, rotation or orientation, and scale of an object in three-dimensional space.

155.27.4 Methods

155.27.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes: Initializes all values with zero.

155.27.6 copy as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the matrix.

155.27.7 equals(other as SCNMatrix4MBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value that indicates whether the corresponding elements of two matrices are equal.
Notes:

self: The first matrix to be compared.
other: The first matrix to be compared.

Returns true if each element in self is exactly equal to the corresponding element in other.

This function performs a numeric (not bitwise) comparison of each pair of elements.

155.27.8 Identity as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The 4 x 4 identity matrix.
Notes: Elements on the diagonal of this matrix are 1.0; all other elements are 0.0. Multiplying another matrix by the identity matrix or multiplying the identity matrix by another matrix yields the other matrix.

155.27.9 Invert as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the inverse of the specified matrix.
Notes: The inverse matrix of the specified matrix, or the original matrix if it is not invertible.

155.27.10 Multiply(other as SCNMatrix4MBS) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the product of two matrices.
Notes:

self: The multiplicand, or left operand of matrix multiplication.
other: The multiplier, or right operand of matrix multiplication.

Returns the matrix product of the self and other parameters.

Matrix multiplication is not commutative. As a transformation, the result of multiplying a matrix A by a matrix B is the transformation represented by B followed by the transformation represented by A.

155.27.11 Null as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The null matrix.
Notes: All values are zero.

155.27.12 Rotate(angle as double, sx as double, sy as double, sz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new matrix created by concatenating the specified matrix with a rotation transformation.
Notes:

mat: The matrix to be combined with a rotation.
angle: The amount of rotation, in radians, measured counterclockwise around the rotation axis.
sx: The x-component of the rotation axis.
sy: The y-component of the rotation axis.
sz: The z-component of the rotation axis.

Returns a new matrix.

The resulting transformation consists of the specified rotation followed by the transformation represented by the mat parameter.

155.27.13 Rotation(angle as double, x as double, y as double, z as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a matrix describing a rotation transformation.
Notes:

angle: The amount of rotation, in radians, measured counterclockwise around the rotation axis.
x: The x-component of the rotation axis.
y: The y-component of the rotation axis.
z: The z-component of the rotation axis.

Returns a new rotation matrix.

155.27.14 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new matrix created by concatenating the specified matrix with a scale transformation.
Notes:

self: The matrix to be combined with a translation.
sx: The scale factor in the x-axis direction.
sy: The scale factor in the y-axis direction.
sz: The scale factor in the z-axis direction.

Returns a new matrix.

The resulting transformation consists of the specified scale followed by the transformation represented by the mat parameter.
See also:

- 155.27.15 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS 22613

155.27.15 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a matrix describing a scale transformation.
Notes:

sx: The scale factor in the x-axis direction.
sy: The scale factor in the y-axis direction.
sz: The scale factor in the z-axis direction.

Returns a new scale matrix.
See also:

- 155.27.14 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS 22613

155.27.16 Translate(tx as double, ty as double, tz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new matrix created by concatenating the specified matrix with a translation transformation.
Notes:

self: The matrix to be combined with a translation.
tx: The translation distance in the x-axis direction.

ty: The translation distance in the y-axis direction.
tz: The translation distance in the z-axis direction.

Returns a new matrix.

The resulting transformation consists of the specified translation followed by the transformation represented by the mat parameter.

155.27.17 Translation(tx as double, ty as double, tz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a matrix describing a translation transformation.
Notes:

tx: The translation distance in the x-axis direction.
ty: The translation distance in the y-axis direction.
tz: The translation distance in the z-axis direction.

Returns a new translation matrix.

155.27.18 Properties

155.27.19 IsIdentity as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value that indicates whether the specified matrix is equal to the identity matrix.
Notes:

Returns true if the elements on the matrix's diagonal are 1.0 and all other elements are 0.0.
(Read only property)

155.27.20 m11 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 1/1.
Notes: (Read and Write property)

155.27.21 m12 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 1/2.
Notes: (Read and Write property)

155.27.22 m13 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 1/3.
Notes: (Read and Write property)

155.27.23 m14 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 1/4.
Notes: (Read and Write property)

155.27.24 m21 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 2/1.
Notes: (Read and Write property)

155.27.25 m22 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 2/2.
Notes: (Read and Write property)

155.27.26 m23 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 2/3.
Notes: (Read and Write property)

155.27.27 m24 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 2/4.
Notes: (Read and Write property)

155.27.28 m31 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 3/1.
Notes: (Read and Write property)

155.27.29 m32 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 3/2.
Notes: (Read and Write property)

155.27.30 m33 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 3/3.
Notes: (Read and Write property)

155.27.31 m34 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 3/4.
Notes: (Read and Write property)

155.27.32 m41 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 4/1.
Notes: (Read and Write property)

155.27.33 m42 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 4/2.
Notes: (Read and Write property)

155.27.34 m43 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 4/3.
Notes: (Read and Write property)

155.27.35 m44 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The value at 4/4.
Notes: (Read and Write property)

155.28 class SCNNodeMBS

155.28.1 class SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A structural element of a scene graph, representing a position and transform in a 3D coordinate space, to which you can attach geometry, lights, cameras, or other displayable content.
Notes:

155.28.6 Methods

155.28.7 addChildNode(node as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a node to the node's array of children.
Notes:

child: The node to be added.

Calling this method appends the node to the end of the childNodes array.

155.28.8 childNodes as SCNNodeMBS()

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: An array of the node's children in the scene graph hierarchy.

155.28.9 childNodeWithName(Name as String, recursively as Boolean = false) as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the first node in the node's child node subtree with the specified name.
Notes:

name: The name of the node to search for.
recursively: True to search the entire child node subtree, or false to search only the node's immediate children.

If the recursive parameter is true, SceneKit uses a preorder traversal to search the child node subtree—that is, the block searches a node before it searches each of the node's children, and it searches all children of a node before searching any of that node's sibling nodes. Otherwise, SceneKit searches only those nodes in

the node's childNodes array.

155.28.10 clone as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the node and its children.
Notes:

This method recursively copies the node and its child nodes. For a nonrecursive copy, use the inherited copy method, which creates a copy of the node without any child nodes.
Cloning or copying a node creates a duplicate of the node object, but not the geometries, lights, cameras, and other SceneKit objects attached to it—instead, each copied node shares references to these objects.

This behavior means that you can use cloning to, for example, place the same geometry at several locations within a scene without maintaining multiple copies of the geometry and its materials. However, it also means that changes to the objects attached to one node will affect other nodes that share the same attachments. For example, to render two copies of a node using different materials, you must copy both the node and its geometry before assigning a new material.

Multiple copies of an SCNGeometryMBS object efficiently share the same vertex data, so you can copy geometries without a significant performance penalty.

155.28.11 constraints as SCNConstraintMBS()

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A list of constraints affecting the node's transformation.
Notes:

An array of constraint objects. Before rendering, SceneKit evaluates all constraints attached to a node hierarchy and adjusts node transformations appropriately.
Use the SCNLookAtConstraintMBS class to make a node always point toward another node even as both are moved, or the SCNTransformConstraintMBS class to apply arbitrary transformations at constraint evaluation time.

155.28.12 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a new node object.
See also:

• 155.28.13 Constructor(geometry as SCNGeometryMBS) 22621

155.28.13 Constructor(geometry as SCNGeometryMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a node object with the specified geometry attached.
Notes:

geometry: The geometry to be attached.

Returns a new node object with the geometry attached, or nil if initialization is not successful.
See also:

• 155.28.12 Constructor 22620

155.28.14 convertPositionFromNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a position to the node's local coordinate space from that of another node.
Notes:

position: A position in the local coordinate space defined by the other node.
node: Another node in the same scene graph as the node, or nil to convert from the scene's world coordinate space.

Returns a position in the node's local coordinate space.

155.28.15 convertPositionToNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a position from the node's local coordinate space to that of another node.
Notes:

position: A position in the node's local coordinate space.
node: Another node in the same scene graph as the node, or nil to convert to the scene's world coordinate space.

Returns a position in the local coordinate space defined by the other node.

155.28.16 convertTransformFromNode(position as SCNMatrix4MBS, node as SCNNodeMBS) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a transform to the node's local coordinate space from that of another node.
Notes:

transform: A transform relative to the local coordinate space defined by the other node.
node: Another node in the same scene graph as the node, or nil to convert from the scene's world coordinate space.

Returns a transform relative to the node's coordinate space.

155.28.17 convertTransformToNode(position as SCNMatrix4MBS, node as SCNNodeMBS) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a transform from the node's local coordinate space to that of another node.
Notes:

transform: A transform relative to the node's coordinate space.
node: Another node in the same scene graph as the node, or nil to convert to the scene's world coordinate space.

Returns a transform relative to the local coordinate space defined by the other node.

155.28.18 convertVectorFromNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a direction vector to the node's local coordinate space from that of another node.
Notes:

vector: A direction vector in the local coordinate space defined by the other node.
node: Another node in the same scene graph as the node, or nil to convert from the scene's world coordinate space.

Returns a direction vector in the node's local coordinate space.

Unlike the convertPositionFromNode method, this method ignores the translational aspect of both nodes'

transforms. As such, this method is more appropriate for use with vectors that represent only directional information, such as velocity or facing.

155.28.19 convertVectorToNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a direction vector from the node's local coordinate space to that of another node.
Notes:

vector: A direction vector in the node's local coordinate space.
node: Another node in the same scene graph as the node, or nil to convert to the scene's world coordinate space.

Returns a direction vector in the local coordinate space defined by the other node.

Unlike the convertPositionToNode method, this method ignores the translational aspect of both nodes' transforms. As such, this method is more appropriate for use with vectors that represent only directional information, such as velocity or facing.

155.28.20 copy as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the node.

155.28.21 flattenedClone as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an optimized copy of the node and its children.
Notes:

A new single node containing the combined geometries and materials of the node and its child node subtree.

Rendering complex node hierarchies can incur a performance cost. Each geometry and material requires a separate draw command to be sent to the GPU, and each draw command comes with a performance overhead. If you plan for a portion of your scene's node hierarchy to remain static (with respect to itself, if not the rest of the scene), use this method to create a single node containing all elements of that node hierarchy that SceneKit can render using fewer draw commands.

155.28.22 hitTestWithSegment(PointA as SCNVector3MBS, PointB as SCNVector3MBS, Options as Dictionary = nil) as SCNHitTestResultMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Searches the node's child node subtree for objects intersecting a line segment between two specified points.
Notes:

pointA: An endpoint of the line segment to search along, specified in the node's local coordinate system.
pointB: The other endpoint of the line segment to search along, specified in the node's local coordinate system.
options: A dictionary of options affecting the search. See Key shared methods in SCNHitTestResultMBS class for acceptable values.

Returns an array of SCNHitTestResultMBS objects representing search results.

Hit-testing is the process of finding elements of a scene located along a specified line segment in the scene's coordinate space (or that of a particular node in the scene). For example, you can use this method to determine whether a projectile launched by a game character will hit its target.

To search for the scene element corresponding to a two-dimensional point in the rendered image, use the renderer's hitTest method instead.

155.28.23 insertChildNode(newNode as SCNNodeMBS, atIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a node to the node's array of children at a specified index.

155.28.24 localRotateBy(rotation as SCNVector4MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the node's orientation relative to its current orientation.
Notes:

rotation: The axis and angle of rotation to apply, in node-local space, expressed as a quaternion.

This method rotates the node according to its pivot transform.
The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.

155.28.25 localTranslateBy(translation as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the node's position relative to its current position.
Notes:

translation: The distance, in node-local space, by which to move the node.

The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the move.

Available in macOS 10.13 or later.

155.28.26 lookAt(worldTarget as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the node's orientation so that its local forward vector points toward the specified location.
Notes:

worldTarget: The point, in world space, to face the node toward.

Using this method is equivalent to calling the other lookAt method and passing the node's worldUp and localFront vectors for the corresponding parameters.
The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.
See also:

- 155.28.27 lookAt(worldTarget as SCNVector3MBS, worldUp as SCNVector3MBS, localFront as SCNVector3MBS) 22625

155.28.27 lookAt(worldTarget as SCNVector3MBS, worldUp as SCNVector3MBS, localFront as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the node's orientation so that the specified forward vector points toward the specified location.
Notes:

worldTarget: The point, in world space, to face the node toward.
worldUp: The direction vector, in world space, that should appear as "up" from the rotated node's point of view.
localFront: The direction vector, in the node's local space, that should orient toward the target point.

The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.
See also:

- 155.28.26 lookAt(worldTarget as SCNVector3MBS) 22625

155.28.28 node as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a node object.
Notes: Returns a new node object, or nil if initialization is not successful.

155.28.29 nodeWithGeometry(geometry as SCNGeometryMBS) as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a node object with the specified geometry attached.
Notes: Returns a new node object with the geometry attached, or nil if initialization is not successful.

155.28.30 removeAllActions

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Ends and removes all actions from the node.
Notes: When SceneKit removes an action from a node, it skips any remaining animation the action would perform. However, any changes the action has already made to the node's state remain in effect.

155.28.31 removeFromParentNode

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the node from its parent's array of child nodes.
Notes: Removing nodes from the node hierarchy serves two purposes. Nodes own their contents (child nodes or attached lights, geometries, and other objects), so deallocating unneeded nodes can reduce memory usage. Additionally, SceneKit does more work at rendering time with a large, complex node hierarchy, so removing nodes whose contents you don't need to display can improve rendering performance.

155.28.32 replaceChildNode(oldNode as SCNNodeMBS, newNode as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Removes a child from the node's array of children and inserts another node in its place.
Notes:

oldNode: The existing child node to be replaced.
newNode: The node with which to replace the child node.

If both the oldNode and newNode nodes are children of the node, calling this method swaps their positions in the array. Note that removing a node from the node hierarchy may result in it being deallocated.
Calling this method results in undefined behavior if the child parameter does not refer to a child of this node.

155.28.33 rotateBy(worldRotation as SCNVector4MBS, worldTarget as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the node's position and orientation, relative to its current transform, through a rotation around the specified point in scene space.
Notes:

worldRotation: The axis and angle of rotation to apply, in scene space, expressed as a quaternion.
worldTarget: The center point, in scene space, about which to rotate.

The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.

155.28.34 runAction(action as SCNActionMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an action to the list of actions executed by the node.
Notes:

action: The action to be performed.

SceneKit begins running a newly added action when it prepares to render the next frame.
See also:

- 155.28.35 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 22628
- 155.28.36 runAction(action as SCNActionMBS, key as string) 22629
- 155.28.37 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 22629

155.28.35 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an action to the list of actions executed by the node. SceneKit calls the specified block when the action completes.
Notes:

action: The action to be performed.
del: The method that SceneKit calls when the action completes.
tag: The tag is passed through to delegate method.

The new action is processed the next time SceneKit prepares to render a frame.
SceneKit calls your method after the action's duration is complete. For example, in a game you could use this method to show a Game Over message after performing a fade-out action on a node that displays a player character.
See also:

- 155.28.34 runAction(action as SCNActionMBS) 22628
- 155.28.36 runAction(action as SCNActionMBS, key as string) 22629
- 155.28.37 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 22629

155.28.36 runAction(action as SCNActionMBS, key as string)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an identifiable action to the list of actions executed by the node.
Notes:

action: The action to be performed.
key: A unique key used to identify the action.

This method is identical to runAction, but the action is stored and identified so that you can retrieve or cancel it later. If an action using the same key is already running, SceneKit removes it before adding the new action.
See also:

- 155.28.34 runAction(action as SCNActionMBS) 22628
- 155.28.35 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 22628
- 155.28.37 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 22629

155.28.37 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an identifiable action to the list of actions executed by the node.
Notes:

SceneKit calls the specified block when the action completes.

action: The action to be performed.
key: A unique key used to identify the action.
del: A completion block called when the action completes.
tag: The tag is passed through to delegate method.

This method is identical to runAction, but the action is stored and identified so that you can retrieve or cancel it later. If an action using the same key is already running, SceneKit removes it before adding the new action.
SceneKit calls your method after the action's duration is complete. For example, you can use this method with a wait action to execute some code after a timed delay. If during the delay period you need to prevent the code from running, use the removeActionForKey method to cancel it.
See also:

- 155.28.34 runAction(action as SCNActionMBS) 22628

- 155.28.35 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 22628
- 155.28.36 runAction(action as SCNActionMBS, key as string) 22629

155.28.38 SCNModelTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming coordinates from model space to scene (or world) space.

155.28.39 SCNModelViewProjectionTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix containing the concatenation of the Model, View, and Projection transformations.

155.28.40 SCNModelViewTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix containing the concatenation of the Model and View transformations.

155.28.41 SCNNormalTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming surface normal vectors from model space to view (or eye) space.

155.28.42 SCNProjectionTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming coordinates from view (or eye) space to clip space.

155.28.43 SCNViewTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming coordinates from scene (or world) space to view (or eye) space.

155.28.44 setConstraints(constraints() as SCNConstraintMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the list of constraints affecting the node's transformation.
Notes:

An array of constraint objects. Before rendering, SceneKit evaluates all constraints attached to a node hierarchy and adjusts node transformations appropriately.
Use the SCNLookAtConstraintMBS class to make a node always point toward another node even as both are moved, or the SCNTransformConstraintMBS class to apply arbitrary transformations at constraint evaluation time.

155.28.45 Properties

155.28.46 Camera as SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The camera attached to the node.
Notes:

To use a camera for displaying a scene, set the the pointOfView property of the view (or layer or renderer) displaying the scene to the node containing the camera. A camera looks in the direction of the node's negative z-axis, so you aim the camera by changing the position and orientation of the node containing it. You

control geometric and optical parameters of the camera—projection, field of view, and depth of field—using the attached SCNCameraMBS object.
(Read and Write property)

155.28.47 CastsShadow as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether SceneKit renders the node's contents into shadow maps.
Notes:

SceneKit renders shadows by rendering a shadow map image containing silhouettes of the scene's contents, and then projecting that image onto the scene. SceneKit performs this process once for each SCNLight object in the scene whose castsShadow property is true. Because shadow map rendering re-renders portions of the scene, it incurs a performance cost. To minimize this performance cost, exclude nodes from shadow map rendering by setting the node's castsShadow property to false.

For more details on shadow rendering, see SCNLight.
(Read and Write property)

155.28.48 categoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A mask that defines which categories the node belongs to.
Notes:

You can assign each node in a scene to one or more categories, where each category corresponds to a bit in the bit mask. You define the mask values used in your app. When SceneKit renders a scene, it compares the each node's categoryBitMask property with the category bit masks of every other object that participates in the rendering process—lights, cameras, and techniques—using a bitwise AND operation. If the result is a nonzero value, SceneKit includes the node when rendering. The default category bit mask is 1.

Use a node's category bit mask together with:

- An SCNLightMBS object's categoryBitMask property to exclude the node from that light's illumination
- An SCNCameraMBS object's categoryBitMask property to make the node invisible to that camera
- The category bit masks in an SCNTechniqueMBS object's definition dictionary to include or exclude the node from phases of a multipass rendering technique

This property does not affect SceneKit's physics simulation. To include or exclude a node from physics interactions, use the categoryBitMask property of the node's physicsBody and physicsField objects.
(Read and Write property)

155.28.49 EulerAngles as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The node's orientation, expressed as pitch, yaw, and roll angles in radians. Animatable.
Notes:

The order of components in this vector matches the axes of rotation:

- Pitch (the x component) is the rotation about the node's x-axis.
- Yaw (the y component) is the rotation about the node's y-axis.
- Roll (the z component) is the rotation about the node's z-axis.

SceneKit applies these rotations relative to the node's pivot property in the reverse order of the components: first roll, then yaw, then pitch. The rotation, eulerAngles, and orientation properties all affect the rotational aspect of the node's transform property. Any change to one of these properties is reflected in the others.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

155.28.50 focusBehavior as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The focus behavior for a node.
Notes: (Read and Write property)

155.28.51 Geometry as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The geometry attached to the node.
Notes:

A node can have only one geometry attached to it. To combine geometries so they can be controlled or animated together, create a node with no geometry and add other nodes to it.
Animating the node's geometric properties can move, rotate, stretch and scale its geometry. For more advanced animations of a node's geometry, use its morpher and skinner objects.

(Read and Write property)

155.28.52 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

155.28.53 Hidden as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines the visibility of the node's contents. Animatable.
Notes:

The default value of this property is false, specifying that SceneKit should render geometries and use lights attached to the node or its children. Change this property's value to true to exclude attached geometries and lights from rendering. (Cameras attached to the node or its children are not affected by this property.) Hiding a node also hides its child nodes recursively.

You can animate changes to this property's value. See Animating SceneKit Content. Hiding or showing a node in an animation results in a fade-in or fade-out effect.
(Read and Write property)

155.28.54 Light as SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The light attached to the node..
Notes:

A node can have only one light attached to it. To combine lights so they can be controlled or animated together, create a node with no light and add other nodes to it.
(Read and Write property)

155.28.55 localFront as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The unit vector SceneKit treats as "forward" in local space for all nodes.
Notes:

The "forward" direction of a node affects cameras and directional lighting attached to a node, as well as relative orientation and movement effects such as lookAt, SCNLookAtConstraint, and SCNBillboardConstraint. This vector is always (0, 0, -1) for all nodes, but you can use this class property when it's convenient to refer to directions symbolically.

Available in macOS 10.13 or later.
(Read only property)

155.28.56 localRight as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The direction SceneKit treats as "right" in local space for all nodes.
Notes:

No SceneKit features depend directly on this direction's definition—it's simply a natural consequence of recognizing "forward" and "up" directions for use with cameras, directional lighting, and relative orientation operations.
This vector is always (1, 0, 0) for all nodes, but you can use this class property when it's convenient to refer to directions symbolically.

Available in macOS 10.13 or later.
(Read only property)

155.28.57 localUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The direction SceneKit treats as "up" in local space for all nodes.
Notes:

The "up" direction of a node affects cameras attached to a node, as well as relative orientation and movement effects such as lookAt, SCNLookAtConstraint, and SCNBillboardConstraint.
This vector is always (0, 1, 0) for all nodes, but you can use this class property when it's convenient to refer to directions symbolically.

Available in macOS 10.13 or later.
(Read only property)

155.28.58 movabilityHint as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A value that indicates how SceneKit should handle the node when rendering movement-related effects.
Notes:

This property controls how the node contributes to various motion-related effects during rendering. The default value is SCNMovabilityHintFixed. If the movability hint is SCNMovabilityHintMovable:

- The node's content is not affected by motion blur effects. (See the motionBlurIntensity camera property, which applies motion blur effects for camera movement but not subject movement.)
- The node does not contribute to environmental lighting of other objects. Environmental lighting is an aspect of physically based rendering (see SCNLightingModelPhysicallyBased), in which surfaces tend to pick up the color of other scene content around them. SceneKit performs environmental lighting by rendering light probes—small, omnidirectional snapshots of the scene's contents, as visible from at various points around the scene. Light probes are static, so nodes that are expected to move should not contribute to the lighting environment for other surfaces.

This value is merely a hint that communicates to SceneKit's rendering system about how you want to move content in your scene; it does not affect your ability to change the node's position or add animations or physics to the node.
(Read and Write property)

155.28.59 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A name associated with the node.
Notes:

You can provide a descriptive name for a node to make managing your scene graph easier. Nodes loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the childNodeWithName or childNodesPassingTest method to retrieve a node from a scene graph by its name, or the SCNSceneSource class to examine nodes in a scene file without loading its scene graph.

The names of nodes and their attached objects are saved when you export a scene to a file using its writeToURL method, and appear in the Xcode scene editor. The SceneKit statistics view (see showsStatistics) also shows the names of nodes with attached cameras.
(Read and Write property)

155.28.60 Opacity as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The opacity value of the node. Animatable.
Notes:

Possible values are between 0.0 (fully transparent) and 1.0 (fully opaque). The default is 1.0.
You can animate changes to this property's value.
(Read and Write property)

155.28.61 orientation as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The node's orientation, expressed as a quaternion. Animatable.
Notes:

The rotation, eulerAngles, and orientation properties all affect the rotational aspect of the node's transform property. Any change to one of these properties is reflected in the others.
You can animate changes to this property's value.
(Read and Write property)

155.28.62 parentNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The node's parent in the scene graph hierarchy.
Notes:

For a scene's rootNode object, the value of this property is nil.
(Read only property)

155.28.63 Paused as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether to run actions and animations attached to the node and its child nodes.
Notes:

The default value of this property is false, specifying that SceneKit should continuously update the node's contents. Pausing a node pauses any running animations or actions. This property applies to the actions and animations attached to the node itself and those attached to any of its child or descendant nodes.
(Read and Write property)

155.28.64 physicsBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The physics body associated with the node.
Notes:

The default value is nil, specifying that the node does not participate in the physics simulation at all. If you provide a physics body, SceneKit updates the node's position and orientation each time it processes a step of its physics simulation. For more information on SceneKit's physics system, see SCNPhysicsWorldMBS.
(Read and Write property)

155.28.65 physicsField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The physics field associated with the node.
Notes:

Physics fields apply forces to other physics bodies in a specified area around their node. For example, a SCNPhysicsDragField field slows all physics bodies that pass through its area. For a full list of field types and their effects, see SCNPhysicsFieldMBS.

A node can contain both a physics body that defines collision behavior and a physics field that defines forces in its area. For example, two nodes containing physics bodies and radial gravity fields will be attracted to one another, but will bounce off each other when they collide.
(Read and Write property)

155.28.66 pivot as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The pivot point for the node's position, rotation, and scale. Animatable.
Notes:

A node's pivot is the transformation between its coordinate space and that used by its position, rotation, and scale properties. The default pivot is SCNMatrix4MBS.Identity, specifying that the node's position locates the origin of its coordinate system, its rotation is about an axis through its center, and its scale is also relative to that center point.
Changing the pivot transform alters these behaviors in many useful ways. You can:

- Offset the node's contents relative to its position. For example, by setting the pivot to a translation transform you can position a node containing a sphere geometry relative to where the sphere would rest on a floor instead of relative to its center.

- Move the node's axis of rotation. For example, with a translation transform you can cause a node to revolve around a faraway point instead of rotating around its center, and with a rotation transform you can tilt the axis of rotation.
- Adjust the center point and direction for scaling the node. For example, with a translation transform you can cause a node to grow or shrink relative to a corner instead of to its center.

You can animate changes to this property's value.
(Read and Write property)

155.28.67 Position as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The translation applied to the node. Animatable.
Notes:

The node's position locates it within the coordinate system of its parent, as modified by the node's pivot property. The default position is the zero vector, indicating that the node is placed at the origin of the parent node's coordinate system.
(Read and Write property)

155.28.68 presentationNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A node object representing the state of the node as it currently appears onscreen.
Notes:

When you use implicit animation (see SCNTransaction) to change a node's properties, those node properties are set immediately to their target values, even though the animated node content appears to transition from the old property values to the new. During the animation SceneKit maintains a copy of the node, called the presentation node, whose properties reflect the transitory values determined by any in-flight animations currently affecting the node. The presentation node's properties provide a close approximation to the version of the node that is currently displayed. SceneKit also uses the presentation node when computing the results of explicit animations, physics, and constraints.

Do not modify the properties of the presentation node. (Attempting to do so results in undefined behavior.) Instead, you use the presentation node to read current animation values—for example, to create a new animation starting at those values.

The presentation node has no parent or child nodes. To access animated properties of related nodes, use the node's own parentNode and childNodes properties and the presentationNode property of each related node.
(Read only property)

155.28.69 RenderingOrder as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The order the node's content is drawn in relative to that of other nodes.
Notes:

Nodes with greater rendering orders are rendered last. Defaults to zero.
(Read and Write property)

155.28.70 Rotation as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The node's orientation, expressed as a rotation angle about an axis. Animatable.
Notes:

The four-component rotation vector specifies the direction of the rotation axis in the first three components and the angle of rotation (in radians) in the fourth. The default rotation is the zero vector, specifying no rotation. Rotation is applied relative to the node's pivot property.
The rotation, eulerAngles, and orientation properties all affect the rotational aspect of the node's transform property. Any change to one of these properties is reflected in the others.
(Read and Write property)

155.28.71 Scale as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The scale factor applied to the node. Animatable.
Notes:

Each component of the scale vector multiplies the corresponding dimension of the node's geometry. The default scale is 1.0 in all three dimensions. For example, applying a scale of (2.0, 0.5, 2.0) to a node containing a cube geometry reduces its height and increases its width and depth. Scaling is applied relative to the node's pivot property.
(Read and Write property)

155.28.72 transform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The transform applied to the node relative to its parent. Animatable.
Notes:

The transformation is the combination of the node's rotation, position, and scale properties. The default

transformation is SCNMatrix4MBS.Identity.

When you set the value of this property, the node's rotation, orientation, eulerAngles, position, and scale properties automatically change to match the new transform, and vice versa. SceneKit can perform this conversion only if the transform you provide is a combination of rotation, translation, and scale operations. If you set the value of this property to a skew transformation or to a nonaffine transformation, the values of these properties become undefined. Setting a new value for any of these properties causes SceneKit to compute a new transformation, discarding any skew or nonaffine operations in the original transformation.

You can animate changes to this property's value.
(Read and Write property)

155.28.73 WorldFront as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The "forward" (-Z) direction vector relative to the node, expressed in world space.
Notes:

Reading this property is equivalent to reading the localFront class property and using the convertVectorToNode or convertVectorFromNode method to convert that vector from the node's local coordinate space to the scene's world coordinate space.

Available in macOS 10.13 or later.
(Read only property)

155.28.74 worldOrientation as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The node's orientation relative to the scene's world coordinate space.
Notes:

This quaternion isolates the rotational aspect of the node's worldTransform matrix, which in turn is the conversion of the node's transform from local space to the scene's world coordinate space. That is, it expresses the difference in axis and angle of rotation between the node and the scene's rootNode.
(Read and Write property)

155.28.75 WorldPosition as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The node's position relative to the scene's world coordinate space.
Notes:

his vector isolates the translational aspect of the node's worldTransform matrix, which in turn is the conversion of the node's transform from local space to the scene's world coordinate space. That is, it expresses the x, y, and z offsets of the node's position from that of the scene's rootNode, and is equivalent to reading the node's position vector and converting it to world space with the convertPositionFromNode or convertPositionToNode method.
(Read and Write property)

155.28.76 WorldRight as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The "right" (+X) direction vector relative to the node, expressed in world space.
Notes:

Reading this property is equivalent to reading the localRight class property and using the convertVectorToNode or convertVectorFromNode method to convert that vector from the node's local coordinate space to the scene's world coordinate space.

Available in macOS 10.13 or later.
(Read only property)

155.28.77 worldTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The world transform applied to the node.
Notes:

A world transform is the node's coordinate space transform relative to the scene's coordinate space. This transform is the concatenation of the node's transform property with that of its parent node, the parent's parent, and so on up to the rootNode object of the scene.
(Read and Write property)

155.28.78 WorldUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The "up" (+Y) direction vector relative to the node, expressed in world space.
Notes:

Reading this property is equivalent to reading the localUp class property and using the convertVectorToN-

ode or convertVectorFromNode method to convert that vector from the node's local coordinate space to the scene's world coordinate space.

Available in macOS 10.13 or later.
(Read only property)

155.28.79 Constants

155.28.80 SCNMovabilityHintFixed = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the values that inform SceneKit's rendering for movement-related effects, used by the movabilityHint property.
Notes: The node is not expected to move over time.

155.28.81 SCNMovabilityHintMovable = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the values that inform SceneKit's rendering for movement-related effects, used by the movabilityHint property.
Notes: The node is expected to move over time.

155.28.82 SCNNodeFocusBehaviorFocusable = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the options for the focusable states of a SceneKit node.
Notes: Node is focusable and prevents nodes that it visually obscures from becoming focusable.

155.28.83 SCNNodeFocusBehaviorNone = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the options for the focusable states of a SceneKit node.
Notes: Node is not focusable.

155.28.84 SCNNodeFocusBehaviorOccluding = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the options for the focusable states of a SceneKit node.
Notes: Node is not focusable and prevents nodes that it visually obscures from becoming focusable.

155.28.85 Delegates

155.28.86 SCNNodeRunActionCompletedMBS(node as SCNNodeMBS, action as SCNActionMBS, key as string, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: The delegate for the runAction method.

155.29 class SCNPhysicsBallSocketJointMBS

155.29.1 class SCNPhysicsBallSocketJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A physics behavior that connects two physics bodies and allows them to pivot around each other in any direction.
Notes:

A ball and socket joint has three rotational degrees of freedom and zero translational degrees of freedom. You can also use a ball and socket joint to pin a body to a specific location in the coordinate space of the node containing it while allowing it to rotate freely.

Available in MacOS 10.10.
Subclass of the SCNPhysicsBehaviorMBS class.

155.29.2 Methods

155.29.3 Constructor(body as SCNPhysicsBodyMBS, anchor as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a ball and socket joint that anchors a single physics body in space and allows it to rotate freely around an anchor point.
Notes:

body: The physics body to be controlled by the joint.
anchor: The point the body pivots around, relative to the node containing it.

Returns a new ball-and-socket-joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 155.29.4 Constructor(bodyA as SCNPhysicsBodyMBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, anchorB as SCNVector3MBS) 22646

155.29.4 Constructor(bodyA as SCNPhysicsBodyMBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, anchorB as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a ball and socket joint connecting two physics bodies.
Notes:

bodyA: The first physics body to be connected by the joint.
anchorA: The point at which the joint connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
anchorB: The point at which the joint connects, relative to the node containing the second body.

Returns a new ball-and-socket-joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior: method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 155.29.3 Constructor(body as SCNPhysicsBodyMBS, anchor as SCNVector3MBS) 22645

155.29.5 jointWithBody(body as SCNPhysicsBodyMBS, anchor as SCNVector3MBS) as SCNPhysicsBallSocketJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a ball and socket joint that anchors a single physics body in space and allows it to rotate freely around an anchor point.
Notes:

body: The physics body to be controlled by the joint.
anchor: The point the body pivots around, relative to the node containing it.

Returns a new ball-and-socket-joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 155.29.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, anchorB as SCNVector3MBS) as SCNPhysicsBallSocketJointMBS 22647

155.29.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, anchorB as SCNVector3MBS) as SCNPhysicsBallSocketJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a ball and socket joint connecting two physics bodies.
Notes:

bodyA: The first physics body to be connected by the joint.
anchorA: The point at which the joint connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
anchorB: The point at which the joint connects, relative to the node containing the second body.

Returns a new ball-and-socket-joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior: method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 155.29.5 jointWithBody(body as SCNPhysicsBodyMBS, anchor as SCNVector3MBS) as SCNPhysicsBallSocketJointMBS 22646

155.29.7 Properties

155.29.8 anchorA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The point at which the joint connects, relative to the node containing the first body.
Notes: (Read and Write property)

155.29.9 anchorB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The point at which the joint connects, relative to the node containing the second body.
Notes: (Read and Write property)

155.29.10 bodyA as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The first physics body connected by the joint.
Notes: (Read only property)

155.29.11 bodyB as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The second physics body connected by the joint.
Notes:

This property's value is nil if the joint was created using the Constructor without bodyB parameter.
(Read only property)

155.30 class SCNPhysicsBehaviorMBS

155.30.1 class SCNPhysicsBehaviorMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The abstract superclass for joints, vehicle simulations, and other high-level behaviors that incorporate multiple physics bodies.
Notes:

An SCNPhysicsBehavior object defines a high-level behavior for one or more physics bodies, modifying the results of the physics simulation. Behaviors include joints that connect multiple bodies so they move together and vehicle definitions that cause a body to roll like a car. You never use this class directly; instead, you instantiate one of the subclasses that defines the kind of behavior you want to add to your physics world.Table 1 describes the kinds of behaviors you can create in SceneKit.

Behavior classes implemented by SceneKit

Class Name	Description
SCNPhysicsHingeJointMBS	Connects two bodies and allows them to pivot around each other on a single axis.
SCNPhysicsBallSocketJointMBS	Connects two bodies and allows them to pivot around each other in any direction.
SCNPhysicsSliderJointMBS	Connects two bodies and allows them to slide or rotate relative to one another. Slider joints can also work as motors, applying a force or torque between the two bodies.
SCNPhysicsVehicleMBS	Simulates a physics body as the chassis of a car or other wheeled vehicle. You control a vehicle in terms of steering, braking, and acceleration, and use SCNPhysicsVehicleWheelMBS objects to define the appearance and physical properties of each of its wheels.

To use a physics behavior, you follow these steps:
1. Create SCNPhysicsBodyMBS objects and attach them to each node that participates in the behavior.
2. Create and configure a behavior object using one of the subclasses listed in above.
3. Add the behavior to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

155.30.2 Methods

155.30.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

155.30.4 Properties

155.30.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

155.31 class SCNPhysicsBodyMBS

155.31.1 class SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The physics simulation attributes attached to a scene graph node.
Notes:

Overview
When SceneKit prepares to render a new frame, it performs physics calculations on physics bodies attached to nodes in the scene. These calculations include gravity, friction, and collisions with other bodies. You can also apply your own forces and impulses to a body. After SceneKit completes these calculations, it updates the positions and orientations of the node objects before rendering the frame.

To add physics to a node, create and configure an SCNPhysicsBody object and then assign it to the physicsBody property of the SCNNode object. A physics body must be associated with a node object before you apply forces or impulses to it.

A Body's Physical Characteristics
The SCNPhysicsBody class defines the physical characteristics for the body when it is simulated by the scene. Three properties are most important for physics simulation:

- The type property, which determines how the body interacts with forces and other bodies in the simulation. Static bodies are unaffected by forces and collisions and cannot move. Dynamic bodies are affected by forces and collisions with other body types. Kinematic bodies are not affected by forces or collisions, but by moving them directly you can cause collisions that affect dynamic bodies.
- The physicsShape property, which defines the three-dimensional form of the body for collision detection purposes. Physics simulations run faster when using simple shapes instead of the fine detail of a node's visible geometry. Typically, you set a body's physics shape to a bounding box, sphere, or primitive shape that roughly matches its node's visible content. For details on creating physics shapes, see SCNPhysicsShape.
- The kinematicBody property. Applying a force or torque to a dynamic body results in an acceleration (or angular acceleration) proportional to its mass.

All values in SceneKit's physics simulation use the International System of Units (SI): The unit of mass is the kilogram; the units of force, impulse, and torque are the newton, newton-second, and newton-meter; and the unit of distance for node positions and sizes is the meter. Note that you need not attempt to provide realistic values for physical quantities—use whatever values produce the behavior or gameplay you're looking for.
For a dynamic body, you can control how the body is affected by forces or collisions. See Defining How Forces Affect a Physics Body.

Defining a Body's Category and Collisions

When you design a game that uses physics, you define the different categories of physics objects that appear in the scene. You define different categories of physics bodies for the behaviors your want for your app. A body can be assigned to as many of these categories as you want. In addition to declaring its own categories, a physics body also declares which categories of bodies it interacts with.
Use the categoryBitMask and collisionBitMask properties to define an object's collision behavior. The constants listed in SCNPhysicsCollisionCategory provide default values for these properties. In addition, with the contactTestBitMask property you can define interactions where a pair of bodies generates contact messages (see the SCNPhysicsContactDelegate protocol) without the bodies being affected by the collision.

Related Physics Classes
Physics fields create forces that affect all bodies in an area, such as vortices and gravitational attraction. For details and a list of available field types, see SCNPhysicsField.
You can add higher-level behaviors that control interactions between multiple bodies, such as joints and wheeled vehicles. For details and a list of available behaviors, see SCNPhysicsBehavior.
A scene's physicsWorld property holds an SCNPhysicsWorld object that manages physics characteristics that affect the entire scene.

Physics and the Rendering Loop
SceneKit evaluates its physics simulation as part of the rendering loop described in SCNSceneRendererDelegate. On each pass through this loop, SceneKit determines the state of all nodes with attached physics bodies, and simulates the effects of physics on those bodies for one time step—for example, by updating the position or rotation of a body based on its velocity and angular velocity. After simulating physics, SceneKit applies the results of the physics simulation to the scene for display.

Because you can animate SceneKit content not only through physics, but also through actions and implicitly and explicitly defined animations, SceneKit applies the results of physics simulation not to the SCNNode objects in your scene, but to each node's presentationNode object that represents its currently displayed state. As such, changing properties of a node that are affected by physics requires special consideration.

If you change the transform value—or any of the other properties that are components of the transform, such as position and rotation—of a node affected by physics, SceneKit resets the physics simulation for that node. If you want to change only one component of the transform, while leaving the others at their physics-simulated values, copy the presentation node's transform before making changes.

155.31.4 Methods

155.31.5 applyForce(direction as SCNVector3MBS, atPosition as SCNVector3MBS, impulse as Boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Applies a force or impulse to the body at a specific point.
Notes:

direction: The direction and magnitude of the force (in newtons) or of the impulse (in newton-seconds).
position: The point on the body where the force or impulse should be applied, in the local coordinate system of the SCNNodeMBS object containing the physics body.
impulse: True to apply an instantaneous change in momentum; false to apply a force that affects the body at the end of the simulation step.

Applying a force or impulse to a body at a position other than its center of mass may impart both linear and angular acceleration, depending on how the body is situated in the physics world and the other forces acting upon it.
The impulse parameter determines how this method contributes to the physics simulation:

- If you specify true, SceneKit treats the direction parameter as an impulse, measured in newton-seconds, and accelerates the physics body immediately. Use this option to simulate instantaneous effects such as launching a projectile.
- If you specify false, SceneKit treats the direction parameter as a force, measured in newtons. At the end of each simulation step (by default, a step occurs once for each frame in the rendering loop), SceneKit sums all forces applied to the physics body during that step and accelerates the body according to the net effect of those forces. Use this option when you want to simulate continuous forces on the body by calling applyForce on each simulation step.

Note
The impulse parameter effectively changes the unit of magnitude. A value that results in a certain acceleration when applied continuously on each frame of the simulation results in much less acceleration if applied only during a single frame.

As with all physical quantities in SceneKit, you need not use realistic force measurements in your app—the effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.
See also:

• 155.31.6 applyForce(direction as SCNVector3MBS, impulse as Boolean) 22654

155.31.6 applyForce(direction as SCNVector3MBS, impulse as Boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Applies a force or impulse to the body at its center of mass.
Notes:

direction: The direction and magnitude of the force (in newtons) or of the impulse (in newton-seconds).
impulse: True to apply an instantaneous change in momentum; false to apply a force that affects the body at the end of the simulation step.

Applying a force or impulse to a body imparts a linear acceleration proportional to its mass.
The impulse parameter determines how this method contributes to the physics simulation:

- If you specify true, SceneKit treats the direction parameter as an impulse, measured in newton-seconds, and accelerates the physics body immediately. Use this option to simulate instantaneous effects such as launching a projectile.
- If you specify false, SceneKit treats the direction parameter as a force, measured in newtons. At the end of each simulation step (by default, a step occurs once for each frame in the rendering loop), SceneKit sums all forces applied to the physics body during that step and accelerates the body according to the net effect of those forces. Use this option when you want to simulate continuous forces on the body by calling applyForce:impulse: on each simulation step.

Note
The impulse parameter effectively changes the unit of magnitude. A value that results in a certain acceleration when applied continuously on each frame of the simulation results in much less acceleration if applied only during a single frame.

As with all physical quantities in SceneKit, you need not use realistic force measurements in your app—the effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.
See also:

- 155.31.5 applyForce(direction as SCNVector3MBS, atPosition as SCNVector3MBS, impulse as Boolean) 22653

155.31.7 applyTorque(torque as SCNVector4MBS, impulse as Boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Applies a net torque or a change in angular momentum to the body.
Notes:

torque: The direction and magnitude of the torque (in newton-meters) or of the change of angular momentum (in newton-meter-seconds), relative to the world coordinate space of the scene.
impulse: True to apply an instantaneous change in angular momentum; false to apply a torque that affects the body at the end of the simulation step.

Applying a torque to a body changes its angular velocity by an amount related to its mass and shape, rotating it without affecting its linear acceleration. Each component of the torque vector relates to rotation about the corresponding axis in the local coordinate system of the SCNNode object containing the physics body. For example, applying a torque of { 0.0, 0.0, 1.0 } causes a node to spin counterclockwise around the world-space z-axis.
The impulse parameter determines how this method contributes to the physics simulation:

- If you specify true, SceneKit treats the direction parameter as an instantaneous change in angular momentum, measured in newton-meter-seconds.
- If you specify false, SceneKit treats the direction parameter as a torque, measured in newton-meters. At the end of each simulation step (by default, a step occurs once for each frame in the rendering loop), SceneKit sums all forces and torques applied to the physics body during that step and accelerates the body according to the net effect of those forces and torques. Use this option when you want to simulate gradual acceleration by calling applyTorque:impulse: on each simulation step.

Note
The impulse parameter effectively changes the unit of magnitude. A value that results in a certain acceleration when applied continuously on each frame of the simulation results in much less acceleration if applied only during a single frame.

As with all physical quantities in SceneKit, you need not use realistic force and torque measurements in your app—the effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.

155.31.8 body(type as Integer, shape as SCNPhysicsShapeMBS) as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a physics body with the specified type and shape.
Notes:

type: A constant that determines how a body responds to forces and collisions. See SCNPhysicsBodyType.
shape: A physics shape defining the volume of the body for collision detection purposes.

Returns a new physics body object.

For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.
If you pass nil for the shape parameter, SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node's geometry property. To create a physics shape that's based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.

Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

155.31.9 clearAllForces

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels all continuous forces and torques acting on the physics body during the current simulation step.
Notes:

When you pass false for the impulse parameter in the applyForce, applyForce:atPosition, or applyTorque method, SceneKit waits until the end of the current simulation step before applying its effect. At that time, SceneKit sums all forces and torques applied during that simulation step and changes the velocity or angular velocity of the body according to the net effect of those forces and torques.
Call clearAllForces to cancel any forces and torques previously applied during the current simulation step.

155.31.10 Constructor(type as Integer, shape as SCNPhysicsShapeMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a physics body with the specified type and shape.
Notes:

type: A constant that determines how a body responds to forces and collisions. See SCNPhysicsBodyType.
shape: A physics shape defining the volume of the body for collision detection purposes.

Returns a new physics body object.

For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody

property of an SCNNode object in a scene.
If you pass nil for the shape parameter, SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node's geometry property. To create a physics shape that's based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.

Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

155.31.11 copy as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the body.

155.31.12 dynamicBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a physics body that can be affected by forces and collisions.
Notes:

Use dynamic bodies for the elements of your scene that are moved by the physics simulation.
For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.
SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node's geometry property. To create a physics shape that's based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.

Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

155.31.13 kinematicBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a physics body that is unaffected by forces or collisions but that can cause collisions affecting other bodies when moved.
Notes:

Return a new physics body object.

Use kinematic bodies for scene elements that you want to control directly but whose movement manipulates other elements. For example, to allow the user to push objects around with a finger, you might create a kinematic body and attach it to an invisible node that you move follow touch events. (In macOS, use the same technique to allow the user to move objects with the mouse pointer.)

For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.
SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node's geometry property. To create a physics shape that's based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.
Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

155.31.14 resetTransform

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Updates the position and orientation of a body in the physics simulation to match that of the node to which the body is attached.
Notes:

If you change the position or orientation of a node with an attached static or dynamic physics body, call this method afterward to ensure that the physics simulation incorporates the change. You need not call this method for kinematic bodies.
Note that dynamic and physics bodies are designed to be moved only by the physics simulation or not at all. You may use this method to move them regardless of this restriction, but at a cost to performance.

155.31.15 staticBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a physics body that is unaffected by forces or collisions and that cannot move.
Notes:

Use static bodies to construct fixtures in your scene that other bodies need to collide with but that do not themselves move, such as floors, walls, and terrain.
For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.
SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node's geometry property. To create a physics shape that's based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.

Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

155.31.16 Properties

155.31.17 AffectedByGravity as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the constant gravity of a scene accelerates the body.
Notes:

If this property is true (the default), and the type of the body is SCNPhysicsBodyTypeDynamic, the gravity property of the scene's physicsWorld object causes the body to accelerate.
If this property is false, the body is not affected by scene gravity. This option can be useful when making physics bodies whose behavior should be governed by SCNPhysicsFieldMBS objects instead of a constant global acceleration.
(Read and Write property)

155.31.18 allowsResting as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether SceneKit can automatically mark the physics body at rest.

Notes:

If true (the default), SceneKit keeps track of whether the body is moving or affected by forces, automatically setting its Resting property to true when it is "at rest." The physics simulation runs faster when simulating fewer bodies, so treating a body as resting temporarily removes it from the simulation to improve performance.

SceneKit automatically returns a resting body to the simulation if another body collides with it, if you change its position or velocity, or if you apply a force to it. However, SceneKit uses a faster, less accurate simulation when deciding whether to change a body's isResting property back to false. If testing your app reveals unexpected physics behaviors involving resting bodies, changing those bodies' allowsResting property to false may improve simulation accuracy.
(Read and Write property)

155.31.19 angularDamping as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A factor that reduces the body's angular velocity.
Notes:

This property simulates the effect of rotational friction on a body. A damping factor of 0.0 specifies no loss in angular velocity, and a damping factor of 1.0 prevents the body from rotating. The default damping factor is 0.1.
(Read and Write property)

155.31.20 angularVelocity as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A vector describing both the current rotation axis and rotational speed (in radians per second) of the physics body.
Notes:

A positive rotational speed indicates counterclockwise rotation (when viewed from the direction the rotation axis points in).
SceneKit's physics simulation determines the angular velocity (and corresponding change in rotation) of each dynamic physics body in the scene. You can also set a body's velocity directly to set the physics simulation in motion or influence its behavior.

The effect of reading or setting this property's value changes based on the current context:

- When invoked within a rendering loop method (any of the events), or from any other code invoked

from within such a method, reading the property returns the current result of the physics simulation, and setting the property immediately applies the change.

- When invoked at any other time, reading the property returns the last value set for the property, and setting the property does not take effect until the next pass through the rendering loop.

(Read and Write property)

155.31.21 angularVelocityFactor as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A multiplier affecting how SceneKit applies rotations computed by the physics simulation to the node containing the physics body.
Notes:

Use this property to constrain or restrict the effect of physics simulation on the node containing the physics body. For example, you can force a body to rotate in only one axis by setting its angular velocity factor to { 0.0, 1.0, 0.0 } .
(Read and Write property)

155.31.22 categoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A mask that defines which categories this physics body belongs to.
Notes:

Every physics body in a scene can be assigned to one or more categories, each corresponding to a bit in the bit mask. You define the mask values used in your game. Use this property together with the physicsShape and contactTestBitMask properties to define which physics bodies interact with each other and when your game is notified of interactions.
The default value is SCNPhysicsCollisionCategoryStatic for static bodies and SCNPhysicsCollisionCategoryDefault for dynamic and kinematic bodies.
(Read and Write property)

155.31.23 charge as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The electric charge of the body, in coulombs.
Notes:

A body's charge determines its behavior when affected by an electric or magnetic field. Use the SCNPhysicsFieldMBS class to add these fields to your scene. Bodies with positive or negative charges behave differently

when affected by electric or magnetic fields. The default electric charge on a physics body is 0.0, causing it to be unaffected by electric and magnetic fields.

Note that you need not use realistic measurements for the bodies in your app—the effects of the physics simulation depend on the relative masses of different bodies, not the absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.
(Read and Write property)

155.31.24 collisionBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A mask that defines which categories of physics bodies can collide with this physics body.
Notes:

When two physics bodies contact each other, a collision may occur. SceneKit compares the body's collision mask to the other body's category mask by performing a bitwise AND operation. If the result is a nonzero value, then the body is affected by the collision. Each body independently chooses whether it wants to be affected by the other body. For example, you might choose to avoid collision calculations that would make negligible changes to a body's velocity.

The default value is SCNPhysicsCollisionCategoryAll (a bit mask whose every bit is enabled), specifying that the body will collide with bodies of all other categories.
(Read and Write property)

155.31.25 contactTestBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A mask that defines which categories of bodies cause intersection notifications with this physics body.
Notes:

When two physics bodies overlap, a contact may occur. SceneKit compares the body's contact mask to the other body's category mask by performing a bitwise AND operation. If the result is a nonzero value, SceneKit creates an SCNPhysicsContactMBS object describing the contact and sends messages to the contactDelegate object of the scene's physics world. For best performance, only set bits in the contact mask for interactions you are interested in.

For applications running in OS X v10.10 or iOS 8, this property's value matches that of the collisionBitMask property—that is, SceneKit sends contact messages if and only if a collision occurs. For applications running in OS X v10.11 or iOS 9 or later, this property's value defaults to zero and need not match the collision mask—that is, a pair of bodies generates contact messages whenever the bodies intersect, regardless of whether they collide or pass through one another.

(Read and Write property)

155.31.26 damping as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A factor that reduces the body's linear velocity.
Notes:

This property simulates the effect of fluid friction or air resistance on a body. A damping factor of 0.0 specifies no loss in velocity, and a damping factor of 1.0 prevents the body from moving. The default damping factor is 0.1.
(Read and Write property)

155.31.27 friction as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The body's resistance to sliding motion.
Notes:

This property simulates the roughness of the body's surface. When two bodies are in contact and a force is applied that would cause them to slide against one another, the friction values for both bodies determine their resistance to motion. If both bodies' friction value is 0.0, they slide freely against each other. If both bodies' friction value is 1.0, they do not slide at all. The default friction is 0.5.
(Read and Write property)

155.31.28 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

155.31.29 isResting as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the physics body is at rest.
Notes:

This property's default value is false, but SceneKit's physics simulation may automatically set it to true if the body is not moving and not affected by any forces. A resting body does not participate in the simulation

until another body collides with it or you change its position or velocity or apply a force to it.
(Read only property)

155.31.30 mass as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The mass of the body, in kilograms.
Notes:

The mass of a body affects its momentum and how it responds to forces. The default mass for dynamic bodies is 1.0. The default mass for static and kinematic bodies is 0.0, but these bodies are unaffected by mass.

Note that you need not use realistic measurements for the bodies in your app—the effects of the physics simulation depend on the relative masses of different bodies, not the absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.
(Read and Write property)

155.31.31 momentOfInertia as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The body's moment of inertia, expressed in the local coordinate system of the node that contains the body.
Notes:

A body's moment of inertia determines how it responds to torques (that is, forces with a rotational component). Each component of this vector is the moment of inertia for the corresponding principal axis (in the coordinate system containing the physics body). For example, if the x-component value of the moment vector is less than the y-component value, the body rotates more freely about its x-axis than its y-axis.

By default, SceneKit automatically determines the body's moment of inertia based on its shape and mass. Use this property to define a custom moment of inertia (for example, to model an object of non-uniform density). Using a custom moment of inertia requires setting the usesDefaultMomentOfInertia property to false.
(Read and Write property)

155.31.32 physicsShape as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that defines the solid volume of the physics body for use in collision detection.
Notes:

The physics simulation does not use a node's visible geometry for collision detection—the simulation can run faster when using simple shapes, and it can also be useful to design your app or game using invisible collision shapes for some elements. Typically, you set a body's physics shape to a bounding box or primitive shape that roughly matches its node's visible content, but you can use a more detailed shape for more precise collision detection at a cost to performance.
For details on creating physics shapes, see SCNPhysicsShapeMBS.
(Read and Write property)

155.31.33 restitution as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A factor that determines how much kinetic energy the body loses or gains in collisions.
Notes:

This property simulates the "bounciness" of a body. A restitution of 1.0 means that the body loses no energy in a collision—for example, a ball dropped onto a flat surface will bounce back to the height it fell from. A restitution of 0.0 means the body does not bounce after a collision. A restitution of greater than 1.0 causes the body to gain energy in collisions. The default restitution is 0.5.
(Read and Write property)

155.31.34 rollingFriction as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The body's resistance to rolling motion.
Notes:

This property simulates the traction between a rounded body and bodies it might roll against. A rolling friction of 0.0 (the default) means that a body induced to roll (for example, by being placed on an inclined surface) will continue to roll without slowing down unless otherwise acted upon, and a rolling friction of 1.0 prevents the body from rolling.
(Read and Write property)

155.31.35 type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A constant that determines how the physics body responds to forces and collisions.
Notes: (Read and Write property)

155.31.36 usesDefaultMomentOfInertia as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether SceneKit automatically calculates the body's moment of inertia or allows setting a custom value.
Notes:

A body's moment of inertia determines how it responds to torques (that is, forces with a rotational component).
If this property is true (the default), SceneKit automatically determines the body's moment of inertia based on its shape and mass. Set this property to false and use the momentOfInertia property to define a custom moment of inertia (for example, to model an object of non-uniform density).
(Read and Write property)

155.31.37 velocity as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A vector describing both the current speed (in meters per second) and direction of motion of the physics body.
Notes:

SceneKit's physics simulation determines the velocity (and corresponding change in position) of each dynamic physics body in the scene. You can also set a body's velocity directly to set the physics simulation in motion or influence its behavior.
The effect of reading or setting this property's value changes based on the current context:

- When invoked within a rendering loop method (any of the events), or from any other code invoked from within such a method, reading the property returns the current result of the physics simulation, and setting the property immediately applies the change.
- When invoked at any other time, reading the property returns the last value set for the property, and setting the property does not take effect until the next pass through the rendering loop.

(Read and Write property)

155.31.38 velocityFactor as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A multiplier affecting how SceneKit applies translations computed by the physics simulation to the node containing the physics body.
Notes:

Use this property to constrain or restrict the effect of physics simulation on the node containing the physics body. For example, you can force a body to move in only two dimensions by setting its velocity factor to { 1.0, 1.0, 0.0 } .
(Read and Write property)

155.31.39 Constants

155.31.40 kPhysicsCollisionCategoryAll = -1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the collision category constants.
Notes:

This is the default value for a physics body's collisionBitMask property.
With this collision mask, a physics body can collide with all other physics bodies.

155.31.41 kPhysicsCollisionCategoryDefault = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the collision category constants.
Notes: The default categoryBitMask value for dynamic and kinematic bodies.

155.31.42 kPhysicsCollisionCategoryStatic = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the collision category constants.
Notes: The default categoryBitMask value for static bodies.

155.31.43 kTypeDynamic = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the body type constants.
Notes:

A physics body that can be affected by forces and collisions.
Use dynamic bodies for the elements of your scene that are moved by the physics simulation.

155.31.44 kTypeKinematic = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the body type constants.
Notes:

A physics body that is unaffected by forces or collisions but that can cause collisions affecting other bodies when moved.
Use kinematic bodies for scene elements that you want to control directly directly but whose movement manipulates other elements. For example, to allow the user to push objects around with a finger, you might create a kinematic body and attach it to an invisible node that you move to follow touch events. (In macOS, use the same technique to allow the user to move objects with the mouse pointer.)

155.31.45 kTypeStatic = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the body type constants.
Notes:

A physics body that is unaffected by forces or collisions and cannot move.
Use static bodies to construct fixtures in your scene that other bodies need to collide with but that do not themselves move, such as floors, walls, and terrain.

155.32 class SCNPhysicsConeTwistJointMBS

155.32.1 class SCNPhysicsConeTwistJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a cone twist join.
Notes: Subclass of the SCNPhysicsBehaviorMBS class.

155.32.2 Methods

155.32.3 Constructor(body as SCNPhysicsBodyMBS, frame as SCNMatrix4MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a physics cone-twist joint.
Notes: The joint attaches "body" to the 3d location specified by "frame" and relative to the node that owns the body.
See also:

- 155.32.4 Constructor(bodyA as SCNPhysicsBodyMBS, frameA as SCNMatrix4MBS, bodyB as SCNPhysicsBodyMBS, frameB as SCNMatrix4MBS) 22669

155.32.4 Constructor(bodyA as SCNPhysicsBodyMBS, frameA as SCNMatrix4MBS, bodyB as SCNPhysicsBodyMBS, frameB as SCNMatrix4MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a physics cone-twist joint.
Notes: The joint attaches bodyA and bodyB on frameA and frameB respectively.
See also:

- 155.32.3 Constructor(body as SCNPhysicsBodyMBS, frame as SCNMatrix4MBS) 22669

155.32.5 jointWithBody(body as SCNPhysicsBodyMBS, frame as SCNMatrix4MBS) as SCNPhysicsConeTwistJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a physics cone-twist joint.
Notes: The joint attaches "body" to the 3d location specified by "frame" and relative to the node that owns the body.
See also:

- 155.32.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, frameA as SCNMatrix4MBS, bodyB as SCNPhysicsBodyMBS, frameB as SCNMatrix4MBS) as SCNPhysicsConeTwistJointMBS 22670

155.32.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, frameA as SCNMatrix4MBS, bodyB as SCNPhysicsBodyMBS, frameB as SCNMatrix4MBS) as SCNPhysicsConeTwistJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a physics cone-twist joint.
Notes: The joint attaches bodyA and bodyB on frameA and frameB respectively.
See also:

- 155.32.5 jointWithBody(body as SCNPhysicsBodyMBS, frame as SCNMatrix4MBS) as SCNPhysicsConeTwistJointMBS 22669

155.32.7 Properties

155.32.8 bodyA as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The first body attached to the slider joint.
Notes: (Read only property)

155.32.9 bodyB as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The second body attached to the slider joint.
Notes: (Read only property)

155.32.10 frameA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Frame for bodyA.
Notes: (Read and Write property)

155.32.11 frameB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Frame for bodyB.
Notes: (Read and Write property)

155.32.12 maximumAngularLimit1 as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum angular limits in radians in each cone tangent directions
Notes: (Read and Write property)

155.32.13 maximumAngularLimit2 as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum angular limits in radians in each cone tangent directions
Notes: (Read and Write property)

155.32.14 maximumTwistAngle as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Maximum twist angle alon the cone axis.
Notes: (Read and Write property)

155.33 class SCNPhysicsContactMBS

155.33.1 class SCNPhysicsContactMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Detailed information about a contact between two physics bodies in a scene's physics simulation.
Notes:

You don't create SCNPhysicsContact instances directly; SceneKit automatically creates these objects whenever contacts occur.
To receive contact messages, implement events in your of your scene's SCNPhysicsWorld object. Next, for each physics body in your scene, set the categoryBitMask and collisionBitMask properties to define which interactions should generate contact messages.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

155.33.2 Methods

155.33.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

155.33.4 Properties

155.33.5 collisionImpulse as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The force over time of the collision, in newton-seconds.
Notes:

This property's value tells you how hard the bodies struck each other in a collision. For example, in a game you might allow a character to proceed unhindered after a minor collision, but take damage when struck with sufficient force.
(Read only property)

155.33.6 contactNormal as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The normal vector at the contact point between the two physics bodies, in scene coordinates.
Notes:

This vector tells you which direction the bodies were moving relative to one another at the time of the collision. For example, in a game you can examine this vector to have enemy characters take damage when struck from above by the player character but damage the player character instead when they collide side-to-side.
(Read only property)

155.33.7 contactPoint as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The contact point between the two physics bodies, in scene coordinates.
Notes: (Read only property)

155.33.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

155.33.9 nodeA as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The node containing the first body in the contact.
Notes:

Use the node's physicsBody property to examine physics characteristics of the node.
(Read only property)

155.33.10 nodeB as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The node containing the second body in the contact.
Notes:

Use the node's physicsBody property to examine physics characteristics of the node.
(Read only property)

155.33.11 penetrationDistance as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The distance of overlap, in units of scene coordinate space, between the two physics bodies.
Notes: (Read only property)

155.33.12 sweepTestFraction as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Value between 0 and 1 giving the relative position of the physic shape when performing a convex sweep test.
Notes: (Read only property)

155.34 class SCNPhysicsFieldMBS

155.34.1 class SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that applies forces, such as gravitation, electromagnetism, and turbulence, to physics bodies within a certain area of effect.
Notes:

You can create many types of field effects, such as gravitation, electromagnetism, and turbulence. To add a field effect to a scene, you create a physics field of the type you want to use and then attach it to the physicsField property of a node in the scene.
Physics fields can affect both SCNPhysicsBodyMBS objects and the particles spawned by SCNParticleSystemMBS objects.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

155.34.2 Methods

155.34.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

155.34.4 copy as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the field.

155.34.5 customField(FieldForceEvaluator as SCNFieldForceEvaluatorMBS, tag as variant = nil) as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a field that runs the specified block to determine the force a field applies to each object in its area of effect.
Notes:

delegate: A method that SceneKit runs for each object in the field's area of effect.

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNodeMBS object.

For custom physics fields, SceneKit ignores the direction, strength, falloffExponent, and minimumDistance properties. Instead, SceneKit calls your block to determine the direction and magnitude of force to apply to each physics body or particle in the field's area of effect.

Due to the dispatching of the delegate to main thread, this is not very efficient.

155.34.6 dragField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a field that slows any object in its area of effect with a force proportional to the object's velocity.
Notes:

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Like the damping and angularDamping properties of a physics body, drag fields can simulate effects such as fluid friction or air resistance. Unlike those properties, drag fields can simulate different intensities of fluid friction in different areas of your scene. For example, you can use a drag field to represent underwater areas. The default falloffExponent value for a drag field is 0.0, indicating that the field's effect is constant throughout its area of effect.

155.34.7 electricField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a field that attracts or repels objects based on their electrical charge and on their distance from the field's center.
Notes:

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Use this field type to make objects behave differently from one another when they enter a region, or to make an object's behavior different from its mass-based behavior. An electric field behaves according to the first part of the Lorentz force equation modeling real-world electromagnetic forces—the field applies a force whose magnitude is proportional to electric charge and distance.
By default, physics bodies and particle systems have no electric charge, so they are unaffected by electric and magnetic fields. Use the charge property of a physics body or the particleCharge property of a particle

system to add charge-based behavior.
When the field's strength value is positive (the default), it attracts bodies whose charge is negative and repels bodies whose charge is positive. To reverse this behavior, set the field's strength property to a negative value.
The default falloffExponent value for an electric field is 2.0, indicating that the field's effect diminishes with the square of its distance from its center.

155.34.8 linearGravityField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a field that accelerates objects in a specific direction.
Notes:

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Because the force of gravity on an object is proportional to the object's mass, this force accelerates all objects in the field's area of affect by the same amount. The field's strength property measures this acceleration in meters per second per second.
By default, a linear gravity field accelerates objects in along its direction vector. To make it accelerate objects in the opposite direction, set the field's strength property to a negative value.
The default falloffExponent value for a linear gravity field is 0.0, indicating that the field's effect is constant throughout its area of effect.

155.34.9 magneticField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a field that attracts or repels objects based on their electrical charge, velocity, and distance from the field's axis.
Notes:

A physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Use this field type to make objects behave differently from one another when they enter a region, or to make an object's behavior different from its mass based behavior. A magnetic field behaves according to the second part of the Lorentz force equation modeling real-world electromagnetic forces—the field applies a force determined by the cross product of an object's velocity vector and the magnetic field vector at the object's location, with magnitude proportional to the object's electric charge.
By default, physics bodies and particle systems have no electric charge, so they are unaffected by electric and magnetic fields. Use the charge property of a physics body or the particleCharge property of a particle system to add charge-based behavior.
When the field's strength value is positive (the default), the magnetic field vectors circulate counterclockwise

relative to the field's direction vector. (That is, the magnetic field models a real-world magnetic field created by current in a wire oriented in the field's direction.) To make field vectors circulate clockwise, set the field's strength property to a negative value.

This SCNPhysicsField option models the real-world physics effect of magnetic fields on moving, electrically charged bodies, not the behavior of permanent magnets or electromagnets. To make objects in your scene simply attract or repel one another, use a different field type. For example, a field created by the radialGravityField method attracts or repels all dynamic bodies near it according to its strength property, and a field created by the electricField method selectively attracts or repels bodies according to their electric charge.
The default falloffExponent value for a magnetic field is 2.0, indicating that the field's effect diminishes with the square of distance from its center.

155.34.10 noiseField(smoothness as double, animationSpeed as double) as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a field that applies random forces to objects in its area of effect.
Notes:

smoothness: The amount of randomness in the field. A value of 0.0 specifies maximum noise, and a value of 1.0 specifies no noise at all.
speed: The field's variation over time. Specify 0.0 for a static field.

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Use this field type to simulate effects involving random motion, such as fireflies or gently falling snow.
In calculating the direction and strength of the field's effect on an object, SceneKit uses a Perlin simplex noise function. This function produces a velocity field that varies over time.
The default falloffExponent value for a noise field is 0.0, indicating that the field's effect is constant throughout its area of effect. This field type ignores the field's direction property.

155.34.11 radialGravityField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a field that accelerates objects toward its center.
Notes:

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Because the force of gravity on an object is proportional to the object's mass, this force accelerates all objects at the same distance from the field's center by the same amount. The field's strength property measures this acceleration in meters per second per second.
By default, a radial gravity field attracts objects toward its center. To make it repel objects instead, set the field's strength property to a negative value.
The default falloffExponent value for a radial gravity field is 2.0, indicating that the field's effect diminishes with the square of distance from its center.

155.34.12 springField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a field that pulls objects toward its center with a spring-like force.
Notes:

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

The force a spring field applies to objects in its area of effect is linearly proportional to the distance from the object to the center of the field. (That is, the field behaves according to Hooke's Law of real-world spring forces.) An object placed at the center of the field and moved away will oscillate around the center, with a period of oscillation that is proportional to the object's mass. The field's strength property scales the magnitude of the spring effect—a larger strength simulates a stiffer spring.

The default falloffExponent value for a spring field is 1.0, indicating that the field's effect diminishes linearly with distance from its center.

155.34.13 turbulenceField(smoothness as double, animationSpeed as double) as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a field that applies random forces to objects in its area of effect, with magnitudes proportional to those objects' velocities.
Notes:

smoothness: The amount of randomness in the field. A value of 0.0 specifies maximum noise, and a value of 1.0 specifies no noise at all.
speed: The field's variation over time. Specify 0.0 for a static field.

Return a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Like a noise field, a turbulence field applies forces in random directions to the objects that it affects. Unlike a noise field, a turbulence field applies a force whose magnitude is proportional to the speed of each affected object. For example, an object passing through a noise field shakes as it travels through the field, but an object passing through a turbulence field shakes more violently the faster it travels. The field's strength property scales the magnitude of the turbulence effect.

The default falloffExponent value for a turbulence field is 0.0, indicating that the field's effect is constant throughout its area of effect.

155.34.14 vortexField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a field whose forces circulate around an axis.
Notes:

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

The force on an object in a vortex field is tangential to the line from the object's position to the field's axis and proportional to the object's mass. (The field's axis is a line that is parallel to its direction vector and that passes through its center. For details, see the offset property.) For example, when a vortex field's area of effect contains many objects, the resulting scene resembles a tornado: The objects simultaneously revolve around and fly away from the field's center.
By default, a vortex circulates counterclockwise relative to its direction vector. To make it circulate clockwise, set the field's strength property to a negative value.
The default falloffExponent value for a vortex field is 0.0, indicating that the field's effect is constant throughout its area of effect.

155.34.15 Properties

155.34.16 Active as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the field's effect is enabled.
Notes:

If this value is fasle, the field does not apply forces to physics bodies in its area of effect. The default value is true.
Use this property, for example, to switch fields on and off as a gameplay mechanic.
(Read and Write property)

155.34.17 CategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A mask that defines which categories this physics field belongs to.
Notes:

To determine whether a field affects a physics body, SceneKit performs a bitwise AND operation on the field's category bit mask and the body's categoryBitMask property. If the result is a nonzero value, SceneKit computes and applies the force of the field on the body. To determine whether a field affects the particles spawned by an SCNParticleSystemMBS object, SceneKit performs the same check using the categoryBitMask property of the node containing the particle system.
Use this property to create fields which affect only certain bodies in your scene. Reducing the number of bodies affected by fields can also improve simulation performance.
(Read and Write property)

155.34.18 direction as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The field's directional axis.
Notes:

Some types of fields apply forces whose direction or magnitude is relative to an axis. (For details on each type of field, see the methods listed in Creating Physics Fields.) Changing the direction changes the effects of these field types.

The default direction is the vector { 0, -1, 0 } . With this direction, for example, linear gravity fields whose strength is positive cause objects to fall in the "down" direction of scene space.
(Read and Write property)

155.34.19 Exclusive as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the field overrides other fields whose areas of effect it overlaps.
Notes:

If this value is true and a physics body is within this field's region, SceneKit ignores the effects of all other fields that might otherwise affect the body. The default value is false.
If you set this property to true on multiple fields in a scene, their regions should not overlap. If they do, the results are undefined.
(Read and Write property)

155.34.20 falloffExponent as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An exponent that determines how the field's strength diminishes with distance.
Notes:

When SceneKit calculates the force to be applied by a field, it attenuates the field's effect by multiplying with the expression pow(distance - minRadius, -falloff). If the falloff exponent is greater than zero, the field's effect is stronger on nearby bodies than on bodies farther away from its location.
The default falloff exponent varies by field type. For details, see the methods listed in Creating Physics Fields.
(Read and Write property)

155.34.21 halfExtent as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A location marking the end of the field's area of effect.
Notes:

To define a field's area of effect, use the position property of the node that contains the field and the field's halfExtent property. The center of the area of effect is the node's position. The half-extent, a position vector in the local coordinate space of the node containing the field, marks one corner of a box, and the negative of the half-extent vector marks the opposite corner of the box. For example, if a node's position is the vector { 2.0, 2.0, 2.0 } and it contains a physics field whose half-extent is the vector { 0.5, 0.5, 0.5 } , the field's area of effect is the box extending from 1.5 to 2.5 along each axis of the scene's coordinate system.
By default, a field's area of effect is the interior of this box shape. Use the usesEllipsoidalExtent property to instead make the area of effect an ellipsoid bounded by this box. Use the scope property to choose whether the area of effect is the interior or exterior of the box (or ellipsoid).
The default half-extent is the vector { INFINITY, INFINITY, INFINITY } , specifying that the field affects bodies located anywhere in the scene.
(Read and Write property)

155.34.22 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

155.34.23 minimumDistance as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum value for distance-based effects.
Notes:

This property determines the beginning of the field's falloff area. At distances less than the minimum, the field's effect is at full strength. At greater distances, the field's effect diminishes based on the value of the falloffExponent property. The default minimum distance is a very small (but nonzero) value.
(Read and Write property)

155.34.24 offset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The offset of the field's center within its area of effect.
Notes:

Some types of fields apply forces whose magnitude is relative to the distance between an object and the field's center. (For details on each type of field, see the methods listed in Creating Physics Fields.) Changing the offset changes the effects of these field types.

With the default offset vector { 0, 0, 0 } , the center of a field is the center of its area of effect.
(Read and Write property)

155.34.25 Scope as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The area affected by the field, either inside or outside its region.
Notes:

First, define a field's region using its halfExtent property and the position property of the node containing the field. Then, use the scope property to choose whether the field's area of effect is the interior of the region (the default) or all space outside the region.
(Read and Write property)

155.34.26 strength as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A multiplier for the force that the field applies to objects in its area of effect.
Notes:

Each type of physics field defines its own behavior for strength values. For details, see the methods listed in Creating Physics Fields.

(Read and Write property)

155.34.27 usesEllipsoidalExtent as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the field's area of effect is shaped like a box or ellipsoid.
Notes:

If this value is false (the default), the field's area of effect is the box-shaped region of space defined by its halfExtent property and the position property of the node containing the field.

If this value is true, the field's area of effect is the ellipsoid bounded by this box-shaped region. That is, if all components of the half-extent vector are equal, the field has a spherical area of effect.
(Read and Write property)

155.34.28 Constants

155.34.29 kScopeInsideExtent = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the options for defining the region of space affected by a physics field, used by the scope property.
Notes: The field's effect applies only to objects within the region of space defined by its position and extent.

155.34.30 kScopeOutsideExtent = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the options for defining the region of space affected by a physics field, used by the scope property.
Notes: The field's effect applies only to objects outside the region of space defined by its position and extent.

155.34.31 Delegates

155.34.32 SCNFieldForceEvaluatorMBS(position as SCNVector3MBS, velocity as SCNVector3MBS, mass as single, charge as single, time as double, Tag as Variant) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The signature for a delegate that SceneKit calls to determine the effect of a custom field on an object.
Notes:

You use this type of delegate to create a custom physics field with the customFieldWithEvaluationBlock: method. SceneKit calls your delegate once for each object in the field's area of effect, on each step of the physics simulation.

Note
By default, one simulation step occurs for each frame rendered. For example, if your view renders at 60 frames per second and three bodies are in the field's area of effect, SceneKit runs your delegate 180 times per second. To avoid reduced rendering performance, take care not to perform extensive computation in this delegate.
The delegate takes the following parameters:

position: The position of the object affected by the field, in the local coordinate space of the node containing the field.
velocity: The velocity of the object affected by the field, relative to the local coordinate space of the node containing the field.
mass: The mass of the object affected by the field. (See the mass property for physics bodies and the particleMass property for particle systems.)
charge: The electrical charge of the object affected by the field. (See the charge property for physics bodies and the particleCharge property for particle systems.)
time: The elapsed time, in seconds, since the last simulation step.

Your delegate uses these parameters to compute and return an SCNVector3 force vector, which SceneKit then applies to the object affected by the field.

155.35 class SCNPhysicsHingeJointMBS

155.35.1 class SCNPhysicsHingeJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A physics behavior that connects two bodies and allows them to pivot around each other on a single axis.
Notes:

A hinge has a single degree of freedom (rotation). You can also use a hinge joint to pin a body so that it can only move by rotating around a specific axis in the coordinate space of the node containing it.

Available in MacOS 10.10 or newer.
Subclass of the SCNPhysicsBehaviorMBS class.

155.35.2 Methods

155.35.3 Constructor(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a hinge joint that anchors a single physics body in space and lets it rotate around a specific axis.
Notes:

body: The physics body to be controlled by the hinge joint.
axis: The direction of the axis that the body pivots around, relative to the node containing the body.
anchor: The location of the axis in the node containing the body.

Returns a new hinge joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 155.35.4 Constructor(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS)

155.35.4 Constructor(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a hinge joint connecting two physics bodies.
Notes:

bodyA: The first physics body to be connected by the joint.
axisA: The axis that the hinge pivots around, relative to the node containing the first body.
anchorA: The point at which the hinge connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
axisB: The axis that the hinge pivots around, relative to the node containing the second body.
anchorB: The point at which the hinge connects, relative to the node containing the second body.

Returns a new hinge joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 155.35.3 Constructor(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) 22686

155.35.5 jointWithBody(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) as SCNPhysicsHingeJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a hinge joint that anchors a single physics body in space and lets it rotate around a specific axis.
Notes:

body: The physics body to be controlled by the hinge joint.
axis: The direction of the axis that the body pivots around, relative to the node containing the body.
anchor: The location of the axis in the node containing the body.

Returns a new hinge joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 155.35.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) as SCNPhysicsHingeJointMBS 22688

155.35.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) as SCNPhysicsHingeJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a hinge joint connecting two physics bodies.
Notes:

bodyA: The first physics body to be connected by the joint.
axisA: The axis that the hinge pivots around, relative to the node containing the first body.
anchorA: The point at which the hinge connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
axisB: The axis that the hinge pivots around, relative to the node containing the second body.
anchorB: The point at which the hinge connects, relative to the node containing the second body.

Returns a new hinge joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 155.35.5 jointWithBody(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) as SCNPhysicsHingeJointMBS 22687

155.35.7 Properties

155.35.8 anchorA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The point at which the hinge connects, relative to the node containing the first body.
Notes: (Read and Write property)

155.35.9 anchorB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The point at which the hinge connects, relative to the node containing the second body.
Notes: (Read and Write property)

155.35.10 axisA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The axis that the hinge pivots around, relative to the node containing the first body.
Notes: (Read and Write property)

155.35.11 axisB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The axis that the hinge pivots around, relative to the node containing the second body.
Notes: (Read and Write property)

155.35.12 bodyA as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The first physics body connected by the joint.
Notes: (Read only property)

155.35.13 bodyB as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The second physics body connected by the joint.
Notes:

This property's value is nil if the joint was created using the Constructor without bodyB parameter.
(Read only property)

155.36 class SCNPhysicsShapeMBS

155.36.1 class SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An abstraction of a physics body's solid volume for tuning collision detection.
Notes:

When SceneKit performs contact detection and other simulations for the SCNPhysicsBodyMBS objects in your scene, it uses physics shapes instead of the rendered geometry of visible objects. This approach both improves simulation performance and allows you to more easily design your gameplay around scene elements the player can interact with.

Simple Versus Complex Shapes
When you allow SceneKit to automatically create a physics shape, it uses the simplest possible shape roughly matching the geometry of the node the physics body is attached to. This approach maximizes simulation performance but can lead to unrealistic physics behavior for some objects.

You can make the simulation behave more realistically by defining physics shapes that more closely follow the visible geometry in your scene. This approach comes at a cost to performance, so you want to limit the amount of detail in your physics shapes. Use the highest levels of detail only on bodies for which precise collision detection is important for your app.
If you create a physics shape using one of the basic geometry classes (SCNBoxMBS, SCNSphereMBS, SCNPyramidMBS, SCNConeMBS, SCNCylinderMBS, or SCNCapsuleMBS), SceneKit uses an idealized form of that geometry for the physics shape instead of using the geometry's vertex data to simulate collisions. For example, if you create a physics shape from an SCNSphere object, SceneKit simulates collisions for any object that passes within the sphere's radius.

Because the idealized forms of simple geometries are computationally much simpler than the vertex data needed for displaying them, using basic geometries for physics shapes (or compound shapes created from basic geometries with the shapeWithShapes method) often provides the best balance between simulation accuracy and performance.

Changing a Physics Body's Shape
Physics shapes are immutable, but you can change the shape associated with a physics body by creating a new SCNPhysicsShape instance and assigning it to the body's physicsShape property.

155.36.4 Methods

155.36.5 Constructor(geometry as SCNGeometryMBS, Options as Dictionary = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a physics shape based on a geometry object.
Notes:

geometry: A geometry object.
options: A dictionary of options affecting the level of detail of the physics shape, or nil to use default options. For applicable keys and their possible values, see Shape Creation Options Keys.

Returns a new physics shape object.

If you create a physics shape using one of the basic geometry classes (SCNBoxMBS, SCNSphereMBS, SCNPyramidMBS, SCNConeMBS, SCNCylinderMBS, or SCNCapsuleMBS), SceneKit uses an idealized form of that geometry for the physics shape instead of using the geometry's vertex data to simulate collisions. For example, if you create a physics shape from an SCNSphere object, SceneKit simulates collisions for any object that passes within the sphere's radius.

Because the idealized forms of simple geometries are computationally much simpler than the vertex data needed for displaying them, using basic geometries for physics shapes (or compound shapes created from basic geometries with the shapeWithShapes method) often provides the best balance between simulation accuracy and performance.

To use the newly created physics shape, create a physics body with the the bodyWithType method, or assign the shape to the physicsShape property of an existing body.
See also:

- 155.36.6 Constructor(node as SCNNodeMBS, Options as Dictionary = nil) 22691

155.36.6 Constructor(node as SCNNodeMBS, Options as Dictionary = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a physics shape from a node or hierarchy of nodes.
Notes:

node: A node object. The node must contain an SCNGeometryMBS object in its geometry property or have one or more child (or descendant) nodes that contain geometry.
options: A dictionary of options affecting the level of detail of the physics shape, or nil to use default options. For applicable keys and their possible values, see Shape Creation Options Keys.

Returns a new physics shape object.

To use the newly created physics shape, create a physics body with the the bodyWithType method, or assign the shape to the physicsShape property of an existing body.

The node used to create the physics shape need not be the same as the node whose physics body you attach the shape to—or even be in the scene whose physics world you use the shape in. For example, you can create a physics body for a complex object by building a hierarchy of nodes containing simple geometries (using the SCNBoxMBS and SCNSphereMBS classes), and then creating a physics shape from those nodes. The resulting physics shape, a compound of bounding boxes or convex hulls, provides a rough approximation of the complex object without a high cost to simulation performance.
See also:

- 155.36.5 Constructor(geometry as SCNGeometryMBS, Options as Dictionary = nil) 22691

155.36.7 copy as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the shape.

155.36.8 SCNPhysicsShapeKeepAsCompoundKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An option for selecting whether to create a group of independent shapes or combine them into a single shape.
Notes: The value for this key is a boolean value. The default value is true, specifying that SceneKit convert separate geometries into separate shapes and join the resulting shapes. If false, SceneKit creates a single shape approximating the combined form of the geometries.

155.36.9 SCNPhysicsShapeOptionCollisionMargin as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Collision margin of the physics shape (as a number)

155.36.10 SCNPhysicsShapeScaleKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An option for selecting the scale factor of the shape relative to the local coordinate space of the node containing it.
Notes:

The value for this key is a SCNVector3MBS object , whose components describe the scale factor in each of the x-, y- and z-axis directions. The default value is the vector { 1.0, 1.0, 1.0 } , specifying no change of scale.
SceneKit's physics simulation ignores the scale property of nodes containing physics bodies when simulating collisions. Instead, use this option to provide a scale factor when creating custom physics shapes. (If you create a physics body for a node without specifying a custom shape, SceneKit uses the node's scale property to infer this scale factor at creation time.)

155.36.11 SCNPhysicsShapeTypeBoundingBox as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The physics shape is the smallest box containing the geometry.
Notes: This option provides the lowest level of detail and the fastest simulation performance. Use it for generally box-shaped physics bodies or when constructing a compound physics shape.

155.36.12 SCNPhysicsShapeTypeConcavePolyhedron as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The physics shape is a concave polyhedron closely following the surface of the geometry.
Notes:

This option provides the highest level of detail, at a high cost to simulation performance. Use it only for irregularly shaped bodies where precise collision behavior is crucial to your app's design.
This shape type may only be used for static physics bodies (that is, those whose type property is SCNPhysicsBodyTypeStatic).

155.36.13 SCNPhysicsShapeTypeConvexHull as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The physics shape is a convex polyhedron roughly enclosing the geometry.
Notes: This option provides a moderate level of detail and simulation performance. Use it for rounded or irregularly shaped physics bodies.

155.36.14 SCNPhysicsShapeTypeKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An option for selecting the level of detail at which to create shapes from geometry.
Notes: The value for this key is one of the constants listed in Shape Types. The default type is SCNPhysicsShapeTypeConvexHull.

155.36.15 shapeWithGeometry(geometry as SCNGeometryMBS, Options as Dictionary = nil) as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a physics shape based on a geometry object.
Notes:

geometry: A geometry object.
options: A dictionary of options affecting the level of detail of the physics shape, or nil to use default options. For applicable keys and their possible values, see Shape Creation Options Keys.

Returns a new physics shape object.

If you create a physics shape using one of the basic geometry classes (SCNBoxMBS, SCNSphereMBS, SCNPyramidMBS, SCNConeMBS, SCNCylinderMBS, or SCNCapsuleMBS), SceneKit uses an idealized form of that geometry for the physics shape instead of using the geometry's vertex data to simulate collisions. For example, if you create a physics shape from an SCNSphere object, SceneKit simulates collisions for any object that passes within the sphere's radius.

Because the idealized forms of simple geometries are computationally much simpler than the vertex data needed for displaying them, using basic geometries for physics shapes (or compound shapes created from basic geometries with the shapeWithShapes method) often provides the best balance between simulation accuracy and performance.

To use the newly created physics shape, create a physics body with the the bodyWithType method, or assign the shape to the physicsShape property of an existing body.

155.36.16 shapeWithNode(node as SCNNodeMBS, Options as Dictionary = nil) as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a physics shape from a node or hierarchy of nodes.
Notes:

node: A node object. The node must contain an SCNGeometryMBS object in its geometry property or have one or more child (or descendant) nodes that contain geometry.
options: A dictionary of options affecting the level of detail of the physics shape, or nil to use default options. For applicable keys and their possible values, see Shape Creation Options Keys.

Returns a new physics shape object.

To use the newly created physics shape, create a physics body with the the bodyWithType method, or assign the shape to the physicsShape property of an existing body.

The node used to create the physics shape need not be the same as the node whose physics body you attach the shape to—or even be in the scene whose physics world you use the shape in. For example, you can create a physics body for a complex object by building a hierarchy of nodes containing simple geometries (using the SCNBoxMBS and SCNSphereMBS classes), and then creating a physics shape from those nodes. The resulting physics shape, a compound of bounding boxes or convex hulls, provides a rough approximation of the complex object without a high cost to simulation performance.

155.36.17 shapeWithShapes(shapes() as SCNPhysicsShapeMBS, transforms() as SCNMatrix4MBS = nil) as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new physics shape by combining others.
Notes:

shapes: An array of SCNPhysicsShapeMBS objects.
transforms: An array SCNMatrix4MBS values, each of which is a transform for the physics shape at the corresponding index in the shapes parameter.

Returns a new physics shape object.

An individual physics shape is defined in its own local coordinate space. Therefore, to describe the positions and orientations of multiple shapes relative to one another, you must use coordinate transformations.

155.36.18 sourceObject as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The object that was used to create the shape.
Notes:

This property, along with the transforms and options properties, provides the information that was used

to create the shape. You can use this information, for example, to draw editing or debugging UI in your scene.

- If the shape was created with the shapeWithGeometry method, the source object is an SCNGeometryMBS object, and the options property contains the options affecting the shape's construction from that geometry.
- If the shape was created with the shapeWithNode method, the source object is an SCNNodeMBS object, and the options property contains the options affecting the shape's construction from that node.
- If the shape was created with the shapeWithShapes method, the source object is an array of SCNPhysicsShapeMBS objects and the transforms property describes how those shapes combine to form a compound shape.

155.36.19 transforms as SCNMatrix4MBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The array of transforms that was used to create a compound shape.
Notes:

You provide this array of SCNMatrix4MBS values, in the shapeWithShapes method to create a compound shape. Use this array along with the sourceObject property to recover the information that was used to create the shape.

If the shape was created with the shapeWithGeometry or shapeWithNode method, this property's value is nil.

155.36.20 Properties

155.36.21 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

155.36.22 options as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The options dictionary that was used to create the shape.
Notes:

You provide this dictionary in the shapeWithGeometry or shapeWithNode method. Use this dictionary along with the sourceObject property to recover the information that was used to create the shape.
If the shape was created with the shapeWithShapes method, this property's value is nil.
(Read only property)

155.37 class SCNPhysicsSliderJointMBS

155.37.1 class SCNPhysicsSliderJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A physics behavior that connects two bodies and allows them to slide against each other and rotate around their connecting points.
Notes:

A slider joint can have zero, one, or two degrees of freedom depending on whether you allow it to slide or rotate. You can also use a slider joint to pin a body so that it can move only by sliding a specific axis in the coordinate space of the node containing it. You can also use a slider joint as a motor, applying a force or torque to the bodies it connects.
Subclass of the SCNPhysicsBehaviorMBS class.

155.37.2 Methods

155.37.3 Constructor(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a slider joint that anchors a single physics body in space and allows it to slide along a specific axis.
Notes:

body: The physics body to be controlled by the joint.
axis: The axis along which the first body can slide, relative to the node containing it.
anchor: The point at which the body is pinned, in the local coordinate system of the node containing it.

Returns a new slider joint behavior.

This method defines the location where the body is anchored in the coordinate system of the node containing it. To define its sliding or rotation motion relative to that point, use the properties listed in Limiting the Motion of a Slider Joint.
For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 155.37.4 Constructor(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS)

155.37.4 Constructor(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a slider joint connecting two physics bodies.
Notes:

bodyA: The first physics body to be connected by the joint.
axisA: The axis along which the first body can slide, relative to the node containing it.
anchorA: The point at which the joint connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
axisB: The axis along which the second body can slide, relative to the node containing it.
anchorB: The point at which the joint connects, relative to the node containing the second body.

Returns a new slider joint behavior.

This method defines the location where the bodies are pinned together. To define their sliding or rotation motion relative to that point, use the properties listed in Limiting the Motion of a Slider Joint.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 155.37.3 Constructor(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) 22698

155.37.5 jointWithBody(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) as SCNPhysicsSliderJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a slider joint that anchors a single physics body in space and allows it to slide along a specific axis.
Notes:

body: The physics body to be controlled by the joint.
axis: The axis along which the first body can slide, relative to the node containing it.
anchor: The point at which the body is pinned, in the local coordinate system of the node containing it.

Returns a new slider joint behavior.

This method defines the location where the body is anchored in the coordinate system of the node containing

it. To define its sliding or rotation motion relative to that point, use the properties listed in Limiting the Motion of a Slider Joint.
For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 155.37.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) as SCNPhysicsSliderJointMBS 22700

155.37.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) as SCNPhysicsSliderJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a slider joint connecting two physics bodies.
Notes:

bodyA: The first physics body to be connected by the joint.
axisA: The axis along which the first body can slide, relative to the node containing it.
anchorA: The point at which the joint connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
axisB: The axis along which the second body can slide, relative to the node containing it.
anchorB: The point at which the joint connects, relative to the node containing the second body.

Returns a new slider joint behavior.

This method defines the location where the bodies are pinned together. To define their sliding or rotation motion relative to that point, use the properties listed in Limiting the Motion of a Slider Joint.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 155.37.5 jointWithBody(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) as SCNPhysicsSliderJointMBS 22699

155.37.7 Properties

155.37.8 anchorA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The point at which the joint connects, relative to the node containing the first body.
Notes: (Read and Write property)

155.37.9 anchorB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The point at which the joint connects, relative to the node containing the second body.
Notes: (Read and Write property)

155.37.10 axisA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The axis along which the first body can slide, relative to the node containing it.
Notes: (Read and Write property)

155.37.11 axisB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The axis along which the second body can slide, relative to the node containing it.
Notes: (Read and Write property)

155.37.12 bodyA as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The first physics body connected by the joint.
Notes: (Read only property)

155.37.13 bodyB as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The second physics body connected by the joint.
Notes:

This property's value is nil if the joint was created using the jointWithBody method.
(Read only property)

155.37.14 maximumAngularLimit as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum rotation angle between the two bodies, measured in radians relative to their initial orientations.
Notes:

The default (and maximum) value of this property is M_PI. With this value, the joint can spin counter-clockwise (relative to the first body) with no limit.
Set both this property and the maximumAngularLimit property to the same value to prevent the bodies from rotating around their anchor points. (Set both properties to 0.0 to fix the bodies in their initial orientations.) Bodies whose orientation is fixed by a sliding joint may still slide, depending on the values of the minimumLinearLimit and maximumLinearLimit properties.
(Read and Write property)

155.37.15 maximumLinearLimit as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum distance between the anchor points of the two bodies, relative to their initial positions.
Notes:

The default value of this property is INFINITY. With this value, the joint can slide forever in the direction of the slider axis.
Set both this property and the minimumLinearLimit property to the same value to pin the bodies together at their anchor points. (Set both properties to 0.0 to pin the bodies together at their initial positions.) Bodies pinned together by a sliding joint may still rotate, depending on the values of the minimumAngularLimit and maximumAngularLimit properties.
(Read and Write property)

155.37.16 minimumAngularLimit as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum rotation angle between the two bodies, measured in radians relative to their initial orientations.
Notes:

The default (and minimum) value of this property is -M_PI. With this value, the joint can spin clockwise (relative to the first body) with no limit.
Set both this property and the maximumAngularLimit property to the same value to prevent the bodies from rotating around their anchor points. (Set both properties to 0.0 to fix the bodies in their initial orientations.) Bodies whose orientation is fixed by a sliding joint may still slide, depending on the values of the minimumLinearLimit and maximumLinearLimit properties.
(Read and Write property)

155.37.17 minimumLinearLimit as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum distance between the anchor points of the two bodies, relative to their initial positions.
Notes:

The default value of this property is -INFINITY. With this value, the joint can slide forever in the direction opposite the slider axis.
Set both this property and the maximumLinearLimit property to the same value to pin the bodies together at their anchor points. (Set both properties to 0.0 to pin the bodies together at their initial positions.) Bodies pinned together by a sliding joint may still rotate, depending on the values of the minimumAngularLimit and maximumAngularLimit properties.
(Read and Write property)

155.37.18 motorMaximumForce as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum linear force that the joint can apply to its connected bodies, in newtons.
Notes:

When you change the value of the motorTargetLinearVelocity property, the joint continuously applies a force of no greater than this magnitude until the bodies are moving at the target velocity. The default value is 1.0.
(Read and Write property)

155.37.19 motorMaximumTorque as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum torque that the joint can apply to its connected bodies, in newton-meters.
Notes:

When you change the value of the motorTargetAngularVelocity property, the joint continuously applies a force of no greater than this magnitude until the bodies are rotating around the joint at the target angular velocity. The default value is 1.0.
(Read and Write property)

155.37.20 motorTargetAngularVelocity as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The angular velocity at which the joint's connected bodies should rotate around it.
Notes:

At the default value of 0.0, the joint moves only when an external force acts on one of its connected bodies. Changing this value causes the joint to act as a rotary motor, continuously applying a torque (specified by the motorMaximumTorque property) until its connected bodies are rotating around the joint at the new angular velocity.
(Read and Write property)

155.37.21 motorTargetLinearVelocity as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The velocity at which the joint's connected bodies should slide.
Notes:

At the default value of 0.0, the joint moves only when an external force acts on one of its connected bodies. Changing this value causes the joint to act as a linear motor, continuously applying a force (specified by the motorMaximumForce property) until its connected bodies are moving along the sliding axis of the joint at the new velocity.
(Read and Write property)

155.38 class SCNPhysicsVehicleMBS

155.38.1 class SCNPhysicsVehicleMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A physics behavior that modifies a physics body to behave like a car, motorcycle, or other wheeled vehicle.
Notes:

To build a vehicle, designate an SCNPhysicsBodyMBS object as its chassis and an array of SCNPhysicsVehicleWheelMBS objects as its wheels. For each wheel, you define physical characteristics such as suspension and traction, and associate a node in your scene to provide the wheel's size and visual representation. After you construct a vehicle, you can control it in terms of acceleration, braking, and steering.

Although it's also possible to use a set of physics bodies and joints to collectively simulate a wheeled vehicle, the SCNPhysicsVehicleMBS class implements a higher-level simulation that provides realistic vehicle behavior with more efficient simulation performance.
Subclass of the SCNPhysicsBehaviorMBS class.

155.38.2 Methods

155.38.3 applyBrakingForce(value as double, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Applies a force between the specified wheel and the ground under the vehicle.
Notes:

value: The magnitude of the torque, in newton-meters.
index: The index of the wheel applying the force.

Applying a braking force causes the wheel to slow down regardless of the direction it's currently spinning in.

As with all physical quantities in SceneKit, you need not use realistic force measurements in your app—the effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.

Calling this method applies a braking force for one step (or frame) of the physics simulation. To continuously decelerate a vehicle, call this method again on subequent simulation steps (for example, from your scene renderer delegate's renderer method) until the vehicle stops or reaches your desired speed.

155.38.4 applyEngineForce(value as double, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Applies a force between the specified wheel and the ground under the vehicle.
Notes:

value: The magnitude of the force, in newtons.
index: The index of the wheel applying the force.

Applying a positive force turns the wheel in a direction that would move the vehicle forward; applying a negative force moves the vehicle in reverse.

As with all physical quantities in SceneKit, you need not use realistic force measurements in your app—the effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.

Calling this method applies a force for one step (or frame) of the physics simulation. To continuously accelerate a vehicle, call this method again on subequent simulation steps (for example, from your scene renderer delegate's renderer method) until the vehicle reaches your desired speed.

155.38.5 Constructor(chassisBody as SCNPhysicsBodyMBS, wheels() as SCNPhysicsVehicleWheelMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a vehicle behavior.
Notes:

chassisBody: A physics body to serve as the vehicle's chassis.
wheels: An array of SCNPhysicsVehicleWheel objects representing the vehicle's wheels. A vehicle must have at least one wheel.

Returns a new vehicle behavior.

Each object in the wheels array associates a node with the wheel to serve as its visual representation and defines properties for the wheel's physical characteristics. Each wheel object must reference a unique node, which should be a child of the node containing the physics body used for the vehicle's chassis. Typically, you load a node hierarchy representing the vehicle and all of its wheels from a scene file and then designate which nodes serve as the body and wheels.

For a behavior to take effect, you must add it to the physics simulation by calling the addBehavior: method on your scene's SCNPhysicsWorldMBS object.

155.38.6 setSteeringAngle(value as double, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Pivots the specified wheel around its steering axis.
Notes:

value: The angle to set the wheel at relative to its steering axis, in radians.
index: The index, in the vehicle's wheels array, of the wheel to be pivoted.

Steering angles are relative to the wheel's steeringAxis vector. With the default steering axis of { 0.0, -1.0, 0.0 } , a steering angle of 0.0 represents neutral steering, positive values steer the vehicle to the right, and negative values steer to the left.

155.38.7 vehicleWithChassisBody(chassisBody as SCNPhysicsBodyMBS, wheels() as SCNPhysicsVehicleWheelMBS) as SCNPhysicsVehicleMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a vehicle behavior.
Notes:

chassisBody: A physics body to serve as the vehicle's chassis.
wheels: An array of SCNPhysicsVehicleWheel objects representing the vehicle's wheels. A vehicle must have at least one wheel.

Returns a new vehicle behavior.

Each object in the wheels array associates a node with the wheel to serve as its visual representation and defines properties for the wheel's physical characteristics. Each wheel object must reference a unique node, which should be a child of the node containing the physics body used for the vehicle's chassis. Typically, you load a node hierarchy representing the vehicle and all of its wheels from a scene file and then designate which nodes serve as the body and wheels.

For a behavior to take effect, you must add it to the physics simulation by calling the addBehavior: method on your scene's SCNPhysicsWorldMBS object.

155.38.8 wheels as SCNPhysicsVehicleWheelMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An array of SCNPhysicsVehicleWheelMBS objects representing the vehicle's wheels.
Notes: You can dynamically change the suspension and traction properties of a wheel connected to the vehicle by using the corresponding SCNPhysicsVehicleWheelMBS object.

155.38.9 Properties

155.38.10 chassisBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The physics body representing the vehicle's chassis.
Notes:

The vehicle's chassis must be a dynamic body.
(Read only property)

155.38.11 speedInKilometersPerHour as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The vehicle's ground speed, in kilometers per hour.
Notes: (Read only property)

155.39 class SCNPhysicsVehicleWheelMBS

155.39.1 class SCNPhysicsVehicleWheelMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The appearance and physical characteristics of an individual wheel associated with an physics vehicle behavior.
Notes:

To use wheels in a vehicle simulation, include them when creating an SCNPhysicsVehicle object with the vehicleWithChassisBody / Constructro initializer, then add the vehicle object to your scene's physics world using the physics world's addBehavior method.

Creating a Wheel
You create a wheel with an SCNNodeMBS object whose contents provide the wheel's visual representation—a geometry that rotates when the simulated vehicle rolls along a surface. The node representing a wheel must be a child of the node containing the physics body that serves as the vehicle's chassis, and each wheel in a vehicle must reference a unique node. Typically, you load a scene file that contains a node hierarchy representing the vehicle and all of its wheels. Next, you designate which nodes serve as the body and wheels.
Because the SCNPhysicsVehicleMBS behavior that a wheel is attached to manages its participation in the physics simulation, you don't need to attach a physics body to the SCNNodeMBS object representing a wheel.

Changing a Wheel's Physical Properties
The properties of a wheel define the geometry of its connection to the vehicle and simulate its size, traction, and suspension. You can change these properties after the wheel and the vehicle containing it have been added to the physics world. In this way, you can simulate effects such as variable suspension and flat tires.

Note
Vehicles and their wheels have several properties measured in real-world units (meters, centimeters, and newtons) with default values that produce realistic behavior for vehicles of size similar to an average automobile. If you design your scene on a different scale, proportionally change the values of these properties to fit the desired behavior of your app or game.

155.39.2 Methods

155.39.3 Constructor(node as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a wheel object.
Notes:

node: The node whose contents provide the wheel's visual representation.

Returns a new wheel object.

The node representing a wheel must be a child of the node whose physics body serves as the chassis of the SCNPhysicsVehicleMBS behavior the wheel is attached to. Each wheel object must reference a unique node. To use the wheel, add it to the vehicle behavior using the addWheel method.
SceneKit uses the node's bounding box to determine the wheel's initial size, and it uses the node's position to determine the where the wheel connects to the vehicle's chassis. You can change attributes using the radius and connectionPosition properties.

155.39.4 copy as SCNPhysicsVehicleWheelMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the wheel.

155.39.5 wheelWithNode(node as SCNNodeMBS) as SCNPhysicsVehicleWheelMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a wheel object.
Notes:

node: The node whose contents provide the wheel's visual representation.

Returns a new wheel object.

The node representing a wheel must be a child of the node whose physics body serves as the chassis of the SCNPhysicsVehicleMBS behavior the wheel is attached to. Each wheel object must reference a unique node. To use the wheel, add it to the vehicle behavior using the addWheel method.
SceneKit uses the node's bounding box to determine the wheel's initial size, and it uses the node's position to determine the where the wheel connects to the vehicle's chassis. You can change attributes using the radius and connectionPosition properties.

155.39.6 Properties

155.39.7 Axle as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The direction of the axis that the wheel spins around to move the vehicle.
Notes:

This vector is expressed in the coordinate space of the node containing the vehicle's chassis. The default axle direction is { -1.0, 0.0, 0.0 } .
(Read and Write property)

155.39.8 ConnectionPosition as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The position of the wheel's connection to the vehicle's chassis.
Notes:

This vector is expressed in the coordinate space of the node containing the vehicle's chassis. When you create a wheel from a node, SceneKit uses the node's position property as the wheel's connection point.
(Read and Write property)

155.39.9 FrictionSlip as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The traction between the wheel and any surface in contact with it.
Notes:

The default value of this property is 1.0. Lower values result in better traction, and higher values make the wheel more likely to slip (causing it to spin freely instead of moving the vehicle).
(Read and Write property)

155.39.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

155.39.11 MaximumSuspensionForce as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum force of the suspension between the vehicle and the wheel, in newtons.
Notes:

The physics simulation applies a force of no greater than this magnitude when contact with the ground causes the wheel to move relative to the vehicle. The default maximum suspension force is 6000.0.
(Read and Write property)

155.39.12 MaximumSuspensionTravel as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum distance that the wheel is allowed to move up or down relative to its connection point, in centimeters.
Notes:

Travel is the total distance a wheel is allowed to move (in both directions), in the coordinate system of the node containing the vehicle's chassis. The default suspension travel is 500.0.
(Read and Write property)

155.39.13 Node as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The node providing the wheel's visual representation.
Notes:

SceneKit automatically rotates and repositions this node in response to the physics simulation.
(Read only property)

155.39.14 Radius as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The radius of the wheel.
Notes:

When you create a wheel from a node, its default radius is half of the largest dimension of the node's bounding box. (A wheel is always circular, even if the content of the node representing it is not.)
(Read and Write property)

155.39.15 SteeringAxis as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The direction of the axis that the wheel pivots around to steer the vehicle.
Notes:

This vector is expressed in the coordinate space of the node containing the vehicle's chassis. The default steering axis is { 0.0, -1.0, 0.0 } .
When you steer a wheel using the vehicle's setSteeringAngle() method, the wheel pivots relative to this axis. For example, you can implement a vehicle whose rear wheels steer opposite its front wheels by reversing this vector's direction for the rear wheels and then applying the same steering angle to all wheels.
(Read and Write property)

155.39.16 SuspensionCompression as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The coefficient that limits the speed of the suspension returning to its rest length when compressed.
Notes:

The default suspension coefficient is 4.4. Lower values cause the wheel to return to its natural position more quickly.
(Read and Write property)

155.39.17 SuspensionDamping as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The damping ratio that limits oscillation in the vehicle's suspension.
Notes:

Damping ratio measures the tendency of the suspension to oscillate after a shock—in other words, for the vehicle to bounce up and down after running over a bump. The default damping ratio of 2.3 causes the wheel to return to its neutral position quickly after a shock. Values lower than 1.0 result in more oscillation.
(Read and Write property)

155.39.18 SuspensionRestLength as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The resting length of the suspension, in meters.
Notes:

This property measures the length of the simulated spring between the vehicle and its wheel when the spring is not stressed by the weight of either body. When the wheel receives a shock (for example, when the vehicle runs over a bump), SceneKit adds the difference between the wheel's current position and its connection position to this rest length and then applies a force between the wheel and vehicle proportional to the total.
(Read and Write property)

155.39.19 SuspensionStiffness as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The spring coefficient of the suspension between the vehicle and the wheel.
Notes:

The spring coefficient determines both how quickly the wheel returns to its natural position after a shock (for example, when the vehicle runs over a bump) and how much force from the shock it transmits to the vehicle. The default spring coefficient is 2.0.
(Read and Write property)

155.40 class SCNPhysicsWorldMBS

155.40.1 class SCNPhysicsWorldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The global simulation of collisions, gravity, joints, and other physics effects in a scene.
Notes:

You do not create SCNPhysicsWorldMBS objects directly; instead, read the physicsWorld property of an SCNSceneMBS object. Use physics world object to perform the following tasks:

- Manage global properties of the simulation, such as its speed and constant gravity. (For more precise control of gravity and similar effects, see the SCNPhysicsFieldMBS class.)
- Register behaviors that modify interactions between the scene's physics bodies, such as joints and vehicles. For more details, see SCNPhysicsBehaviorMBS.
- Specify a delegate object to receive messages when two physics bodies contact each other
- Perform specific contact tests, and search for physics bodies in the scene using ray and sweep tests.

155.40.6 Methods

155.40.7 addBehavior(behavior as SCNPhysicsBehaviorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a behavior to the physics world.
Notes:

behavior: The behavior to be added.

Physics behaviors constrain or modify the effects of the physics simulation on sets of physics bodies. For example, the SCNPhysicsHingeJointMBS behavior causes two bodies to move as if connected by a hinge that pivots around a specific axis, and the SCNPhysicsVehicleMBS behavior causes a body to roll like a car or other wheeled vehicle.

To use a behavior in your scene, follow these steps:
1. Create SCNPhysicsBody objects and attach them to each node that participates in the behavior.
2. Create and configure a behavior object joining the physics bodies. See SCNPhysicsBehaviorMBS for a list of behavior classes.
3. Call addBehavior on your scene's physics world object to add the behavior to the physics simulation.

155.40.8 allBehaviors as SCNPhysicsBehaviorMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The list of behaviors affecting bodies in the physics world.

155.40.9 Constructor(fireContactEvents as Boolean = false)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes:

If fireContactEvents is true or you call EnableContactsEvents, we enable the contact events.

A contact is created when two physics bodies overlap and one of the physics bodies has a collisionBitMask property that overlaps with the other body's categoryBitMask property.

155.40.10 contactTest(body as SCNPhysicsBodyMBS, options as Dictionary = nil) as SCNPhysicsContactMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks for contacts between one physics body and any other bodies in the physics world.
Notes:

body: The body to test for contact.
options: A dictionary of options affecting the test, or nil to use default options. For applicable keys and the possible values, see Physics Test Options Keys.

Returns an array of SCNPhysicsContactMBS objects describing contacts between the specified body and any others, or nil if the body is not in contact with any other bodies.

SceneKit sends messages to the physics world's contactdelegate object only when collisions occur between bodies whose collisionBitMask and categoryBitMask properties overlap, and only for collisions between certain types of bodies. (For details, see SCNPhysicsBodyType.) Use this method to directly test for all contacts between one body and any other bodies at a time of your choosing. For example, to implement a game with a "wall jump" effect, you could call this method when the player presses the jump button to see if the player character is in contact with any walls.
See also:

- 155.40.11 contactTest(bodyA as SCNPhysicsBodyMBS, bodyB as SCNPhysicsBodyMBS, options as Dictionary = nil) as SCNPhysicsContactMBS() 22717

155.40.11 contactTest(bodyA as SCNPhysicsBodyMBS, bodyB as SCNPhysicsBodyMBS, options as Dictionary = nil) as SCNPhysicsContactMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks for contacts between two physics bodies.
Notes:

bodyA: The first body (to test for contact with the second).
bodyB: The second body (to test for contact with the first).
options: A dictionary of options affecting the test, or nil to use default options. For applicable keys and the possible values, see Physics Test Options Keys.

Returns an array of SCNPhysicsContactMBS objects describing contacts between the two bodies, or nil if the bodies are not in contact.

SceneKit sends messages to the physics world's contactDelegate object only when collisions occur between bodies whose collisionBitMask and categoryBitMask properties overlap, and only for collisions between certain types of bodies. (For details, see SCNPhysicsBodyType.) Use this method to directly test for contacts between any two bodies at a time of your choosing. For example, to implement a game where the

player character can pick up an item, you might call this method when the player presses the "pick up" button to see if the player character is in contact with the item to be picked up.
See also:

- 155.40.10 contactTest(body as SCNPhysicsBodyMBS, options as Dictionary = nil) as SCNPhysicsContactMBS() 22717

155.40.12 convexSweepTest(shape as SCNPhysicsShapeMBS, fromTransform as SCNMatrix4MBS, toTransform as SCNMatrix4MBS, options as Dictionary = nil) as SCNPhysicsContactMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Searches for physics bodies in the space formed by moving a convex shape through the physics world.
Notes:

shape: A physics shape. This shape must enclose a convex volume. For details on creating shapes that satisfy this requirement, see SCNPhysicsShapeMBS.
from: A transform matrix representing the initial position and orientation of the shape.
to: A transform matrix representing the final position and orientation of the shape.
options: A dictionary of options affecting the test, or nil to use default options. For applicable keys and the possible values, see Physics Test Options Keys.

Returns an array of SCNPhysicsContactMBS objects describing any contacts that would occur when moving the physics shape through the physics world.

Use this method when it's important to plan for (or avoid) collisions ahead of the physics simulation. For example, in a game you might plan maneuvers for a flying character to fit through the gaps between static bodies in the physics world

155.40.13 EnableContactsEvents

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Enables contact events.
Notes: If you connect the contact events via AddHandler, please call this method once to connect the events internally.

155.40.14 rayTestWithSegment(origin as SCNVector3MBS, dest as SCNVector3MBS, options as Dictionary = nil) as SCNPhysicsBehaviorMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Searches for physics bodies along a line segment between two points in the physics world.
Notes:

origin: An endpoint of the line segment to search, specified in the scene's world coordinate system.
dest: The other endpoint of the line segment to search, specified in the scene's world coordinate system.
options: A dictionary of options affecting the test, or nil to use default options. For applicable keys and the possible values, see Physics Test Options Keys.

Returns an array of SCNHitTestResultMBS objects describing search results.

Use this method to implement concepts such as line of sight in your app. For example, in a game you might implement behavior for an enemy character by searching for physics bodies along a line between the enemy character's position and the player character's position

155.40.15 removeAllBehaviors

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes all behaviors affecting bodies in the physics world.

155.40.16 removeBehavior(behavior as SCNPhysicsBehaviorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes a behavior from the physics world.

155.40.17 SCNPhysicsTestBackfaceCullingKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The key for choosing whether to ignore back-facing polygons in physics shapes when searching for contacts.
Notes:

The value for this key is a Boolean value. The default value is true, specifying that the search should only return contacts with the exterior surfaces of any physics shapes. Change the value to false to consider contacts with both interior and exterior surfaces.

This key applies only to ray and convex sweep tests, and only to physics shapes created using the SCNPhysicsShapeTypeConcavePolyhedron option.

155.40.18 SCNPhysicsTestCollisionBitMaskKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The key for selecting which categories of physics bodies that SceneKit should test for contacts.
Notes: The value for this key is an unsigned Integer value. SceneKit tests for contacts only with physics bodies whose categoryBitMask property overlaps with this bit mask. The default value is SCNPhysicsCollisionCategoryAll, specifying that searches should test all physics bodies regardless of their category.

155.40.19 SCNPhysicsTestSearchModeAll as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the option values for SCNPhysicsTestSearchModeKey key.
Notes: Searches should return all contacts matching the search parameters.

155.40.20 SCNPhysicsTestSearchModeAny as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the option values for SCNPhysicsTestSearchModeKey key.
Notes: Searches should return only the first contact found regardless of its position relative to the search parameters.

155.40.21 SCNPhysicsTestSearchModeClosest as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the option values for SCNPhysicsTestSearchModeKey key.
Notes: Searches should return only the closest contact to the beginning of the search.

155.40.22 SCNPhysicsTestSearchModeKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The key for selecting the number and order of contacts to be tested.
Notes:

See Physics Test Search Modes for possible values. The default value is SCNPhysicsTestSearchModeAny. This key applies only to ray and convex sweep tests.

155.40.23 updateCollisionPairs

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Forces the physics engine to reevaluate possible collisions between physics bodies.
Notes: By default, SceneKit checks for collisions between physics bodies only once per simulation step. If you directly change the positions of any physics bodies outside of a event, call the updateCollisionPairs method before using any of the methods listed in Searching for Physics Bodies Detecting Contacts Between Physics Bodies.

155.40.24 Properties

155.40.25 gravity as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A vector that specifies the gravitational acceleration applied to physics bodies in the physics world.
Notes:

The components of this vector are measured in meters per second per second. The default value is (0.0,-9.8,0.0).
This property applies a constant acceleration to all physics bodies in the world, simulating the effect of gravity near the surface of the Earth. For more sophisticated gravity effects, including limited areas of effect and strength proportional to distance, use the SCNPhysicsFieldMBS class. When using fields, you may want to set this property to the zero vector so that fields provide all gravity effects in the physics world.
(Read and Write property)

155.40.26 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

155.40.27 speed as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The rate at which the simulation executes.
Notes:

The default value is 1.0, which means that the simulation runs at normal speed. A value other than the default changes the rate at which time passes in the physics simulation. For example, a speed value of 2.0 indicates that time in the physics simulation passes twice as fast as the scene's simulation time. A value of 0.0 pauses the physics simulation.

Note:
Increasing the speed of the physics simulation reduces its accuracy.
(Read and Write property)

155.40.28 timeStep as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The time interval between updates to the physics simulation.
Notes:

SceneKit processes the physics simulation and updates the state of all physics bodies once per the time interval specified by this property. The default value is 1/60 second (a rate of 60 Hz).
A faster simulation rate provides more accuracy in simulation results—such as collisions between fast-moving objects—but at a higher cost in CPU time (which may in turn slow down your app's rendering frame rate). Typically, you should set this property to match your target rendering frame rate (as defined by the preferredFramesPerSecond property of the SCNViewMBS object rendering your scene).
(Read and Write property)

155.40.29 Events

155.40.30 didBeginContact(contact as SCNPhysicsContactMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Tells the class that two bodies have come into contact.
Notes: contact: An object that describes the contact.

155.40.31 didEndContact(contact as SCNPhysicsContactMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Tells the class that a contact has ended.
Notes: contact: An object that describes the contact.

155.40.32 didUpdateContact(contact as SCNPhysicsContactMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Tells the class that new information is available about an ongoing contact.
Notes:

contact: An object that describes the contact.

SceneKit calls this method on each step of the physics simulation (see the timeStep property) if information about the contact changes—for example, if two bodies are sliding against one another.

155.41 class SCNPlaneMBS

155.41.1 class SCNPlaneMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: SCNPlaneMBS represents a rectangle with controllable width and height. The plane has one visible side.
Notes: Subclass of the SCNGeometryMBS class.

155.41.6 Methods

155.41.7 Constructor(Width as Double, Height as Double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a plane with given width and height.

155.41.8 plane(Width as Double, Height as Double) as SCNPlaneMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a plane with given width and height.

155.41.9 Properties

155.41.10 cornerRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The corner radius. Animatable.
Notes:

If the value is strictly less than 0, the geometry is empty. The default value is 0.
(Read and Write property)

155.41.11 cornerSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions for the rounded corners. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 10.
(Read and Write property)

155.41.12 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The plane extent along the Y axis. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

155.41.13 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the Y axis. The default value is 1. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

155.41.14 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The plane extent along the X axis. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

155.41.15 widthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the X axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

155.42 class SCNPyramidMBS

155.42.1 class SCNPyramidMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: SCNPyramid represents a right pyramid with a rectangular base.
Notes: Subclass of the SCNGeometryMBS class.

155.42.6 Methods

155.42.7 Constructor(width as double, height as double, length as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a pyramid with given width, height, and length.
Notes:

width: The width of the pyramid.
height: The height of the pyramid.

length: The length of the pyramid.

155.42.8 pyramid(width as double, height as double, length as double) as SCNPyramidMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a pyramid with given width, height, and length.
Notes:

width: The width of the pyramid.
height: The height of the pyramid.
length: The length of the pyramid.

155.42.9 Properties

155.42.10 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the pyramid. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

155.42.11 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

155.42.12 length as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The length of the pyramid base. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

155.42.13 lengthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the Z axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

155.42.14 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The width of the pyramid base. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

155.42.15 widthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the X axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

155.43 class SCNReplicatorConstraintMBS

155.43.1 class SCNReplicatorConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A SCNReplicatorConstraint replicates the position/orientation/scale of a target node
Notes: Subclass of the SCNConstraintMBS class.

155.43.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

155.43.3 Blog Entries

155.43.4 Methods

155.43.5 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNReplicatorConstraint constraint.

155.43.6 replicatorConstraintWithTarget(target as SCNNodeMBS) as SCNReplicatorConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNReplicatorConstraint constraint.

155.43.7 Properties

155.43.8 orientationOffset as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines an addition orientation offset.
Notes:

Defaults to no offset. Animatable.
(Read and Write property)

155.43.9 positionOffset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines an addition orientation offset.
Notes:

Defaults to no offset. Animatable.
(Read and Write property)

155.43.10 replicatesOrientation as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines whether or not the constraint should replicate the target orientation.
Notes:

Defaults to true.
(Read and Write property)

155.43.11 replicatesPosition as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines whether or not the constraint should replicate the target position.
Notes:

Defaults to true.
(Read and Write property)

155.43.12 replicatesScale as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines whether or not the constraint should replicate the target scale.
Notes:

Defaults to true.
(Read and Write property)

155.43.13 scaleOffset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines an addition scale offset.
Notes:

Defaults to no offset. Animatable.
(Read and Write property)

155.43.14 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines the target node to replicate.
Notes: (Read and Write property)

155.44 class SCNSceneMBS

155.44.1 class SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A container for the node hierarchy and global properties that together form a displayable 3D scene.
Notes:

To display 3D content with SceneKit, you create a scene containing a hierarchy of the nodes and attributes that together represent your visual elements. Typically, you build your assets in a 3D visual editor, then assemble them into a scene using Xcode's SceneKit Scene Editor, ready for SceneKit to render.

The simplest way to create a scene is through Xcode's SceneKit Scene Editor. Start by importing one or more assets from a 3D editor, such as Blender. Then you adjust the positions and attributes of the assets, and set global scene properties, such as lighting environment, to compose your scene. The scene editor creates a .scn file, which you save to a .scnassets folder in the app bundle. When you build your project, Xcode optimizes the scene file for your target platform.

155.44.6 Methods

155.44.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an empty scene.

155.44.8 scene as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an empty scene.
Notes: An empty scene contains only a root SCNNode object with no contents. To populate the scene, add children to the root node.

155.44.9 sceneNamed(name as string) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Loads a scene from a file with the specified name in the app's main bundle.
Notes:

name: The name of a scene file in the app bundle's resources directory.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file in the app's main bundle. Calling this method is equivalent to using the NSBundle class to locate the scene file and passing the resulting URL to the sceneWithURL method, specifying no options and no error handling.

For more detailed options or to load only part of a file's scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.
See also:

- 155.44.10 sceneNamed(name as string, folder as folderItem, options as Dictionary = nil) as SCNSceneMBS

155.44.10 sceneNamed(name as string, folder as folderItem, options as Dictionary = nil) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Loads a scene from a file with the specified name in a specific subdirectory of the app's main bundle.
Notes:

name: The name of a scene file in the app bundle.
directory: The path to the subdirectory of the bundle's resources directory containing the scene file.
options: A dictionary of options affecting scene loading, or nil for default options. For available keys, see Scene Loading Options.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file in the app's main bundle. Calling this method is equivalent to using the NSBundle class to locate the scene file and passing the resulting URL to the sceneWithURL method.

For more detailed options or to load only part of a file's scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.
See also:

- 155.44.9 sceneNamed(name as string) as SCNSceneMBS 22734

155.44.11 sceneWithFile(file as folderItem, options as Dictionary = nil, byref Error as NSErrorMBS) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Loads a scene from the specified file.
Notes:

file: The scene file to load.
options: A dictionary of options affecting scene loading, or nil for default options. For available keys, see Scene Loading Options.
error: If an error occurs, this pointer is set to an NSError object describing the error. If you do not want error information, pass in nil.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file at an arbitrary URL. For more detailed options or to load only part of a file's scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.

155.44.12 sceneWithURL(FileURL as string, options as Dictionary = nil, byref Error as NSErrorMBS) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Loads a scene from the specified URL.
Notes:

url: The URL to the scene file to load.
options: A dictionary of options affecting scene loading, or nil for default options. For available keys, see Scene Loading Options.
error: If an error occurs, this pointer is set to an NSError object describing the error. If you do not want error information, pass in nil.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file at an arbitrary URL. For more detailed options or to load only part of a file's scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.

155.44.13 SCNSceneEndTimeAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: One of the constant name for the attributes.
Notes: A floating-point value for the end time of the scene.

155.44.14 SCNSceneExportDestinationURL as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The final destination URL (an NSURLMBS object) for the exported scene file.
Notes: Use this option if you export a scene to a temporary directory and then move it to a final location. You must specify a final destination URL if your scene references external resources, such as image files for textures. SceneKit uses this URL to construct appropriate paths for external resources when writing the scene file.

155.44.15 SCNSceneFrameRateAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: One of the constant name for the attributes.
Notes:

A floating-point value (in an NSNumber object) for the frame rate of the scene.
This value may be present in scenes loaded from scene files produced using external tools, but has no effect on SceneKit's rendering of the scene.

155.44.16 SCNSceneStartTimeAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: One of the constant name for the attributes.
Notes: A floating-point value for the start time of the scene.

155.44.17 SCNSceneUpAxisAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: One of the constant name for the attributes.
Notes:

An SCNVector3MBS object (in an NSValueMBS object) specifying the orientation of the scene.

This value may be present in scenes loaded from scene files produced using external tools, but has no effect on SceneKit's processing of the scene. Use this vector when combining elements from different scenes so that they appear in their expected orientation.

155.44.18 Properties

155.44.19 background as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A background to be rendered before the rest of the scene.
Notes:

If the material property's contents object is nil, SceneKit does not draw any background before drawing the rest of the scene. (If the scene is presented in an SCNView instance, the view's background color is visible behind the contents of the scene.)
If you specify a cube map texture for the material property (see the discussion of the contents property), SceneKit renders the background as a skybox.
(Read only property)

155.44.20 fogColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The color of the fog effect to be rendered with the scene. Animatable.
Notes:

The default fog color is white.
You can animate changes to this property's value.
(Read and Write property)

155.44.21 fogDensityExponent as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The transition curve for the fog's intensity between its start and end distances. Animatable.
Notes:

A fog effect fades out the contents of the scene with increasing distance from the pointOfView location, replacing them with increasing intensities of the fogColor color. The fogDensityExponent property determines the smoothness or abruptness of this transition.

A value of 0.0 (the default) specifies no attenuation—the fog's intensity is the same at all distances . A value of 1.0 specifies a linear transition, and a value of 2.0 specifies a quadratic transition curve. Higher values have little visible effect.

You can animate changes to this property's value.
(Read and Write property)

155.44.22 fogEndDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The distance from a point of view at which the scene's contents are completely obscured by fog. Animatable.
Notes:

A fog effect causes scene contents to become less visible the farther they are from the pointOfView node currently used for rendering. At distances less than the value of the fogStartDistance property, scene contents are fully visible. At greater distances, SceneKit blends the rendered scene contents with a constant color (specified by the fogColor property). At distances greater than the fogEndDistance property, the scene contents fade away completely and only the fog color is visible. Use fog to add atmospheric effects to your app or game, or to improve rendering performance by hiding parts of the scene that are far away from the current point of view.

The default end distance of 0.0 disables the fog effect. Change this property's value to enable fog.

You can animate changes to this property's value.
(Read and Write property)

155.44.23 fogStartDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The distance from a point of view at which the scene's contents begin to be obscured by fog. Animatable.
Notes:

A fog effect causes scene contents to become less visible the farther they are from the pointOfView node currently used for rendering. At distances less than the value of the fogStartDistance property, scene contents are fully visible. At greater distances, SceneKit blends the rendered scene contents with a constant color (specified by the fogColor property). At distances greater than the fogEndDistance property, the scene contents fade away completely and only the fog color is visible. Use fog to add atmospheric effects to your app or game, or to improve rendering performance by hiding parts of the scene that are far away from the current point of view.

The default start distance is 0.0.

You can animate changes to this property's value.
(Read and Write property)

155.44.24 lightingEnvironment as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A cube map texture that depicts the environment surrounding the scene's contents, used for advanced lighting effects.
Notes:

When rendering materials with the physicallyBased lighting model, SceneKit illuminates surfaces differently according to the environment that surrounds them. For example, with physically based shading, even a diffuse surface takes on some color from the sky above it and the ground below it.

Tip: For realistic results, reuse the same contents for both the lighting environment and the background property.

For information about defining cube maps, see the discussion of the contents property.
(Read only property)

155.44.25 paused as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether to run actions, animations, particle systems, and physics simulations in the scene graph.
Notes:

If false (the default), SceneKit continuously updates and renders the contents of the scene. Pausing a scene pauses any running animations or actions attached to the scene graph, and suspends updates of the scene's physics simulation and any particle systems in the scene.
(Read and Write property)

155.44.26 physicsWorld as SCNPhysicsWorldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The physics simulation associated with the scene.
Notes:

Every scene automatically creates a physics world object to simulate physics on nodes in the scene. You use this property to access the scene's global physics properties, such as gravity, and to manage physics interactions between nodes. To make a node in the scene participate in the physics simulation, use either or both of its physicsBodyMBS and physicsFieldMBS properties.
(Read only property)

155.44.27 rootNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The root node of the scene graph.
Notes:

All scene content—nodes, geometries and their materials, lights, cameras, and related objects—is organized in a node hierarchy with a single common root node.

Some scene files created using external tools may describe node hierarchies containing multiple root nodes. When SceneKit imports such files, their separate root nodes will be made children of a new, unique root node.

Each child node's coordinate system is defined relative to the transformation of its parent node. You should not modify the transform property of the root node.
(Read only property)

155.44.28 attributeForKey(key as String) as Variant

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Returns or sets the scene attribute for the specified key.
Notes:

key: One of the constants described in Scene Attributes that identifies the attribute to be written.
(Read and Write computed property)

155.45 class SCNShapeMBS

155.45.1 class SCNShapeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: SCNShape represents a 2D shape (cubic Bezier spline) than can be extruded.
Notes: Subclass of the SCNGeometryMBS class.

155.45.4 Methods

155.45.5 Constructor(path as NSBezierPathMBS, extrusionDepth as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a 3D representation of the given shape with the given extrusion depth.
Notes:

path: The cubic Bezier spline to extrude.
extrusionDepth: The extrusion depth.

155.45.6 shape(path as NSBezierPathMBS, extrusionDepth as double) as SCNShapeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a 3D representation of the given shape with the given extrusion depth.
Notes:

path: The cubic Bezier spline to extrude.
extrusionDepth: The extrusion depth.

155.45.7 Properties

155.45.8 chamferMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The sides of the text that are chamfered.
Notes:

The default value is ChamferModeBoth.
(Read and Write property)

155.45.9 chamferProfile as NSBezierPathMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Describes the profile used to when "chamferRadius" is not nil.
Notes:

When "chamferProfile" is nil we fallback on a path representing a quadrant.
The profile should be a 2D curve beginning at (0,1) and ending at (1,0). The "flatness" property is also used to flatten this path. The default value is nil.
(Read and Write property)

155.45.10 chamferRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The chamfer radius. Animatable.
Notes:

Values are clamped to the range [0, extrusionDepth / 2] . The default value is 0.
(Read and Write property)

155.45.11 extrusionDepth as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The extrusion depth. Animatable.
Notes:

If the value is 0, we get a mono-sided, 2D version of the shape.
(Read and Write property)

155.45.12 path as NSBezierPathMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The path defining the shape to be rendered.
Notes:

The path defines the outline of the shape. The path is filled using the even-odd rule. If the path is self-intersecting, the behavior is undefined.
(Read and Write property)

155.45.13 Constants

155.45.14 ChamferModeBack = 2

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the chamfer mode constants.
Notes: Apply a chamfer to only the back edge of the extruded shape.

155.45.15 ChamferModeBoth = 0

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the chamfer mode constants.
Notes: Apply a chamfer to both front and back edges of the extruded shape.

155.45.16 ChamferModeFront = 1

MBS Mac64bit Plugin, Plugin Version: 19.1.

Function: One of the chamfer mode constants.
Notes: Apply a chamfer to only the front edge of the extruded shape.

155.46 class SCNSliderConstraintMBS

155.46.1 class SCNSliderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A SCNSliderConstraint constraint makes a node to collide and slide against a category of nodes
Notes: Subclass of the SCNConstraintMBS class.

155.46.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

155.46.3 Blog Entries

155.46.4 Methods

155.46.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNSliderConstraint object.

155.46.6 sliderConstraint as SCNSliderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a SCNSliderConstraint object.

155.46.7 Properties

155.46.8 collisionCategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines the category of node to collide against. Defaults to 0.
Notes: (Read and Write property)

155.46.9 offset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines the offset of the slider.
Notes:

Defaults to (0,0,0).
(Read and Write property)

155.46.10 Radius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Defines the radius of the slider. Defaults to 1.
Notes: (Read and Write property)

155.47 class SCNSphereMBS

155.47.1 class SCNSphereMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: SCNSphere represents a sphere with controllable radius.
Notes: Subclass of the SCNGeometryMBS class.

155.47.6 Methods

155.47.7 Constructor(radius as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a sphere with given radius.
Notes: radius: The radius of the sphere.

155.47.8 sphere(radius as double) as SCNSphereMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a sphere with given radius.
Notes: radius: The radius of the sphere.

155.47.9 Properties

155.47.10 geodesic as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Indicate if the geometry is a geosphere.
Notes:

The default value is false.
(Read and Write property)

155.47.11 radius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The sphere radius. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

155.47.12 segmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of segments along both spherical coordinates. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

155.48 class SCNTextMBS

155.48.1 class SCNTextMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: SCNText represents a block of text that has been extruded
Notes: Subclass of the SCNGeometryMBS class.

155.48.7 Properties

155.48.8 alignmentMode as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Determines how individual lines of text are horizontally aligned within the bounds.
Notes:

For the text to be aligned you first need to set its bounds, otherwise the text is not aligned. The default value is kCAAlignmentNatural.
(Read and Write property)

155.48.9 attributedString as NSAttributedStringMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The text to be represented.
Notes:

The text can be string or NSAttributedStringMBS.
(Read and Write property)

155.48.10 chamferProfile as NSBezierPathMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Describes the profile used to when "chamferRadius" is not nil.
Notes:

When "chamferProfile" is nil we fallback on a path representing a quadrant.
The profile should be a 2D curve beginning at (0,1) and ending at (1,0). The "flatness" property is also used to flatten this path. The default value is nil.
(Read and Write property)

155.48.11 chamferRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The chamfer radius. Animatable.
Notes:

Values are clamped to the range [0, extrusionDepth / 2] . The actual chamfer radius might be different to the one here specified: large values are clipped to a per-glyph max value. The default value is 0.

(Read and Write property)

155.48.12 chamferSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: The number of chamfer subdivisions. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 10.
(Read and Write property)

155.48.13 containerFrame as CGRectMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A container within which the text may be wrapped or truncated.
Notes:

The text will start at the top-left corner of the rect. You need to set this property for text truncation or alignment to work. Getting this property when it has never been set returns CGRectMBS with all values zero.
(Read and Write property)

155.48.14 extrusionDepth as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The extrusion depth. Animatable.
Notes:

If the value is 0, we get a mono-sided, 2D version of the text.
(Read and Write property)

155.48.15 flatness as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies the accuracy (or smoothness) with which fonts are rendered.
Notes:

Smaller numbers give smoother curves at the expense of more computation and heavier geometries in terms of vertices. The default value is 0.6, which yields smooth curves.

(Read and Write property)

155.48.16 font as NSFontMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The font used to represent the text.
Notes:

The font property is only used when the string property is not an NSAttributedString. Defaults to the system font (12 point).
(Read and Write property)

155.48.17 text as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The text to be represented.
Notes:

The text can be string or NSAttributedStringMBS.
(Read and Write property)
See also:

- 155.48.6 text(text as string, extrusionDepth as double) as SCNTextMBS 22749

155.48.18 textSize as CGSizeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: Returns the bounding box size the receiver occupies.
Notes: (Read only property)

155.48.19 truncationMode as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Describes how the text is truncated to fit within the bounds.
Notes:

For the text to be truncated you first need to set its bounds, otherwise the text is not truncated. The default value is kCATruncationNone.
(Read and Write property)

155.48.20 Wrapped as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Determines whether the text is wrapped to fit within the bounds.
Notes:

For the text to be wrapped you first need to set its bounds, otherwise the text is not wrapped. The default value is false.
(Read and Write property)

155.49 class SCNTorusMBS

155.49.1 class SCNTorusMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: SCNTorus represents a torus with controllable ring radius and pipe radius.
Notes: Subclass of the SCNGeometryMBS class.

155.49.6 Methods

155.49.7 Constructor(ringRadius as double, pipeRadius as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a torus with given ring radius and pipe radius.
Notes:

ringRadius: The radius of the ring.
pipeRadius: The radius of the pipe.

155.49.8 torus(ringRadius as double, pipeRadius as double) as SCNTorusMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a torus with given ring radius and pipe radius.
Notes:

ringRadius: The radius of the ring.
pipeRadius: The radius of the pipe.

155.49.9 Properties

155.49.10 pipeRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The radius of the torus pipe. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.25.
(Read and Write property)

155.49.11 pipeSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions of the pipe. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 24.
(Read and Write property)

155.49.12 ringRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The radius of the torus ring. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

155.49.13 ringSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions of the ring. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

155.50 class SCNTransformConstraintMBS

155.50.1 class SCNTransformConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A SCNTransformConstraint applies on the transform of a node via a custom block.
Notes:

Subclass of the SCNConstraintMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

155.50.4 Methods

155.50.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

155.51 class SCNTubeMBS

155.51.1 class SCNTubeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: SCNTube represents a tube with controllable height, inner radius and outer radius.
Notes: Subclass of the SCNGeometryMBS class.

155.51.6 Methods

155.51.7 Constructor(InnerRadius as double, outerRadius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a tube with given inner radius, outer radius and height.
Notes:

innerRadius: The inner radius of the tube.
outerRadius: The outer radius of the tube.
height: The height of the tube.

155.51.8 tube(InnerRadius as double, outerRadius as double, height as double) as SCNTubeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a tube with given inner radius, outer radius and height.
Notes:

innerRadius: The inner radius of the tube.
outerRadius: The outer radius of the tube.
height: The height of the tube.

155.51.9 Properties

155.51.10 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the tube. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

155.51.11 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

155.51.12 innerRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The inner radius of the tube. Animatable.
Notes:

If the value is less than or equal to 0, or if it is greater than or equal to the outer radius, then the geometry is empty. The default value is 0.25.
(Read and Write property)

155.51.13 outerRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The outer radius of the tube. Animatable.
Notes:

If the value is less than or equal to 0, or if it is less than or equal to the inner radius, then the geometry is empty. The default value is 0.5.
(Read and Write property)

155.51.14 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of subdivisions along the radial coordinate. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

155.52 class SCNVector3MBS

155.52.1 class SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A representation of a three-component vector.
Notes: SceneKit uses three-component vectors for a variety of purposes, such as describing node or vertex positions, surface normals, and scale or translation transforms. The different vector components should be interpreted based on the context in which the vector is being used.

155.52.6 Methods

155.52.7 Constructor(x as double = 0.0, y as double = 0.0, z as double = 0.0)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

155.52.8 copy as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the vector.

155.52.9 equals(other as SCNVector3MBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Compares two vectors.
Notes: Returns true if both are equal.

155.52.10 Null as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns vector with all values zero.

155.52.11 Vector(x as double, y as double, z as double) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new vector.

155.52.12 Properties

155.52.13 x as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The first component in the vector.
Notes: (Read and Write property)

155.52.14 y as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The second component in the vector.
Notes: (Read and Write property)

155.52.15 z as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The third component in the vector.
Notes: (Read and Write property)

155.53 class SCNVector4MBS

155.53.1 class SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A representation of a four-component vector.
Notes:

SceneKit uses four-component vectors to represent multiple kinds of data:

- Axis-angle rotation or torque. The x, y, and z fields contain the normalized x-, y-, and z-components of the rotation axis, and the w field contains the rotation angle, in radians, or torque magnitude, in newton-meters.
- Color value (or range). The x, y, z, and w fields contain the red, green, blue, and alpha components of the color, or the width of the color variation range in each component.

155.53.4 Methods

155.53.5 Constructor(x as double = 0.0, y as double = 0.0, z as double = 0.0, w as double = 0.0)

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

155.53.6 copy as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the vector.

155.53.7 equals(other as SCNVector4MBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Compares two vectors.
Notes: Returns true if equal.

155.53.8 Null as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns vector with all values zero.

155.53.9 Vector(x as double, y as double, z as double, w as double) as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the vector with given values.

155.53.10 Properties

155.53.11 w as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The fourth component in the vector.
Notes: (Read and Write property)

155.53.12 x as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The first component in the vector.
Notes: (Read and Write property)

155.53.13 y as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The second component in the vector.
Notes: (Read and Write property)

155.53.14 z as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The third component in the vector.
Notes: (Read and Write property)

155.54 class SCNViewMBS

155.54.1 class SCNViewMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A view for displaying 3D SceneKit content.
Notes:

In macOS, SCNView is a subclass of NSView. As part of the operating system's view hierarchy, an SCNView object provides a place for SceneKit content in your app's user interface. You can create a SceneKit view by using its Constructor method. To provide content for a SceneKit view, assign an SCNSceneMBS object to its scene property.

For additional important methods and properties for working with SceneKit views, see the SCNSceneRenderer protocol. (You can also render SceneKit content into an arbitrary Metal command queue or OpenGL context using the SCNRenderer class, or into a Core Animation layer on macOS using the SCNLayer class. The SCNSceneRenderer protocol defines functionality common to all three SceneKit rendering classes.)

see
https://developer.apple.com/documentation/scenekit/scnview

Requires 64bit app on macOS 10.8 or newer
Subclass of the NSViewMBS class.

155.54.6 Methods

155.54.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
dim x as new SCNViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 155.54.8 Constructor(Handle as Integer) 22768
- 155.54.9 Constructor(left as double, top as double, width as double, height as double) 22769

155.54.8 Constructor(Handle as Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an object based on the given NSView handle.
Example:

```
dim t as new SCNViewMBS(0, 0, 100, 100)
dim v as new SCNViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a SCNView and the plugin retains this handle.
See also:

- 155.54.7 Constructor 22768
- 155.54.9 Constructor(left as double, top as double, width as double, height as double) 22769

155.54.9 Constructor(left as double, top as double, width as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new control with the given size and position.
Example:

```
dim left,top,width,height as Integer
// define rectangle
dim x as new SCNViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

- 155.54.7 Constructor 22768
- 155.54.8 Constructor(Handle as Integer) 22768

155.54.10 hitTest(Point as CGPointMBS, Options as Dictionary = nil) as SCNHitTestResultMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Searches the renderer's scene for objects corresponding to a point in the rendered image.
Notes:

Point: A point in the screen-space (view, layer, or GPU viewport) coordinate system of the scene renderer.
options: A dictionary of options affecting the search. See Hit Testing Options Keys for acceptable values.

Returns an array of SCNHitTestResultMBS objects representing search results.

A 2D point in the rendered screen coordinate space can refer to any point along a line segment in the 3D scene coordinate space. Hit-testing is the process of finding elements of a scene located along this line segment. For example, you can use this method to find the geometry corresponding to a click event in a SceneKit view.

155.54.11 isNodeInsideFrustum(node as SCNNodeMBS, pointOfView as SCNNodeMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether a node might be visible from a specified point of view.
Notes:

node: The node whose visibility is to be tested.
