pointOfView: A node defining a point of view, as used by the pointOfView property.

Returns true if the bounding box of the tested node intersects the view frustum defined by the pointOfView node; otherwise, false.

Any node containing a camera or spotlight may serve as a point of view (see the pointOfView property for details). Such a node defines a viewing frustum—a portion of the scene's coordinate space, shaped like a truncated pyramid, that encloses all points visible from that point of view.

Use this method to test whether a node lies within the viewing frustum defined by another node (which may or may not be the scene renderer's current pointOfView node). For example, in a game scene containing multiple camera nodes, you could use this method to determine which camera is currently best for viewing a moving player character.

Note that this method does not perform occlusion testing. That is, it returns true if the tested node lies within the specified viewing frustum regardless of whether that node's contents are obscured by other geometry.

155.54.12 nodesInsideFrustumWithPointOfView(pointOfView as SCNNodeMBS) as SCNNodeMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns all nodes that might be visible from a specified point of view.
Notes:

pointOfView: A node defining a point of view, as used by the pointOfView property.

Returns an array of nodes whose bounding boxes intersect the view frustum defined by the pointOfView node. If the array is empty, no nodes lie within the specified frustum.

Any node containing a camera or spotlight may serve as a point of view (see the pointOfView property for details). Such a node defines a viewing frustum—a portion of the scene's coordinate space, shaped like a truncated pyramid, that encloses all points visible from that point of view.
Use this method find all nodes whose content lies within the viewing frustum defined by another node (which may or may not be the scene renderer's current pointOfView node).
Note that this method does not perform occlusion testing. That is, the returned array includes any node that lies within the specified viewing frustum regardless of whether that node's contents are obscured by other geometry.

155.54.13 pause

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Pauses playback of the view's scene.
Notes: This method has no effect if the scene is already paused.

155.54.14 play

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Resumes playback of the view's scene.
Notes: This method has no effect if the scene is not paused.

155.54.15 projectPoint(Point as SCNVector3MBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Projects a point from the 3D world coordinate system of the scene to the 2D pixel coordinate system of the renderer.
Notes:

point: A point in the world coordinate system of the renderer's scene.

Returns the corresponding point in the screen-space (view, layer, or GPU viewport) coordinate system of the scene renderer.

The z-coordinate of the returned point describes the depth of the projected point relative to the near and far clipping planes of the renderer's viewing frustum (defined by its pointOfView node). Projecting a point on the near clipping plane returns a point whose z-coordinate is 0.0; projecting a point on the far clipping plane returns a point whose z-coordinate is 1.0.

155.54.16 snapshot as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Renders the view's scene into a new image object.

155.54.17 stop

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: Stops playback of the view's scene and resets the scene time to its start time.

155.54.18 unprojectPoint(Point as SCNVector3MBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Unprojects a point from the 2D pixel coordinate system of the renderer to the 3D world coordinate system of the scene.
Notes:

point: A point in the screen-space (view, layer, or GPU viewport) coordinate system of the scene renderer.

Returns the corresponding point in the world coordinate system of the renderer's scene.

The z-coordinate of the point parameter describes the depth at which to unproject the point relative to the near and far clipping planes of the renderer's viewing frustum (defined by its pointOfView node). Unprojecting a point whose z-coordinate is 0.0 returns a point on the near clipping plane; unprojecting a point whose z-coordinate is 1.0 returns a point on the far clipping plane.

A 2D point in the rendered screen coordinate space can refer to any point along a line segment in the 3D scene coordinate space. To test for scene contents along this line—for example, to find the geometry corresponding to the location of a click event in a view—use the hitTest method.

155.54.19 Properties

155.54.20 allowsCameraControl as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the user can manipulate the current point of view that is used to render the scene.
Notes:

If you set this property to true, SceneKit creates a camera node and handles mouse or touch events to allow the user to pan, zoom, and rotate their view of the scene. (Enabling user camera control does not modify camera objects already existing in the scene graph or the nodes containing them.)

When you enable user camera control, the defaultCameraController object handles input events and drives camera behavior. You can use that object's methods and properties to change the style of user camera

interaction, and use the cameraControlConfiguration property to adjust control sensitivity.

In the default configuration, SceneKit provides the following controls:

- Pan with one finger to rotate the camera around the scene
- Pan with two fingers to translate the camera on its local xy-plane
- Pan with three fingers vertically to move the the camera forward backward
- Double-tap to switch to the next camera in the scene
- Rotate with two fingers to roll the camera (rotate on the camera node's z-axis)

Pinch to zoom in or zoom out (change the camera's fieldOfView)
The default value of this property is false. Use this option if you intend to control the camera programmatically.
(Read and Write property)

155.54.21 audioListener as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The node representing the listener's position in the scene for use with positional audio effects.
Notes:

When you use the SCNAudioPlayerMBS class to play sound, the resulting effect depends on the position of each audio source in the scene relative to the listener. For example, changes in relative position can cause a sound to be localized to the left or right channel for stereo headphone output.

This property determines the listener's position. If the value is nil (the default), the listener position is always the same as that of the pointOfView node. By providing a different node for this property, you can separate the listener position from the point of view—this produces an effect similar to that of a boom microphone in video production. For example, in a third-person game where the camera floats high in the sky above the player character, you might use the player character as the listener node so that sounds from positions nearest the player are loudest.
To place an audio source in the scene, use the addAudioPlayer method on an SCNNode object.
(Read and Write property)

155.54.22 autoenablesDefaultLighting as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether SceneKit automatically adds lights to a scene.
Notes:

If this property's value is false (the default), the only light sources SceneKit uses for rendering a scene are those contained in the scene graph. If you change the value to true, SceneKit automatically adds and places an omnidirectional light source when rendering scenes that contain no lights or only contain ambient lights.
(Read and Write property)

155.54.23 backgroundColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The background color of the view.
Notes:

SceneKit displays this color behind the contents of the rendered scene. If the scene contents fill the view or if the scene provides its own background using the background property, the view's background color may not be visible.
This property's value must be a color that can be represented using RGBA components.
(Read and Write property)

155.54.24 debugOptions as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Options for drawing overlay content in a scene that can aid debugging.
Notes:

Use these options to display overlays that show otherwise-invisible scene content—such as node bounding boxes and the extents of physics fields—for use in debugging and profiling your app. For example:

- To visualize how well each object's physics representation corresponds to its visible geometry, show the shape of each SCNPhysicsBodyMBS object in the scene with the SCNDebugOptionShowPhysicsShapes option.
- To improve rendering performance in a scene with multiple SCNLightMBS objects, show each light's area of effect with the SCNDebugOptionShowLightExtents option and ensure that each object in the scene is affected by no more than three lights.

Debug options are bit mask patterns. To display multiple debugging overlays, combine options using the bitwise OR operator.
(Read and Write property)

155.54.25 defaultCameraController as SCNCameraControllerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop & iOS.

Function: The default camera controller for this view.
Notes: (Read only property)

155.54.26 jitteringEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether SceneKit applies jittering to reduce aliasing artifacts.
Notes:

Jittering is a process that SceneKit uses to improve the visual quality of a rendered scene. While the scene's content is still, SceneKit moves the pointOfView location very slightly (by less than a pixel in projected screen space). It then composites images rendered after several such moves to create the final rendered scene, creating an antialiasing effect that smooths the edges of rendered geometry.

By default, the value of this property is false, specifying that SceneKit should not perform jittering. Change the value to true to enable jittering.

Because the SCNViewMBS and SCNLayerMBS classes perform jittering automatically and asynchronously, enabling jittering for these classes has minimal impact on rendering performance. The SCNRenderer class performs jittering synchronously, incurring a high performance cost. With this class, jittering is suitable for rendering single frames on demand, but not for real-time rendering.
(Read and Write property)

155.54.27 loops as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether SceneKit restarts the scene time after all animations in the scene have played.
Notes:

If the value of this property is true (the default), SceneKit returns the scene time to zero after all animations associated with the scene have played, causing those animations to repeat. Otherwise, SceneKit stops playing the scene when all animations have completed.
(Read and Write property)

155.54.28 Playing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the scene is playing.
Notes:

If the value of this property is false (the default), SceneKit does not increment the scene time, so animations associated with the scene do not play. Change this property's value to true to start animating the scene.
(Read and Write property)

155.54.29 pointOfView as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The node from which the scene's contents are viewed for rendering.
Notes:

Use a node with an SCNCameraMBS instance assigned to its camera property to view a scene. The node provides the position and direction of a virtual camera, and the camera object provides rendering parameters such as field of view and focus.
For debugging lights and shadows, you can also designate a spotlight (an SCNLightMBS object whose type property is spot) as a point of view. In this case, the light's spotInnerAngle property determines the field of view, and its zNear and zFar properties determine the near and far extents of the region that is visible onscreen (also known as the viewing frustum).
In either case, the direction of view is along the negative z-axis of the node's local coordinate space.
(Read and Write property)

155.54.30 preferredFramesPerSecond as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The animation frame rate that the view uses to render its scene.
Notes:

SceneKit chooses an actual frame rate that is as close as possible to your preferred frame rate based on the capabilities of the screen the view is displayed on. The actual frame rate is usually a factor of the maximum refresh rate of the screen to provide a consistent frame rate. For example, if the maximum refresh rate of the screen is 60 frames per second, that is also the highest frame rate the view sets as the actual frame rate. However, if you ask for a lower frame rate, SceneKit might choose 30, 20, 15 or some other factor to be the actual frame rate. For this reason, you want to choose a frame rate that your app can consistently maintain. The default value is 60 frames per second.
(Read and Write property)

155.54.31 renderingAPI as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The graphics technology SceneKit uses to render the scene.
Notes:

You choose a graphics technology when initializing a scene renderer:

- When initializing a SCNViewMBS object, use the Constructor initializer and the SCNPreferredRenderingAPIKey key. Alternatively, create a view in Interface Builder and use the Rendering API control in the inspector. During initialization, the view will attempt to use the preferred API, but will fall back to a different API if the preferred one is not supported on the current hardware.
- To create a SCNRendererMBS object that renders into your own OpenGL contect, use the rendererWithContext initializer. To create a renderer for use in your own Metal workflow, use the rendererWithDevice initializer.
- The rendering technology used by a SCNLayer object is determined by Core Animation.

After initializing a renderer, this property reflects the rendering technology in use.
(Read only property)

155.54.32 rendersContinuously as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the view always renders at its preferred frame rate or only when its visible content changes.
Notes:

When this value is false (the default), the view redraws its contents only when something in its scene graph change or animates. Use this option to maximize energy efficiency.

If you change this value to true, the view redraws itself continually, at the rate specified by the preferredFramesPerSecond property, regardless of whether content is changing or animating.
(Read and Write property)

155.54.33 scene as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop & iOS.

Function: The scene to be displayed in the view.
Notes: (Read and Write property)

155.54.34 sceneTime as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The current scene time.
Notes:

This timestamp determines how running animations behave, which is similar to how the playhead time in a video player application determines which frame of a movie to display. Scene time applies only to animations whose usesSceneTimeBase property is true, including those loaded from a scene source using the SCNSceneSourceAnimationImportPolicyPlayUsingSceneTimeBase option.

Use this property, together with the above animation options, when you want to directly control (or allow the user to directly control) the playback of animations. For example, if you're building an authoring tool for 3D assets, you might bind this property's value to a slider control for scrubbing through playback of animations in a scene file.
(Read and Write property)

155.54.35 showsStatistics as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether SceneKit displays rendering performance statistics in an accessory view.
Notes:

The SceneKit statistics view displays various information about scene rendering performance and GPU resource usage, including a frames-per-second (fps) counter. In macOS, click the gear button in the statistics view to show a panel with additional controls for adjusting SceneKit's rendering of the scene.
(Read and Write property)

155.54.36 Constants

155.54.37 kAntialiasingModeMultisampling16X = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the antialiasing modes for scene renderers.
Notes: Multisampling 16x

155.54.38 kAntialiasingModeMultisampling2X = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the antialiasing modes for scene renderers.
Notes: Multisampling 2x

155.54.39 kAntialiasingModeMultisampling4X = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the antialiasing modes for scene renderers.
Notes: Multisampling 4x

155.54.40 kAntialiasingModeMultisampling8X = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the antialiasing modes for scene renderers.
Notes: Multisampling 8x

155.54.41 kAntialiasingModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the antialiasing modes for scene renderers.
Notes: No antialiasing.

155.54.42 kDebugOptionNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the debug flag constants.
Notes: Disable all debugging overlays.

155.54.43 kDebugOptionRenderAsWireframe = 64

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the debug flag constants.
Notes:

Display only wireframe placeholders for geometries in the scene.
Unlike the SCNDebugOptionShowWireframe option, this option disables normal surface rendering, display-

ing only the wireframe for each geometry.

155.54.44 kDebugOptionShowBoundingBoxes = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the debug flag constants.
Notes: Display the bounding boxes for any nodes with content.

155.54.45 kDebugOptionShowCameras = 1024

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the debug flag constants.
Notes: Display visualizations for nodes in the scene with attached cameras and their fields of view.

155.54.46 kDebugOptionShowConstraints = 512

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the debug flag constants.
Notes: Display visualizations of the constraint objects acting on nodes in the scene.

155.54.47 kDebugOptionShowCreases = 256

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the debug flag constants.
Notes: Display nonsmoothed crease regions for geometries affected by surface subdivision.

155.54.48 kDebugOptionShowLightExtents = 8

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the debug flag constants.
Notes:

Display the regions affected by each SCNLightMBS object in the scene.

Only lights whose type is SCNLightTypeOmni or SCNLightTypeSpot have an area of effect; directional and ambient lights affect the entire scene.

155.54.49 kDebugOptionShowLightInfluences = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the debug flag constants.
Notes: Display the locations of each SCNLightMBS object in the scene.

155.54.50 kDebugOptionShowPhysicsFields = 16

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the debug flag constants.
Notes: Display the regions affected by each SCNPhysicsFieldMBS object in the scene.

155.54.51 kDebugOptionShowPhysicsShapes = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the debug flag constants.
Notes: Display the physics shapes for any nodes with attached SCNPhysicsBodyMBS objects.

155.54.52 kDebugOptionShowSkeletons = 128

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the debug flag constants.
Notes: Display visualizations of the skeletal animation parameters for relevant geometries.

155.54.53 kDebugOptionShowWireframe = 32

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the debug flag constants.
Notes:

Display geometries in the scene with wireframe rendering.
When this option is enabled, SceneKit still renders scene geometry with all associated materials, then over-

lays a wireframe rendering of the same geometry. You can use this option, for example, to debug material rendering issues.

155.54.54 kRenderingAPIMetal = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the options for choosing the graphics technology for an SCNViewMBS object (or other SceneKit renderer) to use for drawing its contents.
Notes:

Use the Metal framework for SceneKit rendering.
Metal provides improved graphics performance on supported devices, allows you to integrate GPU-compute tasks into a rendering workflow, and provides the same API in both iOS and macOS.
Used by the renderingAPI property and the SCNPreferredRenderingAPIKey option when initializing an SCNViewMBS object.

155.54.55 kRenderingAPIOpenGLCore32 = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the options for choosing the graphics technology for an SCNViewMBS object (or other SceneKit renderer) to use for drawing its contents.
Notes:

Use the OpenGL 3.2 Core Profile API for SceneKit rendering in macOS.
Used by the renderingAPI property and the SCNPreferredRenderingAPIKey option when initializing an SCNViewMBS object.

155.54.56 kRenderingAPIOpenGLCore41 = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the options for choosing the graphics technology for an SCNViewMBS object (or other SceneKit renderer) to use for drawing its contents.
Notes:

Use the OpenGL 4.1 Core Profile API for SceneKit rendering in macOS.
Used by the renderingAPI property and the SCNPreferredRenderingAPIKey option when initializing an SCNViewMBS object.

155.54.57 kRenderingAPIOpenGLLegacy = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the options for choosing the graphics technology for an SCNViewMBS object (or other SceneKit renderer) to use for drawing its contents.
Notes:

Use the Legacy OpenGL API for SceneKit rendering in macOS.
This option is available on all macOS systems supporting SceneKit. If you request the Metal rendering API for an SCNViewMBS object on a system that does not support Metal, SceneKit falls back to the Legacy OpenGL API.
Used by the renderingAPI property and the SCNPreferredRenderingAPIKey option when initializing an SCNViewMBS object.

Chapter 156

Screenshot

156.1 Globals

156.1.1 ScreenshotDisplayMBS(index as Integer) as picture

MBS Picture Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the Screenshot from the display with the given index.
Example:

Backdrop = ScreenshotDisplayMBS(0)

Notes:

Index starts at 0 for the main display.
Works on Linux only for first screen.

Plugin version 10.4 added support for multiple displays on Windows.

156.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr7
- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr3

156.1.3 ScreenshotFromStringMBS(Width as Integer, Height as Integer, RowBytes as Integer, data as string) as picture

MBS Picture Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates the picture from a string returnd by ScreenshotStringMBS.
Example:

```
dim p as Picture
dim s as string

dim w,h,r as Integer

s=ScreenshotStringMBS(w,h,r)

p=ScreenshotFromStringMBS(w,h,r,s)

Backdrop=p
```

Notes:

Returns nil on any error.
(for example if width, height and rowwidth doesn't fit together.)

156.1.4 ScreenshotMBS as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a picture of the screen content in screen resolution.
Example:

```
dim p as picture
p=screenshotMBS
```

Notes:

For a rectangle only you can use ScreenShotRectMBS.

Plugin Version 7.2 adds Windows Vista Support.

156.1.5 Blog Entries

- MBS REALbasic Plugins, version 10.3pr9

156.1.6 ScreenshotRectMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a picture of the screen rectangle in screen resolution.
Example:

```
// write picture of window to desktop
# if TargetMacOS then
const f = 1
# else
dim f as double = screen(0).ScaleFactor
# endif

dim p as Picture = ScreenshotRectMBS(self.left*F, self.top*F, self.Width*F, self.Height*F)
dim ff as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

p.Save(ff, p.SaveAsJPEG)
```

Notes:

Improved in Version 3.2 to support multiple displays on Mac OS.

Plugin Version 10.4 adds Windows support.
Coordinates given in pixel on screen, so for High DPI on Windows, you need to multiply them before passing parameters.

156.1.7 Blog Entries

- 7.4, page 8: News

156.1.9 ScreenshotStringDisplayMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer, index as Integer) as string

MBS Picture Plugin, Plugin Version: 8.6, Platform: macOS, Targets: All.

Function: Returns a picture of the screen content in screen resolution.
Example:

```
dim s as string
dim w,h,r as Integer
dim index as Integer=0

s=ScreenshotStringDisplayMBS(w,h,r, index)
```

Notes:

Returns nil on any error.
Use ScreenshotFromStringMBS to get the picture from the string.

156.1.10 ScreenshotStringMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer) as string

MBS Picture Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a picture of the screen content in screen resolution.
Example:

```
dim s as string
dim w,h,r as Integer
s=ScreenshotStringMBS(w,h,r)
```

Notes:

Returns nil on any error.
Use ScreenshotFromStringMBS to get the picture from the string.

Chapter 157

SFPassword

157.1 class SFPasswordAssistantMBS

157.1.1 class SFPasswordAssistantMBS

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The class to help the user to create a new password.
Notes:

This is an Apple internal class with no public interface. It works for Mac OS X 10.4 and should work on 10.3 and 10.5.

You need to keep the reference to the SFPasswordAssistantMBS object in a global property. If the object in Xojo is destroyed while the panel is still visible, it will crash.

Do not call Close or PerformClose methods to close this window, use BaseWindowWillClose.
Not supported for 64 bit target.
Subclass of the NSPanelMBS class.

157.1.6 Methods

157.1.7 BaseWindowWillClose

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Tells the panel that the base window will close.
Notes: If your window which uses the panel will close, you should call that method from the CancelClose method of your window.

157.1.8 Constructor

MBS MacExtras Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new password assistant panel.

157.1.9 ShowPanel

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Shows the panel.
Notes:

This method does a bit more than just show.
It will create the panel, create a new password and run the password quality check.

157.1.10 Properties

157.1.11 Password as string

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The current password.
Notes:

If you set the value, the new password is checked for quality and the TextChanged event may be fired.
(Read and Write computed property)

157.1.12 Events

157.1.13 TextChanged(text as string)

MBS MacExtras Plugin, Plugin Version: 7.5, Platform: macOS, Targets: .

Function: The text was changed.
Notes:

This event fires often.
It fires if the text changed (e.g. a letter was added) or sometimes it fires if the text was not changed.

So best if you need to update GUI, to check the text parameter and use timer. Restart the timer every time you get an event with a period of maybe 500 ms. So in case you don't get new events and the timer fires, you can update your GUI.

Chapter 158

Sharing Panel

158.1 class SharingPanelMBS

158.1.1 class SharingPanelMBS

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: Desktop & iOS.

Function: A view controller that you use to offer standard services from your app.
Notes:

The system provides several standard services, such as copying items to the pasteboard, posting content to social media sites, sending items via email or SMS, and more. Apps can also define custom services.
Your app is responsible for configuring, presenting, and dismissing this view controller. Configuration for the view controller involves specifying the data objects on which the view controller should act. (You can also specify the list of custom services your app supports.)

158.1.2 Blog Entries

- MBS Xojo Plugins, version 21.4pr4

158.1.3 Blog Entries

- MBS Xojo Plugins, version 21.4pr4

158.1.4 Methods

158.1.5 AddData(Data as MemoryBlock, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add data to the list of items to share.

158.1.6 AddFile(File as FolderItem, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add a file as URL to the list of items to share.

158.1.7 AddImage(image as NSImageMBS, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add an image to the list of items to share.

158.1.8 AddPicture(pic as Picture, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add an image to the list of items to share.

158.1.9 AddStyledText(text as NSAttributedStringMBS, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add styled text to the list of items to share.
Notes: Subject is optional subject passed to email app.

158.1.10 AddText(text as string, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add text to the list of items to share.
Notes: Subject is optional subject passed to email app.

158.1.11 AddURL(URL as string, subject as string = "")

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Add an URL to the list of items to share.

158.1.12 Constructor

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: The constructor.

158.1.13 Destructor

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: The destructor.

158.1.14 Dismiss

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Dismisses the controller.

158.1.15 ExcludedActivityTypes as String()

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Queries the list of excluded activity types.

158.1.16 Items as Variant()

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Copies the items to share.

158.1.17 Present

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Presents the controller.

158.1.18 SetExcludedActivityTypes(ActivityTypess() as String)

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Sets the list of excluded activity types.

158.1.19 SetItems(items() as Variant)

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: Sets the items to share with an variant array.

158.1.20 UIActivityTypeAddToReadingList as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that adds the URL to Safari's reading list.
When using this service, you can provide an URL whose contents uses the http or https scheme that points to the page to add.

158.1.21 UIActivityTypeAirDrop as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that makes the provided content available through AirDrop.
When using this service, you can provide String, NSAttributedStringMBS, picture, and URLs as data for

the activity items. You may also provide Array or Dictionary objects that contain the listed data types.

158.1.22 UIActivityTypeAssignToContact as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that assigns the image to a contact.
When using this service, you can provide a picture object as data for the activity items.

158.1.23 UIActivityTypeCopyToPasteboard as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that posts the provided content to the pasteboard.

When using this service, you can provide string, picture, URL, color, and Dictionary objects as data for the activity items.

158.1.24 UIActivityTypeMail as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that posts the provided content to a new email message.

When using this service, you can provide string and picture objects and URLs pointing to local files as data for the activity items.
Optional subject for items are passed for email subject.

158.1.25 UIActivityTypeMarkupAsPDF as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that marks up the provided content as a PDF file.

158.1.26 UIActivityTypeMessage as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that posts the provided content to the Messages app.
When using this service, you can provide string and NSAttributedStringMBS objects as data for the activity items. You may also specify URLs whose contents use the sms scheme.
If the device has MMS or FaceTime enabled, you can provide picture, and URLs as data for the activity items.

158.1.27 UIActivityTypeOpenInIBooks as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes: A type of activity that opens the content in iBooks.

158.1.28 UIActivityTypePostToFacebook as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that posts the provided content to the user's wall on Facebook.
When using this service, you can provide String, NSAttributedStringMBS, picture, and URLs as data for the activity items.

158.1.29 UIActivityTypePostToFlickr as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that posts the provided image to the user's Flickr account.
When using this service, you can provide picture and URLs whose contents use the file scheme and point to

an image. You can also use MemoryBlock whose contents are image data as data for the activity items.

158.1.30 UIActivityTypePostToTencentWeibo as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that posts the provided content to the user's Tencent Weibo feed.
When using this service, you can provide String, NSAttributedStringMBS, picture, and URL as data for the activity items.

158.1.31 UIActivityTypePostToTwitter as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that posts the provided content to the user's Twitter feed.
When using this service, you can provide String, NSAttributedStringMBS, picture, and URL as data for the activity items.

158.1.32 UIActivityTypePostToVimeo as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that posts the provided video to the user's Vimeo account.
When using this service, you can provide data from URL/folderItem whose contents use the file scheme and point to a video. You can use MemoryBlock objects whose contents are video data as data for the activty items.

158.1.33 UIActivityTypePostToWeibo as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that posts the provided content to the user's Weibo feed.
When using this service, you can provide picture and URLs whose contents use the file scheme and point to an image. You can also use MemoryBlock whose contents are image data as data for the activity items.

158.1.34 UIActivityTypePrint as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that prints the provided content.

When using this service, you can provide picture and MemoryBlock objects and URL/folderitem pointing to local files as data for the activity items.

158.1.35 UIActivityTypeSaveToCameraRoll as String

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: One of the activity types.
Notes:

A type of activity that assigns the image or video to the user's camera roll.

When using this service, you can provide a picture as data for image-based activity items. For image and video items, you can provide an URL/file with a path to the video.

158.1.36 Properties

158.1.37 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

158.1.38 isBeingPresented as Boolean

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether the view controller is being presented.
Notes: (Read only property)

158.1.39 Events

158.1.40 Completed(activityType as String, completed as Boolean, activityError as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.4, Platform: iOS, Targets: .

Function: The event called after the activity view controller is dismissed.
Notes:

Upon the completion of an activity, or the dismissal of the activity view controller, the view controller's completion block is executed. You can use this block to execute any final code related to the service. The parameters of this block are as follows:

activityType: The type of the service that was selected by the user. For custom services, this is the value returned by the activityType method of a UIActivity object. For system-defined activities, it is one of the strings listed in "Built-in Activity Types" in UIActivity.
completed: True if the service was performed or false if it was not. This parameter is also set to false when the user dismisses the view controller without selecting a service.
activityError: An error object if the activity failed to complete, or nil if the the activity completed normally.

Chapter 159

Shell

159.1 Globals

159.1.1 ConsoleExecuteMBS(path as folderitem, arguments() as string, environment() as string) as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: Console & Web.

Function: Executes a new application.
Notes:

Use WindowsShellExecuteMBS on Windows.

Launch GUI tools on Mac OS X using /bin/open.
Returned value is the PID of the new process.
If the execution fails you still get a PID, but this process is terminated in a few milliseconds.

arguments must have at least one member.

See also WindowsProcessMBS and WindowsShellExecuteMBS (Windows only), NSTask (Mac only) and ShellMBS (cross platform).
See also:

- 159.1.2 ConsoleExecuteMBS(path as string, arguments() as string, environment() as string) as Integer 22806

159.1.2 ConsoleExecuteMBS(path as string, arguments() as string, environment() as string) as Integer

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Targets: Console & Web.

Function: Executes a new application.
Example:

```
// launch an app using open

const sShellPath="/usr/bin/open"

dim a(1) as string
dim e(-1) as string

a(0)="open" // must be the application name
a(1)="/Applications/TextEdit.app" // first parameter

print str(ConsoleExecuteMBS(sShellPath,a,e))

// Launch app binary directly:

dim aa(1) as string
dim ee(-1) as string

dim f as FolderItem

f=GetFolderItem("test.app").Child("Contents").Child("MacOS").Child("test")

aa(0)=f.ShellPath

print str(ConsoleExecuteMBS(f.ShellPath,aa,ee))
```

Notes:

Use WindowsShellExecuteMBS on Windows.

Launch GUI tools on Mac OS X using /bin/open.
Returned value is the PID of the new process.
If the execution fails you still get a PID, but this process is terminated in a few milliseconds.

arguments must have at least one member.

See also WindowsProcessMBS, WindowsShellExecuteAsAdminMBS and WindowsShellExecuteMBS (Windows only), NSTask (Mac only) and ShellMBS (cross platform).

See also:

- 159.1.1 ConsoleExecuteMBS(path as folderitem, arguments() as string, environment() as string) as Integer 22805

159.2 class ShellMBS

159.2.1 class ShellMBS

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class in MBS Plugins to run executables.
Example:

```
Dim s As New ShellMBS

s.Execute "/usr/bin/whoami"
s.Wait 5

Dim output As String = s.ReadOutput
Dim errors As String = s.ReadError

Break // see in debugger

MsgBox "whoami: "+output
```

Notes:

Via input stream, we can send data to the process.
And via output and error streams, we can read data coming back.

While this class does the same as Shell class in Xojo, we have the possibility to add more in the future.
For now you can benefit from an alternative implementation with stderr and stdout as two streams. Also we feature terminate methods to kill the child process.

See also WindowsProcessMBS, WindowsShellExecuteAsAdminMBS and WindowsShellExecuteMBS (Windows only), ConsoleExecuteMBS and NSTaskMBS (Mac only).

159.2.8 Methods

159.2.9 Arguments as String()

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries arguments array.
Example:

```
// query execution policy in PowerShell
Dim s As New ShellMBS

s.Arguments.Append "-Command"
s.Arguments.Append "Get-ExecutionPolicy -List"

s.Execute "powershell.exe"
s.Wait 5

Dim output As String = s.ReadOutput
Dim errors As String = s.ReadError

Break // see in debugger
```

Notes: You can add arguments to this array.

159.2.10 CloseInput

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes stdin to the process.
Notes: Sometimes this is needed as some processes wait till stdin is closed.

159.2.11 CloseStreams

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the streams.
Notes: Automatically done in destructor.

159.2.12 Constructor

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

159.2.13 Destructor

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

159.2.14 Execute(Executable as String)

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Runs the executable.
Example:

```
// run PowerShell and get help
Dim s As New ShellMBS

s.SetArguments array("/?")
s.Execute "powershell.exe"
s.Wait 5

Dim output As String = s.ReadOutput
Dim errors As String = s.ReadError

Break // see in debugger
```

Notes:

Pass path to executable to run.
Opens the streams stdin, stdout and stderr.

159.2.15 ExitCode as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the exit code of the terminated process.

159.2.16 Poll

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Polls for events.
Notes:

This will check for pending event and fire events if needed.
Internally we call this with a timer for the shell object, but you can call this in a tight loop.

159.2.17 ReadError as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads data from stderr.
Notes: Queries available bytes to return all the data in the buffer.

159.2.18 ReadOutput as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads data from stdout.
Notes: Queries available bytes to return all the data in the buffer.

159.2.19 SetArguments(arguments() as String)

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Assigns a new array of arguments.
Example:

```
Dim sh as new ShellMBS
Dim args() As String

args.Append "-c"
args.Append "5"
args.Append "monkeybreadsoftware.com"

sh.SetArguments args
```

159.2.20 Terminate(WinExitCode as Integer = 255) as boolean

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Terminates the app with the given exit code.
Notes:

ExitCode is only used on Windows.
Returns true on success.

159.2.21 Wait(TimeOut as double = 30.0)

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Waits for process to quit.
Notes: Yields time and waits until time passed or process terminates.

159.2.22 WriteInput(data as string) as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sends data to stdin of the running process.
Notes: Returns number of bytes written.

159.2.23 Properties

159.2.24 ApplicationName as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The path to the application.
Notes:

Can be empty when application is part of command line.
Only for Windows.
(Read and Write property)

159.2.25 AvailableBytesError as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries number of available bytes on stderr.
Notes: (Read only property)

159.2.26 AvailableBytesOutput as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries number of available bytes on stdout.
Notes: (Read only property)

159.2.27 CurrentDirectory as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current directory for the process.
Notes:

You can set this before calling Execute to specify the start directory.
If this parameter is "", the new process will have the same current drive and directory as the calling process.
(Read and Write property)

159.2.28 Domain as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The domain name.
Notes:

Only used on Windows.
You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

159.2.29 Environment as Dictionary

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The environment variables to use.
Notes: (Read and Write property)

159.2.30 ErrorCode as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Last native error code.
Notes:

Zero is success.
(Read only property)

159.2.31 Executable as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The command line to run.
Notes:

On Mac and Linux just the path to executable.
If applicationName is set for Windows, this should only provide parameters.
(Read only property)

159.2.32 IsRunning as Boolean

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks whether process is running.
Notes:

Returns true if running or false if not.

The process may not terminate if there is still output data in the pipes. So please read error/stdout regularly.
(Read only property)

159.2.33 Password as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The password.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
Only for Windows.
(Read and Write property)

159.2.34 PID as Integer

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The process ID of the child process.
Notes: (Read only property)

159.2.35 ProcessHandle as Integer

MBS Util Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: For Windows the process handle.
Notes: (Read only property)

159.2.36 ThreadHandle as Integer

MBS Util Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: For Windows the thread handle for the child process.
Notes: (Read only property)

159.2.37 Username as String

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user name.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
Only for Windows.
(Read and Write property)

159.2.38 Events

159.2.39 Completed

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when process terminated.

159.2.40 DataAvailable(AvailableBytesError as Integer, AvailableBytesOutput as Integer)

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Event called when new data is available on stderr or stdout.
Notes: You need to use read commands to query data.

159.3 class WindowsProcessMBS

159.3.1 class WindowsProcessMBS

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to run processes on Windows.
Example:

```
// run command
dim w as new WindowsProcessMBS

w.CommandLine = "cmd /c dir"
w.CurrentDirectory = "C:"

if not w.run then
MsgBox w.LastErrorMessage
Return
end if

// wait
while w.Running
app.YieldToNextThread
wend

// show result
dim a as Integer = w.AvailableBytesOutput
dim r as string = w.ReadOutput(a)
MsgBox r
```

Notes:

Can be used like shell, but with more windows specific options.
For interactive shell, you need to run cmd.exe yourself.
This shell is asynchronously. For synchrones mode, please write yourself a loop waiting for process to finish.

Please read Microsoft documentation for more details:
https://msdn.microsoft.com/en-us/library/windows/desktop/ms682425(v=vs.85).aspx

See also NSTask (Mac only), WindowsShellExecuteAsAdminMBS, WindowsShellExecuteMBS (Windows only), ConsoleExecuteMBS and ShellMBS (cross platform).

159.3.8 Methods

159.3.9 Close

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the process.
Notes: Same as destructor.

159.3.10 PeekError(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Peeks in stderr.

159.3.11 PeekOutput(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Peeks in stdout.

159.3.12 ReadError(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data from stderr.
Notes: Please pass maximum number of bytes to read.

159.3.13 ReadOutput(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data from stdout.
Notes: Please pass maximum number of bytes to read.

159.3.14 Run as Boolean

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Starts the process.
Notes: Returns true on success or false on failure.

159.3.15 SetKillProcessWhenParentDies as boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets process to be killed automatically.
Notes:

When Xojo application ends, the process you started is killed automatically.
Returns true if option is set or false on failure.

159.3.16 Terminate(ExitCode as Integer) as Boolean

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Terminates the app with the given exit code.
Notes: Returns true on success.

159.3.17 Write(Data as MemoryBlock) as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends data to stdin of the running process.
Notes: Returns number of bytes written.
See also:

- 159.3.18 Write(Data as String) as Integer 22820

159.3.18 Write(Data as String) as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends data to stdin of the running process.
Notes: Returns number of bytes written.
See also:

- 159.3.17 Write(Data as MemoryBlock) as Integer 22820

159.3.19 Properties

159.3.20 ApplicationName as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The path to the application.
Notes:

Can be empty when application is part of command line.
(Read and Write property)

159.3.21 AvailableBytesError as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries number of available bytes on stderr.
Notes: (Read only property)

159.3.22 AvailableBytesOutput as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries number of available bytes on stdout.
Notes: (Read only property)

159.3.23 CommandLine as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The command line to run.
Example:

```
// Run PowerShell to query execution policy

Dim s As New WindowsProcessMBS
s.CommandLine = "powershell.exe -Command ""Get-ExecutionPolicy -List"""

if s.run then
DelayMBS 0.5

while s.Running
// wait
app.YieldToNextThread
```

```
DelayMBS 0.1
wend

dim a as Integer = s.AvailableBytesOutput
Dim output As String = s.ReadOutput(a)

Break // see in debugger

else
break // failed
end if
```

Notes:

If applicationName is set, this should only provide parameters.
(Read and Write property)

159.3.24 CurrentDirectory as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current directory for the process.
Notes:

You can set this before calling Run to specify the start directory.
If this parameter is "", the new process will have the same current drive and directory as the calling process.
(Read and Write property)

159.3.25 Domain as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The domain name.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

159.3.26 Environment as Dictionary

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The environment variables to use.
Example:

```
// run command
dim w as new WindowsProcessMBS

w.CommandLine = "cmd /c echo % TEST% "

// set environment
dim env as new Dictionary
env.Value("TEST") = "Hello World"
w.Environment = env

if not w.run then
MsgBox w.LastErrorMessage
Return
end if

// wait
while w.Running
app.YieldToNextThread
wend

// show result
dim a as Integer = w.AvailableBytesOutput
dim r as string = w.ReadOutput(a)
MsgBox r
```

Notes: (Read and Write property)

159.3.27 ExitCode as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the exit code of the terminated process.
Notes: (Read only property)

159.3.28 LastError as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Last windows error code.
Notes: (Read only property)

159.3.29 LastErrorMessage as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The message text for the last error.
Notes: (Read only property)

159.3.30 Password as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The password.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

159.3.31 ProcessHandle as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: For Windows the process handle.
Notes: (Read only property)

159.3.32 ProcessID as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The process ID of the process.
Notes: (Read only property)

159.3.33 Running as Boolean

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether process is running.
Notes:

Returns true if running or false if not.

The process may not terminate if there is still output data in the pipes. So please read error/stdout regularly.
(Read only property)

159.3.34 ThreadHandle as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: For Windows the thread handle for the child process.
Notes: (Read only property)

159.3.35 ThreadID as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The thread ID of the main thread for the process.
Notes: (Read only property)

159.3.36 UserName as String

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The user name.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

159.3.37 Events

159.3.38 DataAvailable(AvailableBytesOutput as Integer, AvailableBytesError as Integer)

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: .

Function: The event called when data is available for stdout or stderr.

159.3.39 Terminated(ExitCode as Integer)

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: .

Function: The event called when process terminated.

Chapter 160

SmartCard

160.1 class SmartCardContextMBS

160.1.1 class SmartCardContextMBS

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a SmartCard context.
Example:

```
dim c as new SmartCardContextMBS
dim list() as string = c.Readers
MsgBox Join(list, EndOfLine)
```

160.1.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr1

160.1.3 Blog Entries

- MBS Xojo Plugins, version 19.6pr1

160.1.4 Methods

160.1.5 Cancel

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Terminates all outstanding actions within a specific resource manager context.
Notes:

The only requests that you can cancel are those that require waiting for external action by the smart card or user. Any such outstanding action requests will terminate with a status indication that the action was canceled. This is especially useful to force outstanding GetStatusChange calls to terminate.

Lasterror is set.

160.1.6 Connect(reader as string, ShareMode as UInt32, PreferredProtocols as UInt32) as SmartCardMBS

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Connects to a smartcard.
Example:

```
dim c as new SmartCardContextMBS

dim s as SmartCardMBS
s = c.Connect("MyReader", SmartCardMBS.kShareShared, SmartCardMBS.kProtocolAny)
if s <>nil then
MsgBox "Connected"
else
MsgBox "Error: "+str(c.Lasterror)
end if
```

Notes:

Establishes a connection (using a specific resource manager context) between the calling application and a smart card contained by a specific reader. If no card exists in the specified reader, an error is returned.

Reader: The name of the reader that contains the target card.
ShareMode: A flag that indicates whether other applications may form connections to the card. Use one of SmartCardMBS.kShare* constants. e.g. kShareExclusive
PreferredProtocols: A bitmask of acceptable protocols for the connection. Possible values may be combined

with the OR operation. Use SmartCardMBS.kProtocol* constants. e.g. kProtocolT1

Lasterror and ActiveProtocol are set.
Returns on success a smartcard object, else returns nil.

160.1.7 Constructor

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes a smartcard context.

160.1.8 IsValid as boolean

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines whether a smart card context handle is valid.
Notes: Returns true if valid or false if not valid.

160.1.9 ReaderGroups as string()

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the list of reader groups that have previously been introduced to the system.
Notes:

The groups may be SCard$ AllReaders, SCard$ DefaultReaders, SCard$ LocalReaders and SCard$ SystemReaders.
Lasterror is set.

160.1.10 Readers as string()

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the list of readers within a set of named reader groups, eliminating duplicates.
Example:

```
dim c as new SmartCardContextMBS
dim list() as string = c.Readers
```

MsgBox Join(list, EndOfLine)

Notes: Lasterror is set.
See also:

- 160.1.11 Readers(ReaderGroups() as string) as string() 22830

160.1.11 Readers(ReaderGroups() as string) as string()

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the list of readers within a set of named reader groups, eliminating duplicates.
Notes:

The caller supplies a list of reader groups, and receives the list of readers within the named groups. Unrecognized group names are ignored. This function only returns readers within the named groups that are currently attached to the system and available for use.

ReaderGroups: The reader groups you like to query.
Lasterror is set.
See also:

- 160.1.10 Readers as string() 22829

160.1.12 Properties

160.1.13 Available as Boolean

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the smartcard API is available.
Notes:

This should be available on Mac and Windows.

Loads on Mac the PCSC.framework.
For Linux you need pcsclite library installed. We try to load libpcsclite.so or /usr/lib/libpcsclite.so.
On Windows we use winscard.dll built into Windows.
(Read only property)

160.1.14 Handle as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

160.1.15 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

160.1.16 Constants

160.1.17 kErrorBadSeek = & H80100029

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: An error occurred in setting the smart card file object pointer.

160.1.18 kErrorCancelled = & H80100002

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The action was canceled by an Cancel request.

160.1.19 kErrorCancelledByUser = & H8010006E

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The action was canceled by the user.

160.1.20 kErrorCantDispose = & H8010000E

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The system could not dispose of the media in the requested manner.

160.1.21 kErrorCardNotAuthenticated = & H8010006F

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: No PIN was presented to the smart card.

160.1.22 kErrorCardUnsupported = & H8010001C

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The smart card does not meet minimal requirements for support.

160.1.23 kErrorCertificateUnavailable = & H8010002D

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The requested certificate could not be obtained.

160.1.24 kErrorChvBlocked = & H8010006C

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The card cannot be accessed because the maximum number of PIN entry attempts has been reached.

160.1.25 kErrorCommDataLost = & H8010002F

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: A communications error with the smart card has been detected.

160.1.26 kErrorCommError = & H80100013

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: An internal communications error has been detected.

160.1.27 kErrorDirNotFound = & H80100023

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The specified directory does not exist in the smart card.

160.1.28 kErrorDuplicateReader = & H8010001B

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The reader driver did not produce a unique reader name.

160.1.29 kErrorEof = & H8010006D

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The end of the smart card file has been reached.

160.1.30 kErrorFileNotFound = & H80100024

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The specified file does not exist in the smart card.

160.1.31 kErrorIccCreateorder = & H80100021

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The requested order of object creation is not supported.

160.1.32 kErrorIccInstallation = & H80100020

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: No primary provider can be found for the smart card.

160.1.33 kErrorInsufficientBuffer = & H80100008

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The data buffer for returned data is too small for the returned data.

160.1.34 kErrorInternalError = & H80100001

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: An internal consistency check failed.

160.1.35 kErrorInvalidAtr = & H80100015

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: An ATR string obtained from the registry is not a valid ATR string.

160.1.36 kErrorInvalidChv = & H8010002A

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The supplied PIN is incorrect.

160.1.37 kErrorInvalidHandle = & H80100003

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The supplied handle was not valid.

160.1.38 kErrorInvalidParameter = & H80100004

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: One or more of the supplied parameters could not be properly interpreted.

160.1.39 kErrorInvalidTarget = & H80100005

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: Registry startup information is missing or not valid.

160.1.40 kErrorInvalidValue = & H80100011

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: One or more of the supplied parameter values could not be properly interpreted.

160.1.41 kErrorNoAccess = & H80100027

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: Access is denied to the file.

160.1.42 kErrorNoDir = & H80100025

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The supplied path does not represent a smart card directory.

160.1.43 kErrorNoFile = & H80100026

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The supplied path does not represent a smart card file.

160.1.44 kErrorNoKeyContainer = & H80100030

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The requested key container does not exist on the smart card.

160.1.45 kErrorNoMemory = & H80100006

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: Not enough memory available to complete this command.

160.1.46 kErrorNoReadersAvailable = & H8010002E

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: No smart card reader is available.

160.1.47 kErrorNoService = & H8010001D

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The smart card resource manager is not running.

160.1.48 kErrorNoSmartcard = & H8010000C

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The operation requires a smart card, but no smart card is currently in the device.

160.1.49 kErrorNoSuchCertificate = & H8010002C

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The requested certificate does not exist.

160.1.50 kErrorNotReady = & H80100010

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The reader or card is not ready to accept commands.

160.1.51 kErrorNotTransacted = & H80100016

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: An attempt was made to end a nonexistent transaction.

160.1.52 kErrorPciTooSmall = & H80100019

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The PCI receive buffer was too small.

160.1.53 kErrorProtoMismatch = & H8010000F

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The requested protocols are incompatible with the protocol currently in use with the card.

160.1.54 kErrorReaderUnavailable = & H80100017

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The specified reader is not currently available for use.

160.1.55 kErrorReaderUnsupported = & H8010001A

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The reader driver does not meet minimal requirements for support.

160.1.56 kErrorRemovedCard = & H80100069

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The smart card has been removed, so further communication is not possible.

160.1.57 kErrorResetCard = & H80100068

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The smart card was reset.

160.1.58 kErrorSecurityViolation = & H8010006A

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: Access was denied because of a security violation.

160.1.59 kErrorServerTooBusy = & H80100031

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The smart card resource manager is too busy to complete this operation.

160.1.60 kErrorServiceStopped = & H8010001E

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The smart card resource manager has shut down.

160.1.61 kErrorSharingViolation = & H8010000B

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The smart card cannot be accessed because of other outstanding connections.

160.1.62 kErrorShutdown = & H80100018

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The operation has been aborted to allow the server application to exit.

160.1.63 kErrorSuccess = 0

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: No error.

160.1.64 kErrorSystemCancelled = & H80100012

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The action was canceled by the system, presumably to log off or shut down.

160.1.65 kErrorTimeout = & H8010000A

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The user-specified time-out value has expired.

160.1.66 kErrorUnexpected = & H8010001F

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: An unexpected card error has occurred.

160.1.67 kErrorUnknownCard = & H8010000D

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The specified smart card name is not recognized.

160.1.68 kErrorUnknownError = & H80100014

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: An internal error has been detected, but the source is unknown.

160.1.69 kErrorUnknownReader = & H80100009

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The specified reader name is not recognized.

160.1.70 kErrorUnknownResMng = & H8010002B

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: An unrecognized error code was returned.

160.1.71 kErrorUnpoweredCard = & H80100067

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: Power has been removed from the smart card, so that further communication is not possible.

160.1.72 kErrorUnresponsiveCard = & H80100066

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The smart card is not responding to a reset.

160.1.73 kErrorUnsupportedCard = & H80100065

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The reader cannot communicate with the card, due to ATR string configuration conflicts.

160.1.74 kErrorUnsupportedFeature = & H80100022

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: This smart card does not support the requested feature.

160.1.75 kErrorWaitedTooLong = & H80100007

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: An internal consistency timer has expired.

160.1.76 kErrorWriteTooMany = & H80100028

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: An attempt was made to write more data than would fit in the target object.

160.1.77 kErrorWrongChv = & H8010006B

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the error codes.
Notes: The card cannot be accessed because the wrong PIN was presented.

160.2 class SmartCardMBS

160.2.1 class SmartCardMBS

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a smartcard.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

160.2.4 Methods

160.2.5 BeginTransaction

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Starts a transaction.
Notes:

The function waits for the completion of all other transactions before it begins. After the transaction starts, all other applications are blocked from accessing the smart card while the transaction is in progress.

If a transaction is held on the card for more than five seconds with no operations happening on that card, then the card is reset. Calling any of the Smart Card and Reader Access Functions or Direct Card Access Functions on the card that is transacted results in the timer being reset to continue allowing the transaction to be used.
The BeginTransaction function is a smart card and reader access function. For more information about other access functions, see Smart Card and Reader Access Functions.

Lasterror is set.

160.2.6 CancelTransaction

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Cancels current transaction.
Notes: Lasterror is set.

160.2.7 Constructor

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

160.2.8 Control(ControlCode as Integer, input as ptr, inputLength as UInt32, output as ptr, byref outputLength as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Direct control of the reader.
Notes:

You can call it any time after a successful call to SmartCard.Connect and before a successful call to SmartCard.Disconnect. The effect on the state of the reader depends on the control code.

ControlCode: Control code for the operation. This value identifies the specific operation to be performed.

Input: Pointer to a buffer that contains the data required to perform the operation. This parameter can be nil if the ControlCode parameter specifies an operation that does not require input data.
inputLength: Size, in bytes, of the buffer pointed to by Input.
output: Pointer to a buffer that receives the operation's output data. This parameter can be nil if the ControlCode parameter specifies an operation that does not produce output data.
outputLength: On input the size, in bytes, of the buffer pointed to by output. On output the receives the size, in bytes, of the data stored into the buffer pointed to by output.

Lasterror is set.

160.2.9 Disconnect(Disposition as Integer = 0)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Terminates a connection previously opened between the calling application and a smart card in the target reader.
Notes:

Disposition: Action to take on the card in the connected reader on close.
can be:

kUnpowerCard	Power down the card and reset it (Cold Reset).
kResetCard	Reset the card (Warm Reset).
kLeaveCard	Do not do anything special on reconnect.
kEjectCard	Eject card.

Lasterror is set.

160.2.10 EndTransaction(Disposition as Integer = 0)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Ends transaction.
Notes:

Completes a previously declared transaction, allowing other applications to resume interactions with the card.

Disposition: Action to take on the card in the connected reader on close. Can be Eject, Leave, Reset or Unpower. See constants.

Lasterror is set.

160.2.11 GetAttrib(AttrId as UInt32) as Memoryblock

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the current reader attributes for the given handle.
Notes:

It does not affect the state of the reader, driver, or card.
The plugin first queries for size of attribute and on success queries again to get the data and return it as a memoryblock.

AttrId: The attribute ID. See kAttribute* constants.

Lasterror is set.

160.2.12 ReadFile(FileID as MemoryBlock) as MemoryBlock

MBS Tools Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read file from smart card with APDU protocol.
Notes:

Returns data as MemoryBlock or error message.
The first two bytes are status code.

160.2.13 Reconnect(ShareMode as UInt32, PreferredProtocols as UInt32, Initialization as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Reconnect function reestablishes an existing connection between the calling application and a smart card.
Notes:

This function moves a card handle from direct access to general access, or acknowledges and clears an error condition that is preventing further access to the card.

Initialization can be one of the following:

kUnpowerCard	Power down the card and reset it (Cold Reset).
kResetCard	Reset the card (Warm Reset).
kLeaveCard	Do not do anything special on reconnect.

ShareMode: A flag that indicates whether other applications may form connections to the card. Use one of SmartCardMBS.kShare* constants. e.g. kShareExclusive
PreferredProtocols: A bitmask of acceptable protocols for the connection. Possible values may be combined with the OR operation. Use SmartCardMBS.kProtocol* constants. e.g. kProtocolT1

Lasterror and ActiveProtocol are set.

160.2.14 SetAttrib(AttrId as UInt32, mem as Memoryblock)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the given reader attribute.
Notes:

It does not affect the state of the reader, reader driver, or smart card. Not all attributes are supported by all readers (nor can they be set at all times) as many of the attributes are under direct control of the transport protocol.

AttrId: The attribute ID. See kAttribute* constants.
Mem: The data to store.

Lasterror is set.

160.2.15 SplitValues(Data as MemoryBlock) as Dictionary

MBS Tools Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Split values read from smart card.
Notes:

Files on smartcard can contain key/value data.
Returns Dictionary with numbers (key) and values as strings.

160.2.16 Status(byref Reader as string, byref State as Integer, byref Protocol as Integer, byref CardID as string)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the current status of a smart card in a reader.
Notes:

You can call it any time after a successful call to SCardConnect and before a successful call to SCardDisconnect. It does not affect the state of the reader or reader driver.

Provides reader name, state of card (see kState constants), Protocol (see kProtocol constants) and CardID.

State: Current state of the smart card in the reader. Upon success, it receives one of the following state indicators.
Protocol: Current protocol, if any. The returned value is meaningful only if the returned value of pdwState is kCardStateSpecific.
CardID: 32-byte buffer that receives the ATR string from the currently inserted card, if available.

Lasterror is set.
See also:

- 160.2.17 Status(byref State as Integer, byref Protocol as Integer, byref CardID as string) 22848

160.2.17 Status(byref State as Integer, byref Protocol as Integer, byref CardID as string)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the current status of a smart card in a reader.
Notes:

Same as other Status function, but without querying the name.
Lasterror is set.
See also:

- 160.2.16 Status(byref Reader as string, byref State as Integer, byref Protocol as Integer, byref CardID as string) 22848

160.2.18 Transmit(ioSendPci as Ptr, SendBuffer as ptr, SendLength as UInt32, ioRecvPci as ptr, RecvBuffer as Ptr, byref RecvLength as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sends a service request to the smart card and expects to receive data back from the card.
Example:

```
dim card as SmartCardMBS // your card

dim header as new memoryBlock(8)

header.Int32Value(0) = 2 // T1
header.Int32Value(4) = 8 // size of this block

dim command as new MemoryBlock(5)
command.Int8Value(0) = 0
command.Int8Value(1) = & hCA
command.Int8Value(2) = 1
command.Int8Value(3) = & h82
command.Int8Value(4) = 2

dim buffer as new MemoryBlock(512)
dim ReceiveHeader as new MemoryBlock(8)

dim RecvLength as UInt32
card.Transmit(header, command, command.Size, ReceiveHeader, buffer, RecvLength)

MsgBox "Received "+str(RecvLength)+" bytes"
```

Notes:

ioSendPci:
A pointer to the protocol header structure for the instruction. This buffer is in the format of an SCARD_IO_REQUEST structure, followed by the specific protocol control information (PCI).
For the T=0, T=1, and Raw protocols, the PCI structure is constant. The smart card subsystem supplies a global T=0, T=1, or Raw PCI structure, which you can reference by using the symbols SCARD_PCI_T0, SCARD_PCI_T1, and SCARD_PCI_RAW respectively.

SendBuffer:
A pointer to the actual data to be written to the card.
For T=0, the data parameters are placed into the address pointed to by SendBuffer according to the following structure:

Type	name	Description
Byte	Cla	The instruction class
Byte	Ins	The instruction code
Byte	P1	Parameter to the instruction
Byte	P2	Parameter to the instruction
Byte	P3	Size of I/O transfer

The data sent to the card should immediately follow the send buffer. In the special case where no data is sent to the card and no data is expected in return, P3 is not sent.

SendLength:
The length, in bytes, of the SendBuffer parameter.
For T=0, in the special case where no data is sent to the card and no data expected in return, this length must reflect that the P3 member is not being sent; the length should be 4.

ioRecvPci:
Pointer to the protocol header structure for the instruction, followed by a buffer in which to receive any returned protocol control information (PCI) specific to the protocol in use. This parameter can be nil if no PCI is returned.

RecvBuffer:
Pointer to any data returned from the card.
For T=0, the data is immediately followed by the SW1 and SW2 status bytes. If no data is returned from the card, then this buffer will only contain the SW1 and SW2 status bytes.

RecvLength:
Supplies the length, in bytes, of the RecvBuffer parameter and receives the actual number of bytes received from the smart card. This value cannot be SCARD_AUTOALLOCATE because Transmit does not support SCARD_AUTOALLOCATE.
For T=0, the receive buffer must be at least two bytes long to receive the SW1 and SW2 status bytes.

Lasterror is set.

160.2.19 Properties

160.2.20 ActiveProtocol as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The active protocol.
Notes: (Read and Write property)

160.2.21 Handle as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

160.2.22 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

160.2.23 Constants

160.2.24 kAttributeAtrString = 590595

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Answer to reset (ATR) string.

160.2.25 kAttributeChannelId = 131344

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes:

DWORD encoded as & hDDDDCCCC, where DDDD = data channel type and CCCC = channel number.

The following encodings are defined for DDDD:
& h01 serial I/O; CCCC is a port number.
& h02 parallel I/O; CCCC is a port number.
& h04 PS/2 keyboard port; CCCC is zero.
& h08 SCSI; CCCC is SCSI ID number.
& h10 IDE; CCCC is device number.
& h20 USB; CCCC is device number.
& hFy vendor-defined interface with y in the range zero through 15; CCCC is vendor defined.

160.2.26 kAttributeCharacteristics = 393552

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes:

Integer indicating which mechanical characteristics are supported. If zero, no special characteristics are supported.
Note that multiple bits can be set:
& h00000001 Card swallowing mechanism
& h00000002 Card ejection mechanism
& h00000004 Card capture mechanism
All other values are reserved for future use (RFU).

160.2.27 kAttributeCurrentBwt = 524809

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Current block waiting time.

160.2.28 kAttributeCurrentClk = 524802

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Current clock rate, in kHz.

160.2.29 kAttributeCurrentCwt = 524810

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Current character waiting time.

160.2.30 kAttributeCurrentD = 524804

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Bit rate conversion factor.

160.2.31 kAttributeCurrentEbcEncoding = 524811

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes:

Current error block control encoding.
0 = longitudinal redundancy check (LRC)
1 = cyclical redundancy check (CRC)

160.2.32 kAttributeCurrentF = 524803

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Clock conversion factor.

160.2.33 kAttributeCurrentIfsc = 524807

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Current byte size for information field size card.

160.2.34 kAttributeCurrentIfsd = 524808

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Current byte size for information field size device.

160.2.35 kAttributeCurrentIoState = 590594

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Current IO state

160.2.36 kAttributeCurrentN = 524805

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Current guard time.

160.2.37 kAttributeCurrentProtocolType = 524801

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Integer encoded as 0x0rrrpppp where rrr is RFU and should be 0x000. pppp encodes the current protocol type. Whichever bit has been set indicates which ISO protocol is currently in use. (For example, if bit zero is set, T=0 protocol is in effect.)

160.2.38 kAttributeCurrentW = 524806

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Current work waiting time.

160.2.39 kAttributeDefaultClk = 196897

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Default clock rate, in kHz.

160.2.40 kAttributeDefaultDataRate = 196899

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Default data rate, in bps.

160.2.41 kAttributeDeviceFriendlyNameA = 2147418115

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Reader's display name. Windows ANSI encoding.

160.2.42 kAttributeDeviceFriendlyNameW = 2147418117

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Reader's display name. Unicode encoding.

160.2.43 kAttributeDeviceInUse = 2147418114

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Reserved for future use.

160.2.44 kAttributeDeviceSystemNameA = 2147418116

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Reader's system name. Windows ANSI encoding.

160.2.45 kAttributeDeviceSystemNameW = 2147418118

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Reader's system name. Unicode encoding.

160.2.46 kAttributeDeviceUnit = 2147418113

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Instance of this vendor's reader attached to the computer. The first instance will be device unit 0, the next will be unit 1 (if it is the same brand of reader) and so on. Two different brands of readers will both have zero for this value.

160.2.47 kAttributeEscAuthrequest = 499717

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Esc authentication request

160.2.48 kAttributeEscCancel = 499715

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Esc cancel

160.2.49 kAttributeEscReset = 499712

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Esc reset

160.2.50 kAttributeExtendedBwt = 524812

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Extended block wait time.

160.2.51 kAttributeIccInterfaceStatus = 590593

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Single byte. Zero if smart card electrical contact is not active; nonzero if contact is active.

160.2.52 kAttributeIccPresence = 590592

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes:

Single byte indicating smart card presence:
0 = not present
1 = card present but not swallowed (applies only if reader supports smart card swallowing)
2 = card present (and swallowed if reader supports smart card swallowing)
4 = card confiscated.

160.2.53 kAttributeIccTypePerAtr = 590596

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes:

Single byte indicating smart card type.
0 = unknown type
1 = 7816 Asynchronous
2 = 7816 Synchronous
Other values RFU.

160.2.54 kAttributeMaxClk = 196898

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Maximum clock rate, in kHz.

160.2.55 kAttributeMaxDataRate = 196900

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Maximum data rate, in bps.

160.2.56 kAttributeMaxIfsd = 196901

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Maximum bytes for information file size device.

160.2.57 kAttributeMaxinput = 499719

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Maximum input

160.2.58 kAttributePowerMgmtSupport = 262449

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Zero if device does not support power down while smart card is inserted. Nonzero otherwise.

160.2.59 kAttributeProtocolTypes = 196896

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes:

Integer encoded as 0x0rrrpppp where rrr is RFU and should be 0x000.
pppp encodes the supported protocol types. A '1' in a given bit position indicates support for the associated ISO protocol, so if bits zero and one are set, both T=0 and T=1 protocols are supported.

160.2.60 kAttributeSupressT1IfsRequest = 2147418119

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Supress T1 information file size request.

160.2.61 kAttributeUserAuthInputDevice = 328002

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: User authentication input device.

160.2.62 kAttributeUserToCardAuthDevice = 328000

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: User to card authentication device

160.2.63 kAttributeVendorIfdSerialNo = 65795

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Vendor-supplied interface device serial number.

160.2.64 kAttributeVendorIfdType = 65793

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Vendor-supplied interface device type (model designation of reader).

160.2.65 kAttributeVendorIfdVersion = 65794

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Vendor-supplied interface device version (DWORD in the form 0xMMmmbbbb where MM = major version, mm = minor version, and bbbb = build number).

160.2.66 kAttributeVendorName = 65792

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the attribute ID constants.
Notes: Vendor name.

160.2.67 kCardStateAbsent = 2

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the card state constants.
Notes: There is no card in the reader.

160.2.68 kCardStateNegotiable = 32

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the card state constants.
Notes: The card has been reset and is awaiting PTS negotiation.

160.2.69 kCardStatePowered = 16

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the card state constants.
Notes: Power is being provided to the card, but the reader driver is unaware of the mode of the card.

160.2.70 kCardStatePresent = 4

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the card state constants.
Notes: There is a card in the reader, but it has not been moved into position for use.

160.2.71 kCardStateSpecific = 64

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the card state constants.
Notes: The card has been reset and specific communication protocols have been established.

160.2.72 kCardStateSwallowed = 8

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the card state constants.
Notes: There is a card in the reader in position for use. The card is not powered.

160.2.73 kCardStateUnknown = 1

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the card state constants.
Notes: Unknown state.

160.2.74 kEjectCard = 3

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the card initialization modes.
Notes: Eject card.

160.2.75 kLeaveCard = 0

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the card initialization modes.
Notes: Do not do anything special on reconnect.

160.2.76 kProtocolAny = 3

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the protocol constants.
Notes: Any protocol is welcome

160.2.77 kProtocolRAW = 4

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the protocol constants.
Notes: Raw protocol

160.2.78 kProtocolT0 = 1

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the protocol constants.
Notes: T=0 is the active protocol.

160.2.79 kProtocolT1 = 2

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the protocol constants.
Notes: T=1 is the active protocol.

160.2.80 kProtocolT15 = 8

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the protocol constants.
Notes: T=15 protocol (not on Windows)

160.2.81 kProtocolUndefined = 0

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the protocol constants.
Notes: kShareDirect has been specified, so that no protocol negotiation has occurred. It is possible that there is no card in the reader.

160.2.82 kProtocolUnset = 0

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the protocol constants.
Notes: Unset

160.2.83 kResetCard = 1

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the card initialization modes.
Notes: Reset the card (Warm Reset).

160.2.84 kShareDirect = 3

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the flags that indicates whether other applications may form connections to the card.
Notes: This application is allocating the reader for its private use, and will be controlling it directly. No other applications are allowed access to it.

160.2.85 kShareExclusive = 1

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the flags that indicates whether other applications may form connections to the card.
Notes: This application is not willing to share the card with other applications.

160.2.86 kShareShared = 2

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the flags that indicates whether other applications may form connections to the card.
Notes: This application is willing to share the card with other applications.

160.2.87 kUnpowerCard = 2

MBS Tools Plugin, Plugin Version: 16.3.

Function: One of the card initialization modes.
Notes: Power down the card and reset it (Cold Reset).

160.3 class TKBERTLVRecordMBS

160.3.1 class TKBERTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An object that parses BER-encoded data and produces DER-encoded data for TLV records.
Notes:

Available in macOS 10.12 or newer.
Subclass of the TKTLVRecordMBS class.

160.3.2 Methods

160.3.3 Constructor(tag as UInt64, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a BER-TLV record with the specified tag and value.
Notes:

tag: The tag field of the record.
value: The value field of the record.

Returns a new TLV record containing the specified tag and value fields.
See also:

- 160.3.4 Constructor(tag as UInt64, records() as TKTLVRecordMBS) 22865

160.3.4 Constructor(tag as UInt64, records() as TKTLVRecordMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a BER-TLV record with the specified tag and an array of TLV subrecords.
Notes:

tag: The tag field of the record.
records: The TLV subrecords of the record.

Returns a new TLV record containing the specified tag field and subrecords.
See also:

- 160.3.3 Constructor(tag as UInt64, data as MemoryBlock) 22865

160.3.5 dataForTag(tag as UInt64) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Encodes a specified tag using BER-TLV tag encoding rules.
Notes:

tag: The tag value to encode.

Returns a data object that encodes a tag value using BER-TLV encoding.

160.4 class TKCompactTLVRecordMBS

160.4.1 class TKCompactTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An object that implements encoding using Compact-TLV encoding according to ISO 7816-4.
Notes: Subclass of the TKTLVRecordMBS class.

160.4.2 Methods

160.4.3 Constructor(tag as integer, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a TLV record with the specified tag and value.
Notes:

tag: The tag field of the record.
value: The value field of the record.

Returns a new TLV record containing the specified tag and value fields.

160.5 class TKSimpleTLVRecordMBS

160.5.1 class TKSimpleTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An object that implements encoding using Simple-TLV encoding according to ISO 7816-4.
Notes: Subclass of the TKTLVRecordMBS class.

160.5.2 Methods

160.5.3 Constructor(tag as integer, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a TLV record with the specified tag and value.
Notes:

tag: The tag field of the record.
value: The value field of the record.

Returnes a new TLV record containing the specified tag and value fields.

160.6 class TKSmartCardATRInterfaceGroupMBS

160.6.1 class TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A single interface-bytes group for a Smart Card ATR (Answer to Reset).
Notes:

You access instances of this class by calling the interfaceGroupAtIndex and interfaceGroupForProtocol methods on an TKSmartCardATRMBS object.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

160.6.2 Methods

160.6.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

160.6.4 Properties

160.6.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.6.6 HasProtocol as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether protocol is defined.
Notes: (Read only property)

160.6.7 HasTA as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether we have a TA value defined.
Notes: (Read only property)

160.6.8 HasTB as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether we have a TB value defined.
Notes: (Read only property)

160.6.9 HasTC as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether we have a TC value defined.
Notes: (Read only property)

160.6.10 Protocol as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The protocol for this group.
Notes:

This property returns the protocol number. See kProtocol* constants.
This property is zero for the first interface group (global), as it has no assigned protocol.
(Read only property)

160.6.11 TA as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The TA interface byte of ATR group.
Notes: (Read only property)

160.6.12 TB as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The TB interface byte of ATR group.
Notes: (Read only property)

160.6.13 TC as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The TC interface byte of ATR group.
Notes: (Read only property)

160.7 class TKSmartCardATRMBS

160.7.1 class TKSmartCardATRMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A parsed ATR (Answer To Reset) message from a Smart Card.
Notes:

This class declares a programmatic interface to parsing an ATR from data or a byte stream, and accessing the individual parts.

The TKSmartCardATR class parses ATR messages according to the ISO/IEC 7816-3 specification.

160.7.2 Methods

160.7.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.10 or newer.

160.7.4 Constructor(data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a TKSmartCardATR object from a provided data object.
Notes:

bytes: The ATR data to be parsed.

Returns a TKSmartCardATR object initialized with the parsed data. If bytes does not contain a valid ATR, raises UnsupportedOperationException.

160.7.5 historicalRecords as TKCompactTLVRecordMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A list of compact TLV records parsed from historical bytes.

160.7.6 interfaceGroupAtIndex(index as Integer) as TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the interface group at the specified index.
Notes:

index: The index of the desired interface group.

Interface group indexes start at 1, as specified by ISO 7816-3.

Returns the interface group at the specified index, or nil if not present.

160.7.7 interfaceGroupForProtocol(protocol as Integer) as TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the interface group with the specified protocol.
Notes:

protocol: The protocol used by the desired interface group.

Returns the interface group with the specified protocol, or nil if none exists.

160.7.8 protocols as Integer()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An array of protocols indicated in the ATR.
Notes:

Each element in the returned array is an integer value corresponding to a member of the kProtocol* constants.
The returned protocols are ordered such that the default protocol is at index 0, and any duplicate values are removed.

160.7.9 Properties

160.7.10 bytes as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The ATR message data.
Notes: (Read only property)

160.7.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.7.12 historicalBytes as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The ATR historical bytes, not including interface bytes or the TCK (check byte).
Notes: (Read only property)

160.7.13 Constants

160.7.14 kProtocolAny = 65535

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the protocol constants.
Notes: Any available transmission protocols.

160.7.15 kProtocolNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the protocol constants.
Notes: No transmission protocols.

160.7.16 kProtocolT0 = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the protocol constants.
Notes: T=0 transmission protocol.

160.7.17 kProtocolT1 = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the protocol constants.
Notes: T=1 transmission protocol.

160.7.18 kProtocolT15 = 32768

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the protocol constants.
Notes: T=15 transmission protocol.

160.8 class TKSmartCardMBS

160.8.1 class TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of a smart card.
Notes:

This class provides an interface for managing sessions with a smart card, transmitting requests, and facilitating user interaction.
You can create a TKSmartCardMBS object when a smart card is inserted into a slot, by calling the makeSmartCard method on the corresponding TKSmartCardSlotMBS object. To start communicating with the smart card, call the beginSession method on the TKSmartCardMBS object. Once an exclusive session has been established, you transmit data using the transmitRequest:reply: method. After you've finished communicating with a smart card, you call the endSession method.
If the smart card is physically removed from its slot, the session object becomes invalid, and any further calls to transmitRequest will return an error.

160.8.2 Methods

160.8.3 beginSession(tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Begins a session with the Smart Card.
Notes:

This method will fail if there is already an existing session for the Smart Card.
Calls to this method must be balanced with calls to endSession.

Calls beginSessionCompleted event later.

160.8.4 beginSessionSync(byref error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Begins a session with the Smart Card.
Notes:

This is the synchronous version, which waits for callback from operation system.
Returns true on success and false on failure.

This method will fail if there is already an existing session for the Smart Card.

Calls to this method must be balanced with calls to endSession.

160.8.5 beginSessionWithDelegate(handler as beginSessionCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes:

request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
beginSessionCompletedDelegate(success as Boolean, error as NSErrorMBS, tag as Variant)

160.8.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.8.7 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

160.8.8 endSession

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Completes any pending transmissions and ends the session to the Smart Card.
Notes: Calls to this method should balance calls to beginSession.

160.8.9 inSession(byref error as NSErrorMBS, tag as variant = nil) as boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Synchronously begins a session, executes the given block, and ends the session.
Notes:

error: On return, if an error occurred when attempting to create a session or execute the block, contains details about the error.

Returns true if the session was successfully created and the inSession event returns true; otherwise, false.
See also:

- 160.8.32 inSession(byref error as NSErrorMBS, tag as Variant) as Boolean 22885

160.8.10 readFileWithDelegate(FileName as MemoryBlock, handler as readFileCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Reads file with given filename.
Notes:

This is for Belgian ID card to read a file.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
readFileCompletedDelegateMBS(FileName as MemoryBlock, Content as MemoryBlock, error as NSErrorMBS, tag as Variant)

160.8.11 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, byref sw as Uint16, byref error as NSErrorMBS) as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Synchronously transmits an APDU command to the card and returns the response.
Notes:

ins: The instruction code.
p1: The first parameter.
p2: The second parameter.
requestData: The data field of the APDU, or nil if no input data field should be present—for example, a

case1 or case2 APDU.
The length of the data serves as Lc field of the APDU.
le: The expected number of bytes to be returned, or zero if no output data are expected—for example, a case1 or case3 APDU. Pass 0 to accept as many bytes as the card provides.
sw: On return, contains the result code as represented by the first two bytes (SW1SW2) of the returned data.
error: On return, if an error occurred when attempting to create a session or execute the block, contains details about the error.

Returns the returned data without the first two bytes (SW1SW2), or nil if an error occurred.
See also:

- 160.8.12 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, tag as variant = nil) 22879

160.8.12 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Asynchronously transmits an APDU command to the card, returning the response in a completion handler.
Notes:

ins: The instruction code.
p1: The first parameter.
p2: The second parameter.
requestData: The data field of the APDU, or nil if no input data field should be present—for example, a case1 or case2 APDU.
The length of the data serves as Lc field of the APDU.
le: The expected number of bytes to be returned, or zero if no output data are expected—for example, a case1 or case3 APDU. Pass 0 to accept as many bytes as the card provides.

Calls sendInsCompleted event later.
See also:

- 160.8.11 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, byref sw as Uint16, byref error as NSErrorMBS) as Memoryblock 22878

160.8.13 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the observer to call validChanged event.
Notes: Called for you by constructor.

160.8.14 transmitRequest(request as MemoryBlock, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes:

request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Calls transmitRequestCompleted method later.

160.8.15 transmitRequestSync(request as MemoryBlock, byref response as MemoryBlock, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes:

This is the synchronous version, which waits for callback from operation system.

request: The APDU request data.
response: The response.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

160.8.16 transmitRequestWithDelegate(request as MemoryBlock, handler as transmitRequestCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes:

request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
transmitRequestCompletedDelegate(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

160.8.17 userInteractionForSecurePINChange(PINFormat as TKSmartCardPINFormatMBS, APDU as MemoryBlock, currentPINByteOffset as Integer, newPINByteOffset as Integer) as TKSmartCardUserInteractionForSecurePINChangeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates a new user interaction object for secure PIN change using the smart card reader facilities (typically a HW keypad).
Notes:

PINFormat: The PIN format descriptor.
APDU: The Application Protocol Data Unit (APDU) used by the Smart Card to fill in PIN data.
currentPINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the entered PIN.
newPINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the new PIN.

Returns a new user interaction object for secure PIN verification, or nil if this feature is not supported by the Smart Card reader.

You should only call this method after a session to the Smart Card has been established using the beginSession method, and before the session is terminated using the endSession method.
Once the interaction has been successfully completed, the results are available via the resultData and resultSW properties of the returned TKSmartCardUserInteractionForSecurePINVerificationMBS object.

160.8.18 userInteractionForSecurePINVerification(PINFormat as TKSmartCardPINFormatMBS, APDU as MemoryBlock, PINByteOffset as Integer) as TKSmartCardUserInteractionForSecurePINVerificationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates and returns a new user interaction object for secure PIN verification using the Smart Card reader facilities.
Notes:

PINFormat: The PIN format descriptor.
APDU: The Application Protocol Data Unit (APDU) used by the Smart Card to fill in PIN data.
PINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a

location of a PIN block for filling in the entered PIN.

This parameter is not currently used. Pass 0.

Returns a new user interaction object for secure PIN verification, or nil if this feature is not supported by the Smart Card reader.

You should only call this method after a session to the Smart Card has been established using the beginSession method, and before the session is terminated using the endSession method.
Once the interaction has been successfully completed, the results are available via the resultData and resultSW properties of the returned TKSmartCardUserInteractionForSecurePINVerificationMBS object.

160.8.19 Properties

160.8.20 AllowedProtocols as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The protocols allowed for communication with the Smart Card.
Notes:

kProtocolAny by default.
This property is consulted only when beginning a session to a Smart Card. Any changes to this property will not be reflected by the current session, if one is already established.
(Read and Write property)

160.8.21 cla as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The CLA byte used for APDU transmission.
Notes:

0 by default.
(Read and Write property)

160.8.22 Context as Variant

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: User-specified information.
Notes:

This property is automatically set to nil if the Smart Card is removed or another TKSmartCardMBS object begins a session.
(Read and Write property)

160.8.23 CurrentProtocol as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The protocol used for communication with the Smart Card.
Notes:

Returns kProtocolNone if no session is currently established.
(Read only property)

160.8.24 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.8.25 Sensitive as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether sessions established for the Smart Card should be considered sensitive.
Notes:

False by default.
When this property is set to true, any sessions established for the receiver will begin and end by sending a reset command to the Smart Card. This is recommended anytime potentially sensitive information is transferred.
(Read and Write property)

160.8.26 Slot as TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The slot in which the Smart Card is inserted.
Notes: (Read only property)

160.8.27 UseCommandChaining as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether to use command chaining of APDU with a data field longer than 255 bytes.
Notes:

By default, this property is set to true when the Smart Card ATR announces that command chaining is supported.
(Read and Write property)

160.8.28 UseExtendedLength as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether to use extended length APDU.
Notes:

By default, this property is set to true when the Smart Card slot supports transmitting extended length commands, and the ATR announces that extended length APDU is supported.
(Read and Write property)

160.8.29 Valid as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether the Smart Card is valid and accessible from its slot.
Notes: (Read only property)

160.8.30 Events

160.8.31 beginSessionCompleted(success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Event called when session begun.
Notes:

success: Whether the session could be established successfully.
error: Contains information about the the error preventing the transaction from being established.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

160.8.32 inSession(byref error as NSErrorMBS, tag as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: The event called in session.
Notes:

The event to be called in the context of the created session. This event returns a Boolean value indicating whether communication was successful.

error: To indicate that an error occurred during the session, populate this with an NSError object containing details and return false.
See also:

- 160.8.9 inSession(byref error as NSErrorMBS, tag as variant = nil) as boolean 22878

160.8.33 sendInsCompleted(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as integer, replyData as MemoryBlock, sw as UInt16, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Event called when sendIns completed.
Notes:

replyData: The returned data without the first two bytes (SW1SW2), or nil if an error occurred.
sw: The result code as represented by the first two bytes (SW1SW2) of the returned data.
error: If a communication error occurred or the sw result code is anything other than & h9000, contains details about the error.

160.8.34 transmitRequestCompleted(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: The event called when transmit is done.
Notes:

response: The APDU response data, or nil if communication with the Smart Card failed.
error: Contains information about the the error preventing the transaction from being established.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

160.8.35 ValidChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Event called when valid property changed.

160.8.36 Constants

160.8.37 kProtocolAny = 65535

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the protocol constants.
Notes: Any available transmission protocols.

160.8.38 kProtocolNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the protocol constants.
Notes: No transmission protocols.

160.8.39 kProtocolT0 = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the protocol constants.
Notes: T=0 transmission protocol.

160.8.40 kProtocolT1 = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the protocol constants.
Notes: T=1 transmission protocol.

160.8.41 kProtocolT15 = 32768

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the protocol constants.
Notes: T=15 transmission protocol.

160.8.42 TKErrorCodeAuthenticationFailed = -5

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the error constants.
Notes: Authentication failed.

160.8.43 TKErrorCodeAuthenticationNeeded = -9

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the error constants.
Notes: Authentication is needed.

160.8.44 TKErrorCodeBadParameter = -8

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the error constants.
Notes: An invalid parameter was provided.

160.8.45 TKErrorCodeCanceledByUser = -4

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the error constants.
Notes: The operation was canceled by the user.

160.8.46 TKErrorCodeCommunicationError = -2

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the error constants.
Notes: A communication error occurred.

160.8.47 TKErrorCodeCorruptedData = -3

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the error constants.
Notes: The data was corrupted.

160.8.48 TKErrorCodeNotImplemented = -1

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the error constants.
Notes: The functionality is not implemented.

160.8.49 TKErrorCodeObjectNotFound = -6

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the error constants.
Notes: The object was not found.

160.8.50 TKErrorCodeTokenNotFound = -7

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the error constants.
Notes: The token was not found.

160.8.51 Delegates

160.8.52 beginSessionCompletedDelegateMBS(success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The delegate for the beginSessionWithDelegate method.

160.8.53 readFileCompletedDelegateMBS(FileName as MemoryBlock, Content as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The delegate for the readFileWithDelegate method.

160.8.54 transmitRequestCompletedDelegateMBS(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The delegate for the transmitRequestWithDelegate method.

160.9 class TKSmartCardPINFormatMBS

160.9.1 class TKSmartCardPINFormatMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The formatting properties for a PIN, such as character encoding and length constraints.
Notes:

You typically interact with TKSmartCardPINFormatMBS objects when calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an instance of TKSmartCardMBS.

Available in macOS 10.11 or newer.

160.9.2 Methods

160.9.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.9.4 Properties

160.9.5 Charset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The format of PIN characters.
Notes:

kCharsetNumeric by default.
(Read and Write property)

160.9.6 Encoding as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The encoding of PIN characters.
Notes:

kEncodingASCII by default.
(Read and Write property)

160.9.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.9.8 MaxPINLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The maximum number of characters to form a valid PIN.
Notes:

8 by default.
(Read and Write property)

160.9.9 MinPINLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The minimum number of characters to form a valid PIN.
Notes:

4 by default.
(Read and Write property)

160.9.10 PINBitOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The offset, in bits, within the PIN block to mark a location for filling in the formatted PIN, which is justified with respect to the PINJustification property value.
Notes:

0 by default.

The value of PINBitOffset indirectly controls the internal system units indicator. If PINBitOffset is byte aligned (that is, PINBitOffset % 8 == 0), the internal representation of PINBitOffset gets converted from bits to bytes.

(Read and Write property)

160.9.11 PINBlockByteLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The total length of the PIN block in bytes.
Notes:

8 by default.
(Read and Write property)

160.9.12 PINJustification as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The justification within the PIN block.
Notes:

kJustificationLeft by default.
(Read and Write property)

160.9.13 PINLengthBitOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The offset, in bits, within the PIN block to mark a location for filling in the PIN length, which is always left justified.
Notes:

0 by default.

The value of PINLengthBitOffset indirectly controls the internal system units indicator. If PINLengthBitOffset is byte aligned (that is, PINLengthBitOffset % 8 == 0), the internal representation of PINLengthBitOffset gets converted from bits to bytes.
(Read and Write property)

160.9.14 PINLengthBitSize as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The size, in bits, of the PIN length field. If set to 0, PIN length is not written.
Notes:

0 by default.
(Read and Write property)

160.9.15 Constants

160.9.16 kCharsetAlphanumeric = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the possible PIN character set constants.
Notes: PIN can be composed of digits and letters.

160.9.17 kCharsetNumeric = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the possible PIN character set constants.
Notes: PIN is only composed of digits.

160.9.18 kCharsetUpperAlphanumeric = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the possible PIN character set constants.
Notes: PIN can be composed of digits and uppercase letters.

160.9.19 kEncodingASCII = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the encoding constants.
Notes: Characters are encoded in ASCII format (for example, 1234 is encoded as 31h 32h 33h 34h).

160.9.20 kEncodingBCD = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the encoding constants.
Notes: Characters (only digits) are encoded in BCD format (for example, 1234 is encoded as 12h 34h).

160.9.21 kEncodingBinary = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the encoding constants.
Notes: Characters are encoded in Binary format (for example, 1234 is encoded as 01h 02h 03h 04h).

160.9.22 kJustificationLeft = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the possible PIN justification constants.
Notes: Justify to the left.

160.9.23 kJustificationRight = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the possible PIN justification constants.
Notes: Justify to the right.

160.10 class TKSmartCardSlotManagerMBS

160.10.1 class TKSmartCardSlotManagerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An interface to all available smart card reader slots.
Notes:

Get a list of all known smart card reader slots in the system using the slotNames property, and access individual slots by name using the getSlotWithName method.

The com.apple.security.smartcard entitlement is required in order to use TKSmartCardSlotManager.

160.10.2 Methods

160.10.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.11 or newer.

160.10.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.10.5 defaultManager as TKSmartCardSlotManagerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The shared singleton Smart Card reader slot manager.
Notes: This method returns nil unless the com.apple.security.smartcard entitlement is enabled.

160.10.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

160.10.7 getSlotWithName(name as string, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Asynchronously calls a block with a Smart Card reader slot for a specified name.
Notes:

name: The name of the Smart Card reader slot.

Calls gotSlotWithName later.

160.10.8 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the observer to call slowNamesChanged event.
Notes: Called for you by constructor.

160.10.9 slotNamed(name as string) as TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the Smart Card slot with a given name.
Notes: Returns the slot with the specified name, or nil if no slot with that name exists.

160.10.10 slotNames as string()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A list of identifiers for all the Smart Card reader slots available to the system.

160.10.11 Properties

160.10.12 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.10.13 Events

160.10.14 gotSlotWithName(name as string, slot as TKSmartCardSlotMBS, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: The event called when the slow with the name is found.

160.10.15 slotNamesChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Event called when slot name list changed.

160.11 class TKSmartCardSlotMBS

160.11.1 class TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A single smart card reader slot in the system.
Notes: Use the TKSmartCardSlotManagerMBS class to manage all the smart card reader slots available to the system. You can retrieve the names of available smart card reader slots for a system using the slotNames property of a manager object, and access instances of TKSmartCardSlotMBS using the getSlotWithName method.

160.11.2 Methods

160.11.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.11.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

160.11.5 makeSmartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates a new TKSmartCardMBS object representing the currently inserted Smart Card.
Notes:

A new TKSmartCardMBS object, or nil if no Smart Card is currently inserted.

You can create multiple instances of TKSmartCardMBS that represent the same Smart Card. Exclusivity of data transfer is handled by sessions on the individual TKSmartCardMBS objects.

160.11.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the observer to call stateChanged event.
Notes: Called for you by constructor.

160.11.7 Properties

160.11.8 ATR as TKSmartCardATRMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The ATR (Answer to Reset) of the inserted Smart Card, or nil if no Smart Card is inserted or the inserted Smart Card is mute.
Notes: (Read only property)

160.11.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.11.10 maxInputLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The maximum length of input APDU (Application Protocol Data Unit) that the Smart Card reader slot is able to transfer to the Smart Card.
Notes: (Read only property)

160.11.11 maxOutputLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The maximum length of output APDU (Application Protocol Data Unit) that the Smart Card reader slot is able to transfer from the Smart Card.
Notes: (Read only property)

160.11.12 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The name of the Smart Card reader slot.
Notes: (Read only property)

160.11.13 State as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The current state of the Smart Card reader slot.
Notes: (Read only property)

160.11.14 Events

160.11.15 StateChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Event called when state changed.

160.11.16 Constants

160.11.17 kStateEmpty = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the states constants.
Notes: The Smart Card reader slot is empty; no card is inserted.

160.11.18 kStateMissing = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the states constants.
Notes:

The Smart Card reader slot is no longer known to the system.

This is the terminal state of a TKSmartCardSlotThis instance; once it has reached this state, the Smart Card reader slot cannot be reinitialized.

160.11.19 kStateMuteCard = 3

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the states constants.
Notes: A Smart Card is inserted, but is mute, or does not provide responses to commands.

160.11.20 kStateProbing = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the states constants.
Notes: A Smart Card was inserted into the slot and an initial probe is in underway.

160.11.21 kStateValidCard = 4

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the states constants.
Notes: A Smart Card is inserted and properly answered to a reset command.

160.12 class TKSmartCardTokenDriverMBS

160.12.1 class TKSmartCardTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The driver that acts as an entry point for smart card app extensions.
Notes: Subclass of the TKTokenDriverMBS class.

160.12.2 Methods

160.12.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.13 class TKSmartCardTokenMBS

160.13.1 class TKSmartCardTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of a smart card based cryptographic token.#
Notes: Subclass of the TKTokenMBS class.

160.13.2 Methods

160.13.3 Constructor(smartCard as TKSmartCardMBS, AID as MemoryBlock, instanceID as String, tokenDriver as TKSmartCardTokenDriverMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a smart card token with the specified smart card, application identifier, and token driver.
Notes:

smartCard: The smart card on which the created token should operate.
AID: The ISO 7816-4 application identifier for the smart card.
instanceID: A unique, persistent identifier for this token. This value is typically generated from the serial number of the target hardware.
tokenDriver: The driver associated with the created token.
See also:

- 160.13.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String) 22903

160.13.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 160.13.3 Constructor(smartCard as TKSmartCardMBS, AID as MemoryBlock, instanceID as String, tokenDriver as TKSmartCardTokenDriverMBS) 22903

160.13.5 Properties

160.13.6 AID as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The ISO 7816-4 application identifiers of the Smart Card.
Notes:

This value is specified in the Smart Card token extension's NSExtensionAttributes property list by the com.apple.ctk.aid attribute. If this attribute specifies multiple AIDs, this parameter represents the application identifier found on the card that is already preselected. If the com.apple.ctk.aid attribute is not present, no application is automatically preselected and the value of this property is nil.
(Read only property)

160.14 class TKSmartCardTokenSessionMBS

160.14.1 class TKSmartCardTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A token session that is based on a smart card token.
Notes:

You can use the smartCard property to access and send APDUs to the underlying smart card.

Available on MacOS 10.12 or newer.
Subclass of the TKTokenSessionMBS class.

160.14.2 Methods

160.14.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 160.14.4 Constructor(token as TKTokenMBS) 22905

160.14.4 Constructor(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token session with the specified token.
Notes:

token: The token to which the initialized session is bound.

Returns a new token session created with the specified token.
See also:

- 160.14.3 Constructor 22905

160.14.5 Properties

160.14.6 smartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The smart card for the active exclusive session and selected application.
Notes:

This property can only be accessed in the implementation of a TKTokenSessionDelegate protocol delegate method. If the associated token has a value set for the AID property, this property opens an exclusive session to the card, with the application already selected.

You should not call beginSession or endSession on the returned value. Instead, the system will take care of beginning the exclusive session and terminating it when the current token request servicing is finished.
You can store any kind of information representing state of the card using the context property. This property will be automatically set to nil if the card is reset or accessed by different TKSmartCard instance, such as by another process. You can check the context property for any previously stored values as a way to avoid costly state restoration before performing an operation.
(Read only property)

160.15 class TKSmartCardUserInteractionForPINOperationMBS

160.15.1 class TKSmartCardUserInteractionForPINOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of user interaction for secure PIN operations on a Smart Card reader.
Notes:

There are two types of user interactions: those for secure PIN change and those for secure PIN validation. These interactions are instances of the TKSmartCardUserInteractionForSecurePINChangeMBS, or TKSmartCardUserInteractionForSecurePINVerificationMBS subclasses of TKSmartCardUserInteractionForPINOperationMBS, respectively.

You interact with instances of one of the subclasses of TKSmartCardUserInteractionForPINOperationMBS when calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an TKSmartCard object.
The result of a user interaction is available once the interaction has completed.

Available in macOS 10.11 or newer.
Subclass of the TKSmartCardUserInteractionMBS class.

160.15.2 Methods

160.15.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.15.4 PINMessageIndices as Integer()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A list of message indices referring to a predefined message table, used to specify the type and number of messages displayed during the PIN operation. nil by default.
Notes: If nil, the reader does not display any message (reader specific). Typically, PIN verification takes 1 message; PIN modification takes 1 – 3 messages.

160.15.5 Properties

160.15.6 locale as NSLocaleMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The locale for the displayed messages.
Notes:

If nil, the user's current locale is used. By default, this value is the current locale of the system.
(Read and Write property)

160.15.7 PINCompletion as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The conditions under which PIN entry should be considered complete.
Notes: (Read and Write property)

160.15.8 resultData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The returned data without SW1-SW2 bytes, if any.
Notes: (Read and Write property)

160.15.9 resultSW as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The SW1-SW2 status bytes.
Notes: (Read and Write property)

160.15.10 Constants

160.15.11 kPINCompletionKey = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the PIN completion constants.
Notes: Key

160.15.12 kPINCompletionMaxLength = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the PIN completion constants.
Notes: MaxLength

160.15.13 kPINCompletionTimeout = 4

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the PIN completion constants.
Notes: Timeout

160.16 class TKSmartCardUserInteractionForSecurePINChangeMBS

160.16.1 class TKSmartCardUserInteractionForSecurePINChangeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of the user interaction for secure PIN change operations on a Smart Card reader.
Notes:

The result of a user interaction is available once the interaction has completed.
Available in macOS 10.11+.
Subclass of the TKSmartCardUserInteractionForPINOperationMBS class.

160.16.2 Methods

160.16.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.16.4 Properties

160.16.5 PINConfirmation as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The way PIN confirmation is requested.
Notes:

kPINConfirmationNone by default.
(Read and Write property)

160.16.6 Constants

160.16.7 kPINConfirmationCurrent = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the PIN confirmation constants.
Notes: Current PIN confirmation.

160.16.8 kPINConfirmationNew = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the PIN confirmation constants.
Notes: New PIN confirmation.

160.16.9 kPINConfirmationNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the PIN confirmation constants.
Notes: No PIN confirmation.

160.17 class TKSmartCardUserInteractionForSecurePINVerificationMBS

160.17.1 class TKSmartCardUserInteractionForSecurePINVerificationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of the user interaction for secure PIN change verification on a Smart Card reader.
Notes:

The result of a user interaction is available once the interaction has completed.
Subclass of the TKSmartCardUserInteractionForPINOperationMBS class.

160.17.2 Methods

160.17.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.18 class TKSmartCardUserInteractionMBS

160.18.1 class TKSmartCardUserInteractionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The base class for encapsulating user interaction with a Smart Card reader.
Notes:

There are two types of user interactions: those for secure PIN change and those for secure PIN validation. These interactions are instances of the TKSmartCardUserInteractionForSecurePINChangeMBS, or TKSmartCardUserInteractionForSecurePINVerificationMBS subclasses of TKSmartCardUserInteractionForPINOperationMBS, respectively. TKSmartCardUserInteractionForPINOperationMBS is a subclass of TKSmartCardUserInteractionMBS.

You interact with instances of one of the subclasses of TKSmartCardUserInteractionForPINOperationwhenMBS calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an TKSmartCardMBS object.

Available in macOS 10.11+.

160.18.2 Methods

160.18.3 Cancel as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Attempts to cancel an interaction started by calling run.
Notes:

Returns false if the operation is not running, or if cancelation is not supported.
For certain interactions, cancellation may not be available.

160.18.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.18.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

160.18.6 Run

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Runs the user interaction and asynchronously receives a reply.
Notes: Calls RunCompleted event later.

160.18.7 Properties

160.18.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.18.9 initialTimeout as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The timeout, in seconds, for initial interaction.
Notes:

If set to 0, the reader-defined default timeout is used. 0 by default.
(Read and Write property)

160.18.10 interactionTimeout as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The timeout, in seconds, after the first key stroke.
Notes:

If set to 0, the reader-defined default timeout is used. 0 by default.
(Read and Write property)

160.18.11 Events

160.18.12 characterEnteredInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate that a valid character has been entered.

160.18.13 correctionKeyPressedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate that a correction key has been pressed.

160.18.14 invalidCharacterEnteredInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate that an invalid character has been entered.

160.18.15 newPINConfirmationRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate that the new PIN needs to be re-entered for confirmation.

160.18.16 newPINRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate that the new PIN needs to be entered.

160.18.17 oldPINRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate that the old PIN needs to be entered.

160.18.18 runCompleted(success as boolean, error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Called when run method is done.
Notes:

success: Whether the user interaction was successful.
error: Contains information about the the error that occurred during the user interaction.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

160.18.19 validationKeyPressedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate that the validation key has been pressed, indicating the end of PIN entry.

160.19 class TKTLVRecordMBS

160.19.1 class TKTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The base class encapsulating a Tag-Length-Value record.
Notes:

The CryptoTokenKit framework provides the following concrete subclasses for various TLV record encodings:

- TKBERTLVRecordMBS for BER-TLV encoding rules
- TKSimpleTLVRecordMBS for Simple-TLV encoding according to ISO 7816-4
- TKCompactTLVRecordMBS for Compact-TLV encoding according to ISO 7816-4

Requires macOS 10.12 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

160.19.2 Methods

160.19.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on macOS 10.12 or newer.

160.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

160.19.5 recordFromData(data as MemoryBlock) as TKTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates and returns a TLV record from by parsing the specified data.
Notes:

data: A data object containing the serialized representation of a TLV record.

Returns a TLV record, or nil if data does not specify a valid record.

160.19.6 sequenceOfRecordsFromData(data as MemoryBlock) as TKTLVRecordMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates and returns an array of TLV records from the specified data.
Notes:

data: A data object containing the serialized representation of zero or more TLV records.

Returns a sequence of TLV records, or nil if data does not specify a sequence of valid records.

160.19.7 Properties

160.19.8 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The record data, including the tag, length, and value fields.
Notes: (Read only property)

160.19.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.19.10 Tag as UInt64

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The tag field of the record.
Notes: (Read only property)

160.19.11 Value as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The value field of the record.
Notes: (Read only property)

160.20 class TKTokenAuthOperationMBS

160.20.1 class TKTokenAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An authentication operation for a cryptographic token.
Notes: The CryptoTokenKit framework provides the following concrete subclasses: TKTokenPasswordAuthOperationMBS, for password-based authentication, and TKTokenSmartCardPINAuthOperationMBS for Smart Card PIN-based authentication.

160.20.2 Methods

160.20.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.20.4 finishWithError(byref error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Finishes the authentication operation.
Notes:

error: On return, if an error occurred, contains an object with details of the error.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

Return true if the authentication operation finished successfully; otherwise false.

160.20.5 Properties

160.20.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.21 class TKTokenDriverMBS

160.21.1 class TKTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The abstract base class for building token drivers.
Notes: When working with Smart Card tokens, use or inherit from the TKSmartCardTokenDriverMBS subclass instead.

160.21.2 Methods

160.21.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.21.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

160.21.5 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets delegate, so events fire.
Notes: Called by constructor for you.

160.21.6 Properties

160.21.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.21.8 Events

160.21.9 createTokenForSmartCard(smartCard as TKSmartCardMBS, AID as MemoryBlock, byref error as NSErrorMBS) as TKSmartCardTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate that a new Smart Card is detected.
Notes:

self: The Smart Card token driver.
smartCard: The detected Smart Card.
AID: The ISO 7816-4 application identifier that is selected on the Smart Card. If the com.apple.ctk.aid attributes is not present in the Smart Card token extension property list, no application is selected.
error: If an error occured, this parameter should be populated with an NSError object containing details about the error.

Return the token created for the Smart Card, or nil if an error occurs or the delegate decides not to provide a token.

This event is only for TKSmartCardTokenDriverMBS class.

160.21.10 terminateToken(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate to terminate the specified token.

160.22 class TKTokenKeyAlgorithmMBS

160.22.1 class TKTokenKeyAlgorithmMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Cryptographic algorithms used by token keys.
Notes:

Typically, the supported algorithm for a token key can be represented by a value of the SecKeyAlgorithm enumeration. However, tokens such as Smart Cards require that input data for operations take the format of a more specific algorithm. For example, a token may accept raw data to generate a cryptographic signature, but require that raw data to be formatted according to PKCS1 padding rules. To express such a requirement, a TKTokenKeyAlgorithm object defines a target algorithm and a set of other algorithms that were used. In the previous example, the target algorithm is kSecKeyAlgorithmRSASignatureRaw and the kSecKeyAlgorithmRSASignatureDigestPKCS1v15SHA1 algorithm is also reported as being used.

Requires macOS 10.12+ or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

160.22.2 Methods

160.22.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

160.22.4 isAlgorithm(algorithm as string) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns whether the specified algorithm is the target operation algorithm.
Notes:

algorithm: The algorithm to be checked.

Returns true if algorithm is the target operation algorithm; otherwise, false.

160.22.5 supportsAlgorithm(algorithm as string) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether the specified algorithm is the target operation algorithm, or one of the other algorithms used.
Notes:

algorithm: The algorithm to be checked.

Returns true if algorithm is the target operation algorithm or one of the other algorithms used; otherwise, false.

160.22.6 Properties

160.22.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.23 class TKTokenKeychainCertificateMBS

160.23.1 class TKTokenKeychainCertificateMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A token's certificate as stored in the keychain.
Notes: Subclass of the TKTokenKeychainItemMBS class.

160.23.2 Methods

160.23.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token keychain certificate with data from the specified certificate reference and a given object ID.
Notes:

CertificateData: The certificate as data block.
objectID: The object ID.

Returns a new token keychain certificate.
See also:

- 160.23.4 Constructor(TKTokenObjectID as Variant) 22925

160.23.4 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 160.23.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant) 22925

160.23.5 Properties

160.23.6 data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns a DER-encoded representation of an X.509 certificate.
Notes: (Read only property)

160.24 class TKTokenKeychainContentsMBS

160.24.1 class TKTokenKeychainContentsMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of the state of the keychain for a particular token.
Notes:

Available on macOS 10.12+.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

160.24.2 Methods

160.24.3 certificateForObjectID(TKTokenObjectID as Variant, byref error as NSErrorMBS) as TKTokenKeychainCertificateMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the key for a specified object identifier.
Notes:

objectID: The object identifier for the keychain item.
error: On return, if no such certificate exists, contains information about the error.

Returns the certificate, or nil if no certificate exists.

160.24.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

160.24.5 fillWithItems(items() as TKTokenKeychainItemMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Fills the keychain with the specified items.
Notes:

items: The items to be added to the keychain.

All existing items for the token are first removed from the keychain before filling the keychain with items.

160.24.6 items as TKTokenKeychainItemMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns all items for token in the keychain.

160.24.7 keyForObjectID(TKTokenObjectID as Variant, byref error as NSErrorMBS) as TKTokenKeychainKeyMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the key for a specified object identifier.
Notes:

objectID: The object identifier for the keychain item.
error: On return, if no such key exists, contains information about the error.

Returns the key, or nil if no key exists.

160.24.8 Properties

160.24.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.25 class TKTokenKeychainItemMBS

160.25.1 class TKTokenKeychainItemMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An abstract base class for managing a token's contents as keychain items.
Notes:

Don't use this base class directly. Instead, use one of its subclasses, such as TKTokenKeychainCertificateMBS for managing certificates or TKTokenKeychainKeyMBS for managing cryptographic keys.
Available on macOS 10.12+.

160.25.2 Methods

160.25.3 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token keychain item with the specified object ID.

160.25.4 Properties

160.25.5 constraints as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Access constraints for the keychain item, keyed by TKTokenOperation values wrapped in integers.
Notes: (Read and Write property)

160.25.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.25.7 Label as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The user-visible label for the keychain item.
Notes:

This property is equivalent to the kSecAttrLabel attribute type.
(Read and Write property)

160.25.8 objectID as Variant

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the object ID used for keychain item identification.
Notes: (Read only property)

160.26 class TKTokenKeychainKeyMBS

160.26.1 class TKTokenKeychainKeyMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A token's key as stored in the keychain.
Notes:

Available on macOS 10.12+.
Subclass of the TKTokenKeychainItemMBS class.

160.26.2 Methods

160.26.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token keychain key with data from the specified certificate and a given object ID.
Notes:

certificateData: The certificate data.
objectID: The object ID.

Returns a new token keychain certificate.
See also:

- 160.26.4 Constructor(TKTokenObjectID as Variant) 22931

160.26.4 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 160.26.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant) 22931

160.26.5 Properties

160.26.6 applicationTag as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private tag data.
Notes:

This property is equivalent to the kSecAttrApplicationTag type attribute.
(Read and Write property)

160.26.7 canDecrypt as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether the key can be used to decrypt data.
Notes:

This property is equivalent to the kSecAttrCanDecrypt type attribute.
(Read and Write property)

160.26.8 canPerformKeyExchange as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether the key can be used to perform Diffie-Hellman style cryptographic key exchange.
Notes: (Read and Write property)

160.26.9 canSign as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether the key can be used to sign data.
Notes: (Read and Write property)

160.26.10 keySizeInBits as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The key size in bits.
Notes: (Read and Write property)

160.26.11 keyType as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The type of the key.
Notes:

Currently, only kSecAttrKeyTypeRSA and kSecAttrKeyTypeECSECPrimeRandom are supported values.
(Read and Write property)

160.26.12 publicKeyData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The public key data.
Notes: (Read and Write property)

160.26.13 publicKeyHash as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The SHA1 hash of the raw public key.
Notes:

This property is equivalent to the kSecAttrApplicationLabel type attribute.
(Read and Write property)

160.26.14 SuitableForLogin as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether the key can be used for system login.
Notes: (Read and Write property)

160.27 class TKTokenKeyExchangeParametersMBS

160.27.1 class TKTokenKeyExchangeParametersMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Parameters used to perform specific key exchange operations.
Notes:

Available on macOS 10.12+.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

160.27.2 Methods

160.27.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

160.27.4 Properties

160.27.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.27.6 requestedSize as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the requested output size, in bytes, of key exchange result.
Notes:

This property should be ignored if the output size is not configurable for the specified key exchange algorithm.
(Read only property)

160.27.7 sharedInfo as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns shared information typically used during the key derivation (KDF) step of a key exchange algorithm.
Notes:

This property should be ignored if shared information isn't used by the specified key exchange algorithm.
(Read only property)

160.28 class TKTokenMBS

160.28.1 class TKTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A representation of a hardware-based cryptographic token.
Notes:

When working with Smart Card tokens, use or inherit from the TKSmartCardToken subclass instead.
Available in macOS 10.12+.

160.28.2 Methods

160.28.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 160.28.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String) 22936

160.28.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token using the specified driver.
Notes:

tokenDriver: The driver of the token.
instanceID: A unique, persistent identifier for this token. This value is typically generated from the serial number of the target hardware.

Returns a new token object.
See also:

- 160.28.3 Constructor 22936

160.28.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

160.28.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the delegate, so you receive events.
Notes: Called by Constructor for you.

160.28.7 Properties

160.28.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.28.9 keychainContents as TKTokenKeychainContentsMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The contents of the keychain for this token.
Notes: (Read only property)

160.28.10 tokenDriver as TKTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The token driver.
Notes: (Read only property)

160.28.11 Events

160.28.12 createSession(byref error as NSErrorMBS) as TKTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate to create a session for the specified token.
Notes:

token: The token.
error: If an error occurred, this method should return nil and populate this parameter with an object con-

taining details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Return a new token session, or nil if an error occurred.

All operations for a token are performed within a session representing an authentication context. This delegate method is called whenever new authentication context is needed. For example, a client may want to perform a token operation using a keychain object that has an associated LAContext.

160.28.13 terminateSession(session as TKTokenSessionMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate to terminate the specified token session.

160.29 class TKTokenPasswordAuthOperationMBS

160.29.1 class TKTokenPasswordAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An authentication operation for a cryptographic token.
Notes:

The CryptoTokenKit framework provides the following concrete subclasses: TKTokenPasswordAuthOperationMBS, for password-based authentication, and TKTokenSmartCardPINAuthOperationMBS for Smart Card PIN-based authentication.
Subclass of the TKTokenAuthOperationMBS class.

160.29.2 Methods

160.29.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.29.4 Properties

160.29.5 password as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The password to be filled in when the finishWithError method is called.
Notes: (Read and Write property)

160.30 class TKTokenSessionMBS

160.30.1 class TKTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A token session that manages the authentication state of a token.
Notes:

A token session communicates with its delegate to perform operations with its token that are bound to the authentication state.

A session is always instantiated by a TKTokenMBS instance through the token's delegate when the framework detects access to the token from a new authentication session.

Never share the authentication status of a token, such as the PIN entered to unlock a smart card, with other token sessions.

160.30.2 Methods

160.30.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 160.30.4 Constructor(token as TKTokenMBS) 22940

160.30.4 Constructor(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token session with the specified token.
Notes:

token: The token to which the initialized session is bound.

Returns a new token session created with the specified token.
See also:

- 160.30.3 Constructor 22940

160.30.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

160.30.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the delegat, so events fire.
Notes: Called for you by constructor.

160.30.7 Properties

160.30.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.30.9 token as TKTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The token to which the session is bound.
Notes: (Read only property)

160.30.10 Events

160.30.11 beginAuthForOperation(operation as Integer, constraint as Variant, byref error as NSErrorMBS) as TKTokenAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate that authentication has begun for the specified operation and constraint.
Notes:

self: The token session.
operation: The kind of operation.

constraint: The constraint to be satisfied.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Return the resulting context of the operation, or nil if an error occurred.

If you return an instance of a subclass of TKTokenAuthOperation that is provided by the CryptoTokenKit framework, the system will first fill in the context-specific properties, such as the password, before calling the finishWithError: method on the context.

160.30.12 decryptData(ciphertext as MemoryBlock, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate to decrypt a data object using the specified key and algorithm.
Notes:

self: The token session.
ciphertext: The data to decrypt.
keyObjectID: The identifier of the public key object.
algorithm: The algorithm to be used for decryption.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Returns the decrypted data, or nil if an error occurred.

160.30.13 performKeyExchangeWithPublicKey(otherPartyPublicKeyData as MemoryBlock, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS, parameters as TKTokenKeyExchangeParametersMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate to perform a key exchange using the specified key and algorithm.
Notes:

self: The token session.
otherPartyPublicKeyData: The public key of the other party.
keyObjectID: The identifier of the private key object.

algorithm: The algorithm to be used for key exchange.
parameters: Additional parameters used by algorithm to perform the key exchange.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Returns the result of the key exchange, or nil if an error occurred.

160.30.14 signData(dataToSign as MemoryBlock, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Tells the delegate to sign a data object using the specified key and algorithm.
Notes:

self: The token session.
data: The data to sign.
keyObjectID: The identifier of the private key object.
algorithm: The algorithm to be used for signing.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Return the signed data, or nil if an error occurred.

160.30.15 supportsOperation(operation as Integer, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Asks the delegate whether the token session supports a given operation using the specified key and algorithm.
Notes:

self: The token session.
operation: The operation to perform. For possible values, see kTokenOperation* constants.
keyObjectID: The identifier of the private key object.
algorithm: The algorithm to be used by the operation.

Returns true if the operation is supported; otherwise, false.

160.30.16 Constants

160.30.17 kTokenOperationDecryptData = 3

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the token operation constants.
Notes: Decrypt data using a private key.

160.30.18 kTokenOperationNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the token operation constants.
Notes: No operation.

160.30.19 kTokenOperationPerformKeyExchange = 4

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the token operation constants.
Notes: Perform a Diffie-Hellman style cryptographic key exchange using a private key.

160.30.20 kTokenOperationReadData = 1

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the token operation constants.
Notes: Read raw data of a certificate.

160.30.21 kTokenOperationSignData = 2

MBS Mac64bit Plugin, Plugin Version: 18.5.

Function: One of the token operation constants.
Notes: Create a cryptographic signature using a private key.

160.31 class TKTokenSmartCardPINAuthOperationMBS

160.31.1 class TKTokenSmartCardPINAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A Smart Card PIN authentication operation.
Notes: Subclass of the TKTokenAuthOperationMBS class.

160.31.2 Methods

160.31.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The constructor.

160.31.4 Properties

160.31.5 APDUTemplate as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The template into which the PIN is filled in. nil by default.
Notes:

If nil, the system will not attempt to authenticate by sending the formatted APDU to the Smart Card. Instead, the token itself is expected to perform the authentication. You are encouraged to provide an APDU template, if possible, as it allows the use of a hardware interface for secure PIN entry, provided one exists. (Read and Write property)

160.31.6 PIN as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The PIN value resulting from performing the operation.
Notes:

This property is set to the result of the operation after finishWithError: is called.

If the APDUTemplate property has a set value, this property is not set, as the PIN is automatically sent to the Smart Card using the specified template.

(Read and Write property)

160.31.7 PINByteOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The offset, in bytes, within the APDU template to mark the location for filling in the PIN.
Notes: (Read and Write property)

160.31.8 PINFormat as TKSmartCardPINFormatMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The PIN format.
Notes:

By default, this property is set to a TKSmartCardPINFormatMBS object initialized without any further configuration.
(Read and Write property)

160.31.9 smartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: A Smart Card to which the formatted APDU is sent in order to authenticate.
Notes:

This property is only used if the APDUTemplate property has a set value.
(Read and Write property)

160.32 class TKTokenWatcherMBS

160.32.1 class TKTokenWatcherMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: An object that tracks the tokens available in the system.
Notes: Create a token watcher and register an insertion handler to be notified when tokens are added to the system. You can also add removal handlers for specific tokens to be notified when those tokens are removed from the system.

160.32.2 Methods

160.32.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Initializes a token watcher.

160.32.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The destructor.

160.32.5 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sets the observer to call tokenIDsChanged event.
Notes: Called for you by constructor.

160.32.6 tokenIDs as String()

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The token IDs currently available in the system.
Notes: Each string in tokenIDs corresponds to the name of the token instance.

160.32.7 Properties

160.32.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

160.32.9 Events

160.32.10 Inserted(tokenID as string)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: The event called when the given token is inserted.

160.32.11 Removed(tokenID as string)

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: The event called when the given token is removed.

160.32.12 tokenIDsChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Platform: macOS, Targets: .

Function: Event called when tokenID list changed.

Chapter 161

Social

161.1 class ACAccountCredentialMBS

161.1.1 class ACAccountCredentialMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: An ACAccountCredential object encapsulates the information needed to authenticate a user.
Notes: To create an account credential that uses the OAuth open authentication standard, use the Constructor.

161.1.2 Methods

161.1.3 Constructor(token as string, refreshToken as string, expiryDate as date)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes an account credential using OAuth 2.
Notes:

token: The client application's token.
refreshToken: The client application's refresh token.
expiryDate: The date the token expires.

Accounts can optionally use the OAuth open authentication standard to authenticate your client application. Instead of the user giving their username and password to log in, the server authenticates the user, and your client application receives a token that grants it access to specific resources for a defined duration. The authentication mechanism uses a key and secret scheme similar to the public and private keys used by ssh. A token is a unique, random string of letters and numbers that is paired with a secret to protect the token

from being abused. You initialize account credentials using this token and secret token.

To learn more about OAuth, go to Hueniverse OAuth.
http://hueniverse.com/oauth/

- 161.1.5 Constructor(token as string, tokenSecret as string) 22950

161.1.4 Constructor(token as string, refreshToken as string, expiryDate as dateTime)

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Initializes an account credential using OAuth 2.
See also:

- 161.1.3 Constructor(token as string, refreshToken as string, expiryDate as date) 22949
- 161.1.5 Constructor(token as string, tokenSecret as string) 22950

161.1.5 Constructor(token as string, tokenSecret as string)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Initializes an account credential using OAuth.
Notes:

Accounts can optionally use the OAuth open authentication standard to authenticate your client application. Instead of the user giving their username and password to log in, the server authenticates the user, and your client application receives a token that grants it access to specific resources for a defined duration. The authentication mechanism uses a key and secret scheme similar to the public and private keys used by ssh. A token is a unique, random string of letters and numbers that is paired with a secret to protect the token from being abused. You initialize account credentials using this token and secret token.

To learn more about OAuth, go to Hueniverse OAuth.
http://hueniverse.com/oauth/
See also:

- 161.1.3 Constructor(token as string, refreshToken as string, expiryDate as date) 22949
- 161.1.4 Constructor(token as string, refreshToken as string, expiryDate as dateTime) 22950

161.1.6 Properties

161.1.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

161.1.8 oauthToken as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The token used for the credential.
Notes: (Read and Write property)

161.2 class ACAccountMBS

161.2.1 class ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The account class.
Notes:

An ACAccount object encapsulates information about a user account stored in the Accounts database. You can create and retrieve accounts using an ACAccountStore object. The ACAccountStore object provides an interface to the persistent Accounts database. For each user, all account objects belong to a single ACAccountStore object.

Available in OS X v10.8 and later in 64-bit applications.

161.2.2 Methods

161.2.3 Constructor(type as ACAccountTypeMBS)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Initializes a new account of the specified type.
Notes: Available in OS X v10.8 and later.

161.2.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The destructor.

161.2.5 Properties

161.2.6 accountDescription as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A human-readable description of the account.
Notes:

This property is available if the user grants the application access to this account; otherwise it is "".
(Read and Write property)

161.2.7 accountType as ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The type of service account.
Notes:

This property is required. You specify the account type using the Constructor. You can use the accountsWithAccountType method to retrieve all accounts of a particular type.
(Read and Write property)

161.2.8 credential as ACAccountCredentialMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The credential used to authenticate the user of this account.
Notes:

This property is required and must be set before the account is saved. For privacy reasons, this property is inaccessible after the account is saved.
(Read and Write property)

161.2.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

161.2.10 identifier as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A unique identifier for this account.
Notes:

Use the accountWithIdentifier method to get an account with the specified identifier.
(Read only property)

161.2.11 Parent as ACAccountStoreMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The account store for this account.
Notes: (Read only property)

161.2.12 username as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The username for this account.
Notes:

This property must be set before the account is saved. After the account is saved, this property is available if the user grants the application access to this account; otherwise it is "".
(Read and Write property)

161.3 class ACAccountStoreMBS

161.3.1 class ACAccountStoreMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The ACAccountStore class provides an interface for accessing, manipulating, and storing accounts.
Notes:

To create and retrieve accounts from the Accounts database, you must create an ACAccountStore object. Each ACAccount object belongs to a single ACAccountStore object.

Available on Mac OS X 10.8 and later in 64-bit applications.

161.3.2 Methods

161.3.3 ACAccountStoreDidChangeNotification as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: One of the notification names.
Notes:

Posted when the accounts managed by this account store changed in the database. There is no userInfo dictionary associated with this notification.

This notification is sent if an account is saved or removed locally or externally. If you receive this notification, you should refetch all account objects.

The plugin automatically registeres this for the Changed event.

161.3.4 accounts as ACAccountMBS()

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The accounts managed by this account store.

161.3.5 accountsWithAccountType(type as ACAccountTypeMBS) as ACAccountMBS()

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Returns all accounts of the specified type.

161.3.6 accountTypeWithAccountTypeIdentifier(identifier as string) as ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Returns an account type that matches the specified identifier.
Notes: typeIdentifier: The account type identifier.

161.3.7 accountWithIdentifier(identifier as string) as ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Returns the account with the specified identifier.

161.3.8 ACErrorDomain as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The error domain for account framework.

161.3.9 available as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Whether class is available.
Notes: Returns true on Mac OS X 10.8 in a 64-bit application.

161.3.10 Constructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The constructor.

161.3.11 Destructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The destructor.

161.3.12 removeAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Removes an account from the account store.
Notes:

account: The account to remove.

This call will fail if you don't have sufficient rights to remove the account.

161.3.13 renewCredentialsForAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Renews account credentials when the credentials are no longer valid.
Notes:

account: The account to renew credentials.

For Twitter and Sina Weibo accounts, this method will prompt the user to go to Settings to re-enter their password.
For Facebook accounts, if the access token has become invalid due to a regular expiration, this method will obtain a new one.
If the user has deauthorized your app, this renewal request will return ACAccountCredentialRenewResultRejected.

161.3.14 requestAccessToAccountsWithType(accountType as ACAccountTypeMBS, dic as dictionary, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Obtains permission to access protected user properties.
Notes:

accountType: The account type.

options: The account options.

Certain account types (such as Facebook) require an options dictionary. This method will throw an NSInvalidArgumentException if the options dictionary is not provided for such account types. Conversely, if the account type does not require an options dictionary, the options parameter must be nil.

161.3.15 saveAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Saves an account to the Accounts database.
Notes:

account: The account to save.

If the account type supports authentication and the account is not authenticated, the account server uses the account's credentials to authenticate it. If the authentication is successful, the account is saved; otherwise it is not saved.

161.3.16 Properties

161.3.17 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

161.3.18 Events

161.3.19 Changed

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

Function: Event called when database changed.
Notes:

Posted when the accounts managed by this account store changed in the database. There is no userInfo dictionary associated with this notification.

This notification is sent if an account is saved or removed locally or externally. If you receive this notification,

you should refetch all account objects.

161.3.20 removeAccountCompleted(account as ACAccountMBS, success as boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

Function: The event called when account removing completed.

161.3.21 renewCredentialsForAccountCompleted(account as ACAccountMBS, renewResult as Integer, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

Function: Event called when renew credentials completed.

161.3.22 requestAccessCompleted(granted as boolean, error as NSErrorMBS, accountType as ACAccountTypeMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

Function: The event called when requestAccessToAccountsWithType completed.

161.3.23 saveAccountCompleted(success as boolean, error as NSErrorMBS, account as ACAccountMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

Function: The account save completed.

161.3.24 Constants

161.3.25 ACAccountCredentialRenewResultFailed = 2

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the status codes of credential renewal requests.
Notes: A non-user-initiated cancel of the prompt. Try again.

161.3.26 ACAccountCredentialRenewResultRejected = 1

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the status codes of credential renewal requests.
Notes: Renewal failed because the user revoked your access to their account.

161.3.27 ACAccountCredentialRenewResultRenewed = 0

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the status codes of credential renewal requests.
Notes: The account's credentials have been renewed and are now associated with the account.

161.3.28 ACErrorAccessDeniedByProtectionPolicy = 10

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Due to the current protection policy in effect, we couldn't fetch a credential

161.3.29 ACErrorAccessInfoInvalid = 8

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: The client's access info dictionary has incorrect or missing values.

161.3.30 ACErrorAccountAlreadyExists = 5

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Account wasn't added because it already exists.

161.3.31 ACErrorAccountAuthenticationFailed = 3

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Account wasn't saved because authentication of the supplied credential failed.

161.3.32 ACErrorAccountMissingRequiredProperty = 2

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Account wasn't saved because it is missing a required property.

161.3.33 ACErrorAccountNotFound = 6

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Account wasn't deleted because it could not be found.

161.3.34 ACErrorAccountTypeInvalid = 4

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Account wasn't saved because the account type is invalid.

161.3.35 ACErrorClientPermissionDenied = 9

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Your client does not have access to the requested data.

161.3.36 ACErrorCredentialNotFound = 11

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Yo, I tried to find your credential, but it must have run off!

161.3.37 ACErrorFetchCredentialFailed = 12

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Something bad happened on the way to the keychain

161.3.38 ACErrorInvalidClientBundleID = 16

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: The client making the request does not have a valid bundle ID.

161.3.39 ACErrorPermissionDenied = 7

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: The operation didn't complete because the user denied permission.

161.3.40 ACErrorRemoveCredentialFailed = 14

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Unable to remove credential

161.3.41 ACErrorStoreCredentialFailed = 13

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Unable to store credential

161.3.42 ACErrorUnknown = 1

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Unknown error

161.3.43 ACErrorUpdatingNonexistentAccount = 15

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the error constants.
Notes: Account save failed because the account being updated has been removed.

161.4 class ACAccountTypeMBS

161.4.1 class ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: An ACAccountType object encapsulates information about all accounts of a particular type.
Notes:

You do not create account type objects directly. To obtain an account type, use the Constructor or the accountType property of an account object. Account Type Identifiers describes the identifiers for currently supported account types. You can also use the accountsWithAccountType method to obtain all accounts of a particular type.

Available in OS X v10.8 and later in 64-bit applications.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 18.5pr3

161.4.3 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

161.4.4 Methods

161.4.5 ACAccountTypeIdentifierFacebook as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Identifier for the Facebook account type.

161.4.6 ACAccountTypeIdentifierLinkedIn as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Identifier for the LinkedIn account type.
Notes: Available in OS X v10.9 and later.

161.4.7 ACAccountTypeIdentifierSinaWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Identifier for the Sina Weibo account type.

161.4.8 ACAccountTypeIdentifierTencentWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Identifier for the Tencent Weibo account type.
Notes: Available in OS X v10.9 and later.

161.4.9 ACAccountTypeIdentifierTwitter as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Identifier for the Twitter account type.

161.4.10 accessGranted as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the user granted the application access to accounts of this type.
Notes: True if the application has access to accounts of this type; otherwise false.

161.4.11 accountTypeDescription as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A human-readable description of the account type.

161.4.12 ACFacebookAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Your Facebook App ID, as it appears on the Facebook website.

161.4.13 ACFacebookAudienceEveryone as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Posts from your app are visible to everyone.

161.4.14 ACFacebookAudienceFriends as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Posts are visible only to friends.

161.4.15 ACFacebookAudienceKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Only required when posting permissions are requested.

161.4.16 ACFacebookAudienceOnlyMe as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Posts are visible to the user only.

161.4.17 ACFacebookPermissionsKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: An array of of the permissions you're requesting.

161.4.18 ACLinkedInAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Your LinkedIn App ID (or API Key), as it appears on the LinkedIn website.

161.4.19 ACLinkedInPermissionsKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: An array of of the LinkedIn permissions you're requesting.

161.4.20 ACTencentWeiboAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Tencent App ID

161.4.21 Constructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The private constructor.

161.4.22 identifier as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The unique identifier for the account type.

161.4.23 Properties

161.4.24 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

161.5 class CustomNSSharingServiceMBS

161.5.1 class CustomNSSharingServiceMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The class for a custom sharing service.
Notes:

You only use it to get your own service inside your app into sharing picker.

Please call Close method when you want to stop the service.
Subclass of the NSSharingServiceMBS class.

161.5.4 Methods

161.5.5 Constructor(title as string, image as NSImageMBS, alternateImage as NSImageMBS = nil, DelegateHandler as NSSharingServiceDelegateMBS = nil, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Creates a custom sharing service object.
Notes:

title: The custom sharing service name.
image: The image that represents the sharing service
alternateImage: The alternate image that represents the sharing service
Delegate: The delegate where events are called for this service.

Custom sharing services can be added to the NSSharingServicePicker with the sharingServicesForItems event. Available in OS X v10.8 and later.

Please call Close method when you want to stop the service.

161.5.6 Events

161.5.7 performCustomService(tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Called when user selected this service and you need to perform your work.

161.6 class NSSharingServiceDelegateMBS

161.6.1 class NSSharingServiceDelegateMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The NSSharingServiceDelegate protocol allows customization of the position and animation of the share sheet as well as be notified of the success or failure of the item being shared.
Notes: Available in OS X v10.8 and later.

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

161.6.9 Events

161.6.10 didFailToShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Invoked when the sharing service encountered an error when sharing items.
Notes:

sharingService: The sharing service.
items: The items being shared.
error: The error that was encountered when trying to share the item. If the error is NSUserCancelledError, the user simply cancelled the error.

Available in OS X v10.8 and later.

161.6.11 didShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Invoked when the sharing service has finished sharing the items.
Notes:

sharingService: The sharing service.
items: The items being shared.

Available in OS X v10.8 and later.

161.6.12 sourceFrameOnScreenForShareItem(service as NSSharingServiceMBS, item as Variant) as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Invoked when the sharing service is performed and the sharing window is displayed, to present a transition between the original items and the sharing window.
Notes:

sharingService: The sharing service.
item: The item being shared.

Return the rectangle, in screen coordinates, to display the transition.

161.6.13 sourceWindowForShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS, scope as Integer) as NSWindowMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Returns the window that contained the share items.
Notes:

sharingService: The sharing service.
items: The items being shared.
sharingContentScope: The sharing content scope. The sharing scope can be modified from the default value of NSSharingContentScopeItem by setting a different value in the out parameter sharingContentScope.

Return the window of the shared items.

161.6.14 transitionImageForShareItem(service as NSSharingServiceMBS, item as Variant, contentRect as NSRectMBS) as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Invoked to allow returning a custom transition image when sharing an item.
Notes:

sharingService: The sharing service.
item: The shared item.
contentRect: The content rectangle is the frame of the actual content inside the transition image, excluding all decorations. For example, if the transition image is a QuickLook thumbnail, the value would be QLThumbnailGetContentRect.

Return the image to display for the sharing transition. Its size should exactly match that of the original image.

161.6.15 willShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Invoked when the sharing service will share the specified items.
Notes:

sharingService: The sharing service.
items: The items being shared.

Available in OS X v10.8 and later.

161.6.16 Constants

161.6.17 NSSharingContentScopeFull = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the sharing scope constants to specify the nature of the things you are sharing.
Notes:

Used when sharing the whole content of the current document, for example, the URL of the webpage.
Available in OS X v10.8 and later.

161.6.18 NSSharingContentScopeItem = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the sharing scope constants to specify the nature of the things you are sharing.
Notes:

Used when sharing a clearly identified item, for example, a file represented by its icon.
Available in OS X v10.8 and later.

161.6.19 NSSharingContentScopePartial = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the sharing scope constants to specify the nature of the things you are sharing.
Notes:

Used when sharing a portion of a more global content, for example, part of a webpage.
Available in OS X v10.8 and later.

161.7 class NSSharingServiceItemsMBS

161.7.1 class NSSharingServiceItemsMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A collection class for files, images, texts and URLs.
Example:

```
dim p as Picture = LogoMBS(500)
dim t as new NSSharingServiceItemsMBS
dim image as new NSImageMBS(p)
t.AddImage image
t.AddText "Hello World. This is a great app!"
```

Notes: Create an object from this class, add some items and pass to the share methods.

161.7.2 Methods

161.7.3 AddAttributedString(AttributedString as NSAttributedStringMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds one attributed string to the collection.
See also:

- 161.7.4 AddAttributedString(AttributedStrings() as NSAttributedStringMBS) 22974

161.7.4 AddAttributedString(AttributedStrings() as NSAttributedStringMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds attributed strings to the collection.
See also:

- 161.7.3 AddAttributedString(AttributedString as NSAttributedStringMBS) 22974

161.7.5 AddFile(file as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds one file to the collection.

161.7.6 AddFiles(files() as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds an array of files to the collection.

161.7.7 AddImage(image as NSImageMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds one image to the collection.

161.7.8 AddImages(images() as NSImageMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds an array of images to the collection.

161.7.9 AddText(text as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds one text to the collection.
See also:

- 161.7.10 AddText(texts() as string) 22975

161.7.10 AddText(texts() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds an array of texts to the collection.
See also:

- 161.7.9 AddText(text as string) 22975

161.7.11 AddURL(URL as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Add one URL to the collection.
See also:

• 161.7.12 AddURL(URLs() as string) 22976

161.7.12 AddURL(URLs() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Adds an array of URLs to the collection.
See also:

• 161.7.11 AddURL(URL as string) 22975

161.7.13 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

161.7.14 count as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns the number of items in this collection.

161.7.15 Images as NSImageMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns all images in the collection.

161.7.16 objectAtIndex(index as Integer) as Variant

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns object at the given index.
Notes:

Index is from 0 to count-1.
Returns URLs and files as string with URL.

161.7.17 Texts as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns array with all texts in this collection.

161.7.18 URLs as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns array with all URLs.
Notes: As files are also handled as URLs, the array contains also files in the collections as URLs.

161.7.19 Properties

161.7.20 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

161.8 class NSSharingServiceMBS

161.8.1 class NSSharingServiceMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The NSSharingService class is used to provide a consistent user experience when sharing items on OS X.
Notes:

For example, items can be: NSURL objects, NSString objects, NSImage objects, video (through file URLs), or any object which implements the NSPasteboardWriting protocol.

For any item or group of items, the NSSharingServiceMBS will display a sharing sheet to allow the user to pre-visualize what will be shared to the service. A sharing service can: create a post on a social network like Twitter or Facebook, send a message by email or iMessage, upload videos to viewing services, or send a file by AirDrop.

161.8.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.2
- MBS Xojo Plugins, version 21.2pr1

161.8.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.2
- MBS Xojo Plugins, version 21.2pr1

161.8.4 Methods

161.8.5 attachmentFileURLs as String()

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Array of file URLs representing the files that were shared.

161.8.6 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether sharing services are available.
Notes: Returns true on Mac OS X 10.8.

161.8.7 canPerformWithItems(items as NSSharingServiceItemsMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns whether the service can share all the specified items.
Notes:

items: The items to share.

Return true if the service can share all the items; false otherwise. If items is nil, the method will return true when the service is configured.

This method can be used to validate a custom user interface such as a dedicated Twitter button. Therefore you could call it once at launch time with nil items to check whether to display the button or not, and then with real items to enable and disable the button depending on the context or selection.

Available in OS X v10.8 and later.

161.8.8 Close

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Closes the sharing services.
Notes: Same as destructor, but closes now, not later.

161.8.9 Constructor(name as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Create a sharing service instance representing the specified service name.
Notes: name: The service name. See NSSharingServiceName* methods.

161.8.10 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

161.8.11 NSSharingServiceNameAddToAperture as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Adds the content to Aperture.
Available in OS X v10.8 and later.

161.8.12 NSSharingServiceNameAddToIPhoto as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Adds the content to iPhoto.
Available in OS X v10.8 and later.

161.8.13 NSSharingServiceNameAddToSafariReadingList as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Add the content to the Safari Reading List.
Available in OS X v10.8 and later.

161.8.14 NSSharingServiceNameCloudSharing as string

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Share via iCloud.
Available in macOS 10.12 and later.

161.8.15 NSSharingServiceNameComposeEmail as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Creates an email messages with the content.
Available in OS X v10.8 and later.

161.8.16 NSSharingServiceNameComposeMessage as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Creates a Messages methods with the content.
Available in OS X v10.8 and later.

161.8.17 NSSharingServiceNamePostImageOnFlickr as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Posts the image on Flickr.
Available in OS X v10.8 and later.

161.8.18 NSSharingServiceNamePostOnFacebook as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Post the content to Facebook.
Available in OS X v10.8 and later.

161.8.19 NSSharingServiceNamePostOnSinaWeibo as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Posts the content on a Sina Weibo, Chinese microblogging (weibo) website. Akin to a hybrid of Twitter and Facebook.
Available in OS X v10.8 and later.

161.8.20 NSSharingServiceNamePostOnTwitter as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Posts the content on Twitter.
Available in OS X v10.8 and later.

161.8.21 NSSharingServiceNamePostVideoOnTudou as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Posts the video on the video sharing service Tudou, based in the People's Republic of China.
Available in OS X v10.8 and later.

161.8.22 NSSharingServiceNamePostVideoOnVimeo as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Posts the video on the video sharing service Vimeo.
Available in OS X v10.8 and later.

161.8.23 NSSharingServiceNamePostVideoOnYouku as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Posts the video on the video sharing service Youku, based in the People's Republic of China.
Available in OS X v10.8 and later.

161.8.24 NSSharingServiceNameSendViaAirDrop as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Sends the file via Air Drop.
Available in OS X v10.8 and later.

161.8.25 NSSharingServiceNameUseAsDesktopPicture as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Replaces the user's desktop image with the content.
Available in OS X v10.8 and later.

161.8.26 NSSharingServiceNameUseAsTwitterProfileImage as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: One of the sharing service names.
Notes:

Replaces the Twitter profile image with the content.
Available in OS X v10.8 and later.

161.8.27 performWithItems(items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Manually performs the service on the provided items.
Notes:

items: The items to share.

In most cases this will display a sharing window.
Available in OS X v10.8 and later.

161.8.28 recipients as String()

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: The list of recipients.

161.8.29 SetDelegate(DelegateHandler as NSSharingServiceDelegateMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the delegate of the sharing service.

161.8.30 setRecipients(recipients() as String)

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Sets the list of recipients.
Example:

```
// compose email
Dim items As New NSSharingServiceItemsMBS

// styled text from text area control
Dim tv As NSTextViewMBS = TextArea1.NSTextViewMBS
items.AddAttributedString tv.textStorage

// find service
Dim service As New NSSharingServiceMBS("com.apple.share.Mail.compose")

service.subject = "Test Email"
service.setRecipients Array("test@test.test")

service.performWithItems items
```

Notes: List of emails for sending an email message.

161.8.31 sharingServiceNamed(name as string) as NSSharingServiceMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns a sharing service instance representing the specified service name.
Notes:

serviceName: The service name. See NSSharingServiceName* methods.

Returns an instance of NSSharingService for the specified service name.
Available in OS X v10.8 and later.

161.8.32 sharingServicesForItems(items as NSSharingServiceItemsMBS) as NSSharingServiceMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns a list of sharing services which could share all the provided items together.
Example:

```
// get an image
dim logo as Picture = LogoMBS(500)
Dim nsi as new NSImageMBS( logo )

// make items object
Dim nshi as new NSSharingServiceItemsMBS
nshi.AddImage nsi

// query services which are supported
Dim ssl(-1) as NSSharingServiceMBS = NSSharingServiceMBS.sharingServicesForItems( nshi )

// show services
for each s as NSSharingServiceMBS in ssl
msgBox s.title
next
```

Notes:

items: The items to share.

Returns an array of sharing services to allow for items.
This method can be used to build a custom user interface or to populate a contextual menu.
Available in OS X v10.8 and later.

161.8.33 Properties

161.8.34 accountName as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Account name used for sending on Twitter or Sina Weibo
Notes: (Read only property)

161.8.35 alternateImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The alternate image representing the sharing service. (read-only)
Notes:

Available in OS X v10.8 and later.
(Read only property)

161.8.36 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

161.8.37 image as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The primary image representing the sharing service. (read-only)
Notes: (Read only property)

161.8.38 menuItemTitle as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Title of the service in the Share menu.
Notes:

Can be modified.
(Read and Write property)

161.8.39 messageBody as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Message body as string.
Notes: (Read only property)

161.8.40 permanentLink as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: URL to access the post on Facebook, Twitter, Sina Weibo, etc. (also known as permalink)
Notes: (Read only property)

161.8.41 subject as String

MBS MacFrameworks Plugin, Plugin Version: 21.2, Platform: macOS, Targets: Desktop only.

Function: Subject for email or text message.
Example:

```
// compose email
Dim items As New NSSharingServiceItemsMBS

// styled text from text area control
Dim tv As NSTextViewMBS = TextArea1.NSTextViewMBS
items.AddAttributedString tv.textStorage

// find service
Dim service As New NSSharingServiceMBS("com.apple.share.Mail.compose")

service.subject = "Test Email"
service.setRecipients Array("test@test.test")

service.performWithItems items
```

Notes: (Read and Write property)

161.8.42 title as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The title of the sharing service. (read-only)
Example:

```
// get an image
dim logo as Picture = LogoMBS(500)
Dim nsi as new NSImageMBS( logo )

// make items object
Dim nshi as new NSSharingServiceItemsMBS
nshi.AddImage nsi

// query services which are supported
Dim ssl(-1) as NSSharingServiceMBS = NSSharingServiceMBS.sharingServicesForItems( nshi )

// show services
for each s as NSSharingServiceMBS in ssl
msgBox s.title
next
```

Notes: (Read only property)

161.9 class NSSharingServicePickerMBS

161.9.1 class NSSharingServicePickerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The NSSharingServicePicker class presents a list of sharing services, so that the user can choose a service to share an item.
Notes:

When a service is chosen, the picker automatically executes it, which presents the sharing window.

The events in this class allows customizing the picker's available services, where it appears, and allows assigning the delegate object for the NSSharingService delegate.

Available in OS X v10.8 and later.

161.9.2 Methods

161.9.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether sharing services are available.
Notes: Returns true on Mac OS X 10.8.

161.9.4 Constructor(items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a new sharing service picker for the selected items.
Notes: Available in OS X v10.8 and later.

161.9.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

161.9.6 showRelativeToRect(r as NSRectMBS, view as NSViewMBS, preferredEdge as Integer)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Shows the picker, populated with sharing services related to the instance items.
Notes:

rect: The rectangle the picker should be shown relative to. The coordinates are in the view coordinate system. Passing NSRectMBS.Zero causes the view bounds to be used.
view: The view.
preferredEdge: The preferred edge of the view to display the picker. See edge constants for the possible values.

When the user selects one of the sharing services, the sharing service will be performed. This method must be called on mouseDown.

Available in OS X v10.8 and later.

161.9.7 Properties

161.9.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

161.9.9 Events

161.9.10 delegateForSharingService(service as NSSharingServiceMBS) as NSSharingServiceDelegateMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Invoked to provide the delegate to the sharing service when the user has selected a service.
Notes:

sharingServicePicker: The sharing service picker.
sharingService: The selected sharing service.

Return a NSSharingServiceDelegateMBS object the sharing service should use for this item's transfer.
Available in OS X v10.8 and later.

161.9.11 didChooseSharingService(service as NSSharingServiceMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Invoked when the user has selected a service and before it is executed.
Notes:

sharingServicePicker: The sharing service picker.
service: The sharing service the user selected. Invoked to give the delegate to the sharing service that is about to be executed.

Available in OS X v10.8 and later.

161.9.12 sharingServicesForItems(items as NSSharingServiceItemsMBS, proposedServices() as NSSharingServiceMBS) as NSSharingServiceMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Invoked to allow the delegate to customize exactly what appears in the sharing service picker before it is presented.
Notes:

sharingServicePicker: The sharing service picker.
items: The items to share.
proposedServices: The proposed services to share the content.

Return the sharing services to use.
If you have no code in the event, the proposedServices are returned automatically.

The delegate can reorder, remove default services or add custom services before the picker is presented. It's possible to add custom services by mutating the proposedSharingServices array and adding new NSSharingService instances.

Available in OS X v10.8 and later.

161.9.13 Constants

161.9.14 NSMaxXEdge = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the Cocoa edge constants.
Notes: the maximum X edge. Typically right side.

161.9.15 NSMaxYEdge = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the Cocoa edge constants.
Notes: The maximum Y edge. Topically the top edge of a window.

161.9.16 NSMinXEdge = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the Cocoa edge constants.
Notes: the minimum X edge. Typically left side.

161.9.17 NSMinYEdge = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the Cocoa edge constants.
Notes: Minimum Y. As coordinates are upside down in the Cocoa world, this is the bottom edge of a window.

161.10 class SLRequestMBS

161.10.1 class SLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The SLRequest object encapsulates the properties of an HTTP request, providing a convenient template for you to make requests.
Notes:

You send a request to a social networking service to perform some operation on behalf of the user or to retrieve user information.

HTTP requests have these common components: an HTTP request method (GET, POST, PUT, or DELETE), a URL identifying the operation to perform, a set of query parameters, and an optional multipart POST body containing additional data. The values for these properties depend on the request you are sending and the target service provider. Refer to each supported social networking site's documentation for possible values. Links to documentation are provided in Table 1.

Use the requestForServiceType:requestMethod:URL:parameters: method to initialize a newly created SLRequest object passing the required property values. Use the addMultipartData:withName:type: to optionally specify a multipart POST body. After you create your request, use the performRequestWithHandler: method to send the request, specifying the handler to call when the request is done.

If you already have a sending mechanism, you can use the preparedURLRequest method to create the request that you send using an NSURLConnection object. If the request requires user authorization, set the account property to an ACAccount object.

Available in OS X v10.8 and later. 64bit only.

161.10.2 Methods

161.10.3 addMultipartData(data as memoryblock, name as string, type as string, filename as string)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Specifies a named multipart POST body for this request.
Notes:

data: The data for the multipart POST body, such as an image or text.
name: The name of the multipart POST body. This is the name that a specific social service expects.
type: The type of the multipart POST body. This is the MIME content type of the multipart data.
filename: The filename of the attachment that you want to POST. Many social services require a filename

in order to accept certain POST requests, such as uploading an image or video. If your multipart data does not require a filename, pass in nil.

Possible parameter values are dependent on the target service. This information, as well as guidance on when to use a multipart POST body, is documented by the service provider.

161.10.4 Available as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on OS X 10.8 and newer in a 64-bit app.

161.10.5 Constructor(serviceType as string, requestMethod as Integer, URL as string, parameters as dictionary)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Initializes a newly created request object with the specified properties.
Notes:

serviceType: The social networking service type. e.g. SLServiceTypeTwitter
requestMethod: The method to use for this HTTP request. e.g. SLRequestMethodPOST
url: The destination URL for this HTTP request. The values and formatting for the URL are dependent on the target service and are documented by the service provider.
parameters: The parameters for this HTTP request. The values and formatting are dependent on the target service and are documented by the service provider.

The newly initialized request object.
Use this method to initialize an SLRequest. The value and formatting of each parameter is dependent on the target service.

161.10.6 performRequest(tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Performs an asynchronous request and calls the RequestHandler event when done.

161.10.7 preparedURLRequest as NSURLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Returns an authorized URL request that can be sent using an NSURLConnectionMBS object.
Notes:

An OAuth-compatible NSURLRequest object that allows an app to act on behalf of the user while keeping the user's password private. The NSURLRequest is signed as OAuth1 by default, or OAuth2 by adding the appropriate token based on the user's account.

Use this method to modify your request before sending. By setting the account correctly, this method will automatically add any necessary tokens.

161.10.8 SLServiceTypeFacebook as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A string constant that identifies the social networking site, Facebook.

161.10.9 SLServiceTypeLinkedIn as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A string constant that identifies the social networking site, LinkedIn.

161.10.10 SLServiceTypeSinaWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A string constant that identifies the social networking site, Sina Weibo.

161.10.11 SLServiceTypeTencentWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A string constant that identifies the social networking site, Tencent Weibo.

161.10.12 SLServiceTypeTwitter as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: A string constant that identifies the social networking site, Twitter.

161.10.13 Properties

161.10.14 account as ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: Account information used to authenticate the request.
Notes:

The account is used to sign a request with OAuth1 services or to add an access token for OAuth2 services. By associating the account with the request, the necessary tokens are added automatically. The default value is nil.
(Read and Write property)

161.10.15 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

161.10.16 parameters as Dictionary

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The parameters for this request.
Notes:

Use this property to look up the query parameters of the HTTP request that was set in Constructor. Possible values are dependent on the target service and are documented by the service provider.
(Read only property)

161.10.17 requestMethod as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The method to use for this request.
Notes:

Use this property to look up the method of the HTTP request that was set in requestForServiceType.
(Read only property)

161.10.18 URL as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: All.

Function: The destination URL for this request.
Notes: (Read only property)

161.10.19 Events

161.10.20 performRequestCompleted(responseData as memoryblock, urlResponse as NSURLResponseMBS, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

Function: The callback handler for a request..
Notes:

responseData: The data returned by the request. The format of this data is dependent on the target service.
urlResponse: The URL response returned by the request that includes the HTTP response codes.
error: An error identifier.
Possible values are dependent on the target service and are documented by the service provider.

161.10.21 Constants

161.10.22 SLRequestMethodDELETE = 2

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the request types.
Notes:

Deletes the specified resource.

Available in OS X v10.8 and later.

161.10.23 SLRequestMethodGET = 0

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the request types.
Notes:

Requests information from the specified resource. Use a GET request to fetch information from the specified server such as character limits or a user's timeline.

Available in OS X v10.8 and later.

161.10.24 SLRequestMethodPOST = 1

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the request types.
Notes:

Submits data to be processed. Use a POST request to submit information to the specified server such as a status update or an image.

Available in OS X v10.8 and later.

161.10.25 SLRequestMethodPUT = 3

MBS Mac64bit Plugin, Plugin Version: 15.3.

Function: One of the request types.
Notes:

Uses a PUT request to submit the data.

Available in OS X v10.9 and later.

Chapter 162

Spamsum

162.1 class SpamSumMBS

162.1.1 class SpamSumMBS

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the spamsum tool.
Notes:

Overview
———

spamsum is a tool for generating and testing signatures on files. The signature is designed to be particularly suitable for producing a result that can be used to compare two emails and see if they are 'similar'. This can provide the core of a SPAM detection system.

The algorithms in spamsum are in two parts. The first part generates a signature which is encoded as a string of ascii characters less than 72 characters long. The second part takes a new signature and a database of existing signatures (actually just a text file with one signature per line) and finds the existing signature that best matches the new signature. A match result in the range of 0 to 100 is generated, where 100 is a perfect match and 0 is a complete mismatch.

Signature Algorithm
————————-

The signature algorithm in spamsum has a number of interesting properties that make is especially suitable for SPAM detection.

- non-propogation

In most hash algorithms a change in any part of a plaintext will either change the resulting hash completely or will change all parts of the hash after the part corresponding with the changed plaintext. In the spamsum algorithm only the part of the spamsum signature that corresponds linearly with the changed part of the plaintext will be changed. This means that small changes in any part of the plaintext will leave most of the signature the same. This is essential for SPAM detection as it is common for varients of the same SPAM to have small changes in their body and we need to ensure that the matching algorithm can cope with these changes.

- alignment robustness

Most hash algorithms are very alignment sensitive. If you shift the plaintext by a byte (say by inserting a character at the start) then a completely different hash is generated. The spamsum algorithm is robust to alignment changes, and will automatically re-align the resulting signature after insertions or deletions. This works in combination with the non-propogation property to make spamsum suitable for telling if two emails are 'similar'.

The core of the spamsum algorithm is a rolling hash similar to the rolling hash used in 'rsync'. The rolling hash is used to produce a series of 'reset points' in the plaintext that depend only on the immediate context (with a default context width of seven characters) and not on the earlier or later parts of the plaintext. A stronger hash based on the FNV algorithm is then used to produce hash values of the areas between two reset points. The resulting signature comes from the concatenation of a single character from the FNV hash per reset point.

The frequency of the reset points determines how many characters in the plaintext will be used for each character of output in the signature. At startup spamsum scans the plaintext to determine how many valid input characters are in the plaintext (whitespace is ignored). The algorithm then estimates the reset frequency needed to produce a signature of length 64 and starts producing the
signature. If after the signature is produced the result is less than a third of the desired length then the reset frequency is adjusted and the signature re-generated.

Similarity Testing

Once a set of signatures has been generated you need to be able to take a new plaintext and see if it matches one of the signatures. The way this is done is to generate a spamsum signature of the new plaintext then compute a distance measure between each of the existing signatures and the new signature.

The distance measure that spamsum uses is based on the 'string edit distance'. The string edit distance is a measure of how many edit operations are required to take one of the signatures and turn it into the other. In spamsum the 'insert' and 'delete' edit operations are given a weight of 1 while substitution is given a weight of 3 and transposition is given a weight of 5.

The resulting string edit distance is then scaled to produce a 'score' in the range 0-100. A score of 100 indicates a perfect match and a score of 0 indicates a complete mismatch. If the two signatures used a different 'reset frequency' (also known as block_size) then the score is automatically set as 0.

The score is weighted so that a value of 50 is a reasonable threshold to use for a 'good match'.

Dual hashes

A significant problem with the above algorithm is the sensitivity to the chosen hash strength of the rolling hash. The initial implementation used a single hash strength chosen based on the file size and rounded to a power of 2. This works, but it means that if the two files being compared cross over a boundary then they will not be able to be compared. To reduce this problem the current implementation chooses two different hash strengths and generates two hashes for each file. This means that the two files will have to have very different lengths for their respected spamsum signatures not to share a common hash strength.

Infrastructure

spamsum is useless without a good quality database of signatures for known spam. I am hoping that the spamsum algorithm will be incorportated into a online system for capturing known SPAM (such as razor).

Author

spamsum was written by Andrew Tridgell tridge @ samba.org

162.1.2 Methods

162.1.3 Match(sum1 as string, sum2 as string) as Integer

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a percent value representing
Example:

```
dim s as SpamSumMBS
dim t1,t2 as string

s=new SpamSumMBS

t1=S.Spamsum("Hello Welt, wie geht es? Mir geht es manchmal gut.",0,0)
```

```
t2=S.Spamsum("Hallo Welt, wie geht es? Mir geht es manchmal gut.",0,0)

MsgBox t1+" "+t2+" "+str(s.Match(t1,t2))
// 17 percent here. This needs longer texts...
```

Notes: Returns a value from 0 (not equal) to 100 (equal).

162.1.4 Spamsum(text as string, flags as Integer, blocksize as Integer) as string

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a checksum for a given text.
Notes:

You can specify for flags a combination of FlagsIgnoreWhitespace=1 and FlagsIgnoreHeaders=2.
Blocksize is linked to the length of the checksum. You can try values like 0, 3 or 90 and check what is best for you.
The text strings must be longer than just a few words as they are designed to take whole emails.

162.1.5 Properties

162.1.6 FlagsIgnoreHeaders as Integer

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value used for the Spamsum call as flags.
Notes:

Value is 2.
(Read only property)

162.1.7 FlagsIgnoreWhitespace as Integer

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value used for the Spamsum call as flags.
Notes:

Value is 1.
(Read only property)

Chapter 163

Sparkle

163.1 class SUAppcastItemMBS

163.1.1 class SUAppcastItemMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The class for items in the appcast file.

163.1.2 Blog Entries

- MBS Xojo Plugins, version 20.3pr6
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr7

163.1.3 Blog Entries

- MBS Xojo Plugins, version 20.3pr6
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr7

163.1.4 Methods

163.1.5 Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new appcast item object.
See also:

- 163.1.6 Constructor(dict as dictionary) 23004
- 163.1.7 Constructor(dict as dictionary, byref error as string) 23004

163.1.6 Constructor(dict as dictionary)

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Initializes with data from a dictionary provided by the RSS class.
See also:

- 163.1.5 Constructor 23003
- 163.1.7 Constructor(dict as dictionary, byref error as string) 23004

163.1.7 Constructor(dict as dictionary, byref error as string)

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Initializes with data from a dictionary provided by the RSS class.
See also:

- 163.1.5 Constructor 23003
- 163.1.6 Constructor(dict as dictionary) 23004

163.1.8 Properties

163.1.9 ContentLength as Int64

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: The content length.
Notes: (Read only property)

163.1.10 CriticalUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Whether this is a critical update.
Notes: (Read only property)

163.1.11 date as date

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The release date for this app cast item.
Notes: (Read only property)

163.1.12 DateString as String

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: The date string.
Notes: (Read only property)

163.1.13 DateTime as DateTime

MBS MacExtras Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The release date for this app cast item.
Notes: (Read only property)

163.1.14 DeltaUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Whether this is a delta update.
Notes: (Read only property)

163.1.15 DeltaUpdates as Dictionary

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Dictionary with properties about delta updates.
Notes: (Read only property)

163.1.16 displayVersionString as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The display version number for this app cast item.
Notes:

Maybe "1.1de"
(Read only property)

163.1.17 fileURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The file URL for this app cast item.
Notes: (Read only property)

163.1.18 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The internal handle used for this object.
Notes: (Read and Write property)

163.1.19 InformationOnlyUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Whether this is only an information only update.
Notes:

Only available in newer Sparkle in 64-bit.
For older version this is always false.
(Read only property)

163.1.20 InfoURL as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: The info URL.
Notes: (Read only property)

163.1.21 itemDescription as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The description for this app cast item.
Notes: (Read only property)

163.1.22 MacOsUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Whether this is a MacOS update.
Notes: (Read only property)

163.1.23 MaximumSystemVersion as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: The maximum system version for this app cast item.
Notes:

The update will not be offered to users with newer system versions.
(Read only property)

163.1.24 minimumSystemVersion as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The minimum system version for this app cast item.
Notes:

The update will not be offered to users with older system versions.
(Read only property)

163.1.25 OSString as String

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: The operation system string.
Notes: (Read only property)

163.1.26 phasedRolloutInterval as Variant

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: The phased rollout interval.
Notes:

May be nil.
(Read only property)

163.1.27 propertiesDictionary as dictionary

MBS MacExtras Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: A dictionary with all the properties for this item.
Notes: (Read only property)

163.1.28 releaseNotesURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The release notes URL for this app cast item.
Notes: (Read only property)

163.1.29 title as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The title for this app cast item.
Example:

```
dim a as SUAppcastItemMBS

// get item somehow
MsgBox a.title
```

Notes: (Read only property)

163.1.30 versionString as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The version string for this app cast item.
Notes: (Read only property)

163.2 class SUAppcastMBS

163.2.1 class SUAppcastMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The class for an appcast.

163.2.2 Blog Entries

- MBS Xojo Plugins, version 20.3pr6
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr7

163.2.3 Blog Entries

- MBS Xojo Plugins, version 20.3pr6
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr7

163.2.4 Methods

163.2.5 Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new appcast object.

163.2.6 copyWithoutDeltaUpdates as SUAppcastMBS

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Creates a copy without deleta updates of the whole appcast.

163.2.7 fetchAppcastFromURL(url as string)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Fetches the appcast from the given URL.
Example:

```
dim a as SUAppcastMBS

a.fetchAppcastFromURL "http://www.monkeybreadsoftware.de/SparkleTest/appcast.xml"
```

Notes: Passing inBackground = false.
See also:

- 163.2.8 fetchAppcastFromURL(url as string, inBackground as Boolean) 23011

163.2.8 fetchAppcastFromURL(url as string, inBackground as Boolean)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Fetches the appcast from the given URL.
See also:

- 163.2.7 fetchAppcastFromURL(url as string) 23010

163.2.9 incrementalData as Memoryblock

MBS MacExtras Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The data loaded from the appcast.
Notes:

This is the XML data with the appcast.xml file content.
Only available on 32 bit target.

163.2.10 items as SUAppcastItemMBS()

MBS MacExtras Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: The items in this appcast.

163.2.11 Properties

163.2.12 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The internal handle for the appcast.
Notes: (Read and Write property)

163.2.13 httpHeaders as Dictionary

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: The HTTP headers.
Notes:

You can check this dictionary for HTTP headers.
Or make a new dictionary and assign it to this property to set http headers to include in transfer.
(Read and Write property)

163.2.14 UserAgentString as string

MBS MacExtras Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Which user agent string to use for the http download.
Notes: (Read and Write property)

163.3 class SUUpdaterMBS

163.3.1 class SUUpdaterMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The class for Sparkle.
Notes: This class is for use with the Sparkle 1.5b6 framework and implements the Cocoa classes inside this framework.

163.3.2 Blog Entries

- MBS Xojo Plugins, version 20.5pr8

- MonkeyBread Software Releases the MBS REALbasic plug-ins 8.6

163.3.4 Methods

163.3.5 checkForUpdateInformation

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Checks for new update information.
Notes: This begins a "probing" check for updates which will not actually offer to update to that version. The events, though, (up to didFindValidUpdate and updaterDidNotFindUpdate), are called, so you can use that information in your UI.

163.3.6 checkForUpdates

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Performs a check for updates.
Notes: Call this method from a menu item where the user can check for updates manually. Sparkle will check for updates and report back its findings verbosely.

163.3.7 checkForUpdatesInBackground

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: This kicks off an update meant to be programmatically initiated.
Notes: That is, it will display no UI unless it actually finds an update, in which case it proceeds as usual. If the fully automated updating is turned on, however, this will invoke that behavior, and if an update is found, it will be downloaded and prepped for installation.

163.3.8 Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The constructor for the updater.
Notes: Please create only one instance of the SUUpdaterMBS class in your application using this constructor.
See also:

- 163.3.9 Constructor(Bundle as folderitem) 23014

163.3.9 Constructor(Bundle as folderitem)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The constructor for the updater.
Notes:

Targets for the update the bundle you specify. This can be used to update a preference panel for example.

Please create only one instance of the SUUpdaterMBS class in your application using this constructor.
See also:

- 163.3.8 Constructor 23014

163.3.10 installUpdatesIfAvailable

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: Checks for updates and, if available, immediately downloads and installs them.
Notes:

A progress dialog is shown but the user will never be prompted to read the release notes.

You may want to respond to the userDidCancelDownload event in case the user clicks the "Cancel" button while the update is downloading.

Only available in newer Sparkle version for 64-bit.

163.3.11 InvokeImmediateInstallation

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: If installation was moved to quit of app, you can call this method to update now.
Notes: New in version 1.6 of Sparkle.

163.3.12 InvokeUpdate

MBS MacExtras Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop only.

Function: Invokes a postponed updated.
Notes: Call this after you returned true in shouldPostponeRelaunchForUpdate event and have time to restart.

163.3.13 IsFrameworkLoaded as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Whether the framework has been loaded.
Notes: Returns true if the Sparkle framework has been loaded.

163.3.14 LoadFramework(path as folderitem) as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Loads the Sparkle framework from the given folderitem.
Notes:

Returns false on Windows and Linux or on Mac OS X if the framework failed to load.
Return true if the framework was loaded already or was loaded successfully.

Be aware that the Sparkle Framework needs correct file permissions:

$ { APPFILENAME } /Contents/Frameworks/Sparkle.framework/Versions/A/Sparkle"
$ { APPFILENAME } /Contents/Frameworks/Sparkle.framework/Versions/A/Resources/relaunch"

If the permissions are set wrong the relaunch does not work.

You can run app from Terminal to see any error message while loading framework. You may need to code sign both the Sparkle framework and the app with your code signing certificate. Finally make sure platform (32 or 64bit) match between app and framework.

163.3.15 resetUpdateCycle

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Resets the update cycle.
Notes: Call this to appropriately schedule or cancel the update checking timer according to the preferences for time interval and automatic checks. This call does not change the date of the next check, but only the internal timer.

163.3.16 SUSparkleErrorDomain as String

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: The error domain for all Sparkle errors.

163.3.17 SUUpdaterAppcastItemNotificationKey as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys for user info dictionary.
Notes: Key for the SUAppcastItem object in the SUUpdaterDidFindValidUpdateNotification userInfo dictionaries.

163.3.18 SUUpdaterAppcastNotificationKey as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Key for the SUAppcast object in the SUUpdaterDidFinishLoadingAppCastNotification userInfo.

163.3.19 SUUpdaterDidFindValidUpdateNotification as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification constants for use with NSNotificationObserverMBS class.
Notes: Object for this notification is the updater.

163.3.20 SUUpdaterDidFinishLoadingAppCastNotification as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification constants for use with NSNotificationObserverMBS class.
Notes: Object for this notification is the updater.

163.3.21 SUUpdaterDidNotFindUpdateNotification as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification constants for use with NSNotificationObserverMBS class.
Notes: Object for this notification is the updater.

163.3.22 SUUpdaterWillRestartNotification as String

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: The notification sent when updater will restart app.

163.3.23 validateMenuItem(menuItem as NSMenuItemMBS) as Boolean

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: he menu item validation used for the checkForUpdates action

163.3.24 Properties

163.3.25 automaticallyChecksForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Whether update checks are performed automatically.
Notes: (Read and Write property)

163.3.26 automaticallyDownloadsUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Whether downloads should be downloaded automatically.
Notes: (Read and Write property)

163.3.27 decryptionPassword as String

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: A property indicating the decryption password used for extracting updates shipped as Apple Disk Images (dmg)
Notes: (Read and Write property)

163.3.28 feedURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The URL of the appcast feed.
Notes: (Read and Write property)

163.3.29 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The internal handle to the object used.
Notes: (Read and Write property)

163.3.30 hostBundle as Variant

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: The target application to update.
Notes:

Value is a NSBundleMBS object.
You can query BundleFolder on the NSBundle object to know where your app is.
(Read only property)

163.3.31 httpHeaders as Dictionary

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: The HTTP headers to include with fetchAppcastFromURL call.
Notes:

You can check this dictionary for HTTP headers.
Or make a new dictionary and assign it to this property to set http headers to include in transfer.
(Read and Write property)

163.3.32 lastUpdateCheckDate as date

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date of the last update check.
Notes:

Returns nil if no check has been performed.
(Read only property)

163.3.33 lastUpdateCheckDateTime as DateTime

MBS MacExtras Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date of the last update check.
Notes:

Returns nil if no check has been performed.
(Read only property)

163.3.34 sendsSystemProfile as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Whether the system profile is sent to the server.
Notes: (Read and Write property)

163.3.35 sparkleBundle as Variant

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

Function: The sparkle bundle.
Notes:

Value is a NSBundleMBS object.
You can query BundleFolder on the NSBundle object to know where your app is.
(Read only property)

163.3.36 updateCheckInterval as Double

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: After which time the next update check is performed.
Notes: (Read and Write property)

163.3.37 updateInProgress as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Whether an update is in progress.
Notes: (Read only property)

163.3.38 userAgentString as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Which user agent string to use for the http download.
Notes: (Read and Write property)

163.3.39 Events

163.3.40 bestValidUpdateInAppcast(appcast as SUAppcastMBS) as SUAppcastItemMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: The event called to decide which appcast item is the best to use.
Notes:

If you're using special logic or extensions in your appcast, implement this to use your own logic for finding a valid update, if any, in the given appcast.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

163.3.41 didAbortWithError(error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: .

Function: Called after an update is aborted due to an error.
Notes:

error: The error that caused the abort

This is a newer event which is only called in 64-bit version.

163.3.42 didCancelInstallUpdateOnQuit(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

Function: Called when an update is scheduled to be silently installed on quit and cancelled.
Notes: New in version 1.6 of Sparkle.

163.3.43 didDismissUpdateAlertPermanently(permanently as boolean, item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

Function: Called after the user dismisses the update alert.
Notes: permanently: true if the alert will not appear again for this update; false if it may reappear.

163.3.44 didDownloadUpdate(item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

Function: Called immediately after succesfull download of the specified update.
Notes: item: The appcast item corresponding to the update that has been downloaded.

163.3.45 didExtractUpdate(item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

Function: Called immediately after extracting the specified downloaded update.
Notes: item: The appcast item corresponding to the update that has been extracted.

163.3.46 didFindValidUpdate(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: This event is called when a valid update is found by the update driver.
Notes:

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

163.3.47 didFinishLoadingAppcast(update as SUAppcastMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: The event called when the appcast has been loaded.
Notes:

Implement this if you want to do some special handling with the appcast once it finishes loading.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

163.3.48 failedToDownloadUpdate(item as SUAppcastItemMBS, error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: .

Function: Called after the specified update failed to download.
Notes:

item: The appcast item corresponding to the update that failed to download.
error: The error generated by the failed download.

This is a newer event which is only called in 64-bit version.

163.3.49 feedParametersForUpdater(sendingProfile as boolean) as dictionary()

MBS MacExtras Plugin, Plugin Version: 14.0, Platform: macOS, Targets: .

Function: Provide additional parameters for updater.
Notes: This method allows you to add extra parameters to the appcast URL, potentially based on whether or not Sparkle will also be sending along the system profile. This method should return an array of dictionaries with keys: "key", "value", "displayKey", "displayValue", the latter two being specifically for display to the user.

163.3.50 feedURLStringForUpdater as String

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

Function: Override this to dynamically specify the entire feed URL.
Notes: New in version 1.6 of Sparkle.

163.3.51 pathToRelaunchForUpdater as string

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: This event is called so you can customize the installation destination of the update.
Notes:

This event returns the path which is used to relaunch the client after the update is installed. By default, the path of the host bundle.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

163.3.52 shouldPostponeRelaunchForUpdate(sendingProfile as SUAppcastItemMBS) as boolean

MBS MacExtras Plugin, Plugin Version: 14.0, Platform: macOS, Targets: .

Function: Return true to delay the relaunch until you do some processing.
Notes:

Invoke the update later by calling InvokeUpdate method.
This is not called if the user didn't relaunch on the previous update, in that case it will immediately restart.

163.3.53 updaterDidNotFindUpdate

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: The event called when a valid update is not found.
Notes: Plugin version 8.7 makes sure this method is executed on the main thread.

163.3.54 updaterDidRelaunchApplication

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

Function: Called immediately after relaunching. SUUpdater delegate must be set before applicationDidFinishLaunching: to catch this event.

163.3.55 updaterDidShowModalAlert

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

Function: Called after an updater shows a modal alert window, to give the host the opportunity to hide attached windows etc. that may get in the way.
Notes: New in version 1.6 of Sparkle.

163.3.56 updaterMayCheckForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

Function: Use this to keep Sparkle from popping up e.g. while your setup assistant is showing.
Notes: New in version 1.6 of Sparkle.

163.3.57 updaterShouldPromptForPermissionToCheckForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: The event to decide whether the updater should prompt for permission to check for updates.
Notes:

Use this to override the default behavior for Sparkle prompting the user about automatic update checks.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

163.3.58 updaterShouldRelaunchApplication as boolean

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

Function: Whether app should be relaunched.
Notes:

Some apps *can not* be relaunched in certain circumstances. They can use this method to prevent a relaunch "hard".
New in version 1.6 of Sparkle.

163.3.59 updaterShouldShowUpdateAlertForScheduledUpdate(item as SUAppcastItemMBS) as boolean

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

Function: Called just before the scheduled update driver prompts the user to install an update.
Notes: Yes to allow the update prompt to be shown (the default behavior), or no to suppress it.

163.3.60 updaterWillRelaunchApplication

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: The event called immediately before relaunching.
Notes:

Plugin version 8.7 makes sure this method is executed on the main thread.

The current Sparkle (1.5b6) implementation seems to force quit the application so this method is the last chance for your application to clean up.

163.3.61 updaterWillShowModalAlert

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

Function: Called before an updater shows a modal alert window, to give the host the opportunity to hide attached windows etc. that may get in the way.
Notes: New in version 1.6 of Sparkle.

163.3.62 userDidCancelDownload

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: .

Function: Called when the user clicks the cancel button while and update is being downloaded.
Notes: This is a newer event which is only called in 64-bit version.

163.3.63 userDidSkipThisVersion(item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

Function: Called when the user clicks the Skip This Version button.

163.3.64 versionComparatorForUpdater as SUVersionComparisonMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: This event allows you to provide a custom version comparator.
Notes:

If you don't implement this event or return nil, the standard version comparator will be used.

Please makes ure that the SUVersionComparisonMBS object lives longer, so it can be used later. e.g. keep a reference in an app property.

163.3.65 willDownloadUpdate(item as SUAppcastItemMBS, request as Variant)

MBS MacExtras Plugin, Plugin Version: 16.1, Platform: macOS, Targets: .

Function: Called immediately before downloading the specified update.
Notes:

item: The appcast item corresponding to the update that is proposed to be downloaded.
request: The mutable URL request that will be used to download the update. (NSMutableURLRequestMBS object)

This is a newer event which is only called in 64-bit version.

163.3.66 willExtractUpdate(item as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 20.3, Platform: macOS, Targets: .

Function: Called immediately before extracting the specified downloaded update.
Notes: item: The appcast item corresponding to the update that is proposed to be extracted.

163.3.67 willInstallUpdate(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: This event is called immediately before installing the specified update.
Notes:

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

163.3.68 willInstallUpdateOnQuit(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 14.4, Platform: macOS, Targets: .

Function: Called when an update is scheduled to be silently installed on quit.
Notes:

New in version 1.6 of Sparkle.
If you like to install now instead, you can call InvokeImmediateInstallation method.

163.3.69 Constants

163.3.70 SUAppcastError = 1002

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: An error occurred in retrieving update information.

163.3.71 SUAppcastParseError = 1000

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes:

An error occurred while parsing the update feed.
The appcast must be valid xml.

163.3.72 SUAuthenticationFailure = 4001

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: Unable to grant authorization to perform action because it is explicitly turned off.

163.3.73 SUDowngradeError = 4006

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: The update contains an older version.

163.3.74 SUDownloadError = 2001

MBS MacExtras Plugin, Plugin Version: 20.3.

Function: One of the Sparkle error codes.
Notes: Download error.

163.3.75 SUFileCopyFailure = 4000

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: File copy failed.

163.3.76 SUInstallationCancelledError = 4007

MBS MacExtras Plugin, Plugin Version: 20.3.

Function: One of the Sparkle error codes.
Notes: Installation was cancelled.

163.3.77 SUInstallationError = 4005

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: An error occurred while installing the update.

163.3.78 SUMissingInstallerToolError = 4003

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: The installer tool is missing.

163.3.79 SUMissingUpdateError = 4002

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes:

Couldn't find an appropriate update in the downloaded package.
App name or bundle ID must match to current app.

163.3.80 SUNoUpdateError = 1001

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: You already have the newest version.

163.3.81 SURelaunchError = 4004

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: Failed to relaunch.

163.3.82 SURunningFromDiskImageError = 1003

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: The app runs from disk image and can't update.

163.3.83 SURunningTranslocated = 1004

MBS MacExtras Plugin, Plugin Version: 20.3.

Function: One of the Sparkle error codes.
Notes: The application got translocated.

163.3.84 SUSignatureError = 3001

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: The signture doesn't match.

163.3.85 SUSystemPowerOffError = 5000

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: The update will not be installed because the user requested for the system to power off.

163.3.86 SUTemporaryDirectoryError = 2000

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: Failed to get temp file.

163.3.87 SUUnarchivingError = 3000

MBS MacExtras Plugin, Plugin Version: 16.1.

Function: One of the Sparkle error codes.
Notes: Failed to unarchive the update.

163.4 class SUVersionComparisonMBS

163.4.1 class SUVersionComparisonMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Implement this class to provide version comparison facilities for Sparkle.
Notes: Or use the default implementation by not implementing the versionComparatorForUpdater event.

163.4.2 Methods

163.4.3 Constructor

MBS MacExtras Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: The constructor.

163.4.4 Destructor

MBS MacExtras Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: The destructor.

163.4.5 Properties

163.4.6 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: The internal handle for this object.
Notes: (Read and Write property)

163.4.7 Events

163.4.8 compareVersion(VersionA as string, VersionB as string) as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Platform: macOS, Targets: .

Function: The method to compare two version strings.
Notes:

Should return NSOrderedAscending if b >a, NSOrderedDescending if b <a, and NSOrderedSame if they are equivalent.

This function may be called on the main thread or some other thread, so disable stack checking in your event.

163.4.9 Constants

163.4.10 NSOrderedAscending = -1

MBS MacExtras Plugin, Plugin Version: 8.6.

Function: One of the order constants.

163.4.11 NSOrderedDescending = 1

MBS MacExtras Plugin, Plugin Version: 8.6.

Function: One of the order constants.

163.4.12 NSOrderedSame = 0

MBS MacExtras Plugin, Plugin Version: 8.6.

Function: One of the order constants.

163.5 class WinSparkleMBS

163.5.1 class WinSparkleMBS

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for WinSparkle library.
Notes:

Please first use LoadLibrary, than set properties and finally call Initialize.
Optionally you can later call Check methods.

163.5.2 Methods

163.5.3 CheckUpdateWithoutUI

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Checks if an update is available.
Example:

WinSparkleMBS.CheckUpdateWithoutUI

Notes:

No progress UI is shown to the user when checking. If an update is available, the usual "update available" window is shown; this function is *not* completely UI-less.
Use with caution, it usually makes more sense to use the automatic update checks on interval option or manual check with visible UI.
This function returns immediately.
This function respects "Skip this version" choice by the user.

163.5.4 CheckUpdateWithUI

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Checks if an update is available, showing progress UI to the user.
Example:

WinSparkleMBS.CheckUpdateWithUI

Notes:

Normally, WinSparkle checks for updates on startup and only shows its UI when it finds an update. If the application disables this behavior, it can hook this function to "Check for updates..." menu item.

When called, background thread is started to check for updates. A small window is shown to let the user know the progress. If no update is found, the user is told so. If there is an update, the usual "update available" window is shown.
This function returns immediately.

Because this function is intended for manual, user-initiated checks for updates, it ignores "Skip this version" even if the user checked it previously.

163.5.5 CheckUpdateWithUIAndInstall

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Checks if an update is available, showing progress UI to the user and immediately installing the update if one is available.
Example:

WinSparkleMBS.CheckUpdateWithUIAndInstall

Notes:

This is useful for the case when users should almost always use the newest version of your software. When called, WinSparkle will check for updates showing a progress UI to the user. If an update is found the update prompt will be skipped and the update will be installed immediately.
If your application expects to do something after checking for updates you may wish to use DidNotFindUpdate and UpdateCancelled events.

163.5.6 Cleanup

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Cleans up after WinSparkle.
Example:

WinSparkleMBS.Cleanup

Notes: Should be called by the app when it's shutting down. Cancels any pending Sparkle operations and shuts down its helper threads.

163.5.7 Initialize

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Starts WinSparkle.
Example:

WinSparkleMBS.Initialize

Notes:

If WinSparkle is configured to check for updates on startup, proceeds to perform the check. You should only call this function when your app is initialized and shows its main window.

This call doesn't block and returns almost immediately. If an update is available, the respective UI is shown later from a separate thread.

163.5.8 LoadLibrary(File as folderitem) as boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Loads the WinSparkle DLL.
Example:

```
dim f as FolderItem = GetFolderItem("WinSparkle.dll")

if WinSparkleMBS.LoadLibrary(f) then
MsgBox "OK"
else
MsgBox "Failed to load DLL."
end if
```

Notes: Returns true on success.
See also:

- 163.5.9 LoadLibrary(Path as string) as boolean 23036

163.5.9 LoadLibrary(Path as string) as boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Loads the WinSparkle DLL.
Example:

```
if WinSparkleMBS.LoadLibrary("Libs\WinSparkle.dll") then
MsgBox "OK"
else
MsgBox "Failed to load DLL."
end if
```

Notes: Returns true on success.
See also:

- 163.5.8 LoadLibrary(File as folderitem) as boolean 23036

163.5.10 Properties

163.5.11 AppCastURL as String

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets URL for the app's appcast.
Example:

```
WinSparkleMBS.AppCastURL = "https://www.monkeybreadsoftware.test/test/test.xml"
```

Notes:

Only http and https schemes are supported.

If this function isn't called by the app, the URL is obtained from Windows resource named "FeedURL" of type "APPCAST".

Always use HTTPS feeds, do not use unencrypted HTTP! This is necessary to prevent both leaking user information and preventing various MITM attacks.

See https://github.com/vslavik/winsparkle/wiki/Appcast-Feeds for more information about appcast feeds.
(Read and Write property)

163.5.12 AppName as String

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Application name.
Example:

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

Notes:

This is both shown to the user and used in HTTP User-Agent header.

CompanyName and AppName are used to determine the location of WinSparkle settings in registry. (HKCU\Software\<CompanyName>\<AppName>\WinSparkle is used.)

If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

163.5.13 AppVersion as String

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Version of the app, as string (e.g. "1.2" or "1.2rc1").
Example:

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

Notes:

If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

163.5.14 AutomaticCheckForUpdates as Boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether updates are checked automatically or only through a manual call.
Example:

WinSparkleMBS.AutomaticCheckForUpdates = true

Notes:

If disabled, CheckUpdateWithUI must be used explicitly.

True to have updates checked automatically, false otherwise.
Defaults to false when not yet configured (as happens on first start).
(Read and Write property)

163.5.15 BuildVersion as String

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets application build version number.
Example:

WinSparkleMBS.BuildVersion = "123"

Notes:

This is the internal version number that is not normally shown to the user. It can be used for finer granularity that official release versions, e.g. for interim builds.

If this function is called, then the provided *build* number is used for comparing versions; it is compared to the "version" attribute in the appcast and corresponds to OS X Sparkle's CFBundleVersion handling. If used, then the appcast must also contain the "shortVersionString" attribute with human-readable display version string. The version passed to AppVersion property corresponds to this and is used for display.
(Read and Write property)

163.5.16 CanShutdown as Boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether your app can shutdown now.
Example:

WinSparkleMBS.CanShutdown = false

Notes:

By default true.
Set to false when you have something like an open edited document.
(Read and Write property)

163.5.17 CompanyName as String

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the vendor.
Example:

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

Notes:

CompanyName and AppName are used to determine the location of WinSparkle settings in registry. (HKCU\Software\<CompanyName>\<AppName>\WinSparkle is used.)

If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

163.5.18 DSAPubPEM as String

MBS Win Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The public key in PEM format.
Notes:

If not set, the framework will look into the app resources.
(Read and Write property)

163.5.19 Language as String

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets UI language from its ISO code.
Example:

WinSparkleMBS.Language = "en-US"

Notes:

Language and LanguageID properties set user interface language. One must be set before
Initialize to have any effect. If none of them is called, WinSparkle detects the UI language automatically.

ISO 639 language code with an optional ISO 3116 country code, e.g. ”fr”, ”pt-PT”, ”pt-BR” or ”pt_BR”,
(Read and Write property)

163.5.20 LanguageID as Integer

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets UI language from its Win32 LANGID code.
Notes:

Language and LanguageID properties set user interface language. One must be set before
Initialize to have any effect. If none of them is called, WinSparkle detects the UI language automatically.
(Read and Write property)

163.5.21 LastCheckTime as Integer

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Gets the time for the last update check.
Notes:

Default value is -1, indicating that the update check has never run.
(Read only property)

163.5.22 RegistryPath as String

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The registry path where settings will be stored.
Example:

WinSparkleMBS.RegistryPath = ”Software\My App\Updates”

Notes:

Normally, these are stored in ”HKCU\Software\<company_name>\<app_name>\WinSparkle” but if your application needs to store the data elsewhere for some reason, using this function is an alternative.
Note that path is relative to HKCU/HKLM root and the root is not part of it. For example:
(Read and Write property)

163.5.23 UpdateCheckInterval as Integer

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The automatic update interval.
Example:

WinSparkleMBS.UpdateCheckInterval = 7200

Notes:

The interval in seconds between checks for updates. The minimum update interval is 3600 seconds (1 hour). (Read and Write property)

163.5.24 Events

163.5.25 DidFindUpdate

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Called when an update was found.

163.5.26 DidNotFindUpdate

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Called when an update was not found.

163.5.27 Error

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Called when an update failed due to an error.

163.5.28 ShutdownRequest

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: The event to ask the host to shut down immediately after launching the installer.
Notes: Its implementation should gracefully terminate the application.

163.5.29 UpdateCancelled

MBS Win Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: The update was cancelled.

Chapter 164

Special Folders

164.1 Globals

164.1.1 ALMLocationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ALMLocationsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateALMLocationsFolder function.

164.1.2 ALMModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ALMModulesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateALMModulesFolder function.

164.1.3 ALMPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ALMPreferencesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateALMPreferencesFolder function.

164.1.4 AppearanceFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AppearanceFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppearanceFolder function.

164.1.5 AppleExtrasFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AppleExtrasFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleExtrasFolder function.

164.1.6 AppleMenuFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AppleMenuFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleMenuFolder function.

164.1.7 AppleShareAuthenticationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AppleShareAuthenticationFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleShareAuthenticationFolder function.

164.1.8 AppleshareAutomountServerAliasesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AppleshareAutomountServerAliasesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleshareAutomountServerAliasesFolderMBS function.

164.1.9 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr5

164.1.10 AppleShareSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AppleShareSupportFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleShareSupportFolder function.

164.1.11 ApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ApplicationsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateApplicationsFolder function.
On Windows, only the System Domain is supported.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.12 ApplicationSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
dim f as folderitem

f=preferencesFolderMBS(-32763)
if f=nil then // On Windows always nil
f=applicationsupportFolderMBS(-32763)
end if

msgBox f.NativePath

// example output:
// "Mac OS X:Users:cs:Library:Preferences:" on Mac OS X
// "Mac OS 9:Systemordner:Preferences" on a german Mac OS 9
// "C:\Dokumente und Einstellungen\Christian\Anwendungsdaten\" on a german Windows XP.
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateApplicationSupportFolder function.

Xojo ApplicationSupport function points to "/Library/Application Support" while ApplicationSupportFolderMBS points to different locations on my test system depending on the domain code:

-32768 ->"/Library/Application Support"
-32767 ->"/Library/Application Support"

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

-32766 ->nil
-32765 ->"/Library/Application Support"
-32764 ->nil
-32763 ->"/Users/cs/Library/Application Support"
-32762 ->"/Volumes/Mac OS 9/Systemordner/Application Support"
0 ->"/Library/Application Support"

At last it is your decision to use the correct one!

164.1.13 AssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AssistantsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateAssistantsFolder function.

164.1.14 AudioAlertSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioAlertSoundsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioAlertSoundsFolder function.

164.1.15 AudioComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioComponentsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioComponentsFolder function.

164.1.16 AudioDigidesignFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioDigidesignFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateAudioDigidesignFolderMBS function.

-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioSoundsFolder function.

164.1.23 AudioSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioSupportFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioSupportFolder function.

164.1.24 AudioVSTFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioVSTFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.28 AutosaveInformationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AutosaveInformationFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAutosaveInformationFolderMBS function.

-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppleExtrasFolder function.

164.1.57 CreateAppleMenuFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleMenuFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppleMenuFolder function.

164.1.58 CreateAppleShareAuthenticationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleShareAuthenticationFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppleShareAuthenticationFolder function.

164.1.59 CreateAppleshareAutomountServerAliasesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleshareAutomountServerAliasesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the AppleshareAutomountServerAliasesFolderMBS function.

164.1.60 CreateAppleShareSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleShareSupportFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppleShareSupportFolder function.

164.1.61 CreateApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
```

```
dim f as folderitem = CreateApplicationsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ApplicationsFolder function.
On Windows, only the System Domain is supported.

164.1.62 CreateApplicationSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateApplicationSupportFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ApplicationSupportFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Xojo ApplicationSupport function points to "/Library/Application Support" while ApplicationSupportFolderMBS points to different locations on my test system depending on the domain code:

-32768 ->"/Library/Application Support"
-32767 ->"/Library/Application Support"
-32766 ->nil
-32765 ->"/Library/Application Support"
-32764 ->nil
-32763 ->"/Users/cs/Library/Application Support"
-32762 ->"/Volumes/Mac OS 9/Systemordner/Application Support"
0 ->"/Library/Application Support"

At last it is your decision to use the correct one!

164.1.63 CreateAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAssistantsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AssistantsFolder function.

164.1.64 CreateAudioAlertSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioAlertSoundsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioAlertSoundsFolder function.

164.1.65 CreateAudioComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioComponentsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioComponentsFolder function.

164.1.66 CreateAudioDigidesignFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioDigidesignFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioDigidesignFolderMBS function.

164.1.67 CreateAudioPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioPlugInsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the AudioPlugInsFolder function.

164.1.68 CreateAudioPresetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioPresetsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioPresetsFolderMBS function.

164.1.69 CreateAudioSoundBanksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioSoundBanksFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioSoundBanksFolder function.

164.1.70 CreateAudioSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioSoundsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the AudioSoundsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.71 CreateAudioSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioSupportFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioSupportFolder function.

164.1.72 CreateAudioVSTFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioVSTFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioVSTFolderMBS function.

164.1.73 CreateAutomatorWorkflowsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAutomatorWorkflowsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AutomatorWorkflowsFolderMBS function.

164.1.74 CreateAutosaveInformationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAutosaveInformationFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AutosaveInformationFolderMBS function.

164.1.75 CreateBootTimeStartupItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateBootTimeStartupItemsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the BootTimeStartupItemsFolderMBS function.

164.1.76 CreateCachedDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCachedDataFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CachedDataFolder function.

164.1.77 CreateCarbonLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCarbonLibraryFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CarbonLibraryFolder function.

164.1.78 CreateChewableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreateChewableItemsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ChewableItemsFolder function.

164.1.79 CreateClassicDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateClassicDesktopFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ClassicDesktopFolder function.

164.1.80 CreateClassicPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateClassicPreferencesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ClassicPreferencesFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.81 CreateColorPickersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateColorPickersFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorPickersFolderMBS function.

164.1.82 CreateColorSyncCMMFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncCMMFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncCMMFolder function.

164.1.83 CreateColorSyncFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncFolder function.

164.1.84 CreateColorSyncProfilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncProfilesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncProfilesFolder function.

164.1.85 CreateColorSyncScriptingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncScriptingFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncScriptingFolder function.

164.1.86 CreateComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateComponentsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ComponentsFolder function.

164.1.87 CreateCompositionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCompositionsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CompositionsFolderMBS function.

164.1.88 CreateContextualMenuItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreateContextualMenuItemsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ContextualMenuItemsFolder function.

164.1.89 CreateControlPanelDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateControlPanelDisabledFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ControlPanelDisabledFolder function.

164.1.90 CreateControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateControlPanelFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ControlPanelFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.91 CreateControlStripModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateControlStripModulesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ControlStripModulesFolder function.

164.1.92 CreateCoreServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCoreServicesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CoreServicesFolder function.

164.1.93 CreateCurrentUserFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCurrentUserFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CurrentUserFolder function.

164.1.94 CreateCurrentUserRemoteFolderLocationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCurrentUserRemoteFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CurrentUserRemoteFolder function.

164.1.95 CreateCurrentUserRemoteFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCurrentUserRemoteFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CurrentUserRemoteFolder function.

164.1.96 CreateDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDesktopFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SpecialFolder.Desktop function.

164.1.97 CreateDesktopPicturesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDesktopPicturesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the DesktopPicturesFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.98 CreateDeveloperApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The developer application folder.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperApplicationsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperApplicationsFolderMBS function.

164.1.99 CreateDeveloperDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperDocsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperDocsFolder function.

164.1.100 CreateDeveloperFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperFolder function.

164.1.101 CreateDeveloperHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperHelpFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperHelpFolder function.

164.1.102 CreateDictionariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The folder for the dictionaries.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDictionariesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DictionariesFolderMBS function.

164.1.103 CreateDirectoryServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDirectoryServicesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DirectoryServicesFolder function.

164.1.104 CreateDirectoryServicesPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDirectoryServicesPlugInsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the DirectoryServicesPlugInsFolder function.

164.1.105 CreateDisplayExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreateDisplayExtensionsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DisplayExtensionsFolder function.

164.1.106 CreateDocumentationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDocumentationFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DocumentationFolder function.

164.1.107 CreateDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDocumentsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the DocumentsFolder function.
On Windows only the user and the system domain are supported.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.108 CreateDomainLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDomainLibraryFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DomainLibraryFolder function.

164.1.109 CreateDomainTopLevelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDomainTopLevelFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DomainTopLevelFolder function.

164.1.110 CreateDownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDownloadsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DownloadsFolderMBS function.

164.1.111 CreateEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateEditorsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the EditorsFolder function.

164.1.112 CreateExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateExtensionDisabledFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ExtensionDisabledFolder function.

164.1.113 CreateExtensionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateExtensionFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ExtensionFolder function.

164.1.114 CreateFavoritesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFavoritesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the FavoritesFolder function.

164.1.115 CreateFileSystemSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreateFileSystemSupportFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FileSystemSupportFolder function.

164.1.116 CreateFindByContentFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFindByContentFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FindByContentFolder function.

164.1.117 CreateFindByContentIndexesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFindByContentIndexesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the FindByContentIndexesFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.118 CreateFindByContentPluginsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFindByContentPluginsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FindByContentPluginsFolder function.

164.1.119 CreateFindSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFindSupportFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FindSupportFolder function.

164.1.120 CreateFolderActionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFolderActionsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FolderActionsFolder function.

164.1.121 CreateFontCollectionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFontCollectionsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FontCollectionsFolderMBS function.

164.1.122 CreateFontsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFontsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FontsFolder function.

164.1.123 CreateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFrameworksFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FrameworksFolder function.

164.1.124 CreateGenEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateGenEditorsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the GenEditorsFolder function.

164.1.125 CreateHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreateHelpFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the HelpFolder function.

164.1.126 CreateiMovieFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateiMovieFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the iMovieFolderMBS function.

164.1.127 CreateiMoviePlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateiMoviePlugInsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the iMoviePlugInsFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.128 CreateiMovieSoundEffectsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = iMovieSoundEffectsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateiMovieSoundEffectsFolderMBS function.

164.1.129 CreateIndexFilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = IndexFilesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateIndexFilesFolderMBS function.

164.1.130 CreateInputManagersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInputManagersFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InputManagersFolderMBS function.

164.1.131 CreateInputMethodsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = InputMethodsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateInputMethodsFolderMBS function.

164.1.132 CreateInstallerLogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInstallerLogsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InstallerLogsFolder function.

164.1.133 CreateInstallerReceiptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInstallerReceiptsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InstallerReceiptsFolder function.

164.1.134 CreateInternetFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the InternetFolder function.

164.1.135 CreateInternetPlugInFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetPlugInFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InternetPlugInFolder function.

164.1.136 CreateInternetSearchSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetSearchSitesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InternetSearchSitesFolder function.

164.1.137 CreateInternetSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetSitesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the InternetSitesFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.138 CreateISSDownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateISSDownloadsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ISSDownloadsFolder function.

164.1.139 CreateKernelExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateKernelExtensionsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the KernelExtensionsFolder function.

164.1.140 CreateKeyboardLayoutsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = KeyboardLayoutsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateKeyboardLayoutsFolderMBS function.

164.1.141 CreateKeychainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateKeychainFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the KeychainFolder function.

164.1.142 CreateLauncherItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateLauncherItemsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the LauncherItemsFolder function.

164.1.143 CreateLibraryAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = LibraryAssistantsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateLibraryAssistantsFolderMBS function.

164.1.144 CreateLocalesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateLocalesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the LocalesFolder function.

164.1.145 CreateLogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The log files folder.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreateLogsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the LogsFolderMBS function.

164.1.146 CreateMacOSReadMesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateMacOSReadMesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MacOSReadMesFolder function.

164.1.147 CreateMagicTemporaryItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = MagicTemporaryItemsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateMagicTemporaryItemsFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.148 CreateManagedItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateManagedItemsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ManagedItemsFolderMBS function.

164.1.149 CreateMIDIDriversFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateMIDIDriversFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MIDIDriversFolder function.

164.1.150 CreateModemScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateModemScriptsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ModemScriptsFolder function.

164.1.151 CreateMovieDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateMovieDocumentsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MovieDocumentsFolder function.

164.1.152 CreateMultiprocessingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateMultiprocessingFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MultiprocessingFolder function.

164.1.153 CreateMusicDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateMusicDocumentsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MusicDocumentsFolder function.

164.1.154 CreateOpenDocEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocEditorsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the OpenDocEditorsFolder function.

164.1.155 CreateOpenDocFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocFolder function.

164.1.156 CreateOpenDocLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocLibrariesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocLibrariesFolder function.

164.1.157 CreateOpenDocShellPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocShellPlugInsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the OpenDocShellPlugInsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.158 CreatePictureDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePictureDocumentsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PictureDocumentsFolder function.
As there is no such folder on Mac OS Classic, you always get nil there.

164.1.159 CreatePreferencePanesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The preferences panes folder.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePreferencePanesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PreferencePanesFolderMBS function.

164.1.160 CreatePreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePreferencesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PreferencesFolder function.

164.1.161 CreatePrinterDescriptionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePrinterDescriptionFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the PrinterDescriptionFolder function.

164.1.162 CreatePrinterDriverFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreatePrinterDriverFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrinterDriverFolder function.

164.1.163 CreatePrintersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePrintersFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrintersFolder function.

164.1.164 CreatePrintingPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePrintingPlugInsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the PrintingPlugInsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.165 CreatePrintMonitorDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePrintMonitorDocsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrintMonitorDocsFolder function.

164.1.166 CreatePrivateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePrivateFrameworksFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrivateFrameworksFolder function.

164.1.167 CreatePublicFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePublicFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PublicFolder function.

164.1.168 CreateQuickLookFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateQuickLookFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the QuickLookFolderMBS function.

164.1.169 CreateQuickTimeComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateQuickTimeComponentsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the QuickTimeComponentsFolder function.

164.1.170 CreateQuickTimeExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateQuickTimeExtensionsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the QuickTimeExtensionsFolder function.

164.1.171 CreateRecentApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateRecentApplicationsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the RecentApplicationsFolder function.

164.1.172 CreateRecentDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreateRecentDocumentsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the RecentDocumentsFolder function.

164.1.173 CreateRecentServersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateRecentServersFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the RecentServersFolder function.

164.1.174 CreateScriptingAdditionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateScriptingAdditionsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the ScriptingAdditionsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.175 CreateScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateScriptsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ScriptsFolder function.

164.1.176 CreateSharedLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSharedLibrariesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SharedLibrariesFolder function.

164.1.177 CreateSharedUserDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSharedUserDataFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SharedUserDataFolder function.

164.1.178 CreateShutdownFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateShutdownFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ShutdownFolder function.

164.1.179 CreateShutdownItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateShutdownItemsDisabledFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ShutdownItemsDisabledFolder function.

164.1.180 CreateSoundSetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSoundSetsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SoundSetsFolder function.

164.1.181 CreateSpeakableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSpeakableItemsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the SpeakableItemsFolder function.

164.1.182 CreateSpeechFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreateSpeechFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SpeechFolder function.

164.1.183 CreateSpotlightImportersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SpotlightImportersFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpotlightImportersFolderMBS function.

164.1.184 CreateSpotlightMetadataCacheFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SpotlightMetadataCacheFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateSpotlightMetadataCacheFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.185 CreateSpotlightSavedSearchesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSpotlightSavedSearchesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SpotlightSavedSearchesFolderMBS function.

164.1.186 CreateStartupFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateStartupFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the StartupFolder function.

164.1.187 CreateStartupItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateStartupItemsDisabledFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the StartupItemsDisabledFolder function.

164.1.188 CreateStationeryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateStationeryFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the StationeryFolder function.

164.1.189 CreateSystemControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemControlPanelFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemControlPanelFolder function.

164.1.190 CreateSystemDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemDesktopFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemDesktopFolder function.

164.1.191 CreateSystemExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemExtensionDisabledFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the SystemExtensionDisabledFolder function.

164.1.192 CreateSystemFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemFolder function.

164.1.193 CreateSystemPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemPreferencesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemPreferencesFolder function.

164.1.194 CreateSystemSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemSoundsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the SystemSoundsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.195 CreateSystemTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemTrashFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemTrashFolder function.

164.1.196 CreateTemporaryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateTemporaryFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TemporaryFolder function.

164.1.197 CreateTemporaryItemsInCacheDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateTemporaryItemsInCacheDataFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TemporaryItemsInCacheDataFolderMBS function.

164.1.198 CreateTemporaryItemsInUserDomainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateTemporaryItemsInUserDomainFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TemporaryItemsInUserDomainFolderMBS function.

164.1.199 CreateTextEncodingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateTextEncodingsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TextEncodingsFolder function.

164.1.200 CreateThemesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateThemesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ThemesFolder function.

164.1.201 CreateTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateTrashFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the TrashFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.202 CreateUsersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateUsersFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the UsersFolder function.

164.1.203 CreateUserSpecificTmpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateUserSpecificTmpFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the UserSpecificTmpFolder function.

164.1.204 CreateUtilitiesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateUtilitiesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the UtilitiesFolder function.

164.1.205 CreateVoicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateVoicesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the VoicesFolder function.

164.1.206 CreateVolumeRootFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateVolumeRootFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the VolumeRootFolder function.

164.1.207 CreateVolumeSettingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateVolumeSettingsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder

could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the VolumeSettingsFolder function.

164.1.208 CreateWhereToEmptyTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateWhereToEmptyTrashFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the WhereToEmptyTrashFolder function.

164.1.209 CurrentUserFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

```
const kUserDomain = -32763
dim f as folderitem = CurrentUserFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCurrentUserFolder function.

164.1.210 CurrentUserRemoteFolderLocationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CurrentUserRemoteFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCurrentUserRemoteFolder function.

164.1.211 CurrentUserRemoteFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CurrentUserRemoteFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCurrentUserRemoteFolder function.

164.1.212 DesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DesktopFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDesktopFolder function.

164.1.213 DesktopPicturesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DesktopPicturesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDesktopPicturesFolder function.

164.1.214 DeveloperApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The developer application folder.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DeveloperApplicationsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperApplicationsFolderMBS function.

164.1.215 DeveloperDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DeveloperDocsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperDocsFolder function.

164.1.216 DeveloperFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DeveloperFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperFolder function.

164.1.217 DeveloperHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DeveloperHelpFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperHelpFolder function.

164.1.218 DictionariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The folder for the dictionaries.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DictionariesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDictionariesFolderMBSfunction.

164.1.219 DirectoryServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DirectoryServicesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDirectoryServicesFolder function.

164.1.220 DirectoryServicesPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DirectoryServicesPlugInsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDirectoryServicesPlugInsFolder function.

164.1.221 DisplayExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DisplayExtensionsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDisplayExtensionsFolder function.

164.1.222 DocumentationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DocumentationFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDocumentationFolder function.
On Windows only the user and the system domain are supported.

164.1.223 DocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DocumentsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDocumentsFolder function.

164.1.224 DomainLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DomainLibraryFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDomainLibraryFolder function.

164.1.225 DomainTopLevelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DomainTopLevelFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDomainTopLevelFolder function.

164.1.226 DownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DownloadsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDownloadsFolderMBS function.

164.1.228 EditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = EditorsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateEditorsFolder function.

164.1.229 ExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ExtensionDisabledFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateExtensionDisabledFolder function.

164.1.230 ExtensionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ExtensionFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateInternetPlugInFolder function.

164.1.261 InternetSearchSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = InternetSearchSitesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateInternetSearchSitesFolder function.

164.1.262 InternetSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = InternetSitesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateInternetSitesFolder function.

164.1.263 ISSDownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ISSDownloadsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateISSDownloadsFolder function.

164.1.264 KernelExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = KernelExtensionsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateKernelExtensionsFolder function.

164.1.265 KeyboardLayoutsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = KeyboardLayoutsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateKeyboardLayoutsFolderMBS function.

164.1.267 KeychainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = KeychainFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateKeychainFolder function.

164.1.268 LauncherItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = LauncherItemsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateLauncherItemsFolder function.

164.1.269 LibraryAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = LibraryAssistantsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateLibraryAssistantsFolderMBS function.

-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.286 OpenDocShellPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = OpenDocShellPlugInsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateOpenDocShellPlugInsFolder function.

164.1.287 PictureDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = PictureDocumentsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePictureDocumentsFolder function.
As there is no such folder on Mac OS Classic, you always get nil there.

164.1.288 PreferencePanesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The preferences panes folder.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PreferencePanesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePreferencePanesFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.289 PreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
dim f as folderitem

f=preferencesFolderMBS(-32763)
if f=nil then // On Windows always nil
f=applicationsupportFolderMBS(-32763)
end if

msgBox f.NativePath

// example output:
// "Mac OS X:Users:cs:Library:Preferences:" on Mac OS X
// "Mac OS 9:Systemordner:Preferences" on a german Mac OS 9
// "C:\Dokumente und Einstellungen\Christian\Anwendungsdaten\" on a german Windows XP.
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePreferencesFolder function.

164.1.290 PrinterDescriptionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = PrinterDescriptionFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrinterDriverFolder function.

164.1.292 PrintersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PrintersFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrintersFolder function.

164.1.293 PrintingPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PrintingPlugInsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrintingPlugInsFolder function.

164.1.294 PrintMonitorDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PrintMonitorDocsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrintMonitorDocsFolder function.

164.1.295 PrivateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PrivateFrameworksFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrivateFrameworksFolder function.

164.1.296 PublicFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PublicFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePublicFolder function.

164.1.297 QuickLookFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = QuickLookFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module

instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateQuickLookFolderMBS function.

-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSharedLibrariesFolder function.

164.1.307 SharedUserDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = SharedUserDataFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk

-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSharedUserDataFolder function.

164.1.308 ShutdownFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ShutdownFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateShutdownFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.309 ShutdownItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ShutdownItemsDisabledFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateShutdownItemsDisabledFolder function.

164.1.310 SoundSetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = SoundSetsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSoundSetsFolder function.

164.1.311 SpeakableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SpeakableItemsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateSpeakableItemsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.312 SpeechFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SpeechFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpeechFolder function.

164.1.313 SpotlightImportersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = SpotlightImportersFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemControlPanelFolder function.

164.1.323 SystemDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemDesktopFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemDesktopFolder function.

164.1.324 SystemExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemExtensionDisabledFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemExtensionDisabledFolder function.

164.1.325 SystemFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemFolder function.

164.1.326 SystemPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemPreferencesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemPreferencesFolder function.

164.1.327 SystemSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemSoundsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemSoundsFolder function.

164.1.328 SystemTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemTrashFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemTrashFolder function.

164.1.329 TemporaryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = TemporaryFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateTemporaryFolder function.

164.1.330 TemporaryItemsInCacheDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = TemporaryItemsInCacheDataFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateTemporaryItemsInCacheDataFolderMBS function.

164.1.332 TemporaryItemsInUserDomainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = TemporaryItemsInUserDomainFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateTemporaryItemsInUserDomainFolderMBS function.

-32762	Classic Domain, the current used Classic System folder.

164.1.334 TextEncodingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = TextEncodingsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)

Also take a look on the CreateTextEncodingsFolder function.

164.1.335 ThemesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = ThemesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateThemesFolder function.

164.1.336 TrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = TrashFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateTrashFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.337 UsersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = UsersFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateUsersFolder function.

164.1.338 UserSpecificTmpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = UserSpecificTmpFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateUserSpecificTmpFolder function.

164.1.339 UtilitiesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = UtilitiesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateUtilitiesFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.340 VoicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = VoicesFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateVoicesFolder function.

164.1.341 VolumeRootFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = VolumeRootFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateVolumeRootFolder function.

164.1.342 VolumeSettingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = VolumeSettingsFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateVolumeSettingsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

164.1.343 WhereToEmptyTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = WhereToEmptyTrashFolderMBS(kUserDomain)
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateWhereToEmptyTrashFolder function.

164.1.344 WindowsBurnAreaFolderMBS as folderitem

MBS Util Plugin, Plugin Version: 8.5, Platform: Windows, Targets: All.

Function: Returns the folder which Windows uses to store temporary data for burning a CD/DVD.

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead. **Notes:** Returns nil on any error.

164.1.345 WindowsFolderMBS as folderitem

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
dim f as folderitem
f=WindowsFolderMBS
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead.

164.1.346 WindowsSystemFolderMBS as folderitem

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Returns a folderitem to this folder if it exists on that system.
Example:

```
dim f as folderitem
f=WindowsSystemFolderMBS
```

Deprecated: This item is deprecated and should no longer be used. You can use SpecialFolder module instead.

Chapter 165

Speech

165.1 class NSSpeechRecognizerMBS

165.1.1 class NSSpeechRecognizerMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class to handle the cocoa speech recognition.
Notes: Available in Mac OS X v10.3 and later.

165.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr7

165.1.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr7

165.1.4 Methods

165.1.5 commands as string()

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the current list of commands.

165.1.6 Destructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The destructor.

165.1.7 SetCommands(commands() as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the list of commands for which the receiver should listen to commands.
Notes: If the receiver is already listening, the current command list is updated and listening continues. commands should be an array of strings. The commands must be in U.S. English.

165.1.8 StartListening

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Tells the speech recognition engine to begin listening for commands.
Notes: When a command is recognized the message didRecognizeCommand is called.

165.1.9 StopListening

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Tells the speech recognition engine to suspend listening for commands.

165.1.10 Properties

165.1.11 BlocksOtherRecognizers as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the receiver should block all other recognizers (that is, other applications attempting to understand spoken commands) when listening.
Notes: (Read and Write property)

165.1.12 DisplayedCommandsTitle as string

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the title of the commands section or "" if there is no title.
Notes:

Commands are displayed in the Speech Commands window indented under a section with this title.
(Read and Write property)

165.1.13 ListensInForegroundOnly as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the receiver should only enable its commands when the receiver's application is the frontmost one.
Notes: (Read and Write property)

165.1.14 Events

165.1.15 DidRecognizeCommand(command as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: .

Function: Invoked when the recognition engine has recognized the application command command.
Notes: command is one of the strings from the array passed to setCommands. The delegate typically evaluates which command was recognized and performs the related action.

165.2 class NSSpeechSynthesizerMBS

165.2.1 class NSSpeechSynthesizerMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class to handle the cocoa speech synthesizing.
Notes:

Available in Mac OS X v10.3 and later.

More details on Apple's website:
https://developer.apple.com/library/mac/documentation/Cocoa/Reference/ApplicationKit/Classes/NSSpeech-Synthesizer_Class/

165.2.5 Videos

- Speech Synthesizer

165.2.6 Methods

165.2.7 addSpeechDictionary(speechDictionary as dictionary)

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Registers the given speech dictionary with the receiver.
Notes:

speechDictionary: Speech dictionary to add to the receiver's dictionaries.

See the discussion of UseSpeechDictionary in Speech Synthesis Manager Reference for more information.
Available in OS X v10.5 and later.

165.2.8 attributesForVoice(voice as String) as NSVoiceMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns information about a voice or nil.

165.2.9 availableVoice(index as Integer) as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns name of a voice.
Notes:

The available voices can be listed using this function.
Index is from 0 to count-1.

165.2.10 availableVoices as String()

MBS MacCocoa Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the array with the identifiers for the available voices.
Example:

MsgBox Join(NSSpeechSynthesizerMBS.availableVoices)

Notes: Same as availableVoice() and availableVoicesCount, but this function returns an array which is very useful for for-each-loops.

165.2.11 availableVoicesCount as Integer

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Number of voices available.

165.2.12 Constructor

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes the class with the default voice.
Notes:

This constructor is needed for the events to fire.
The given voice must be valid!
See also:

- 165.2.13 Constructor(voice as string) 23272

165.2.13 Constructor(voice as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes the class with a voice.
Notes: This constructor is needed for the events to fire.
See also:

- 165.2.12 Constructor 23272

165.2.14 continueSpeaking

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Continues speaking after it has been paused.
Notes: Mac OS X 10.5 only.

165.2.15 defaultVoice as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Provides the identifier of the default voice.
Example:

```
dim s as NSSpeechSynthesizerMBS

s=new NSSpeechSynthesizerMBS

MsgBox s.defaultVoice
```

165.2.16 Destructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The destructor.

165.2.17 isAnyApplicationSpeaking as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates whether any other application is currently speaking through the sound output device.

165.2.18 NSSpeechCharacterModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

call s.setObjectForProperty(s.NSSpeechModeLiteral, s.NSSpeechCharacterModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechCharacterModeProperty, e)

call s.setObjectForProperty(s.NSSpeechModeNormal, s.NSSpeechCharacterModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechCharacterModeProperty, e)
```

Notes:

Get or set the synthesizer's current text-processing mode. A string that specifies whether the channel is currently in text input mode or phoneme input mode.
When the character-processing mode is NSSpeechModeNormal, input characters are spoken as you would expect to hear them. When the mode is NSSpeechModeLiteral, each character is spoken literally, so that the word "cat" is spoken "C–A–T".
Available in OS X v10.5 and later.

165.2.19 NSSpeechCommandDelimiterProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Set the embedded speech command delimiter characters to be used for the synthesizer. A dictionary that contains the delimiter information. See "Command Delimiter Keys" for the keys you can use to specify values in this dictionary.
By default, the opening delimiter is " [[" and the closing delimiter is "]] ". Your application might need to change these delimiters temporarily if those character sequences occur naturally in a text buffer that is to be spoken. Your application can also disable embedded command processing by passing empty delimiters (as empty strings). See "Speech Command Delimiter" for the keys you can use to specify values in this dictionary.
Available in OS X v10.5 and later.

165.2.20 NSSpeechCommandPrefix as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants speech-command delimiters keys used in NSSpeechCommandDelimiter-Property.
Notes:

The command delimiter string that prefixes a command, by default, this is [[.
Available in OS X v10.5 and later.

165.2.21 NSSpeechCommandSuffix as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants speech-command delimiters keys used in NSSpeechCommandDelimiter-Property.
Notes:

The command delimiter string that suffixes a command,by default, this is]] .
Available in OS X v10.5 and later.

165.2.22 NSSpeechCurrentVoiceProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Set the current voice on the synthesizer to the specified voice. A dictionary that contains the phoneme symbols and example words defined for the current synthesizer.
Your application might use this information to show the user what symbols to use when entering phonemic text directly. See "NSSpeechPhonemeSymbolsProperty Dictionary Keys" for the keys you can use to specify values in this dictionary.
Available in OS X v10.5 and later.

165.2.23 NSSpeechDictionaryAbbreviations as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:

An array of dictionary objects containing the keys NSSpeechDictionaryEntrySpelling and NSSpeechDictionaryEntryPhonemes.
Available in OS X v10.5 and later.

165.2.24 NSSpeechDictionaryEntryPhonemes as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:

The phonemic representation of an entry. A string.
Available in OS X v10.5 and later.

165.2.25 NSSpeechDictionaryEntrySpelling as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:

The spelling of an entry. A string.
Available in OS X v10.5 and later.

165.2.26 NSSpeechDictionaryLocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:

The canonical locale identifier string describing the dictionary's locale. A locale is generally composed of three pieces of ordered information: a language code, a region code, and a variant code. Refer to documentation about NSLocale or Locales Programming Guide for more information
Available in OS X v10.5 and later.

165.2.27 NSSpeechDictionaryModificationDate as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:

A string representation of the dictionary's last modification date in the international format (YYYY-MM-DD HH:MM:SS ±HHMM). If the same word appears across multiple dictionaries, the one from the dictionary with the most recent date will be used.
Available in OS X v10.5 and later.

165.2.28 NSSpeechDictionaryPronunciations as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes: An array of dictionary objects containing the keys NSSpeechDictionaryEntrySpelling and NSSpeechDictionaryEntryPhonemes.

165.2.29 NSSpeechErrorCount as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:

The number of errors that have occurred in processing the current text string, since the last call to object-

ForProperty with the NSSpeechErrorsProperty property. A Number
Using the NSSpeechErrorOldestCode keys and the NSSpeechErrorNewestCode keys, you can get information about the oldest and most recent errors that occurred since the last call to objectForProperty, but you cannot get information about any intervening errors.
Available in OS X v10.5 and later.

165.2.30 NSSpeechErrorNewestCharacterOffset as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:

The position in the text string of the most recent error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number.
Available in OS X v10.5 and later.

165.2.31 NSSpeechErrorNewestCode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:

The error code of the most recent error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A number
Available in OS X v10.5 and later.

165.2.32 NSSpeechErrorOldestCharacterOffset as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:

The position in the text string of the first error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A number
Available in OS X v10.5 and later.

165.2.33 NSSpeechErrorOldestCode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:

The error code of the first error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number
Available in OS X v10.5 and later.

165.2.34 NSSpeechErrorsProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Get speech-error information for the synthesizer. An Dictionary object that contains speech-error information. See "NSSpeechErrorProperty Dictionary Keys" for a description of the keys present in the dictionary. This property lets you get information about various run-time errors that occur during speaking, such as the detection of badly formed embedded commands. Errors returned directly by the Speech Synthesis Manager are not reported here.
If your application implements the didEncounterErrorAtIndex event, the event can use this property to get error information.
Available in OS X v10.5 and later.

165.2.35 NSSpeechInputModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Get or set the synthesizer's current text-processing mode. A string that specifies whether the channel is currently in text input mode or phoneme input mode.The supported values are listed in "Speaking Modes for NSSpeechInputModeProperty."
When in phoneme-processing mode, a text string is interpreted to be a series of characters representing various phonemes and prosodic controls. Some synthesizers might support additional input-processing modes and define constants for these modes.
Available in OS X v10.5 and later.

165.2.36 NSSpeechModeLiteral as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants defining the available text-processing and number-processing modes for a synthesizer. This key is used with NSSpeechInputModeProperty and NSSpeechNumberModeProperty)
Notes:

Indicates that each digit or character is spoken literally (so that 12 is spoken as "one, two", or the word "cat" is spoken as "C A T").
Available in OS X v10.5 and later.

165.2.37 NSSpeechModeNormal as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants defining the available text-processing and number-processing modes for a synthesizer. This key is used with NSSpeechInputModeProperty and NSSpeechNumberModeProperty)
Notes:

Indicates that the synthesizer assembles digits into numbers (so that 12 is spoken as "twelve") and text into words.
Available in OS X v10.5 and later.

165.2.38 NSSpeechModePhoneme as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify input modes are used with NSSpeechInputModeProperty.
Notes:

Indicates that the synthesizer is in phoneme-processing mode. When in phoneme-processing mode, a text buffer is interpreted to be a series of characters representing various phonemes and prosodic controls.
Available in OS X v10.5 and later.

165.2.39 NSSpeechModeText as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify input modes are used with NSSpeechInputModeProperty.
Notes:

Indicates that the synthesizer is in text-processing mode.
Available in OS X v10.5 and later.

165.2.40 NSSpeechNumberModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

call s.setObjectForProperty(s.NSSpeechModeLiteral, s.NSSpeechNumberModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechNumberModeProperty, e)

call s.setObjectForProperty(s.NSSpeechModeNormal, s.NSSpeechNumberModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechNumberModeProperty, e)
```

Notes:

Get or set the synthesizer's current number-processing mode. A string that specifies whether the synthesizer is currently in normal or literal number-processing mode. The constants NSSpeechModeNormal and NSSpeechModeLiteral are the possible values of this string.
When the number-processing mode is NSSpeechModeNormal, the synthesizer assembles digits into numbers (so that "12" is spoken as "twelve"). When the mode is NSSpeechModeLiteral, each digit is spoken literally (so that "12" is spoken as "one, two").
Available in OS X v10.5 and later.

165.2.41 NSSpeechOutputToFileURLProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Set the speech output destination to a file or to the computer's speakers. A NSURL object. To write the speech output to a file, use the file's NSURL; to generate the sound through the computer's speakers, use nil.
Available in OS X v10.5 and later.

165.2.42 NSSpeechPhonemeInfoExample as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes:

An example word that illustrates the use of the phoneme.
Available in OS X v10.5 and later.

165.2.43 NSSpeechPhonemeInfoHiliteEnd as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes:

The character offset into the example word that identifies the location of the end of the phoneme.
Available in OS X v10.5 and later.

165.2.44 NSSpeechPhonemeInfoHiliteStart as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes:

The character offset into the example word that identifies the location of the beginning of the phoneme.
Available in OS X v10.5 and later.

165.2.45 NSSpeechPhonemeInfoOpcode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes:

The opcode as Number.
Available in OS X v10.5 and later.

165.2.46 NSSpeechPhonemeInfoSymbol as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes:

The symbol used to represent the phoneme.
The symbol does not necessarily have a phonetic connection to the phoneme, but might simply be an abstract textual representation of it.
Available in OS X v10.5 and later.

165.2.47 NSSpeechPhonemeSymbolsProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Get a list of phoneme symbols and example words defined for the synthesizer. A Dictionary object that contains the phoneme symbols and example words defined for the current synthesizer
Your application might use this information to show the user what symbols to use when entering phonemic text directly. See "NSSpeechPhonemeSymbolsProperty Dictionary Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

165.2.48 NSSpeechPitchBaseProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

dim n as Integer = s.objectForProperty(s.NSSpeechPitchBaseProperty, e)
msgBox str(n)
```

Notes:

Get or set a synthesizer's baseline speech pitch. An number that specifies the baseline speech pitch.
Typical voice frequencies range from around 90 hertz for a low-pitched male voice to perhaps 300 hertz for a high-pitched child's voice. These frequencies correspond to approximate pitch values in the ranges of 30.000 to 40.000 and 55.000 to 65.000, respectively.
Note: The change in speech pitch may not be noticeable until the next sentence or paragraph is spoken.
Available in OS X v10.5 and later.

165.2.49 NSSpeechPitchModProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

dim n as Double = s.objectForProperty(s.NSSpeechPitchModProperty, e)
msgBox str(n)
```

Notes:

Get or set a synthesizer's pitch modulation. A number object that specifies the synthesizer's pitch modulation.
Pitch modulation is also expressed as a floating-point value in the range of 0.000 to 127.000. These values correspond to MIDI note values, where 60.000 is equal to middle C on a piano scale. The most useful speech pitches fall in the range of 40.000 to 55.000. A pitch modulation value of 0.000 corresponds to a monotone in which all speech is generated at the frequency corresponding to the speech pitch. Given a speech pitch value of 46.000, a pitch modulation of 2.000 would mean that the widest possible range of pitches corresponding to the actual frequency of generated text would be 44.000 to 48.000.

Note: The change in pitch modulation may not be noticeable until the next sentence or paragraph is spoken. Available in OS X v10.5 and later.

165.2.50 NSSpeechRateProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS
dim value as Double = s.objectForProperty(s.NSSpeechRateProperty, e)
MsgBox str(value)
```

Notes:

Get or set the synthesizer's baseline speech pitch. A number that specifies the synthesizer's baseline speech

pitch.
Typical voice frequencies range from around 90 hertz for a low-pitched male voice to perhaps 300 hertz for a high-pitched child's voice. These frequencies correspond to approximate pitch values in the ranges of 30.000 to 40.000 and 55.000 to 65.000, respectively.
Available in OS X v10.5 and later.

165.2.51 NSSpeechRecentSyncProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Get the message code for the most recently encountered synchronization command. A number that specifies the most recently encountered synchronization command.

Available in OS X v10.5 and later.

165.2.52 NSSpeechResetProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty to get or set the characteristics of a synthesizer.
Notes:

Set a synthesizer back to its default state. There is no value associated with this property; to reset the channel to its default state, set the key to nil.
You can use this function to, for example, set speech pitch and speech rate to default values.
Available in OS X v10.5 and later.

165.2.53 NSSpeechStatusNumberOfCharactersLeft as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes:

The number of characters left in the input string of text.
When the value of this key is zero, you can destroy the input string.
Available in OS X v10.5 and later.

165.2.54 NSSpeechStatusOutputBusy as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes:

Indicates whether the synthesizer is currently producing speech.
A synthesizer is considered to be producing speech even at some times when no audio data is being produced through the computer's speaker. This occurs, for example, when the synthesizer is processing input, but has not yet initiated speech or when speech output is paused.
Available in OS X v10.5 and later.

165.2.55 NSSpeechStatusOutputPaused as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes:

Indicates whether speech output in the synthesizer has been paused by sending the message pauseSpeakingAt-Boundary.
Available in OS X v10.5 and later.

165.2.56 NSSpeechStatusPhonemeCode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes:

Indicates that the synthesizer is in phoneme-processing mode. When in phoneme-processing mode, a text buffer is interpreted to be a series of characters representing various phonemes and prosodic controls.
Available in OS X v10.5 and later.

165.2.57 NSSpeechStatusProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS
```

```
call s.startSpeakingString "Hello"

dim status as Dictionary = s.objectForProperty(s.NSSpeechStatusProperty, e)
dim CharactersLeft as Integer = status.Value(s.NSSpeechStatusNumberOfCharactersLeft)

MsgBox str(CharactersLeft)+" Characters left"
```

Notes:

Get speech-status information for the synthesizer. A dictionary that contains speech-status information for the synthesizer. See "NSSpeechStatusProperty Dictionary Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

165.2.58 NSSpeechSynthesizerInfoIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants are keys used in the NSSpeechSynthesizerInfoProperty dictionary.
Notes:

The identifier of the speech synthesizer.
Available in OS X v10.5 and later.

165.2.59 NSSpeechSynthesizerInfoProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Get information about the speech synthesizer being used on the specified synthesizer. A dictionary object that contains information about the speech synthesizer being used on the specified synthesizer. See "Speech Synthesizer Property Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

165.2.60 NSSpeechSynthesizerInfoVersion as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants are keys used in the NSSpeechSynthesizerInfoProperty dictionary.
Notes:

The version of the speech synthesizer.
Available in OS X v10.5 and later.

165.2.61 NSSpeechVolumeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS
dim value as Double = s.objectForProperty(s.NSSpeechVolumeProperty, e)
MsgBox str(value)
```

Notes:

Get or set the speech volume for a synthesizer. A Number that specifies the synthesizer's speech volume. Volumes are expressed in floating-point values ranging from 0.0 through 1.0. A value of 0.0 corresponds to silence, and a value of 1.0 corresponds to the maximum possible volume. Volume units lie on a scale that is linear with amplitude or voltage. A doubling of perceived loudness corresponds to a doubling of the volume.
Available in OS X v10.5 and later.

You may prefer to simply use the volume property.

165.2.62 objectForProperty(PropertyName as string, byref error as NSErrorMBS) as Variant

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Provides the value of a receiver's property.
Notes:

PropertyName: Property to get.
error: On output, error that occurred while obtaining the value of speechProperty.

Returns the value of speechProperty.
Available in OS X v10.5 and later.

165.2.63 pauseSpeakingAtBoundary(boundary as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Pauses the speaking on the given boundary.
Example:

```
dim s as NSSpeechSynthesizerMBS // your synthesizer
s.pauseSpeakingAtBoundary s.NSSpeechSentenceBoundary // pause on end of sentence.
```

Notes:

Mac OS X 10.5 only.
boundary can be NSSpeechImmediateBoundary, NSSpeechSentenceBoundary or NSSpeechWordBoundary.

165.2.64 phonemesFromText(text as string) as string

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the phonems from a given text.
Example:

```
dim s as new NSSpeechSynthesizerMBS

MsgBox s.phonemesFromText("Hello")

// shows "_hEHl1OW."
```

Notes: Mac OS X 10.5 only.

165.2.65 setObjectForProperty(value as Variant, PropertyName as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies the value of a receiver's property.
Notes:

PropertyName: Property to set.
Error: On output, error that occurred while setting speechProperty.

Returns true when the speechProperty was set. False when there was an error, specified in error.

Available in OS X v10.5 and later.

165.2.66 SetVoice(voice as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the receiver's current voice.
Notes: Returns true on success.

165.2.67 StartSpeakingString(text as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Begins speaking synthesized text through the system's default sound output device.
Example:

```
dim s as new NSSpeechSynthesizerMBS

s.rate=300 // not slow
s.volume=0.5 // not loud
call s.startSpeakingString "Hello World"
```

Notes:

Returns true when synthesis starts successfully, false otherwise.

If the receiver is currently speaking synthesized speech when startSpeakingString is called, that process is stopped before text is spoken.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(true) is called.
See also:

- 165.2.68 StartSpeakingString(text as string, file as folderitem) as boolean 23289
- 165.2.69 startSpeakingString(Text as String, URL as string) as boolean 23290

165.2.68 StartSpeakingString(text as string, file as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Begins synthesizing text into a sound (AIFF) file.
Notes:

Returns true when synthesis starts successfully, false otherwise.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(True) is called.

One example of how you might use this method is in an email program that automatically converts new messages into sound files that can be stored on an iPod for later listening.
See also:

- 165.2.67 StartSpeakingString(text as string) as boolean 23289
- 165.2.69 startSpeakingString(Text as String, URL as string) as boolean 23290

165.2.69 startSpeakingString(Text as String, URL as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Begins synthesizing text into a sound (AIFF) file.
Notes:

Returns true when synthesis starts successfully, false otherwise.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(True) is called.

One example of how you might use this method is in an email program that automatically converts new messages into sound files that can be stored on an iPod for later listening.
See also:

- 165.2.67 StartSpeakingString(text as string) as boolean 23289
- 165.2.68 StartSpeakingString(text as string, file as folderitem) as boolean 23289

165.2.70 StopSpeaking

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Stops synthesis in progress.
Notes: If the receiver is currently generating speech, synthesis is halted, and the message didFinishSpeaking(false) is called.

165.2.71 stopSpeakingAtBoundary(boundary as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Stops speech on the next w
Notes: Mac OS X 10.5 only.

165.2.72 Properties

165.2.73 IsSpeaking as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates whether the receiver is currently generating synthesized speech.
Notes:

true when the receiver is generating synthesized speech, false otherwise.
(Read only property)

165.2.74 rate as Double

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The current rate of the speech.
Example:

```
dim s as NSSpeechSynthesizerMBS
s=new NSSpeechSynthesizerMBS
MsgBox str(s.rate)
// shows e.g. "160"
```

Notes:

Mac OS X 10.5 only.
The range of supported rates is not predefined by the Speech Synthesis framework; but the synthesizer may only respond to a limited range of speech rates. Average human speech occurs at a rate of 180 to 220 words per minute.
(Read and Write property)

165.2.75 UsesFeedbackWindow as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates whether the receiver uses the speech feedback window.
Notes: (Read and Write property)

165.2.76 Voice as string

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The current voice.
Example:

```
dim s as new NSSpeechSynthesizerMBS
MsgBox s.voice
// shows e.g. "com.apple.speech.synthesis.voice.Zarvox"
```

Notes: (Read and Write property)

165.2.77 volume as Double

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The volume of the speech.
Example:

```
dim s as new NSSpeechSynthesizerMBS
MsgBox str(s.volume)
// shows e.g. 1
```

Notes:

No sound is zero, full sound one.
Mac OS X 10.5 only.

Volumes are expressed in floating-point units ranging from 0.0 through 1.0. A value of 0.0 corresponds to silence, and a value of 1.0 corresponds to the maximum possible volume. Volume units lie on a scale that is linear with amplitude or voltage. A doubling of perceived loudness corresponds to a doubling of the volume.

Setting a value outside this range is undefined.
(Read and Write property)

165.2.78 Events

165.2.79 didEncounterErrorAtIndex(characterIndex as Integer, text as string, message as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: .

Function: An event called when an error has been found in the text while speaking.
Notes: Mac OS X 10.5 only.

165.2.80 didEncounterSyncMessage(message as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: .

Function: A sync message was found in the text.
Notes:

See Apple Speech documentation about the special tags you need to place in the text to get this event.
Mac OS X 10.5 only.

165.2.81 didFinishSpeaking(finishedSpeaking as boolean)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: .

Function: Called when speaking through the sound output device is done.
Notes: finishedSpeaking is true when finished normally and false when StopSpeaking was called.

165.2.82 willSpeakPhoneme(phonemeOpcode as Integer)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: .

Function: Sent just before a synthesized phoneme is spoken through the sound output device.
Notes:

phonemeOpcode: Phoneme that sender is about to speak into the sound output device.

One use of this method might be to animate a mouth on screen to match the generated speech.

Important: The delegate is not sent this message when the SpeechSynthesizer object is synthesizing speech to a file (startSpeakingString).

165.2.83 willSpeakWord(Position as Integer, Length as Integer, Text as String)

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: .

Function: Sent just before a synthesized word is spoken through the sound output device.
Notes:

Position and Length: Word that sender is about to speak into the sound output device.
text: Text that is being synthesized by sender.

One use of this method might be to visually highlight the word being spoken.

Important: The delegate is not sent this message when the SpeechSynthesizer object is synthesizing speech to a file (startSpeakingString).

165.2.84 Constants

165.2.85 NSSpeechImmediateBoundary=0

MBS MacCocoa Plugin, Plugin Version: 7.7.

Function: One of the constants for the pauseSpeakingAtBoundary method.
Notes: Mac OS X 10.5 only.

165.2.86 NSSpeechSentenceBoundary=2

MBS MacCocoa Plugin, Plugin Version: 7.7.

Function: One of the constants for the pauseSpeakingAtBoundary method.
Notes: Mac OS X 10.5 only.

165.2.87 NSSpeechWordBoundary=1

MBS MacCocoa Plugin, Plugin Version: 7.7.

Function: One of the constants for the pauseSpeakingAtBoundary method.
Notes: Mac OS X 10.5 only.

165.3 class NSVoiceMBS

165.3.1 class NSVoiceMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A voice on Mac OS X with its attributes.
Notes:

Available in Mac OS X v10.3 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

165.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr7

165.3.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr7

165.3.4 Methods

165.3.5 Age as Integer

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The perceived age (in years) of the voice.

165.3.6 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

165.3.7 Demotext as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A demonstration string to speak.

165.3.8 Gender as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The perceived gender of the voice.
Notes: May be either GenderNeuter ("VoiceGenderNeuter), GenderFemale ("VoiceGenderFemale"), or GenderMale ("VoiceGenderMale").

165.3.9 GenderFemale as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the possible values for the gender property.

165.3.10 GenderMale as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the possible values for the gender property.

165.3.11 GenderNeuter as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the possible values for the gender property.

165.3.12 Identifier as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A unique string identifying the voice. The identifiers of the system voices are listed below.
Notes:

Identifiers of the Mac OS X system voices
com.apple.speech.synthesis.voice.Agnes
com.apple.speech.synthesis.voice.Albert
com.apple.speech.synthesis.voice.BadNews
com.apple.speech.synthesis.voice.Bahh
com.apple.speech.synthesis.voice.Bells
com.apple.speech.synthesis.voice.Boing
com.apple.speech.synthesis.voice.Bruce
com.apple.speech.synthesis.voice.Bubbles

com.apple.speech.synthesis.voice.Cellos
com.apple.speech.synthesis.voice.Deranged
com.apple.speech.synthesis.voice.Fred
com.apple.speech.synthesis.voice.GoodNews
com.apple.speech.synthesis.voice.Hysterical
com.apple.speech.synthesis.voice.Junior
com.apple.speech.synthesis.voice.Kathy
com.apple.speech.synthesis.voice.Organ
com.apple.speech.synthesis.voice.Princess
com.apple.speech.synthesis.voice.Ralph
com.apple.speech.synthesis.voice.Trinoids
com.apple.speech.synthesis.voice.Vicki
com.apple.speech.synthesis.voice.Victoria
com.apple.speech.synthesis.voice.Whisper
com.apple.speech.synthesis.voice.Zarvox

165.3.13 Language as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The language of the voice (currently US English only).
Notes: Language has been replaced by LocaleIdentifier in Mac OS X 10.5.

165.3.14 LocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The locale identifier.
Example:

```
dim v as NSVoiceMBS
dim s as NSSpeechSynthesizerMBS
dim n as string

s=new NSSpeechSynthesizerMBS

n=s.voice
v=s.attributesForVoice(n)

MsgBox n+EndOfLine+v.LocaleIdentifier
// shows for example "en_US"
```

Notes:

Mac OS X 10.5 only.

Language has been replaced by LocaleIdentifier in Mac OS X 10.5.

165.3.15 Name as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the voice suitable for display.

165.3.16 NSVoiceAge as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: The perceived age (in years) of the voice. A string.

165.3.17 NSVoiceDemoText as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: A demonstration string to speak. A String.

165.3.18 NSVoiceGender as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: The perceived gender of the voice.

165.3.19 NSVoiceIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes:

A unique string identifying the voice.

Identifiers of the OS X system voices:
com.apple.speech.synthesis.voice.Agnes
com.apple.speech.synthesis.voice.Albert
com.apple.speech.synthesis.voice.Alex
com.apple.speech.synthesis.voice.BadNews
com.apple.speech.synthesis.voice.Bahh
com.apple.speech.synthesis.voice.Bells
com.apple.speech.synthesis.voice.Boing
com.apple.speech.synthesis.voice.Bruce
com.apple.speech.synthesis.voice.Bubbles
com.apple.speech.synthesis.voice.Cellos
com.apple.speech.synthesis.voice.Deranged
com.apple.speech.synthesis.voice.Fred
com.apple.speech.synthesis.voice.GoodNews
com.apple.speech.synthesis.voice.Hysterical
com.apple.speech.synthesis.voice.Junior
com.apple.speech.synthesis.voice.Kathy
com.apple.speech.synthesis.voice.Organ
com.apple.speech.synthesis.voice.Princess
com.apple.speech.synthesis.voice.Ralph
com.apple.speech.synthesis.voice.Trinoids
com.apple.speech.synthesis.voice.Vicki
com.apple.speech.synthesis.voice.Victoria
com.apple.speech.synthesis.voice.Whisper
com.apple.speech.synthesis.voice.Zarvox

165.3.20 NSVoiceIndividuallySpokenCharacters as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes:

A list of unicode character id ranges that define the unicode characters that can be spoken in character-by-character mode by this voice. ach list entry is a dictionary containing two keys: "UnicodeCharBegin", an integer value containing the beginning unicode id of this range; and "UnicodeCharBegin", an integer value containing the ending unicode id of this range.
These ranges can be used by your application to determine if the voice can speak the name of an individual character when spoken in character-by-character mode.
Some voices may not provide this attribute.
Available in OS X v10.5 and later.

165.3.21 NSVoiceLanguage as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes:

The language of the voice (currently US English only). A string
Deprecated: Use NSVoiceLocaleIdentifier instead.
Deprecated in OS X v10.5.

165.3.22 NSVoiceLocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes:

The language of the voice. A string
The canonical locale identifier string describing the voice's locale. A locale is generally composed of three pieces of ordered information: a language code, a region code, and a variant code. Refer to documentation about the NSLocale class or Locales Programming Guide for more information.
Available in OS X v10.5 and later.

165.3.23 NSVoiceName as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes: The name of the voice suitable for display. A String.

165.3.24 NSVoiceSupportedCharacters as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the properties names.
Notes:

A list of unicode character id ranges that define the unicode characters supported by this voice. a dictionary containing two keys: "UnicodeCharBegin", an integer value containing the beginning unicode id of this range; and "UnicodeCharBegin", an integer value containing the ending unicode id of this range. The synthesizer will convert or ignore any characters not contained in the range of supported characters.
Some voices may not provide this attribute.
Available in OS X v10.5 and later.

165.3.25 Properties as Dictionary

MBS MacCocoa Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns dictionary with all the properties for this voice.
Notes: This dictionary may contain additional information if Apple adds more features in newer Mac OS X versions.

165.4 class SpeechChannelMBS

165.4.1 class SpeechChannelMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: A SpeechMBS channel.
Example:

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

Deprecated: This item is deprecated and should no longer be used. You can use NSSpeechSynthesizerMBS instead.

165.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

165.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

165.4.4 Methods

165.4.5 close

MBS MacClassic Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

165.4.6 ContinueSpeech as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Continue speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.ContinueSpeech)
```

Notes: Renamed from Continue to ContinueSpeech in v5.3 to fix a problem with Xojo 2005r3.

165.4.7 PauseEndOfSentence as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Pauses speaking at the end of the current sentence.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PauseEndOfSentence)
```

165.4.8 PauseEndOfWord as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Pauses speaking at the end of the current word.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PauseEndOfWord)
```

165.4.9 PauseImmediate as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Pauses speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PauseImmediate)
```

165.4.10 Reset

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Resets the SpeechMBS channel to some default values.
Example:

```
dim c as SpeechChannelMBS // your channel

c.reset
```

Notes: Resets e.g. pitchbase, pitchmodulation, volume, rate.

165.4.11 SetOutputFile(file as folderitem) as boolean

MBS MacClassic Plugin, Plugin Version: 4.1, Platform: macOS, Targets: Desktop only.

Function: Sets the destination file.
Example:

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel
dim f as FolderItem = SpecialFolder.Desktop.Child("test.aiff")

call c.SetOutputFile(f)
call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

Notes:

Returns true on success and false on any error.
Requires Mac OS X 10.3.

165.4.12 Speak(s as string) as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Speak the given text.
Example:

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

MsgBox str(c.Speak("Hello"))
```

Notes: v5.1: Now encoding safe and stores result in lasterror property.

165.4.13 SpeechBusy as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns how much SpeechChannels are currently in use of you application.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeechBusy)
```

165.4.14 SpeechBusySystemWide as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns how much SpeechChannels are currently in use on this Mac.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeechBusySystemWide)
```

165.4.15 Stop as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Stops speaking.
Example:

```
dim c as SpeechChannelMBS // your channel
```

```
MsgBox str(c.Stop)
```

165.4.16 StopEndOfSentence as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Stops speaking at the end of the current sentence.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.StopEndOfSentence)
```

165.4.17 StopEndOfWord as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Stops speaking at the end of the current word.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.StopEndOfWord)
```

165.4.18 StopImmediate as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Stops speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.StopImmediate)
```

165.4.19 Properties

165.4.20 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 5.1, Platform: macOS, Targets: Desktop only.

Function: The last error code.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.Lasterror)
```

Notes:

A Mac OS error code.
from the plugin -1 is bad parameter and 0 is success.
(Read only property)

165.4.21 Paused as boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Are we paused?
Example:

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

MsgBox str(c.Paused)
```

Notes: (Read only property)

165.4.22 PitchBase as Double

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The pich base used for speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PitchBase)
```

Notes: (Read and Write property)

165.4.23 PitchModulation as Double

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The pich modulation used for speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PitchModulation)
```

Notes: (Read and Write property)

165.4.24 Playing as boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Are we playing?
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.Playing)
```

Notes: (Read only property)

165.4.25 Rate as Double

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The rate used for speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.Rate)
```

Notes:

Normally around 175 words/minute.
(Read and Write property)

165.4.26 SpeakCharactersLiteral as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: whether to speak characters literal.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeakCharactersLiteral)
```

Notes:

Speaks Hello like "H-E-L-L-O"
(Read and Write property)

165.4.27 SpeakNumbersLiteral as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: whether to speak numbers literal.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeakNumbersLiteral)
```

Notes:

Speaks 11 not like "elven", but like "one, one".
(Read and Write property)

165.4.28 TextBytesToSpeak as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: How much text is left in the text buffer?
Example:

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

Notes: (Read only property)

165.4.29 Voice as VoiceMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The VoiceMBS used for that SpeechChannelMBS.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox c.Voice.Name
```

Notes: (Read and Write property)

165.4.30 Volume as Double

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The current volume.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.Volume)
```

Notes:

From 0 to 65535.
(Read and Write property)

165.5 class SpeechMBS

165.5.1 class SpeechMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The class for the Mac OS speech synthesizer.
Deprecated: This item is deprecated and should no longer be used. You can use NSSpeechSynthesizerMBS instead. **Notes:**

For Mac OS X you can also use the NSSpeechSynthesizerMBS class and for recognition the NSSpeechRecognizerMBS class.

You can try Speech with some declares, but your app won't start if the Speech extension is not installed. This plugin won't stop, but simply will just tell you that the Speech is not available, so you can react in your application.

165.5.2 Blog Entries

165.5.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

165.5.4 Methods

165.5.5 close

MBS MacClassic Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

165.5.6 DefaultVoice as VoiceMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the default VoiceMBS.
Example:

```
dim s as new SpeechMBS
dim v as VoiceMBS = s.DefaultVoice

MsgBox v.Name
```

165.5.7 Speak(s as string) as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Speaks a text using the default settings.
Example:

```
dim s as new SpeechMBS

call s.Speak("Hello")

MsgBox "you hear me?"
```

Notes:

Returns directly to caller.
Returns true if speaking is working.

v5.1: Now encoding safe and stores result in lasterror property.

165.5.8 SpeechBusy as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns how much SpeechChannels are currently in use of you application.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.SpeechBusy)
```

165.5.9 SpeechBusySystemWide as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns how much SpeechChannels are currently in use on this Mac.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.SpeechBusySystemWide)
```

165.5.10 Voice(index as Integer) as VoiceMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the VoiceMBS with this number.
Example:

```
dim s as new SpeechMBS

MsgBox s.Voice(1).Name
```

Notes: Index is from 1 to VoiceCount.

165.5.11 Properties

165.5.12 Available as Boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Is SpeechMBS available?
Notes: (Read only property)

165.5.13 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 5.1, Platform: macOS, Targets: Desktop only.

Function: The last error code.
Notes:

A Mac OS error code.
from the plugin -1 is bad parameter and 0 is success.
(Read only property)

165.5.14 VersionMajor as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The major Version number.
Example:

```
dim s as SpeechMBS
s=new SpeechMBS
msgbox hex(s.VersionMajor)+"."+hex(s.versionMinor\16)+"."+hex(s.versionMinor mod 16)
```

Notes: (Read only property)

165.5.15 versionMinor as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The minor Version number.
Example:

```
dim s as SpeechMBS
s=new SpeechMBS
msgbox hex(s.VersionMajor)+"."+hex(s.versionMinor\16)+"."+hex(s.versionMinor mod 16)
```

Notes: (Read only property)

165.5.16 VersionRev as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The revision Version number.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.VersionRev)
```

Notes: (Read only property)

165.5.17 VersionStage as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The Stage Version number.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.VersionStage)
```

Notes:

Some constants:

developStage	& h20
alphaStage	& h40
betaStage	& h60
finalStage	& h80

(Read only property)

165.5.18 VoiceCount as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: How much voices are present?
Example:

```
dim s as new SpeechMBS

MsgBox str(s.VoiceCount)
```

Notes:

If you add or remove VoiceMBS files, please call this function as SpeechMBS can then recognice those changes.
(Read only property)

165.6 class VoiceMBS

165.6.1 class VoiceMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: This class represents a voice.
Example:

```
dim s as new SpeechMBS

MsgBox s.Voice(2).name
```

Deprecated: This item is deprecated and should no longer be used. You can use NSVoiceMBS instead.

165.6.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

165.6.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

165.6.4 Methods

165.6.5 close

MBS MacClassic Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

165.6.6 NewChannel as SpeechChannelMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Creates a new SpeechChannel using the given voice.
Example:

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel
```

```
MsgBox str(c.Speak("Hello"))
```

Notes: Returns nil on any error.

165.6.7 Properties

165.6.8 age as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The approximate age in years of the individual represented by the VoiceMBS.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).age)
```

Notes: (Read only property)

165.6.9 comment as string

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: Additional text information about the VoiceMBS. The information might indicate how much memory the VoiceMBS requires. Some synthesizers use this field to store a phrase that can be spoken.
Example:

```
dim s as new SpeechMBS
MsgBox s.Voice(1).comment
```

Notes: (Read only property)

165.6.10 file as folderitem

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The file of this VoiceMBS.
Notes:

May be nil.
(Read only property)

165.6.11 gender as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The gender of this VoiceMBS.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).gender)
```

Notes:

Some constants for this property:

kNeuter	0
kMale	1
kFemale	2

(Read only property)

165.6.12 language as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: A code that indicates the language of VoiceMBS output.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).language)
```

Notes:

Language constants:

(Read only property)

165.6.13 name as string

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The name of this VoiceMBS.
Example:

```
dim s as new SpeechMBS
MsgBox s.Voice(1).name
```

Notes: (Read only property)

165.6.14 region as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: A code that indicates the region represented by the VoiceMBS.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).region)
```

Notes:

Some region constants:

(Read only property)

165.6.15 ResID as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: There can be several voices in one file, but this VoiceMBS has this ResID.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).ResID)
```

Notes: (Read only property)

165.6.16 script as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The script code of text that the VoiceMBS can process.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).script)
```

Notes:

Script constants:

(Read only property)

165.6.17 version as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop only.

Function: The version of this VoiceMBS.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).Version)
```

Notes: (Read only property)

165.7 class WinSpeechMBS

165.7.1 class WinSpeechMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for speech on Windows.
Notes:

You need to install the "Microsoft Reader" to get this working.

see also:
http://msdn.microsoft.com/en-us/library/ms719576(v=vs.85).aspx

165.7.6 Methods

165.7.7 close

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

165.7.8 DisplayUI(type as string, title as string, parent as window)

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop only.

Function: Displays the UI from the underlying text-to-speech engine's object token.
Notes:

Type specifies which UI you want.
Title is optional the title of the window.
You can optionally specify a parent window.
Lasterror is set.
See also:

- 165.7.9 DisplayUI(type as string, title as string="") 23326

165.7.9 DisplayUI(type as string, title as string="")

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop only.

Function: Displays the UI from the underlying text-to-speech engine's object token.
Notes:

Type specifies which UI you want.
Title is optional the title of the window.
You can optionally specify a parent window.
Lasterror is set.
See also:

- 165.7.8 DisplayUI(type as string, title as string, parent as window) 23326

165.7.10 IsUISupported(type as string) as boolean

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks if the underlying text-to-speech engine's object token supports the requested UI.
Notes:

Returns whether the specified UI is supported. True indicates the UI is supported, and false indicates the UI is not supported.
Lasterror is set.

165.7.11 ListVoices as boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Makes a list of voices which is later returned using the NextVoice function.

165.7.12 NextVoice as WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the next voice in the list.
Notes: Returns nil on the end of the list.

165.7.13 Pause

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pauses speech.

165.7.14 Resume

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resumes speech.

165.7.15 Skip(sentenceCount as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Causes the voice to skip forward or backward the specified number of items within the text of the current speak call.
Notes:

sentenceCount is the number of sentences to skip. If negative, you skip backward.
Returns the actual number of items skipped.
Lasterror is set.

165.7.16 Speak(text as string, Purge as Boolean = false, ContainsXML as boolean = false)

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Speaks a string.
Notes:

The string must be a 16bit unicode string.

Version 7.8 of the plugins convert to unicode automatically.

If Purge is true an existing speech will be stopped.

If ContainsXML is true, you can include xml commands in the text. See MSDN page:
http://msdn.microsoft.com/en-us/library/ms717077% 28v=vs.85% 29.aspx

165.7.17 SpeakFile(file as folderitem, unicodestring as string, AudioFormat as Integer = 0, ContainsXML as boolean = false)

MBS Win Plugin, Plugin Version: 4.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Speaks a string to a file.
Notes:

The string must be a 16bit unicode string.
File is a valid folderitem where the WAV file is stored.
The function will not return before the speaking is complete.
Lasterror is set.

Version 7.8 of the plugins convert to unicode automatically.

For AudioFormat, please use kAudioFormat* constants. Default is 22Khz Mono which is default format for speech API.

If ContainsXML is true, you can include xml commands in the text. See MSDN page:
http://msdn.microsoft.com/en-us/library/ms717077% 28v=vs.85% 29.aspx

165.7.18 WaitUntilDone(msTimeout as Integer)

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Blocks the caller until either the voice has completed speaking or the specified time interval has elapsed.
Notes:

msTimeout: Timeout period in milliseconds. INFINITE may be used to prevent this method from timing out.

INFINITE is -1.

Lasterror is set.

165.7.19 Properties

165.7.20 Handle as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle to the speech object.
Notes:

If handle is 0 there is no Speech software installed.
(Read only property)

165.7.21 IsDone as Boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns true if the voice has finished speaking.
Notes:

Lasterror is set.
(Read only property)

165.7.22 IsSpeaking as Boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns true if the voice is speaking.
Notes:

Lasterror is set.
(Read only property)

165.7.23 Lasterror as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code reported.
Notes:

You may get the Speech SDK from Microsoft for more details.
(Read only property)

165.7.24 Priority as Integer

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current voice priority level.
Notes:

The default priority is SPVPRI_NORMAL.
Lasterror is set.

Assuming an output object which implements ISpAudio, speak requests of similar priority voices are queued, and are spoken one at a time in the order they are issued. That is, speak requests from normal priority voices are put in one queue, while speak requests from alert priority voices (with priority SPVPRI_ALERT) are put in another queue.

Alert priority voices take priority over normal voices. If one or more speak requests from alert priority voices are pending, a normal voice that is speaking will be interrupted on the next alert boundary (see ISpVoice::SetAlertBoundary). When all the queued alert priority voice speak requests have been processed, the normal voice will continue.

Voices with the SPVPRI_OVER priority speak over (mix with) all other audio in the system with no synchronization. SPVPRI_OVER priority voices only mix on Windows 2000.

If the output object does not implement ISpAudio, no serialization will occur, and all voices will be treated as if their priority is SPVPRI_OVER.
(Read and Write property)

165.7.25 Rate as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current text rendering rate adjustment.
Notes:

Ranges from kMinRate to kMaxRate.
(Read and Write property)

165.7.26 SyncSpeakTimeout as Integer

MBS Win Plugin, Plugin Version: 8.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The timeout interval in milliseconds after which, synchronous Speak calls to this instance of the voice will timeout.
Notes:

Timeouts occur when waiting for access to the output object. This means that for a normal priority voice (see Priority for more information on priorities) and an output device which implements ISpAudio, a timeout may occur while waiting to reacquire the output object after an interruption by an alert priority voice. For voices of both normal and alert priorities, a timeout may also occur while waiting to reacquire the output object after the voice has been paused and resumed (see Pause and Resume).

Wait times are not accumulated - that is, if a voice waits for n milliseconds to initially acquire the output object, and is then paused and resumed, it will again wait for up to msTimeout milliseconds to reacquire the output object, not msTimeout - n milliseconds.
(Read and Write property)

165.7.27 Voice as WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current used voice.
Notes:

Set to nil to use the default voice.
(Read and Write property)

165.7.28 Volume as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The volume for the voice.
Notes:

Ranges from kMinVolume to kMaxVolume.
(Read and Write property)

165.7.29 Constants

165.7.30 kAudioFormat_11kHz16BitMono = 10

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 11 kHz, 16 Bit, Mono

165.7.31 kAudioFormat_11kHz16BitStereo = 11

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 11 kHz, 16 Bit, Stereo

165.7.32 kAudioFormat_11kHz8BitMono = 8

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 11 kHz, 8 Bit, Mono

165.7.33 kAudioFormat_11kHz8BitStereo = 9

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 11 kHz, 8 Bit, Stereo

165.7.34 kAudioFormat_12kHz16BitMono = 14

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 12 kHz, 16 Bit, Mono

165.7.35 kAudioFormat_12kHz16BitStereo = 15

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 12 kHz, 16 Bit, Stereo

165.7.36 kAudioFormat_12kHz8BitMono = 12

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 12 kHz, 8 Bit, Mono

165.7.37 kAudioFormat_12kHz8BitStereo = 13

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 12 kHz, 8 Bit, Stereo

165.7.38 kAudioFormat_16kHz16BitMono = 18

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 16 kHz, 16 Bit, Mono

165.7.39 kAudioFormat_16kHz16BitStereo = 19

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 16 kHz, 16 Bit, Stereo

165.7.40 kAudioFormat_16kHz8BitMono = 16

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 16 kHz, 8 Bit, Mono

165.7.41 kAudioFormat_16kHz8BitStereo = 17

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 16 kHz, 8 Bit, Stereo

165.7.42 kAudioFormat_22kHz16BitMono = 22

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 22 kHz, 16 Bit, Mono

165.7.43 kAudioFormat_22kHz16BitStereo = 23

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 22 kHz, 16 Bit, Stereo

165.7.44 kAudioFormat_22kHz8BitMono = 20

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 22 kHz, 8 Bit, Mono

165.7.45 kAudioFormat_22kHz8BitStereo = 21

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 22 kHz, 8 Bit, Stereo

165.7.46 kAudioFormat_24kHz16BitMono = 26

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 24 kHz, 16 Bit, Mono

165.7.47 kAudioFormat_24kHz16BitStereo = 27

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 24 kHz, 16 Bit, Stereo

165.7.48 kAudioFormat_24kHz8BitMono = 24

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 24 kHz, 8 Bit, Mono

165.7.49 kAudioFormat_24kHz8BitStereo = 25

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 24 kHz, 8 Bit, Stereo

165.7.50 kAudioFormat_32kHz16BitMono = 30

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 32 kHz, 16 Bit, Mono

165.7.51 kAudioFormat_32kHz16BitStereo = 31

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 32 kHz, 16 Bit, Stereo

165.7.52 kAudioFormat_32kHz8BitMono = 28

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 32 kHz, 8 Bit, Mono

165.7.53 kAudioFormat_32kHz8BitStereo = 29

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 32 kHz, 8 Bit, Stereo

165.7.54 kAudioFormat_44kHz16BitMono = 34

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 44 kHz, 16 Bit, Mono

165.7.55 kAudioFormat_44kHz16BitStereo = 35

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 44 kHz, 16 Bit, Stereo

165.7.56 kAudioFormat_44kHz8BitMono = 32

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 44 kHz, 8 Bit, Mono

165.7.57 kAudioFormat_44kHz8BitStereo = 33

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 44 kHz, 8 Bit, Stereo

165.7.58 kAudioFormat_48kHz16BitMono = 38

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 48 kHz, 16 Bit, Mono

165.7.59 kAudioFormat_48kHz16BitStereo = 39

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 48 kHz, 16 Bit, Stereo

165.7.60 kAudioFormat_48kHz8BitMono = 36

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 48 kHz, 8 Bit, Mono

165.7.61 kAudioFormat_48kHz8BitStereo = 37

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 48 kHz, 8 Bit, Stereo

165.7.62 kAudioFormat_8kHz16BitMono = 6

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 8 kHz, 16 Bit, Mono

165.7.63 kAudioFormat_8kHz16BitStereo = 7

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 8 kHz, 16 Bit, Stereo

165.7.64 kAudioFormat_8kHz8BitMono = 4

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 8 KHz, 8 Bit, Mono

165.7.65 kAudioFormat_8kHz8BitStereo = 5

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: 8 kHz, 8 Bit, Stereo

165.7.66 kAudioFormat_ADPCM_11kHzMono = 59

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: ADPCM, 11 kHz, Mono

165.7.67 kAudioFormat_ADPCM_11kHzStereo = 60

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: ADPCM, 11 kHz, Stereo

165.7.68 kAudioFormat_ADPCM_22kHzMono = 61

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: ADPCM, 22 kHz, Mono

165.7.69 kAudioFormat_ADPCM_22kHzStereo = 62

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: ADPCM, 22 kHz, Stereo

165.7.70 kAudioFormat_ADPCM_44kHzMono = 63

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: ADPCM, 44 kHz, Mono

165.7.71 kAudioFormat_ADPCM_44kHzStereo = 64

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: ADPCM, 44 kHz, Stereo

165.7.72 kAudioFormat_ADPCM_8kHzMono = 57

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: ADPCM, 8 kHz, Mono

165.7.73 kAudioFormat_ADPCM_8kHzStereo = 58

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: ADPCM, 8 kHz, Stereo

165.7.74 kAudioFormat_CCITT_ALaw_11kHzMono = 43

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, ALaw, 11 kHz, Mono

165.7.75 kAudioFormat_CCITT_ALaw_11kHzStereo = 44

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, ALaw, 11 kHz, Stereo

165.7.76 kAudioFormat_CCITT_ALaw_22kHzMono = 45

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, ALaw, 22 kHz, Mono

165.7.77 kAudioFormat_CCITT_ALaw_22kHzStereo = 46

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, ALaw, 22 kHz, Stereo

165.7.78 kAudioFormat_CCITT_ALaw_44kHzMono = 47

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, ALaw, 44 kHz, Mono

165.7.79 kAudioFormat_CCITT_ALaw_44kHzStereo = 48

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, ALaw, 44 kHz, Stereo

165.7.80 kAudioFormat_CCITT_ALaw_8kHzMono = 41

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, ALaw, 8 kHz, Mono

165.7.81 kAudioFormat_CCITT_ALaw_8kHzStereo = 42

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, ALaw, 8 kHz, Stereo

165.7.82 kAudioFormat_CCITT_uLaw_11kHzMono = 51

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, uLaw, 11 kHz, Mono

165.7.83 kAudioFormat_CCITT_uLaw_11kHzStereo = 52

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, uLaw, 11 kHz, Stereo

165.7.84 kAudioFormat_CCITT_uLaw_22kHzMono = 53

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, uLaw, 22 kHz, Mono

165.7.85 kAudioFormat_CCITT_uLaw_22kHzStereo = 54

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, uLaw, 22 kHz, Stereo

165.7.86 kAudioFormat_CCITT_uLaw_44kHzMono = 55

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, uLaw, 44 kHz, Mono

165.7.87 kAudioFormat_CCITT_uLaw_44kHzStereo = 56

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, uLaw, 44 kHz, Stereo

165.7.88 kAudioFormat_CCITT_uLaw_8kHzMono = 49

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, uLaw, 8 kHz, Mono

165.7.89 kAudioFormat_CCITT_uLaw_8kHzStereo = 50

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: CCITT, uLaw, 8 kHz, Stereo

165.7.90 kAudioFormat_GSM610_11kHzMono = 66

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: GSM 610, 11 kHz, Mono

165.7.91 kAudioFormat_GSM610_22kHzMono = 67

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: GSM 610, 22 kHz, Mono

165.7.92 kAudioFormat_GSM610_44kHzMono = 68

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: GSM 610, 44 kHz Mono

165.7.93 kAudioFormat_GSM610_8kHzMono = 65

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: GSM 610, 8 kHz, Mono

165.7.94 kAudioFormat_TrueSpeech_8kHz1BitMono = 40

MBS Win Plugin, Plugin Version: 14.3.

Function: One of the audio format constants.
Notes: TrueSpeech, 8 kHz, 1 Bit, Mono

165.7.95 kMaxRate = 10

MBS Win Plugin, Plugin Version: 3.3.

Function: The maximum for the rate property.

165.7.96 kMaxVolume = 100

MBS Win Plugin, Plugin Version: 3.3.

Function: The maximum for the volume property.

165.7.97 kMinRate = -10

MBS Win Plugin, Plugin Version: 3.3.

Function: The minimum for the rate property.

165.7.98 kMinVolume = 0

MBS Win Plugin, Plugin Version: 3.3.

Function: The minimum for the volume property.

165.7.99 PriorityAlert = 1

MBS Win Plugin, Plugin Version: 8.1.

Function: One of the priority constants.

165.7.100 PriorityNormal = 0

MBS Win Plugin, Plugin Version: 8.1.

Function: One of the priority constants.

165.7.101 PriorityOver = 2

MBS Win Plugin, Plugin Version: 8.1.

Function: One of the priority constants.

165.7.102 SPDUI_AddRemoveWord = "AddRemoveWord"

MBS Win Plugin, Plugin Version: 8.1.

Function: One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

165.7.103 SPDUI_AudioProperties = "AudioProperties"

MBS Win Plugin, Plugin Version: 8.1.

Function: One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

165.7.104 SPDUI_AudioVolume = "AudioVolume"

MBS Win Plugin, Plugin Version: 8.1.

Function: One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

165.7.105 SPDUI_EngineProperties = "EngineProperties"

MBS Win Plugin, Plugin Version: 8.1.

Function: One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

165.7.106 SPDUI_MicTraining = "MicTraining"

MBS Win Plugin, Plugin Version: 8.1.

Function: One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

165.7.107 SPDUI_RecoProfileProperties = "RecoProfileProperties"

MBS Win Plugin, Plugin Version: 8.1.

Function: One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

165.7.108 SPDUI_UserTraining = "UserTraining"

MBS Win Plugin, Plugin Version: 8.1.

Function: One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

165.8 class WinVoiceMBS

165.8.1 class WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for a voice.

165.8.2 Methods

165.8.3 Description as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the voice.
Notes: Returns a 16bit unicode string.

165.8.4 Properties

165.8.5 Handle as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle to the voice.
Notes: (Read only property)

165.8.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code reported.
Notes: (Read only property)

Chapter 166

SpeechRecognition

166.1 class SFAcousticFeatureMBS

166.1.1 class SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The value of a voice analysis metric.
Notes:

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

166.1.2 Blog Entries

- Playing with SpeechRecognition

166.1.3 Blog Entries

- Playing with SpeechRecognition

166.1.4 Methods

166.1.5 acousticFeatureValuePerFrame as Double()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of feature values, one value per audio frame, corresponding to a transcript segment of

recorded audio.

166.1.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

166.1.7 copy as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

166.1.8 Properties

166.1.9 frameDuration as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The duration of the audio frame.
Notes:

In seconds.
(Read only property)

166.1.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

166.2 class SFSpeechAudioBufferRecognitionRequestMBS

166.2.1 class SFSpeechAudioBufferRecognitionRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request to recognize speech from captured audio content, such as audio from the device's microphone.
Notes:

Use an SFSpeechAudioBufferRecognitionRequestMBS object to perform speech recognition on live audio, or on a set of existing audio buffers. For example, use this request object to route audio from a device's microphone to the speech recognizer.

The request object contains no audio initially. As you capture audio, call appendAudioPCMBuffer or appendAudioSampleBuffer to add audio samples to the request object. The speech recognizer continuously analyzes the audio you appended, stopping only when you call the endAudio method. (You must call endAudio explicitly to stop the speech recognition process.)

Requires MacOS 10.15 or later.
Subclass of the SFSpeechRecognitionRequestMBS class.

166.2.2 Blog Entries

- Playing with SpeechRecognition

166.2.3 Blog Entries

- Playing with SpeechRecognition

166.2.4 Methods

166.2.5 appendAudioPCMBuffer(audioPCMBuffer as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Appends audio in the PCM format to the end of the recognition request.
Notes:

audioPCMBuffer: An audio buffer (AVAudioPCMBufferMBS class) that contains audio in the PCM format.

The audio must be in a native format and uncompressed.

166.2.6 appendAudioSampleBuffer(sampleBuffer as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Appends audio to the end of the recognition request.
Notes:

sampleBuffer: A buffer of audio. Must be CMSampleBufferMBS class.

The audio must be in a native format.

166.2.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

166.2.8 endAudio

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Marks the end of audio input for the recognition request.
Notes: Call this method explicitly to let the speech recognizer know that no more audio input is coming.

166.2.9 Properties

166.2.10 nativeAudioFormat as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The preferred audio format for optimal speech recognition.
Notes:

Use the audio format in this property as a hint for optimal recording, but don't depend on the value remaining unchanged.
Value is an AVAudioFormatMBS object.
(Read only property)

166.3 class SFSpeechRecognitionRequestMBS

166.3.1 class SFSpeechRecognitionRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An abstract class representing a request to recognize speech from an audio source.
Notes:

Do not create SFSpeechRecognitionRequestMBS objects directly. Create an SFSpeechURLRecognitionRequestMBS or SFSpeechAudioBufferRecognitionRequestMBS object instead. Use the properties of this class to configure various aspects of your request object before you start the speech recognition process. For example, use the shouldReportPartialResults property to specify whether you want partial results or only the final result of speech recognition.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

166.3.2 Blog Entries

- Playing with SpeechRecognition

166.3.3 Blog Entries

- Playing with SpeechRecognition

166.3.4 Methods

166.3.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

166.3.6 contextualStrings as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of phrases that should be recognized, even if they are not in the system vocabulary.
Notes:

Use this property to specify short custom phrases that are unique to your app. You might include phrases with the names of characters, products, or places that are specific to your app. You might also include

domain-specific terminology or unusual or made-up words. Assigning custom phrases to this property improves the likelihood of those phrases being recognized.
Keep phrases relatively brief, limiting them to one or two words whenever possible. Lengthy phrases are less likely to be recognized. In addition, try to limit each phrase to something the user can say without pausing. Limit the total number of phrases to no more than 100.

166.3.7 setContextualStrings(contextualStrings() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets array of phrases that should be recognized, even if they are not in the system vocabulary.
Notes:

Use this property to specify short custom phrases that are unique to your app. You might include phrases with the names of characters, products, or places that are specific to your app. You might also include domain-specific terminology or unusual or made-up words. Assigning custom phrases to this property improves the likelihood of those phrases being recognized.
Keep phrases relatively brief, limiting them to one or two words whenever possible. Lengthy phrases are less likely to be recognized. In addition, try to limit each phrase to something the user can say without pausing. Limit the total number of phrases to no more than 100.

166.3.8 Properties

166.3.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

166.3.10 interactionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An identifier string that you use to describe the type of interaction associated with the speech recognition request.
Notes:

If different parts of your app have different speech recognition needs, you can use this property to identify the part of your app that is making each request. For example, if one part of your app lets users speak phone numbers and another part lets users speak street addresses, consistently identifying the part of the app that makes a recognition request may help improve the accuracy of the results.
(Read and Write property)

166.3.11 requiresOnDeviceRecognition as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that determines whether a request must keep its audio data on the device.
Notes:

Set this property to true to prevent an SFSpeechRecognitionRequestMBS from sending audio over the network. However, on-device requests won't be as accurate.

The request only honors this setting if the supportsOnDeviceRecognition (SFSpeechRecognizerMBS) property is also YES.
(Read and Write property)

166.3.12 shouldReportPartialResults as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether you want intermediate results returned for each utterance.
Notes:

The default value of this property is true. If you want only final results (and you don't care about intermediate results), set this property to false to prevent the system from doing extra work.
(Read and Write property)

166.3.13 taskHint as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A value that indicates the type of speech recognition being performed.
Notes:

The default value of this property is kTaskHintUnspecified. See SFSpeechRecognitionResultMBS for constants.
(Read and Write property)

166.4 class SFSpeechRecognitionResultMBS

166.4.1 class SFSpeechRecognitionResultMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An object containing the partial or final results of a speech recognition request.
Notes:

Use an SFSpeechRecognitionResultMBS object to retrieve the results of a speech recognition request. You do not create these objects directly. Instead, the Speech framework creates them and passes them to the handler block or delegate object you specified when starting your speech recognition task.
A speech recognition result object contains one or more transcriptions of the current utterance. Each transcription has a confidence rating indicating how likely it is to be correct. (You can also get the transcription with the highest rating directly from the bestTranscription property.)
If you requested partial results from the speech recognizer, the transcriptions may represent only part of the total audio content. Use the final property to determine if the request contains partial or final results.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

166.4.2 Blog Entries

166.4.3 Blog Entries

- Playing with SpeechRecognition

166.4.4 Methods

166.4.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

166.4.6 copy as SFSpeechRecognitionResultMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

166.4.7 transcriptions as SFTranscriptionMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of potential transcriptions, sorted in descending order of confidence.
Notes: All transcriptions correspond to the same utterance, which can be a partial or final result of the overall request. The first transcription in the array has the highest confidence rating, followed by transcriptions with decreasing confidence ratings.

166.4.8 Properties

166.4.9 bestTranscription as SFTranscriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The transcription with the highest confidence level.
Notes: (Read only property)

166.4.10 final as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether speech recognition is complete and whether the transcriptions are final.
Notes:

When a speech recognition request is final, its transcriptions do not change.
(Read only property)

166.4.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

166.4.12 Constants

166.4.13 kTaskHintConfirmation = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the task hints.
Notes:

A task that uses captured speech for short, confirmation-style requests.
Use this hint type when you are using speech recognition to handle confirmation commands, such as "yes," "no," or "maybe."

166.4.14 kTaskHintDictation = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the task hints.
Notes:

A task that uses captured speech for text entry.
Use this hint type when you are using speech recognition for a task that's similar to the keyboard's built-in dictation function.

166.4.15 kTaskHintSearch = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the task hints.
Notes:

A task that uses captured speech to specify seach terms.
Use this hint type when you are using speech recognition to identify search terms.

166.4.16 kTaskHintUnspecified = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the task hints.
Notes:

An unspecified type of task.
Use this hint type when the intended use for captured speech does not match the other task types.

166.5 class SFSpeechRecognitionTaskMBS

166.5.1 class SFSpeechRecognitionTaskMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A task object that you use to monitor the speech recognition progress.
Notes:

Use an SFSpeechRecognitionTaskMBS object to determine the state of a speech recognition task, to cancel an ongoing task, or to signal the end of the task.
You do not create speech recognition task objects directly. Instead, you receive one of these objects after calling recognitionTaskWithRequest.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

166.5.2 Blog Entries

- Playing with SpeechRecognition

166.5.3 Blog Entries

- Playing with SpeechRecognition

166.5.4 Methods

166.5.5 Cancel

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Cancels the current speech recognition task.
Notes:

You can cancel recognition tasks for both prerecorded and live audio input. For example, you might cancel a task in response to a user action or because the recording was interrupted.
When canceling a task, be sure to release any resources associated with the task, such as the audio input resources you are using to capture audio samples.

166.5.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

166.5.7 Finish

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Stops accepting new audio and finishes processing on the audio input that has already been accepted.
Notes: For audio buffer–based recognition, recognition does not finish until this method is called, so be sure to call it when the audio source is exhausted.

166.5.8 Properties

166.5.9 Cancelled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the speech recognition task was canceled.
Notes:

By default, the value of this property is false.
(Read only property)

166.5.10 Error as NSErrorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An error object that specifies the error that occurred during a speech recognition task.
Notes: (Read only property)

166.5.11 Finishing as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether audio input has stopped.
Notes:

By default, the value of this property is false.
(Read only property)

166.5.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

166.5.13 State as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The current state of the speech recognition task.
Notes:

Check the value of this property to get the state of the in-progress speech recognition session. For valid values, see constants.
(Read only property)

166.5.14 Constants

166.5.15 kStateCanceling = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants for the state of the task associated with the recognition request.
Notes: Delivery of recognition results has finished, but audio recording may be ongoing.

166.5.16 kStateCompleted = 4

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants for the state of the task associated with the recognition request.
Notes: Delivery of recognition requests has finished and audio recording has stopped.

166.5.17 kStateFinishing = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants for the state of the task associated with the recognition request.
Notes: Audio recording has stopped, but delivery of recognition results may continue.

166.5.18 kStateRunning = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants for the state of the task associated with the recognition request.
Notes: Speech recognition (potentially including audio recording) is in progress.

166.5.19 kStateStarting = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants for the state of the task associated with the recognition request.
Notes: Speech recognition (potentially including audio recording) has not yet started.

166.6 class SFSpeechRecognizerMBS

166.6.1 class SFSpeechRecognizerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An object you use to check for the availability of the speech recognition service, and to initiate the speech recognition process.
Notes:

An SFSpeechRecognizerMBS object is the central object for managing the speech recognizer process. Use this object to:

- Request authorization to use speech recognition services.
- Specify the language to use during the recognition process.
- Initiate new speech recognition tasks.

Set Up Speech Recognition
Each speech recognizer supports only one language, which you specify at creation time. The successful creation of a speech recognizer does not guarantee that speech recognition services are available. For some languages, the recognizer might require an Internet connection. Use the available property to find out if speech recognition services are available for the current language.

To initiate the speech recognition process, do the following:

- Request authorization to use speech recognition.
- Create an SFSpeechRecognizerMBS object.
- Verify the availability of services using the available property of your speech recognizer object.
- Prepare your audio content.
- Create a recognition request object—an object that descends from SFSpeechRecognitionRequest.
- Call the recognitionTaskWithRequest method to begin the recognition process.

The type of recognition request object you create depends on whether you are processing an existing audio file or an incoming stream of audio. For existing audio files, create a SFSpeechURLRecognitionRequestMBS object. For audio streams, create a SFSpeechAudioBufferRecognitionRequestMBS object.

Create a Great User Experience for Speech Recognition
Here are some tips to consider when adding speech recognition support to your app.

- Be prepared to handle failures caused by speech recognition limits. Because speech recognition is a network-based service, limits are enforced so that the service can remain freely available to all apps. Individual devices may be limited in the number of recognitions that can be performed per day, and each app may be throttled globally based on the number of requests it makes per day. If a recognition request fails quickly (within a second or two of starting), check to see if the recognition service became unavailable. If it is, you may want to ask users to try again later.
- Plan for a one-minute limit on audio duration. Speech recognition places a relatively high burden on battery life and network usage. To minimize this burden, the framework stops speech recognition tasks that last longer than one minute. This limit is similar to the one for keyboard-related dictation.
- Remind the user when your app is recording. For example, display a visual indicator and play sounds at the beginning and end of speech recognition to help users understand that they're being actively recorded. You can also display speech as it is being recognized so that users understand what your app is doing and see any mistakes made during the recognition process.
- Do not perform speech recognition on private or sensitive information. Some speech is not appropriate for recognition. Don't send passwords, health or financial data, and other sensitive speech for recognition.

Requires MacOS 10.15 or later.

166.6.4 Methods

166.6.5 authorizationStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Returns your app's current authorization to perform speech recognition.
Notes: The user can reject your app's request to perform speech recognition, but your request can also be denied if speech recognition is not supported on the device. The app can also change your app's authorization status at any time from the Settings app.

166.6.6 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether the Speech Framework was loaded.
Notes: Returns true on MacOS 10.15 or newer.

166.6.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a speech recognizer associated with the user's default language settings.
Notes:

Returns an initialized speech recognizer object, or nil if there was a problem creating the object.

If the user's default language is not supported for speech recognition, this method attempts to fall back to the language used by the keyboard for dictation. If that fails, this method returns nil.
Even if this method returns a valid speech recognizer object, the speech recognition services may be temporarily unavailable. To determine whether speech recognition services are available, check the available property.
See also:

- 166.6.8 Constructor(locale as NSLocaleMBS) 23365

166.6.8 Constructor(locale as NSLocaleMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a speech recognizer associated with the specified locale.
Notes:

locale: The locale object representing the language you want to use for speech recognition. For a list of languages supported by the speech recognizer, see supportedLocales.

Returns an initialized speech recognizer object, or nil if the specified language was not supported.

If you specify a language that is not supported by the speech recognizer, this method attempts to fall back to the language used by the keyboard for dictation. If that fails, this method returns nil.
Even if this method returns a valid speech recognizer object, the speech recognition services may be temporarily unavailable. To determine whether speech recognition services are available, check the available property.
See also:

- 166.6.7 Constructor 23365

166.6.9 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The destructor.

166.6.10 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS) as SFSpeechRecognitionTaskMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Recognizes speech from the audio source associated with the specified request, using the specified events to manage the results.
Notes:

request: A request (encapsulated in an SFSpeechRecognitionRequestMBS object) to recognize speech from an audio source.

Returns the task object you can use to manage an in-progress recognition request.

Use this method to initiate the speech recognition process on the audio contained in the request object. This method executes asynchronously and returns a SFSpeechRecognitionTaskMBS object that you can use to cancel or finalize the recognition process later. As results become available, the method calls the methods of the provided delegate object.
Note that the SFSpeechRecognitionTaskMBS object returned by this method does not retain your delegate object. You must maintain a strong reference to your delegate while speech recognition is in progress.
See also:

- 166.6.11 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS, delegateHandler as recognitionTaskWithRequestCompletedMBS, tag as Variant = nil) as SFSpeechRecognitionTaskMBS 23366

166.6.11 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS, delegateHandler as recognitionTaskWithRequestCompletedMBS, tag as Variant = nil) as SFSpeechRecognitionTaskMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Executes the speech recognition request and delivers the results to the specified handler delegate.
Notes:

request: A request (in an SFSpeechRecognitionRequestMBS object) to recognize speech from an audio source.
delegateHandler: The method to call when partial or final results are available, or when an error occurs. If the shouldReportPartialResults property is true, this event may be called multiple times to deliver the

partial and final results.

The delegare has no return value and takes the following parameters:
result: A SFSpeechRecognitionResultMBS containing the partial or final transcriptions of the audio content.
error: An error object if a problem occurred. This parameter is nil if speech recognition was successful.

Request and Tag parameters are passed through to delegate.

Returns the task object you can use to manage an in-progress recognition request.

Use this method to initiate the speech recognition process on the audio contained in the request object. This method executes asynchronously and returns a SFSpeechRecognitionTaskMBS object that you can use to cancel or finalize the recognition process later. As results become available, the method calls the delegate in the delegateHandler parameter.
See also:

- 166.6.10 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS) as SFSpeechRecognitionTaskMBS 23366

166.6.12 requestAuthorization(delegateHandler as requestAuthorizationCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Asks the user to allow your app to perform speech recognition.
Notes:

delegateHandler: The delegate to execute when your app's authorization status is known. The status parameter of the delegate contains your app's authorization status.

Call this method before performing any other tasks associated with speech recognition. This method executes asynchronously, returning shortly after you call it. At some point later, the system calls the provided handler block with the results.
When your app's authorization status is SFSpeechRecognizerAuthorizationStatusNotDetermined, this method causes the system to prompt the user to grant or deny permission for your app to use speech recognition. The prompt includes the custom message you specify in the NSSpeechRecognitionUsageDescription key of your app's Info.plist file. The user's response is saved so that future calls to this method do not prompt the user again.

Your app's Info.plist file must contain the NSSpeechRecognitionUsageDescription key with a valid usage description. If this key is not present, your app will crash when you call this method.
For more information about requesting authorization, see Asking Permission to Use Speech Recognition.

166.6.13 supportedLocales as NSLocaleMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Returns the set of locales that are supported by the speech recognizer.
Notes:

This method returns the locales for which speech recognition is supported. Support for a locale does not guarantee that speech recognition is currently possible for that locale. For some locales, the speech recognizer requires an active Internet connection to communicate with Apple's servers. If the speech recognizer is currently unable to process requests, available returns NO.
Speech recognition supports the same locales that are supported by the keyboard's dictation feature. For a list of these locales, see QuickType Keyboard: Dictation.

166.6.14 Properties

166.6.15 defaultTaskHint as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A hint that indicates the type of speech recognition being requested.
Notes:

By default, the value of this property overrides the SFSpeechRecognitionTaskHintUnspecified value for requests.
(Read and Write property)

166.6.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

166.6.17 isAvailable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the speech recognizer is currently available.
Notes:

When the value of this property is true, you may create new speech recognition tasks. When value of this property is false, speech recognition services are not available.

(Read only property)

166.6.18 locale as NSLocaleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The locale of the speech recognizer.
Notes:

The locale of the speech recognizer is an NSLocaleMBS object. The default value of this property is the system locale (that is, systemLocale).
(Read only property)

166.6.19 supportsOnDeviceRecognition as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the speech recognizer can operate without network access.
Notes:

An SFSpeechRecognitionRequestMBS can only honor its requiresOnDeviceRecognition property if supportsOnDeviceRecognition is true. If supportsOnDeviceRecognition is false, the SFSpeechRecognizer requires a network in order to recognize speech.
(Read only property)

166.6.20 Events

166.6.21 availabilityDidChange(available as Boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

Function: Tells you that the availability of its associated speech recognizer changed.
Notes: available: A Boolean value that indicates the new availability of the speech recognizer.

166.6.22 didDetectSpeech(task as SFSpeechRecognitionTaskMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

Function: Tells you when the task first detects speech in the source audio.
Notes: task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the

request.

166.6.23 TaskDidFinishRecognition(task as SFSpeechRecognitionTaskMBS, recognitionResult as SFSpeechRecognitionResultMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

Function: Tells you when the final utterance is recognized.
Notes:

task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.
recognitionResult: A recognized utterance that contains one or more transcription hypotheses in an SFSpeechRecognitionResultMBS object.

When this method is called, the delegate should expect no further information about the utterance to be reported.

166.6.24 TaskDidFinishSuccessfully(task as SFSpeechRecognitionTaskMBS, successfully as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

Function: Tells you when the recognition of all requested utterances is finished.
Notes:

task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.
successfully: A Boolean value that indicates whether the task was successful. When this parameter is false, use the error property of the task to get information about why the task was unsuccessful.

166.6.25 TaskDidHypothesizeTranscription(task as SFSpeechRecognitionTaskMBS, transcription as SFTranscriptionMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

Function: Tells you that a hypothesized transcription is available.
Notes:

task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.
transcription: The hypothesized transcription in an SFTranscriptionMBS object.

This method is called for all recognitions, including partial recognitions.

166.6.26 TaskFinishedReadingAudio(task as SFSpeechRecognitionTaskMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

Function: Tells you when the task is no longer accepting new audio input, even if final processing is in progress.
Notes: task: The speech recognition task (an SFSpeechRecognitionTask object) that represents the request.

166.6.27 TaskWasCancelled(task as SFSpeechRecognitionTaskMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

Function: Tells you that the task has been canceled.
Notes:

task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.

A speech recognition task can be canceled by the user, by your app, or by the system.

166.6.28 Constants

166.6.29 kAuthorizationStatusAuthorized = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants for app's authorization to perform speech recognition.
Notes: The user granted your app's request to perform speech recognition.

166.6.30 kAuthorizationStatusDenied = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants for app's authorization to perform speech recognition.
Notes: The user denied your app's request to perform speech recognition.

166.6.31 kAuthorizationStatusNotDetermined = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants for app's authorization to perform speech recognition.
Notes: The app's authorization status has not yet been determined.

166.6.32 kAuthorizationStatusRestricted = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants for app's authorization to perform speech recognition.
Notes: The device prevents your app from performing speech recognition.

166.6.33 Delegates

166.6.34 recognitionTaskWithRequestCompletedMBS(request as SFSpeechRecognitionRequestMBS, result as SFSpeechRecognitionResultMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate for the callback when recognition is done.

166.6.35 requestAuthorizationCompletedMBS(status as integer, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate to call when authorization request finished.

166.7 class SFSpeechURLRecognitionRequestMBS

166.7.1 class SFSpeechURLRecognitionRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request to recognize speech in a recorded audio file.
Notes:

Use an SFSpeechURLRecognitionRequest object to perform speech recognition on the contents of an existing audio file.

Requires MacOS 10.15 or later.
Subclass of the SFSpeechRecognitionRequestMBS class.

166.7.4 Methods

166.7.5 Constructor(File as FolderItem)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a speech recognition request, initialized with the specified folderitem.
Notes: Use this method to create a request to recognize speech in a recorded audio file that resides at the specified URL. Pass the request to the recognizer's recognitionTaskWithRequest method to start recognition.
See also:

- 166.7.6 Constructor(URL as String) 23373

166.7.6 Constructor(URL as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a speech recognition request, initialized with the specified URL.
Notes: Use this method to create a request to recognize speech in a recorded audio file that resides at the

specified URL. Pass the request to the recognizer's recognitionTaskWithRequest method to start recognition.
See also:

- 166.7.5 Constructor(File as FolderItem) 23373

166.7.7 Properties

166.7.8 File as FolderItem

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The folderitem of the audio file.
Notes: (Read only property)

166.7.9 URL as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The URL of the audio file.
Notes: (Read only property)

166.8 class SFTranscriptionMBS

166.8.1 class SFTranscriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A textual representation of the given speech it its entirety, as recognized by the speech recognizer.
Notes:

Use SFTranscriptionMBS to obtain all the recognized utterances from your audio content. An utterance is a vocalized word or group of words that represent a single meaning to the speech recognizer (SFSpeechRecognizerMBS).
Use the formattedString property to retrieve the entire transcription of utterances, or use the segments property to retrieve an individual utterance (SFTranscriptionSegmentMBS).
You don't create an SFTranscriptionMBS directly. Instead, you retrieve it from an SFSpeechRecognitionResultMBS instance. The speech recognizer sends a speech recognition result to your app in one of two ways, depending on how your app started a speech recognition task.
You can start a speech recognition task by using the speech recognizer's recognitionTaskWithRequest method. When the task is complete, the speech recognizer sends an SFSpeechRecognitionResult instance to your resultHandler closure. Alternatively, you can use the speech recognizer's recognitionTaskWithRequest method to start a speech recognition task. When the task is complete, the speech recognizer uses events to send a SFSpeechRecognitionResultMBS by using the TaskDidFinishRecognition event.
An SFTranscriptionMBS represents only a potential version of the speech. It might not be an accurate representation of the utterances.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

166.8.3 Blog Entries

- Playing with SpeechRecognition

166.8.4 Methods

166.8.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

166.8.6 copy as SFTranscriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

166.8.7 segments as SFTranscriptionSegmentMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of transcription segments that represent the parts of the transcription, as identified by the speech recognizer.
Notes: The order of the segments in the array matches the order in which the corresponding utterances occur in the spoken content.

166.8.8 Properties

166.8.9 averagePauseDuration as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The average pause duration between words, measured in seconds.
Notes: (Read only property)

166.8.10 formattedString as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The entire transcription of utterances, formatted into a single, user-displayable string.
Notes: (Read only property)

166.8.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

166.8.12 speakingRate as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The number of words spoken per minute.
Notes: (Read only property)

166.9 class SFTranscriptionSegmentMBS

166.9.1 class SFTranscriptionSegmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A discrete part of an entire transcription, as identified by the speech recognizer.
Notes:

Use SFTranscriptionSegmentMBS to get details about a part of an overall SFTranscriptionMBS. An SFTranscriptionSegmentMBS represents an utterance, which is a vocalized word or group of words that represent a single meaning to the speech recognizer (SFSpeechRecognizerMBS).

You don't create transcription object segments directly. Instead, you access them from a transcription's segments property.
A transcription segment includes the following information:

- The text of the utterance, plus any alternative interpretations of the spoken word.
- The character range of the segment within the formattedString of its parent SFTranscriptionMBS.
- A confidence value, indicating how likely it is that the specified string matches the audible speech.
- A timestamp and duration value, indicating the position of the segment within the provided audio stream.
- A voiceAnalytics metric, indicating the likelihood of a voice in a segment, and that voice's pitch, jitter, and shimmer properties.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

166.9.2 Blog Entries

166.9.4 Methods

166.9.5 alternativeSubstrings as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of alternate interpretations of the utterance in the transcription segment.

166.9.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

166.9.7 copy as SFTranscriptionSegmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

166.9.8 Properties

166.9.9 confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The level of confidence the speech recognizer has in its recognition of the speech transcribed for the segment.
Notes:

This property reflects the overall confidence in the recognition of the entire phrase. The value is 0 if there was no recognition, and it is closer to 1 when there is a high certainty that a transcription matches the user's speech exactly. For example, a confidence value of 0.94 represents a very high confidence level, and is more likely to be correct than a transcription with a confidence value of 0.72.
(Read only property)

166.9.10 duration as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The number of seconds it took for the user to speak the utterance represented by the segment.
Notes: (Read only property)

166.9.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

166.9.12 substring as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The string representation of the utterance in the transcription segment.
Notes: (Read only property)

166.9.13 substringRange as NSRangeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The range information for the transcription segment's substring, relative to the overall transcription.
Notes:

Use the range information to find the position of the segment within the formattedString property of the SFTranscription object containing this segment.
(Read only property)

166.9.14 timestamp as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The start time of the segment in the processed audio stream.
Notes:

The timestamp is the number of seconds between the beginning of the audio content and when the user spoke the word represented by the segment. For example, if the user said the word "time" one second into the transcription "What time is it", the timestamp would be equal to 1.0.
(Read only property)

166.9.15 voiceAnalytics as SFVoiceAnalyticsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An analysis of the transcription segment's vocal properties.
Notes: (Read only property)

166.10 class SFVoiceAnalyticsMBS

166.10.1 class SFVoiceAnalyticsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A collection of vocal analysis metrics.
Notes:

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

166.10.4 Methods

166.10.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

166.10.6 copy as SFVoiceAnalyticsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

166.10.7 Properties

166.10.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

166.10.9 jitter as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The variation in pitch in each frame of a transcription segment, expressed as a percentage of the frame's fundamental frequency.
Notes: (Read only property)

166.10.10 pitch as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The highness or lowness of the tone (fundamental frequency) in each frame of a transcription segment, expressed as a logarithm.
Notes:

The value is a logarithm (base e) of the normalized pitch estimate for each frame.
(Read only property)

166.10.11 shimmer as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The variation in vocal volume stability (amplitude) in each frame of a transcription segment, expressed in decibels.
Notes: (Read only property)

166.10.12 voicing as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The likelihood of a voice in each frame of a transcription segment, expressed as a probability in the range [0.0, 1.0] .
Notes: (Read only property)

Chapter 167

Spell Checking

167.1 class NSSpellCheckerMBS

167.1.1 class NSSpellCheckerMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The spell checker class.
Notes:

The NSSpellChecker object is used by a client (e.g. a document in an application) to spell-check a given String.
There is only one NSSpellChecker instance per application (since spell-checking is interactive and you only have one mouse and one keyboard).

The string being spell-checked need only be valid for the duration of the call to checkSpellingOfString or countWordsInString.

Requires Mac OS X 10.2.

167.1.6 Methods

167.1.7 availableLanguages as string()

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a list of the available languages.
Notes: Requires Mac OS X 10.5.

167.1.8 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initiates a grammatical analysis of a given string.
Notes:

text: String to analyze.
start: Location within string at which to start the analysis.
language: Language use in string. When nil, the language selected in the Spelling panel is used.
wrap: true to specify that the analysis continue to the beginning of string when the end is reached. false to have the analysis stop at the end of string.
outDetails: Optional. On output, dictionaries describing grammar-analysis details within the flagged grammatical unit. See the NSSpellServer class for information about these dictionaries.

Returns Location of the first flagged grammatical unit.

Available in Mac OS X v10.5 and later.
See also:

- 167.1.9 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean, Details() as dictionary) as NSRangeMBS 23385

167.1.9 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean, Details() as dictionary) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initiates a grammatical analysis of a given string.
Notes:

text: String to analyze.
start: Location within string at which to start the analysis.
language: Language use in string. When nil, the language selected in the Spelling panel is used.
wrap: true to specify that the analysis continue to the beginning of string when the end is reached. false to have the analysis stop at the end of string.
outDetails: Optional. On output, dictionaries describing grammar-analysis details within the flagged grammatical unit. See the NSSpellServer class for information about these dictionaries.

Returns Location of the first flagged grammatical unit.

Available in Mac OS X v10.5 and later.
See also:

- 167.1.8 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean)

as NSRangeMBS 23385

167.1.10 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initiates a spell-check of a string.
Notes: Returns the range of the first misspelled word.
See also:

- 167.1.11 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS 23386
- 167.1.12 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS 23386

167.1.11 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initiates a spell-check of a string.
Notes: Returns the range of the first misspelled word.
See also:

- 167.1.10 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS 23386
- 167.1.12 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS 23386

167.1.12 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initiates a spell-check of a string.
Notes: Returns the range of the first misspelled word (and optionally the wordCount by reference).
See also:

- 167.1.10 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS 23386
- 167.1.11 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS 23386

167.1.13 checkString(text as string, range as NSRangeMBS = nil, checkingTypes as Int64 = -1, options as Dictionary = nil, byref orthography as NSOrthographyMBS, byref wordCount as Integer) as NSTextCheckingResultMBS()

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Requests unified text checking for the given range of the given string.
Notes:

text: The string to check.
range: The range of the string to check.
checkingTypes: The type of checking to be performed. The possible constants are listed in NSTextCheckingType and can be combined using the C bit-wise OR operator to perform multiple checks at the same time.
options: The options dictionary specifying the types of checking to perform. See Spell Checking Option Dictionary Keys for the possible keys and expected values.

orthography: Returns by-reference, the orthography of the range of the string. See NSOrthographyMBS for more information.
wordCount: Returns by-reference, the word count for the range of the string.

Returns an array of NSTextCheckingResultMBS objects describing particular items found during checking and their individual ranges, sorted by range origin, then range end, then result type.

167.1.14 completionsForPartialWordRange(start as Integer, length as Integer, text as string, language as string="") as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Searches possible completions for the given word.
Notes:

Returns an array of strings, in the order in which they should be presented, representing complete words that the user might be trying to type when starting by typing the partial word at the given range in the given string.

Within the text, length characters are picked starting at at position (0 based) and matched agains the dictionary defined by language.
Up to around 100 words are returned.

Requires Mac OS X 10.3.
Returns an empty string on any error.

167.1.15 correctionForWordRange(range as NSRangeMBS, text as string, language as string) as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a single proposed correction if a word is mis-spelled.
Notes:

range: The range of the word to be corrected.
text: The string containing the proposed correction.
language: The language.

Returns the proposed correct string.

167.1.16 countWordsInString(word as string, language as string="") as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Just counts the words without checking spelling.
Example:

```
dim text as string = "Hello World"
dim spell as NSSpellCheckerMBS // your spellchecker

msgBox str(spell.countWordsInString(text,"en"))
```

Notes:

Returns the number of words in text. The language argument specifies the language used in the string. If language is the empty string, the current selection in the Spelling panel's pop-up menu is used.

Returns -1 if text is nil or this spellchecker function is not available.

Returns -1 if counting words isn't supported by the spell server selected.

167.1.17 deletesAutospaceBetweenString(precedingString as string, followingString as string, language as String = "") as Boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Deletes auto space between strings.
Notes: In some cases the space automatically inserted after an accepted candidate should be deleted when

the next text is typed (e.g. if it is a period or comma). This method allows clients to recognize these cases in a standardized way.

167.1.18 dismissCorrectionIndicatorForView(view as NSViewMBS)

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: Dismisses the correction indicator for the specified view.

167.1.19 forgetWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes the given word from the user dictionary.

167.1.20 guessesForWord(range as NSRangeMBS, word as string, language as string) as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of possible substitutions for the specified string.
Notes:

range: The range of the string to check.
word: The string to guess
language: The language of the string

Returns an array of strings containing possible replacement words.
Available in Mac OS X v10.6 and later.
See also:

- 167.1.21 guessesForWord(word as string) as string() 23389

167.1.21 guessesForWord(word as string) as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array with words matching the given word.
Example:

```
dim a() as string
dim s as new NSSpellCheckerMBS
```

```
a=s.guessesForWord("Hell")

msgbox str(ubound(a)+1)+" suggestions."
```

Notes:

Returns nil on any error.

Returns an array of suggested spellings for the misspelled word word. If word contains all capital letters, or its first letter is capitalized, the suggested words are capitalized in the same way.
See also:

- 167.1.20 guessesForWord(range as NSRangeMBS, word as string, language as string) as string() 23389

167.1.22 hasLearnedWord(word as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Checks whether a word has been learned.
Notes:

Returns true if the word is known.
Requires Mac OS X 10.5.

167.1.23 ignoredWords as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The list of ignored words.
Example:

```
dim spell as new NSSpellCheckerMBS
dim f as FolderItem
dim i,c as Integer
dim t as TextOutputStream
dim n(-1) as string

f=SpecialFolder.Preferences.Child("SpellCheck RB.pref")
t=f.CreateTextFile
if t<>nil and spell<>nil then
n=spell.ignoredWords
MsgBox Join(n,EndOfLine)
end if
```

Notes: Returns nil on any error.

167.1.24 ignoreWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds the word to the ignore list so it will be ignored for spell checking in this NSSpellCheckerMBS object.
Notes: Requires Mac OS X 10.2.

167.1.25 isAutomaticCapitalizationEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic capitalization is enabled by the user.

167.1.26 isAutomaticDashSubstitutionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic dash substitution is enabled by the user.

167.1.27 isAutomaticPeriodSubstitutionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic period substitution is enabled by the user.

167.1.28 isAutomaticQuoteSubstitutionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic quote substitution is enabled by the user.

167.1.29 isAutomaticSpellingCorrectionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic spelling correction is enabled.
Notes: Available in Mac OS X v10.6 and later.

167.1.30 isAutomaticTextCompletionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic text completion is enabled by the user.

167.1.31 isAutomaticTextReplacementEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether automatic spelling replacement is enabled.
Notes: Available in Mac OS X v10.6 and later.

167.1.32 languageForWordRange(range as NSRangeMBS, text as string, orthography as NSOrthographyMBS = nil) as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Clients who have an NSOrthography from NSTextCheckingTypeOrthography checking and wish to determine a specific language from it for a particular word.

167.1.33 languageMenuEntries as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The entries from the language menu of the panel.
Notes:

Copies the list of menu entries from the panel.

Currently you can use this names to show to the user and see what languages are available. It uses a private property which works for Mac OS X 10.4 and 10.5.
For the language function you need the short names:

Australian English	en_AU
British English	en_GB
Canadian English	en_CA
Deutsch	de
English	en
Español	es
Français	fr
Italiano	it
Multilingual	Multilingual
Nederlands	nl
Português	pt
Protuguês do Brasil	pt_BR
Svenska	sv

167.1.34 learnWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Learns the given word.
Notes: Requires Mac OS X 10.5.

167.1.35 menuForResult(TextCheckingResult as NSTextCheckingResultMBS, checkedString as string, options as Dictionary = nil, atLocation as NSPointMBS, view as NSViewMBS) as NSMenuMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: Provides a menu containing contextual menu items suitable for certain kinds of detected results.
Notes:

TextCheckingResult: The NSTextCheckingResult instance for the checked string.
checkedString: The string that has been checked.
options: The options dictionary allows clients to pass in information associated with the document. See Spell Checking Option Dictionary Keys for possible key-value pairs.
location: The location, in the view's coordinate system, to display the menu.
view: The view object over which to display the contextual menu.

Returns a menu suitable for displaying as a contextual menu, or adding to another contextual menu as a submenu.

167.1.36 NSSpellCheckerDidChangeAutomaticCapitalizationNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The notification named used when automatic capitalization setting changed.

167.1.37 NSSpellCheckerDidChangeAutomaticDashSubstitutionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The notification named used when automatic dash substitution setting changed.

167.1.38 NSSpellCheckerDidChangeAutomaticPeriodSubstitutionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The notification named used when automatic period substitution setting changed.

167.1.39 NSSpellCheckerDidChangeAutomaticQuoteSubstitutionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The notification named used when automatic quote substitution setting changed.

167.1.40 NSSpellCheckerDidChangeAutomaticSpellingCorrectionNotification as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the notification names.
Notes:

Use with NSNotificationObserverMBS class.
This notification is posted when the spell checker did change text using automatic spell checking correction.
The are posted to the application's default notification center.
Available in Mac OS X v10.7 and later.

167.1.41 NSSpellCheckerDidChangeAutomaticTextCompletionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The notification named used when automatic text completion setting changed.

167.1.42 NSSpellCheckerDidChangeAutomaticTextReplacementNotification as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the notification names.
Notes:

Use with NSNotificationObserverMBS class.
This notification is posted when the spell checker changed text using automatic text replacement. The are posted application's to the default notification center.
Available in Mac OS X v10.7 and later.

167.1.43 NSTextCheckingDocumentAuthorKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes:

An string containing the name of an author to be associated with the document

Available in Mac OS X v10.6 and later.

167.1.44 NSTextCheckingDocumentTitleKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes:

A string containing the title to be associated with the document.

Available in Mac OS X v10.6 and later.

167.1.45 NSTextCheckingDocumentURLKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes:

An NSURL to be associated with the document.

Available in Mac OS X v10.6 and later.

167.1.46 NSTextCheckingOrthographyKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes:

An NSOrthography instance indicating an orthography to be used as a starting point for orthography checking, or as the orthography if orthography checking is not enabled.

Available in Mac OS X v10.6 and later.

167.1.47 NSTextCheckingQuotesKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes:

An NSArray containing four strings to be used with NSTextCheckingTypeQuote (opening double quote, closing double quote, opening single quote, and closing single quote in that order); if not specified, values will be taken from user's preferences.

Available in Mac OS X v10.6 and later.

167.1.48 NSTextCheckingReferenceDateKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes:

An NSDate to be associated with the document, used as a referent for relative dates; if not specified, the current date will be used.

Available in Mac OS X v10.6 and later.

167.1.49 NSTextCheckingReferenceTimeZoneKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes:

An NSTimeZone to be associated with the document, used as a reference for dates without time zones; if not specified, the current time zone will be used.

Available in Mac OS X v10.6 and later.

167.1.50 NSTextCheckingRegularExpressionsKey as string

MBS MacCocoa Plugin, Plugin Version: 12.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes:

Available in Mac OS X 10.7 or newer.
Currently not directly supported with our plugins.

167.1.51 NSTextCheckingReplacementsKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes:

A dictionary containing replacements to be used with NSTextCheckingTypeReplacement; if not specified, values will be taken from user's preferences.

Available in Mac OS X v10.6 and later.

167.1.52 NSTextCheckingSelectedRangeKey as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the constants for the options dictionary.
Notes: NSValueMBS containing NSRangeMBS, should be the portion of the selected range intersecting the string being checked, or a zero-length range if there is an insertion point in or adjacent to the string being checked, or New NSRangeMBS(NSNotFound, 0) if the selection is entirely outside of the string being checked.

167.1.53 preventsAutocorrectionBeforeString(text as string, language as String = "") as Boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: In some cases the next typing should prevent a pending correction (if it is an @, for example).
Notes: This method allows clients to recognize these cases in a standardized way.

167.1.54 recordResponse(response as Integer, correction as string, word as string, language as String = "")

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Records the user response to the correction indicator being displayed.
Notes:

response: The user's response. The possible values are shown in NSCorrectionResponse.
correction: The corrected word. This should match the original correction.
word: The original word. This should match the original correction.
language: The language being edited. This should match the original correction.

When a correction is automatically proposed, the user may respond in one of several ways. Clients may report this to the spell checker so that it can learn from the user's response and adjust future correction behavior accordingly.

Use of this method implies that the client stored the original word and original correction at least from the point at which the user accepts it until the user edits or reverts it.

167.1.55 requestCandidatesForSelectedRange(selectedRange as NSRangeMBS, stringToCheck as string, types as Int64 = -1, options as Dictionary = nil, tag as Variant = nil) as Integer

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Requests candidates in background.

167.1.56 requestCheckingOfString(stringToCheck as string, range as NSRangeMBS, types as Int64 = -1, options as Dictionary = nil, tag as Variant = nil) as Integer

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Requests that the string be checked in the background.
Notes:

stringToCheck: The string to check.
range: The range of the string to check.
types: The type of checking to be performed. The possible constants are listed in NSTextCheckingType and can be combined using the C bit-wise OR operator to perform multiple checks at the same time.
options: The options dictionary specifying the types of checking to perform. See Spell Checking Option Dictionary Keys for the possible keys and expected values.
tag: An identifier unique within the application used to inform the spell checker which document that text is associated, potentially for many purposes, not necessarily just for ignored words. A value of 0 can be passed in for text not associated with a particular document.

The return value is a monotonically increasing sequence number that can be used to keep track of requests in flight.

Calls requestCheckingOfStringCompleted event later on main thread.

167.1.57 setIgnoredWords(words() as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the ignored word list.
Example:

```
dim spell as NSSpellCheckerMBS // your spellchecker

dim f as FolderItem
dim t as TextInputStream
dim words(-1),line as string
```

```
f=SpecialFolder.Preferences.Child("SpellCheck RB.pref")
t=f.OpenAsTextFile
if t<>nil and spell<>nil then

while not t.eof
line=t.ReadLine(encodings.UTF8)
if line<>"" then
words.Append line
end if
wend

spell.setIgnoredWords words

end if
```

167.1.58 setLanguage(language as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Allows programmatic setting of the language to spell-check in.
Notes:

Normally chosen by a pop-up-list in the spelling panel and defaulted to the user's preferred language, so call this with care.
Set to "" to use the language from the panel popup menu.

167.1.59 sharedSpellCheckerExists as boolean

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns whether the application's NSSpellChecker has already been created.
Notes: Returns true if the shared spell checker already exists, otherwise false.

167.1.60 spellingPanel as NSPanelMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: The spelling panel used for spell checking.

167.1.61 unlearnWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Tells the spell checker to unlearn a given word.
Notes:

Available in Mac OS X v10.5 and later.
Same as the older forgetWord.

167.1.62 updatePanels

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Updates the available panels to account for user changes.
Notes:

This method should be called when a client changes some relevant setting, such as what kind of spelling, grammar checking, or substitutions it uses.

Available in Mac OS X v10.6 and later.

167.1.63 updateSpellingPanelWithGrammarString(lang as string, detail as dictionary)

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies a grammar-analysis detail to highlight in the Spelling panel.
Notes:

problemString: Problematic grammatical unit identified by checkGrammarOfString.
detail: One of the grammar-analysis details provided by checkGrammarOfString.

Available in Mac OS X v10.5 and later.

167.1.64 updateSpellingPanelWithMisspelledWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Updates the panel with the word.
Notes: The checkSpellingOfString methods return the range of the misspelled word found. It is up to the client to select that word in their document and to cause the spelling panel to update itself to reflect the found misspelling. Clients can call updateSpellPanelWithMisspelledWord to insure that the spell panel is

up to date.

167.1.65 userPreferredLanguages as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Provides a subset of the available languages to be used for spell checking.
Notes:

Returns an array containing the user's preferred languages for spell checking. The order is set in the system preferences.

If automaticallyIdentifiesLanguages is true, then text checking will automatically use this method as appropriate; otherwise, it will use the language set by Language property.

The older checkSpellingOfString and checkGrammarOfString methods will use the language set by Language property, if they are called with an empty language argument.

Available in Mac OS X v10.6 and later.

167.1.66 userQuotesArrayForLanguage(lang as string) as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the default values for quote replacement.
Example:

```
dim n as new NSSpellCheckerMBS

dim en(-1) as string = n.userQuotesArrayForLanguage("en")

MsgBox Join(en," ")
```

Notes:

An array of quote replacements used by the NSTextCheckingQuotesKey key-value pair.

Available in Mac OS X v10.6 and later.

167.1.67 userReplacementsDictionary as dictionary

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the dictionary used when replacing words.
Notes:

The key-value pairs in this dictionary are used by the NSTextCheckingQuotesKey when replacing characters and words.

Available in Mac OS X v10.6 and later.

167.1.68 Properties

167.1.69 accessoryView as NSViewMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The Spelling panel's accessory view.
Notes:

The accessory view can be any custom view you want to display with the spelling panel. The accessory view is displayed below the spelling checker and the panel automatically resizes to accommodate the accessory view.

This method posts a notification named NSWindowDidResizeNotification with the Spelling panel object to the default notification center.

The accessory view or nil if there is none.
(Read and Write property)

167.1.70 automaticallyIdentifiesLanguages as boolean

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the spell checker will automatically identify languages.
Notes:

Available in Mac OS X v10.6 and later.
(Read and Write property)

167.1.71 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle to the used NSSpellChecker reference.
Notes: (Read and Write property)

167.1.72 language as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The current language used.
Example:

```
dim c as NSSpellCheckerMBS

c=new NSSpellCheckerMBS

c.Language="en"

MsgBox c.Language // shows en

c.Language="Dutch"

MsgBox c.Language // shows nl

c.Language="Multilingual"

MsgBox c.Language // shows Multilingual
```

Notes: (Read and Write property)

167.1.73 Length as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last length of the position where an error was found.
Notes:

Length is 0 if no location was found.
(Read and Write property)

167.1.74 Location as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last location where an error was found.
Notes: (Read and Write property)

167.1.75 substitutionsPanel as NSPanelMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The substitutions panel.
Notes: (Read only property)

167.1.76 substitutionsPanelAccessoryViewController as NSViewControllerMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: Sets the substitutions panel's accessory view.
Notes:

accessoryController: The accessory view controller or nil if there is none.

The accessory view controller can accommodate any custom view you want to display with the substitutions panel. The accessory view controller's view is displayed below the substitutions list and the panel automatically resizes to accommodate the accessory view.
This method posts a notification named NSWindowDidResizeNotification with the substitutions panel object to the default notification center.
(Read only property)

167.1.77 Tag as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The document tag for the current document.
Notes:

Every NSSpellCheckerMBS gets a new tag. The tag identifies which ignore list is used. This value is set automatically.
(Read and Write property)

167.1.78 WordFieldValue as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The word textfield content string.
Notes: (Read and Write computed property)

167.1.79 Events

167.1.80 Correct

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: .

Function: An event sent whenever the Correct button is pressed.

167.1.81 FindNext

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: .

Function: An event sent whenever the Find Next button is pressed.

167.1.82 Ignore

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: .

Function: An event sent whenever the Ignore button is pressed.

167.1.83 requestCandidatesForSelectedRangeCompleted(sequenceNumber as Integer, candidates() as NSTextCheckingResultMBS, stringToCheck as String, selectedRange as NSRangeMBS, checkingTypes as Int64, options as Dictionary, tag as Variant)

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called later by requestCandidatesForSelectedRange method.

167.1.84 requestCheckingOfStringCompleted(sequenceNumber as Integer, results() as NSTextCheckingResultMBS, orthography as NSOrthographyMBS, wordCount as Integer, stringToCheck as String, Range as NSRangeMBS, checkingTypes as Int64, options as Dictionary, tag as Variant)

MBS MacCocoa Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called later by requestCheckingOfString method.
Notes:

sequenceNumber: A monotonically increasing sequence number.
results: An array of NSTextCheckingResultMBS objects describing particular items found during checking and their individual ranges, sorted by range origin, then range end, then result type..
orthography: The orthography of the string.
wordCount: The number of words in the range of the string.

167.1.85 Constants

167.1.86 NSCorrectionIndicatorTypeDefault = 0

MBS MacCocoa Plugin, Plugin Version: 11.3.

Function: One of the correction indicator type constants.
Notes:

The default indicator that shows a proposed correction.
Available in Mac OS X v10.7 and later.

167.1.87 NSCorrectionIndicatorTypeGuesses = 2

MBS MacCocoa Plugin, Plugin Version: 11.3.

Function: One of the correction indicator type constants.
Notes:

Shows multiple alternatives from which the user may choose the appropriate spelling.
Available in Mac OS X v10.7 and later.

167.1.88 NSCorrectionIndicatorTypeReversion = 1

MBS MacCocoa Plugin, Plugin Version: 11.3.

Function: One of the correction indicator type constants.
Notes:

Provides the option to revert to the original form after a correction has been made.
Available in Mac OS X v10.7 and later.

167.1.89 NSCorrectionResponseAccepted = 1

MBS MacCocoa Plugin, Plugin Version: 11.3.

Function: One of the constants passed to recordresponse method.
Notes:

The user accepted the correction.
Available in Mac OS X v10.7 and later.

167.1.90 NSCorrectionResponseEdited = 4

MBS MacCocoa Plugin, Plugin Version: 11.3.

Function: One of the constants passed to recordresponse method.
Notes:

After the correction was accepted, the user edited the corrected word (to something other than its original form.
Available in Mac OS X v10.7 and later.

167.1.91 NSCorrectionResponseIgnored = 3

MBS MacCocoa Plugin, Plugin Version: 11.3.

Function: One of the constants passed to recordresponse method.
Notes:

The user continued in such a way as to ignore the correction.
Available in Mac OS X v10.7 and later.

167.1.92 NSCorrectionResponseNone = 0

MBS MacCocoa Plugin, Plugin Version: 11.3.

Function: One of the constants passed to recordresponse method.
Notes:

No response was received from the user.
Available in Mac OS X v10.7 and later.

167.1.93 NSCorrectionResponseRejected = 2

MBS MacCocoa Plugin, Plugin Version: 11.3.

Function: One of the constants passed to recordresponse method.
Notes:

The user rejected the correction by dismissing the correction indicator.
Available in Mac OS X v10.7 and later.

167.1.94 NSCorrectionResponseReverted = 5

MBS MacCocoa Plugin, Plugin Version: 11.3.

Function: One of the constants passed to recordresponse method.
Notes:

After the correction was accepted, the user reverted the correction back to the original word.
Available in Mac OS X v10.7 and later.

167.1.95 NSGrammarCorrections = "NSGrammarCorrections"

MBS MacCocoa Plugin, Plugin Version: 9.6.

Function: One of the key constants for the dictionaries in the details array.

167.1.96 NSGrammarRange = "NSGrammarRange"

MBS MacCocoa Plugin, Plugin Version: 9.6.

Function: One of the key constants for the dictionaries in the details array.

167.1.97 NSGrammarUserDescription = "NSGrammarUserDescription"

MBS MacCocoa Plugin, Plugin Version: 9.6.

Function: One of the key constants for the dictionaries in the details array.

167.2 class WinSpellCheckerExceptionMBS

167.2.1 class WinSpellCheckerExceptionMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The class for an exception with spell checking classes.
Notes: Subclass of the RuntimeException class.

167.3 class WinSpellCheckerMBS

167.3.1 class WinSpellCheckerMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Represents a particular spell checker for a particular language.
Example:

```
Dim w As New WinSpellCheckerMBS("en-US")

Dim Text As String = "Helo World"
Dim errors() As WinSpellingErrorMBS = w.Check(Text)
Dim Error As WinSpellingErrorMBS = errors(0)

MsgBox "Spelling error in """ + text.Mid(error.StartIndex+1, error.Length)+""""
```

Notes: Requires Windows 8.

167.3.6 Methods

167.3.7 Add(word as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Treats the provided word as though it were part of the original dictionary.
Notes:

The word will no longer be considered misspelled, and will also be considered as a candidate for suggestions.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.8 AutoCorrect(FromWord as String, ToWord as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Causes occurrences of one word to be replaced by another.
Notes:

FromWord: The incorrectly spelled word to be autocorrected.
ToWord: The correctly spelled word that should replace from.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.9 Check(text as String) as WinSpellingErrorMBS()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Checks the spelling of the supplied text and returns a collection of spelling errors.
Example:

```
Dim w As New WinSpellCheckerMBS("en-US")

Dim Text As String = "Helo World"
Dim errors() As WinSpellingErrorMBS = w.Check(Text)
Dim Error As WinSpellingErrorMBS = errors(0)

MsgBox "Spelling error in """ + text.Mid(error.StartIndex+1, error.Length)+"""
```

Notes:

text: The text to check.

Returns an array of error objects.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.10 ComprehensiveCheck(text as String) as WinSpellingErrorMBS()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Checks the spelling of the supplied text in a more thorough manner than Check, and returns a collection of spelling errors.
Notes: Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.11 Constructor(languageTag as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Creates a spell checker that supports the specified language.
Notes:

languageTag: A BCP47 language tag that identifies the language for the requested spell checker.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.12 Destructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The destructor.

167.3.13 Ignore(word as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Ignores the provided word for the rest of this session.
Notes:

Until this WinSpellCheckerMBS object is released, the word will no longer be considered misspelled, but it will not be considered as a candidate for suggestions.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.14 IsSupported(languageTag as String) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Determines if the specified language is supported by a registered spell checker.
Example:

```
If WinSpellCheckerMBS.IsSupported("en-US") Then
MsgBox "US-English is supported."
Else
MsgBox "US-English is not supported!"
End If

If WinSpellCheckerMBS.IsSupported("de-CH") Then
MsgBox "Swiss German is supported."
Else
MsgBox "Swiss German is not supported!"
End If
```

Notes:

languageTag: A BCP47 language tag that identifies the language for the requested spell checker. e.g. "en-US"

Returns true if supported; false if not supported.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.15 OptionDescription(optionId as String) as WinSpellCheckerOptionDescriptionMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Retrieves the information (id, description, heading and labels) of a specific option.
Notes:

optionId: Identifier of the option to be retrieved.
Returns WinSpellCheckerOptionDescriptionMBS interface that contains the information about optionId.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.16 OptionIds as String()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets all of the declared option identifiers.
Notes: Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.17 OptionValue(optionId as String) as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Retrieves the value associated with the given option.
Notes:

optionId: The option identifier.

Returns the value associated with optionId.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.18 RegisterUserDictionary(dictionaryPath as String, languageTag as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Registers a file to be used as a user dictionary for the current user, until unregistered.
Notes:

dictionaryPath: The path of the dictionary file to be registered.
languageTag: The language for which this dictionary should be used. If left empty, it will be used for any language.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.19 Remove(word as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Removes a word that was previously added by Add, or set by Ignore to be ignored.
Notes:

Word: The word to be removed from the list of added words, or from the list of ignored words. If the word is not present, nothing will be removed.

Raises exception if word is an empty string, or its length is greater than MAX_WORD_LENGTH (128).

Available on Windows 10 and later.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.20 Suggest(word as String) as String()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Retrieves spelling suggestions for the supplied text.
Example:

```
Dim w As New WinSpellCheckerMBS("en-US")

Dim suggestions() As String = w.Suggest("Helo")

MsgBox Join(suggestions, EndOfLine)
```

Notes:

word: The word or phrase to get suggestions for.

Returns the list of suggestions, returned as string array.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.21 SupportedLanguages as String()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the set of languages/dialects supported by any of the registered spell checkers.
Example:

```
MsgBox Join(WinSpellCheckerMBS.SupportedLanguages, EndOfLine)
```

Notes:

The supported languages are specific, not neutral.
For Hebrew, for example, the supported language is "he-IL", not "he".

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.22 UnregisterUserDictionary(dictionaryPath as String, languageTag as String)

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Unregisters a previously registered user dictionary. The dictionary will no longer be used by the spell checking functionality.
Notes:

dictionaryPath: The path of the dictionary file to be unregistered.
languageTag: The language for which this dictionary was used. It must match the language passed to RegisterUserDictionary.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.3.23 Properties

167.3.24 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

167.3.25 Id as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the identifier for this spell checker.
Example:

```
Dim w As New WinSpellCheckerMBS("en-US")

MsgBox w.Id
```

Notes:

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

167.3.26 LanguageTag as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the BCP47 language tag this instance of the spell checker supports.
Example:

```
Dim w As New WinSpellCheckerMBS("en-US")

MsgBox w.LanguageTag
```

Notes:

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

167.3.27 LocalizedName as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets text, suitable to display to the user, that describes this spell checker.
Example:

```
Dim w As New WinSpellCheckerMBS("en-US")

MsgBox w.LocalizedName
```

Notes:

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

167.3.28 Events

167.3.29 Changed

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: .

Function: The changed event.
Notes: The SpellCheckerChanged event fires whenever the state of the spell checker changes in a way such that any text that has been checked should be rechecked. This should happen when the contents of a word list changes, when an option changes, or when the default spell checker changes.

167.4 class WinSpellCheckerOptionDescriptionMBS

167.4.1 class WinSpellCheckerOptionDescriptionMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Represents the description of a spell checker option.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

167.4.2 Blog Entries

- MBS Xojo Plugins, version 21.2pr3

167.4.3 Blog Entries

- MBS Xojo Plugins, version 21.2pr3

167.4.4 Methods

167.4.5 Constructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

167.4.6 Destructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The destructor.

167.4.7 Labels as String()

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the label enumerator for the spell checker option.
Notes:

When there is a single label, the valid values for this option are 0 (not chosen) and 1 (chosen). When there is more than one label, the first label is associated with the value 0, the second with 1, and so on, effectively

forming an enumeration. The labels should be in the language of the spell checker or localized to the user's UI language.

Raises WinSpellCheckerExceptionMBS in case of an error.

167.4.8 Properties

167.4.9 Description as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Get the description of the spell checker option.
Notes:

The description explains the implications of making the various choices associated with the option. This should be in the language of the spell checker or localized to the user's UI language.

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

167.4.10 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

167.4.11 Heading as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the heading for the spell checker option.
Notes:

The heading can be used to group sets of options by placing the header on the first item of that group. This should be in the language of the spell checker or localized to the user's UI language.

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

167.4.12 Id as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the identifier of the spell checker option.
Notes:

Option identifiers all exist in the same area. Spell checker providers should use the engine identifier and the language tag (if the option is language-specific) to disambiguate potential collisions.

Specifically, the structure for naming the option identifiers should be:

For the Microsoft spell checker engine: <language tag>:<option name>. For example, "pt-BR:2009Reform." For spell check provider engines: <engine id>:<language tag>:<option name>(the language tag may be omitted if the option is not language specific). For example, "samplespell:fr-FR:AccentedUppercase".

Spell check providers are allowed to support existing Microsoft option identifiers, but they must not create new option identifiers in the Microsoft namespace. That is, spell check providers must use the engine identifier as a prefix.

An option identifier is linked to the set of labels and the semantics associated with them. If any change needs to be made between versions to the option (adding a label to the set of labels), a new option with a new identifier must be used. The only valid change that does not require a new identifier is to change from a single label to two labels and vice-versa when the semantics for values 0 and 1 do not change.

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

167.5 class WinSpellingErrorMBS

167.5.1 class WinSpellingErrorMBS

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Provides information about a spelling error.
Example:

```
Dim w As New WinSpellCheckerMBS("en-US")

// tell it to capitalize Xojo!
w.AutoCorrect "xojo", "Xojo"

Dim Text As String = "Hello xojo!"
Dim errors() As WinSpellingErrorMBS = w.check(Text)
Dim Error As WinSpellingErrorMBS = errors(0)

MsgBox "Spelling error in """ + Text.Mid(error.StartIndex+1, error.Length)+"""". Must be "+error.Replacement
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

167.5.2 Blog Entries

- Spell Checking on Windows for Xojo
- MBS Xojo Plugins, version 21.2pr3

167.5.3 Blog Entries

- Spell Checking on Windows for Xojo

167.5.4 Methods

167.5.5 Constructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

167.5.6 Destructor

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The destructor.

167.5.7 Properties

167.5.8 CorrectiveAction as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Indicates which corrective action should be taken for the spelling error.
Notes:

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

167.5.9 Length as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the length of the erroneous text.
Notes:

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

167.5.10 Replacement as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the text to use as replacement text when the corrective action is replace.
Example:

```
Dim w As New WinSpellCheckerMBS("en-US")

// tell it to capitalize Xojo!
w.AutoCorrect "xojo", "Xojo"

Dim Text As String = "Hello xojo!"
Dim errors() As WinSpellingErrorMBS = w.check(Text)
Dim Error As WinSpellingErrorMBS = errors(0)
```

MsgBox "Spelling error in """ + Text.Mid(error.StartIndex+1, error.Length)+"""". Must be "+error.Replacement

Notes:

If the CorrectiveAction returned by CorrectiveAction is not kCorrectiveActionReplace, value is the empty string.

Raises WinSpellCheckerExceptionMBS in case of an error.

If empty, you may better go with Suggest() function in WinSpellCheckerMBS class.
(Read only property)

167.5.11 StartIndex as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: Gets the position in the checked text where the error begins.
Notes:

Index is zero based!

Raises WinSpellCheckerExceptionMBS in case of an error.
(Read only property)

167.5.12 Text as String

MBS WinFrameworks Plugin, Plugin Version: 21.2, Platform: Windows, Targets: Desktop only.

Function: The text referenced.
Notes:

For your convenience we prepare Text.Middle(StartIndex, Length) for you here.
(Read only property)

167.5.13 Constants

167.5.14 kCorrectiveActionDelete = 3

MBS WinFrameworks Plugin, Plugin Version: 21.2.

Function: One of the constants of corrective action to be taken for a spelling error.
Notes: The user should be prompted to delete the indicated erroneous text.

167.5.15 kCorrectiveActionGetSuggestions = 1

MBS WinFrameworks Plugin, Plugin Version: 21.2.

Function: One of the constants of corrective action to be taken for a spelling error.
Notes: The user should be prompted with a list of suggestions as returned by Suggest.

167.5.16 kCorrectiveActionNone = 0

MBS WinFrameworks Plugin, Plugin Version: 21.2.

Function: One of the constants of corrective action to be taken for a spelling error.
Notes: There are no errors.

167.5.17 kCorrectiveActionReplace = 2

MBS WinFrameworks Plugin, Plugin Version: 21.2.

Function: One of the constants of corrective action to be taken for a spelling error.
Notes: Replace the indicated erroneous text with the text provided in the suggestion. The user does not need to be prompted.

Chapter 168

Spotlight

168.1 class MDItemMBS

168.1.1 class MDItemMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: This is the class that represents a file and the metadata associated with the file.
Notes: Available in Mac OS X version 10.4 and later.

168.1.4 Methods

168.1.5 AllAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a list with all possible attribute names in the system.
Notes:

dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox join(item.AllAttributes, EndOfLine)

168.1.6 AttributeBoolean(name as string) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the value for this attribute.

168.1.7 AttributeDouble(name as string) as Double

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the value for this attribute.

168.1.8 AttributeMultiValued(name as string) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the given attribute is an array of multiple values.

168.1.9 AttributeNames as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array containing the attribute names existing in the metadata item.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox join(item.AttributeNames, EndOfLine)
```

Notes: Available in Mac OS X version 10.4 and later.

168.1.10 AttributeString(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the value for this attribute.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.AttributeString(item.kMDItemFSName)
```

168.1.11 AttributeStringArray(name as string) as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the value for this attribute.

168.1.12 AttributeType(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The type of the attribute.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.AttributeType(item.kMDItemFSName) // "String"
```

Notes: Returns "Boolean", "Number", "Date" or "String".

168.1.13 Constructor(path as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates an MDItem object for a file at the specified path.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim m as new MDItemMBS(f)

MsgBox m.DisplayName
```

Notes:

path: A path to the file from which to create the MDItem.

Available in Mac OS X version 10.4 and later.

168.1.14 DisplayDescriptionForAttribute(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The display description for the attribute.
Notes:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.DisplayDescriptionForAttribute(item.kMDItemDisplayName)
// shows "Lokalisiert angezeigter Name der Datei" in German
```

168.1.15 DisplayNameForAttribute(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The display name for this attribute.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.DisplayNameForAttribute(item.kMDItemDisplayName)
// shows "Anzeigename" in German
```

168.1.16 GetAttribute(name as string) as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the value of the given attribute for the item.
Notes:

name: The name of the desired attribute.

A variant, or nil on failure, or if the attribute does not exist, of if the attribute is not readable.

168.1.17 GetAttributes as dictionary

MBS MacOSX Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries all attributes with all names and values.
See also:

- 168.1.18 GetAttributes(names() as string) as dictionary 23431

168.1.18 GetAttributes(names() as string) as dictionary

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the values of the given attributes for the item.
Notes:

names: An array of the names of the desired attributes.
A dictionary where the keys are the attribute names, and the values are the attribute values, or nil on failure.
If an attribute does not exist, or is unreadable, there will be no key-value pair for it in the dictionary.
See also:

- 168.1.17 GetAttributes as dictionary 23431

168.1.19 kMDItemAcquisitionMake as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The manufacturer of the device used to aquire the document contents. A string.

168.1.20 kMDItemAcquisitionModel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The model of the device used to aquire the document contents. For example, 100, 200, 400, etc. A string.

168.1.21 kMDItemAlbum as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The title for a collection of media. This is analagous to a record album, or photo album. A string.

168.1.22 kMDItemAltitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The altitude of the item in meters above sea level, expressed using the WGS84 datum. Negative values lie below sea level. A number.

168.1.23 kMDItemAperture as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The aperture setting used to acquire the document contents. This unit is the APEX value. A number.

168.1.24 kMDItemAppleLoopDescriptors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Specifies multiple pieces of descriptive information about a loop. An array of strings.

Besides genre and instrument, files can contain descriptive information that help users in refining searches.

168.1.25 kMDItemAppleLoopsKeyFilterType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Specifies key filtering information about a loop. Loops are matched against projects that often in a major or minor key. A string.

To assist users in identifying loops that will "fit" with their compositions, loops can be tagged with one of the following key filters: "AnyKey" "Minor" "Major" "NeitherKey" "BothKeys". "AnyKey" means that it fits with anything (whether in a major key, minor key or neither). "Minor" fits with compositions in a minor key. "NeitherKey" doesn't work well with compositions that are in major or minor key. "BothKeys" means it fits with major or minor key.

168.1.26 kMDItemAppleLoopsLoopMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Specifies how a file should be played. A string.

Tagged files can either be loops or non-loops (e.g., a cymbal crash). "Looping" indicates if the file should be treated as a loop. "Non-looping" indicates the file should not be treated as a loop.

168.1.27 kMDItemAppleLoopsRootKey as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Specifies the loop's original key. The key is the root note or tonic for the loop, and does not include the scale type. A string.

168.1.28 kMDItemApplicationCategories as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.29 kMDItemAttributeChangeDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The date and time of the last change made to a metadata attribute. A date.

168.1.30 kMDItemAudiences as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The audience for which the file is intended. The audience may be determined by the creator or the publisher or by a third party. An array of strings.

168.1.31 kMDItemAudioBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The audio bit rate. A number.

168.1.32 kMDItemAudioChannelCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Number of channels in the audio data contained in the file. A number.

This integer value only represents the number of discreet channels of audio data found in the file. It does not indicate any configuration of the data in regards to a user's speaker setup.

168.1.33 kMDItemAudioEncodingApplication as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The name of the application that encoded the data contained in the audio file. A string.

168.1.34 kMDItemAudioSampleRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Sample rate of the audio data contained in the file. The sample rate is a float value representing hz (audio_frames/second). For example: 44100.0, 22254.54. A number.

168.1.35 kMDItemAudioTrackNumber as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The track number of a song or composition when it is part of an album. A number (integer).

168.1.36 kMDItemAuthorAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

This attribute indicates the author addresses of the document.
An array of string. Requires Mac OS X 10.6.

168.1.37 kMDItemAuthorEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This attribute indicates the author of the emails message addresses. (This is always the email address, and not the human readable version). An array of string. Requires Mac OS X 10.5.

168.1.38 kMDItemAuthors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The author, or authors, of the contents of the file. An array of strings.
The order of the authors is preserved, but does not represent the main author or relative importance of the

authors.

168.1.39 kMDItemBitsPerSample as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The number of bits per sample. For example, the bit depth of an image (8-bit, 16-bit etc...) or the bit depth per audio sample of uncompressed audio data (8, 16, 24, 32, 64, etc..). A number.

168.1.40 kMDItemCameraOwner as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.41 kMDItemCFBundleIdentifier as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: If this item is a bundle, then this is the CFBundleIdentifier. A string

168.1.42 kMDItemCity as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Identifies city of origin according to guidelines established by the provider. A string.

For example, ”New York”, ”Cupertino”, or ”Toronto”.

168.1.43 kMDItemCodecs as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The codecs used to encode/decode the media. An array of strings.

168.1.44 kMDItemColorSpace as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The color space model used by the document contents. For example, "RGB", "CMYK", "YUV", or "YCbCr". A string.

168.1.45 kMDItemComment as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A comment related to the file. This differs from the Finder comment, kMDItemFinderComment. A string.

168.1.46 kMDItemComposer as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The composer of the music contained in the audio file. A string.

168.1.47 kMDItemContactKeywords as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A list of contacts that are associated with this document, not including the authors. An array of strings.

168.1.48 kMDItemContentCreationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The date that the contents of the file were created. A date.

This is different than the file creation date. Its can be used to store when the file contents were first created, or first modified.

168.1.49 kMDItemContentModificationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The date and time that the contents of the file were last modified. A date.

This is not necessarily the file modification date.

168.1.50 kMDItemContentType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: For example, a jpeg image file will have a value of public.jpeg/public.image/public.data. The value of this attribute is set by the MDImporter. Changes to this value are lost when the file attributes are next imported.

168.1.51 kMDItemContentTypeTree as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Array of string

168.1.52 kMDItemContributors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The entities responsible for making contributions to the content of the resource. An array of strings.

Examples of a contributor include a person, an organization or a service.

168.1.53 kMDItemCopyright as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The copyright owner of the file contents. A string.

168.1.54 kMDItemCountry as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The full, publishable name of the country or primary location where the intellectual property of the item was created, according to guidelines of the provider. A string.

168.1.55 kMDItemCoverage as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The extent or scope of the content of the resource. A string.

Coverage will typically include spatial location (a place name or geographic co-ordinates), temporal period (a period label, date, or date range) or jurisdiction (such as a named administrative entity).

Recommended best practice is to select a value from a controlled vocabulary, and that, where appropriate, named places or time periods be used in preference to numeric identifiers such as sets of co-ordinates or date ranges.

168.1.56 kMDItemCreator as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Application used to create the document content (e.g. ”Word”, ”AppleWorks”, etc.). A string.

168.1.57 kMDItemDateAdded as string

MBS MacOSX Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

This is the date that the file was moved into the current location.
Not all files will have this attribute.
Not all file systems support this attribute.

168.1.58 kMDItemDeliveryType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The delivery type. Values are "Fast start" or "RTSP". A string.

168.1.59 kMDItemDescription as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A description of the content of the resource. The description may include an abstract, table of contents, reference to a graphical representation of content or a free-text account of the content. A string.

168.1.60 kMDItemDirector as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Director of the movie. A string. Requires Mac OS X 10.5.

168.1.61 kMDItemDisplayName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The localized version of the file name. A string.

168.1.62 kMDItemDownloadedDate as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.63 kMDItemDueDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Date this item is due. A date.

168.1.64 kMDItemDurationSeconds as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The duration, in seconds, of the content of file. A value of 10.5 represents media that is 10 and 1/2 seconds long. A number.

168.1.65 kMDItemEditors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The list of editor/editors that has worked on this file. There could be 0 or more editors of a particular file. The order of the editors in the array is preserved, but is not intended to represent the main editor or relative importance of the editors. Type is An array of strings.

168.1.66 kMDItemEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Email addresses related to this item. An array of strings.

168.1.67 kMDItemEncodingApplications as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Application used to convert the original content into it's current form. For example, a PDF file might have an encoding application set to "Distiller". An array of strings.

168.1.68 kMDItemExecutableArchitectures as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.69 kMDItemEXIFGPSVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The version of GPSInfoIFD header that was used to generate the metadata. A string. Requires Mac OS X 10.5.

168.1.70 kMDItemEXIFVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The version of the EXIF header used to generate the metadata. A string.

168.1.71 kMDItemExposureMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The exposure mode used to acquire the document contents. A number.

Possible values are 0 (auto exposure), 1 (manual exposure) and 2 (auto bracket).

168.1.72 kMDItemExposureProgram as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The class of the exposure program used by the camera to set exposure when the image is taken. Possible values include: Manual, Normal, and Aperture priority. A string.

168.1.73 kMDItemExposureTimeSeconds as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The exposure time, in seconds, used to acquire the document contents. A number.

168.1.74 kMDItemExposureTimeString as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The time of the exposure. A string.

168.1.75 kMDItemFinderComment as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Finder comments for this file. A string.

168.1.76 kMDItemFlashOnOff as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates if a camera flash was used. A number.

168.1.77 kMDItemFNumber as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The diameter of the diaphragm aperture in terms of the effective focal length of the lens.

168.1.78 kMDItemFocalLength as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The actual focal length of the lens, in millimeters. A number.

168.1.79 kMDItemFocalLength35mm as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.80 kMDItemFonts as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Fonts used in this item. You should store the font's full name, the postscript name, or the font family name, based on the available information. An array of strings.

168.1.81 kMDItemFSContentChangeDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The date the file contents last changed. A date.

168.1.82 kMDItemFSCreationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The date and time that the file was created. A date.

168.1.83 kMDItemFSExists as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This attribute is deprecated and was never implemented.

168.1.84 kMDItemFSHasCustomIcon as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Boolean indicating if this file has a custom icon. Type is a boolean.

168.1.85 kMDItemFSInvisible as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates whether the file is invisible. A boolean.

168.1.86 kMDItemFSIsExtensionHidden as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates whether the file extension of the file is hidden. A boolean.

168.1.87 kMDItemFSIsReadable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This attribute is deprecated and was never implemented.

168.1.88 kMDItemFSIsStationery as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Boolean indicating if this file is stationery. Type is a boolean.

168.1.89 kMDItemFSIsWriteable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This attribute is deprecated and was never implemented.

168.1.90 kMDItemFSLabel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Index of the Finder label of the file. Possible values are 0 through 7. A number.

168.1.91 kMDItemFSName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The file name of the item. A string.

168.1.92 kMDItemFSNodeCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Number of files in a directory. A number.

168.1.93 kMDItemFSOwnerGroupID as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The group ID of the owner of the file. A number.

168.1.94 kMDItemFSOwnerUserID as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The user ID of the owner of the file. A number.

168.1.95 kMDItemFSSize as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The size, in bytes, of the file on disk. A number.

168.1.96 kMDItemGenre as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Genre of the movie. A string.
Requires Mac OS X 10.5.

168.1.97 kMDItemGPSAreaInformation as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.98 kMDItemGPSDateStamp as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.99 kMDItemGPSDestBearing as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.100 kMDItemGPSDestDistance as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.101 kMDItemGPSDestLatitude as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.102 kMDItemGPSDestLongitude as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.103 kMDItemGPSDifferental as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.104 kMDItemGPSDOP as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.105 kMDItemGPSMapDatum as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.106 kMDItemGPSMeasureMode as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.107 kMDItemGPSProcessingMethod as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.108 kMDItemGPSStatus as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.109 kMDItemGPSTrack as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The direction of travel of the item, in degrees from true north. A number.
Requires Mac OS X 10.5.

168.1.110 kMDItemHasAlphaChannel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates if this image file has an alpha channel. A boolean.

168.1.111 kMDItemHeadline as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A publishable entry providing a synopsis of the contents of the file. For example, "Apple Introduces the iPod Photo". A string.

168.1.112 kMDItemIdentifier as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A formal identifier used to reference the resource within a given context. A string.

168.1.113 kMDItemImageDirection as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The direction of the item's image, in degrees from true north. A number.
Requires Mac OS X 10.5.

168.1.114 kMDItemInformation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Information about the item. A string.
Requires Mac OS X 10.5.

168.1.115 kMDItemInstantMessageAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Instant message addresses related to this item. An array of strings.

168.1.116 kMDItemInstructions as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Editorial instructions concerning the use of the item, such as embargoes and warnings. For example, "Second of four stories". A string.

168.1.117 kMDItemIsApplicationManaged as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.118 kMDItemIsGeneralMIDISequence as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates whether the MIDI sequence contained in the file is setup for use with a General MIDI device. A boolean.

168.1.119 kMDItemIsLikelyJunk as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.120 kMDItemISOSpeed as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The ISO speed used to acquire the document contents. A number.

168.1.121 kMDItemKeySignature as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The key of the music contained in the audio file. For example: C, Dm, F# m, Bb. A string.

168.1.122 kMDItemKeywords as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Keywords associated with this file. For example, "Birthday", "Important", etc. An array of strings.

168.1.123 kMDItemKind as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A description of the kind of item this file represents. A string.

168.1.124 kMDItemLabelIcon as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.125 kMDItemLabelID as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.126 kMDItemLabelKind as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.127 kMDItemLabelUUID as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.128 kMDItemLanguages as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates the languages of the intellectual content of the resource. Recommended best practice for the values of the Language element is defined by RFC 3066. An array of strings.

168.1.129 kMDItemLastUsedDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The date and time that the file was last used. This value is updated automatically by LaunchServices everytime a file is opened by double clicking, or by asking LaunchServices to open a file. A date.

168.1.130 kMDItemLatitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The latitude of the item in degrees north of the equator, expressed using the WGS84 datum. Negative values lie south of the equator. A number.
Requires Mac OS X 10.5.

168.1.131 kMDItemLayerNames as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The names of the layers in the file. An array of strings.

168.1.132 kMDItemLensModel as string

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

168.1.133 kMDItemLongitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The longitude of the item in degrees east of the prime meridian, expressed using the WGS84 datum. Negative values lie west of the prime meridian. A number.
Requires Mac OS X 10.5.

168.1.134 kMDItemLyricist as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The lyricist, or text writer, of the music contained in the audio file. A string.

168.1.135 kMDItemMaxAperture as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The smallest f-number of the lens. Ordinarily it is given in the range of 00.00 to 99.99. A number.

168.1.136 kMDItemMediaTypes as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The media types present in the content. An array of strings.

168.1.137 kMDItemMeteringMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The metering mode used to take the image. A string.

Possible values are: Unknown, Average, CenterWeightedAverage, Spot, MultiSpot, Pattern, and Partial.

168.1.138 kMDItemMusicalGenre as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The musical genre of the song or composition contained in the audio file. For example: Jazz, Pop, Rock, Classical. A string.

168.1.139 kMDItemMusicalInstrumentCategory as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Specifies the category of an instrument. A string.

Files should have an instrument associated with them ("Other Instrument" is provided as a catch-all). For some categories, such as "Keyboards", there are instrument names which provide a more detailed instrument definition, for example "Piano" or "Organ".

168.1.140 kMDItemMusicalInstrumentName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Specifies the name of instrument relative to the instrument category. A string.

Files can have an instrument name associated with them if they have certain instrument categories. For example, the "Percussion" category has multiple instruments, including "Conga" and "Bongo".

168.1.141 kMDItemNamedLocation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The name of the location or point of interest associated with the item. The name may be user provided. A string

168.1.142 kMDItemNumberOfPages as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Number of pages in the document. A number.

168.1.143 kMDItemOrganizations as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The company or organization that created the document. An array of strings.

168.1.144 kMDItemOrientation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The orientation of the document contents. Possible values are 0 (landscape) and 1 (portrait). A

number.

168.1.145 kMDItemOriginalFormat as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Original format of the movie.
A string.
Requires Mac OS X 10.5

168.1.146 kMDItemOriginalSource as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Original source of the movie. A string.
Requires Mac OS X 10.5.

168.1.147 kMDItemPageHeight as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Height of the document page, in points (72 points per inch). For PDF files this indicates the height of the first page only. A number.

168.1.148 kMDItemPageWidth as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Width of the document page, in points (72 points per inch). For PDF files this indicates the width of the first page only. A number.

168.1.149 kMDItemParticipants as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The list of people who are visible in an image or movie or written about in a document. Type is array of strings.
Requires Mac OS X 10.6.

168.1.150 kMDItemPath as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The complete path to the file. A string.

168.1.151 kMDItemPerformers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Performers in the movie. An array of string.
Requires Mac OS X 10.5.

168.1.152 kMDItemPhoneNumbers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Phone numbers related to this item. An array of strings.

168.1.153 kMDItemPixelCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The total number of pixels in the contents. Same as kMDItemPixelWidth x kMDItemPixelHeight.

A number.

168.1.154 kMDItemPixelHeight as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The height, in pixels, of the contents. For example, the image height or the video frame height. A number.

168.1.155 kMDItemPixelWidth as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The width, in pixels, of the contents. For example, the image width or the video frame width. A number.

168.1.156 kMDItemProducer as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Producer of the content. A string. Requires Mac OS X 10.5.

168.1.157 kMDItemProfileName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The name of the color profile used by the document contents. A string.

168.1.158 kMDItemProjects as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The list of projects that this file is part of. For example, if you were working on a movie all of the files could be marked as belonging to the project "My Movie". An array of strings.

168.1.159 kMDItemPublishers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The entity responsible for making the resource available. For example, a person, an organization, or a service. Typically, the name of a publisher should be used to indicate the entity. An array of strings.

168.1.160 kMDItemRecipientAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: This attribute indicates the recipient addresses of the document. array of string. Requires Mac OS X 10.6.

168.1.161 kMDItemRecipientEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

This attribute indicates the reciepients email addresses. (This is always the email address, and not the human readable version). An array of string.
Requires Mac OS X 10.5.

168.1.162 kMDItemRecipients as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Recipients of this item. An array of strings.

168.1.163 kMDItemRecordingDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The recording date of the song or composition. A date.

This is in contrast to kMDItemContentCreationDate which, could indicate the creation date of an edited or 'mastered' version of the original art.

168.1.164 kMDItemRecordingYear as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Indicates the year the item was recorded. For example, 1964, 2003, etc. A number.

168.1.165 kMDItemRedEyeOnOff as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Indicates if red-eye reduction was used to take the picture. A boolean.

Possible values are 0 (no red-eye reduction mode or unknown) and 1 (red-eye reduction used).

168.1.166 kMDItemResolutionHeightDPI as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Resolution height of this image in DPI. A number.

168.1.167 kMDItemResolutionWidthDPI as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Resolution width, in DPI, of this image. A number.

168.1.168 kMDItemRights as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Provides a link to information about rights held in and over the resource. A string.

Contains a rights management statement for the resource, or reference a service providing such information. Rights information often encompasses Intellectual Property Rights (IPR), Copyright, and various Property Rights.

If this attribute is absent, no assumptions can be made about the status of these and other rights with respect to the resource.

168.1.169 kMDItemSecurityMethod as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The security or encryption method used for the file. A number.

168.1.170 kMDItemSpeed as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The speed of the item, in kilometers per hour. A number.

Requires Mac OS X 10.5

168.1.171 kMDItemStarRating as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: User rating of this item. For example, the stars rating of an iTunes track. A number.

168.1.172 kMDItemStateOrProvince as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Identifies the province or state of origin according to guidelines established by the provider. For example, "CA", "Ontario", or "Sussex". A string.

168.1.173 kMDItemStreamable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Whether the content is prepared for streaming. A boolean.

168.1.174 kMDItemSubject as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Subject of the this item. Type is a string.

168.1.175 kMDItemSupportFileType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: array of strings

168.1.176 kMDItemTempo as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: A float value that specifies the beats per minute of the music contained in the audio file. A number.

168.1.177 kMDItemTextContent as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

Contains a text representation of the content of the document. Data in multiple fields should be combined using a whitespace character as a separator. A string.

An application's Spotlight importer provides the content of this attribute. Applications can search for values in this attribute, but are not able to read the content of this attribute directly.

168.1.178 kMDItemTheme as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: Theme of the this item. Type is a string.

168.1.179 kMDItemTimeSignature as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The time signature of the musical composition contained in the audio/MIDI file. For example: "4/4", "7/8". A string.

168.1.180 kMDItemTimestamp as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

The timestamp on the item. This generally is used to indicate the time at which the event captured by the item took place.

Mac OS X 10.5

168.1.181 kMDItemTitle as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The title of the file. For example, this could be the title of a document, the name of an song, or the subject of an email message. A string.

168.1.182 kMDItemTotalBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The total bit rate, audio and video combined, of the media. A number.

168.1.183 kMDItemURL as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes:

URL of the item.

Mac OS X 10.5

168.1.184 kMDItemVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The version number of this file. A string

168.1.185 kMDItemVideoBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The video bit rate. A number.

168.1.186 kMDItemWhereFroms as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Example:

```
dim file as FolderItem = DownloadsFolderMBS(0).Child("test.html")
dim item as new MDItemMBS(file)
dim value as Variant = item.GetAttribute(MDItemMBS.kMDItemWhereFroms)

if value <>nil then
dim values() as Variant = value
dim Link as String = values(0)
MsgBox link
end if
```

Notes:

Describes where the file was obtained from. An array of strings.

For example, a downloaded file may refer to the URL, files received by email may indicate the sender's email address, message subject, etc.

168.1.187 kMDItemWhiteBalance as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the item attribute constants.
Notes: The white balance setting used to acquire the document contents. Possible values are 0 (auto white balance) and 1 (manual). A number.

168.1.188 Properties

168.1.189 DisplayName as String

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The localized version of the file name.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.DisplayName // shows "Schreibtisch"
```

Notes:

This is a shortcut for AttributeString(kMDItemDisplayName).
(Read only property)

168.1.190 FSName as String

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The file name of the item.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.FSName // shows "Desktop"
```

Notes:

This is a shortcut for AttributeString(kMDItemFSName).
(Read only property)

168.1.191 FSSize as Int64

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The size, in bytes, of the file on disk.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox str(item.FSSize) // shows 0
```

Notes:

This is a shortcut for AttributeString(kMDItemFSSize).
(Read only property)

168.1.192 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the item.
Notes: (Read and Write property)

168.1.193 Path as String

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The complete path to the file.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.path // shows "/Users/cs/Desktop"
```

Notes:

This is a shortcut for AttributeString(kMDItemPath).
(Read only property)

168.1.194 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The attached value.
Notes:

You can use this property as you like.
(Read and Write property)

168.2 class MDQueryBatchingParamsMBS

168.2.1 class MDQueryBatchingParamsMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: This class containing the progress notification batching parameters of an MDQuery.
Notes: The first notification can be triggered by the either firstmaxnum or firstmaxms limit being exceeded. Subsequent notifications are triggered by either the progressmaxnum or progressmaxms limit. The default batching parameters are undefined and subject to change.

168.2.2 Properties

168.2.3 firstMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of milliseconds that can pass before a progress notification is sent out.
Notes:

This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for the first progress notification.
(Read and Write property)

168.2.4 firstMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of results that can accumulate before a progress notification is sent out by the MDQuery, for the first notification.
Notes: (Read and Write property)

168.2.5 progressMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of milliseconds that can pass before a progress notification is sent out.
Notes:

This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for progress notifications after the first, during the initial gathering phase of the query.

(Read and Write property)

168.2.6 progressMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of results that can accumulate before a progress notification is sent out by the MDQuery, for notifications after the first, during the initial gathering phase of the query.
Notes: (Read and Write property)

168.2.7 updateMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of milliseconds that can pass before a progress notification is sent out.
Notes:

This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for update notifications after the gathering phase of the query has finished.
(Read and Write property)

168.2.8 updateMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of results that can accumulate before an update notification is sent out by the MDQuery, for update notifications after the gathering phase of the query has finished.
Notes: (Read and Write property)

168.3 class MDQueryMBS

168.3.1 class MDQueryMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: MDQuery encapsulates all queries against the MetaData database.
Example:

```
dim m as new MDQueryMBS("* == ""Hello""wcd | | kMDItemTextContent = ""Hello""c")

call m.Execute(m.kMDQuerySynchronous)

MsgBox str(m.ResultCount) // shows a lot of results
```

Notes:

Depending on what and how you want to search, you can decide whether MDQueryMBS or CatSearchMBS is the better choice.

Available in Mac OS X version 10.4 and later.

Queries gather results or process updates only while the current thread's run loop is running. Queries normally operate asynchronously, and only send out progress notificiations as the list is being collected. The query list is kept up to date with respect to value lists and sorting as the progress notifications are sent out, so the query is in a good state during those events.

An MDQuery presents its results as if it were a simple array object. The results are MDItem.

Query Sorting Sorting the results from a query can be performed in one of two ways. First is to let the library sort the results for you by passing an array of attributes to sort on to constructor. The default sort provided by the constructor is a assending sort strings are compared using CFStringCompare() with the options kCFCompareNonliteral | kCFCompareLocalized | kCFCompareNumerically.

If used in a thread, please use a loop with calling NSRunLoopMBS.currentRunLoop.runUntilDate(nil) to give time for update events to fire.

168.3.4 Methods

168.3.5 AttributeValueOfResultAtIndex(name as string, index as UInt32) as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the value of the named attribute for the result at the given index.
Notes:

name: The attribute name for which to return the values. If the attribute is not one of those requested in the valueListAttrs or sortingAttrs parameters to one of the query creation functions, the result will be nil.
index: The index into the query's result list. If the index is negative, or is equal to or larger than the current number of results in the query, the behavior is undefined.
Returns he value of the attribute, or nil if the attribute doesn't exist in the query on that result.

168.3.6 Constructor(query as MDQueryMBS, queryString as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new query, which is a subset of the given query.
Notes:

Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

168.3.7 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new query, which is a subset of the given query.
Notes:

Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the

CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

168.3.8 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string, sortingAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new query, which is a subset of the given query.
Notes:

Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

168.3.9 Constructor(queryString as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new query with the given query expression.
Notes:

queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

168.3.10 Constructor(queryString as string, valueListAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new query with the given query expression.
Notes:

queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

168.3.11 Constructor(queryString as string, valueListAttributes() as string, sortingAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new query with the given query expression.
Notes:

queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

- 168.3.10 Constructor(queryString as string, valueListAttributes() as string) 23477

168.3.12 CountOfResultsWithAttributeValue(name as string, Value as Variant) as UInt32

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the number of results which have the given attribute and attribute value. Note that this count may change over time, as the query's result list is updated.
Notes:

name: The attribute name for which to return the number of results with the given value. If the attribute is not one of those requested in the valueListAttrs parameter to one of the query creation functions, the behavior is undefined.

value: The attribute value for which to return the number of results with that value. This parameter may be nil, in which case the number of results that do not contain the named attribute is returned.

Returns the number of results with that attribute and value.

168.3.13 DisableUpdates

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Disables updates to the query result list.
Notes: This should be called before iterating through the list of results to prevent the result list from changing during the iteration. The disabled state is a counter, and disabling can be done recursively and from different threads.

168.3.14 EnableUpdates

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Re-enables updates to the query result list.
Notes: This should be called when finished iterating through the list of results, to allow changes to the result list to occur. Changes will be allowed when all the disables have been matched by a corresponding enable.

168.3.15 Execute(flags as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Run the query, and populate the query with the results.
Example:

```
dim q as new MDQueryMBS("kMDItemContentModificationDate>=$ time.now")
// you will want to use a MDQueryMBS subclass here to catch the events

if not q.Execute(q.kMDQueryWantsUpdates) then
MsgBox "Failed to query"
end if
```

Notes:

Queries only gather results or process updates while the current thread's run loop is running. Queries normally operate asynchronously, and send out progress and update notifications to report changes to the list of results that has been collected. Queries have two phases: the initial gathering of all currently matching results, and a second live-update phase where queries monitor the state of the system and update themselves

to external changes in files or the operating environment (for example, as time advances, files which did not match the query when it was started may later match the query). Query notifications are posted within the context of the same thread which executes the query. [

here are three operational modes: (1) synchronous static queries, which collect the list of current results and then do not watch for updates to the results, (2) asynchronous static queries, which collect the results asychronously after this function returns, and then do not watch for updates to the results, and (3) asynchronous live queries which collect the initial results asychronously after this function returns, and then do watch for updates to the results, until the query is destroyed. There is little reason not to allow the fourth case, synchronous collection of initial results, followed by asynchronous monitoring for updates, so this may change in the future.

Flags: Options for the query.

Returns true if the query was started (executed in the case of a synchronous query), false otherwise. Queries cannot be executed more than once.

168.3.16 GetSortOptionFlagsForAttribute(fieldName as string) as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Gets the sort option flags for a sorting attribute.
Notes:

fieldName: The attribute name for which sort option flags are to be fetched.
Returns an integer with flags. Currently can be 0 or 1.

Available on Mac OS X 10.7 or later.

168.3.17 IndexOfResult(it as MDItemMBS) as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the current index of the given result.
Notes:

Note that the index of a result will change over time, as the query's result list is updated.

Returns the index of the given result, or -1 if the value is not one of the query's existing results.

168.3.18 IsGatheringComplete as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if the first phase of a query, the initial result gathering, has finished.
Notes: A boolean indicating whether or not the first phase of a query has completed.

168.3.19 QueryString as string

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the query string of the query.

168.3.20 ResultAtIndex(index as Integer) as MDItemMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the current result at the given index.
Notes:

This function causes the result object to be created if it hasn't been created already. For performance reasons, it is not advisable to ask for results that you don't need, to avoid the cost of creating them. If possible, call this function to fetch only the results you need to display or otherwise process. Note that the index of a particular result will change over time, as the query's result list is updated.

index: The index into the query's result list.

If the index is negative, or is equal to or larger than the current number of results in the query, the behavior is undefined.

Returns the MDItem currently at the given index, or if a result-create function has been set, returns the result returned by that function.

168.3.21 ResultCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the number of results currently collected by the query.
Example:

```
dim m as new MDQueryMBS("kMDItemContentModificationDate>=$ time.today")
```

```
call m.Execute(m.kMDQuerySynchronous)

MsgBox str(m.ResultCount)+" files modified today"
```

Notes: Note that the number of results in a query will change over time as the query's result list is updated.

168.3.22 Results(limit as Integer = -1) as MDItemMBS()

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries result items.
Notes:

Internally does what ResultAtIndex does for up to limit entries.
Limit with -1 will cause no limit.
If possible, call this function to fetch only the results you need to display or otherwise process.

168.3.23 SetMaxCount(size as Integer)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Use SetMaxCount to limit the number of results returned by the query engine.
Notes:

This must be called before the query is executed.
size: The maximum number of results desired.

168.3.24 SetSearchScope(paths() as folderitem, options() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Use SetSearchScope to limit the results returned by the query engine to those MDItem that appear within the specified directories.
Example:

```
dim q as MDQueryMBS // your query

q.SetSearchScope nil, array(q.kMDQueryScopeComputer)
```

Notes:

This may be used to limit searching to particular volumes. Tilde paths, or environment variables are not expanded. Calling this multiple times will replace the previous options. This must be called before the query is executed.

paths: An array of directories where you want to search. This array can be empty.
options: An array of scope options. Pass the kMDQueryScope* constants. This array can be empty.

168.3.25 SetSortOptionFlagsForAttribute(fieldName as string, flags as UInt32) as Boolean

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the sort flags for a query.
Notes:

fieldName: The attribute name for which sort option flags are to be set.

The attribute name must have been part of the sortingFlags when the query was created.

flags: An integer containing MDQuerySortOptionFlags to be applied to the attibute

Returns a boolean, true on success, false on failure.

Available on Mac OS X 10.7 or later.

168.3.26 SetSortOrder(sortingAttrs() as string) as Boolean

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the sort order for a query.
Notes:

sortingAttrs An array of attribute names, as in MDQueryCreate.
The query's result set will be sorted according to the order of these attributes. All names in the array have to have been passed as sortingAttrs when the query was created. The attribute names are strings.

Returns a boolean, true on success, false on failure.

Available on Mac OS X 10.7 or later.

168.3.27 SortingAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the list of attribute names the query is using to sort the results.

168.3.28 Stop

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Stops the query from ever generating more results.
Notes: Queries may be executed only once, so a stopped query cannot be restarted. The query will also not generate any result updates. The query is static after this function returns. The query will do final processing of results that have come in but not yet been processed (because, say, the batching parameters hasn't triggered that yet). That may trigger a progress notification, so be aware of that if you are stopping a query from within your progress note handler; that is, during this function, a recursive progress and/or finished notification might occur, which might recursively call your notification handler. It is safe to call this function recursively. You would call this function to stop a query that is generating way too many results to be useful, but still want to access the results that have come in so far. If a query is stopped before the gathering phase finishes, it will not report itself as finished, nor will it send out a finished notification.

168.3.29 ValueListAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the list of attribute names for which the query is collecting the lists of values.

168.3.30 ValuesOfAttribute(name as string) as Variant()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the list of values, from the results of the query, of the named attribute.
Notes:

The list is not ordered in any way. The list contains only one occurrence of each value. Note that this list may change over time, as the query's result list is updated.

name: The attribute name for which to return the values. If the attribute is not one of those requested in the valueListAttrs parameter to one of the query creation functions, the behavior is undefined.

Returns an array holding the value objects for that attribute.

168.3.31 Properties

168.3.32 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference for the MDQuery.
Notes: (Read and Write property)

168.3.33 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The attached value.
Notes:

You can use this property as you like.
(Read and Write property)

168.3.34 BatchingParameters as MDQueryBatchingParamsMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The query whose batching parameters are to be set.
Notes: (Read and Write computed property)

168.3.35 Events

168.3.36 Finish()

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

Function: The event called when the query has finished.
Notes: Called when the query has finished with the initial result-gathering phase, and may now proceed into the live-update phase (if that option was chosen when the query was executed). This event often shortly follows after the last progress notification. It is usually not necessary to update any displayed UI in response to this event, since it doesn't indicate any change in the result list of a query.

168.3.37 Progress(AddedItems() as MDItemMBS, ChangedItems() as MDItemMBS, RemovedItems() as MDItemMBS)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

Function: The event sent to indicate changes to the query's results list during the initial gathering phase of a query's execution.
Notes:

Mostly adds will occur during this phase, but removals and changes can also occur, as in any update.
For performance reasons the arrays are empty in newer Mac OS X SDK versions.
In that case please use the result functions.

168.3.38 Update(AddedItems() as MDItemMBS, ChangedItems() as MDItemMBS, RemovedItems() as MDItemMBS)

MBS MacOSX Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

Function: The event is sent to indicate changes to the query's results list during the second, live-update, phase of a query's execution.

168.3.39 Constants

168.3.40 kMDQueryReverseSortOrderFlag=1

MBS MacOSX Plugin, Plugin Version: 11.2.

Function: A flag constant for calling SetSortOptionFlagsForAttribute.
Notes:

Sort the attribute in reverse order.
Available on Mac OS X 10.7 or later.

168.3.41 kMDQueryScopeAllIndexed="kMDQueryScopeAllIndexed"

MBS MacOSX Plugin, Plugin Version: 9.6.

Function: One of the option constants for the search scope.
Notes: A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to indexed, locally mounted volumes and indexed user mounted remote volumes, plus the user's home directory.

168.3.42 kMDQueryScopeComputer="kMDQueryScopeComputer"

MBS MacOSX Plugin, Plugin Version: 9.6.

Function: One of the option constants for the search scope.
Notes: A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to all locally mounted volumes, plus the user's home directory (which may be on a remote volume).

168.3.43 kMDQueryScopeComputerIndexed="kMDQueryScopeComputerIndexed"

MBS MacOSX Plugin, Plugin Version: 9.6.

Function: One of the option constants for the search scope.
Notes: A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to indexed, locally mounted volumes, plus the user's home directory (which may be on a remote volume).

168.3.44 kMDQueryScopeHome="kMDQueryScopeHome"

MBS MacOSX Plugin, Plugin Version: 9.6.

Function: One of the option constants for the search scope.
Notes: A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to the volume and directory that contains the current user's home directory

168.3.45 kMDQueryScopeNetwork="kMDQueryScopeNetwork"

MBS MacOSX Plugin, Plugin Version: 9.6.

Function: One of the option constants for the search scope.
Notes: A constant, which can be passed in the scopeDirectories array, to specify that the search should include all user mounted remote volumes.

168.3.46 kMDQueryScopeNetworkIndexed="kMDQueryScopeNetworkIndexed"

MBS MacOSX Plugin, Plugin Version: 9.6.

Function: One of the option constants for the search scope.
Notes: A constant, which can be passed in the scopeDirectories array, to specify that the search should include indexed user mounted remote volumes.

168.3.47 kMDQuerySynchronous=1

MBS MacOSX Plugin, Plugin Version: 9.6.

Function: One of the constants for executing a query.
Notes: Block during the gathering phase. If this parameter is true, the function will not return until the query has finished gathering the initial results. The run loop will run in the default mode, which will allow anything registered in that mode with this run loop to execute as well. If this parameter is false, the function returns immediately after starting the query asychronously.

168.3.48 kMDQueryWantsUpdates=4

MBS MacOSX Plugin, Plugin Version: 9.6.

Function: One of the constants for executing a query.
Notes:

When set, after gathering the initial results the query will watch for changes in the system which should update the list of results. This can be changes which cause new files to now match the query, or changes which cause files in the result list to continue to match, or no longer match, the query. Files which begin to match the query are added to the result list, and files which no longer match the query expression are removed from the result list.
Currently, this parameter is ignored if the synchronous parameter is true. This is subject to change, and you should always pass in the value you want here.

168.4 Globals

168.4.1 SpotlightMBS(searchString as string) as Integer

MBS MacOSX Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Displays a Spotlight search window.
Example:

call SpotlightMBS("Hello")

Notes:

searchString: An initial query string. Pass "" to open the search window with no initial query string.

Returns a Mac OS error code and -1 if the function is not available and 0 on success.
Requires Mac OS X 10.4.

Chapter 169

SQL

169.1 class Database

169.1.1 class Database

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Xojo Database class is the base class for the database subclasses that communicate with a variety of databases.
Notes: Use one of the subclasses to connect to your database.

169.1.2 Methods

169.1.3 AddRow(TableName as String, row as DatabaseRow)

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts Data (a populated DatabaseRow) as a new row in TableName.

169.1.4 BeginTransaction

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new transaction.
Notes: Changes to the database made after this call can be saved with CommitTransaction or undone with RollbackTransaction.

169.1.5 Close

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes or disconnects the database.
Notes:

Calling Close does not issue a Commit, but some databases will automatically Commit changes in a transaction when you Close the connection and some database will automatically Rollback changes in a transaction when the connection is closed. Refer to the documentation for your database to check what its behavior is.

For desktop applications, you will often Connect to the database when the app starts and Close it when the app quits.

For web applications, you usually Connect to the database when the Session starts and Close it when the Session quits.

169.1.6 Commit

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Commits an open transaction. This permanently saves changes to the database.
Notes:

You have to have an open transaction to be able to use Commit. On SQLite (and other databases), you can start a transaction with this command:

BEGIN TRANSACTION

It can be sent using SQLExecute:

DB.SQLExecute("BEGIN TRANSACTION")

169.1.7 CommitTransaction

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Commits an open transaction. This permanently saves changes to the database.

169.1.8 Connect

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to the database so that you can begin using it.
See also:

- 169.1.9 Connect as boolean 23493

169.1.9 Connect as boolean

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to the database so that you can begin using it.
Notes:

Before proceeding with database operations, test to be sure that Connect returns True.
If Connect returns False, you should also check the ErrorCode and ErrorMessage.

See Option() for various options you can set before connecting.
e.g. c.Option("SQLiteVFSFlags") = "1" for SQLite for read only access.
See also:

- 169.1.8 Connect 23493

169.1.10 ExecuteSQL(sql As String, ParamArray values As Variant)

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used to execute an SQL command.
Notes: Use this for commands that do not return any data, such as CREATE TABLE or INSERT.
See also:

- 169.1.11 ExecuteSQL(sql As String, values() As Variant) 23493

169.1.11 ExecuteSQL(sql As String, values() As Variant)

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used to execute an SQL command.
Notes: Use this for commands that do not return any data, such as CREATE TABLE or INSERT.
See also:

- 169.1.10 ExecuteSQL(sql As String, ParamArray values As Variant) 23493

169.1.12 InsertRecord(TableName as String, Data as DatabaseRecord)

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts Data (a populated DatabaseRecord) as a new row in TableName.
Notes: Always check the Error property to verity that the data was added.

169.1.13 Prepare(statement as String) as PreparedSQLStatement

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a PreparedSQLStatement using the SQL statement for use with the various database prepared statement classes.
Notes: A prepared statement is an SQL statement with parameters that has been pre-processed by the database so that it can be executed more quickly if it is re-used with different parameters. Prepared statements also mitigate the risk of SQL injection in web apps.

169.1.14 Rollback

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cancels an open transaction restoring the database to the state it was in before the transaction began.
Notes:

You will generally want to rollback database changes if a database error occurs within the transaction.
You have to have an open transaction to be able to use Rollback. On SQLite (and other databases), you can start a transaction with this command:

BEGIN TRANSACTION

It can be sent using SQLExecute:

DB.SQLExecute("BEGIN TRANSACTION")

169.1.15 RollbackTransaction

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cancels an open transaction restoring the database to the state it was in before the transaction began.

169.1.16 SelectSQL(sql As String, ParamArray values As Variant) as RowSet

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL SELECT statement and returns the results in a RowSet.
See also:

- 169.1.17 SelectSQL(sql As String, values() As Variant) as RowSet 23495

169.1.17 SelectSQL(sql As String, values() As Variant) as RowSet

MBS SQL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL SELECT statement and returns the results in a RowSet.
See also:

- 169.1.16 SelectSQL(sql As String, ParamArray values As Variant) as RowSet 23495

169.1.18 SQLExecute(ExecuteString as string)

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used to execute an SQL command. Use this for commands that do not return any data, such as CREATE TABLE or INSERT. ExecuteString contains the SQL statement.
Notes: To avoid SQL Injection, be sure to use Prepared SQL Statements.

169.1.19 SQLSelect(SelectString as string) as RecordSet

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is an SQL statement that returns a RecordSet.
Notes:

SelectString contains the SQL statement.

Typically only SQL SELECT statements return a RecordSet, but some databases return a RecordSet for SQL commands such as INSERT, UPDATE or stored procedures.

If the SQL does not return data then Nil is returned. Nil is also usually returned if there is an error in the SQL statement, but you should instead check Database.Error to check if an error occurred.

To avoid SQL Injection, be sure to use Prepared SQL Statements.

169.1.20 Properties

169.1.21 DatabaseName as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the database to open.
Example:

```
dim db as new SQLDatabaseMBS
db.DatabaseName="PostgreSQL:127.0.0.1,5432@dbname=postgres connect_timeout=10 sslmode=require"
```

Notes:

The DatabaseName is typically used with server databases (such as MySQL or PostgreSQL) to identify the specific database to use on the server.

Please set the DatabaseName, UserName and Password properties when using SQLDatabaseMBS class. The Host property is ignored.
The database name must contain the complete information and a prefix for the kind of database.
(Read and Write property)

169.1.22 Error as Boolean

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if an error is returned from the database engine.
Notes:

See the values of the ErrorCode and ErrorMessage properties to learn the specifics of the error.

You should check the Error property after each database operation to see if there was an error. If there is an error, you can display or log the ErrorCode and ErrorMessage.
(Read and Write property)

169.1.23 ErrorCode as Integer

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error code returned from the database.
Notes:

Error codes and error messages are different for each database.

(Read and Write property)

169.1.24 ErrorMessage as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text of the error message returned from the database.
Notes:

Error codes and error messages are different for each database.
You should check the Error property after each database operation to see if there was an error. If there is an error, you can display or log the ErrorCode and ErrorMessage.
(Read and Write property)

169.1.25 Host as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The database host name or IP address of the database server.
Notes: (Read and Write property)

169.1.26 Password as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password that is required for access to the database.
Notes:

Typically used in conjunction with UserName.
(Read and Write property)

169.1.27 UserName as String

MBS SQL Plugin, Plugin Version: 1.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The username that is required for access to the database.
Notes: (Read and Write property)

169.2 class DB2MBS

169.2.1 class DB2MBS

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for some DB2 related API commands.
Example:

```
dim cmd as new SQLCommandMBS // your command
dim con as new SQLConnectionMBS // your connection
dim api as DB2MBS = con.NativeAPI

// now use an API function
MsgBox str(api.SQLRowCount(cmd))
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

More commands are added as requested.

Deprecated in favor of direct methods on SQLCommandMBS. Please let us know if you need more DB2 specific functions.
Subclass of the SQLAPIMBS class.

169.2.2 Blog Entries

169.2.4 Methods

169.2.5 SQLExecDirect(cmd as SQLCommandMBS, text as string)

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes an SQL command directly without any preprocessing in the plugin.
Example:

```
dim cmd as new SQLCommandMBS // your command
dim con as new SQLConnectionMBS // your connection
dim api as DB2MBS = con.NativeAPI

// now use an API function
const sql = "some sql command"
api.SQLExecDirect cmd, sql
```

Notes: Lasterror is set.

169.2.6 SQLRowCount(cmd as SQLCommandMBS) as Int64

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the affected number of rows for the last operation.
Notes: Lasterror is set.

169.2.7 Properties

169.2.8 Lasterror as Integer

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

169.3 class InformixMBS

169.3.1 class InformixMBS

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for Informix specific functions.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more Informix specific functions.
Subclass of the SQLAPIMBS class.

169.3.2 Blog Entries

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.0
- MBS Real Studio Plugins, version 13.0fc1

169.3.4 Methods

169.3.5 Error(cmd as SQLCommandMBS, byref SQLState as string, byref NativeError as Integer, byref ErrorMsg as string) as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the error status.

169.3.6 GetCursorName(cmd as SQLCommandMBS) as string

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries cursor name for given recordset.

169.3.7 HDBC as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Database Connection handle.

169.3.8 HENV as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The environment handle.

169.3.9 HSTMT(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the statement handle for the command object.
Notes: Returns 0 on any error.

169.3.10 SetCursorName(cmd as SQLCommandMBS, name as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets cursor name for given recordset.
Notes: Returns true on success.

169.4 module InternalCubeSQLLibraryMBS

169.4.1 module InternalCubeSQLLibraryMBS

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for our internal CubeSQL client connector.
Example:

```
if InternalCubeSQLLibraryMBS.Use then
MsgBox "Using internal CubeSQL library."
else
MsgBox "Failed, so please use library file."
end if

Dim db As SQLDatabaseMBS // or SQLConnectionMBS

db.Option("ConnectionTimeout") = "30" // 30 seconds timeout
db.Option("ConnectionEncryption") = "SSL+AES256"
db.Option("SSLCertificatePath") = SSLCertificatePath

// connect...
```

Notes:

This is a CubeSQL client library built into a plugin, so you can decide with use of MBS SQL Plugin to use this plugin instead of providing your own external copy of CubeSQL shared library.

Version 19.4 or newer have CubeSQL with SSL included.
You can use Option("ConnectionEncryption") with SSL, SSL+AES128, SSL+AES192 and SSL+AES256 as values.

If ConnectionEncryption is SSL, we can pass path from Option("SSLCertificatePath") with the certificate file.

169.4.2 Blog Entries

169.4.6 Methods

169.4.7 SSLVersion as String

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries SSL version of library.

169.4.8 Use as boolean

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Registers the built in CubeSQL client library for use.
Example:

```
if InternalCubeSQLLibraryMBS.Use then
MsgBox "Using internal CubeSQL library."
else
MsgBox "Failed, so please use library file."
end if
```

Notes: So instead of having SQL Plugin load CubeSQL shared library from file, we use the one built into this plugin.

169.4.9 Version as String

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of library.

169.5 module InternalPostgreSQLLibraryMBS

169.5.1 module InternalPostgreSQLLibraryMBS

MBS SQL Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Targets: All.

Function: The module for our internal PostgreSQL engine.
Example:

```
if InternalPostgreSQLLibraryMBS.Use then
MsgBox "Using internal PostgreSQL."
else
MsgBox "Failed, so please use library file."
end if
```

Deprecated: This item is deprecated and should no longer be used. You can use postgres driver libraries instead. **Notes:** This is a PostgreSQL library built into a plugin, so you can decide with use of MBS SQL Plugin to use this plugin instead of providing your own external copy of PostgreSQL shared library.

169.5.2 Blog Entries

- MBS Xojo Plugins, version 20.5pr8

169.5.4 Methods

169.5.5 OpenSSLVersion as String

MBS SQL Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Targets: All.

Function: Returns the version of the OpenSSL library.
Example:

```
MsgBox InternalPostgreSQLLibraryMBS.OpenSSLVersion
```

169.5.6 Use as boolean

MBS SQL Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Targets: All.

Function: Registers the built in PostgreSQL client library for use.
Example:

```
if InternalPostgreSQLLibraryMBS.Use then
MsgBox "Using internal PostgreSQL."
else
MsgBox "Failed, so please use library file."
end if
```

Notes: So instead of having SQL Plugin load libpg shared library from file, we use the one built into this plugin.

169.5.7 Version as Integer

MBS SQL Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Targets: All.

Function: Returns version of PostgreSQL version.
Example:

```
MsgBox str(InternalPostgreSQLLibraryMBS.Version)
// e.g. 90501 for 9.5.1
```

169.6 module InternalSQLiteLibraryMBS

169.6.1 module InternalSQLiteLibraryMBS

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for our internal SQLite3 engine.
Example:

```
// enable our built-in SQLite library, which supports encryption
Call InternalSQLiteLibraryMBS.Use

// where to store?
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.db")
Dim storage_database As New SQLDatabaseMBS ' SQLiteDatabase
storage_database.SQLiteEncryptionKey = "aes256:password" ' <- password with AES256 as prefix to pick algorithm
storage_database.DatabaseName = "sqlite:"+ f.NativePath

If storage_database.Connect Then

// create table if this is not yet here
storage_database.SQLExecute "Create table if not exists pics(pic_id integer PRIMARY KEY AUTOINCREMENT, name varchar(20), pic blob)"

// done
MsgBox "Ready"
Else
MsgBox storage_database.ErrorMessage
End If
```

Notes: This is a SQLite3 library built into a plugin, so you can decide with use of MBS SQL Plugin to use this plugin instead of providing your own external copy of SQLite shared library.

169.6.6 Methods

169.6.7 CompileOption(index as Integer) as String

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of a compile option.
Example:

```
dim list() as string

for i as Integer = 0 to 100
dim s as string = InternalSQLiteLibraryMBS.CompileOption(i)
if s = "" then exit
dim b as Boolean = InternalSQLiteLibraryMBS.CompileOptionUsed(s)
dim t as string
if b then
t = ": yes"
else
t = ": no"
end if
list.Append s + t
next

MsgBox Join(list, EndOfLine)
```

Notes: Index index starting with zero until you get back an empty name.

169.6.8 CompileOptionUsed(optionName as String) as Boolean

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries if a given compile option was set on or off.
Example:

```
dim list() as string

for i as Integer = 0 to 100
dim s as string = InternalSQLiteLibraryMBS.CompileOption(i)
if s = "" then exit
dim b as Boolean = InternalSQLiteLibraryMBS.CompileOptionUsed(s)
dim t as string
if b then
t = ": yes"
else
```

```
t = ": no"
end if
list.Append s + t
next

MsgBox Join(list, EndOfLine)
```

Notes: If you need a specific option set, please contact MBS support.

169.6.9 isKeyword(name as string) as boolean

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if an identifier is a keyword.
Example:

```
if InternalSQLiteLibraryMBS.isKeyword("TABLE") then
MsgBox "Table is a keyword"
else
MsgBox "Table is not a keyword!"
end if
```

169.6.10 Keywords as String()

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of keywords.
Example:

```
MsgBox Join(InternalSQLiteLibraryMBS.Keywords,EndOfLine)
```

169.6.11 LoadICU as Boolean

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads ICU libraries now.
Notes:

Returns true on success.
Normally we load them when SQLite initializes and we then add the ICU extension if we find the library.

Call this function toe explicit load them now.

If MBS Plugin can find International Components for Unicode library files, we can load them and use them for proper unicode handling in SQLite.

169.6.12 Shell(arguments() as string) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs a SQLite shell command.
Example:

```
dim arguments() as string

dim f as FolderItem = SpecialFolder.Desktop.Child("test.sqlite")
dim o as FolderItem = SpecialFolder.Desktop.Child("out.csv")

arguments.Append "sqlite3" // path to app
arguments.Append f.NativePath
arguments.Append "-csv"
arguments.Append "-header"
arguments.Append "-cmd"
arguments.Append ".output"
arguments.Append ".output """+o.NativePath+""""
arguments.Append "-cmd"
arguments.Append "select * from Documentation;"

dim n as Integer = InternalSQLiteLibraryMBS.Shell(arguments)
Break
```

Deprecated: This item is deprecated and should no longer be used. You can use Sqlite command line tool instead. **Notes:**

Using the SQLite library inside the plugin.
For this the plugin includes the code from the SQLite command line tool.
The tool may print to stdout/stderr and could possibly read from stdin.

Deprecated for MBS Plugin 19.2.

169.6.13 SourceID as String

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source code ID.
Example:

```
MsgBox InternalSQLiteLibraryMBS.SourceID
```

169.6.14 Use as boolean

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Registers the built in SQLite library for use.
Example:

```
if InternalSQLiteLibraryMBS.Use then
MsgBox "Using internal SQLite"
else
MsgBox "Failed, so please use library file."
end if
```

Notes: So instead of having SQL Plugin load sqlite3 shared library from file, we use the one built into this plugin.

169.6.15 Version as String

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the version number.
Example:

```
MsgBox InternalSQLiteLibraryMBS.Version
```

169.6.16 VersionNumber as Integer

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the sqlite version number.
Example:

```
MsgBox str(InternalSQLiteLibraryMBS.VersionNumber)
```

169.6.17 Properties

169.6.18 ICUEnabled as Boolean

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether ICU libraries are enabled.
Notes:

If MBS Plugin can find International Components for Unicode library files, we can load them and use them for proper unicode handling in SQLite.
Default is true to enable them, if possible.
(Read and Write property)

169.6.19 ICULoaded as Boolean

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether ICU libraries are loaded.
Notes:

If MBS Plugin can find International Components for Unicode library files, we can load them and use them for proper unicode handling in SQLite.
(Read only property)

169.6.20 ICUUsed as Boolean

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether ICU libraries have been used.
Notes:

Once SQLite is initialized, we set this to 1 if we passed the functionality to SQLite.
Starts with false and should later turn true if ICU libraries are loaded and enabled for usage.
(Read only property)

169.6.21 MemoryHighwater as Int64

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries high water memory usage mark.
Example:

MsgBox "SQLite uses "+_
str(InternalSQLiteLibraryMBS.MemoryUsed)+_

```
" bytes and has a high mark of "+_
str(InternalSQLiteLibraryMBS.MemoryHighwater)+" bytes."
```

Notes: (Read only property)

169.6.22 MemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current memory usage.
Example:

```
MsgBox "SQLite uses "+_
str(InternalSQLiteLibraryMBS.MemoryUsed)+_
" bytes and has a high mark of "+_
str(InternalSQLiteLibraryMBS.MemoryHighwater)+" bytes."
```

Notes: (Read only property)

169.7 class MySQLMBS

169.7.1 class MySQLMBS

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for MySQL specific functionality.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more MySQL or MariaDB specific functions.
Subclass of the SQLAPIMBS class.

169.7.4 Methods

169.7.5 AffectedRows as UInt64

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the number of affected rows in the last statement.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-affected-rows.html

169.7.6 Error as string

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the last error text.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-error.html

169.7.7 ErrorNumber as UInt32

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the last error code.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-errno.html

169.7.8 FieldCount as UInt32

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of columns for the most recent query on the connection.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-field-count.html

169.7.9 Info as string

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieves an info string providing information about the most recently executed statement.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-info.html

169.7.10 InsertID as Int64

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the last auto increment value from last insert command.
Notes:

Please query value right after doing Insert. This value is reset when you call commit.

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html

169.7.11 NumberOfRows(cmd as SQLCommandMBS) as UInt64

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of records in a command.

169.7.12 SetSSL(keyPath as string, CertificatePath as string, AuthorityPath as string, authorityFolderPath as string, Cipher as string)

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets SSL connection parameters.
Notes:

Calls mysql_ssl_set internally.
Used for establishing secure connections using SSL. It must be called before Connect(). It does nothing unless SSL support is enabled in the client library.

keyPath is the path name to the key file.
CertificatePath is the path name to the certificate file.
AuthorityPath is the path name to the certificate authority file.
authorityFolderPath is the path name to a directory that contains trusted SSL CA certificates in PEM format.
Cipher is a list of permissible ciphers to use for SSL encryption.

Any unused SSL parameters may be given as empty string.
For paths, please use folderitem.UnixPathMBS and not folderitem.ShellPath.

Please switch to using the following options on the connection:

MYSQL_SSL_KEY
MYSQL_SSL_CERT
MYSQL_SSL_CA
MYSQL_SSL_CAPATH

MYSQL_SSL_CIPHER

They should be specified before the connection is made.
e.g.

db.Option("MYSQL_SSL_CIPHER") = "DHE-RSA-AES256-SHA"

Allows to specify MySQL SSL parameters that will be used with mysql_ssl_set. MySQL API method called only when at least one parameter specified. See MySQL documentation for more information about these options.

169.8 class PostgreSQLAPIMBS

169.8.1 class PostgreSQLAPIMBS

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for Postgre SQL specific functions.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

The Listen method and Notification event are in the SQLDatabaseMBS/SQLConnectionMBS classes directly.

Deprecated in favor of direct methods on SQLCommandMBS. Please let us know if you need more postgreSQL specific functions.
Subclass of the SQLAPIMBS class.

169.8.2 Blog Entries

169.8.4 Methods

169.8.5 DB as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The database name used to create the connection.

169.8.6 ErrorMessage as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.

169.8.7 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldIndex as Integer) as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a field by index for the row with the RecordIndex.
See also:

- 169.8.8 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldName as string) as string 23520

169.8.8 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldName as string) as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a field by name for the row with the RecordIndex.
See also:

- 169.8.7 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldIndex as Integer) as string 23520

169.8.9 FieldCount(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of fields in the result.

169.8.10 Host as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The host used to create the connection.

169.8.11 Options as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The options used to create the connection.

169.8.12 Password as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password used to create the connection.

169.8.13 Port as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The port used to create the connection.

169.8.14 RecordCount(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of records in the result.

169.8.15 TTY as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tty used to create the connection.

169.8.16 User as string

MBS SQL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user name used to create the connection.

169.9 Globals

169.9.1 BuildRecordSetMBS(fieldNames() as string, values() as string) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a recordset from strings.
Example:

```
dim names() as string = array("Firstname", "Lastname")
dim values() as string

values.append "Stefan"
values.append "Miller"
values.append "Patrick"
values.append "Maier"

dim r as RecordSet = BuildRecordSetMBS(names, values)
```

Notes:

First array has field names. Second array has all values.
As plugin can't access multi dimensional arrays, we have to flatten it into one dimension and concat all rows.
Returns nil on low memory.
Array sizes should be like: Ubound(values)+1 = (ubound(fieldNames)+1) * RecordCount

See also BuildRowSetMBS for newer Xojo versions.

169.9.2 Blog Entries

169.9.3 BuildRowSetMBS(fieldNames() as string, values() as string) as RowSet

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Builds a recordset from strings.
Example:

```
dim names() as string = array("Firstname", "Lastname")
dim values() as string

values.append "Stefan"
values.append "Miller"
values.append "Patrick"
values.append "Maier"

dim r as RowSet = BuildRowSetMBS(names, values)
```

Notes:

First array has field names. Second array has all values.
As plugin can't access multi dimensional arrays, we have to flatten it into one dimension and concat all rows.
Returns nil on low memory.
Array sizes should be like: Ubound(values)+1 = (ubound(fieldNames)+1) * RecordCount

RowSet requires Xojo 2019r2 or newer.

169.9.5 CloneRecordSetMBS(rec as RecordSet) as RecordSet

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an in memory copy of the RecordSet.
Notes: This copied record set can be used instead of the original one and even after the original database connection is closed.

169.11.4 Properties

169.11.5 ClassName as String

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class name of the underlying C++ class.
Notes:

Sometimes useful to see a which API currently is used.
(Read only property)

169.11.6 Connection as Variant

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The database connection this API is used with.
Notes: (Read only property)

169.12 class SQLBLobMBS

169.12.1 class SQLBLobMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a blob.
Notes:

Basicly this is a SQLStringMBS which is always marked to contain binary data. You only need this class to use the constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

169.12.4 Methods

169.12.5 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.
See also:

- 169.12.6 Constructor(Data as MemoryBlock) 23526
- 169.12.7 Constructor(data as SQLStringMBS) 23527
- 169.12.8 Constructor(Data as string, isText as Boolean = True) 23527
- 169.12.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 23527

169.12.6 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data, e.g. for blob.
See also:

- 169.12.5 Constructor 23526
- 169.12.7 Constructor(data as SQLStringMBS) 23527
- 169.12.8 Constructor(Data as string, isText as Boolean = True) 23527
- 169.12.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 23527

169.12.7 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new blob object from a string object.
See also:

- 169.12.5 Constructor 23526
- 169.12.6 Constructor(Data as MemoryBlock) 23526
- 169.12.8 Constructor(Data as string, isText as Boolean = True) 23527
- 169.12.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 23527

169.12.8 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 169.12.5 Constructor 23526
- 169.12.6 Constructor(Data as MemoryBlock) 23526
- 169.12.7 Constructor(data as SQLStringMBS) 23527
- 169.12.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 23527

169.12.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new blob object from a data provider.
Notes:

The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new blob object life long enough. Because the actual

data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.

169.14.6 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new clob object from a string object.
See also:

- 169.14.5 Constructor 23531

- 169.14.7 Constructor(Data as string, isText as boolean=true) 23532
- 169.14.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 23532

169.14.7 Constructor(Data as string, isText as boolean=true)

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 169.14.5 Constructor 23531
- 169.14.6 Constructor(data as SQLStringMBS) 23531
- 169.14.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 23532

169.14.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new clob object from a data provider.
Notes:

The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new clob object life long enough. Because the actual data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.
See also:

- 169.14.5 Constructor 23531
- 169.14.6 Constructor(data as SQLStringMBS) 23531
- 169.14.7 Constructor(Data as string, isText as boolean=true) 23532

169.15 class SQLCommandMBS

169.15.1 class SQLCommandMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the central class for the using the SQL database access.
Example:

```
dim con as SQLConnectionMBS
dim cmd as SQLCommandMBS

try

con = new SQLConnectionMBS // connection object
cmd = new SQLCommandMBS // create command object

// where is the library?
con.SetFileOption con.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database (mySQL in our example)
// server: 192.168.1.80
// port: 3306
// database: test
// name: root
// no password
con.Connect("192.168.1.80,3306@test","root","",SQLConnectionMBS.kMySQLClient)
// associate a command with connection
// connection can also be specified in SACommand constructor
cmd.Connection=con

// create table
cmd.setCommandText("Create table test_tbl(fid integer, fvarchar20 varchar(20), fblob blob)")
cmd.Execute

// insert value
cmd.setCommandText("Insert into test_tbl(fid, fvarchar20) values (1, 'Some string (1)')")
cmd.Execute

// commit changes on success
con.Commit

MsgBox("Table created, row inserted!")

catch r as SQLErrorExceptionMBS
// SAConnection::Rollback()
// can also throw an exception
// (if a network error for example),
```

```
// we will be ready
try

// on error rollback changes
if con<>nil then
con.rollback
end if
catch x as SQLErrorExceptionMBS
// ignore
end try

// show error message
MsgBox r.message
end try
```

Notes:

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

169.15.6 Methods

169.15.7 AsRecordSet as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a recordset using the command to query fields.
Notes:

You can use normal RecordSet functions to walk through fields and they simply control the command object. This is for convenience like passing RecordSet to report functions in Xojo.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

169.15.8 AsRowSet as RowSet

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a RowSet using the command to query fields.
Notes:

You can use normal RowSet functions to walk through fields and they simply control the command object. This is for convenience like passing RowSet to other functions in Xojo.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RowSet functionality.

The RowSet may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

Requires Xojo 2019r2 or newer.

169.15.9 Cache

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Caches values.
Notes:

The plugin will load the whole recordset and store it in memory.
Now you can move forward/backward as needed to read data.

If you set Option("AutoCache") = "true", the plugin will call Cache automatically for all result sets.
We can only cache first result set.

169.15.10 Cancel

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Attempts to cancel the pending result set, or current statement execution.
Notes:

Only if isExecuting is true, doing cancel makes sense.

Cancel can cancel the following types of processing on a statement:

A function running asynchronously on the statement.
A function running on the statement on another thread.
After an application calls a function asynchronously, it checks repeatedly to determine whether it has finished processing. While the function is processing, an application can call Cancel to cancel the function.

In a multithread application, the application can cancel a function that is running synchronously on a statement.

see also
https://www.sqlapi.com/ApiDoc/class_s_a_command.html

169.15.11 Close

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the specified command object.
Notes:

Use the Close method to close the command explicitly.

A command will be implicitly closed in destructor, so you don't have to call Close method explicitly.

169.15.12 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new command object with no connection and no command text.
See also:

- 169.15.13 Constructor(connection as SQLConnectionMBS, SQLCommand as String, CommandType as Integer = 0) 23537

169.15.13 Constructor(connection as SQLConnectionMBS, SQLCommand as String, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This constructor initializes a new SQLCommandMBS object.
Example:

```
// your connection
dim con as SQLConnectionMBS
dim SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
dim cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

Notes:

Connection: the connection to associated with the command.
SQLCommand: A string which represents command text string (an SQL statement or a stored procedure name). If it is an empty string, no command text is associated with the command, and you have to call setCommandText method later.
CommandType: The type of command like kCommandTypeUnknown, kCommandTypeSQLStatement, kCommandTypeSQLStatementRaw or kCommandTypeStoredProcedure.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.
See also:

- 169.15.12 Constructor 23537

169.15.14 CreateParam(name as string, ParamType as Integer, DirType as Integer=0) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates parameter associated with the specified command.
Notes:

Parameters

Returns a new SQLParamMBS object on success or nil on any error.

Normally you should not create parameters by yourself. The Library automatically detects whether the

name:	A string representing the name of parameter.
ParamType:	Type of the parameter's value. Use the kDataType constants.
ParamSize:	An integer value represents parameter's value size.
ParamPrecision:	An integer value represents parameter's value precision.
ParamScale:	An integer value represents parameter's value scale.
DirType:	Type of the parameter. Use the kParamDirType* constants.

command has parameters in terms of the command text and implicitly creates a set of SAParam objects.

Nevertheless, if you call CreateParam explicitly you have to delete all SAParam objects created automatically by the Library before. Use DestroyParams method before the first call of CreateParam method.
See also:

- 169.15.15 CreateParam(name as string, ParamType as Integer, NativeType as Integer, ParamSize as Integer, ParamPrecision as Integer, ParamScale as Integer, DirType as Integer=0) as SQLParamMBS 23539

169.15.15 CreateParam(name as string, ParamType as Integer, NativeType as Integer, ParamSize as Integer, ParamPrecision as Integer, ParamScale as Integer, DirType as Integer=0) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates parameter associated with the specified command.
Notes:

Parameters

name:	A string representing the name of parameter.
ParamType:	Type of the parameter's value. Use the kDataType constants.
ParamSize:	An integer value represents parameter's value size.
ParamPrecision:	An integer value represents parameter's value precision.
ParamScale:	An integer value represents parameter's value scale.
DirType:	Type of the parameter. Use the kParamDirType* constants.

Returns a new SQLParamMBS object on success or nil on any error.

Normally you should not create parameters by yourself. The Library automatically detects whether the command has parameters in terms of the command text and implicitly creates a set of SAParam objects.

Nevertheless, if you call CreateParam explicitly you have to delete all SAParam objects created automatically

by the Library before. Use DestroyParams method before the first call of CreateParam method.
See also:

- 169.15.14 CreateParam(name as string, ParamType as Integer, DirType as Integer=0) as SQLParamMBS 23538

169.15.16 DB2SQLExecDirect(sql as string)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes an SQL command directly without any preprocessing in the plugin.
Example:

```
dim cmd as new SQLCommandMBS // your command
dim con as new SQLConnectionMBS // your connection

// now use an API function
const sql = "some sql command"
cmd.DB2SQLExecDirect sql
```

Notes: Lasterror is set.

169.15.17 DB2SQLRowCount as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the affected number of rows for the last operation.
Notes: Lasterror is set.

169.15.18 DestroyParams

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destroys all parameters associated with the specified command.
Notes:

DestroyParams method destroys all parameters either created automatically by the Library or by user.

Normally you should not create and delete parameters by yourself. The Library automatically detects whether the command has parameters, implicitly creates a set of SAParam objects and then deletes them in SACommanddestructor. But if you have some reason to create parameters explicitly use CreateParam method and then call DestroyParams method to delete all parameters after your work with parameters is over.

169.15.19 Execute

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes the current command.
Example:

```
// your connection
dim con as SQLConnectionMBS
dim SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
dim cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

Notes:

Use the Execute method to execute the query or stored procedure specified in the command text. Execute method calls Prepare method implicitly if needed. If the command has input parameters, they should be bound before calling Execute method. Input parameters represented by SAParam object. To bind input variables assign a value to SAParam object returning by Param or ParamByIndex methods.

A command (an SQL statement or procedure) can have a result set after executing. To check whether a result set exists use isResultSet method. If result set exists, a set of SAField objects is created after command execution. Rows from the result set can be fetched one by one using FetchNext method. To get field description or value use Field method.

Output parameters represented by SAParam objects. They are available after command execution. To get parameter description or value use Param or ParamByIndex methods.

169.15.20 ExecuteCommand(SQLCommand as string, CommandType as Integer=0)

MBS SQL Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes the given command.
Notes:

This is a convenience function.

Internally it calls setCommandText with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

169.15.21 ExecuteCommandMT(SQLCommand as string, CommandType as Integer=0)

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes the given command.
Notes:

This is a convenience function.
Internally it calls setCommandText with the given command and calls Execute.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

169.15.22 ExecuteMT

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes the current command.
Notes:

Use the Execute method to execute the query or stored procedure specified in the command text. Execute method calls Prepare method implicitly if needed. If the command has input parameters, they should be bound before calling Execute method. Input parameters represented by SAParam object. To bind input variables assign a value to SAParam object returning by Param or ParamByIndex methods.

A command (an SQL statement or procedure) can have a result set after executing. To check whether a result set exists use isResultSet method. If result set exists, a set of SAField objects is created after command execution. Rows from the result set can be fetched one by one using FetchNext method. To get field description or value use Field method.

Output parameters represented by SAParam objects. They are available after command execution. To get parameter description or value use Param or ParamByIndex methods.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

169.15.23 FetchFirst as boolean

MBS SQL Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fetches first row from a result set.
Notes:

Same as FetchNext, but jumps to the first row.
Returns true if the row was fetched; otherwise false.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

169.15.24 FetchLast as boolean

MBS SQL Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fetches last row from a result set.
Notes:

Same as FetchNext, but jumps to the last row.
Returns true if the row was fetched; otherwise false.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

169.15.25 FetchNext as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fetches next row from a result set.
Notes:

Returns true if the next row was fetched; otherwise false .

Use FetchNext method to fetch row by row from the result set.

Each column of fetched row is represented by SAField object. If a result set exists after the last command execution, a set of SAField objects is created implicitly. To check whether a result set exists use isResultSet method. FetchNext method updates value parts of SAField objects.

To get field description or value use Field method.

When you cache the result set, you can always move within the result set.

169.15.26 FetchPos(offset as Integer, relative as boolean = false) as boolean

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fetches a row by index.
Notes:

Returns true if the row was fetched; otherwise false.
You may need to request recordset to be scrollable to have this work.
For that, please set Option("Scrollable") = "true" before doing the query.

When you cache the result set, you can always move within the result set.

169.15.27 FetchPrior as boolean

MBS SQL Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fetches previous row from a result set.
Notes:

Returns true if the row was fetched; otherwise false.
Same as FetchNext, just going back inside the result set.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

169.15.28 Field(index as Integer) as SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the column specified by its position in the result set.
Example:

```
dim c as SQLCommandMBS // your command object

// get field by name
dim f1 as SQLFieldMBS = c.Field("FirstName")

// get field by Index
dim f2 as SQLFieldMBS = c.Field(1)
```

Notes:

index: A one-based field number in a result set.

Use Field method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using an index smaller than 1 and greater then the value returned by FieldCount method will result in a failed assertion.

A set of SAField objects creates implicitly after the command execution if the result set exists.SAField object contains full information about a column: name, type, size, value.

Raises OutOfBoundsException exception if index parameter is out of range.
See also:

- 169.15.29 Field(name as string) as SQLFieldMBS 23545

169.15.29 Field(name as string) as SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the column specified by its name in the result set.
Example:

```
dim c as SQLCommandMBS // your command object

// get field by name
dim f1 as SQLFieldMBS = c.Field("FirstName")
```

```
// get field by Index
dim f2 as SQLFieldMBS = c.Field(1)
```

Notes:

name: A string that represents a name of the requested field.

Returns a reference to a SAField object.

Use Field method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using a non-existent field name will throw an exception.

A set of SAField objects creates implicitly after the command execution if the result set exists.SAField object contains full information about a column: name, type, size, value.
See also:

- 169.15.28 Field(index as Integer) as SQLFieldMBS 23545

169.15.30 FieldExists(name as string) as Boolean

MBS SQL Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether a field exists.
Notes: Returns true if field is found or false if not.

169.15.31 FieldNames as String()

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with all the field names for quick inspection.
Example:

```
dim cmd as SQLCommandMBS // your command

dim FieldNames() as String = cmd.FieldNames
```

169.15.32 Open

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the specified command object.
Notes:

Use the Open method to open the command explicitly.

A command will be implicitly opened by any method that needs an open command, therefore you don't have to call it explicitly.

To test whether a command is opened use isOpened method.

169.15.33 Param(ID as Integer) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the command parameter specified by its position.
Notes:

ID: A position of parameter specified in the command text. Normally position is a number stated in the command text after a colon (for example, 1 for :1, 5 for :5).

Returns a reference to a SAParam object which is only valid as long as the param object is not deleted by the library.

Use Param method to access a parameter by its name or position (in SQL statement). If, for example, you want to walk through all the parameters use ParamByIndex method.

If parameters were not created before calling Param method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a value of name or position which does not specified in the command text will throw an exception.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.
See also:

- 169.15.34 Param(name as string) as SQLParamMBS 23548

169.15.34 Param(name as string) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the command parameter specified by its name.
Example:

```
// your connection
dim con as SQLConnectionMBS
dim SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
dim cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

Notes:

Name: A string that represents a name of the requested parameter. Normally name is a string stated in the command text after a colon (for example, 'city' for :city, 'my city' for :"my city") or a parameter name in a stored procedure or function.

Returns a reference to a SAParam object which is only valid as long as the param object is not deleted by the library.

Use Param method to access a parameter by its name or position (in SQL statement). If, for example, you want to walk through all the parameters use ParamByIndex method.

If parameters were not created before calling Param method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a value of name or position which does not specified in the command text will throw an exception.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.
See also:

- 169.15.33 Param(ID as Integer) as SQLParamMBS 23547

169.15.35 ParamByIndex(index as Integer) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the command parameter specified by index.
Notes:

Index: A zero-based index of the requested parameter in the array of SAParam objects. It must be greater than or equal to 0 and 1 less than the value returned by ParamCount method.

Returns a reference to a SAParam object.

Normally you should use Param method to access a parameter by its name or position (in SQL statement). ParamByIndex method can be used if, for example, you want to walk through all the parameters.

If parameters were not created before calling ParamByIndex method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a negative value of index or a value greater or equal than the value returned by ParamCount method will result in a failed assertion.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.

Raises OutOfBoundsException exception if index parameter is out of range.

169.15.36 PostgreSQLField(RecordIndex as integer, FieldIndex as integer) as string

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a field by index for the row with the RecordIndex.
See also:

- 169.15.37 PostgreSQLField(RecordIndex as integer, FieldName as string) as string 23549

169.15.37 PostgreSQLField(RecordIndex as integer, FieldName as string) as string

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a field by name for the row with the RecordIndex.
See also:

- 169.15.36 PostgreSQLField(RecordIndex as integer, FieldIndex as integer) as string 23549

169.15.38 PostgreSQLFieldCount as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of fields in the result.

169.15.39 PostgreSQLRowCount as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of records in the result.

169.15.40 Prepare

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prepares command before execution.
Notes:

Prepare method compiles the command, but does not execute it. The method detects syntax errors in command text and verifies the existence of database objects.

Execute method calls Prepare method implicitly if needed, therefore you don't have to call it explicitly.

169.15.41 setCommandText(SQLCommand as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the command text.
Example:

```
dim s as new SQLCommandMBS

s.setCommandText "select * from test"

MsgBox s.CommandText
```

Notes:

SQLCommand: A string which represents command text string (an SQL statement or a stored procedure name).
CommandType: The type of command like kCommandTypeUnknown, kCommandTypeSQLStatement, kCommandTypeSQLStatementRaw or kCommandTypeStoredProcedure.

It's not necessary to set a command type explicitly, because it is defined automatically in terms of command text string. But if you still have any reason to do it, use one of the kCommandType* constants. To get command type use CommandType method.

169.15.42 SetParameters(Params as dictionary)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the parameters based on the keys and values in the dictionary.
Example:

```
dim con as SQLConnectionMBS // your connection
dim pic as picture // some picture

// get picture data
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// parse a SQL command
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim cmd as new SQLCommandMBS(con, sql)

dim d as new Dictionary
// set by param index
d.Value(0) = "test.jpg"
// set by param name
d.Value("image") = jpegData

// set all parameters together
cmd.SetParameters d
cmd.Execute
```

Notes:

Keys can be String, Text or numeric types. Text and String are used to pick parameters by name. Numeric values are used to pick parameter by index (zero based).
MemoryBlock and Strings without text encoding are converted to byte values (BLOB).

Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.

Raises OutOfBoundsException exception if index parameter is out of range.

169.15.43 Value(index as Integer) as SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value specified by its position in the result set.
Example:

```
dim c as SQLCommandMBS // your command object

// get field by name
dim f1 as SQLValueReadMBS = c.Value("FirstName")

// get field by Index
dim f2 as SQLValueReadMBS = c.Value(1)
```

Notes:

You can use Value() to get values for normal or cached result sets.

index: A one-based field number in a result set.

Use Value method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using an index smaller than 1 and greater then the value returned by FieldCount method will result in a failed assertion.

A set of SAField objects creates implicitly after the command execution if the result set exists. SAField object contains full information about a column: name, type, size, value.

Raises OutOfBoundsException exception if index parameter is out of range.
See also:

- 169.15.44 Value(name as string) as SQLValueReadMBS

169.15.44 Value(name as string) as SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value specified by its name in the result set.
Example:

```
dim c as SQLCommandMBS // your command object

// get value by name
dim f1 as SQLValueReadMBS = c.Value("FirstName")

// get value by Index
dim f2 as SQLValueReadMBS = c.Value(1)
```

Notes:

You can use Value() to get values for normal or cached result sets.

name: A string that represents a name of the requested field.

Returns a reference to a SAValueRead object.

Use Value method to access a field by its name or position in the result set.
Using a non-existent field name will throw an exception.

A set of SAField objects creates implicitly after the command execution if the result set exists.SAField object contains full information about a column: name, type, size, value.
See also:

- 169.15.43 Value(index as Integer) as SQLValueReadMBS 23552

169.15.45 Properties

169.15.46 CommandCount as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of current command objects.
Notes:

This method should help you find leaked objects by keeping track of current count from the plugin perspective.
This includes SQLCommandMBS and RecordSet objects.

(Read only property)

169.15.47 CommandText as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the command text associated with the SACommand object.
Example:

```
dim s as new SQLCommandMBS(nil, "select * from test")

MsgBox s.CommandText
```

Notes:

Use the CommandText method to return the command text declared in SACommand constructor or setCommandText method.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.
(Read and Write property)

169.15.48 CommandType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the command type currently associated with the SACommand object.
Notes:

One of the following values from SACommandType_t enum:

- kCommandTypeUnknown Command type is not defined. Library will detect command type automatically when needed.
- kCommandTypeSQLStmt Command is an SQL statement.
- kCommandTypeSQLStmtRaw Command is an SQL statement that mustn't be interpreted by SQLAPI++.
- kCommandTypeStoredProc Command is a stored procedure or a function.

Remarks

The command type can be explicitly set in SACommand constructor and setCommandText method, but it's not necessary to do it.

The CommandTypemethod returns the command type value that was specified in SACommand constructor or setCommandText method. If you declared the command type value as kCommandTypeUnknown (the default value) then command type is detected by the Library and the CommandType method returns this detected value.
(Read only property)

169.15.49 Connection as SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The connection for the command.
Notes:

When you set the connection on a command object that already has associated connection, the previous association will be correctly discarded (with closing opened command if needed) and new connection will be set.

If you attempt to call any method on a SACommand object that requires database access with no valid connection, an error occurs.
(Read and Write property)

169.15.50 FieldCount as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of fields (columns) in a result set.
Notes:

FieldCount method returns the number of fields created implicitly after the command execution if a result set exists.

A field is represented by SAField object. You can get field value and description using Field method.
(Read only property)

169.15.51 Fields as Dictionary

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provides dictionary with all fields.
Notes:

This dictionary should help for debugging to inspect all fields and their text value.
(Read only property)

169.15.52 hasCache as Boolean

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether cache is active.
Notes: (Read only property)

169.15.53 isExecuted as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this command was already executed.
Notes: (Read only property)

169.15.54 isExecuting as Boolean

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this command is executing.
Notes:

You only see this true if you use threaded queries and look on the property from another thread.
(Read only property)

169.15.55 isOpened as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the SACommand object is opened; otherwise false.
Notes: (Read only property)

169.15.56 isResultSet as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether a result set exists after the command execution.
Notes:

Returns true if the result set exists; otherwise false.
(Read only property)

169.15.57 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

169.15.58 ParamCount as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of parameters associated with the SACommand object.
Notes:

ParamCount method returns the number of parameters created explicitly by using CreateParam method or (if parameters were not created before) creates them implicitly (can query native API if needed and therefore can throw exception on error) and returns the number of created parameters.

Command parameter is represented by SAParam object. You can look SAParam objects through and assign their values with Param and ParamByIndex methods.
(Read only property)

169.15.59 Parameters as Dictionary

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provides dictionary with all parameters.
Notes:

This dictionary should help for debugging to inspect all parameters and their text value.
(Read only property)

169.15.60 RowsAffected as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of rows affected by the last insert/update/delete command execution.
Example:

```
dim con as SQLConnectionMBS // your connection

dim sql as string = "UPDATE Test SET MyField=1"
dim c as new SQLCommandMBS(con, sql)

c.Execute

MsgBox str(c.RowsAffected)
```

Notes: (Read only property)

169.15.61 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag property.
Example:

```
dim c as SQLCommandMBS // your command object

// store reference to window/control, so we have it available in events
c.Tag = self
```

Notes:

You can store here whatever you like.
(Read and Write property)

169.15.62 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string value of a specific command option.
Example:

```
dim cmd as SQLCommandMBS // your command

// turn on auto cache
cmd.Option("AutoCache") = "true"
```

Notes:

see also:
https://www.sqlapi.com/ApiDoc/class_s_a_command.html
(Read and Write computed property)

169.15.63 Events

169.15.64 Trace(traceInfo as Integer, SQL as string)

MBS SQL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: .

Function: The event to trace SQL commands.

169.15.65 Working

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called while the ExecuteMT and ExecuteCommandMT methods are running.

169.15.66 Constants

169.15.67 kCommandTypeSQLStatement = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the constants for the command type.
Notes: Command is an SQL statement.

169.15.68 kCommandTypeSQLStatementRaw = 2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the constants for the command type.
Notes: Command is an SQL statement that mustn't be interpreted by SQLAPI.

169.15.69 kCommandTypeStoredProcedure = 3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the constants for the command type.
Notes: Command is a stored procedure or a function.

169.15.70 kCommandTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the constants for the command type.
Notes: Used by default. Library detects command type automatically.

169.15.71 kOptionPreFetchRows = "PreFetchRows"

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the option constants.
Example:

```
dim cmd as new SQLCommandMBS
// do something

dim nBulkSize as Integer = 1000
cmd.Option(SQLCommandMBS.kOptionPreFetchRows) = str(nBulkSize)
```

169.15.72 kParamDirTypeInput = 0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the parameter direction type constants.
Notes: Input parameter.

169.15.73 kParamDirTypeInputOutput = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the parameter direction type constants.
Notes: Input/output parameter.

169.15.74 kParamDirTypeOutput = 2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the parameter direction type constants.
Notes: Output parameter.

169.15.75 kParamDirTypeReturn = 3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the parameter direction type constants.
Notes: Returning parameter.

169.16 class SQLConnectionMBS

169.16.1 class SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a SQL Plugin Database connection.
Example:

```
dim con as new SQLConnectionMBS

try

// where is the library?
con.SetFileOption con.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database
// in this example it is Oracle,
// but can also be Sybase, Informix, DB2
// SQLServer, InterBase, SQLBase and ODBC

dim server as string = "192.168.1.80,3306@test"

con.Connect(server,"root","",SQLConnectionMBS.kMySQLClient)

MsgBox "We are connected!"

// Disconnect is optional
// autodisconnect will ocur in destructor if needed
con.Disconnect

msgbox "We are disconnected!"

catch r as RuntimeException
MsgBox r.message

// SAConnection::Rollback()
// can also throw an exception
// (if a network error for example),
// we will be ready
try

// on error rollback changes
con.Rollback

catch rr as runtimeexception
MsgBox rr.message
end try
```

end try

Notes:

Supported databases: CubeSQL, Centura SQLBase, DB2, Firebird, Informix, InterBase, MariaDB, Microsoft Access, Microsoft SQL Server, MySQL, ODBC, Oracle Database Server, PostgreSQL, SQL Anywhere, SQLite, SQLCipher and Sybase.
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

With Xojo 2013r1, you only need a database server license from Xojo, Inc. if you use the SQLDatabaseMBS class. The SQLConnectionMBS class does not require this license. But some features like getting a recordset do need the license as they refer to the SQLDatabaseMBS class.

Please free all RecordSets and SQLCommand objects before you close the SQLConnection or the SQLDatabase. The plugin keeps references from RecordSets and SQLCommand to prevent automatic destruction of the database connection. If you close a database connection while you have RecordSets and SQLCommand in use, things may go wrong.

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

You can use InternalPostgreSQLLibraryMBS or InternalSQLiteLibraryMBS if you like to use our built in SQLite or PostgreSQL database libraries.

see also
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

The class pings the database every minute by checking whether it's alive and to avoid server dropping connection. This can be disabled by setting Option("Ping") = "false". Ping is not used for SQLite.

MBS Database connections are implemented via SQLConnectionMBS and SQLCommandMBS classes. We provide a thin layer on top with SQLDatabaseMBS class to make it compatible to the Xojo database class. And when you use SQLDatabaseMBS, you can always get the matching SQLConnectionMBS objet via Connection property. Instead of SQLCommandMBS class, you may just use SelectSQL/ExecuteSQL or older SQLSelect/SQLExecute functions.

169.16.8 Methods

169.16.9 CancelAllCommands

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cancel all commands for the connection.
Notes: This loops over the list of commands associated with this connection and calls Cancel on them.

169.16.10 Commands as SQLCommandMBS()

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all command objects related to the connection.

169.16.11 Commit

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves any changes and ends the current transaction.
Notes:

Use Commit method to write transaction changes permanently to a database. It commits the work of all commands that associated with that connection.

All changes to the database since the last commit are made permanent and cannot be undone. Before a commit, all changes made since the start of the transaction can be rolled back using Rollback method.

169.16.12 Connect(DBString as string, UserID as string, Password as string, client as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the connection to a data source.
Example:

```
dim con as SQLConnectionMBS// your connection

// some calls for MS SQL Server:
con.Connect("srv2@pubs","", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("@pubs", "", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("BEDLAM\SQL2005EX_EN@pubs", "", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("BEDLAM\SQLEXPRESS@master", "", "", SQLConnectionMBS.kSQLServerClient)

// for MySQL:

con.Connect("192.168.1.80,3306@test","root","password", SQLConnectionMBS.kMySQLClient)

// for Postgre SQL:

con.Connect("somedb", "name", "password",SQLConnectionMBS.kPostgreSQLClient)
// with options
con.Connect("127.0.0.1,5432@dbname=postgres connect_timeout=10 sslmode=require", "name", "password",SQL-
ConnectionMBS.kPostgreSQLClient)

// for SQLite:

con.Connect("/test.db", "", "",SQLConnectionMBS.kSQLiteClient)
```

Notes:

Using the Connect method on a SAConnection object establishes the physical connection to a data source. After this method successfully completes, the connection is live and you can issue commands against it and process the results.

If you use the default value of Client parameter, you should set Client before using Connect.

DBString:	Name of database this connection will connect to (see Server specific notes).
UserID:	A string containing a user name to use when establishing the connection (see Server specific notes).
Password:	A string containing a password to use when establishing the connection.
client:	Optional. One of the following values from k*Client constants.

To check whether a connection established use isConnected method. To check whether a connection is broken or not use isAlive method.

see also for server specific notes:
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

For Firebird, if you connect to a database and you have 32/64bit mismatch, you get error number 3.

See Option() for various options you can set before connecting.
e.g. c.Option("SQLiteVFSFlags") = "1" for SQLite for read only access.

Raises OutOfBoundsException exception if client parameter is out of range.

169.16.13 ConnectMT(DBString as string, UserID as string, Password as string, client as Integer = 0)

MBS SQL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the connection to a data source.
Notes:

DBString:	Name of database this connection will connect to (see Server specific notes).
UserID:	A string containing a user name to use when establishing the connection (see Server specific notes).
Password:	A string containing a password to use when establishing the connection.
client:	Optional. One of the following values from k*Client constants.

Using the Connect method on a SAConnection object establishes the physical connection to a data source.

After this method successfully completes, the connection is live and you can issue commands against it and process the results.

If you use the default value of Client parameter, you should set Client before using Connect.

To check whether a connection established use isConnected method. To check whether a connection is broken or not use isAlive method.

see also for server specific notes:
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

The MT method will not trigger WillConnect and DidConnect events.
Raises OutOfBoundsException exception if client parameter is out of range.

169.16.14 CubeSQLLastInsertID as Int64

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the last auto increment value from last insert command.
Notes: Only for CubeSQL connections. May raise error if not available.

169.16.15 CubeSQLReceiveData(byref data as String, byref IsEndChunk as Boolean) as Boolean

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receives a data chunk for file download.
Notes:

Returns true on success.
Data is set with data and IsEndChunk is set to true for last chunk.

169.16.16 CubeSQLSendData(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data chunk for file upload.
See also:

- 169.16.17 CubeSQLSendData(data as String) 23569

169.16.17 CubeSQLSendData(data as String)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data chunk for file upload.
See also:

- 169.16.16 CubeSQLSendData(data as MemoryBlock) 23569

169.16.18 CubeSQLSendEndData

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends end data packet.

169.16.19 Disconnect

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Disconnects the connection from the database.
Notes: Closes all commands objects and RecordSets.

169.16.20 InsertRecord(TableName as String, Record as Dictionary)

MBS SQL Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to insert a record.
Example:

```
dim con as SQLConnectionMBS // your database connection

dim d as new Dictionary

d.Value("ID")=2
d.Value("text")="test insert"
```

```
d.Value("other")="Just a test"

con.InsertRecord("test_tbl", d)
```

Notes:

The plugin builds for you SQL statement with prepared statement and runs the insert command with values.
Lasterror is set or exception raised as with SQLExecute.
You can check statement via LastStatement property.

169.16.21 Listen

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Start listening for notifications.
Notes:

Works only for PostgresSQL Client.
Please set client or connect before calling this method.

169.16.22 MySQLInsertID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the last auto increment value from last insert command.
Notes:

Please query value right after doing Insert. This value is reset when you call commit.

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html

169.16.23 Rollback

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cancels any changes made during the current transaction and ends the transaction.
Notes:

Rollback method rolls back the database to the state it was in at the completion of the last commit operation.
All uncommitted work is undone.

Rollback method rolls back the work of all commands that associated with that connection.

To commit all changes made since the start of the transaction use Commit method.

169.16.24 SetFileOption(name as string, file as folderitem)

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option with passing a file path.
Example:

```
dim db as new SQLConnectionMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")
```

Notes: Makes sure the path is correct and you have a 32 or 64-bit library matching the architecture of your application.

169.16.25 SQLExecute(command as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and ignores result.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

169.16.26 SQLExecuteMT(command as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and ignores result.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

169.16.27 SQLiteBackupFinish(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes a backup run.
Notes:

When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.
A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.

169.16.28 SQLiteBackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a backup.
Notes:

The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other

users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.
However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

169.16.29 SQLiteBackupPageCount(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages in total.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

169.16.30 SQLiteBackupRemaining(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages remaining.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

169.16.31 SQLiteBackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
Notes:

If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler func-

tion is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

169.16.32 SQLiteEnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables/disables extension loading for the given connection.

169.16.33 SQLiteLastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Last Insert Rowid.
Notes:

Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

169.16.34 SQLiteLibVersion as String

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the version string of the SQLite library.

169.16.35 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 169.16.36 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer

169.16.36 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 169.16.35 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 23576

169.16.37 SQLiteMemoryHighwater(reset as boolean = false) as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries maximum memory usage so far.
Notes: Can be reset with reset parameter being true.

169.16.38 SQLiteMemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries memory in use by SQLite.
Notes:

This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.

169.16.39 SQLiteReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: You can change the key on a database using the Rekey Function.
Notes:

An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

169.16.40 SQLiteSetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs busy handler for this connection.
Notes:

This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [database connection] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

169.16.41 SQLiteSetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
Notes:

The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

169.16.42 SQLiteSetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies encryption to a database connection.
Notes:

Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

169.16.43 SQLiteTableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extract Metadata About A Column Of A Table
Notes:

Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

169.16.44 SQLiteThreadsafe as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test To See If The Library Is Threadsafe.
Notes:

The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

169.16.45 SQLSelect(command as string, CommandType as Integer = 0) as string

MBS SQL Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and returns the first field's string value.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.
If the result is a record set, the first field from the first row is returned.
This is basicly useful for commands like "select sqlite_version()".

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

169.16.46 SQLSelectAsRecordSet(command as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and returns the result as RecordSet object.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

169.16.47 SQLSelectAsRecordSetMT(command as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and returns the result as RecordSet object.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

169.16.48 SQLSelectAsRowSet(command as string, CommandType as integer = 0) as RowSet

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and returns the result as RowSet object.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RowSet functionality.

If Scrollable property is true, the RowSet will be requested to be scrollable.

The RowSet may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

For Xojo 2019r2 and newer. See SQLSelectAsRecordSet for older versions.

169.16.49 SQLSelectAsRowSetMT(command as string, CommandType as integer = 0) as RowSet

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and returns the result as RowSet object.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RowSet functionality.

If Scrollable property is true, the RowSet will be requested to be scrollable.

The RowSet may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

For Xojo 2019r2 and newer. See SQLSelectAsRecordSetMT for older versions.

169.16.50 SQLSelectMT(command as string, CommandType as Integer = 0) as string

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes a SQL command and returns the first field's string value.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.
If the result is a record set, the first field from the first row is returned.
This is basicly useful for commands like "select sqlite_version()".

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

169.16.51 UpdateRecord(TableName as String, Record as Dictionary, Keys as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to update a record.
Example:

```
dim con as SQLConnectionMBS // your database connection

dim d as new Dictionary

d.Value("text")="new text"
d.Value("other")="second value"

con.UpdateRecord("test_tbl", d, new dictionary("ID":2))
```

Notes:

The plugin builds for you SQL statement with prepared statement and runs the update command with given values for records with given key values.

You can put multiple field names in the keys dictionary.

Lasterror is set or exception raised as with SQLExecute.
You can check statement via LastStatement property.

169.16.52 Properties

169.16.53 AutoCommit as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether autocommit is enabled or disabled for the current connection.
Example:

```
Dim con as SQLConnectionMBS // your database connection
con.AutoCommit = SQLConnectionMBS.kAutoCommitOn
```

Notes:

If autocommit is on, the database is committed automatically after each SQL command. Otherwise, transaction is committed only after Commit calling.
(Read and Write property)

169.16.54 Client as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current DBMS client assigned for the connection.
Notes:

Raises OutOfBoundsException exception if value parameter is out of range on setting.
(Read and Write property)

169.16.55 ClientVersion as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the DBMS client API version number.
Notes:

The higher word contains the major client version (the XX value in the XX.YY version number); the lower word contains the minor client version (the YY value in the XX.YY version number).

If an DBMS client was not set calling ClientVersion method will throw an exception.
(Read only property)

169.16.56 ConnectionCount as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of current connection objects.
Notes:

This method should help you find leaked objects by keeping track of current count from the plugin perspective.
This includes SQLConnectionMBS and SQLDatabaseMBS objects.
(Read only property)

169.16.57 Error as Boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether an error occurred.
Notes:

This is set always when an error occurs and cleared if no error happened.
Be aware that the next call to a plugin function may reset error status.
If you look on this property in debugger, it's probably already cleared by the debugger querying a property.
(Read only property)

169.16.58 ErrorCode as Integer

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes:

This is set always when an error occurs and cleared if no error happened.
(Read only property)

169.16.59 ErrorMessage as string

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.
Notes:

This is set always when an error occurs and cleared if no error happened.
(Read only property)

169.16.60 isAlive as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the database server connection status for a particular connection object.
Notes:

Returns true if the database server is active and accessible; otherwise false.
This method uses the safe query execution for most supported DBMS-es. The query uses the well known database table or procedure (mysql_ping is used for MySQL). If the query fails the method returns false.
(Read only property)

169.16.61 isConnected as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the connection state for a particular connection object.
Notes:

Returns true if connected; otherwise false.
(Read only property)

169.16.62 IsolationLevel as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transaction isolation level.
Notes:

Use the kReadCommitted, kReadUncommitted, kRepeatableRead, kSerializable and kLevelUnknown constants.
(Read and Write property)

169.16.63 LastStatement as String

MBS SQL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last executed SQL Statement.
Notes: (Read only property)

169.16.64 NativeAPI as Variant

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a set of functions of native DBMS client API.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Returns a SQLAPIMBS object.
Deprecated in version 19.5 in favor of direct methods in SQLDatabaseMBS and SQLConnectionMBS classes.
(Read only property)

169.16.65 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

169.16.66 RaiseExceptions as Boolean

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to raise exceptions.
Notes:

Default is true which means we set error, ErrorCode and ErrorMessage properties and than raise SQLErrorExceptionMBS exception.
If you set to false, we don't raise the exception and you have similar behavior as with database class.
We recommend to use exceptions as they are not so easily ignored like an error property being true.
(Read and Write property)

169.16.67 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to make internally created SQLCommand objects scrollable.
Notes:

Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

169.16.68 ServerVersion as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the currently connected DBMS server version number.
Notes:

The higher word contains the major server version (the XX value in the XX.YY version number); the lower word contains the minor server version (the YY value in the XX.YY version number).
(Read only property)

169.16.69 ServerVersionString as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the currently connected DBMS server version string.
Notes:

A server version string may contain some useful information about server brand, configuration and so on. It is a good idea to display this information in all your applications.
(Read only property)

169.16.70 SQLiteEncryptionKey as String

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The encryption key to use.
Example:

```
dim db as new SQLConnectionMBS
db.SQLiteEncryptionKey = "Hello"
```

Notes:

This key is applied to the database after connecting. In case of an error, the plugin raises an exception. An empty key can be used for having no encryption.
Alternatively you can use SQLite3MBS.SetKey yourself.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix. If no prefix is given, we default to AES 128. To be compatible to Xojo, you can use AES128.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.
(Read and Write property)

169.16.71 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag property.
Notes:

You can store here whatever you like.
(Read and Write property)

169.16.72 VariantsKeepSQLObjects as Boolean

MBS SQL Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether variants should use SQL types.
Notes:

If set to true, we return datetime and numeric as SQLDateTimeMBS and SQLNumericMBS objects.
If false, we return them as date and double.
(Read and Write property)

169.16.73 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string value of a specific connection or command option.
Example:

```
dim c as SQLConnectionMBS // your connection

// for Microsoft SQL use OLEDB, so you don't need native SQL drivers installed...
c.Option("UseAPI") = "OLEDB"
c.Option("SQLNCLI.LIBS") = "sqlsrv32.dll" // Library included in Windows Vista and newer

// for SQLite, set flag to open database file read only:
c.Option("SQLiteVFSFlags") = "1"

// set 10 seconds timeout for MySQL
c.Option("MYSQL_OPT_CONNECT_TIMEOUT") = "10"

// turn on auto cache
c.Option("AutoCache") = "true"

// set connection timeout for ODBC:
c.Option("SQL_ATTR_CONNECTION_TIMEOUT") = "10"
```

Notes:

see also:
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html
(Read and Write computed property)

169.16.74 Events

169.16.75 DidConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

Function: Event called after connection was made.
Notes: After we got connected, you can apply various options on the new connection here.

169.16.76 PostgresNotification(NotificationName as string, PID as Integer, Extras as String)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: .

Function: A postgresSQL notification was received.
Notes: Provides notification name, process ID of app and optional extra information.

169.16.77 Trace(traceInfo as Integer, SQL as string, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: .

Function: The event to trace SQL commands.

169.16.78 WillConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

Function: Event called before connection is established.
Notes: Last chance to set connection options.

169.16.79 Working

MBS SQL Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called while the SQLExecuteMT and SQLSelectMT methods are running.

169.16.80 Constants

169.16.81 kANSILevel0 = 0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the ANSI level constants.
Notes: ANSI Level 0

169.16.82 kANSILevel1 = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the ANSI level constants.
Notes: ANSI Level 1

169.16.83 kANSILevel2 = 2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the ANSI level constants.
Notes: ANSI Level 2

169.16.84 kANSILevel3 = 3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the ANSI level constants.
Notes: ANSI Level 3

169.16.85 kAutoCommitOff = 0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the constants for the autocommit property.
Example:

```
dim db as SQLConnectionMBS // your database connection

db.AutoCommit = SQLConnectionMBS.kAutoCommitOff
```

Notes: Autocommit is off.

169.16.86 kAutoCommitOn = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the constants for the autocommit property.
Example:

```
dim db as SQLConnectionMBS // your database connection

db.AutoCommit = SQLConnectionMBS.kAutoCommitOn
```

Notes: Autocommit is on.

169.16.87 kAutoCommitUnknown = -1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the constants for the autocommit property.
Notes: Autocommit unknown

169.16.88 kClientNotSpecified = 0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the database client constants.
Notes: Client is not specified.

169.16.89 kCubeSQLClient = 13

MBS SQL Plugin, Plugin Version: 18.0.

Function: One of the database client constants.
Notes: CubeSQL client. (coming soon)

169.16.90 kDB2Client = 6

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the database client constants.
Notes: DB2 client.

169.16.91 kDuckDBClient = 14

MBS SQL Plugin, Plugin Version: 21.2.

Function: One of the database client constants.
Notes: DuckDB client

169.16.92 kErrorBindVarNotFound = 7

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Bind variable not found.

169.16.93 kErrorClientInitFails = 6

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Initialization failed for client.

169.16.94 kErrorClientNotSet = 1

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Client not set.

169.16.95 kErrorClientNotSupported = 2

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Unsupported client type for this platform.

169.16.96 kErrorClientVersionOld = 5

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Library file is too old.

169.16.97 kErrorFieldNotFound = 8

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Field not found.

169.16.98 kErrorGetLibraryVersionFails = 4

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Failed to query library version.

169.16.99 kErrorLoadLibraryFails = 3

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Failed to load a library. For example path could be wrong or 32/64bit mismatch.

169.16.100 kErrorNoMemory = 0

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Out of memory.

169.16.101 kErrorUnknownColumnType = 11

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Unknown column type.

169.16.102 kErrorUnknownDataType = 9

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Unknown data type.

169.16.103 kErrorUnknownParameterType = 10

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Unknown parameter type.

169.16.104 kErrorWrongConversion = 12

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Failed to convert a value, e.g. string to number.

169.16.105 kErrorWrongDatetime = 13

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Can't convert text to date.

169.16.106 kFirebirdClient = 4

MBS SQL Plugin, Plugin Version: 10.4.

Function: One of the database client constants.
Example:

```
Dim con As New SQLConnectionMBS

try

// where is the library?
Dim LibPath As String = GetFolderItem("FIREBIRD3").child("fbclient.dll").NativePath
System.DebugLog LibPath
con.Option( con.kOptionLibraryFirebird) = LibPath

// connect to database
// in this example it is Firebird/InterBase,
// but can also be Sybase, Informix, DB2, MySQL
// SQLServer, SQLBase and ODBC

// Read more here: http://www.sqlapi.com/ServerSpecific/InterBase.html

// Please enter values for your server here:

Dim DBFile As FolderItem = GetFolderItem("test.FDB")
Dim ConnectionString As String = DBFile.NativePath

// For local databases, this can be a file name.
// To connect to a database on a remote server using TCP/IP the syntax is <server name>:<filename>.
// To connect to a database on a remote server using NetBEUI, the syntax is \\<server name>\<filename>.
// To connect to a database on a remote server using SPX, the syntax is <server name>@<filename>.

dim username as string = "SYSDBA"
Dim password As String = "masterkey"

con.Connect(ConnectionString, username, password, SQLConnectionMBS.kFirebirdClient)

MsgBox "We are connected!"

// now use database

Catch r As RuntimeException
MsgBox "Failed: "+r.message
end try
```

Notes: InterBase/Firebird client.

169.16.107 kInformixClient = 7

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the database client constants.
Notes: Informix client.

169.16.108 kInterBaseClient = 4

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the database client constants.
Notes: InterBase/Firebird client.

169.16.109 kLevelUnknown = -1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the isolation level constants.
Notes: Unknown

169.16.110 kMySQLClient = 9

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the database client constants.
Notes: MySQL client.

169.16.111 kODBCClient = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the database client constants.
Notes: ODBC client.

169.16.112 kOptionAPPNAME = "APPNAME"

MBS SQL Plugin, Plugin Version: 9.3.

Function: A constant for the options.

169.16.113 kOptionLibraryCubeSQL = "CUBESQL.LIBS"

MBS SQL Plugin, Plugin Version: 19.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("cubesql.dll")
con.SetFileOption con.kOptionLibraryCubeSQL, f
```

Notes: for CubeSQL.

169.16.114 kOptionLibraryDB2 = "DB2CLI.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("db2cli.dll")
con.SetFileOption con.kOptionLibraryDB2, f
```

Notes: for DB2.

169.16.115 kOptionLibraryDuckDB = "DUCKDB.LIBS"

MBS SQL Plugin, Plugin Version: 21.2.

Function: ConstantsGroup: Options to specify the library with SetFileOption
Example:

One of the option constant to specify the library with the SetFileOption method.

Notes:

dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libduckdb.dylib")
con.SetFileOption con.kOptionLibrarySQLite, f

169.16.116 kOptionLibraryFirebird = "IBASE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("fbclient.dll")
con.SetFileOption con.kOptionLibraryFirebird, f

Notes: for Firebird.

169.16.117 kOptionLibraryInformix = "INFCLI.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("ICLIT09B.dll")
con.SetFileOption con.kOptionLibraryInformix, f

Notes: for Informix.

169.16.118 kOptionLibraryInterbase = "IBASE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("ibclient64.dll")
con.SetFileOption con.kOptionLibraryInterbase, f
```

Notes: for Interbase.

169.16.119 kOptionLibraryMySQL = "MYSQL.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libmysqlclient.18.dylib")
con.SetFileOption con.kOptionLibraryMySQL, f
```

Notes: for MySQL. Library extension on Mac is ".dylib", on Linux ".so" and on Windows ".dll". You get this library with the MySQL download on their homepage.

169.16.120 kOptionLibraryODBC = "ODBC.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

con.Option( con.kOptionLibraryODBC) = "/usr/lib/libiodbc.dylib"
```

Notes: for ODBC.

169.16.121 kOptionLibraryOracle = "OCI8.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("oci.dll")
con.SetFileOption con.kOptionLibraryOracle, f
```

Notes: for Oracle.

169.16.122 kOptionLibraryPostgreSQL = "LIBPQ.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libpq.dll")
con.SetFileOption con.kOptionLibraryPostgreSQL, f
```

Notes: for Postgre SQL.

169.16.123 kOptionLibrarySeparator = ":"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the platform specific path separator.
Notes:

Use with SetFileOption to specify multiple file paths for a library.
Has a different value on the different platforms.

169.16.124 kOptionLibrarySQLanywhere = "SQLANY.LIBS"

MBS SQL Plugin, Plugin Version: 15.2.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("dbcapi.dll")
con.SetFileOption con.kOptionLibrarySQLanywhere, f
```

Notes: for SQL Anywhere.

169.16.125 kOptionLibrarySQLBase = "SQLBASE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("sqlwntm.dll")
con.SetFileOption con.kOptionLibrarySQLBase, f
```

Notes: for SQLbase.

169.16.126 kOptionLibrarySQLite = "SQLITE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("sqlite.dylib")
con.SetFileOption con.kOptionLibrarySQLite, f
```

Notes: for SQLite. Can also be the spatialite library.

169.16.127 kOptionLibrarySybaseComn = "SYBCOMN.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: OOne of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

169.16.128 kOptionLibrarySybaseCS = "SYBCS.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libsybcs.dll")
con.SetFileOption con.kOptionLibrarySybaseCS, f
```

Notes: for Sybase.

169.16.129 kOptionLibrarySybaseCT = "SYBCT.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libsybct.dll")
con.SetFileOption con.kOptionLibrarySybaseCT, f
```

Notes: for Sybase.

169.16.130 kOptionLibrarySybaseIntl = "SYBINTL.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

169.16.131 kOptionLibrarySybaseTCL = "SYBTCL.LIBS"

MBS SQL Plugin, Plugin Version: 10.5.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

169.16.132 kOptionWSID = "WSID"

MBS SQL Plugin, Plugin Version: 9.3.

Function: A constant for the options.

169.16.133 kOracleClient = 2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the database client constants.
Notes:

Oracle client.

For Windows the file is "oci.dll", for Linux libclntsh.so and for Mac OS X libclntsh.dylib.

169.16.134 kPostgreSQLClient = 10

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the database client constants.
Notes: PostgreSQL client.

169.16.135 kReadCommitted = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the isolation level constants.
Notes: Read committed.

169.16.136 kReadUncommitted = 0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the isolation level constants.
Notes: Read uncommitted.

169.16.137 kRepeatableRead = 2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the isolation level constants.
Notes: Repeatable read.

169.16.138 kSerializable = 3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the isolation level constants.
Notes: Serializable.

169.16.139 kSnapshot = 4

MBS SQL Plugin, Plugin Version: 21.2.

Function: One of the isolation level constants.
Notes: Changes made in other transactions can not be seen. For Microsoft SQL Server.

169.16.140 kSQLAnywhereClient = 12

MBS SQL Plugin, Plugin Version: 18.0.

Function: One of the database client constants.
Notes: SQL Anywhere client.

169.16.141 kSQLBaseClient = 5

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the database client constants.
Notes: SQLbase client.

169.16.142 kSQLiteClient = 11

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the database client constants.
Notes: SQLite client. Or spatialite.

169.16.143 kSQLServerClient = 3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the database client constants.
Notes:

Mircosoft SQL Server client.

You may need to download the client packages for accessing SQL Server. Files like the SQLNCLI dll may be missing. You can download for example the Feature Pack for Microsoft SQL Server 2005 from the microsoft download page.

169.16.144 kSybaseClient = 8

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the database client constants.
Notes: Sybase client.

169.16.145 SQLiteInMemory = ":memory:"

MBS SQL Plugin, Plugin Version: 19.2.

Function: Connection string for SQLite for a new in-memory database.

169.17 class SQLDatabaseMBS

169.17.1 class SQLDatabaseMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The database class for the SQL plugin
Example:

```
dim db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibrarySQLite, getfolderitem("/usr/lib/libsqlite3.0.dylib", folderitem.PathTy
Shell)

// connect to database
// in this example it is SQLite,
// but can also be Sybase, Oracle, Informix, DB2, SQLServer, InterBase, MySQL, SQLBase and ODBC

dim path as string

if TargetMacOS then
path = "/tmp/test.db" // put the database in the temporary folder
else
path = "test.db" // for Windows and Linux in the current folder the application is inside.
end if

db.DatabaseName = "sqlite:"+path

if db.Connect then

MsgBox "We are connected!"

// Disconnect is optional
// autodisconnect will ocur in destructor if needed
db.close

msgbox "We are disconnected!"
end if
```

Notes:

You can use the SQL plugin without using Xojo built in database classes if you use the SQLConnectionMBS and SQLCommandMBS classes.

Or you use the SQLDatabaseMBS class which is a subclass of the database class and can be used with Xojo's

RecordSet class. The current implementation is not complete. You can connect with passing the database URL in the DatabaseName property of the SQLDatabaseMBS class. You prefix this URL with the database type you are using.

You can use Execute and Select to run SQL statements. Errors can be queries with the lasterror properties. For the RecordSet, you can get the column count, the column names and values and move to the next row. All the other methods like deleting a record or updating a value are not implemented and you need to use SQL commands to do this.

Supported databases: CubeSQL, Centura SQLBase, DB2, Firebird, Informix, InterBase, MariaDB, Microsoft Access, Microsoft SQL Server, MySQL, ODBC, Oracle Database Server, PostgreSQL, SQL Anywhere, SQLite, SQLCipher and Sybase.
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

As field and table schema functions are not implemented, you can't use this database with the database browser features in the Xojo IDE.
The plugin does not provide RecordCount on RecordSet class. For that you need to make a extra SELECT count(*) query.

With Xojo 2013r1, you only need a database server license from Xojo, Inc. if you use the SQLDatabaseMBS class. The SQLConnectionMBS class does not require this license. But some features like getting a recordset do need the license as they refer to the SQLDatabaseMBS class.

Please free all RecordSets and SQLCommand objects before you close the SQLConnection or the SQLDatabase. The plugin keeps references from RecordSets and SQLCommand to prevent automatic destruction of the database connection. If you close a database connection while you have RecordSets and SQLCommand in use, things may go wrong.

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

You can use InternalPostgreSQLLibraryMBS or InternalSQLiteLibraryMBS if you like to use our built in SQLite or PostgreSQL database libraries.

The class pings the database every minute by checking whether it's alive and to avoid server dropping connection. This can be disabled by setting Option("Ping") = "false". Ping is not used for SQLite.

MBS Plugin 21.1 adds support for Edit/Update methods in RecordSet and RowSet classes.

MBS Database connections are implemented via SQLConnectionMBS and SQLCommandMBS classes. We provide a thin layer on top with SQLDatabaseMBS class to make it compatible to the Xojo database class. And when you use SQLDatabaseMBS, you can always get the matching SQLConnectionMBS objet via Connection property. Instead of SQLCommandMBS class, you may just use SelectSQL/ExecuteSQL or older SQLSelect/SQLExecute functions.
Subclass of the Database class.

169.17.8 Methods

169.17.9 CancelAllCommands

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cancel all commands for the connection.
Notes: This loops over the list of commands associated with this connection and calls Cancel on them.

169.17.10 Commands as SQLCommandMBS()

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all command objects related to the connection.

169.17.11 Connect as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to the database.
Example:

```
dim db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database
// in this example it is MySQL,
// but can also be Sybase, Informix, Oracle, DB2
// SQLServer, InterBase, SQLBase and ODBC

db.DatabaseName="mysql:192.168.1.80,3306@test"

db.UserName="root"
db.Password=""

// or postgreSQL with timeout and ssl mode
db.DatabaseName="PostgreSQL:127.0.0.1,5432@dbname=postgres connect_timeout=10 sslmode=require"
```

```
if db.Connect then

MsgBox "We are connected!"

MsgBox "Server Version: "+db.Connection.ServerVersionString

// Disconnect is optional
// autodisconnect will ocur in destructor if needed

else
MsgBox db.ErrorMessage
end if
```

Notes:

Returns true on success and false on failure.

Please set the DatabaseName, UserName and Password properties. The Host property is ignored.
The database name must contain the complete information and a prefix for the kind of database.

Use this prefixes: "CubeSQL:", "SQLAnywhere:", "ODBC:", "Oracle:", "SQLServer:", "Firebird:", "InterBase:", "SQLBase:", "DB2:", "Informix:", "Sybase:", "MySQL:", "PostgreSQL:" or "SQLite:".
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

For Firebird, if you connect to a database and you have 32/64bit mismatch, you get error number 3.

169.17.12 ConnectMT as Boolean

MBS SQL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to the database.
Notes:

Returns true on success and false on failure.

Please set the DatabaseName, UserName and Password properties. The Host property is ignored.
The database name must contain the complete information and a prefix for the kind of database.

Use this prefixes: "CubeSQL:", "SQLAnywhere:", "ODBC:", "Oracle:", "SQLServer:", "Firebird:", "InterBase:", "SQLBase:", "DB2:", "Informix:", "Sybase:", "MySQL:", "PostgreSQL:" or "SQLite:".
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

Same as Connect, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

The MT method will not trigger WillConnect and DidConnect events.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

169.17.13 Constructor(globals as SQLGlobalsMBS = nil)

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Please don't call this directly as it's called automatically with using new command.

169.17.14 CubeSQLLastInsertID as Int64

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the last auto increment value from last insert command.
Notes: Only for CubeSQL connections. May raise error if not available.

169.17.15 CubeSQLReceiveData(byref data as String, byref IsEndChunk as Boolean) as Boolean

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receives a data chunk for file download.
Notes:

Returns true on success.
Data is set with data and IsEndChunk is set to true for last chunk.

169.17.16 CubeSQLSendData(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data chunk for file upload.
See also:

- 169.17.17 CubeSQLSendData(data as String) 23616

169.17.17 CubeSQLSendData(data as String)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data chunk for file upload.
See also:

- 169.17.16 CubeSQLSendData(data as MemoryBlock) 23616

169.17.18 CubeSQLSendEndData

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends end data packet.

169.17.19 InsertRecord(TableName as String, Record as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to insert a record.
Example:

```
dim db as SQLDatabaseMBS // your database connection

dim d as new Dictionary

d.Value("ID")=2
d.Value("text")="test insert"
d.Value("other")="Just a test"

db.InsertRecord("test_tbl", d)

if db.Error then
MsgBox db.ErrorMessage
end if
```

Notes:

The plugin builds for you SQL statement with prepared statement and runs the insert command with values.
Lasterror is set or exception raised as with SQLExecute.
You can check statement via LastStatement property.

169.17.20 Listen

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Start listening for notifications.
Notes:

Works only for PostgresSQL Client.
Please set client or connect before calling this method.

169.17.21 MySQLInsertID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the last auto increment value from last insert command.
Notes:

Please query value right after doing Insert. This value is reset when you call commit.

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html

169.17.22 Prepare(statement as string) as SQLPreparedStatementMBS

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prepares a statement.
Notes:

Returns prepared statement or nil in case of error.
Please check ErrorMessage property for errors.

169.17.23 SetFileOption(name as string, file as folderitem)

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option with passing a file path.
Example:

```
dim db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")
```

Notes: Makes sure the path is correct and you have a 32 or 64-bit library matching the architecture of your application.

169.17.24 SQLExecute(ExecuteString as string, CommandType as Integer)

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQLExecute threaded.
Notes: Same as SQLExecute, but with additional CommandType parameter.

169.17.25 SQLExecuteMT(ExecuteString as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQLExecute threaded.
Notes:

Same as SQLExecute, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

169.17.26 SQLiteBackupFinish(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes a backup run.
Notes:

When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The Back-

upFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.
A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.

169.17.27 SQLiteBackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a backup.
Notes:

The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.

If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.
However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

169.17.28 SQLiteBackupPageCount(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages in total.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

169.17.29 SQLiteBackupRemaining(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages remaining.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

169.17.30 SQLiteBackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
Notes:

If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is

modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

169.17.31 SQLiteEnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables/disables extension loading for the given connection.

169.17.32 SQLiteLastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Last Insert Rowid.
Notes:

Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

169.17.33 SQLiteLibVersion as String

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the version string of the SQLite library.

169.17.34 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 169.17.35 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer 23623

169.17.35 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 169.17.34 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 23623

169.17.36 SQLiteMemoryHighwater(reset as boolean = false) as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries maximum memory usage so far.
Notes: Can be reset with reset parameter being true.

169.17.37 SQLiteMemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries memory in use by SQLite.
Notes:

This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.

169.17.38 SQLiteReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: You can change the key on a database using the Rekey Function.
Notes:

An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

169.17.39 SQLiteSetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs busy handler for this connection.
Notes:

This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [database connection] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

169.17.40 SQLiteSetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
Notes:

The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

169.17.41 SQLiteSetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies encryption to a database connection.
Notes:

Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

169.17.42 SQLiteTableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extract Metadata About A Column Of A Table
Notes:

Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

169.17.43 SQLiteThreadsafe as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test To See If The Library Is Threadsafe.
Notes:

The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

169.17.44 SQLSelect(SelectString as string, CommandType as Integer) as RecordSet

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQLSelect threaded.
Notes:

Same as SQLSelect, but with additional CommandType parameter.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

169.17.45 SQLSelectMT(SelectString as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQLSelect threaded.
Notes:

Same as SQLSelect, but if you run this on a thread, the plugin gives time to other threads so the rest of

your application runs just fine.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

169.17.46 UpdateRecord(TableName as String, Record as Dictionary, Keys as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to update a record.
Example:

```
dim db as SQLDatabaseMBS // your database connection

dim d as new Dictionary

d.Value("text")="new text"
d.Value("other")="second value"

db.UpdateRecord("test_tbl", d, new dictionary("ID":2))

if db.Error then
MsgBox db.ErrorMessage
end if
```

Notes:

The plugin builds for you SQL statement with prepared statement and runs the update command with given values for records with given key values.

You can put multiple field names in the keys dictionary.

Lasterror is set or exception raised as with SQLExecute.
You can check statement via LastStatement property.

169.17.47 Properties

169.17.48 AutoCommit as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether autocommit is enabled or disabled for the current connection.
Example:

```
Dim db as SQLDatabaseMBS // your database connection
db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

Notes:

If autocommit is on, the database is committed automatically after each SQL command. Otherwise, transaction is committed only after Commit calling.
(Read and Write property)

169.17.49 Client as Integer

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current DBMS client assigned for the connection.
Notes:

Raises OutOfBoundsException exception if value parameter is out of range on setting.
(Read and Write property)

169.17.50 ClientVersion as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the DBMS client API version number.
Notes:

The higher word contains the major client version (the XX value in the XX.YY version number); the lower word contains the minor client version (the YY value in the XX.YY version number).

If an DBMS client was not set calling ClientVersion method will throw an exception.
(Read only property)

169.17.51 Connection as SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The connection for this database used in the background.
Notes:

Note that methods on this connection object can raise exceptions while methods on the SQLDatabaseMBS class sets the error properties.
(Read only property)

169.17.52 isAlive as boolean

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the database server connection status for a particular connection object.
Notes:

Returns true if the database server is active and accessible; otherwise false.
This method uses the safe query execution for most supported DBMS-es. The query uses the well known database table or procedure (mysql_ping is used for MySQL). If the query fails the method returns false.
(Read only property)

169.17.53 isConnected as boolean

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the connection state for a particular connection object.
Notes:

Returns true if connected; otherwise false.
(Read only property)

169.17.54 IsolationLevel as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transaction isolation level.
Notes:

Use the kReadCommitted, kReadUncommitted, kRepeatableRead, kSerializable and kLevelUnknown constants.
(Read and Write property)

169.17.55 LastStatement as String

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last executed SQL Statement.
Notes: (Read only property)

169.17.56 NativeAPI as Variant

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a set of functions of native DBMS client API.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Returns a SQLAPIMBS object.
Deprecated in version 19.5 in favor of direct methods in SQLDatabaseMBS and SQLConnectionMBS classes.
(Read only property)

169.17.57 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

169.17.58 RaiseExceptions as Boolean

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to raise exceptions.
Notes:

Default is false which means we set error, ErrorCode and ErrorMessage properties and not raise SQLErrorExceptionMBS exception.
If you set to true, we do raise the exception and you have similar behavior as with SQLConnection class.
We recommend to use exceptions as they are not so easily ignored like an error property being true.
(Read and Write property)

169.17.59 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to make internally created SQLCommand objects scrollable.
Notes:

Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

169.17.60 ServerVersion as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the currently connected DBMS server version number.
Notes:

The higher word contains the major server version (the XX value in the XX.YY version number); the lower word contains the minor server version (the YY value in the XX.YY version number).
(Read only property)

169.17.61 ServerVersionString as string

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the currently connected DBMS server version string.
Notes:

A server version string may contain some useful information about server brand, configuration and so on. It is a good idea to display this information in all your applications.
(Read only property)

169.17.62 SQLiteEncryptionKey as String

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The encryption key to use.
Example:

```
// enable our built-in SQLite library, which supports encryption
Call InternalSQLiteLibraryMBS.Use

// where to store?
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.db")
Dim storage_database As New SQLDatabaseMBS ' SQLiteDatabase
```

```
storage_database.SQLiteEncryptionKey = "aes256:password" ' <- password with AES256 as prefix to pick algorithm
storage_database.DatabaseName = "sqlite:"+ f.NativePath

If storage_database.Connect Then

// create table if this is not yet here
storage_database.SQLExecute "Create table if not exists pics(pic_id integer PRIMARY KEY AUTOINCREMENT, name varchar(20), pic blob)"

// done
MsgBox "Ready"
Else
MsgBox storage_database.ErrorMessage
End If
```

Notes:

This key is applied to the database after connecting. In case of an error, the plugin raises an exception. An empty key can be used for having no encryption.
Alternatively you can use SQLite3MBS.SetKey yourself.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix. If no prefix is given, we default to AES 128. To be compatible to Xojo, you can use AES128.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.
(Read and Write property)

169.17.63 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag property.
Notes:

You can store here whatever you like.
(Read and Write property)

169.17.64 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option for the connection.
Example:

```
dim c as SQLDatabaseMBS // your database connection

// for Microsoft SQL use OLEDB, so you don't need native SQL drivers installed...
c.Option("UseAPI") = "OLEDB"
c.Option("SQLNCLI.LIBS") = "sqlsrv32.dll" // Library included in Windows Vista and newer

// for SQLite, set flag to open database file read only:
c.Option("SQLiteVFSFlags") = "1"

// turn on auto cache
c.Option("AutoCache") = "true"

// set connection timeout for ODBC:
c.Option("SQL_ATTR_CONNECTION_TIMEOUT") = "10"
```

Notes: (Read and Write computed property)

169.17.65 Events

169.17.66 DidConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

Function: Event called after connection was made.
Notes: After we got connected, you can apply various options on the new connection here.

169.17.67 PostgresNotification(NotificationName as string, PID as Integer, Extras as String)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: .

Function: A postgresSQL notification was received.
Notes: Provides notification name, process ID of app and optional extra information.

169.17.68 Trace(traceInfo as Integer, SQL as string, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event to trace SQL commands.

169.17.69 WillConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

Function: Event called before connection is established.
Notes: Last chance to set connection options.

169.17.70 Constants

169.17.71 kANSILevel0 = 0

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the ANSI level constants.
Notes: ANSI Level 0

169.17.72 kANSILevel1 = 1

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the ANSI level constants.
Notes: ANSI Level 1

169.17.73 kANSILevel2 = 2

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the ANSI level constants.
Notes: ANSI Level 2

169.17.74 kANSILevel3 = 3

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the ANSI level constants.
Notes: ANSI Level 3

169.17.75 kAutoCommitOff = 0

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the constants for the autocommit property.
Example:

```
dim db as SQLDatabaseMBS // your database connection

db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

Notes: Autocommit is off.

169.17.76 kAutoCommitOn = 1

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the constants for the autocommit property.
Example:

```
dim db as SQLDatabaseMBS // your database connection

db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

Notes: Autocommit is on.

169.17.77 kAutoCommitUnknown = -1

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the constants for the autocommit property.
Notes: Autocommit unknown

169.17.78 kCommandTypeSQLStatement = 1

MBS SQL Plugin, Plugin Version: 14.1.

Function: One of the constants for the command type.
Notes: Command is an SQL statement.

169.17.79 kCommandTypeSQLStatementRaw = 2

MBS SQL Plugin, Plugin Version: 14.1.

Function: One of the constants for the command type.
Notes: Command is an SQL statement that mustn't be interpreted by SQLAPI.

169.17.80 kCommandTypeStoredProcedure = 3

MBS SQL Plugin, Plugin Version: 14.1.

Function: One of the constants for the command type.
Notes: Command is a stored procedure or a function.

169.17.81 kCommandTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 14.1.

Function: One of the constants for the command type.
Notes: Used by default. Library detects command type automatically.

169.17.82 kErrorBindVarNotFound = 7

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Bind variable not found.

169.17.83 kErrorClientInitFails = 6

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Initialization failed for client.

169.17.84 kErrorClientNotSet = 1

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Client not set.

169.17.85 kErrorClientNotSupported = 2

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Unsupported client type for this platform.

169.17.86 kErrorClientVersionOld = 5

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Library file is too old.

169.17.87 kErrorFieldNotFound = 8

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Field not found.

169.17.88 kErrorGetLibraryVersionFails = 4

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Failed to query library version.

169.17.89 kErrorLoadLibraryFails = 3

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Failed to load a library. For example path could be wrong or 32/64bit mismatch.

169.17.90 kErrorNoMemory = 0

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Out of memory.

169.17.91 kErrorUnknownColumnType = 11

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Unknown column type.

169.17.92 kErrorUnknownDataType = 9

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Unknown data type.

169.17.93 kErrorUnknownParameterType = 10

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Unknown parameter type.

169.17.94 kErrorWrongConversion = 12

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Failed to convert a value, e.g. string to number.

169.17.95 kErrorWrongDatetime = 13

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Can't convert text to date.

169.17.96 kLevelUnknown = -1

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the isolation level constants.
Notes: Unknown

169.17.97 kOptionLibraryCubeSQL = "CUBESQL.LIBS"

MBS SQL Plugin, Plugin Version: 19.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("cubesql.dll")
con.SetFileOption con.kOptionLibraryCubeSQL, f
```

Notes: for CubeSQL.

169.17.98 kOptionLibraryDB2 = ”DB2CLI.LIBS”

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for DB2.

169.17.99 kOptionLibraryFirebird = ”IBASE.LIBS”

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Firebird.

169.17.100 kOptionLibraryInformix = ”INFCLI.LIBS”

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Informix.

169.17.101 kOptionLibraryInterbase = ”IBASE.LIBS”

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Interbase.

169.17.102 kOptionLibraryMySQL = ”MYSQL.LIBS”

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for MySQL. Library extension on Mac is ”.dylib”, on Linux ”.so” and on Windows ”.dll”. You get this library with the MySQL download on their homepage.

169.17.103 kOptionLibraryODBC = ”ODBC.LIBS”

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for ODBC.

169.17.104 kOptionLibraryOracle = "OCI8.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Oracle.

169.17.105 kOptionLibraryPostgreSQL = "LIBPQ.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Postgre SQL.

169.17.106 kOptionLibrarySQLanywhere = "SQLANY.LIBS"

MBS SQL Plugin, Plugin Version: 15.2.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for SQL Anywhere.

169.17.107 kOptionLibrarySQLBase = "SQLBASE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for SQLbase.

169.17.108 kOptionLibrarySQLite = "SQLITE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLDatabaseMBS // your database connection
```

```
dim f as FolderItem = GetFolderItem("sqlite.dylib")
con.SetFileOption con.kOptionLibrarySQLite, f
```

Notes: for SQLite. Can also be the spatialite or SQLcipher library.

169.17.109 kOptionLibrarySybaseComn = "SYBCOMN.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: OOne of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

169.17.110 kOptionLibrarySybaseCS = "SYBCS.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

169.17.111 kOptionLibrarySybaseCT = "SYBCT.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

169.17.112 kOptionLibrarySybaseIntl = "SYBINTL.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

169.17.113 kOptionLibrarySybaseTCL = "SYBTCL.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

169.17.114 kReadCommitted = 1

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the isolation level constants.
Notes: Read committed.

169.17.115 kReadUncommitted = 0

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the isolation level constants.
Notes: Read uncommitted.

169.17.116 kRepeatableRead = 2

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the isolation level constants.
Notes: Repeatable read.

169.17.117 kSerializable = 3

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the isolation level constants.
Notes: Serializable.

169.17.118 kSnapshot = 4

MBS SQL Plugin, Plugin Version: 21.2.

Function: One of the isolation level constants.
Notes: Changes made in other transactions can not be seen. For Microsoft SQL Server.

169.17.119 SQLiteInMemory = "Sqlite::memory:"

MBS SQL Plugin, Plugin Version: 19.2.

Function: Connection string for SQLite for a new in-memory database.
Notes: Prefixed with SQLite to use directly.

169.18 class SQLDataConsumerMBS

169.18.1 class SQLDataConsumerMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a data consumer.
Notes: If you query a clob/blob value, that value may not fit into memory, so you may prefer to get a callback for data and write it to a file in small chunks.

169.18.6 Events

169.18.7 Write(PieceType as Integer, data as string, Length as UInt32, BlobSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called to process data.
Notes:

PieceType is kOnePiece, kFirstPiece, kLastPiece or kNextPiece.
Data is the raw data in a binary string.
Length is the number of bytes and BlobSize the size of data blocks used.

169.18.8 Constants

169.18.9 kFirstPiece = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The first piece is processed. You may setup everything you need to handle the data.

169.18.10 kLastPiece = 3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The last piece is processed. You can close files/network connections.

169.18.11 kNextPiece = 2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The next piece is processed. Not the first one or the last one, but one between.

169.18.12 kOnePiece = 4

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The whole data stream is delivered in one call of the event.

169.19 class SQLDataProviderMBS

169.19.1 class SQLDataProviderMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a data provider.
Notes: Use this to set a blob/clob object with streaming data. For example if you want to add a 1 GB big file to the database without loading it into RAM in one piece, you can use this class to read it in small chunks.

169.19.6 Events

169.19.7 Read(byref PieceType as Integer, Length as UInt32) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called whenever new data is needed.
Notes:

PieceType is kOnePiece, kFirstPiece, kLastPiece or kNextPiece.
If your stream is on the end, you set this to kLastPiece.
Return the raw data in a string.
Length is the number of bytes.

169.19.8 Constants

169.19.9 kFirstPiece = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The first piece is processed. You may setup everything you need to handle the data.

169.19.10 kLastPiece = 3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The last piece is processed. You can close files/network connections.

169.19.11 kNextPiece = 2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The next piece is processed. Not the first one or the last one, but one between.

169.19.12 kOnePiece = 4

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The whole data stream is delivered in one call of the event.

169.20 class SQLDateTimeMBS

169.20.1 class SQLDateTimeMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL date/time value class.
Example:

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)

MsgBox d.StringValue // shows "2008-03-04T23:10:20"
```

169.20.6 Methods

169.20.7 Constructor(DateTimeValue as DateTime)

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the datetime value with the given DateTime object.
See also:

- 169.20.8 Constructor(DateValue as Date) 23652
- 169.20.9 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 23653
- 169.20.10 Constructor(other as SQLDateTimeMBS) 23653
- 169.20.11 Constructor(StringValue as String) 23654
- 169.20.12 Constructor(value as Double) 23655
- 169.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 23655
- 169.20.14 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 23656

169.20.8 Constructor(DateValue as Date)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes the datetime value with the given date.
See also:

- 169.20.7 Constructor(DateTimeValue as DateTime) 23652
- 169.20.9 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 23653
- 169.20.10 Constructor(other as SQLDateTimeMBS) 23653
- 169.20.11 Constructor(StringValue as String) 23654
- 169.20.12 Constructor(value as Double) 23655

- 169.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 23655
- 169.20.14 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 23656

169.20.9 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new SQL Datetime with the given values.
See also:

- 169.20.7 Constructor(DateTimeValue as DateTime) 23652
- 169.20.8 Constructor(DateValue as Date) 23652
- 169.20.10 Constructor(other as SQLDateTimeMBS) 23653
- 169.20.11 Constructor(StringValue as String) 23654
- 169.20.12 Constructor(value as Double) 23655
- 169.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 23655
- 169.20.14 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 23656

169.20.10 Constructor(other as SQLDateTimeMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the SQL Date Time.
Example:

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
dim e as new SQLDateTimeMBS(d)

MsgBox e.StringValue // shows "2008-03-04T23:10:20"
```

See also:

- 169.20.7 Constructor(DateTimeValue as DateTime) 23652
- 169.20.8 Constructor(DateValue as Date) 23652

- 169.20.9 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 23653
- 169.20.11 Constructor(StringValue as String) 23654
- 169.20.12 Constructor(value as Double) 23655
- 169.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 23655
- 169.20.14 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 23656

169.20.11 Constructor(StringValue as String)

MBS SQL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialized a date time value from a string.
Example:

```
Dim d As New SQLDateTimeMBS("2021-04-12T18:46:16.242")
msgbox d.StringValue

Dim d2 As New SQLDateTimeMBS("now")
MsgBox d2.StringValue
```

Notes: You can pass "now" for current time, a string containing a double value for seconds since epoche or a string formatted with SQL datetime. Either with T or space as separator. If fraction is given, it should be 3 digits for milliseconds.

169.20.12 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new SQL date time value based on the double value.
Example:

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
dim e as new SQLDateTimeMBS(d.DoubleValue+1) // clone with one day more

MsgBox e.StringValue // shows "2008-03-05T23:10:20"
```

169.20.13 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "")

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new SQL Datetime with the given values.
Example:

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)

MsgBox d.StringValue // shows "2008-03-04T23:10:20"
```

169.20.15 Set(DateTimeValue as DateTime)

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Assigns the datetime value with the given dateTime object.
See also:

- 169.20.16 Set(value as Date) 23657

169.20.16 Set(value as Date)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Assigns the datetime value with the given date.
See also:

- 169.20.15 Set(DateTimeValue as DateTime) 23656

169.20.17 Properties

169.20.18 DateTimeValue as DateTime

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the value of this datetime object as a date object.
Notes: (Read only property)

169.20.19 DateValue as Date

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the value of this datetime object as a date object.
Notes: (Read only property)

169.20.20 Day as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the day this SADateTime object represents (1 – 31).
Notes: (Read only property)

169.20.21 DayOfWeek as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the day of the week this SADateTime object represents (Sunday = 1).
Notes: (Read only property)

169.20.22 DayOfYear as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the day of the year this SADateTime object represents (Jan 1 = 1).
Notes: (Read only property)

169.20.23 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The double value of this date/time.
Notes:

Use these operators to get current date/time value using standard double representation. Days are represented by whole number increments starting with 30 December 1899, midnight as time zero. Hour values are expressed as the absolute value of the fractional part of the number.

Date and time	Representation
30 December 1899, midnight	0.00
1 January 1900, midnight	2.00
4 January 1900, midnight	5.00
4 January 1900, 6 A.M.	5.25
4 January 1900, noon	5.50
4 January 1900, 9 P.M.	5.875

(Read only property)

169.20.24 Fraction as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the fraction of second (0 to 999,999,999) this SQLDateTime object represents.
Notes:

The value of the fraction field is the number of billionths of a second and ranges from 0 through 999,999,999 (1 less than 1 billion). For example, the value of the fraction field for a half-second is 500,000,000, for a thousandth of a second (one millisecond) is 1,000,000, for a millionth of a second (one microsecond) is 1,000, and for a billionth of a second (one nanosecond) is 1.
(Read only property)

169.20.25 hasDate as Boolean

MBS SQL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this date & time object contains a date.
Notes: (Read only property)

169.20.26 hasTime as Boolean

MBS SQL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this date & time object contains a time.
Notes: (Read only property)

169.20.27 Hour as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hour this SADateTime object represents (0 – 23).
Notes: (Read only property)

169.20.28 Minute as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the minute this SADateTime object represents (0 – 59).
Notes: (Read only property)

169.20.29 Month as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the month this SADateTime object represents (1 – 12).
Notes: (Read only property)

169.20.30 Second as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the second this SADateTime object represents (0 – 59).
Notes: (Read only property)

169.20.31 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value for this date/time.
Notes: (Read only property)

169.20.32 TimeZone as String

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time zone.
Notes:

Should be in format "00:00" and should be supported for Oracle and Postgres.
(Read and Write property)

169.20.33 Year as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the year this SADateTime object represents.
Notes: (Read only property)

169.21 class SQLErrorExceptionMBS

169.21.1 class SQLErrorExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error exception class to report SQL errors.
Notes:

The SQLDatabaseMBS class sets its error properties on an error. All other SQL classes raise exceptions where you can check the message property.
Subclass of the RuntimeException class.

169.21.6 Properties

169.21.7 ErrorClass as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a class of error.
Notes:

Returns one of the following values:

SA_No_Error	0	No error occurred.
SA_UserGenerated_Error	1	User-generated error.
SA_Library_Error	2	The Library error occurred.
SA_DBMS_API_Error	3	DBMS API error occurred.

A SQLErrorExceptionMBS object handles the next error classes:

- User-generated errors
- Library errors
- DBMS API errors

The Library errors are generated by the Library itself. It can be like detecting some mistake in passing arguments to the function or referencing the parameter with an inappropriate name. To get a Library-defined error text call ErrorMessage method.

The DBMS API errors come to the Library from the DBMS Client or Server. In this case the Library returns an error code and text Client- or Server-defined. To get error code and error text returned by the server call NativeError and ErrorMessage methods.

The User-generated exception is "SQLAPI++ compatible" exception thrown by the user. To throw user exception use throwUserException method.
(Read and Write property)

169.21.8 ErrorMessage as String

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets an error text.
Notes:

A error text depends on a class of error.

If error class is Library error the ErrorMessage method returns Library-defined error text. If error class is DBMS API error the ErrorMessage method returns an error text gotten from DBMS Server or Client. If error class is User-defined error the ErrorMessage method returns an error text specified by user (see throwUserException method).

To get the error class call ErrorClass method.
(same as Message property)
(Read and Write property)

169.21.9 ErrorPosition as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets an error position in SQL statement.
Notes:

Returns an integer value representing error position.
Not all DBMS servers allow to get error position. See Server specific notes to get detailed information about returned value.

If a command object's associated SQL statement contains any syntax errors, an exception will be thrown when you try to compile. ErrorPosition method returns the error position within the command string.

Server specific notes

DBMS server	ErrorPosition method returned value
Oracle	ErrorPosition returns parse error offset.
SQL Server	ErrorPosition returns the number of line within SQL statement where error occurred.
Sybase	ErrorPosition returns the number of line within SQL statement where error occurred.
DB2	ErrorPosition returns -1. DB2 does not support this function.
Informix	ErrorPosition returns -1. Informix does not support this function.
InterBase	ErrorPosition returns -1. InterBase does not support this function.
SQLBase	ErrorPosition returns character position of the syntax error within an SQL statement. The first character is position 0.
MySQL	ErrorPosition returns -1. MySQL does not support this function.
PostgreSQL	ErrorPosition returns -1. PostgreSQL does not support this function.
ODBC	ErrorPosition returns -1. ODBC does not support this function.

(Read and Write property)

169.21.10 NativeError as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a native code associated with current error.
Notes:

Returns an integer value represents a native code associated with current error.

If error class is DBMS API error the NativeError method returns error code received from DBMS Server or Client. If error class is User-defined error the NativeError method returns an error code specified by user (see throwUserException method). If error class is Library error the NativeError method returns -1.

To get the error class call ErrorClass method.

See server specific documentation to get more information about DBMS API error code.
(same as ErrorNumber property)
(Read and Write property)

169.21.11 SQL as String

MBS SQL Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL string set when this error occurred.
Notes: (Read and Write property)

169.22 class SQLFieldMBS

169.22.1 class SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the class for a SQL field in a record.
Notes:

Be aware that field objects exists only as long as their SQLCommand exists.

see also
https://www.sqlapi.com/ApiDoc/class_s_a_field.html
Subclass of the SQLValueReadMBS class.

169.22.4 Methods

169.22.5 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value using the given data consumer.
Notes:

BlockSize: Size of piece of data you want to get to the consumer event.

After a command execution all output parameters are updated by their values, including Long and BLob(CLob) parameters. If you want to control piecewise reading of Long or BLob(CLob) data you should do the following:

Before a command execution set kLongOrLobReaderManual reading mode (see LongOrLobReaderMode) for Long or BLob(CLob) parameters you want to process by a data consumer. After that SQLAPI++ will skip reading output Long and BLob(CLob) parameters that you set to be read manually.
After command execution use ReadLongOrLob method for each output parameter defined to be read manually.
Note, that if the command has result set(s) (it is possible in some servers, see Server specific notes) then output parameters are available only after all result sets are completely processed using FetchNext method.
See also:

- 169.22.6 ReadLongOrLob(toFile as FolderItem) 23666
- 169.22.7 ReadLongOrLob(toStream as Writeable) 23666

169.22.6 ReadLongOrLob(toFile as FolderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value to the given file.
Example:

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim field as SQLFieldMBS = cmd.Field("image")
// read blob content to binarystream
field.ReadLongOrLob(f)
```

Notes: May raise IOExceptions if things go wrong.
See also:

- 169.22.5 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 23665
- 169.22.7 ReadLongOrLob(toStream as Writeable) 23666

169.22.7 ReadLongOrLob(toStream as Writeable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value to the given writeable stream.
Example:

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.Create(f, true)
dim field as SQLFieldMBS = cmd.Field("image")
// read blob content to binarystream
field.ReadLongOrLob(b)
```

Notes: This allows you to read in chunks the data to a stream, e.g. binarystream, textoutputstream or socket.
See also:

- 169.22.5 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 23665
- 169.22.6 ReadLongOrLob(toFile as FolderItem) 23666

169.22.8 Properties

169.22.9 FieldNativeType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns native type code of the field.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use NativeType property instead.
(Read only property)

169.22.10 FieldPrecision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns precision of the field value (the total number of allowable digits).
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use Precision property instead.
(Read only property)

169.22.11 FieldScale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns scale of the field value (the number of digits to the right of the decimal point).
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use Scale property instead.
(Read and Write property)

169.22.12 FieldSize as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns field data size.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use Size property instead.
(Read only property)

169.22.13 FieldType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns field data type.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Value is one of the kDataType* constants.
Deprecated. Please use Type property instead.
(Read and Write property)

169.22.14 isFieldRequired as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows if it is possible for the field value to be null.
Notes:

Returns true if the field value can be null; false otherwise.
(Read only property)

169.22.15 Name as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns name of the field.
Notes: (Read only property)

169.22.16 NativeType as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns native type code of the field.
Notes: (Read only property)

169.22.17 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

169.22.18 Pos as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a one-based position of the field in a result set.
Notes: (Read only property)

169.22.19 Precision as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns precision of the field value (the total number of allowable digits).
Notes: (Read only property)

169.22.20 Scale as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns scale of the field value (the number of digits to the right of the decimal point).
Notes: (Read and Write property)

169.22.21 Size as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns field data size.
Notes: (Read only property)

169.22.22 Type as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns field data type.
Example:

```
dim db as SQLConnectionMBS
dim cmd as new SQLCommandMBS(db, "select * from test")

cmd.Execute

dim f as SQLFieldMBS = cmd.Field("test")

if f.Type = f.kDataTypeLong then
MsgBox "type is long"
end if
```

Notes:

Value is one of the kDataType* constants.
(Read and Write property)

169.22.23 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value of a specific field option.
Notes:

See for more details:
https://www.sqlapi.com/ApiDoc/class_s_a_field.html
(Read and Write computed property)

169.23 class SQLGlobalsMBS

169.23.1 class SQLGlobalsMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the global methods of the SQL plugin.

169.23.4 Methods

169.23.5 FindTableName(SQL as String) as String

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries table name used in a SQL SELECT statement.
Example:

```
Dim sql As String = "SELECT First, Last FROM MyTable WHERE ID = 1"
Dim TableName As String = SQLGlobalsMBS.FindTableName(sql)

MessageBox TableName // shows MyTable
```

Notes:

This is a helper function used by our Edit/Update methods in RecordSet.
Returns either the found table name or empty text if something got wrong. e.g. multiple tables affected due to JOIN operation.

If you find a case where the parser crashes or reports wrong result, please contact us.

169.23.6 GetEnv(name as string) as string

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries environment variable.
Notes: Returns empty string if variable is undefined.

169.23.7 GetVersion as String

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the SQLAPI library.

169.23.8 GetVersionBuild as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The build number of the SQLAPI library.

169.23.9 GetVersionMajor as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The major version number of the SQLAPI library.

169.23.10 GetVersionMinor as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minor version number of the SQLAPI library.

169.23.11 PutEnv(line as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets environment variable.
Notes: Line format should be "key=value" and returns true on success and false on failure.

169.23.12 RaiseException(message as string)

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raises an exception to test exception handling in SQL Plugin.
Notes: Raises directly a SQLErrorExceptionMBS with the given message.

169.23.13 RaiseSQLErrorException(UserCode as Integer, message as string)

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raises an exception to test exception handling in SQL Plugin.
Notes: Raises a SAUserException which the plugin catches and translates to a SQLErrorExceptionMBS in Xojo.

169.23.14 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS SQL Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory.
Notes: This is often useful to make sure the DLLs in that folder are found.

See also:

- 169.23.15 SetCurrentWorkingDirectory(path as String) as boolean 23674

169.23.15 SetCurrentWorkingDirectory(path as String) as boolean

MBS SQL Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory.
Notes: This is often useful to make sure the DLLs in that folder are found.
See also:

- 169.23.14 SetCurrentWorkingDirectory(path as folderitem) as boolean 23673

169.23.16 SetEnv(name as string, value as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an environment variable.
Notes:

Existing variable with same name will be overwritten.
Returns true on success and false on failure.

169.23.17 SetLicenseCode(n as string, enddate as Integer, v1 as Integer, v2 as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Registeres the SQL plugin and library.
Notes: Once you ordered a license, you receive details on how to call this method.

169.23.18 Setlocale(category as Integer, locale as string)

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the locale to use.
Example:

```
// ask for English for USA with 1252 codepage
SQLGlobalsMBS.Setlocale SQLGlobalsMBS.LocaleAll, "English_United States.1252"
```

Notes:

The Setlocale function sets the C library's notion of natural language formatting style for particular sets of routines. Each such style is called a 'locale' and is invoked using an appropriate name passed as a C string.

The setlocale() function recognizes several categories of routines. These are the categories and the sets of routines they select:

LocaleAll	Set the entire locale generically.
LocaleCollate	Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().
LocaleCType	Set a locale for the ctype and multibyte functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.
LocaleMessages	Set a locale for message catalogs, see catopen function.
LocaleMonetary	Set a locale for formatting monetary values; this affects the localeconv() function.
LocaleNumeric	Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().
LocaleTime	Set a locale for formatting dates and times using the strftime() function.

Only three locales are defined by default: the empty string "" (which denotes the native environment) and the "C" and "POSIX" locales (which denote the C-language environment). By default, C programs start in the "C" locale.

169.23.19 UnInitialize

MBS SQL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Explicitly shutdown SQL engine.
Notes: You can call this in App Close or Destructor, but only after you destroyed all Connections, e.g. all SQLDatabaseMBS and SQLConnectionMBS objects.

169.23.20 UnSetEnv(name as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes environment variable.
Notes: Returns true on success and false on failure.

169.23.21 Events

169.23.22 Trace(traceInfo as Integer, SQL as string, Connection as SQLConnectionMBS, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: .

Function: The event to trace SQL commands.

169.23.23 Constants

169.23.24 LocaleAll=0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: Set the entire locale generically.

169.23.25 LocaleCollate=1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().

169.23.26 LocaleCType=2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: et a locale for the ctype(3) and multibyte(3) functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.

169.23.27 LocaleMessages=6

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: Set a locale for message catalogs, see catopen(3) function.

169.23.28 LocaleMonetary=3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: Set a locale for formatting monetary values; this affects the localeconv() function.

169.23.29 LocaleNumeric=4

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().

169.23.30 LocaleTime=5

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: Set a locale for formatting dates and times using the strftime() function.

169.24 class SQLIntervalMBS

169.24.1 class SQLIntervalMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class in the SQL Plugin for an interval.

169.24.2 Methods

169.24.3 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new zero interval.
See also:

- 169.24.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0) 23678
- 169.24.5 Constructor(value as Double) 23678

169.24.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new interval with the given values.
See also:

- 169.24.3 Constructor 23678
- 169.24.5 Constructor(value as Double) 23678

169.24.5 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new interval with the given time delta.
Example:

```
dim n as new SQLIntervalMBS(5)

MsgBox n.StringValue // shows "120:00:00" for 120 hours
```

See also:

- 169.24.3 Constructor 23678
- 169.24.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0) 23678

169.24.6 Dec(interval as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrements the interval.

169.24.7 Inc(interval as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Increments the interval.

169.24.8 SetInterval(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the interval values.

169.24.9 Properties

169.24.10 Days as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The days in this interval.
Notes: (Read only property)

169.24.11 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of this interval.
Example:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.DoubleValue) // shows "1.085463" for 1 day, 2 hours, 3 minutes and 4 seconds
```

Notes: (Read only property)

169.24.12 Fraction as Integer

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fraction of a second in nano seconds.
Notes:

Range 0..999999999.
(Read only property)

169.24.13 Hours as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hours value.
Notes: (Read only property)

169.24.14 Minutes as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minutes value.
Notes: (Read only property)

169.24.15 Seconds as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The seconds value.
Notes: (Read only property)

169.24.16 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The interval as a string.
Example:

```
dim n as new SQLIntervalMBS(5)

MsgBox n.StringValue // shows "120:00:00" for 120 hours
```

Notes: (Read only property)

169.24.17 TotalDays as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total days value.
Example:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalDays) // shows "1"
```

Notes: (Read only property)

169.24.18 TotalHours as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total hours value.
Example:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalHours) // shows "26"
```

Notes: (Read only property)

169.24.19 TotalMinutes as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total minutes value.
Example:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalMinutes) // shows "1563"
```

Notes: (Read only property)

169.24.20 TotalSeconds as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total seconds value.
Notes:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.GetTotalSeconds) // shows "93784"
```

(Read only property)

169.25 class SQLite3BackupMBS

169.25.1 class SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The object for a running backup.
Notes:

The backup object records state information about an ongoing online backup operation. The sqlite3_backup object is created by a call to BackupInit() and is destroyed by a call to BackupFinish().
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

169.25.6 Methods

169.25.7 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

169.25.8 Properties

169.25.9 Handle as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

169.26 class SQLite3MBS

169.26.1 class SQLite3MBS

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the native SQLite API.
Example:

```
dim con as new SQLConnectionMBS
dim path as string = "/tmp/test.db" // change path for Windows!

con.Connect(path,"","",SQLConnectionMBS.kSQLiteClient)

dim api as SQLAPIMBS = con.NativeAPI
if api isa SQLite3MBS then
dim s as SQLite3MBS = SQLite3MBS(api)
MsgBox s.Version
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more SQLite specific functions.
Subclass of the SQLAPIMBS class.

169.26.6 Methods

169.26.7 BackupFinish(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes a backup run.
Notes:

When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.
A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.

169.26.8 BackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a backup.
Notes:

The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.

However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

169.26.9 BackupPageCount(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages in total.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

169.26.10 BackupRemaining(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages remaining.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

169.26.11 BackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
Notes:

If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

169.26.12 EnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables/disables extension loading for the given connection.

169.26.13 ErrCode as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ErrCode function returns the numeric result code or extended result code for the most recent failed sqlite3 API call associated with a database connection.
Notes: If a prior API call failed but the most recent API call succeeded, the return value from ErrCode is undefined.

169.26.14 ErrMessage as string

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the most recent error message in english for the given connection.

169.26.15 LastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Last Insert Rowid.
Notes:

Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

169.26.16 LoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 169.26.17 LoadExtension(path as String, ByRef ErrorMessage as String) as Integer 23691

169.26.17 LoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 169.26.16 LoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 23691

169.26.18 MemoryHighwater(reset as boolean) as Int64

MBS SQL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries maximum memory usage so far.
Notes: Can be reset with reset parameter being true.
See also:

- 169.26.26 MemoryHighwater as Int64 23696

169.26.19 ReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: You can change the key on a database using the Rekey Function.
Notes:

An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

169.26.20 SetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs busy handler for this connection.
Notes:

This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while

waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [database connection] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

169.26.21 SetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
Notes:

The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

169.26.22 SetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies encryption to a database connection.
Notes:

Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

169.26.23 TableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extract Metadata About A Column Of A Table
Notes:

Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been

explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

169.26.24 Threadsafe as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test To See If The Library Is Threadsafe.
Notes:

The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_thread-

safe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

169.26.25 Properties

169.26.26 MemoryHighwater as Int64

MBS SQL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries maximum memory usage so far.
Notes:

Can be reset with reset parameter.
(Read only property)
See also:

- 169.26.18 MemoryHighwater(reset as boolean) as Int64 23691

169.26.27 MemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries memory in use by SQLite.
Notes:

This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.
(Read only property)

169.26.28 Version as string

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the SQLite library.
Notes: (Read only property)

169.26.29 VersionNumber as Integer

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version number of the SQLite library.
Notes: (Read only property)

169.26.30 Constants

169.26.31 kErrorAbort = 4

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Callback routine requested an abort.

169.26.32 kErrorAuth = 23

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Authorization denied

169.26.33 kErrorBusy = 5

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: The database file is locked.

169.26.34 kErrorCantopen = 14

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Unable to open the database file.

169.26.35 kErrorConstraint = 19

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Abort due to constraint violation.

169.26.36 kErrorCorrupt = 11

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: The database disk image is malformed.

169.26.37 kErrorDone = 101

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: sqlite3_step() has finished executing.

169.26.38 kErrorEmpty = 16

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Database is empty

169.26.39 kErrorError = 1

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: SQL error or missing database.

169.26.40 kErrorFormat = 24

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Auxiliary database format error.

169.26.41 kErrorFull = 13

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Insertion failed because database is full.

169.26.42 kErrorInternal = 2

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Internal logic error in SQLite

169.26.43 kErrorInterrupt = 9

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Operation terminated by sqlite3_interrupt().

169.26.44 kErrorIoerr = 10

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Some kind of disk I/O error occurred.

169.26.45 kErrorLocked = 6

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: A table in the database is locked.

169.26.46 kErrorMismatch = 20

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Data type mismatch.

169.26.47 kErrorMisuse = 21

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Library used incorrectly.

169.26.48 kErrorNolfs = 22

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Uses OS features not supported on host.

169.26.49 kErrorNoMem = 7

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Out of memory.

169.26.50 kErrorNotaDB = 26

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: File opened that is not a database file.

169.26.51 kErrorNotFound = 12

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: NOT USED. Table or record not found.

169.26.52 kErrorOk = 0

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Successful result

169.26.53 kErrorPerm = 3

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Access permission denied.

169.26.54 kErrorProtocol = 15

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: NOT USED. Database lock protocol error.

169.26.55 kErrorRange = 25

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: 2nd parameter to sqlite3_bind out of range.

169.26.56 kErrorReadonly = 8

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Attempt to write a readonly database.

169.26.57 kErrorRow = 100

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: sqlite3_step() has another row ready.

169.26.58 kErrorSchema = 17

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: The database schema changed.

169.26.59 kErrorToobig = 18

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: String or BLOB exceeds size limit.

169.27 class SQLLongBinaryMBS

169.27.1 class SQLLongBinaryMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a long binary object.
Notes:

Basicly this is a SQLStringMBS which is always marked to contain binary data. You only need this class to use the constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

- 169.27.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 23704

169.27.6 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data, e.g. for blob.
See also:

- 169.27.5 Constructor 23703
- 169.27.7 Constructor(data as SQLStringMBS) 23704
- 169.27.8 Constructor(Data as string, isText as Boolean = True) 23704
- 169.27.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 23704

169.27.7 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new long binary object from a string object.
See also:

- 169.27.5 Constructor 23703
- 169.27.6 Constructor(Data as MemoryBlock) 23703
- 169.27.8 Constructor(Data as string, isText as Boolean = True) 23704
- 169.27.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 23704

169.27.8 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 169.27.5 Constructor 23703
- 169.27.6 Constructor(Data as MemoryBlock) 23703
- 169.27.7 Constructor(data as SQLStringMBS) 23704
- 169.27.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 23704

169.27.9 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new long binary object from a data provider.
Notes:

The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new blob object life long enough. Because the actual

data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.

- 169.32.8 Constructor(value as Double) 23712

169.32.10 NumericWithCurrency(value as Currency) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new numeric value object with given currency value.
Example:

```
// test code for currency
dim c1 as Currency = 12345678.
dim c2 as Currency = 1234567.8
dim c3 as Currency = 123456.78
dim c4 as Currency = 12345.678
dim c5 as Currency = 1234.5678
dim c6 as Currency = 123.45678

dim n1 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c1)
dim n2 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c2)
dim n3 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c3)
```

```
dim n4 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c4)
dim n5 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c5)
dim n6 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c6)

dim s1 as string = n1.StringValue
dim s2 as string = n2.StringValue
dim s3 as string = n3.StringValue
dim s4 as string = n4.StringValue
dim s5 as string = n5.StringValue
dim s6 as string = n6.StringValue

dim d1 as Double = n1.DoubleValue
dim d2 as Double = n2.DoubleValue
dim d3 as Double = n3.DoubleValue
dim d4 as Double = n4.DoubleValue
dim d5 as Double = n5.DoubleValue
dim d6 as Double = n6.DoubleValue

dim x1 as Currency = n1.CurrencyValue
dim x2 as Currency = n2.CurrencyValue
dim x3 as Currency = n3.CurrencyValue
dim x4 as Currency = n4.CurrencyValue
dim x5 as Currency = n5.CurrencyValue
dim x6 as Currency = n6.CurrencyValue

// check for errors
if x1<>c1 then break
if x2<>c2 then break
if x3<>c3 then break
if x4<>c4 then break
if x5<>c5 then break
if x6<>c6 then break

if x1*10000 <>round(d1 * 10000) then Break
if x2*10000 <>round(d2 * 10000) then Break
if x3*10000 <>round(d3 * 10000) then Break
if x4*10000 <>round(d4 * 10000) then Break
if x5*10000 <>round(d5 * 10000) then Break
if x6*10000 <>round(d6 * 10000) then Break

Break // if no break before, it's okay.
```

169.32.11 NumericWithDouble(value as Double) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with the given double value.

169.32.12 NumericWithInt64(value as Int64) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with the given Int64 value.

169.32.13 NumericWithString(value as string) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with the given string value.
Notes: If string is empty, we return a number with zero as value.

169.32.14 NumericWithUInt64(value as UInt64) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with the given unsigned integer value.

169.32.15 Properties

169.32.16 CurrencyValue as Currency

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The currency value.
Example:

```
// test code for currency
dim c1 as Currency = 12345678.
dim c2 as Currency = 1234567.8
dim c3 as Currency = 123456.78
dim c4 as Currency = 12345.678
dim c5 as Currency = 1234.5678
dim c6 as Currency = 123.45678

dim n1 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c1)
dim n2 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c2)
dim n3 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c3)
```

```
dim n4 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c4)
dim n5 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c5)
dim n6 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c6)

dim s1 as string = n1.StringValue
dim s2 as string = n2.StringValue
dim s3 as string = n3.StringValue
dim s4 as string = n4.StringValue
dim s5 as string = n5.StringValue
dim s6 as string = n6.StringValue

dim d1 as Double = n1.DoubleValue
dim d2 as Double = n2.DoubleValue
dim d3 as Double = n3.DoubleValue
dim d4 as Double = n4.DoubleValue
dim d5 as Double = n5.DoubleValue
dim d6 as Double = n6.DoubleValue

dim x1 as Currency = n1.CurrencyValue
dim x2 as Currency = n2.CurrencyValue
dim x3 as Currency = n3.CurrencyValue
dim x4 as Currency = n4.CurrencyValue
dim x5 as Currency = n5.CurrencyValue
dim x6 as Currency = n6.CurrencyValue

// check for errors
if x1<>c1 then break
if x2<>c2 then break
if x3<>c3 then break
if x4<>c4 then break
if x5<>c5 then break

if x1*10000 <>round(d1 * 10000) then Break
if x2*10000 <>round(d2 * 10000) then Break
if x3*10000 <>round(d3 * 10000) then Break
if x4*10000 <>round(d4 * 10000) then Break
if x5*10000 <>round(d5 * 10000) then Break
if x6*10000 <>round(d6 * 10000) then Break

Break // if no break before, it's okay.
```

Notes: (Read and Write property)

169.32.17 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The double value for this number.
Notes: (Read and Write property)

169.32.18 Int64Value as Int64

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number value as an int64.
Notes: (Read and Write property)

169.32.19 precision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum number of digits in base 10.
Notes: (Read only property)

169.32.20 scale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of digits to the right of the decimal point.
Notes: (Read only property)

169.32.21 sign as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sign: 1 for positive numbers, 0 for negative numbers.
Notes: (Read only property)

169.32.22 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value of this number.
Notes: (Read and Write property)

169.32.23 UInt64Value as UInt64

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number value as an uint64.
Notes: (Read and Write property)

169.33 class SQLParamMBS

169.33.1 class SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL class for parameters.
Notes:

see also
https://www.sqlapi.com/ApiDoc/class_s_a_param.html
Subclass of the SQLValueMBS class.

169.33.4 Methods

169.33.5 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Long or Lob data reading mode.
Notes:

SQLAPI++ Library provides two ways to read Long or BLob(CLob) object's value (usually SQLField or SQLParam objects):

1. reading of Long or Lob data at once into an internal buffer (like ordinary string or binary values);
2. piecewise reading of Long or Lob data using user defined callback.

kLongOrLobReaderDefault reading mode used by default.

If you want to control piecewise reading of Long or BLob(CLob) data you should set LongOrLobReaderMode and use kLongOrLobReaderManual reading mode for Long or BLob(CLob) parameters or fields you want to process with your data consumer. After that each fetch will skip reading Long and BLob(CLob) parameters that you set to be read manually. To read field or parameter defined to be read manually you should call ReadLongOrLob method for each of them after the fetch. ReadLongOrLob method will repeatedly call the data consumer Write event.
See also:

- 169.33.6 ReadLongOrLob(toFile as FolderItem) 23719
- 169.33.7 ReadLongOrLob(toStream as Writeable) 23719

169.33.6 ReadLongOrLob(toFile as FolderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value to the given file.
Example:

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim Param as SQLParamMBS = cmd.Param("image")
// read blob content to binarystream
Param.ReadLongOrLob(f)
```

Notes: May raise IOExceptions if things go wrong.
See also:

- 169.33.5 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 23718
- 169.33.7 ReadLongOrLob(toStream as Writeable) 23719

169.33.7 ReadLongOrLob(toStream as Writeable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value to the given writeable stream.
Example:

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.Create(f, true)
dim param as SQLParamMBS = cmd.param("image")
// read blob content to binarystream
param.ReadLongOrLob(b)
```

Notes: This allows you to read in chunks the data to a stream, e.g. binarystream, textoutputstream or socket.
See also:

- 169.33.5 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 23718
- 169.33.6 ReadLongOrLob(toFile as FolderItem) 23719

169.33.8 Properties

169.33.9 DirType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The direction type of parameter (input, output, etc.).
Notes:

Use the kParamDirType* constants.

Usually the Library automatically detects parameter's direction type and implicitly creates an appropriate SAParam object. But not all of DBMS clients/servers provide complete parameters information. In that situation programmer need to describe parameter's direction type explicitly. See Server specific notes for details.

https://www.sqlapi.com/ApiDoc/class_s_a_param.html
(Read and Write property)

169.33.10 IsInput as Boolean

MBS SQL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an input paramater.
Notes:

Checks ParamType property internally.

(Read only property)

169.33.11 IsOutput as Boolean

MBS SQL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an output paramater.
Notes:

Checks ParamType property internally.
(Read only property)

169.33.12 Name as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the parameter.
Notes: (Read only property)

169.33.13 NativeType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native type code of the parameter.
Notes: (Read and Write property)

169.33.14 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

169.33.15 Precision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The precision of the parameter value (the total number of allowable digits).
Notes: (Read and Write property)

169.33.16 Scale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scale of the parameter value (the number of digits to the right of the decimal point).
Notes: (Read and Write property)

169.33.17 Size as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter's data size.
Notes: (Read and Write property)

169.33.18 Type as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter's data type.
Notes:

See the kDataType constants.
(Read and Write property)

169.33.19 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value of a specific parameter option.
Notes:

see also:
https://www.sqlapi.com/ApiDoc/class_s_a_param.html
(Read and Write computed property)

169.33.20 Constants

169.33.21 kParamDirTypeInput=0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the parameter direction type constants.
Notes: Input parameter.

169.33.22 kParamDirTypeInputOutput=1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the parameter direction type constants.
Notes: Input/output parameter.

169.33.23 kParamDirTypeOutput=2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the parameter direction type constants.
Notes: Output parameter.

169.33.24 kParamDirTypeReturn=3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the parameter direction type constants.
Notes: Returning parameter.

169.34 class SQLPositionMBS

169.34.1 class SQLPositionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a position value.

169.34.2 Methods

169.34.3 Constructor(withID as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Position value with an ID.
See also:

- 169.34.4 Constructor(withName as string) 23724

169.34.4 Constructor(withName as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Position value with a name.
See also:

- 169.34.3 Constructor(withID as Integer) 23724

169.35 class SQLPreparedStatementMBS

169.35.1 class SQLPreparedStatementMBS

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for prepared statements if you work with SQLDatabaseMBS class.
Notes:

If you work with SQLCommandMBS class, you can set parameters there directly.

For the SQL string you number parameters with colon and number. Like this: :1, :2, :3.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Interfaces: PreparedSQLStatement

169.35.8 Methods

169.35.9 Bind(name As String, value as Variant)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the value for one parameter.
Example:

```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.BindType("fid", SQLPreparedStatementMBS.kTypeLong)
```

```
p.BindType("fvarchar20", SQLPreparedStatementMBS.kTypeString)
p.Bind("fid", 2345)
p.Bind("fvarchar20", "Hello World by name")

p.SQLExecute
```

Notes:

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.
See also:

- 169.35.10 Bind(name As String, value as Variant, type as Integer) 23727
- 169.35.11 Bind(Values as Dictionary) 23728
- 169.35.12 Bind(values() as Variant) 23729
- 169.35.13 Bind(zeroBasedIndex as Integer, value as Variant) 23730
- 169.35.14 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 23730

169.35.10 Bind(name As String, value as Variant, type as Integer)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines one paramater with value and type.
Example:

```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.Bind("fid", 2345, SQLPreparedStatementMBS.kTypeLong)
p.Bind("fvarchar20", "Hello World by name", SQLPreparedStatementMBS.kTypeString)

p.SQLExecute
```

Notes:

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 169.35.9 Bind(name As String, value as Variant) 23726
- 169.35.11 Bind(Values as Dictionary) 23728
- 169.35.12 Bind(values() as Variant) 23729
- 169.35.13 Bind(zeroBasedIndex as Integer, value as Variant) 23730
- 169.35.14 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 23730

169.35.11 Bind(Values as Dictionary)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the parameters based on the keys and values in the dictionary.
Example:

```
dim db as SQLDatabaseMBS // your database
dim pic as Picture // some picture
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// get an insert command
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim p as SQLPreparedStatementMBS = db.Prepare(sql)

// put parameter values in a dictionary
dim d as new Dictionary

// by param index
d.Value(0) = "logo.jpg"
// by param name
d.Value("image") = jpegData
```

```
// bind values and run it
p.Bind(d)
p.SQLExecute
```

Notes:

The dictionary is saved to fill parameters later.
Keys can be String, Text or numeric types. Text and String are used to pick parameters by name. Numeric values are used to pick parameter by index (zero based).
MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.
See also:

- 169.35.9 Bind(name As String, value as Variant) 23726
- 169.35.10 Bind(name As String, value as Variant, type as Integer) 23727
- 169.35.12 Bind(values() as Variant) 23729
- 169.35.13 Bind(zeroBasedIndex as Integer, value as Variant) 23730
- 169.35.14 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 23730

169.35.12 Bind(values() as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the value list with the given values.
Notes:

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.
See also:

- 169.35.11 Bind(Values as Dictionary) 23728
- 169.35.13 Bind(zeroBasedIndex as Integer, value as Variant) 23730
- 169.35.14 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 23730

169.35.13 Bind(zeroBasedIndex as Integer, value as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the value for one parameter.
Notes:

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

Raises OutOfBoundsException exception if index parameter is out of range.
See also:

- 169.35.9 Bind(name As String, value as Variant) 23726
- 169.35.10 Bind(name As String, value as Variant, type as Integer) 23727

- 169.35.12 Bind(values() as Variant) 23729
- 169.35.14 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 23730

169.35.14 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines one paramater with value and type.
Notes:

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

Raises OutOfBoundsException exception if index parameter is out of range.

- 169.35.12 Bind(values() as Variant) 23729
- 169.35.13 Bind(zeroBasedIndex as Integer, value as Variant) 23730

169.35.15 BindType(name As String, type as Integer)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the type of one value.
Example:

```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.BindType("fid", SQLPreparedStatementMBS.kTypeLong)
p.BindType("fvarchar20", SQLPreparedStatementMBS.kTypeString)
```

p.Bind("fid", 2345)
p.Bind("fvarchar20", "Hello World by name")

p.SQLExecute

Notes: With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 169.35.16 BindType(types() as Integer) 23732
- 169.35.17 BindType(zeroBasedIndex as Integer, type as Integer) 23732

169.35.16 BindType(types() as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the types for all values.
Notes:

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 169.35.15 BindType(name As String, type as Integer) 23731
- 169.35.17 BindType(zeroBasedIndex as Integer, type as Integer) 23732

169.35.17 BindType(zeroBasedIndex as Integer, type as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the type of one value.
Notes:

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 169.35.15 BindType(name As String, type as Integer) 23731
- 169.35.16 BindType(types() as Integer) 23732

169.35.18 Clear

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all parameters for reusing the SQL Prepared statement.

169.35.19 Constructor

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless SQLPreparedStatementMBS objects by error. The only way to create an object is to use the prepare method in the database class.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

169.35.20 ExecuteSQL(ParamArray bindItems As Variant)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQL command with the given parameters.
Notes:

You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

If bindItems is not nil, we bind parameters using it.

This version of the function raises always exceptions, while SQLExecute only if you set RaiseException property to true.

169.35.21 ExecuteSQLMT(ParamArray bindItems As Variant)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQL command with the given parameters.
Notes:

You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

If bindItems is not nil, we bind parameters using it.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

This version of the function raises always exceptions, while SQLExecuteMT only if you set RaiseException property to true.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

169.35.22 SelectSQL(ParamArray bindItems As Variant) As RowSet

MBS SQL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the query with the given parameters.
Notes:

Returns the RowSet object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If bindItems is not nil, we bind parameters using it.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

This version of the function raises always exceptions, while SQLSelect only if you set RaiseException property to true.

169.35.23 SelectSQLMT(ParamArray bindItems As Variant) As Rowset

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Returns the RowSet object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If bindItems is not nil, we bind parameters using it.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

This version of the function raises always exceptions, while SQLSelectMT only if you set RaiseException property to true.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

169.35.24 SQLExecute(ParamArray bindItems as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQL command with the given parameters.
Notes:

You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

169.35.25 SQLExecuteMT(ParamArray bindItems as Variant)

MBS SQL Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQL command with the given parameters.
Notes:

You can decide whether you pass values here or call Bind methods.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

169.35.26 SQLSelect(ParamArray bindItems as Variant) As RecordSet

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the query with the given parameters.
Notes:

Returns the recordset object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

169.35.27 SQLSelectMT(ParamArray bindItems as Variant) As RecordSet

MBS SQL Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the query with the given parameters.
Notes:

Returns the recordset object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

169.35.28 Properties

169.35.29 BoundTypes as Dictionary

MBS SQL Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The binded types to inspect in debugger.
Notes:

When queried, the plugin creates a copy of the dictionary for you to inspect in debugger.
Changes to the dictionary do not bind types.

Renamed to BoundTypes in version 19.4. Was BindedTypes, but that was not proper english.
(Read only property)

169.35.30 BoundValues as Dictionary

MBS SQL Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The binded values to inspect in debugger.
Notes:

When queried, the plugin creates a copy of the dictionary for you to inspect in debugger.
Changes to the dictionary do not bind values.

Renamed to BoundValues in version 19.4. Was BindedValues, but that was not proper english.
(Read only property)

169.35.31 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin will ask for a scrollable recordset when doing SQLSelect.
Notes:

Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

169.35.32 SQL as String

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL command for this prepared statement.

Notes: (Read and Write property)

169.35.33 Constants

169.35.34 kTypeBlob = 16

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: Binary large Object. Pass a string or memoryblock.

169.35.35 kTypeBool = 1

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: Boolean

169.35.36 kTypeBytes = 13

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes:

a binary string.
(which is a string without text encoding)

169.35.37 kTypeClob = 17

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: Character Large Object

169.35.38 kTypeDateTime = 10

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: Date and/or Time.

169.35.39 kTypeDouble = 8

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: double float value.

169.35.40 kTypeInt32 = 4

MBS SQL Plugin, Plugin Version: 20.2.

Function: One of the data type constants.
Notes: signed 32 bit integer

169.35.41 kTypeInt64 = 6

MBS SQL Plugin, Plugin Version: 19.5.

Function: One of the data type constants.
Notes: Signed 64-bit integer.

169.35.42 kTypeInterval = 11

MBS SQL Plugin, Plugin Version: 13.5.

Function: One of the data type constants.
Notes:

An interval.
Please pass SQLIntervalMBS in the variant. If the variant contains anything else, the plugin will pass nil value.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

169.35.43 kTypeLong = 4

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: signed 32 bit integer

169.35.44 kTypeLongBinary = 14

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: Long binary.

169.35.45 kTypeLongChar = 15

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: Long string.

169.35.46 kTypeNull = 99

MBS SQL Plugin, Plugin Version: 14.3.

Function: One of the data type constants.
Notes: NULL value

169.35.47 kTypeNumeric = 9

MBS SQL Plugin, Plugin Version: 13.5.

Function: One of the data type constants.
Notes:

A number (Int64 or double).
This can be used for Int64 or Double values. Depending of the type of number in the variant, the plugin will either make an Int64 or a double internally.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as

good as possible. Raises exceptions if you pass anything which is not recognized.

169.35.48 kTypeShort = 2

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: signed 16 bit integer

169.35.49 kTypeString = 12

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: String

169.35.50 kTypeUInt32 = 5

MBS SQL Plugin, Plugin Version: 20.2.

Function: One of the data type constants.
Notes: unsigned 32 bit integer

169.35.51 kTypeUInt64 = 7

MBS SQL Plugin, Plugin Version: 19.5.

Function: One of the data type constants.
Notes: Unsigned 64-bit integer.

169.35.52 kTypeULong = 5

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: unsigned 32 bit integer

169.35.53 kTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: unknown type

169.35.54 kTypeUShort = 3

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: unsigned 16 bit integer

169.36 class SQLStringMBS

169.36.1 class SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for strings in this plugin.
Example:

```
dim s as new SQLStringMBS("Hello äöü")

MsgBox "Characters: "+str(s.GetLength)+" Bytes: "+str(s.GetBinaryLength)

dim a as string= s.CopyBinaryData
dim b as string= s.CopyText

MsgBox a // RB shows garbage as it tries to display bytes as UTF8 which does not work
MsgBox b // displays correct
```

Notes:

A string can be text (with text encoding) or bytes (raw binary data).

169.36.4 Methods

169.36.5 Compare(text as SQLStringMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares this string object with another string.
Notes:

Function performs a case-sensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical, <0 if this string object is less than text, or >0 if this string object is greater than text.
See also:

- 169.36.6 Compare(text as string) as Integer 23745

169.36.6 Compare(text as string) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares this string object with another string.
Notes:

Function performs a case-sensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical, <0 if this string object is less than text, or >0 if this string object is greater than text.
See also:

- 169.36.5 Compare(text as SQLStringMBS) as Integer 23744

169.36.7 CompareNoCase(text as SQLStringMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares this string object with another string.
Notes:

Function performs a case-insensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical (ignoring case), <0 if this string object is less than text (ignoring case), or >0 if this string object is greater than text (ignoring case).
See also:

- 169.36.8 CompareNoCase(text as string) as Integer 23745

169.36.8 CompareNoCase(text as string) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares this string object with another string.
Notes:

Function performs a case-insensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical (ignoring case), <0 if this string object is less than text (ignoring case), or >0 if this string object is greater than text (ignoring case).
See also:

- 169.36.7 CompareNoCase(text as SQLStringMBS) as Integer 23745

169.36.9 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty string object.
See also:

- 169.36.10 Constructor(Data as MemoryBlock) 23746
- 169.36.11 Constructor(Data as string, isText as Boolean = True) 23746
- 169.36.12 Constructor(other as SQLStringMBS) 23747

169.36.10 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data, e.g. for blob.
See also:

- 169.36.9 Constructor 23746
- 169.36.11 Constructor(Data as string, isText as Boolean = True) 23746
- 169.36.12 Constructor(other as SQLStringMBS) 23747

169.36.11 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 169.36.9 Constructor 23746
- 169.36.10 Constructor(Data as MemoryBlock) 23746
- 169.36.12 Constructor(other as SQLStringMBS) 23747

169.36.12 Constructor(other as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data copied from the other string object.
See also:

- 169.36.9 Constructor 23746
- 169.36.10 Constructor(Data as MemoryBlock) 23746
- 169.36.11 Constructor(Data as string, isText as Boolean = True) 23746

169.36.13 CopyBinaryData as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the bytes from the internal buffer ignoring any text encoding.

169.36.14 CopyText as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the characters of this string as text.
Notes: Text encoding conversion may happen.

169.36.15 Empty

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Forces a string to have 0 length.

169.36.16 GetBinaryLength as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a count of the bytes in the binary data buffer.
Deprecated: This item is deprecated and should no longer be used. You can use BinaryLength instead.
Notes: Deprecated. Please use BinaryLength property.

169.36.17 GetLength as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of characters in a SAString object.
Deprecated: This item is deprecated and should no longer be used. You can use Length instead. **Notes:**

Deprecated. Please use Length property.
For multibyte character sets, GetLength counts each 8-bit character; that is, a lead and trail byte in one multibyte character are counted as two bytes.

169.36.18 Left(count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the left part of a string.

169.36.19 MakeLower

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes all characters in the string to lower case.

169.36.20 MakeUpper

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes all characters in the string to upper case.

169.36.21 Mid(first as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the middle part of a string.
Notes: first: The zero-based index of the first character in this string object that is to be included in the extracted substring.
See also:

- 169.36.22 Mid(first as Integer, Count as Integer) as SQLStringMBS

169.36.22 Mid(first as Integer, Count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the middle part of a string.
Notes:

first: The zero-based index of the first character in this string object that is to be included in the extracted substring.
count: The number of characters to extract from this string object. If this parameter is not supplied, then the remainder of the string is extracted.
See also:

- 169.36.21 Mid(first as Integer) as SQLStringMBS 23748

169.36.23 Operator_Convert as string

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert operation for assignment to string.
See also:

- 169.36.24 Operator_Convert(text as string) 23749

169.36.24 Operator_Convert(text as string)

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert operation for assigning text string.
See also:

- 169.36.23 Operator_Convert as string 23749

169.36.25 Right(count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the right part of a string.

169.36.26 TrimLeft

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trim leading whitespace characters from the string.

169.36.27 TrimRight

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trim trailing whitespace characters from the string.

169.36.28 Properties

169.36.29 BinaryLength as UInt32

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a count of the bytes in the binary data buffer.
Notes: (Read only property)

169.36.30 DebugText as String

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text content for debugging.
Notes:

We show up to 1000 characters here for debugger.
(Read only property)

169.36.31 IsEmpty as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether a String object contains no characters.
Notes:

Returns true if length is zero.
(Read only property)

169.36.32 Length as UInt32

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of characters in a SAString object.
Notes:

For multibyte character sets, GetLength counts each 8-bit character; that is, a lead and trail byte in one multibyte character are counted as two bytes.
(Read only property)

169.37 class SQLUnsupportedExceptionMBS

169.37.1 class SQLUnsupportedExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an exception to report that the function is not supported on this platform.
Notes:

This one raises only if the plugin is compiled for Mac OS Classic.
Subclass of the RuntimeException class.

169.38 class SQLValueMBS

169.38.1 class SQLValueMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL class for mutable values.
Notes: Subclass of the SQLValueReadMBS class.

169.38.6 Methods

169.38.7 Constructor(DataType as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty value object with the given data type.

169.38.8 setAsBlob(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as BLob data using a memoryblock.
See also:

- 169.38.9 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 23754
- 169.38.10 setAsBlob(data as SQLStringMBS) 23755
- 169.38.11 setAsBlob(data as string) 23755
- 169.38.12 setAsBlob(file as folderItem) 23756
- 169.38.13 setAsBlob(stream as Readable) 23756

169.38.9 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as BLob data (SQLString)
Notes:

When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.
See also:

- 169.38.8 setAsBlob(data as MemoryBlock) 23754

- 169.38.10 setAsBlob(data as SQLStringMBS) 23755
- 169.38.11 setAsBlob(data as string) 23755
- 169.38.12 setAsBlob(file as folderItem) 23756
- 169.38.13 setAsBlob(stream as Readable) 23756

169.38.10 setAsBlob(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as BLob data (SQLString)
See also:

- 169.38.8 setAsBlob(data as MemoryBlock) 23754
- 169.38.9 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 23754
- 169.38.11 setAsBlob(data as string) 23755
- 169.38.12 setAsBlob(file as folderItem) 23756
- 169.38.13 setAsBlob(stream as Readable) 23756

169.38.11 setAsBlob(data as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as BLob data (SQLString)
Example:

```
dim c as SQLCommandMBS // your command object
dim JPEGData as string // some data

c.Param("imageData").setAsBlob JPEGData
```

See also:

- 169.38.8 setAsBlob(data as MemoryBlock) 23754
- 169.38.9 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 23754
- 169.38.10 setAsBlob(data as SQLStringMBS) 23755
- 169.38.12 setAsBlob(file as folderItem) 23756
- 169.38.13 setAsBlob(stream as Readable) 23756

169.38.12 setAsBlob(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of file.
Example:

```
dim cmd as SQLCommandMBS // your command object

// pass folderitem to BLOB field
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
cmd.Param("image").setAsBlob(f)
```

Notes:

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 169.38.8 setAsBlob(data as MemoryBlock) 23754
- 169.38.9 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 23754
- 169.38.10 setAsBlob(data as SQLStringMBS) 23755
- 169.38.11 setAsBlob(data as string) 23755
- 169.38.13 setAsBlob(stream as Readable) 23756

169.38.13 setAsBlob(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of stream.
Example:

```
dim cmd as SQLCommandMBS // your command object

// pass BinaryStream to BLOB field
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.open(f)
cmd.Param("image").setAsBlob(b)
```

Notes:

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 169.38.8 setAsBlob(data as MemoryBlock) 23754
- 169.38.9 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 23754
- 169.38.10 setAsBlob(data as SQLStringMBS) 23755
- 169.38.11 setAsBlob(data as string) 23755
- 169.38.12 setAsBlob(file as folderItem) 23756

169.38.14 setAsBool(value as boolean)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as bool data.

169.38.15 setAsBytes(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as binary data from memoryblock.
See also:

- 169.38.16 setAsBytes(data as string) 23757
- 169.38.17 setAsBytes(value as SQLBytesMBS) 23758
- 169.38.18 setAsBytes(value as SQLStringMBS) 23758

169.38.16 setAsBytes(data as string)

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the value to be bytes with content of given string.
Notes:

For BLOB fields or parameters.
Same as the other variant, but avoids creating extra SQLStringMBS object.
See also:

- 169.38.15 setAsBytes(data as MemoryBlock) 23757
- 169.38.17 setAsBytes(value as SQLBytesMBS) 23758
- 169.38.18 setAsBytes(value as SQLStringMBS) 23758

169.38.17 setAsBytes(value as SQLBytesMBS)

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the value to be bytes with content of given Bytes object.
Notes:

For BLOB fields or parameters.
Same as the other variant, but avoids creating extra SQLStringMBS object.
See also:

- 169.38.15 setAsBytes(data as MemoryBlock) 23757
- 169.38.16 setAsBytes(data as string) 23757
- 169.38.18 setAsBytes(value as SQLStringMBS) 23758

169.38.18 setAsBytes(value as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as binary string data (SQLString).
See also:

- 169.38.15 setAsBytes(data as MemoryBlock) 23757
- 169.38.16 setAsBytes(data as string) 23757
- 169.38.17 setAsBytes(value as SQLBytesMBS) 23758

169.38.19 setAsClob(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method.
Notes: This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 169.38.20 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 23759
- 169.38.21 setAsClob(file as folderItem) 23759
- 169.38.22 setAsClob(stream as Readable) 23759
- 169.38.23 setAsClob(text as SQLStringMBS) 23760
- 169.38.24 setAsClob(text as string) 23760

169.38.20 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as CLob data (SQLString)
Notes:

nWhen you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.
See also:

- 169.38.19 setAsClob(data as MemoryBlock) 23758
- 169.38.21 setAsClob(file as folderItem) 23759
- 169.38.22 setAsClob(stream as Readable) 23759
- 169.38.23 setAsClob(text as SQLStringMBS) 23760
- 169.38.24 setAsClob(text as string) 23760

169.38.21 setAsClob(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of file.
Notes:

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 169.38.19 setAsClob(data as MemoryBlock) 23758
- 169.38.20 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 23759
- 169.38.22 setAsClob(stream as Readable) 23759
- 169.38.23 setAsClob(text as SQLStringMBS) 23760
- 169.38.24 setAsClob(text as string) 23760

169.38.22 setAsClob(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of stream.
Notes:

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 169.38.19 setAsClob(data as MemoryBlock) 23758
- 169.38.20 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 23759
- 169.38.21 setAsClob(file as folderItem) 23759
- 169.38.23 setAsClob(text as SQLStringMBS) 23760
- 169.38.24 setAsClob(text as string) 23760

169.38.23 setAsClob(text as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as CLob data (SQLString)
See also:

- 169.38.19 setAsClob(data as MemoryBlock) 23758
- 169.38.20 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 23759
- 169.38.21 setAsClob(file as folderItem) 23759
- 169.38.22 setAsClob(stream as Readable) 23759
- 169.38.24 setAsClob(text as string) 23760

169.38.24 setAsClob(text as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as CLob data (SQLString)
See also:

- 169.38.19 setAsClob(data as MemoryBlock) 23758
- 169.38.20 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 23759
- 169.38.21 setAsClob(file as folderItem) 23759
- 169.38.22 setAsClob(stream as Readable) 23759
- 169.38.23 setAsClob(text as SQLStringMBS) 23760

169.38.25 setAsDate(value as date)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets parameter's value with a date.
Example:

```
dim cmd as SQLCommandMBS // your command object
dim d as new date(2012,12,24,16,0,0) // some date
cmd.Param(3).setAsDate(d) // set third parameter
```

Notes: Same as setAsDateTime, but here we take a date object to make it more convenient.

169.38.26 setAsDateTime(value as dateTime)

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value with a dateTime.
Notes: Same as setAsDate, but here we take a dateTime object to make it more convenient.
See also:

- 169.38.27 setAsDateTime(value as SQLDateTimeMBS) 23761

169.38.27 setAsDateTime(value as SQLDateTimeMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as SQLDateTime data.
See also:

- 169.38.26 setAsDateTime(value as dateTime) 23761

169.38.28 setAsDefault

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Forces to use the default parameter's value.
Notes:

Forces DBMS API to use the default parameter value as the input value for an input or input/output parameter in a procedure.

If DBMS API does not support the concept of ”default parameter values” in stored procedures, this setting will be ignored.

If you set this flag for the parameter that doesn't have a default value, the effect is DBMS defined (e.g. an error can be returned or NULL can be bound).

To cancel using the default parameter value you should call any other SQLValue::setAs... method to bind a parameter value.

To check whether this flag is set or not use isDefault method.

169.38.29 setAsDouble(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Double data.

169.38.30 setAsInt32(value as Int32)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Int32 data.

169.38.31 setAsInt64(value as Int64)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Int64 data.

169.38.32 setAsInteger(value as Integer)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Integer data.
Notes: Int32 or Int64 depending whether app is 32 or 64 bit.

169.38.33 setAsInterval(value as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an interval value.

169.38.34 setAsLong(value as Int32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Int32 data.

169.38.35 setAsLongBinary(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long binary data from memoryblock.
See also:

- 169.38.36 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 23763
- 169.38.37 setAsLongBinary(data as SQLStringMBS) 23764
- 169.38.38 setAsLongBinary(data as string) 23764
- 169.38.39 setAsLongBinary(file as folderItem) 23764
- 169.38.40 setAsLongBinary(stream as Readable) 23765

169.38.36 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long binary data (SQLString)
Notes:

When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.

- 169.38.39 setAsLongBinary(file as folderItem) 23764
- 169.38.40 setAsLongBinary(stream as Readable) 23765

169.38.38 setAsLongBinary(data as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long binary data (SQLString)
See also:

- 169.38.35 setAsLongBinary(data as MemoryBlock) 23763
- 169.38.36 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 23763
- 169.38.37 setAsLongBinary(data as SQLStringMBS) 23764
- 169.38.39 setAsLongBinary(file as folderItem) 23764
- 169.38.40 setAsLongBinary(stream as Readable) 23765

169.38.39 setAsLongBinary(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of file.
Notes:

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 169.38.35 setAsLongBinary(data as MemoryBlock) 23763

- 169.38.38 setAsLongBinary(data as string) 23764
- 169.38.40 setAsLongBinary(stream as Readable) 23765

169.38.40 setAsLongBinary(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of stream.
Notes:

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 169.38.35 setAsLongBinary(data as MemoryBlock) 23763

- 169.38.44 setAsLongChar(stream as Readable) 23766
- 169.38.45 setAsLongChar(text as SQLStringMBS) 23767
- 169.38.46 setAsLongChar(text as string) 23767

169.38.42 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long character data (SQLString)
Notes:

When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.

- 169.38.45 setAsLongChar(text as SQLStringMBS) 23767
- 169.38.46 setAsLongChar(text as string) 23767

169.38.45 setAsLongChar(text as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long character data (SQLString)
See also:

- 169.38.41 setAsLongChar(data as MemoryBlock) 23765
- 169.38.42 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 23766
- 169.38.43 setAsLongChar(file as folderItem) 23766
- 169.38.44 setAsLongChar(stream as Readable) 23766
- 169.38.46 setAsLongChar(text as string) 23767

169.38.46 setAsLongChar(text as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long character data (SQLString)
See also:

- 169.38.41 setAsLongChar(data as MemoryBlock) 23765
- 169.38.42 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 23766
- 169.38.43 setAsLongChar(file as folderItem) 23766
- 169.38.44 setAsLongChar(stream as Readable) 23766
- 169.38.45 setAsLongChar(text as SQLStringMBS) 23767

169.38.47 setAsNull

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets value to null.

169.38.48 setAsNumeric(value as SQLNumericMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as SQLNumeric data.

169.38.49 setAsShort(value as Int16)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as short data.

169.38.50 setAsString(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method.
Notes: This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 169.38.51 setAsString(value as SQLStringMBS) 23768
- 169.38.52 setAsString(value as string) 23769

169.38.51 setAsString(value as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as character string data (SQLString)
See also:

- 169.38.50 setAsString(data as MemoryBlock) 23768
- 169.38.52 setAsString(value as string) 23769

169.38.52 setAsString(value as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as character string data.
Notes: Same as setAsString, but for your convenience with a Xojo string instead of a SQLStringMBS object.
See also:

- 169.38.50 setAsString(data as MemoryBlock) 23768
- 169.38.51 setAsString(value as SQLStringMBS) 23768

169.38.53 setAsUInt32(value as UInt32)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as UInt32 data.

169.38.54 setAsULong(value as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as unsigned long data.

169.38.55 setAsUnknown

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's type as unknown.

169.38.56 setAsUShort(value as UInt16)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as unsigned short data.
Notes: Sets value as unsigned short data.

169.38.57 setAsValueRead(value as SQLValueReadMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value from SQLParam or SQLField objects.
Notes: This method allows using SQLField or SQLParam object received from one SQL statement as a parameter for another SQL statement.

169.38.58 setVariant(value as Variant)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the value based on a variant.
Example:

```
dim con as SQLConnectionMBS // your connection
dim pic as picture // some picture

// get picture data
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// get a command for an Insert command
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim cmd as new SQLCommandMBS(con, sql)

// set values by variant
cmd.Param("name").setVariant "logo.jpg"
cmd.Param("image").setVariant jpegData

// do the insert
cmd.Execute
```

Notes:

MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

169.38.59 Properties

169.38.60 isDefault as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the plugin has been forced to use parameter's default value by calling setAsDefault method; false otherwise.
Notes: (Read only property)

169.39 class SQLValueReadMBS

169.39.1 class SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class used in the SQL Plugin for value objects which can be read.

169.39.4 Methods

169.39.5 asBLob as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as BLob (SQLString) data.
Notes:

If the value of current object is NULL, asBLob method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asBLob method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

169.39.6 asBLobMemory as MemoryBlock

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as BLob data in a memoryblock.

169.39.7 asBLobString as String

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as BLob data in a string.

169.39.8 asBytes as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as binary string data (SQLString).
Notes:

If the value of current object is NULL, asBytes method returns an empty string. Use isNull method to make

sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asBytes method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric) or date-time (kDataTypeDateTime), asBytes method returns a block of data with size sizeof(value's type) as SQLString object.

If the value's type of current object is cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

169.39.9 asCLob as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as CLob (SQLString) data.
Notes:

If the value of current object is NULL, asCLob method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asCLob method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric(kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

169.39.10 asDate as Date

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the value as date.

Example:

```
dim cmd as SQLCommandMBS // your command object
dim d as date = cmd.Field("mydate").asDate // read date value
```

Notes:

If the value of current object is NULL, asDate method returns an empty date object. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is kDataTypeDateTime, asDate method returns date object.

If the value's type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

169.39.11 asDateTime as SQLDateTimeMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as SQLDateTimeMBS object.
Notes:

If the value of current object is NULL, asDateTime method returns an empty SQLDateTime object. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is kDataTypeDateTime, asDateTime method returns SQLDateTime object.

If the value's type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

169.39.12 asDateTimeValue as DateTime

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as date.
Notes:

If the value of current object is NULL, asDate method returns an empty date object. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is kDataTypeDateTime, asDate method returns date object.

If the value's type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

169.39.13 asInterval as SQLIntervalMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as interval (SQLIntervalMBS).

169.39.14 asLongBinary as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as long binary (SQLString) data.
Notes:

If the value of current object is NULL, asLongBinary method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asLongBinary method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

169.39.15 asLongChar as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as long character (SQLString) data.
Notes:

If the value of current object is NULL, asLongChar method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asLongChar method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

169.39.16 asNumeric as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as SQLNumeric data.
Notes:

If the value of current object is NULL, asNumeric method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is exact numeric value (kDataTypeNumeric), asNumeric method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or long (kDataTypeLong), asNumeric method converts it to SQLNumeric .

If the value's type of current object is string (kDataTypeString), asNumeric method tries to convert it from SQLChar* value. If the conversion is possible and correct, asNumeric converts to SQLNumeric from SQLChar* value. If conversion is incorrect asNumeric method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

169.39.17 asString as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: returns the value as string (SQLString) data.
Notes:

If the value of current object is NULL, asString method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is bool (kDataTypeBool), asString method returns "true" or "false" string (SQLString object).

If the value's type of current object is short (kDataTypeShort), asString method converts it to decimal string (SQLString object) like function printf("% hd", ...) does.

If the value's type of current object is long (kDataTypeLong), asString method converts it to decimal string (SQLString object) like function printf("% ld", ...) does.

If the value's type of current object is double (kDataTypeDouble), asString method converts it to decimal string (SQLString object) like function printf("% g", ...) does.

If the value's type of current object is numeric (kDataTypeNumeric), asString method converts it to decimal string (SQLString object) without precision loss.

If the value's type of current object is date-time (kDataTypeDateTime), asString method converts it to string (SQLString object) like function asctime(...) does.

If the value's type of current object is string (kDataTypeString, kDataTypeLongChar, kDataTypeCLob), asString method returns the original object's value as SQLString object.

If the value's type of current object is binary (kDataTypeBytes, kDataTypeLongBinary, kDataTypeBLob), asString method converts it to hexadecimal string (SQLString object).

If the value's type of current object is cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
For numbers, this may give english decimal separator. For getting localized one, please use AsDoubleValue and use cstr() function.

169.39.18 Constructor(DataType as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty value object for the given data type.
See also:

- 169.39.19 Constructor(value as SQLValueReadMBS) 23779

169.39.19 Constructor(value as SQLValueReadMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new value object by copying the given one.
See also:

- 169.39.18 Constructor(DataType as Integer) 23779

169.39.20 Properties

169.39.21 asBool as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of current object as bool data.
Notes:

f the value of current object is NULL, asBool method returns false. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is bool (kDataTypeBool), asBool method returns the original value with no conversion.

If the value's type of current object is short (kDataTypeShort), long (kDataTypeLong) or double (kDataTypeDouble), asBool method converts it to bool data type. Conversion returns false if the value is 0; true otherwise.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

169.39.22 asDouble as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: returns the value as Double data.
Notes:

If the value of current object is NULL, asDouble method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is double (kDataTypeDouble), asDouble method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong) or numeric (kDataTypeNumeric), asDouble method converts it to double (kDataTypeDouble) data type.

If the value's type of current object is string (kDataTypeString), asDouble method tries to convert it to double value. If the conversion is possible and correct, asDouble returns kDataTypeDouble value. If conversion is incorrect asDouble method throws an exception.

If the value's type of current object is kDataTypeDateTime, asDouble method converts it to standard double representation. Days are represented by whole number increments starting with 30 December 1899, midnight as time zero. Hour values are expressed as the absolute value of the fractional part of the number. See SQLDateTime::operator double() for more detailes.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

169.39.23 asInt32 as Int32

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as Int32 data.
Notes: (Read only property)

169.39.24 asInt64 as Int64

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as Int64 data.
Notes: (Read only property)

169.39.25 asInteger as Integer

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as Integer data.
Notes:

Either Int32 or Int64 depending on whether the application is 32 or 64 bit.
(Read only property)

169.39.26 asLong as Int32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as Int32 data.
Notes:

If the value of current object is NULL, asLong method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is long (kDataTypeLong), asLong method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asLong method converts it to long data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asLong method tries to convert it to long (kDataTypeLong) value. If the conversion is possible and correct, asLong returns kDataTypeLong value. If conversion is incorrect asLong method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

169.39.27 asShort as Int16

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as short.
Notes:

If the value of current object is NULL, asShort method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is short, asShort method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), long (kDataTypeLong), unsigned long (SkDataTypeULong), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asShort method converts it to short data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asShort method tries to convert it to short value. If the conversion is possible and correct, asShort returns the value. If conversion is incorrect asShort method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SAValueRead object.
(Read only property)

169.39.28 asStringValue as String

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value string.
Notes:

Same as asString but returns a Xojo string.
Please use SQLStringMBS and CopyBinaryData if the string you want to read is a BLOB value, else text encoding will change your data!
For numbers, this may give english decimal separator. For getting localized one, please use AsDoubleValue and use cstr() function.
(Read only property)

169.39.29 asUInt32 as UInt32

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as UInt32 data.
Notes: (Read only property)

169.39.30 asULong as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as an unsigned 32 bit integer value.
Notes:

If the value of current object is NULL, asULong method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is long (kDataTypeLong), asULong method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asULong method converts it to long data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asULong method tries to convert it to long (kDataTypeLong) value. If the conversion is possible and correct, asULong returns kDataTypeLong value. If conversion is incorrect asULong method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

169.39.31 asUShort as UInt16

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as unsigned short.
Notes:

If the value of current object is NULL, asUShort method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is unsigned short, asUShort method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), long (kDataTypeLong), unsigned long (SkDataTypeULong), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asUShort method converts it to unsigned short data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asUShort method tries to convert it to unsigned short value. If the conversion is possible and correct, asUShort returns the value. If conversion is incorrect asUShort method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SAValueRead object.
(Read only property)

169.39.32 asVariant as Variant

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as a variant.
Notes:

This is a convenience function.
May return nil, date, number or string.
BLOB strings without encoding and text strings as UTF-8.
(Read only property)

169.39.33 DataType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns SAValueRead object's data type.
Notes:

One of the kDataType constants.
(Read only property)

169.39.34 isNull as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the value of current object is NULL; otherwise false.
Notes: (Read only property)

169.39.35 LongOrLobReaderMode as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Long or Lob data reading mode.
Notes:

SQLAPI++ Library provides two ways to read Long or BLob(CLob) object's value (usually SQLField or SQLParam objects):

1. reading of Long or Lob data at once into an internal buffer (like ordinary string or binary values);
2. piecewise reading of Long or Lob data using user defined callback.

kLongOrLobReaderDefault reading mode used by default.

If you want to control piecewise reading of Long or BLob(CLob) data you should set LongOrLobReaderMode and use kLongOrLobReaderManual reading mode for Long or BLob(CLob) parameters or fields you want to process with your data consumer. After that each fetch will skip reading Long and BLob(CLob) parameters that you set to be read manually. To read field or parameter defined to be read manually you should call ReadLongOrLob method for each of them after the fetch. ReadLongOrLob method will repeatedly call the data consumer Write event.
(Read and Write property)

169.39.36 Constants

169.39.37 kDataTypeBlob = 16

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is BLob data (SQLStringMBS).

169.39.38 kDataTypeBool = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is a boolean.

169.39.39 kDataTypeBytes = 13

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is binary string (SQLStringMBS).

169.39.40 kDataTypeClob = 17

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is CLob data (SQLStringMBS).

169.39.41 kDataTypeCursor = 18

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is Oracle REF CURSOR (SQLCommand).

169.39.42 kDataTypeDateTime = 10

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is SQLDateTime.

169.39.43 kDataTypeDouble = 8

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: This is a normal double variable.

169.39.44 kDataTypeInt64 = 6

MBS SQL Plugin, Plugin Version: 19.5.

Function: One of the field type constants
Notes: Signed 64-bit integer.

169.39.45 kDataTypeInterval = 11

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is an interval (SQLIntervalMBS).

169.39.46 kDataTypeLong = 4

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: A 32 bit integer.

169.39.47 kDataTypeLongBinary = 14

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is long binary data (SQLStringMBS).

169.39.48 kDataTypeLongChar = 15

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is long character data (SQLStringMBS).

169.39.49 kDataTypeNumeric = 9

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is SQLNumeric (used internally).

169.39.50 kDataTypeShort = 2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is a 16 bit signed integer.

169.39.51 kDataTypeSpecificToDBMS = 19

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is server-specific.

169.39.52 kDataTypeString = 12

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is character string (SQLString).

169.39.53 kDataTypeUInt64 = 7

MBS SQL Plugin, Plugin Version: 19.5.

Function: One of the field type constants
Notes: Unsigned 64-bit integer.

169.39.54 kDataTypeULong = 5

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is a 32 bit unsigned integer.

169.39.55 kDataTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is unknown.

169.39.56 kDataTypeUShort = 3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: A 16 bit unsigned integer.

169.39.57 kLongOrLobReaderModeDefault = 0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the read modes.
Notes: Long or Lob(CLob) data reading mode is default (automatic).

169.39.58 kLongOrLobReaderModeManual = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the read modes.
Notes: Long or Lob(CLob) data reading mode is manual.

Chapter 170

Statusitem

170.1 class NSStatusBarButtonMBS

170.1.1 class NSStatusBarButtonMBS

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: StatusBarButtons are the visual representation of NSStatusItems, and are primarily displayed on the right side of the menu bar.
Notes:

When a template image is set as the \c image property of the status bar button, it is rendered with the correct menu bar style. This guarantees that the button will look correct in various button states and appearances (such as dark menu bar).

Available on Mac OS X 10.10 and newer.
Subclass of the NSButtonMBS class.

170.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 15.0
- MBS Xojo / Real Studio Plugins, version 15.0pr11

170.1.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr11

170.1.4 Methods

170.1.5 Available as boolean

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Returns true on OS X 10.10.

170.1.6 Properties

170.1.7 appearsDisabled as Boolean

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Whether icon appears disabled.
Notes:

When true the status bar icon has a disabled/off appearance while still being functional, such as allowing selection and actions. Defaults to false.
(Read and Write property)

170.2 class NSStatusItemMBS

170.2.1 class NSStatusItemMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: A class to handle a NSStatusitem which is a tiny little item in the menubar.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

170.2.7 Videos

- NSStatusItem

170.2.8 Methods

170.2.9 Available as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Whether Statusitems are available.
Notes: True on MachO platforms.

170.2.10 Close

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

170.2.11 CreateMenu as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Creates a new menu.
Notes:

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.
See also:

- 170.2.12 CreateMenu(length as single) as boolean 23795

170.2.12 CreateMenu(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Creates the StatusItem menu with the given width.
Example:

```
dim e as new NSStatusItemMBS
call e.CreateMenu(24) // best for a 16x16 picture
```

Notes:

Constants:

NSVariableStatusItemLength	-1
NSSquareStatusItemLength	-2

Other values between 0 and 10000 are used for the length.
Bad values like 20000 will crash the application.

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.
See also:

- 170.2.11 CreateMenu as boolean 23795

170.2.13 CreateMenuMiddle(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Same as CreateMenu but tries to place Statusitem on the right side.
Deprecated: This item is deprecated and should no longer be used. You can use CreateMenu instead.
Notes:

Uses private Apple API which may break on future Mac OS X versions. Returns false if Apple changes something in the future and the function we use will not be available. So if this function returns false, you can call CreateMenu to continue. Works on Mac OS X 10.4 to 10.6 and make the new statusitem being the rightmost one (left to Apples MenuItems).

Constants:

NSVariableStatusItemLength	-1
NSSquareStatusItemLength	-2

Other values between 0 and 10000 are used for the length.
Bad values like 20000 will crash the application.

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.

Deprecated.

170.2.14 CreateMenuRight(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Same as CreateMenu but tries to place Statusitem on the right side.
Deprecated: This item is deprecated and should no longer be used. You can use CreateMenu instead.
Notes:

Uses private Apple API which may break on future Mac OS X versions. Returns false if Apple changes something in the future and the function we use will not be available. So if this function returns false, you can call CreateMenu to continue. Works on Mac OS X 10.4 to 10.6 and make the new statusitem being the rightmost one.

If you run this code after you used CreateMenuRight, the new menu will be right of all other statusitems:

dim sh as new Shell
sh.Execute "killall","SystemUIServer"

Constants:

NSVariableStatusItemLength	-1
NSSquareStatusItemLength	-2

Other values between 0 and 10000 are used for the length.
Bad values like 20000 will crash the application.

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.

Deprecated.

170.2.15 DrawStatusBarBackground(x as Double, y as Double, width as Double, height as Double, highlight as boolean)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Draws the menu background pattern for a custom status-bar item in regular or highlight pattern.
Notes:

x, y, width and height: A rectangle defining the area of a custom status-bar item.
highlight: true to draw the background pattern in the standard highlight pattern, false to not highlight the pattern.

You can use this method to help a custom status-bar item emulate the behavior of a standard item.

Available in Mac OS X v10.3 and later.

170.2.16 MenuIsVertical as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the statusitem has a vertical orientation.
Example:

MsgBox str(NSStatusItemMBS.MenuIsVertical)

170.2.17 MenuThickness as Double

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The thickness of the status bar.
Example:

MsgBox str(NSStatusItemMBS.MenuThickness)

Notes: The status bar returned by systemStatusBar has a thickness of 22 pixels, the thickness of the menu bar.

170.2.18 popUpStatusItemMenu(menu as NSMenuMBS)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Displays a menu under a custom status bar item.
Notes: You can use this method to cause a popup menu to appear under a custom status bar item when the user clicks the item. Note that view must exist (that is, it must not be nil).

170.2.19 SendActionOn(mode as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Sets the conditions on which action event is called.
Notes:

mask is set with one or more of the following bit masks described in NSEvent Constants: NSLeftMouseUpMask, NSLeftMouseDownMask, NSLeftMouseDraggedMask, and NSPeriodicMask.

mode is set with one or more of the following bit masks:

```
const NSLeftMouseDownMask      = & h00002
const NSLeftMouseUpMask        = & H00004
const NSLeftMouseDraggedMask   = & h00040
const NSPeriodicMask           = & h10000
```

170.2.20 Properties

170.2.21 alternateImage as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: An alternate image to be displayed when a status bar item is highlighted.
Notes: (Read and Write property)

170.2.22 attributedTitle as NSAttributedStringMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The attributed string that is displayed at the status item's position in the status bar.
Notes:

If an image is also set, the title appears to the right of the image.
(Read and Write property)

170.2.23 Button as Variant

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: The button that is displayed in the status bar.
Notes:

Value is a NSStatusBarButtonMBS object. Returned as Variant to reduce plugin dependencies.

This is created automatically on the creation of the StatusItem. Behavior customization for the button, such as image, target/action, tooltip, can be set with this property.

Available on Mac OS X 10.10 and newer.
(Read only property)

170.2.24 Enabled as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Whether this status item is enabled.
Notes: (Read and Write property)

170.2.25 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The handle of the NSStatusItem object used internally.
Notes: (Read and Write property)

170.2.26 Height as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The height of the status item.
Notes:

Should be 22 pixels.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

170.2.27 HighlightMode as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Whether the receiver is highlighted when clicked.
Notes:

If you use HighlightMode and Menu, you need to first assign the menu and later set HighlightMode to true.
(Read and Write property)

170.2.28 image as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The image that is displayed at the statusitem's position in the status bar.
Notes:

nil if an image has not been set.
(Read and Write property)

170.2.29 Left as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The left position of the status item.
Notes:

Valid only after item was drawn the first time.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

170.2.30 Length as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The length of the status item in pixels.
Notes:

Constants for special values:

NSVariableStatusItemLength	-1
NSSquareStatusItemLength	-2

(Read and Write property)

170.2.31 Menu as NSMenuMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The menu attached to this statusitem.
Notes:

Nil if no menu is attached.
(Read and Write property)

170.2.32 Title as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The title of the status item.
Notes: (Read and Write property)

170.2.33 ToolTip as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The help tag for a menu item.
Notes: (Read and Write property)

170.2.34 Top as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The top position of the status item.
Notes:

Always 0.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

170.2.35 View as NSViewMBS

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Sets the view to be used for this status menuitem.
Notes:

Using a custom view you can draw whatever you like in the menu item.
You can set it to nil to remove the view.
(Read and Write property)

170.2.36 Width as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The width of the status item.
Notes:

This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

170.2.37 Window as NSWindowMBS

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: The window used for this NSStatusItem.
Notes:

This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
Returns nil on 64 bit target.
(Read only property)

170.2.38 Events

170.2.39 Action

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: .

Function: The event called when the user clicks on the statusitem.
Notes:

Mouse position can be calculated based on System.MouseX/System.MouseY relative to Left/Top. Mouse status can be read using System.MouseDown.

This event is limited. You can't for example do everything like quit an application. For using quit, start a timer which will remove the menu 500ms later and than quit 500ms later.

This event is coming from the Cocoa event system. What you can do is a bit limited when using GUI functions from Xojo. To avoid some redraw errors, you may want to start a timer and let your Xojo code run a millisecond after the menu code has finished.
Depending on what you do, you can see the menu not redrawing properly (staying highlighted) and crashes if the Xojo code modifies some global Cocoa states.

170.2.40 DoubleAction

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: .

Function: The event called when the user double clicks on the statusitem.
Notes:

If two Action Events happen very fast, this one is called the second time so you can e.g. react on double clicks.
Mouse position can be calculated based on System.MouseX/System.MouseY relative to Left/Top. Mouse status can be read using System.MouseDown.

This event is coming from the Cocoa event system. What you can do is a bit limited when using GUI functions from Xojo. To avoid some redraw errors, you may want to start a timer and let your Xojo code run a millisecond after the menu code has finished.
Depending on what you do, you can see the menu not redrawing properly (staying highlighted) and crashes if the Xojo code modifies some global Cocoa states.

170.2.41 Screenshots

170.2.42 NSStatusItem.jpg

Function: The NSStatusItem running a menu on the top right of the menubar.

Chapter 171

StoreKit

171.1 class AppReceiptIAPMBS

171.1.1 class AppReceiptIAPMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The class to represent an in-app purchase in the app receipt.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
dim inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
MsgBox str(p.quantity)+"x "+p.productIdentifier+" "+p.purchaseDate.AbbreviatedDate
next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

171.1.4 Methods

171.1.5 Constructor

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The private constructor.

171.1.6 isActiveAutoRenewableSubscriptionForDate(d as Date) as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns whether the auto renewable subscription is active for the given date.
Notes:

date: The date in which the auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 171.1.7 isActiveAutoRenewableSubscriptionForDate(d as DateTime) as boolean 23806

171.1.7 isActiveAutoRenewableSubscriptionForDate(d as DateTime) as boolean

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Returns whether the auto renewable subscription is active for the given date.
Notes:

date: The date in which the auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.

If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 171.1.6 isActiveAutoRenewableSubscriptionForDate(d as Date) as boolean 23806

171.1.8 Properties

171.1.9 cancellationDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: For a transaction that was canceled by Apple customer support, the date of the cancellation.
Notes: (Read only property)

171.1.10 cancellationDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: For a transaction that was canceled by Apple customer support, the date of the cancellation.
Notes: (Read only property)

171.1.11 originalPurchaseDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: For a transaction that restores a previous transaction, the date of the original transaction.
Notes:

This value corresponds to the original transaction's transactionDate property.
In an auto-renewable subscription receipt, this indicates the beginning of the subscription period, even if the subscription has been renewed.
(Read only property)

171.1.12 originalPurchaseDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: For a transaction that restores a previous transaction, the date of the original transaction.
Notes:

This value corresponds to the original transaction's transactionDate property.
In an auto-renewable subscription receipt, this indicates the beginning of the subscription period, even if the subscription has been renewed.

(Read only property)

171.1.13 originalTransactionIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: For a transaction that restores a previous transaction, the transaction identifier of the original transaction.
Notes:

Otherwise, identical to the transaction identifier.
This value corresponds to the original transaction's transactionIdentifier property.
All receipts in a chain of renewals for an auto-renewable subscription have the same value for this field.
(Read only property)

171.1.14 productIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The product identifier of the item that was purchased.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
dim inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
MsgBox str(p.quantity)+"x "+p.productIdentifier+" "+p.purchaseDate.AbbreviatedDate
next
```

Notes:

This value corresponds to the productIdentifier property of the SKPayment object stored in the transaction's payment property.
(Read only property)

171.1.15 purchaseDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time that the item was purchased.
Notes:

This value corresponds to the transaction's transactionDate property.

For a transaction that restores a previous transaction, the purchase date is the date of the restoration. Use originalPurchaseDate to get the date of the original transaction.

In an auto-renewable subscription receipt, this is always the date when the subscription was purchased or renewed, regardles of whether the transaction has been restored.
(Read only property)

171.1.16 purchaseDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The date and time that the item was purchased.
Notes: (Read only property)

171.1.17 quantity as Integer

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The number of items purchased.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
dim inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
MsgBox str(p.quantity)+"x "+p.productIdentifier+" "+p.purchaseDate.AbbreviatedDate
next
```

Notes:

This value corresponds to the quantity property of the SKPayment object stored in the transaction's payment property.
(Read only property)

171.1.18 subscriptionExpirationDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The expiration date for the subscription.
Notes:

Only present for auto-renewable subscription receipts.
(Read only property)

171.1.19 subscriptionExpirationDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The expiration date for the subscription.
Notes:

Only present for auto-renewable subscription receipts.
(Read only property)

171.1.20 transactionIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The transaction identifier of the item that was purchased.
Notes:

This value corresponds to the transaction's transactionIdentifier property.
(Read only property)

171.1.21 webOrderLineItemID as Integer

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The primary key for identifying subscription purchases.
Notes: (Read only property)

171.2 class AppReceiptMBS

171.2.1 class AppReceiptMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The class for an app receipt.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.bundleIdentifier
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

171.2.4 Methods

171.2.5 bundleReceipt as AppReceiptMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns the app receipt contained in the bundle, if any and valid.
Notes:

Extracts the receipt in ASN1 from the PKCS # 7 container, and then parses the ASN1 data into a AppReceiptMBS instance. If an Apple Root certificate is available, it will also verify that the signature of the receipt is valid.
Returns the app receipt contained in the bundle, or nil if there is no receipt or if it is invalid.

171.2.6 Constructor

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The private constructor.

171.2.7 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as date) as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns whether the receipt contains an active auto-renewable subscription for the given product identifier and for the given date.
Notes:

productIdentifier: The identifier of the auto-renewable subscription.
date: The date in which the latest auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the latest auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 171.2.8 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as dateTime) as boolean 23812

171.2.8 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as dateTime) as boolean

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Returns whether the receipt contains an active auto-renewable subscription for the given product identifier and for the given date.
Notes:

productIdentifier: The identifier of the auto-renewable subscription.
date: The date in which the latest auto-renewable subscription should be active. If you are using the current

date, you might not want to take it from the device in case the user has changed it.
Returns true if the latest auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 171.2.7 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as date) as boolean 23812

171.2.9 containsInAppPurchaseOfProductIdentifier(productIdentifier as string) as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns whether there is an in-app purchase in the receipt for the given product.
Notes:

productIdentifier: The identifier of the product.
True if there is an in-app purchase for the given product, false otherwise.

171.2.10 inAppPurchases as AppReceiptIAPMBS()

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Array of in-app purchases contained in the receipt.

171.2.11 receiptForFile(file as folderitem) as AppReceiptMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns the app receipt contained in the given file, if any and valid.
Example:

```
dim a as new AppReceiptVerificatorMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// testing with receipt from current Dash app
a.bundleIdentifier = "com.kapeli.dash"
a.bundleVersion = "2.1.2"

if a.verifyReceipt(r) then
```

```
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

Notes:

Extracts the receipt in ASN1 from the PKCS # 7 container, and then parses the ASN1 data into a AppReceiptMBS instance. If an Apple Root certificate is available, it will also verify that the signature of the receipt is valid.
Returns the receipt contained in the given file, or nil if there is no receipt or if it is invalid.

171.2.12 setAppleRootCertificate(Data as Memoryblock)

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Sets the certificate data of the Apple Root certificate that will be used to verifiy the signature of the bundle receipt.
Notes:

If none is provided, the resource AppleIncRootCertificate.cer will be used. If no certificate is available, no signature verification will be performed.
data: The contents of the Apple Root certificate file to use.
See also:

- 171.2.13 setAppleRootCertificate(File as FolderItem) 23814

171.2.13 setAppleRootCertificate(File as FolderItem)

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Sets the file of the Apple Root certificate that will be used to verifiy the signature of the bundle receipt.
Notes:

If none is provided, the resource AppleIncRootCertificate.cer will be used. If no certificate is available, no signature verification will be performed.
file: The folderitem of the Apple Root certificate.
See also:

- 171.2.12 setAppleRootCertificate(Data as Memoryblock) 23814

171.2.14 verifyReceiptHash as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns wheter the receipt hash corresponds to the device's GUID by calcuting the expected hash using the GUID, bundleIdentifierData and opaqueValue.
Notes: Returns true if the hash contained in the receipt corresponds to the device's GUID, false otherwise.

171.2.15 Properties

171.2.16 appVersion as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The app's version number.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.appVersion
```

Notes:

This corresponds to the value of CFBundleVersion (in iOS) or CFBundleShortVersionString (in OS X) in the Info.plist.
(Read only property)

171.2.17 bundleIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The bundle identifier.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.bundleIdentifier
```

Notes:

This corresponds to the value of CFBundleIdentifier in the Info.plist file.
(Read only property)

171.2.18 bundleIdentifierData as Memoryblock

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The bundle identifier as data.
Notes:

The bundle identifier as data, as contained in the receipt. Used to verifiy the receipt's hash.
(Read only property)

171.2.19 creationDate as Date

MBS MacCloud Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The creation date of the receipt.
Notes: (Read only property)

171.2.20 creationDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The creation date of the receipt.
Notes: (Read only property)

171.2.21 expirationDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date that the app receipt expires.
Notes:

Only for apps purchased through the Volume Purchase Program. If nil, the receipt does not expire. When validating a receipt, compare this date to the current date to determine whether the receipt is expired. Do not try to use this date to calculate any other information, such as the time remaining before expiration.
(Read only property)

171.2.22 expirationDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The date that the app receipt expires.
Notes:

Only for apps purchased through the Volume Purchase Program. If nil, the receipt does not expire. When validating a receipt, compare this date to the current date to determine whether the receipt is expired. Do not try to use this date to calculate any other information, such as the time remaining before expiration.
(Read only property)

171.2.23 opaqueValue as Memoryblock

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: An opaque value used as part of the SHA-1 hash.
Notes: (Read only property)

171.2.24 originalAppVersion as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The version of the app that was originally purchased.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.originalAppVersion
```

Notes:

This corresponds to the value of CFBundleVersion (in iOS) or CFBundleShortVersionString (in OS X) in the Info.plist file when the purchase was originally made. In the sandbox environment, the value of this field is always "1.0".
(Read only property)

171.2.25 purchaseDate as Date

MBS MacCloud Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Another date.
Notes:

Digging in a receipt we found this field and assume it is the original purchase date.
(Read only property)

171.2.26 purchaseDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Another date.
Notes:

Digging in a receipt we found this field and assume it is the original purchase date.
(Read only property)

171.2.27 receiptHash as Memoryblock

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: A SHA-1 hash, used to validate the receipt.
Notes: (Read only property)

171.2.28 transactionDate as Date

MBS MacCloud Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Another date.
Notes:

Digging in a receipt we found this field and assume it is the transaction date.
(Read only property)

171.2.29 transactionDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Another date.
Notes:

Digging in a receipt we found this field and assume it is the transaction date.
(Read only property)

171.3 class AppReceiptVerificatorMBS

171.3.1 class AppReceiptVerificatorMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Reference implementation of an app receipt verificator.
Example:

```
dim a as new AppReceiptVerificatorMBS

if a.verifyAppReceipt then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

Notes: If security is a concern you might want to avoid using a verificator whose code is open source.

- MBS Xojo / Real Studio Plugins, version 14.3pr8
- Validating Receipts of Mac App Store Purchases including In-App Purchases

171.3.4 Methods

171.3.5 Constructor

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The constructor.

171.3.6 ExitApp(code as Integer = 173)

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Quits the application directly.
Example:

AppReceiptVerificatorMBS.ExitApp 173

Notes:

This does not call the destructors and CancelClose events. The app is quit right away.
If you use code 173 the Finder will show error message that app needs to be downloaded again from Mac App Store.

171.3.7 GUID as string

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads the GUID of the Mac.
Example:

```
dim g as String = AppReceiptVerificatorMBS.GUID
MsgBox EncodeHex(g)
```

Notes: This is normally build from the MAC ID of the ethernet card.

171.3.8 verifyAppReceipt as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Verifies the app's receipt file.
Example:

```
dim a as new AppReceiptVerificatorMBS

if a.verifyAppReceipt then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

Notes:

Verifies the receipt by checking the integrity of the receipt, comparing its bundle identifier and bundle version to the values returned by the corresponding properties and verifying the receipt hash.

Returns true if the receipt is verified, false otherwise.
If validation fails, Apple recommends to refresh the receipt and try again.

If you set bundleVersion and/or bundleIdentifier properties, we use those values.
Else we pick them from the info.plist of the app.

171.3.9 verifyReceipt(Receipt as AppReceiptMBS) as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Verifies the given receipt file.
Example:

```
dim a as new AppReceiptVerificatorMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// testing with receipt from current Dash app
a.bundleIdentifier = "com.kapeli.dash"
a.bundleVersion = "2.1.2"

if a.verifyReceipt(r) then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

Notes:

Verifies the receipt by checking the integrity of the receipt, comparing its bundle identifier and bundle version

to the values returned by the corresponding properties and verifying the receipt hash.

Returns true if the receipt is verified, false otherwise.
If validation fails, Apple recommends to refresh the receipt and try again.

171.3.10 Properties

171.3.11 bundleIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The value that will be used to validate the bundle identifier included in the app receipt.
Notes:

Given that it is possible to modify the app bundle in jailbroken devices, setting this value from a hardcoded string might provide better protection.
Returns the given value, or the app's bundle identifier by default.
(Read and Write property)

171.3.12 bundleVersion as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The value that will be used to validate the bundle version included in the app receipt.
Notes:

Given that it is possible to modify the app bundle in jailbroken devices, setting this value from a hardcoded string might provide better protection.
Returns the given value, or the app's bundle version by default.
(Read and Write property)

171.3.13 FailReason as String

MBS MacCloud Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The reason for a failure.
Notes:

This is for debugging and to help you to find the reason for why a verification fails.
(Read only property)

171.3.14 MACAddress as MemoryBlock

MBS MacCloud Plugin, Plugin Version: 18.0, Platform: macOS, Targets: All.

Function: The MAC Address to use.
Example:

```
// get the one of this Mac
dim m as MemoryBlock = AppReceiptVerificatorMBS.MACAddress

// now set a fake one
dim x as MemoryBlock = DecodeHex("12347890ABCD")
AppReceiptVerificatorMBS.MACAddress = x

// and display
MsgBox EncodeHex(m)+EndOfLine+EncodeHex(AppReceiptVerificatorMBS.MACAddress)
```

Notes:

Can be queried to automatically get the one we detect.
Or set to use a custom one for testing.
(Read and Write property)

171.4 class SKDownloadMBS

171.4.1 class SKDownloadMBS

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: This storeKit class gives you information about the download status of a content file.
Notes:

Available in Mac OS X 10.8 and newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

171.4.2 Methods

171.4.3 Constructor

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

171.4.4 contentURLForProductID(productID as string) as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries content URL for a product.

171.4.5 deleteContentForProductID(productID as string)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Deletes the content for that identifier from disk.

171.4.6 Properties

171.4.7 contentIdentifier as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Product identifier entered in iTunesConnect.
Notes: (Read only property)

171.4.8 contentLength as Int64

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Filesize of the asset.
Notes: (Read only property)

171.4.9 contentURL as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Content URL.
Notes: (Read only property)

171.4.10 contentVersion as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Version string of the product.
Notes: (Read only property)

171.4.11 error as NSErrorMBS

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Last error, can be nil.
Notes: (Read only property)

171.4.12 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

171.4.13 progress as Double

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Download progress.
Notes: (Read only property)

171.4.14 state as Integer

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Download state.
Notes: (Read only property)

171.4.15 timeRemaining as Double

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Estimated number of seconds remaining in the download.
Notes: (Read only property)

171.4.16 Transaction as SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The transaction associated with the downloadable file
Notes:

Available in MacOS 10.11 or newer.
(Read only property)

171.4.17 Constants

171.4.18 kStateActive = 1

MBS MacCloud Plugin, Plugin Version: 12.3.

Function: One of the download state constants.
Notes: Active

171.4.19 kStateCancelled = 5

MBS MacCloud Plugin, Plugin Version: 12.3.

Function: One of the download state constants.
Notes: Cancelled

171.4.20 kStateFailed = 4

MBS MacCloud Plugin, Plugin Version: 12.3.

Function: One of the download state constants.
Notes: Failed

171.4.21 kStateFinished = 3

MBS MacCloud Plugin, Plugin Version: 12.3.

Function: One of the download state constants.
Notes: Finished

171.4.22 kStatePaused = 2

MBS MacCloud Plugin, Plugin Version: 12.3.

Function: One of the download state constants.
Notes: Paused

171.4.23 kStateWaiting = 0

MBS MacCloud Plugin, Plugin Version: 12.3.

Function: One of the download state constants.
Notes: Waiting

171.5 class SKMutablePaymentMBS

171.5.1 class SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The mutable class for SKPaymentMBS.
Notes:

The SKMutablePayment class defines a request to the Apple App Store to process payment for additional functionality offered by your application. A payment encapsulates a string that identifies a particular product and the quantity of that item the user would like to purchase.

When a mutable payment is added to the payment queue, the payment queue copies the contents into an immutable request before queueing the request. Your application can safely change the contents of the mutable payment object.

Please also check the documentation from Apple for the SKMutablePayment class.
Subclass of the SKPaymentMBS class.

- MBS Real Studio Plugins, version 11.3pr1

171.5.4 Methods

171.5.5 Constructor(payment as SKPaymentMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a mutable copy of the given payment.
See also:

- 171.5.6 Constructor(product as SKProductMBS) 23829

171.5.6 Constructor(product as SKProductMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new payment for the specified product.
Example:

```
dim product as SKProductMBS // your product
dim queue as SKPaymentQueueMBS // your queue

dim payment as new SKMutablePaymentMBS(product)
payment.quantity = 5

MsgBox str(payment.quantity)+" units of "+product.localizedTitle

queue.addPayment payment
```

See also:

- 171.5.5 Constructor(payment as SKPaymentMBS) 23829

171.5.7 paymentWithProduct(product as SKProductMBS) as SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new payment for the specified product with the given quantity.
Example:

```
dim product as SKProductMBS // your product
dim payment as SKMutablePaymentMBS = SKMutablePaymentMBS.paymentWithProduct(product)

MsgBox str(payment.quantity)+" units of "+product.localizedTitle
```

Notes:

product: The product the user wishes to purchase.
quantity: Optional quantity. If you don't pass it, we default to 1.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier.

Available in Mac OS X v10.7 and later.
See also:

- 171.5.8 paymentWithProduct(product as SKProductMBS, quantity as Integer) as SKMutablePaymentMBS 23831

171.5.8 paymentWithProduct(product as SKProductMBS, quantity as Integer) as SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new payment for the specified product with the given quantity.
Example:

```
dim product as SKProductMBS // your product
dim payment as SKMutablePaymentMBS = SKMutablePaymentMBS.paymentWithProduct(product, 5)

MsgBox str(payment.quantity)+" units of "+product.localizedTitle
```

Notes:

product: The product the user wishes to purchase.
quantity: Optional quantity. If you don't pass it, we default to 1.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier.

Available in Mac OS X v10.7 and later.
See also:

- 171.5.7 paymentWithProduct(product as SKProductMBS) as SKMutablePaymentMBS 23830

171.5.9 Properties

171.5.10 applicationUsername as String

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: Application-specific user identifier. Optional.
Notes: (Read and Write property)

171.5.11 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string that identifies a product that can be purchased from within your application.
Notes:

The product identifier is a string previously agreed on between your application and the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read and Write property)

171.5.12 quantity as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The number of items the user wants to purchase.
Notes:

The quantity property must be greater than 0.
Available in Mac OS X v10.7 and later.
(Read and Write property)

171.5.13 requestData as Memoryblock

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Reserved for future use.
Notes:

The default value is nil. If requestData is not nil, your payment will be rejected by the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read and Write property)

171.5.14 simulatesAskToBuyInSandbox as Boolean

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that produces an “ask to buy” flow for this payment in the sandbox.
Notes:

Available on MacOS 10.14 or newer.
(Read and Write property)

171.6 class SKPaymentMBS

171.6.1 class SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a payment in the App Store.
Notes:

The SKPayment class defines a request to the Apple App Store to process payment for additional functionality offered by your application. A payment encapsulates a string that identifies a particular product and the quantity of those items the user would like to purchase.

Please also check the documentation from Apple for the SKPayment class.
Available in Mac OS X v10.7 and later.

171.6.2 Blog Entries

171.6.4 Methods

171.6.5 Constructor(product as SKProductMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new payment for the specified product.
Example:

```
dim product as SKProductMBS // your product
dim queue as SKPaymentQueueMBS // your queue

dim payment as new SKPaymentMBS(product)
MsgBox str(payment.quantity)+" units of "+product.localizedTitle

queue.addPayment payment
```

171.6.6 copy as SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

171.6.7 mutableCopy as SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a mutable copy of the object.

171.6.8 paymentWithProduct(product as SKProductMBS) as SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new payment for the specified product.
Example:

```
dim product as SKProductMBS // your product
dim queue as SKPaymentQueueMBS // your queue

dim payment as SKPaymentMBS = SKPaymentMBS.paymentWithProduct(product)
MsgBox str(payment.quantity)+" units of "+product.localizedTitle

queue.addPayment payment
```

Notes:

product: The product the user wishes to purchase.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier. The quantity property defaults to 1.

To create a SKPaymentMBS object with a quantity greater than 1, create a SKMutablePaymentMBS object, adjust its quantity property and then add it to the payment queue.

Available in Mac OS X v10.7 and later.

171.6.9 Properties

171.6.10 applicationUsername as String

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: Application-specific user identifier. Optional.
Notes: (Read only property)

171.6.11 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference to the SKPayment object.
Notes: (Read and Write property)

171.6.12 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string used to identify a product that can be purchased from within your application. (read-only)
Notes:

The product identifier is a string previously agreed on between your application and the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read only property)

171.6.13 quantity as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The number of items the user wants to purchase. (read-only)
Notes:

Default value is 1.
Available in Mac OS X v10.7 and later.

(Read only property)

171.6.14 requestData as Memoryblock

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Reserved for future use. (read-only)
Notes:

The default value is nil. If requestData is not nil, your payment will be rejected by the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read only property)

171.6.15 simulatesAskToBuyInSandbox as Boolean

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that produces an "ask to buy" flow for this payment in the sandbox.
Notes:

Available on MacOS 10.14 or newer.
(Read only property)

171.7 class SKPaymentQueueMBS

171.7.1 class SKPaymentQueueMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The SKPaymentQueue class defines a queue of payment transactions to send to the Apple App Store.
Notes:

To use the payment queue, you add one or more payments. When payments are added to the queue, Store Kit connects to the Apple App Store and presents a user interface so that the user can authorize payment. As payments are fulfilled, the payment queue updates transactions and delivers them through events.

Available in Mac OS X v10.7 and later.
Please also check the documentation from Apple for the SKPaymentQueue class.
The plugin installs a transaction observer for you.

171.7.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr6
- MBS Xojo Plugins, version 18.1pr3

171.7.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr6

171.7.4 Methods

171.7.5 addPayment(payment as SKPaymentMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a payment request to the queue.
Notes:

payment: A payment request.

The payment request must have a product identifier registered with the Apple App Store and a quantity greater than 0. If either property is invalid, addPayment throws an exception.

When a payment request is added to the queue, the payment queue processes that request with the Apple App Store and arranges for payment from the user. When that transaction is complete or if a failure occurs, the payment queue sends the SKPaymentTransaction object that encapsulates the request to all transaction observers.

171.7.6 cancelDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Cancel one download.
Notes: Available in Mac OS X 10.8 and newer.

171.7.7 cancelDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Cancel a few downloads.
Notes: Available in Mac OS X 10.8 and newer.

171.7.8 canMakePayments as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns whether the user is allowed to make payments.
Example:

```
if SKPaymentQueueMBS.canMakePayments then
MsgBox "can make payments"
else
MsgBox "not available"
end if
```

Notes: A Mac can be restricted from accessing the Apple App Store. For example, parents can restrict their children's ability to purchase additional content. Your application should confirm that the user is allowed to authorize payments before adding a payment to the queue. Your application may also want to alter its behavior or appearance when the user is not allowed to authorize payments.

171.7.9 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new SKPaymentQueueMBS object.
Notes:

Please make a subclass of this class to fill code into the events.
And please only have one instance of this class.

171.7.10 Destructor

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

171.7.11 finishTransaction(transaction as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Completes a pending transaction.
Notes:

transaction: The transaction to finish.

Your application should call this method from a transaction observer that received a notification from the payment queue. Calling finishTransaction on a transaction removes it from the queue. Your application should call finishTransaction only after it has successfully processed the transaction and unlocked the functionality purchased by the user.

Calling finishTransaction on a transaction that is in the SKPaymentTransactionMBS.StatePurchasing state throws an exception.

171.7.12 pauseDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Pauses one download.
Notes: Available in Mac OS X 10.8 and newer.

171.7.13 pauseDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Pauses a few downloads.
Notes: Available in Mac OS X 10.8 and newer.

171.7.14 restoreCompletedTransactions

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Asks the payment queue to restore previously completed purchases.
Notes:

Your application calls this method to restore transactions that were previously finished so that you can process them again. For example, your application would use this to allow a user to unlock previously purchased content onto a new device.

When you create a new product to be sold in your store, you choose whether that product can be restored or not. See the In App Purchase Programming Guide for more information.

The payment queue will deliver a new transaction for each previously completed transaction that can be restored. Each transaction includes a copy of the original transaction.

After the transactions are delivered, the payment queue calls the observer's paymentQueueRestoreCompletedTransactionsFinished event. If an error occurred while restoring transactions, the observer will be notified through its paymentQueue:restoreCompletedTransactionsFailedWithError event.

171.7.15 restoreCompletedTransactionsWithApplicationUsername(username as String)

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Asks the payment queue to restore previously completed purchases, providing an opaque identifier for the user's account.
Notes: username: An opaque identifier for the user's account on your system.

171.7.16 resumeDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Resumes one download.
Notes: Available in Mac OS X 10.8 and newer.

171.7.17 resumeDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Resumes a few downloads.
Notes: Available in Mac OS X 10.8 and newer.

171.7.18 startDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Start one download.
Notes: Available in Mac OS X 10.8 and newer.

171.7.19 startDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Starts a few downloads.
Notes: Available in Mac OS X 10.8 and newer.

171.7.20 transactions as SKPaymentTransactionMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns an array of pending transactions.
Notes: The value of this property is undefined when there are no observers attached to the payment queue.

171.7.21 Properties

171.7.22 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference.
Notes: (Read and Write property)

171.7.23 Events

171.7.24 paymentQueueRestoreCompletedTransactionsFinished

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells the observer that the payment queue has finished sending restored transactions.
Notes: This method is called after all restorable transactions have been processed by the payment queue. Your application is not required to do anything in this method.

171.7.25 removedTransactions(transactions() as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells an observer that one or more transactions have been removed from the queue.
Notes:

transactions: An array of the transactions that were removed.

Your application does not typically need to implement this event but might implement it to update its own user interface to reflect that a transaction has been completed.

171.7.26 restoreCompletedTransactionsFailedWithError(Error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells the observer that an error occurred while restoring transactions.

171.7.27 updatedDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Sent when the download state has changed.
Notes: Available in Mac OS X 10.8 and newer.

171.7.28 updatedTransactions(transactions() as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells an observer that one or more transactions have been updated.
Notes:

transactions: An array of the transactions that were updated.

The application should process each transaction by examining the transaction's transactionState property. If transactionState is SKPaymentTransactionStatePurchased, payment was successfully received for the desired functionality. The application should make the functionality available to the user. If transactionState is SKPaymentTransactionStateFailed, the application can read the transaction's error property to return a meaningful error to the user.

Once a transaction is processed, it should be removed from the payment queue by calling the payment queue's finishTransaction: method, passing the transaction as a parameter.

Important: Once the transaction is finished, Store Kit can not tell you that this item is already purchased. It is important that applications process the transaction completely before calling finishTransaction:.

171.8 class SKPaymentTransactionMBS

171.8.1 class SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The SKPaymentTransactionMBS class defines objects residing in the payment queue.
Notes:

A payment transaction is created whenever a payment is added to the payment queue. Transactions are delivered to your application when the App Store has finished processing the payment. Completed transactions provide a receipt and transaction identifier that your application can use to save a permanent record of the processed payment.

Please also check the documentation from Apple for the SKPaymentTransaction class.
Available in Mac OS X v10.7 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

171.8.2 Methods

171.8.3 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

171.8.4 downloads as SKDownloadMBS()

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the downloads for this transaction.
Notes: Available in Mac OS X 10.8 and newer.

171.8.5 Properties

171.8.6 error as NSErrorMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object describing the error that occurred while processing the transaction.
Notes:

The error property is undefined except when transactionState is set to StateFailed. Your application can read the error property to determine why the transaction failed.
(Read only property)

171.8.7 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference to the SKPaymentTransaction object.
Notes: (Read and Write property)

171.8.8 originalTransaction as SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The transaction that was restored by the App Store.
Notes:

The contents of this property are undefined except when transactionState is set to StateRestored. When a transaction is restored, the current transaction holds a new transaction identifier, receipt, and so on. Your application will read this property to retrieve the restored transaction.
(Read only property)

171.8.9 payment as SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The payment for the transaction.
Notes:

Each payment transaction is created in response to a payment that your application added to the payment queue.
(Read only property)

171.8.10 transactionDate as date

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The date the transaction was added to the App Store's payment queue.
Notes:

The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored.

(Read only property)

171.8.11 transactionDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The date the transaction was added to the App Store's payment queue.
Notes:

The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored.
(Read only property)

171.8.12 transactionIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string that uniquely identifies a successful payment transaction.
Notes:

The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored. The transactionIdentifier is a string that uniquely identifies the processed payment. Your application may wish to record this string as part of an audit trail for App Store purchases. See In App Purchase Programming Guide for more information.
(Read only property)

171.8.13 transactionState as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The current state of the transaction.
Notes:

see State* constants.
(Read only property)

171.8.14 Constants

171.8.15 StateDeferred = 4

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the tansaction state constants.
Notes: Transaction is neither purchased nor failed, yet.

171.8.16 StateFailed = 2

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the tansaction state constants.
Notes: The transaction failed. Check the error property to determine what happened.

171.8.17 StatePurchased = 1

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the tansaction state constants.
Notes: The App Store successfully processed payment. Your application should provide the content the user purchased.

171.8.18 StatePurchasing = 0

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the tansaction state constants.
Notes: The transaction is being processed by the App Store.

171.8.19 StateRestored = 3

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the tansaction state constants.
Notes: This transaction restores content previously purchased by the user. Read the originalTransaction property to obtain information about the original purchase.

171.9 class SKProductDiscountMBS

171.9.1 class SKProductDiscountMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The class for product discounts.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

171.9.2 Methods

171.9.3 Constructor

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

171.9.4 Properties

171.9.5 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

171.9.6 NumberOfPeriods as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of periods this price is valid.
Notes: (Read only property)

171.9.7 PaymentMode as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The payment mode.
Notes: (Read only property)

171.9.8 Price as Double

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The price of the product.
Notes: (Read only property)

171.9.9 priceLocale as NSLocaleMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The price locale.
Notes: (Read only property)

171.9.10 PriceString as String

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The price as formatted string.
Notes: (Read only property)

171.9.11 subscriptionPeriod as SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The subscription period.
Notes: (Read only property)

171.9.12 Constants

171.9.13 kPaymentModeFreeTrial = 2

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the payment modes.
Notes: Free trial

171.9.14 kPaymentModePayAsYouGo = 0

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the payment modes.
Notes: Pay ss you go

171.9.15 kPaymentModePayUpFront = 1

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the payment modes.
Notes: Pay Upfront

171.10 class SKProductMBS

171.10.1 class SKProductMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The App Store class for a product.
Notes:

SKProductMBS objects are returned as part of an didReceiveResponse event in SKProductsRequestMBS class and are used to provide information about a product previously registered with the Apple App Store.

Please also check the documentation from Apple for the SKProduct class.
Available in Mac OS X v10.7 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

171.10.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr6

171.10.4 Methods

171.10.5 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

171.10.6 contentLengths as Int64()

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Array with filesizes of the assets.
Notes: Available in Mac OS X 10.8 and newer.

171.10.7 downloadContentLengths as Int64()

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: The lengths of the downloadable files available for this product.
Notes:

The array holds Int64 values that is the size of one of the downloadable files (in bytes).

For MacOS 10.14 or newer.
Falls back to downloadLengths for older OS versions.

171.10.8 Properties

171.10.9 contentLength as Int64

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Total filesize of the assets.
Notes:

Available in Mac OS X 10.8 and newer.
(Read only property)

171.10.10 contentVersion as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Version string of the product.
Notes:

Available in Mac OS X 10.8 and newer.
(Read only property)

171.10.11 downloadable as boolean

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether this is a download item.
Notes:

Available in Mac OS X 10.8 and newer.
(Read only property)

171.10.12 downloadContentLength as Int64

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: The length of the downloadable files available for this product.
Notes:

For MacOS 10.14 or newer.
Falls back to downloadLength for older OS versions.
(Read only property)

171.10.13 downloadContentVersion as String

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A string that identifies which version of the content is available for download.
Notes:

The version string is formatted as a series of integers separated by periods.

For MacOS 10.14 or newer.
Falls back to ContentVersion for older OS versions.
(Read only property)

171.10.14 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference to the SKProduct object.
Notes: (Read and Write property)

171.10.15 introductoryPrice as SKProductDiscountMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: Introductory Price.
Notes:

Available on MacOS 10.13.2 or later.
Value is nil on older systems.
(Read only property)

171.10.16 localizedDescription as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of the product.
Notes:

The description is localized based on the currentLocale property.
(Read only property)

171.10.17 localizedTitle as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the product.
Notes:

The description is localized based on the currentLocale property.
(Read only property)

171.10.18 price as Double

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The cost of the product in the local currency.
Notes:

Use PriceString to get a localized formatted price.
(Read only property)

171.10.19 priceLocale as NSLocaleMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The locale used to format the price of the product.
Notes: (Read only property)

171.10.20 priceString as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The cost of the product in the local currency.
Notes:

We format the price in the locale currency format.
(Read only property)

171.10.21 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The string that identifies the product to the Apple App Store.
Notes: (Read only property)

171.10.22 subscriptionGroupIdentifier as String

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The identifier of the subscription group to which the subscription belongs.
Notes:

All auto-renewable subscriptions must be a part of a group. You create the group identifiers in App Store Connect.
Available on MacOS 10.14 or newer.
(Read only property)

171.10.23 subscriptionPeriod as SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: Subscription period.
Notes:

Available on MacOS 10.13.2 or later.
Value is nil on older systems.
(Read only property)

171.11 class SKProductsRequestMBS

171.11.1 class SKProductsRequestMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: An SKProductsRequestMBS object is used to retrieve localized information about a list of products from the Apple App Store.
Notes:

Your application uses this request to present localized prices and other information to the user without having to maintain that list itself.

To use an SKProductsRequest object, you initialize it with a list of product identifier strings, attach a delegate, and then call the request's start method. When the request completes, you receive the didReceiveResponse event.

Please also check the documentation from Apple for the SKProductsRequest class.
Available in Mac OS X v10.7 and later.

171.11.4 Methods

171.11.5 cancel

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels a previously started request.
Notes: When you cancel a request, the events are not called with an error.

171.11.6 Constructor(productIdentifiers() as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes the request with the set of product identifiers.
Notes: productIdentifiers: The list of product identifiers for the products you wish to retrieve descriptions of.

171.11.7 Destructor

MBS MacCloud Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

171.11.8 start

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sends the request to the Apple App Store.
Notes: The results for a request are sent to the events.

171.11.9 Properties

171.11.10 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference to the SKProductsRequest object.
Notes: (Read and Write property)

171.11.11 Events

171.11.12 didFailWithError(error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Called if the request failed to execute.
Notes:

error: The error that caused the request to fail.

When the request fails, your application should release the request. The requestDidFinish event is not called after this method is called.

171.11.13 didFinish

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Called when the request has completed.
Notes: This method is called after all processing of the request has been completed.

171.11.14 didReceiveResponse(products() as SKProductMBS, invalidProductIdentifiers() as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Called when the Apple App Store responds to the product request.
Notes:

products: A list of products, one product for each valid product identifier provided in the original request.
invalidProductIdentifiers: An array of product identifier strings that were not recognized by the Apple App Store. This array should typically be empty.

171.12 class SKProductSubscriptionPeriodMBS

171.12.1 class SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a subscription period.
Notes:

Available on MacOS 10.13.2.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

171.12.2 Methods

171.12.3 Constructor

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

171.12.4 Properties

171.12.5 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

171.12.6 numberOfUnits as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of units.
Notes: (Read only property)

171.12.7 unit as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The unit of the period from day to year.
Notes: (Read only property)

171.12.8 Constants

171.12.9 PeriodUnitDay = 0

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the period units.
Notes: Day

171.12.10 PeriodUnitMonth = 2

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the period units.
Notes: Month

171.12.11 PeriodUnitWeek = 1

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the period units.
Notes: Week

171.12.12 PeriodUnitYear = 3

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the period units.
Notes: Year

171.13 class SKReceiptRefreshRequestMBS

171.13.1 class SKReceiptRefreshRequestMBS

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: The SKReceiptRefreshRequest class allows an app to refresh its receipt.
Notes:

With this API, the app can request a new receipt if the receipt is invalid or missing. In the sandbox environment, you can request a receipt with any combination of properties to test the state transitions related to Volume Purchase Plan receipts.
Requires Mac OS X 10.9.

171.13.6 Methods

171.13.7 cancel

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels a previously started request.
Notes: When you cancel a request, the events are not called with an error.

171.13.8 Constructor(properties as dictionary = nil)

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: Initialized a receipt refresh request with optional properties.
Notes:

In the test enviroment, the properties that the new receipt should have. For keys, see SKReceiptProperty* methods.
In the production environment, set this parameter to nil.

171.13.9 Destructor

MBS MacCloud Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

171.13.10 SKReceiptPropertyIsExpired as string

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties in initialization.
Notes: A key whose value is a Boolean value, indicating whether the receipt is expired.

171.13.11 SKReceiptPropertyIsRevoked as string

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties in initialization.
Notes: A key whose value is a Boolean value, indicating whether the receipt has been revoked.

171.13.12 SKReceiptPropertyIsVolumePurchase as string

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties in initialization.
Notes: A key whose value is a Boolean value, indicating whether the receipt is is a Volume Purchase Plan receipt.

171.13.13 start

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: Sends the request to the Apple App Store.
Notes: The results for a request are sent to the events.

171.13.14 TerminateForInvalidReceipt

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Terminates an app if the license to use the app has expired.
Notes: Falls back to exit(173) for MacOS before 10.14.

171.13.15 Properties

171.13.16 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

171.13.17 receiptProperties as Dictionary

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: The properties of the receipt. (read-only)
Notes: (Read only property)

171.13.18 Events

171.13.19 didFailWithError(error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: .

Function: Called if the request failed to execute.
Notes:

error: The error that caused the request to fail.

When the request fails, your application should release the request. The requestDidFinish event is not called after this method is called.

171.13.20 didFinish

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: .

Function: Called when the request has completed.
Notes: This method is called after all processing of the request has been completed.

171.14 module StoreKitMBS

171.14.1 module StoreKitMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Globals for the StoreKit plugin.
Notes: Be aware that StoreKit requires your app to be signed.

171.14.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr6

171.14.3 Blog Entries

171.14.4 Methods

171.14.5 appStoreReceiptURL as string

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Queries URL for the app store receipt file.

171.14.6 available as Boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Whether the StoreKit framework is available.
Example:

msgbox "StoreKit available: "+str(StoreKitMBS.available)

Notes: Should always be true on Mac OS X 10.7 and newer.

171.14.7 requestReview

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Tells StoreKit to ask the user to rate or review your app, if appropriate.
Example:

```
If StoreKitMBS.StoreReviewAvailable Then
StoreKitMBS.requestReview
End If
```

Notes:

Although you should call this method when it makes sense in the user experience flow of your app, the actual display of a rating/review request view is governed by App Store policy. Because this method may or may not present an alert, it's not appropriate to call it in response to a button tap or other user action.

When you call this method while your app is still in development mode, a rating/review request view is always displayed so that you can test the user interface and experience. However, this method has no effect when you call it in an app that you distribute using TestFlight.

When you call this method in your shipping app and a rating/review request view is displayed, the system handles the entire process for you. In addition, you can continue to include a persistent link in the settings or configuration screens of your app that deep-links to your App Store product page. To automatically open a page on which users can write a review in the App Store, append the query parameter action=write-review to your product URL.

Available on MacOS 10.14 or newer.
requestReview method will only work, if StoreReviewAvailable returns true.
Does nothing if called on older OS versions.

171.14.8 SKErrorDomain as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The domain for StoreKit errors.

171.14.9 StoreReviewAvailable as Boolean

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether SKStoreReviewController class is available.
Example:

```
If StoreKitMBS.StoreReviewAvailable Then
StoreKitMBS.requestReview
```

End If

Notes: requestReview method will only work, if StoreReviewAvailable returns true.

171.14.10 Constants

171.14.11 SKErrorClientInvalid = 1

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the StoreKit error codes.
Notes: client is not allowed to issue the request, etc.

171.14.12 SKErrorPaymentCancelled = 2

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the StoreKit error codes.
Notes: user cancelled the request, etc.

171.14.13 SKErrorPaymentInvalid = 3

MBS MacCloud Plugin.

Function: One of the StoreKit error codes.
Notes: purchase identifier was invalid, etc.

171.14.14 SKErrorPaymentNotAllowed = 4

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the StoreKit error codes.
Notes: this machine is not allowed to make the payment

171.14.15 SKErrorUnknown = 0

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the StoreKit error codes.
Notes: unknown error

Chapter 172

String

172.1 Globals

172.1.1 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for question mark or uppercase letters A to Z
MsgBox str(InStrByteRangeMBS("Hello?", "?", 65, 90)) // shows 1 as H is found.

MsgBox str(InStrByteRangeMBS("hello?", "?", 65, 90)) // shows 6 as ? is found.
```

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.
See also:

- 172.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 23870
- 172.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 23871
- 172.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 23872
- 172.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 23873
- 172.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 23874

172.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for question mark or uppercase letters A to Z or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", "?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello?", "?", 65, 90, 48, 57)) // shows 6 as ? is found
MsgBox str(InStrByteRangeMBS("Hello 123", "?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello 123", "?", 65, 90, 48, 57)) // shows 7 as 1 is found.
```

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.
See also:

- 172.1.1 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer) as Integer 23869

- 172.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 23871
- 172.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 23872
- 172.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 23873
- 172.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 23874

172.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for question mark, low byte values, high byte values or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", "?", 0, 31, 127, 255, 48, 57 )) // shows 6 as ? is found.
MsgBox str(InStrByteRangeMBS("123", "?", 0, 31, 127, 255, 48, 57 )) // shows 1 as 1 is found.
MsgBox str(InStrByteRangeMBS(EndOfLine.Windows, "?", 0, 31, 127, 255, 48, 57 )) // shows 1 as chr(13) is found.
MsgBox str(InStrByteRangeMBS("Hello", "?", 0, 31, 127, 255, 48, 57 )) // shows 0 as nothing is found.
```

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- 172.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 23872
- 172.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 23873
- 172.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 23874

172.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for uppercase letters A to Z
MsgBox str(InStrByteRangeMBS("Hello?", 65, 90)) // shows 1 as H is found.

MsgBox str(InStrByteRangeMBS("hello?", 65, 90)) // shows 0 as nothing is found.
```

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- 172.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 23870

- 172.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 23871
- 172.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 23872
- 172.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 23873

172.1.8 InStrBytesMBS(target as string, find as string) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the first position of one of the bytes given in the find string in the target string.
Example:

```
MsgBox str(InStrBytesMBS("Hello", "e")) // shows 2, as e is found
MsgBox str(InStrBytesMBS("Hello", "abcd")) // shows 0, as nothing is found
MsgBox str(InStrBytesMBS("Hello World", "abcd")) // shows 11, as d is found
```

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).
The find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

Returns 0 if nothing is found or the position of the found character.

172.1.10 EncodingNameMBS(extends Text as string) as string

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the text encoding name for this string.
Example:

```
dim t as string = "Hello World"
```

```
MsgBox "InternetName: "+t.Encoding.InternetName
MsgBox "InternetNameMBS: "+t.Encoding.InternetNameMBS
MsgBox "EncodingNameMBS: "+t.EncodingNameMBS
```

172.1.11 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr6

172.1.12 RemoveAccentsMBS(text as string, IgnoreCase as boolean = false) as string

MBS Util Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes accents from text.
Example:

```
dim s as string = "L'élève préféré"
dim a as string = RemoveAccentsMBS(s)
dim b as string = RemoveAccentsMBS(s, true)
// check values in debugger
```

Notes:

Optionally also ignores case and outputs text in capital letters.
The plugin has a long replacement list of unicode code points to do this.

Useful as a preparation to convert to ASCII text, so all accents are removed before conversion.

172.1.15 SplitCommaSeparatedValuesMBS(text as string, delimiter as string = ””, quote as string = ””) as string()

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Splits a string with CSV values.
Example:

```
// 1. read a CSV file:

dim file as FolderItem = SpecialFolder.Desktop.Child("test.csv")
dim t as TextInputStream = TextInputStream.open(file)

// use right encoding for your file!
t.Encoding = encodings.MacRoman

while not t.EOF
dim line as string = t.ReadLine
dim items() as string = SplitCommaSeparatedValuesMBS(line)

// process items array
wend

// 2. compare with split:

dim test as string = "Hello,""World,test"",end"

dim a() as string = split(test, ",")
dim b() as string = SplitCommaSeparatedValuesMBS(test, ",")

MsgBox Join(a,EndOfLine)+EndOfLine+EndOfLine+Join(b,EndOfLine)
```

Notes:

This function is better for CSV data than the Split function as it handles quoted text right.
For 17.5 we rewrote this function. Now auto detects the delimiter (comma or semicolon) if none passed. Default quote character is ” if nothing is passed. Please only one character for delimiter.

Version 18.0 can detect tab character, too.

172.1.19 CheckUTF8MBS(data as ptr, size as Integer, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.
Notes:

This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.
See also:

- 172.1.20 CheckUTF8MBS(data as string, Placeholder as string) as string 23879
- 172.1.21 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string 23879

172.1.20 CheckUTF8MBS(data as string, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.
Example:

```
// some random bytes
dim t as string = RandomBytesStringMBS(20, false)

// and some text
t = t + " äöü "

// checked
dim s as string = CheckUTF8MBS(t, "")

MsgBox s
```

Notes:

This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.
See also:

- 172.1.19 CheckUTF8MBS(data as ptr, size as Integer, Placeholder as string) as string 23878
- 172.1.21 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string 23879

172.1.21 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.
Example:

```
// some random bytes
dim t as string = RandomBytesStringMBS(20, false)

// and some text
t = t + " äöü "

// checked in memoryblock
```

```
dim m as MemoryBlock = t
dim s as string = CheckUTF8MBS(m, "")

MsgBox s
```

Notes:

This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.

172.1.24 ClearStringContentMBS(s as String) as Boolean

MBS Util Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears string content.
Example:

```
// this is a constant string
Dim c As String = "Hello"
```

```
// this is an allocated string
Dim a As String = c + "World"

// try to clear both
Call ClearStringContentMBS c
Call ClearStringContentMBS a

MsgBox "const: "+c+" "+Str(Len(c))+EndOfLine+"allocated: "+a+" "+Str(Len(a))
```

Notes:

Overwrites content of string with zeros.
We check if this is a constant string and for those do nothing.
Returns true if we zeroed content, otherwise false.

This function can help to clear memory for passwords stored in strings.

172.1.26 ConcatBinaryStringsMBS(a as string, b as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Concats the given strings with binary encoding.
Example:

```
dim a as string = "Hello"
dim b as string = "World"
dim c as string = ConcatBinaryStringsMBS(a,b)
dim d as string = ConvertEncoding(b, encodings.UTF16)
dim e as string = ConcatBinaryStringsMBS(a,d)

MsgBox "ConcatBinaryStringsMBS"+EndOfLine+EndOfLine+c+EndOfLine+EncodingToHexMBS(c)+EndOfLine+EndOfLine+e+EndOfLine+EncodingToHexMBS(e)
```

Notes: If RB concats strings the encoding is changed before concating to match the other strings.

- 172.1.30 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string 23883

172.1.28 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Concats the given strings with binary encoding.
Notes: If RB concats strings the encoding is changed before concating to match the other strings.
See also:

- 172.1.26 ConcatBinaryStringsMBS(a as string, b as string) as string 23881
- 172.1.27 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string 23882
- 172.1.29 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string) as string 23883
- 172.1.30 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string 23883

172.1.29 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Concats the given strings with binary encoding.
Notes: If RB concats strings the encoding is changed before concating to match the other strings.
See also:

- 172.1.26 ConcatBinaryStringsMBS(a as string, b as string) as string 23881
- 172.1.27 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string 23882
- 172.1.28 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string 23882
- 172.1.30 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string 23883

172.1.30 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Concats the given strings with binary encoding.
Notes: If RB concats strings the encoding is changed before concating to match the other strings.

172.1.31 Blog Entries

- MBS Xojo Plugins, version 19.1pr7

See also:

172.1.32 CountOccurancesMBS(s as string, find as string) as Integer

MBS Util Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts the occurances of a string.
Example:

```
dim s as string

s="111110001110101010111"

MsgBox str(CountOccurancesMBS(s,"1")) // 14
MsgBox str(CountOccurancesMBS(s,"0")) // 7
MsgBox str(len(s)) // 21
```

Notes: Returns the number of occurances of a substring in a string.

172.1.33 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr5
- MonkeyBread Software Releases the MBS Plugins 8.2

172.1.34 CreateStringMBS(Length as Integer, Content as String) as string

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a string based on a pattern.
Example:

```
dim c as string = CreateStringMBS(20, "Hello")
dim t as string = CreateStringMBS(10, chrb(255))

Break
```

Notes:

The content string is repeated until size is matched and returned.
The string returned has the same encoding set as the content string.

172.1.35 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr5

172.1.36 DecodingFromHTMLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with HTML escaped characters.
Example:

```
dim html as string = "<p><B>Gr& uuml;& szlig;e</B></P>"
dim htmltext as string = RemoveHTMLTagsMBS(html)
dim text as string = DecodingFromHTMLMBS(htmltext)

MsgBox text // shows: Grüße
```

Notes:

The source string is converted to a native string if it is not allready in ASCII. Than for every character the functions looks for the unescaped character code and returns a normal unicode string.

e.g. "M& uuml;nchen" ->"München"

This functions uses Xojo unicode strings, so you may need to convert back to a NativeString before saveing the string to a file. (using e.g. ConvertEncoding(string, encodings.UTF8))

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Speed optimized in version 2.8 to be a hundret times faster.
Added Linux support in v5.1.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

172.1.37 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr7

172.1.38 DecodingFromMySQLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string from MySQL.
Example:

```
MsgBox DecodingFromMySQLMBS("test\\test\% 2.doc")
```

Notes: Replaces all the escapes in a mysql string like (\0, \t or \\) to their binary replacement.

172.1.39 DecodingFromQuotedPrintableMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with quoted printable encoding.
Example:

```
msgbox DecodingFromQuotedPrintableMBS("Hi, =A1=92")
```

Notes:

The decoded string is marked to have an ASCII encoding, but you may need to set the encoding to something like ISO. Than you need a text converter to make something printable from it.

May return "" on low memory conditions.

172.1.40 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr9

172.1.41 DecodingFromURLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with URL escaped characters.
Example:

```
dim s as string
dim t as string
dim u as string

t="Hello World äöü"

s= EncodingToURLMBS(t,0)

u=DecodingFromURLMBS(s,0)

SetEncodingOfStringMBS u,GetEncodingOfStringMBS(t) // restore encoding

// Hello World äöü
MsgBox t
```

```
// Hello% 20World% 20% C3% A4% C3% B6% C3% BC
MsgBox s
// Hello World äöü
MsgBox u
```

Notes:

Decodes an URL encoded ASCII string. The string returned is marked as a binary string (without encoding). You need to set the encoding to whatever the original was (ISO-9660 or UTF8 for example).

e.g. "Wie% 20geht's% 3F" ->"Wie geht's?"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.
See also:

- 172.1.42 DecodingFromURLMBS(s as string, options as Integer) as string 23887

172.1.42 DecodingFromURLMBS(s as string, options as Integer) as string

MBS Util Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with URL escaped characters.
Example:

```
dim s as string
dim t as string
dim u as string

t="Hello World äöü"

s= EncodingToURLMBS(t,1)

u=DecodingFromURLMBS(s,1)

SetEncodingOfStringMBS u,GetEncodingOfStringMBS(t) // restore encoding

// Hello World äöü
MsgBox t
// Hello+World+% C3% A4% C3% B6% C3% BC
MsgBox s
// Hello World äöü
MsgBox u
```

Notes:

Decodes an URL encoded ASCII string. The string returned is marked as a binary string (without encoding). You need to set the encoding to whatever the original was (ISO-9660 or UTF8 for example).

e.g. "Wie% 20geht's% 3F" ->"Wie geht's?"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Pass 1 for the options parameter to get PHP/Perl compatible output (+ instead of spaces and % 20 for spaces).
Added Linux support in v5.1.
See also:

- 172.1.41 DecodingFromURLMBS(s as string) as string 23886

172.1.43 DecodingFromXMLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with XML escaped characters.
Notes: see DecodingFromHTMLMBS.

172.1.44 DetectUnicodeMarkersMBS(s as string) as Integer

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tries to get the unicode marker from the string.
Example:

```
const EncodingUnknown=0
const EncodingUTF8=1
const EncodingUTF16be=3
const EncodingUTF16le=4
const EncodingUTF32be=6
const EncodingUTF32le=7

dim text as string = "Hello World" // this text does not have a marker..

msgbox str(DetectUnicodeMarkersMBS(text))
```

Notes: For some UTF16 LittleEndian strings this function may return UTF32.

172.1.45 EncodeEmailSubjectMBS(s as string) as string

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Encodes an email subject.
Text is encoded with UTF-8 Quoted Printable encoding.
If text does not need to be encoded (pure ASCII), we return the input text.
Example:

```
MsgBox EncodeEmailSubjectMBS("Hello World")+EndOfLine+EncodeEmailSubjectMBS("Test äöü")
```

172.1.46 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr3

172.1.47 EncodingToHTMLMBS(s as string, options as Integer = 0) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with HTML escaped characters.
Example:

```
dim f as folderItem
dim b as binaryStream

f=getsaveFolderItem("text/html","new.html")
if f<>nil then
b=f.createBinaryFile("text/html")
if b<>nil then
b.write nativeStringMBS(EncodingToHTMLMBS(editfield1.text))
b.close
end if
end if
```

Notes:

The source string is converted to unicode if it is not allready in unicode. Than for every character the functions looks for the escaped character code and returns a HTML encoded string.

e.g. "München" ->"M& uuml;nchen"

This functions uses Xojo unicode strings, so you may need to convert back to a NativeString before saveing the string to a file.

Return characters (chr(10) and chr(13)) are not converted to
codes.

May return "" on low memory conditions.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

Options can be 1 to not encode ASCII values <128, so quotes, <, >and & are not encoded.

172.1.48 Blog Entries

- Smileys and UTF32
- MBS Xojo / Real Studio Plugins, version 15.0pr9
- MBS Xojo / Real Studio Plugins, version 15.0pr7

- MBS Real Studio Plugins, version 11.2pr2

172.1.49 EncodingToQuotedPrintableMBS(s as string, LineLen as Integer = 72) as string

MBS Util Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with quoted printable characters.
Example:

```
dim a as string = "Hello äöü!"
dim b as string = EncodingToQuotedPrintableMBS(a)
dim c as string = ConvertEncoding(a, encodings.ISOLatin1)
dim d as string = EncodingToQuotedPrintableMBS(c)
dim e as string = EncodeQuotedPrintable(a)
dim f as string = EncodeQuotedPrintable(c)

MsgBox b+EndOfLine+d+EndOfLine+e+EndOfLine+f
```

Notes:

Line wrap is per default at 72 characters but you can pass some other positive value here.
Quoted printable encoded strings have some ISO encoding as base, you need to pass a valid ISO string to this function to get the correct result.
May return "" on low memory conditions.

172.1.50 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr9

172.1.51 EncodingToURLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with URL escaped characters.
Example:

msgbox EncodingToURLMBS("Wie geht's?")

Notes:

Encodings a string for an URL. Use with UTF8 or ISO-9660 encoded strings. This function does not work correctly with UTF16 strings.

e.g. "Wie geht's?" ->"Wie% 20geht's% 3F"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.
See also:

- 172.1.52 EncodingToURLMBS(s as string, options as Integer) as string 23891

172.1.52 EncodingToURLMBS(s as string, options as Integer) as string

MBS Util Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with URL escaped characters.
Example:

```
dim s as string = "20101210 1244 - Sky Cinema +24 - Wen die Geister lieben"
```

MsgBox EncodingToURLMBS(s)

// gives: 20101210% 201244% 20-% 20Sky% 20Cinema% 20+24% 20-% 20Wen% 20die% 20Geister% 20lieben

MsgBox EncodingToURLMBS(s,1)

// gives: 20101210+1244+-+Sky+Cinema+% 2B24+-+Wen+die+Geister+lieben

MsgBox EncodingToURLMBS(s,2)

// gives: 20101210% 201244% 20-% 20Sky% 20Cinema% 20% 2b24% 20-% 20Wen% 20die% 20Geister% 20lieben

Notes:

Encodings a string for an URL. Use with UTF8 or ISO-9660 encoded strings. This function does not work correctly with UTF16 strings.

e.g. "Wie geht's?" ->"Wie% 20geht's% 3F"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Pass 1 for the options parameter to get PHP/Perl compatible output (+ instead of spaces and % 20 for spaces).
Pass 2 for the options parameter to get plus to % 2B and space to % 20. Added in plugin version 10.6.

See also:

- 172.1.51 EncodingToURLMBS(s as string) as string 23891

172.1.54 EncodingToXMLMBS(s as string, options as Integer = 0) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with XML escaped characters.
Notes: see EncodingToHTMLMBS.

172.1.55 GetStringsFromDataMBS(data as MemoryBlock, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks for strings within a data block.
Notes:

Looks over the bytes in the data block to see if there are useful byte sequences which could be text.
Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments.
See also:

- 172.1.56 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string() 23893
- 172.1.57 GetStringsFromDataMBS(data as String, MinLength as Integer = 0) as string() 23893

172.1.56 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks for strings within a data block.
Notes:

Looks over the bytes in the data block to see if there are useful byte sequences which could be text.
Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments.
See also:

- 172.1.55 GetStringsFromDataMBS(data as MemoryBlock, MinLength as Integer = 0) as string() 23893
- 172.1.57 GetStringsFromDataMBS(data as String, MinLength as Integer = 0) as string() 23893

172.1.57 GetStringsFromDataMBS(data as String, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks for strings within a data block.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim b as BinaryStream = BinaryStream.Open(f)
```

```
dim s as string = b.Read(b.Length)
dim texts() as string = GetStringsFromDataMBS(s, 3)

Break
```

Notes:

Looks over the bytes in the data block to see if there are useful byte sequences which could be text.
Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments.

- 172.1.56 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string() 23893

172.1.59 GetUnicodeMarkersMBS(kind as Integer) as string

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the unicode marker with the given code.
Example:

```
const EncodingUnknown=0
const EncodingUTF8=1
const EncodingUTF16=2 // native
const EncodingUTF16be=3
const EncodingUTF16le=4
const EncodingUTF32=5 // native
const EncodingUTF32be=6
const EncodingUTF32le=7

msgbox EncodingToHexMBS(GetUnicodeMarkersMBS(EncodingUTF8))
```

Notes: If you concat strings, RB may convert the string to UTF8.

172.1.60 HasPostfixMBS(Text as String, Prefix as String) as boolean

MBS Util Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether text has given postfix.
Example:

```
dim t as string = "Hello World"
dim p as string = "Hello"
dim w as string = "World"

if HasPrefixMBS(t, p) then
// ok
else
break
MsgBox "failed?"
end if

if HasPostfixMBS(t, w) then
// ok
else
break
MsgBox "failed?"
end if

if HasPrefixMBS(t, w) then
break
MsgBox "failed?"
else
// ok
end if

if HasPostfixMBS(t, p) then
break
MsgBox "failed?"
else
// ok
end if

Break
```

Notes:

Returns true if yes, or false if not.
We may convert text to UTF-8 to compare.

172.1.61 Blog Entries

- MBS Xojo Plugins, version 18.5pr6

172.1.62 HasPrefixMBS(Text as String, Prefix as String) as boolean

MBS Util Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether text has given prefix.
Example:

```
dim t as string = "Hello World"
dim p as string = "Hello"
dim w as string = "World"

if HasPrefixMBS(t, p) then
// ok
else
break
MsgBox "failed?"
end if

if HasPostfixMBS(t, w) then
// ok
else
break
MsgBox "failed?"
end if

if HasPrefixMBS(t, w) then
break
MsgBox "failed?"
else
// ok
end if

if HasPostfixMBS(t, p) then
break
MsgBox "failed?"
else
// ok
end if

Break
```

Notes:

Returns true if yes, or false if not.
We may convert text to UTF-8 to compare.

172.1.63 Blog Entries

- MBS Xojo Plugins, version 18.5pr6

172.1.64 HexstringMBS(input as string, hexlen as Integer, linelen as Integer, linestart as string, lineend as string, spacer as string,filler as string) as string

MBS Util Plugin, Plugin Version: 2.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a hexadecimal string.
Example:

```
dim s as string
s=HexstringMBS("Hello World",2,10,"<",">"+endofline,"","0")
```

Notes:

Fails if input="" or hexlen<1 or linelen<1 or on low memory conditions.
If filler is "", filler is set to "0".

Memory requirement is around 5 times the memory for input.
or exactly:
mem=20+linelen*hexlen*(1+len(filler))+2*((linelen*hexlen*len(filler)+len(lineend)+len(linestart))*(len(input)*2/hexlen))

All strings must be in the encoding you want to have.
Can raise OutOfMemoryException on low memory.

- MBS Xojo / Real Studio Plugins, version 15.2pr4

172.1.66 IsASCIIStringMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if this string is an ASCII string.
Notes:

False if one of the characters of the string has a numeric value of 128 or higher. (->string is not a 7 bit ASCII string)
True if all bytes are in the valid ASCII range.
See also:

- 172.1.67 IsASCIIStringMBS(s as string, mode as Integer) as boolean 23898

172.1.67 IsASCIIStringMBS(s as string, mode as Integer) as boolean

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if this string is an ASCII string.
Notes:

Does not work for 16bit unicode strings.
But it works fine with UTF8.

Mode values:

0	False if one of the characters of the string has a numeric value of 128 or higher. (->string is not a 7 bit ASCII string)
1	False if one of the characters of the string has a numeric value >128 or <32. (->string may not be printable in ASCII, which may require some kind of Base64 encoding to transfer it.)
2	False if one of the characters of the string has a numeric value below 32. (->string may contain line breaks or other control characters)

Added Linux support in v5.1.
See also:

- 172.1.66 IsASCIIStringMBS(s as string) as boolean 23897

172.1.68 JaroWinklerDistanceMBS(a as string, b as string) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the string distance.
Example:

```
dim s1 as string = "Hello"
dim s2 as string = "Hallo"
```

```
dim s3 as string = "Helo"
dim s4 as string = "Helllo"

// 0 for equal, the more it goes to 1.0

dim d1 as Double = levenshteinDistanceMBS(s1,s1)
dim d2 as Double = levenshteinDistanceMBS(s1,s2)
dim d3 as Double = levenshteinDistanceMBS(s1,s3)
dim d4 as Double = levenshteinDistanceMBS(s1,s4)

dim d5 as Double = jaroWinklerDistanceMBS(s1,s1)
dim d6 as Double = jaroWinklerDistanceMBS(s1,s2)
dim d7 as Double = jaroWinklerDistanceMBS(s1,s3)
dim d8 as Double = jaroWinklerDistanceMBS(s1,s4)

break // check values in debugger
```

Notes:

Value is normalized, so 0.0 is equal text and 1.0 is totally unequal.

- MBS SQLite Extension in version 1.4
- MBS Real Studio Plugins, version 12.4pr10

172.1.72 NativeStringMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a native string with the given string as content.
Notes:

If the string in the parameter s is allready native it is returned unchanged and without allocating additional memory. Else the string is copied into a new string with native characters.
On Mac OS Classic native means MacRoman encoding, on Mac OS X it's UTF8 and on Windows the ANSI Codepage.
May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

172.1.73 RandomBytesStringMBS(Length as Integer, ASCII as boolean=false) as string

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a string with random content.
Example:

```
dim s as string

s = RandomBytesStringMBS(10, true)

MsgBox s

s = RandomBytesStringMBS(10, false)

MsgBox s
```

Notes:

Length is the number of bytes in the string.
If ASCII is true the string returned in an ASCII string.

172.1.74 Blog Entries

- CheckUTF8MBS function

172.1.75 Xojo Developer Magazine

- 10.1, page 71: Using Plugins, Working with the Monkeybread Plugins by Marc Zeedar

172.1.76 RemoveHTMLTagsMBS(AsciiTextWithTags as string) as string

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes all html tags from the string.
Example:

```
Dim s As String = "<div><P param=""value""></P></div>"
Dim t As String = RemoveHTMLTagsMBS(s)

MsgBox t // returns "Hello"
```

Notes:

Returns "" on low memory.
Written to be used with UTF8 strings.

Added Linux support in v5.1.

172.1.77 Blog Entries

- MBS Xojo Plugins, version 19.4pr8

172.1.78 RemoveHTMLTagsWithMBS(AsciiTextWithTags as string, Replacement as string) as string

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes all html tags from the string and replaces them with the replacement string.
Example:

```
msgbox RemoveHTMLTagsWithMBS("<P>Hello</P>"," ") // returns " Hello "
```

Notes:

Returns "" on low memory.
Written to be used with UTF8 strings.

172.1.79 ReplaceLineEndingsMBS(Text as String, NewLine as String, yield as boolean = false) as String

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces line endings.
Example:

```
dim s as string = "Some text"
dim t as string = ReplaceLineEndingsMBS(s, endofline.Unix)
```

Notes:

Whether we got CR, LF, CRLF or even LFCR, we'll replace it with the given replacement text.
If yield is true, we yield to other Xojo threads every 16 MB of input text to keep other threads responsive.

Handles UTF16/UTF32 by converting first to UTF-8.
Other 8 bit encodings (or no encoding set) are passed through.

Returns new text. May raise OutOfMemoryException in case of no memory available.

172.1.80 Blog Entries

- MBS Xojo Plugins, version 19.0pr7
- New ReplaceLineEndingsMBS function

172.1.81 ReplaceNonPrintableCharactersMBS(s as string, replacevalue as Integer=46) as string

MBS Util Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces bytes in the string which are not printable with the given byte value.
Example:

```
MsgBox ReplaceNonPrintableCharactersMBS("Hello World")
MsgBox ReplaceNonPrintableCharactersMBS("Hello äöü World")
MsgBox ReplaceNonPrintableCharactersMBS("Hello äöü World",32)
```

Notes:

All bytes in range 32 to 127 are copied and all others replaces with the given byte value. Default is 46 which is a dot.
Returns always an ASCII string.
On low memory this function returns an empty string.

172.1.82 Blog Entries

- New ReplaceLineEndingsMBS function

172.1.83 ScientificStrMBS(d as Double, digits as Integer) as string

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the given value formatted as scientific number with the given number of digits.
Example:

```
dim d as Double = 3.1415926535897

MsgBox ScientificStrMBS(d,6)+EndOfLine+ScientificStrMBS(d,9)
```

172.1.84 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

172.1.85 SplitMBS(value as String, delimiter as String = " ") as String()

MBS DataTypes Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Splits string.
Example:

```
dim a() as string = SplitMBS("Hello World Test", " ")
dim b() as string = SplitMBS("Grüße", "")
dim c() as string = SplitMBS("Just$ test$ a$ test$ test", "$ test$ ")

break
```

Notes:

Similar to the Split() function, but without the problems we see with Split function. See feedback cases for Split.

If delimiter is "", we return an array with all characters in string.
Else we split given string with delimiter.

- 14.6, page 10: News

172.1.88 SQLReplaceBooleanMBS(SQL as string) as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces all false/true strings with 0/1 and handles quotes correctly.
Example:

MsgBox SQLReplaceBooleanMBS("INSERT INTO criteria VALUES ('1','9999','0001','000001557',false);")

Notes:

SQLite used in REALSQLDatabase does not like false and true literals for boolean values. You need to use 0 and 1. So this function helps you converting old queries using false/true.
false and true inside a quoted string are not changed.

172.1.89 Blog Entries

- MBS Plugins 10.3 Release Notes

172.1.90 StrCompBytesMBS(a as string, b as string) as Integer

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two strings.
Example:

msgbox str(StrCompBytesMBS("Hello","hello"))

Notes:

Returns zero if the two strings are identical.
Returns 1 or -1 if the strings are different.
Empty strings are equal.

Compares the bytes of both strings independend of the text encoding.

So if a="A" in UTF-8 and b="A" in UTF-16 they will not be equal!

172.1.91 StrCompCharactersMBS(a as string, b as string) as Integer

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two strings.
Example:

```
msgbox str(StrCompCharactersMBS("Hello","hello"))
```

Notes:

Returns zero if the two strings are identical.
Returns 1 or -1 if the strings are different.
Empty strings are equal.

Compares the characters of both strings. If the text encodings are not equal, they are both converted to UTF-8 before comparing them.

So if a="A" in UTF-8 and b="A" in UTF-16 they will be equal!

172.1.92 StringANDMBS(a as string,b as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a binary AND on the bytes from the both strings.
Notes:

If a is "" or memory is low, the result is "".
If b is shorter as a the b string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
Added Linux support in v5.1.

172.1.93 StringIsHTMLreadyMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test whether a string is html safe.
Example:

```
Function html(t as string) As string
# pragma disablebackgroundtasks
# pragma disableautowaitcursor

if StringIsHTMLreadyMBS(t) then
Return t
```

```
else
t=EncodingToHTMLMBS(t)
Return ConvertEncoding(t,encodings.UTF8)
end if
End Function
```

Notes:

String which are not html safe, need to go through EncodingToHTMLMBS.
Using this function saves a lot of time!

Returns true for strings which are html safe.

172.1.94 StringIsXMLreadyMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test whether a string is xml safe.
Notes:

String which are not html safe, need to go through EncodingToXMLMBS.
Using this function saves a lot of time!

Returns true for strings which are xml safe.

172.1.95 StringORMBS(a as string,b as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a binary OR on the bytes from the both strings.
Notes:

If a is "" or memory is low, the result is "".
If b is shorter as a the b string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
Added Linux support in v5.1.

172.1.96 StringXOR2MBS(data as string, XorMask as string, MaskOffset as Integer = 0) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a binary XOR on the bytes from the both strings.
Example:

```
dim s as string = StringXORMBS("Hello", "World")
dim t as string = StringXOR2MBS("Hello", "World")

MsgBox EncodeHex(S)+" "+EncodeHex(t)

dim ss as string = StringXORMBS(s, "World")
dim tt as string = StringXOR2MBS(t, "World")

MsgBox ss+" "+tt
```

Notes:

If data is "" or memory is low, the result is "".
If XorMask is shorter as data the XorMask string is used several times.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.

The difference between StringXORMBS and StringXOR2MBS is that the second version xors also with position of byte in string, so your text looks a little bit more random.
MaskOffset specifies where in the XorMask string to start. This is useful for partial blocks.

172.1.97 Blog Entries

- MBS Real Studio Plugins, version 12.3pr8

172.1.98 StringXORMBS(data as string, XorMask as string, MaskOffset as Integer = 0) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a binary XOR on the bytes from the both strings.
Notes:

If data is "" or memory is low, the result is "".
If XorMask is shorter as data the XorMask string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.

Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
MaskOffset specifies where in the XorMask string to start. This is useful for partial blocks.

172.1.99 StrMBS(d as Double) as string

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Formats numbers more human readable
Example:

```
// shows: 0.000000012339 1.234560e-8
MsgBox StrMBS(0.00000001234)+" "+str(0.00000001234)

// shows 123456789.0 1.234568e+8
MsgBox StrMBS(123456789.0)+" "+str(123456789.0)
```

Notes: The idea is to have a dynamically changing number of digits. We have no scientific notation and up to 15 digits visible (not counting zeros).

172.1.100 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr4

172.1.101 UnicodeStringMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a unicode string with the given string as content.
Notes:

If the string in the parameter s is allready unicode it is returned unchanged and without allocating additional memory. Else the string is copied into a new string with unicode (16bit) characters.
May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

172.1.102 ConvertUnicodeToCharacterCompositionMBS(text as string) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts unicode characters to composed normalization form.
Example:

```
dim s1 as string = ConvertUnicodeToCharacterDecompositionMBS("ä")

MsgBox s1+": "+EncodeHex(s1)
// shows ä: 61CC88

dim s2 as string = ConvertUnicodeToCharacterCompositionMBS("ä")

MsgBox s2+": "+EncodeHex(s2)
// shows ä: C3A4
```

Notes:

This function replaces character represented by decomposed representation with the composed representation.

see also
https://en.wikipedia.org/wiki/Unicode_equivalence

172.1.103 ConvertUnicodeToCharacterDecompositionMBS(text as string) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts unicode characters to decomposed normalization form.
Example:

```
dim s1 as string = ConvertUnicodeToCharacterDecompositionMBS("ä")

MsgBox s1+": "+EncodeHex(s1)
// shows ä: 61CC88

dim s2 as string = ConvertUnicodeToCharacterCompositionMBS("ä")

MsgBox s2+": "+EncodeHex(s2)
// shows ä: C3A4
```

Notes:

This function replaces character represented by one unicode character by the decomposed variant.

see also
https://en.wikipedia.org/wiki/Unicode_equivalence

172.1.104 Blog Entries

- MBS Xojo Plugins, version 20.1pr4

172.1.105 DecodingFromCP1252MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with ISO 8859 encoding.
Notes:

The source string must be really an CP1252 string!
The string returned is Unicode and you may try NativeString to make a string you can display better.

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

172.1.106 DecodingFromHexMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a Hex string to a binary string.
Example:

```
dim s as String

s=EncodingToHexMBS("Hallo")

MsgBox DecodingFromHexMBS(s)
```

Notes:

May return "" on low memory conditions.
Added Linux support in v5.1.
The string returned has no defined string encoding, so use DefineEncoding on the result if needed.

172.1.107 DecodingFromISO8859MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with ISO 8859 encoding.
Example:

```
dim s as String

s=EncodingToISO8859MBS("hallo äöü")

MsgBox s

s=DecodingFromISO8859MBS(s)

MsgBox s

s=NativeStringMBS(s)

MsgBox s
```

Notes:

The source string must be really an ISO 8859-1 string!
The string returned is Unicode and you may try NativeString to make a string you can display better.

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

172.1.108 EncodingToCP1252MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string encoded with Codepage 1252.
Notes:

The string is converted to Unicode (if it's not allready Unicode) and than encoded to a CP 1252 string which is returned with encoding set to binary.
(other encodings are available, but currently not in the plugin)

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

172.1.109 EncodingToHexMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a binary string to a hex string.
Example:

```
dim s1 as string = "Hello World"
dim s2 as string = EncodingToHexMBS(s1)

dim t1 as string = "Umlauts äöü"
dim t2 as string = EncodingToHexMBS(t1)

dim u as new UUIDMBS
dim u1 as string = u.ValueString
dim u2 as string = EncodingToHexMBS(u1)

break // see variables in debugger
```

Notes:

May return "" on low memory conditions.
Added Linux support in v5.1.

172.1.110 EncodingToISO8859MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string encoded with ISO 8859-1.
Example:

```
dim s as String

s=EncodingToISO8859MBS("hallo äöü")

MsgBox s

s=DecodingFromISO8859MBS(s)

MsgBox s

s=NativeStringMBS(s)

MsgBox s
```

Notes:

The string is converted to Unicode (if it's not allready Unicode) and than encoded to a ISO 8859-1 string which is returned with encoding set to binary.
(other encodings are available, but currently not in the plugin)

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

172.1.111 JoinDataMBS(blocks() as memoryblock) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of memoryblocks in new string.
Example:

```
dim s() as MemoryBlock

// make memoryblock with a space character
dim m as MemoryBlock = "Hello"

s.Append m
s.Append m
s.Append m

// now join
dim r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

Notes:

Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.
See also:

- 172.1.112 JoinDataMBS(strings() as string) as string 23915
- 172.1.113 JoinDataMBS(values() as Variant) as string 23915

172.1.112 JoinDataMBS(strings() as string) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of strings in new string.
Example:

```
dim s() as string

s.Append "Hello"
s.Append " "
s.Append "World"

// now join
dim r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

Notes:

Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.
See also:

- 172.1.111 JoinDataMBS(blocks() as memoryblock) as string 23914
- 172.1.113 JoinDataMBS(values() as Variant) as string 23915

172.1.113 JoinDataMBS(values() as Variant) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of variants in new string.
Example:

```
dim s() as Variant

// make memoryblock with a space character
dim m as new MemoryBlock(1)
m.Int8Value(0) = 32

s.Append "Hello"
s.Append m
```

```
s.Append "World"

// now join
dim r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

Notes:

Variants can be memoryblocks or strings or normal objects which can give stringValue.
Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.

172.1.114 Blog Entries

- Split and Join strings
- MBS Xojo / Real Studio Plugins, version 14.2pr3

See also:

- 172.1.111 JoinDataMBS(blocks() as memoryblock) as string 23914
- 172.1.112 JoinDataMBS(strings() as string) as string 23915

172.1.115 JoinStringMBS(strings() as string) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of strings in new string.
Example:

```
dim s() as string

s.Append "Hello"
s.Append " "
s.Append "World"

dim r as string = JoinStringMBS(s)

MsgBox r
```

Notes:

Converts all strings if necessary into UTF-8. If you want to join them as they are, please use JoinDataMBS.
Raises OutOfMemoryException in case of low memory.
See also:

- 172.1.116 JoinStringMBS(values() as Variant) as string 23917

172.1.116 JoinStringMBS(values() as Variant) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of strings in new string.
Example:

```
dim s() as Variant

s.Append "Hello"
s.Append " "
s.Append "World"

dim r as string = JoinStringMBS(s)

MsgBox r
```

Notes:

Converts all strings if necessary into UTF-8.
Raises OutOfMemoryException in case of low memory.

172.1.117 Blog Entries

- Split and Join strings
- MBS Xojo / Real Studio Plugins, version 14.2pr3

See also:

- 172.1.115 JoinStringMBS(strings() as string) as string 23916

172.1.118 StringCodePointsMBS(text as string) as UInt32()

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Query unicode code points for a text.
Example:

```
// take Hello World in Japanese
Dim Text As String = ""

// get code points
Dim v() As UInt32 = StringCodePointsMBS(Text)

// check in debugger
Break
```

Notes:

We get text as UTF32 and return you the characters as an array of numbers.

Can be faster than Xojo's character iterator as we don't construct temporary strings and an iterator object here.

172.2 class StringHandleMBS

172.2.1 class StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for attaching strings together very fast.
Example:

```
dim s as StringHandleMBS

s=new StringHandleMBS

// Add some text
s.Add "Hello"
```

```
s.Add " "
s.Add "World"

// Insert a string
s.Insert " great",6

// check it
MsgBox s.Copy

// Delete the great from above
s.Delete 6,7

// check
MsgBox s.Copy

// Insert again
s.Insert " great ",6

// check
MsgBox s.Copy

// Now we extract the middle, so it's deleted
MsgBox s.Extract(6,7)

// check again
MsgBox s.copy
```

Notes: The class initalized itself on the first use.

172.2.6 Methods

172.2.7 Add(data as MemoryBlock)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data from memoryblock to the string handle.
See also:

- 172.2.8 Add(data as Ptr, size as Integer) 23920
- 172.2.9 Add(data as string) 23921

172.2.8 Add(data as Ptr, size as Integer)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data from ptr to the string handle with given size.
Notes: Using invalid Ptr or size combination can cause a crash.
See also:

- 172.2.7 Add(data as MemoryBlock) 23920
- 172.2.9 Add(data as string) 23921

172.2.9 Add(data as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the string at the end of the current data.
Notes: Note that all strings added must have the same encoding.
See also:

- 172.2.7 Add(data as MemoryBlock) 23920
- 172.2.8 Add(data as Ptr, size as Integer) 23920

172.2.10 AddByte(value as UInt8)

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a byte to the string handle.

172.2.11 AddInteger(value as Int64)

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a integer value to the string handle.
Notes: This is like AddString(str(value)).

172.2.12 Clear

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the string handle.
Notes: Resets size to zero, but does not release memory, so it can be reused.

172.2.13 clone as StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new StringHandleMBS object with the same content.

172.2.14 Constructor

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor of this class.
See also:

- 172.2.15 Constructor(initvalue as string) 23922

172.2.15 Constructor(initvalue as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second constructor of this class which sets the value directly to the given Xojo string.
Example:

```
// An utility function you can define in a module:

Function BinaryReplaceAll(s as string, a as string,b as string) As string
dim h as StringHandleMBS

h=new StringHandleMBS(s)
h.ReplaceAll(a,b)

Return h.Copy
End Function
```

See also:

- 172.2.14 Constructor 23922

172.2.16 Copy as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the content as a Xojo string.
Notes: This string will have the encoding set in the encoding property.

172.2.17 CopyMemory as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies content of handle in new memoryblock.

172.2.18 Delete(start as Integer, lengthBytes as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the bytes within the range.
Notes:

One based like RB's string functions.
The start and length parameters use bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

172.2.19 Extract(start as Integer, lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a part of the string.
Notes:

One based and the returned part is removed form the string data.
The start and length parameters use bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

172.2.20 FindByte(value as UInt8, StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds position of a given value.
Example:

```
Dim s As New StringHandleMBS("Hello")

// 64 = big letters
// +32 = small letters
// + 5 = for 5th letter in alphabet

Dim c As Integer = 64+32+5
Dim p As Integer = s.FindByte(c)

MsgBox "position "+Str(p)+" for letter e"
```

Notes:

Returns one based byte offset.
Result is 0 if not found.

StartPosition added in v21.3.
See also:

- 172.2.21 FindByte(values() as UInt8, StartByteOffset as Integer = 1) as Integer 23924

172.2.21 FindByte(values() as UInt8, StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds position of a given value.
Example:

```
Dim s As New StringHandleMBS("Hello Welt")

Dim values() As UInt8
values.append Asc("e")
values.append Asc("o")
Dim p As Integer = s.FindByte(values, 3)

MsgBox "position "+Str(p)+" for letter "+s.Mid(p, 1)
```

Notes:

Values is an array of possible values to find.
For best performance avoid duplicates in that array.

Returns one based byte offset.
Result is 0 if not found.
See also:

- 172.2.20 FindByte(value as UInt8, StartByteOffset as Integer = 1) as Integer 23923

172.2.22 FirstNonWhiteSpace(StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds first non-whitespace byte in the data starting at given offset.
Example:

```
Dim s As New StringHandleMBS("Hello World")
Dim p As Integer = s.FirstWhiteSpace(1)
Dim x As Integer = s.FirstNonWhiteSpace(p+1)

MsgBox "position "+Str(p)+" for white space and "+Str(x)+" for following text"
```

Notes:

StartByteOffset is one based.
White space are space, tab and new line characters.
Returns 0 if not found.

172.2.23 FirstWhiteSpace(StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds first whitespace byte in the data starting at given offset.
Example:

```
Dim s As New StringHandleMBS("Hello World")
Dim p As Integer = s.FirstWhiteSpace(1)
Dim x As Integer = s.FirstNonWhiteSpace(p+1)

MsgBox "position "+Str(p)+" for white space and "+Str(x)+" for following text"
```

Notes:

StartByteOffset is one based.
White space are space, tab and new line characters.
Returns 0 if not found.

172.2.24 Insert(data as string, position as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts the string data at the given byte position.
Notes:

One based.
Note that on Unicode the character position and the byte position are not equal!
(On 16bit Unicode charpos=2*bytepos and on US ASCII charpos=bytepos)

The position parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

172.2.25 InStr(OffsetBytes as Integer = 1, target as String, EndOffsetBytes as Integer = -1) as Integer

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for a binary string inside the StringHandle.
Example:

```
// We test if RB returns the same values as the plugin

dim s as String
dim h as StringHandleMBS

s="Christian"
h=new StringHandleMBS

h.Add s

MsgBox "MBS: "+str(h.InStr("is"))+", RB: "+str(InStr(s,"is"))
MsgBox "MBS: "+str(h.InStr(5,"ia"))+", RB: "+str(InStr(5,s,"ia"))
MsgBox "MBS: "+str(h.InStr("xy"))+", RB: "+str(InStr(s,"xy"))
```

Notes:

The same as InStr but with a second parameter to specify the start of the search inside the string handled.

The srcOfs parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

Returns positive value if something is found and zero in case nothing is found.
Returns negative value in case of error.
Casesensitive search!

172.2.26 InStrUTF8(OffsetCharacters as Integer = 1, target as String, EndOffsetCharacters as Integer = -1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for a binary string inside the StringHandle.
Example:

```
Dim sh As New StringHandleMBS
sh.Encoding = sh.encodingUTF8 // so copy gives right encoding

sh.Add "Ä test Hello Word äöü test string."
```

```
Dim s As String = sh.Copy

MsgBox "position of text: "+Str(sh.InStr(5,"test"))+"/"+Str(s.InStrB(5,"test"))+"th byte "+_
"or "+Str(sh.InStrUTF8(5,"test"))+"/"+Str(s.InStr(5,"test"))+"th character"
```

Notes:

This function uses UTF8 characters instead of bytes as unit.
Returns positive value if something is found and zero in case nothing is found.
Returns negative value in case of error.
The same as InStrUTF8 but with a second parameter to specify the start of the search inside the string handle.
Casesensitive search!

172.2.27 IsValidASCII(data as ptr, TotalByteLength as integer) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether given data is valid ASCII text.

172.2.28 IsValidUTF8(data as ptr, TotalByteLength as integer) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether given data is valid UTF-8 text.

172.2.29 Left(lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the first left bytes of the string.
Notes:

May return less strings if the stored string is not long enough.

The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

172.2.30 LeftUTF8(lengthCharacter as integer) as string

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries given number of characters from string from the left side.
Example:

```
Dim s As String = "Hello öäü!"
Dim d As New StringHandleMBS(s)

d.Encoding = d.encodingUTF8

// ö is two bytes
MsgBox d.LeftUTF8(8)+" in UTF8 and "+d.Left(8)+" in bytes"
```

172.2.31 Mid(startByte as Integer, lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a part of the string.
Notes:

One based.
The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

172.2.32 MidInteger(startByte As Integer, lengthBytes As Integer = -1) as Int64

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts some bytes read as ASCII text to number.
Example:

```
Dim s As New StringHandleMBS("123456789")

Dim v As Integer = s.MidInteger(3,3)
MsgBox str(v)
```

Notes: startByte is one based.

172.2.33 MidUTF8(startCharacter as integer, lengthCharacter as integer) as string

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries characters from UTF-8 string with given characters.
Example:

```
Dim s As String = "Hello öäü!"
Dim d As New StringHandleMBS(s)

d.Encoding = d.encodingUTF8

// ö is two bytes
MsgBox d.MidUTF8(7,4)+" in UTF8 and "+d.Mid(7,4)+" in bytes"
```

Notes: startCharacter starts with 1 as in Xojo's mid function.

172.2.34 Replace(a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the first string found with content of a with the content of b.
Example:

```
dim s as StringHandleMBS

s=new StringHandleMBS

s.Add "Hallo Leutle, Hellau"

s.Replace("H","h")
s.Replace("l","i")

MsgBox s.Copy+" "+str(s.Len)
```

Notes:

Note that all strings are compared binary and must have the same encoding.
Basicly this is just a call to instr, one to delete and one to insert.
See also:

- 172.2.35 Replace(startpos as Integer, a as String, b as string) 23930

172.2.35 Replace(startpos as Integer, a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the first string found with content of a with the content of b.
Notes:

If you don't give a startpos parameter the call uses one and is equal to Replace(a,b).
Startpos is one based like all indexes in this class.
The startpos parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.
See also:

- 172.2.34 Replace(a as String, b as string) 23929

172.2.36 ReplaceAll(a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces all strings with content of a with the content of b.
Example:

```
dim s as StringHandleMBS

s=new StringHandleMBS

s.Add "Hallo Leutle, Hellau"

s.Replaceall("H","h")
s.Replaceall("l","i")

MsgBox s.Copy+" "+str(s.Len)
```

Notes:

Note that all strings are compared binary and must have the same encoding.
Basicly this is just a loop with calls to instr, to delete and to insert.
See also:

- 172.2.37 ReplaceAll(startpos as Integer, a as String, b as string) 23930

172.2.37 ReplaceAll(startpos as Integer, a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces all strings with content of a with the content of b.
Notes:

If you don't give a startpos parameter the call uses one and is equal to ReplaceAll(a,b).
Startpos is one based like all indexes in this class.

The startpos parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.
See also:

- 172.2.36 ReplaceAll(a as String, b as string) 23930

172.2.38 Reverse as StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reverses bytes in string.
Example:

```
Dim s As New StringHandleMBS("Hello")
Dim r As StringHandleMBS = s.Reverse

MsgBox r.Copy
```

Notes: Returns copy of the string with reversed order.

172.2.39 Right(lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the first right bytes of the string.
Example:

```
// There was a small bug in the Right and the Mid function for the version 3.1 of this plugin.
// This test failed in 3.1, but works in 3.2:

dim Text as StringhandleMBS
dim Part as String

Text = New StringHandleMBS
Text.Add "." + chr(13) + chr(10)

Part = Text.Copy
' Now Part is ".<CR><LF" which is correct

if lenb(Part)<>3 then
MsgBox "Failed on Copy "+str(lenb(Part))
```

```
end if

Part = Text.Right(1)
' Now Part is "<LF>" which is correct

if lenb(Part)<>1 then
MsgBox "Failed on Right(1) "+str(lenb(Part))
end if

Part = Text.Right(2)
' Now Part is "<CR><LF>" which is correct

if lenb(Part)<>2 then
MsgBox "Failed on Right(2) "+str(lenb(Part))
end if

Part = Text.Right(3)
' Now Part is "" which is wrong!

if lenb(Part)<>3 then
MsgBox "Failed on Right(3) "+str(lenb(Part))
end if
```

Notes:

May return less strings if the stored string is not long enough.
The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

172.2.40 RightUTF8(lengthCharacter as integer) as string

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries given number of characters from string from the right side.
Example:

```
Dim s As String = "Hello öäü!"
Dim d As New StringHandleMBS(s)

d.Encoding = d.encodingUTF8

// ö is two bytes
MsgBox d.RightUTF8(8)+" in UTF8 and "+d.Right(8)+" in bytes"
```

172.2.41 Truncate(lengthBytes as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Truncates the string handle content.
Notes:

Sets the length of the string back to the given value if it's greater.

The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

172.2.42 TruncateUTF8(lengthCharacters as integer)

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Truncates data to given number of UTF-8 characters.
Example:

```
Dim s As New StringHandleMBS("äöü")

// limit to 2 characters, here 4 bytes
s.TruncateUTF8 2

MsgBox s.Copy
```

172.2.43 UTF8Length(data as ptr, TotalByteLength as integer) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries how many UTF-8 characters are in one memory area.
Example:

```
Dim s As String = "Hello äöü"
Dim m As MemoryBlock = s

Dim c As Integer = StringHandleMBS.UTF8Length(m, m.size)

MsgBox str(c)+" characters, "+str(m.size)+" bytes"
```

Notes:

Please make sure ptr is a valid ptr.

This is the internal function we use ourselves for the UTF-8 related functions.

172.2.44 UTF8LengthToBytes(data as ptr, TotalByteLength as integer, Characters as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries how many bytes are needed for UTF-8 characters.
Example:

```
Dim s As String = "Hello äöü"
Dim m As MemoryBlock = s

Dim c As Integer = StringHandleMBS.UTF8Length(m, m.size)
Dim b As Integer = StringHandleMBS.UTF8LengthToBytes(m, m.size, c)

MsgBox Str(c)+" characters, "+Str(b)+" bytes"
```

Notes:

Please make sure ptr is a valid ptr.
This is the internal function we use ourselves for the UTF-8 related functions.

172.2.45 Properties

172.2.46 BlockLen as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the memory currently used for this class.
Notes:

This value increases by BlockSize if more memory is needed.
(Read only property)

172.2.47 BlockSize as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the blocks to allocate for storing the data.
Notes: (Read and Write property)

172.2.48 Encoding as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The encoding to use for returned strings.
Notes:

Only useful on Xojo 4.5 and newer.

Some example values for encoding:

MacRoman	0	Also for ASCII or binary data used.
WindowsLatin1	& h0500	ANSI codepage 1252
ISOLatin1	& h0201	ISO 8859-1
NextStepLatin	& h0B01	NextStep encoding
Unicode	& h0100	16 bit Unicode
UTF8	& h08000100	8 bit Unicode
Invalid	& hFFFFFFFF	(Binary)
Invalid	& hFFFF	(Binary)

(Read and Write property)

172.2.49 Len as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the len in bytes of the stored string.
Notes: (Read only property)

172.2.50 LenUTF8 as Int64

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries length of text in UTF-8 encoded characters.
Example:

```
Dim s As String = "Hello öäü!"
Dim d As New StringHandleMBS(s)

MsgBox Str(d.Len)+" bytes, "+Str(d.LenUTF8)+" characters"
```

Notes:

Returns incorrect values if string is not UTF-8!
(Read only property)

172.2.51 ReplaceCount as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: After a call to one of the Replace functions the number of items replaced.
Notes: (Read and Write property)

172.2.52 ValidASCII as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this string handle contains valid ASCII text.
Notes: (Read only property)

172.2.53 ValidUTF8 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this string handle contains valid UTF-8 text.
Example:

```
Dim s As New StringHandleMBS

s.Add "Hello World"

Dim validUTF8a As Boolean = s.ValidUTF8

// now make invalid
s.AddByte 222

Dim validUTF8b As Boolean = s.ValidUTF8

Break
```

Notes: (Read only property)

172.2.54 UInt16Value(offset as Integer) as UInt16

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set an UInt16 value.
Example:

```
Dim t As String = ConvertEncoding("Hello Welt", encodings.UTF16)
Dim s As New StringHandleMBS(t)

// offset 1 is first character, so second character is offset 3
Dim n As Integer = s.UInt16Value(3)
s.UInt16Value(3) = Asc("a")

MsgBox s.Copy

// append

s.UInt16Value(s.Len+1) = Asc("!")
MsgBox s.Copy
```

Notes:

Offset is range checked and may raise an OutOfBoundsException.

When you assign a value and the offset is exactly size of the string handle plus one, we append the new byte.
(Read and Write computed property)

172.2.55 UInt32Value(offset as Integer) as UInt32

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set an UInt32 value.
Notes:

Offset is range checked and may raise an OutOfBoundsException.

When you assign a value and the offset is exactly size of the string handle plus one, we append the new byte.
(Read and Write computed property)

172.2.56 UInt8Value(offset as Integer) as UInt8

MBS DataTypes Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a byte value.
Example:

```
Dim s As New StringHandleMBS("Hello Welt")

dim n as integer = s.UInt8Value(2)
s.UInt8Value(2) = Asc("a")

MsgBox s.Copy

// append

s.UInt8Value(s.Len+1) = Asc("!")
MsgBox s.Copy
```

Notes:

Offset is range checked and may raise an OutOfBoundsException.

When you assign a value and the offset is exactly size of the string handle plus one, we append the new byte. (Read and Write computed property)

172.2.57 Constants

172.2.58 encodingASCII = & h0600

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: ASCII encoding.

172.2.59 encodingBinary = & hFFFF

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: No encoding.

172.2.60 encodingLatin1 = & h0201

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: ISO Latin 1 encoding.

172.2.61 encodingMacRoman = 0

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: Mac Roman encoding.

172.2.62 encodingUnicode = & h0100

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: Unicode UTF16 encoding.

172.2.63 encodingUTF8 = & h08000100

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: UTF-8 encoding.

172.2.64 encodingWindows = & h0500

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: Windows encoding.

172.3 class StyledText

172.3.1 class StyledText

Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The built-in class for styled text.

172.3.2 Properties

172.3.3 RTFDataMBS(SkipParagraphs as Boolean = false) as string

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set RTF data for this StyledText.
Example:

```
Dim s As New StyledText

s.Text = "Hello World"

s.Bold(0,5) = True
s.size(0,6) = 12
s.size(6,5) = 14

# if TargetDesktop
Dim m As String = s.RTFData
# EndIf

Dim r As String = s.RTFDataMBS

Break
```

Notes:

This is a replacement for the built-in RTFData property.
We tried to make the results exactly like the original.
Speed should be a little bit faster than the official method.

Added SkipParagraphs parameter in version 21.2.
If SkipParagraphs is true, we skip to look on paragraphs, so left/center/right alignment won't be included in the output, but that is much faster.
(Read and Write computed property)

172.4 class TextConverterMBS

172.4.1 class TextConverterMBS

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for converting text from one text encoding to other one.
Example:

```
dim s as string = "Hello äöü"
dim c as new TextConverterMBS

c.Input = s
c.InputEncoding = "UTF-8"
c.OutputEncoding = "WINDOWS-1252"

c.Convert

dim output as string = c.Output

Break // see in debugger
```

Notes:

Wraps iconv library.

Encoding list with alternative names:

- ANSI_X3.4-1968,ANSI_X3.4-1986,ASCII,CP367,IBM367,ISO-IR-6,ISO646-US,ISO_646.IRV:1991,US,US-ASCII,CSASCII

172.4.7 Videos

- Presentation from Xojo Developer Conference 2019 in Miami.

172.4.8 Methods

172.4.9 Canonicalize(name as String) as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Canonicalize an encoding name.
Example:

```
MsgBox TextConverterMBS.Canonicalize("utf-8")
MsgBox TextConverterMBS.Canonicalize("Latin1")
```

Notes: The result is either a canonical encoding name, or name itself.

172.4.10 Constructor

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Currently enables translit and ignore by default.

172.4.11 Convert

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts text.
Example:

```
dim s as string = "Hello äöü"
dim c as new TextConverterMBS

c.Input = s
c.InputEncoding = "UTF-8"
c.OutputEncoding = "WINDOWS-1252"

c.Convert

dim output as string = c.Output

Break // see in debugger
```

Notes:

Input is read from either Input or InputData properties.
ErrorCode and ErrorMessage are set.
Output is set with output data.

172.4.12 EncodingNames(Mode as Integer = 0) as String()

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries names of text encodings.
Example:

```
MsgBox Join(TextConverterMBS.EncodingNames(1),EndOfLine)
```

Notes:

Mode 0 returns list of text encoding names.
Mode 1 returns list of text encoding names and alternative names separated by comma.
Mode 2 returns list of text encoding names and alternative names.

e.g. "CP1252,MS-ANSI,WINDOWS-1252" in the list for mode 1.

172.4.13 LoadIconvLibrary(path as String, byref Error as String) as boolean

MBS Tools Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the iconv library.
Notes:

The TextConverterMBS class uses libiconv for text encoding conversion.
If you explicitly need, you can load the library on start of solution.

MBS Plugin may try to load iconv.dll/dylib/so automatically when first iconv function is called.

172.4.14 Properties

172.4.15 ErrorCode as Integer

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last error code from Convert method.
Notes: (Read and Write property)

172.4.16 ErrorMessage as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text message for error.
Notes: (Read and Write property)

172.4.17 Ignore as Boolean

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to ignore errors.
Notes:

Characters that cannot be represented in the target character set will be silently discarded.
(Read and Write property)

172.4.18 Input as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input text string.
Notes: (Read and Write property)

172.4.19 InputData as MemoryBlock

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input as memoryblock.
Notes: (Read and Write property)

172.4.20 InputEncoding as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of input encoding.
Notes:

e.g. "UTF-8"
(Read and Write property)

172.4.21 InputPosition as Integer

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input position on the end of convert.
Notes:

If errors are not ignored, this shows error position.
(Read and Write property)

172.4.22 LibVersion as Integer

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The library version for iconv.
Notes:

Returns major * 256 + minor, e.g. & h10B for 1.11.
(Read only property)

172.4.23 Output as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output text.
Notes:

String may not have an encoding set, if the plugin does not recognize the encoding.
But for e.g. UTF-8, we set the text encoding.
(Read and Write property)

172.4.24 OutputEncoding as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of output encoding.
Notes:

e.g. "UTF-8"
(Read and Write property)

172.4.25 OutputLength as Integer

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of the output in bytes.
Notes: (Read and Write property)

172.4.26 Translit as Boolean

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to activate transliteration.
Notes:

This means that when a character cannot be represented in the target character set, it can be approximated through one or several characters that look similar to the original character.
(Read and Write property)

172.5 class TextEncoding

172.5.1 class TextEncoding

Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Built in class from Xojo for text encodings.

172.5.2 Methods

172.5.3 InternetNameMBS as string

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the name of this text encoding.
Notes:

We have this method in MBS Plugin as InternetName function does not work on Linux/Windows.
(See feedback case 30712)

172.5.4 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr6

Chapter 173

Sudden Motion Sensor

173.1 module UniMotionMBS

173.1.1 module UniMotionMBS

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: This module handles communication with the UniMotion library.
Notes:

UniMotion - Unified Motion detection for Apple portables.

- MBS REALbasic plug-ins with 30,000 functions

173.1.3 Blog Entries

- MBS REALbasic plug-ins with 30,000 functions

173.1.4 Methods

173.1.5 DetectSMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the value of SMS hardware present or unknown if no hardware is detected.
Example:

```
dim type as Integer = UniMotionMBS.DetectSMS

if type=0 then
MsgBox "Unknown motion hardware or none found."
quit
end if
```

Notes:

Use the constants powerbook, ibook, highrespb and macbookpro.

Use the value returned from DetectSMS as the type for the other functions.
Don't call readsms(detectsms...) as this will do extra work.
If you can't save the type between calls pass 0 as type to avoid extra work.

173.1.6 LoadLibrary(file as folderitem) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Loads the library from the folderitem.
Example:

```
dim f as FolderItem

f=GetFolderItem("libUniMotion.dylib")
if UniMotionMBS.LoadLibrary(f) then
'ok
MainWindow.Show
else
MsgBox "Failed to load the UniMotion library."
quit
```

end if

Notes: Returns true on success and false on failure.

173.1.7 ReadSMS(type as Integer, byref x as Integer, byref y as Integer, byref z as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Reads the "calibrated" values (same as raw if no calibration data exists)
Notes: Returns true on success and false on failure.

173.1.8 ReadSMSraw(type as Integer, byref x as Integer, byref y as Integer, byref z as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Reads the raw, unmodified values.
Notes: Returns true on success and false on failure.

173.1.9 ReadSMSrawBytes(type as Integer) as memoryblock

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Reads the raw data bytes.
Notes:

The raw SMS data (useful for debugging)
Note that endian issues make reading the raw bytes non-trivial.
Returns nil or a memoryblock with the data.

173.1.10 ReadSMSreal(type as Integer, byref x as Double, byref y as Double, byref z as Double) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Reads the real (1.0 = 1G) values (requires calibration data).
Notes:

Note that this is the preferred API as it need not change with new machines.
If no "scale" calibration data exists defaults will be used based on the machine type.

Returns true on success and false on failure.

173.1.11 ReadSMSscaled(type as Integer, byref x as Integer, byref y as Integer, byref z as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the scaled values, like real but easier to handle.
Notes:

This reverses the backwards polarity of x and increases the range of the older machines to match the MacBook [Pro] sensor.

Returns true on success and false on failure.

173.1.12 Constants

173.1.13 highrespb=3

MBS MacOSX Plugin, Plugin Version: 9.1.

Function: One of the constants used by DetectSMS.

173.1.14 ibook=2

MBS MacOSX Plugin, Plugin Version: 9.1.

Function: One of the constants used by DetectSMS.

173.1.15 macbookpro=4

MBS MacOSX Plugin, Plugin Version: 9.1.

Function: One of the constants used by DetectSMS.

173.1.16 powerbook=1

MBS MacOSX Plugin, Plugin Version: 9.1.

Function: One of the constants used by DetectSMS.

173.1.17 unknown=0

MBS MacOSX Plugin, Plugin Version: 9.1.

Function: One of the constants used by DetectSMS.

Chapter 174

System

174.1 Globals

174.1.1 GetHelpTagDelayMBS as Integer

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the delay time for the help tags.
Example:

msgbox str(GetHelpTagDelayMBS)

Deprecated: This item is deprecated and should no longer be used. **Notes:**

A positive value is for milliseconds and a negative value for microseconds.
It looks like the setting of this property is not recognized always.
This setting is also per application and not saved between sessions.

174.1.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

174.1.3 GetHelpTagDisplayedMBS as boolean

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: whether the help tags are displayed.
Deprecated: This item is deprecated and should no longer be used. **Notes:** This setting is per application

and not saved between sessions.

174.1.4 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

174.1.5 SetHelpTagDelayMBS(value as Integer)

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Sets the delay time for the help tags.
Example:

```
if GetHelpTagDelayMBS<>5000 then // change to 5 seconds
SetHelpTagDelayMBS 5000
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

A positive value is for milliseconds and a negative value for microseconds.
It looks like the setting of this property is not recognized always.
This setting is also per application and not saved between sessions.

Xojo 2006r3 does set this value whenever a window comes to front, so if you want to set it really, use some code like in the example above in a timer to change it to your need.

174.1.6 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

174.1.7 SetHelpTagDisplayedMBS(value as boolean)

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Sets whether the help tags are displayed.
Deprecated: This item is deprecated and should no longer be used. **Notes:** This setting is per application and not saved between sessions.

174.1.8 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

174.1.9 GetWindowsColorProfileMBS as folderitem

MBS Win Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the path to the color profile for the main screen on Windows.
Example:

```
dim f as folderitem

f=getwindowsColorProfileMBS

msgBox f.NativePath
```

Notes: Returns nil on any error.

174.1.10 GetWindowsDisplayColorProfileMBS(DisplayIndex as Integer) as folderitem

MBS Win Plugin, Plugin Version: 8.6, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the path to the color profile for the given screen on Windows.
Example:

```
dim f as folderitem

f=GetWindowsDisplayColorProfileMBS(1)

msgBox f.NativePath
```

Notes:

Index is zero based.
Returns nil on any error.
See also:

- 174.1.11 GetWindowsDisplayColorProfileMBS(DisplayName as String) as folderitem 23963

174.1.11 GetWindowsDisplayColorProfileMBS(DisplayName as String) as folderitem

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the path to the color profile for the given screen on Windows.
Notes: Same as GetWindowsDisplayColorProfileMBS, but without index and taking a name.
See also:

- 174.1.10 GetWindowsDisplayColorProfileMBS(DisplayIndex as Integer) as folderitem 23963

174.1.12 CrashNiceMBS

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crashes the application.
Notes: Does a nil object dereference which leads to a crash.

174.1.13 CrashUglyMBS

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crashes the application.
Notes:

This function should hide the stack list so it should be impossible to know what function crashed.

It may take a second to finish it, but CrashReporter (on Mac OS X) and other tools will not be able to show you which function crashed.

174.1.14 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr1

174.1.15 DelayMBS(time as Double)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stopps the application for the given time.
Example:

```
DelayMBS 1.5 // wait one and a half seconds
```

Notes:

The application should take nearly 0% CPU Power till time has gone.
If you need more options like blocking other RB threads, check the DelayMBS method with mode parameter.

Another example from Kirk Clendinning:

Property: lastupdate as Integer

Sub YieldProcessorTime(periodticks as Integer, widthmilliseconds as Integer)
// use the Monkeybread Software delay to yeild time for a screen update
// every period*ticks for a pulse width of width milliseconds

if ticks>lastupdate+periodTicks then
delayMBS widthmilliseconds/1000
lastupdate=ticks
end if

exception err
ExceptionReport(err, "Utils:Methods:YieldProcessorTime")
end sub

YieldProcessorTime(15, 20) gives me a delay of 20ms every 250ms. But,
since the delayMBS yields time more efficiently than using a RB thread, this turns out to be a much more effective way to update progress bars etc.
I don't need the delay per se, but since RB still hasn't written a good yield function (that I know of) your delayMSB works instead.

Please use optional mode flags with DelayDontWaitNextEvent when using on thread.

Using DelayMBS on Web Applications can cause problems as the server is paused than for all clients, a really bad thing.
See also:

- 174.1.16 DelayMBS(time as Double, mode as Integer) 23965

174.1.16 DelayMBS(time as Double, mode as Integer)

MBS Util Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stopps the application for the given time.
Example:

DelayMBS 1.5, 0 // wait one and a half seconds

Notes:

Like DelayMBS with one parameter but additional mode parameter:

combine the following constants:

```
const DelayDontMPYield = 1            // Don't give additional time for other OS threads
const DelayDontRBYield = 2            // Don't give Xojo time for other Xojo threads
const DelayDontThreadYield = 4        // Don't give addition time for other OS threads
const DelayDontQuickTimeYield = 8     // Don't give time for QuickTime Movieplayer
const DelayDontWait = 16              // Don't give CPU time for other OS threads
const DelayDontWaitNextEvent = 32     // Don't give CPU time to handle events on Mac OS X to avoid beachball
                                      cursor
const DelayDontSleep = 64             // Don't give CPU time for other OS threads (Windows)
```

Using DelayDontWaitNextEvent may show the beach ball cursor, but will have the OpenDocument event working as other AppleEvents. Please use DelayDontWaitNextEvent option for running on threads.

Using DelayMBS on Web Applications can cause problems as the server is paused than for all clients, a really bad thing.

174.1.17 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.0pr8

- 19.2, page 33: Shake It!, Shake any window to show an incorrect entry... on any platform, without plugins or declares! by Markus Winter

See also:

- 174.1.15 DelayMBS(time as Double) 23964

174.1.19 SleepMBS(time as Double)

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sleeps the current thread for the given time in seconds.
Example:

```
dim sock as TCPSocket // some socket
dim done as Boolean // some global property

do

SleepMBS(0.1) // 100 ms
sock.poll

loop until done
```

Notes:

Sleep does not yield CPU time to other functions, so you really sleep the whole process.
Useful for console projects which sleep for a few milliseconds in a loop polling a socket.

If you need to give CPU time to socket, other threads or for quicktime movie playback, please use DelayMBS.

174.1.20 Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

174.1.21 InstallSystemExceptionHandlerMBS(Message as string = "")

MBS Main Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Targets: All.

Function: Installs an exception handler to show a message dialog with custom message before the app crashes.
Example:

```
InstallSystemExceptionHandlerMBS "My message"
```

Notes:

If message is empty, the default message is "An unhandled C++ exception occurred. The application will now quit. A common reason for this is simply running out of memory.".

The plugin allocates some memory which we release later to make sure there is free memory for the message box.

On Windows this method does not work as currently we use static runtime on Windows which does not allow the plugin to access the runtime inside the RB framework.

174.1.22 Blog Entries

- About InstallSystemExceptionHandlerMBS

174.1.23 AbortMBS

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The abort function causes abnormal program termination to occur.
Notes:

Any open streams are flushed and closed.
The abort function never returns.

174.1.24 ExitMBS(code as Integer)

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform normal program termination.
Notes:

See "man 3 exit" on the terminal on Mac OS X or Linux for details.
You define your own error codes. Zero is no error by convention.

- Console and GUI in one project
- Tipp of the day: Shell SSH Trouble and Workaround

174.1.26 GlobalIdleTimeMBS as Double

MBS MacOSX Plugin, Plugin Version: 13.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Queries the current global idle time on a Mac.
Example:

```
MsgBox Format(GlobalIdleTimeMBS,"0.0")+" seconds idle"
```

Notes:

The return value is the number of seconds the user did not use mouse or keyboard.
Returns 0 on any error.

174.1.27 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5

174.1.28 MacGlobalIdleTimeMBS as UInt64

MBS MacOSX Plugin, Plugin Version: 10.0, Platform: macOS, Targets: Desktop only.

Function: Queries the current global idle time on a Mac.
Example:

```
MsgBox Format(MacGlobalIdleTimeMBS/1000000000.0,"0.0")+" seconds idle"
```

Notes:

The return value is the number of nanoseconds the user did not use mouse or keyboard.
Returns 0 on any error.

Deprecated in 13.2 plugins in favor of GlobalIdleTimeMBS.

174.1.29 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5
- MBS REALbasic plug-ins version 10.0

174.1.30 MacMountServerVolumeMBS(URL as string, MountDir as String, User as String, Password as String, byref Disk as FolderItem, flags as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: This routine will mount the server specified by url at mountDir (or the default location if mountDir is empty).
Example:

```
dim flags as Integer = 0
dim disk as FolderItem
dim URL as string = "smb://Test.local"
```

```
dim user as string = "root"
dim pass as string = "xxx"

dim e as Integer = MacMountServerVolumeMBS(URL, "", user, pass, disk, flags)

if e = 0 then
MsgBox "OK"
else
MsgBox disk.NativePath
end if
```

Notes:

An optional user and password can be passed in for authentication. If no user or password is provided then the underlying file system will handle authentication if required. This routine returns after the mount is complete.

url: The server to mount.
mountDir: The directory to mount the server to (default if empty).
user: String to pass as user for authentication.
password: String to pass as password for authenticated log in.
Disk: The folderItem of the newly mounted volume.
Flags: Options (such as kFSMountServerMarkDoNotDisplay and kFSMountServerMountOnMountDir).

Constant	Value	Description
kFSMountServerMarkDoNotDisplay	1	Specify this option if you do want the volume displayed as a stand

along volume in the UI.

kFSMountServerMountOnMountDir	4	Specify this option if you want the volume mounted on the mountdir passed in instead of in it.
kFSMountServerSuppressConnectionUI	& h40	Specify this option if you want to suppress connection-time UI when mounting the server volume.

Returns Mac OS X error code. Zero for success.

174.1.31 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Xojo / Real Studio Plugins, version 16.1pr5

174.1.32 MacUnmountVolumeMBS(volume as folderItem, Force as Boolean, byref dissenter as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: This routine unmounts the volume specified by FolderItem.
Example:

```
dim u as Integer = VolumeCount-1
for i as Integer = 0 to u
dim v as FolderItem = volume(i)

if v.Name = "TestServer" then
dim dissenter as Integer = 0
dim e as Integer = MacUnmountVolumeMBS(v, false, dissenter)

if e = 0 then
MsgBox "Unmounted"
else
MsgBox "Failed to unmount with error "+str(e)+". The app with PID "+str(dissenter)+" blocks it."
end if
end if
next
```

Notes:

If the volume cannot be unmounted the pid of the process which denied the unmount will be returned in the dissenter parameter. This routine returns after the unmount is complete.

Force: Specify true if you want the volume forcibly unmounted. Force unmounting a volume will very likely result in data loss since the volume will be ejected even if there are open files on it. This option should be reserved for situations such as the backing store for a volume is gone (so the data is lost regardless).

dissenter: pid of the process which denied the unmount if the unmount is denied.

Returns Mac OS X error code. Zero for success.

174.1.33 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr5

174.1.34 StartDictationMBS

MBS MacOSX Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Starts dictation.
Notes: This is for Carbon application. For Cocoa use methods on NSApplicationMBS.

174.1.35 Blog Entries

- MBS Real Studio Plugins, version 13.1pr1

174.1.36 BacktraceMBS(MaxFrames as Integer = 0, skip as Integer = 2) as string()

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Queries the stack trace of the current function.
Example:

MsgBox Join(BacktraceMBS, EndOfLine)

Notes:

MaxFrames: How many steps to show at maximum. Default is 128 currently.
skip: How many entries to skip. Default is 2 to not show this function.
Requires Mac OS X 10.5 or Linux.
Skip is 2 to hide this plugin function in the list.

174.1.37 Blog Entries

- MBS Xojo Plugins, version 20.1pr1

- MBS Real Studio Plugins, version 13.0pr1

174.1.38 MillisecondsMBS as Double

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current milliseconds time.
Notes: Like Microseconds in Xojo, but queries system functions for milliseconds counter.

174.1.39 ExitWindowsMBS(mode as Integer) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shutdown a Windows PC.
Example:

```
dim b as boolean
b=ExitWindowsMBS(0)
```

Notes:

Mode constants:

LOGOFF	0	Shuts down all processes running in the security context of the process that called the ExitWindows function. Then it logs the user off.
SHUTDOWN	1	Shuts down the system to a point at which it is safe to turn off the power. All file buffers have been flushed to disk, and all running processes have stopped.
REBOOT	2	Shuts down the system and then restarts the system.
FORCE	4	Forces processes to terminate. When this flag is set, the system does not send the WM_QUERYENDSESSION and WM_ENDSESSION messages. This can cause the applications to lose data. Therefore, you should only use this flag in an emergency.
POWEROFF	8	Shuts down the system and turns off the power. The system must support the power-off feature.
FORCEIFHUNG	16	(Windows 2000) Forces processes to terminate if they do not respond to the WM_QUERYENDSESSION or WM_ENDSESSION message. This flag is ignored if FORCE is used.

Returns true if successfull.

The ExitWindows function returns as soon as it has initiated the shutdown. The shutdown or logoff then proceeds asynchronously.

During a shutdown or log-off operation, applications that are shut down are allowed a specific amount of time to respond to the shutdown request. If the time expires, the system displays a dialog box that allows the user to forcibly shut down the application, to retry the shutdown, or to cancel the shutdown request. If the FORCE value is specified, the system always forces applications to close and does not display the dialog box. If the FORCEIFHUNG value is specified, the system forces hung applications to close and does not display the dialog box.

Windows NT: To shut down or restart the system, the calling process must use the AdjustTokenPrivileges function to enable the SE_SHUTDOWN_NAME privilege.

174.1.40 Blog Entries

- MBS Real Studio Plugins, version 12.0pr7

174.1.41 GetDoubleClickIntervalMBS as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the time in ticks which makes two clicks to one double click.
Example:

```
sub MouseUp(X as Integer, Y as Integer)
dim currentClickTicks as Integer
currentClickTicks = ticks

if (currentClickTicks - lastClickTicks) <= GetDoubleClickIntervalMBS then
if abs(x - lastClickX) <= 5 and abs (y - lastClickY) <= 5 then
DoubleClick //Fire new Doubleclick event
return
end
end

lastClickTicks = currentClickTicks
lastClickX = x
lastClickY = y
MouseUp
End sub
```

Notes: Time returned in ticks. One tick is 1/60 of a second.

174.1.42 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.0pr1

174.1.43 GetMaximumOpenFileCountMacOSXMBS as Integer

MBS MacCF Plugin, Platforms: macOS, Linux, Targets: All.

Function: The number of simultan open files
Example:

```
msgbox str(GetMaximumOpenFileCountMacOSXMBS)
```

Notes:

On Mac OS X per default a process can have 256 files open at the same time.
This function allows you to increase the number of open files. It seems that you can't have more than 10240 files open on Mac OS X.
Returns -2 if the function is not available and -1 if the current number of open files is unknown.

174.1.44 GetSystemUIModeMBS as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Returns the current Mac OS X System UI Mode for your application.
Notes:

Returns -1 on any error.
See SetSystemUIModeMBS for more details.
Please use presentationOptions in NSApplicationMBS for Cocoa applications.

174.1.45 GetSystemUIModeOptionsMBS as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Returns the current Mac OS X System UI Mode options for your application.
Notes:

Returns -1 on any error.
See SetSystemUIModeMBS for more details.
Please use presentationOptions in NSApplicationMBS for Cocoa applications.

174.1.46 MacCountryCodeMBS as string

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

Function: Returns the country code for
Example:

msgbox MacCountryCodeMBS // Shows DE in Germany.

Notes:

On any error returns "".
Requires Mac OS 8.6 or newer (or Mac OS X).
Fix in Plugin version 4.0 to no longer return random strings, but now you must accept that this function

may fail on Mac if it has nothing to report. (unkown reason)

174.1.47 OpenMacOSXPreferencesPaneMBS(name as string) as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Opens a named preference pane on Mac OS X.
Example:

```
dim e as Integer
e=OpenMacOSXPreferencesPaneMBS("Network")
```

Notes:

Returns a Mac OS X error code. For example -43 if file not found, -1 if function is not available or 0 if successfull.

Possible values for Mac OS X:
UniversalAccessPref
StartupDisk
Speech
Sound
Network
MyAccount
Mouse
LoginItems
Localization
Keyboard
Internet
Ink
General
EnergySaver
DigiHubDiscs
DesktopPictures
Dock
ColorSync
QuickTime
Classic
Bluetooth
ARDPref
DateAndTime
Accounts
Displays
SoftwareUpdate
SharingPref

ScreenSaver

See content of /System/Library/PreferencePanes/ folder.

In MacOS 10.10 or newer, better use URL schemes:

174.1.49 RunningOnCarbonXMBS as boolean

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns true if we are running Carbon on Mac OS X.
Example:

```
if RunningOnCarbonXMBS then
' do Stuff for Mac OS X only
end if
```

Notes: Does always return false on Windows and Mac OS Classic.

174.1.50 SetMaximumOpenFileCountMacOSXMBS(Value as Integer)

MBS MacCF Plugin, Platforms: macOS, Linux, Targets: All.

Function: The number of simultan open files
Example:

```
SetMaximumOpenFileCountMacOSXMBS 500
```

Notes:

On Mac OS X per default a process can have 256 files open at the same time.
This function allows you to increase the number of open files. It seems that you can't have more than 10240 files open on Mac OS X.

174.1.51 SetSystemUIModeMBS(mode as Integer, Options as Integer)

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Sets the current System UI mode for your application.
Notes:

Details from Apple's documentation:

Sets the presentation mode for system-provided user interface elements.

The presentation mode of an application determines which system-provided user interface elements are visible on thes screen. When the frontmost application changes its presentation mode, a kEventAppSystemUIModeChanged Carbon event is sent to all applications that have registered for the event. This event is also sent when an application is activated; it contains the newly active application's presentation mode.

Note that the system UI mode is a per-process state. Switching from a process that is suppressing system UI to another processthat is not will cause system UI elements to become visible automatically. Switching back to the first process will suppress system UI elements again.

The modes available:

kUIModeNormal	0	In this mode, all standard system UI elements are visible.
kUIModeContentSuppressed	1	In this mode, system UI elements which cover the "content area" of the screen (the area other than the menubar) are hidden. However, these elements may automatically show themselves in response to mouse movements or other user activity; specifically, the Dock will still show itself automatically when the mouse moves into the Dock's auto-show region.
kUIModeContentHidden	2	In this mode, system UI elements which cover the "content area" of the screen (the area other than the menubar) are hidden. Unlike kUIModeContentSuppressed, most UI elements will not automatically show themselves in this mode.
kUIModeAllHidden	3	In this mode, all system UI elements, including the menubar, are hidden. Most system UI elements will not automatically show themselves in this mode. The application may request that the menubar automatically show itself while in this mode by passing the kUIOptionAutoShowMenuBar flag to SetSystemUIMode.

The options which you can combine:

Please use presentationOptions in NSApplicationMBS for Cocoa applications.

kUIOptionAutoShowMenuBar	1	Requests that the menubar automatically show itself when the user moves the mouse into the screen area that would ordinarily be occupied by the menubar. Only valid with kUIModeAllHidden.
kUIOptionAnimateMenuBar	2	Requests that the menubar animate on or offscreen, if the UIMode is also being changed such that the menubar will change visibility. Unlike other UI options, this option is not stored and only affects the behavior of this call to SetSystemUIMode. Valid for all modes. Available in Mac OS X 10.7 and later.
kUIOptionDisableAppleMenu	4	Disables all items in the Apple menu. Valid for all modes.
kUIOptionDisableProcessSwitch	8	The active application may not be changed while this process is active. Currently disables the Command-Tab and Command-Shift-Tab key sequences to switch the active process, and the global window rotation key sequence selected by the user in the Keyboard preference pane. SetFrontProcess may still be used to explicitly switch the active process. Only valid with modes other than kUIModeNormal.
kUIOptionDisableForceQuit	16	The Force Quit window may not be displayed while this process is active. Currently disables the Command-Option-Escape key sequence to open the Force Quit window and the Force Quit menu item in the Apple menu. Only valid with modes other than kUIModeNormal.
kUIOptionDisableSessionTerminate	32	The current login session may not be terminated while this process is active. Currently disables the Power key and the Restart, Shut Down, and Log Out menu items in the Apple menu. Only valid with modes other than kUIMode-Normal.

174.1.52 ShowCharacterPaletteMBS

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: Desktop only.

Function: Shows the character palette.
Example:

ShowCharacterPaletteMBS

Notes:

Works on Mac OS X 10.3 and newer.
We have no way to close this window.

174.1.53 SystemControlByNameMBS(name as string) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: The SystemControlByNameMBS function retrieves system information and allows processes with appropriate privileges to set system information.
Example:

```
dim m1 as MemoryBlock = SystemControlByNameMBS("hw.physicalcpu")
dim m2 as MemoryBlock = SystemControlByNameMBS("hw.logicalcpu")
```

```
MsgBox "physicalcpu: "+str(m1.Long(0))+EndOfLine+"logicalcpu: "+str(m2.Long(0))
```

Notes:

The name is given as an ASCII string.
Returns nil on any error.
See also:

- 174.1.54 SystemControlByNameMBS(name as string, input as memoryblock) as memoryblock 23980

174.1.54 SystemControlByNameMBS(name as string, input as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: The SystemControlByNameMBS function retrieves system information and allows processes with appropriate privileges to set system information.
Notes:

The name is given as an ASCII string.
Returns nil on any error.
See also:

- 174.1.53 SystemControlByNameMBS(name as string) as memoryblock 23979

174.1.55 SystemControlMBS(name as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: The SystemControlMBS function retrieves system information and allows processes with appropriate privileges to set system information.
Example:

```
Function IsRosetta() As boolean
Const CTL_HW = 6
Const HW_MODEL = 2

dim mib,m as MemoryBlock

mib=newMemoryBlock(8)
mib.Long(0) = CTL_HW
mib.Long(4) = HW_MODEL

m=SystemControlMBS(mib)
if m<>nil then
if m.CString(0)="PowerMac" then
```

```
Return true
end if
end if
End Function
```

Notes:

name is a MIB which can be constructed or queried with SystemControlNameToMIBMBS.
Returns nil on any error.
See also:

- 174.1.56 SystemControlMBS(name as memoryblock, input as memoryblock) as memoryblock 23981

174.1.56 SystemControlMBS(name as memoryblock, input as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: The SystemControlMBS function retrieves system information and allows processes with appropriate privileges to set system information.
Notes:

Returns nil on any error.
name is a MIB which can be constructed or queried with SystemControlNameToMIBMBS.

174.1.57 Xojo Developer Magazine

- 5.1, page 45: Detecting Rosetta, Are we running under emulation? by Christian Schmitz

See also:

- 174.1.55 SystemControlMBS(name as memoryblock) as memoryblock 23980

174.1.58 SystemControlNameToMIBMBS(name as string) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: Searches the given MIB for the given name.
Notes:

Name is an ASCII string.
Returns nil on any error.

174.1.59 Blog Entries

- MBS Real Studio Plugins, version 13.1pr12

174.1.60 WindowsSystemMetricsMBS(what as Integer) as Integer

MBS Win Plugin, Plugin Version: 3.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WindowsSystemMetrics function retrieves various system metrics (widths and heights of display elements) and system configuration settings.
Example:

```
const SM_CYSMICON = 50

MsgBox str(WindowsSystemMetricsMBS(SM_CYSMICON))
```

Notes:

All dimensions retrieved by GetSystemMetrics are in pixels.
If the function fails, the return value is zero.

Values for the what parameter:

The SM_ARRANGE setting specifies how the system arranges minimized windows, and consists of a starting position and a direction. The starting position can be one of the following values:

The direction in which to arrange can be one of the following values:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms724385(v=vs.85).aspx

174.1.61 IsWindows95MBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether operation system is Windows 95/98/ME.
Example:

```
if IsWindows95MBS then
MsgBox "Windows 95/98/ME"
else
MsgBox "no Windows 95/98/ME"
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** Returns true or false on Windows and alway false on other platforms.

174.1.62 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

174.1.63 IsWindowsAdminUserMBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checkes whether the current user is an Admin User on Windows.
Example:

```
if IsWindowsAdminUserMBS then
MsgBox "Is admin user."
else
MsgBox "no admin user."
end if
```

Notes: Returns true or false on Windows and alway false on other platforms.

174.1.64 IsWindowsNTMBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether operation system is Windows NT/2000/XP.
Example:

```
if IsWindowsNTMBS then
MsgBox "Windows NT/2000/XP"
else
MsgBox "no Windows NT/2000/XP"
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** Returns true or false on Windows and alway false on other platforms.

174.1.65 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

174.1.66 WindowsGetProcessIntegrityLevelMBS as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The function gets the integrity level of the current process.
Example:

msgbox str(WindowsGetProcessIntegrityLevelMBS)

Notes:

Integrity level is only available on Windows Vista and newer operating systems, thus GetProcessIntegrityLevel throws a C++ exception if it is called on systems prior to Windows Vista.

Returns the integrity level of the current process. It is usually one of these values:

- MBS REALbasic Plugins, version 10.4pr3

174.1.68 WindowsIsApplicationRunAsAdminMBS as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The function checks whether the current process is run as administrator.
Example:

msgbox str(WindowsIsApplicationRunAsAdminMBS)

Notes:

In other words, it dictates whether the primary access token of the process belongs to user account that is a member of the local Administrators group and it is elevated.

Returns true if the primary access token of the process belongs to user account that is a member of the local Administrators group and it is elevated. Returns false if the token does not.

174.1.69 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes

- MBS REALbasic Plugins, version 10.4pr3

174.1.70 WindowsIsProcessElevatedMBS as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The function gets the elevation information of the current process.
Example:

msgbox str(WindowsIsProcessElevatedMBS)

Notes:

It dictates whether the process is elevated or not. Token elevation is only available on Windows Vista and newer operating systems, thus IsProcessElevated returns always false if it is called on systems prior to Windows Vista. It is not appropriate to use this function to determine whether a process is run as administartor.

Returns true if the process is elevated. Returns false if it is not.

174.2.4 Constants

174.2.5 Date = " 5. 9.2021"

MBS Main Plugin, Plugin Version: 11.0.

Function: The constant for the date.
Example:

MsgBox BuildConstantsMBS.Date

Notes:

Format is dd.mm.yyyy like 24.12.2010.
This is the date when the plugin was loaded to the Xojo IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.

174.2.6 DateTime = "Sun Sep 5 20:26:42 2021"

MBS Main Plugin, Plugin Version: 11.0.

Function: The constant for the date and time.
Example:

MsgBox BuildConstantsMBS.DateTime

Notes: This is the time when the plugin was loaded to the Xojo IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.

174.2.7 Day = 5

MBS Main Plugin, Plugin Version: 11.0.

Function: The day.

174.2.8 Hour = 20

MBS Main Plugin, Plugin Version: 11.0.

Function: The hour.

174.2.9 Minute = 26

MBS Main Plugin, Plugin Version: 11.0.

Function: The minute.

174.2.10 Month = 9

MBS Main Plugin, Plugin Version: 11.0.

Function: The month.

174.2.11 Second = 42

MBS Main Plugin, Plugin Version: 11.0.

Function: The second.

174.2.12 Time = "20:26:42"

MBS Main Plugin, Plugin Version: 11.0.

Function: The constant for the time.
Example:

MsgBox BuildConstantsMBS.Time

Notes:

Format is like hh:mm:ss like 11:22:33.
This is the time when the plugin was loaded to the Xojo IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.

174.2.13 Year = 2021

MBS Main Plugin, Plugin Version: 11.0.

Function: The year.

SM_ARRANGE	56	Flags specifying how the system arranged minimized windows. For more information about minimized windows, see the following Remarks section.
SM_CLEANBOOT	67	Value that specifies how the system was started: 0 Normal boot; 1 Fail-safe boot; 2 Fail-safe with network boot; Fail-safe boot (also called SafeBoot) bypasses the user's startup files.
SM_CMETRICS	83	(Windows 2000 or newer)
SM_CMONITORS	80	Number of display monitors on the desktop. (Windows 2000 or newer)
SM_CMOUSEBUTTONS	43	Number of buttons on mouse, or zero if no mouse is installed.
SM_CXBORDER	5	Width, in pixels, of a window border.
SM_CXCURSOR	13	Width, in pixels, of a cursor. The system cannot create cursors of other sizes.
SM_CXDLGFRAME	7	Thickness, in pixels, of the sizing border around the perimeter of a window that can be resized. (or SM_CXFIXEDFRAME)
SM_CXDOUBLECLK	36	Width, in pixels, of the rectangle around the location of a first click in a double-click sequence. The second click must occur within this rectangle for the system to consider the two clicks a double-click. (The two clicks must also occur within a specified time.)
SM_CXDRAG	68	Width, in pixels, of a rectangle centered on a drag point to allow for limited movement of the mouse pointer before a drag operation begins. This allows the user to click and release the mouse button easily without unintentionally starting a drag operation.
SM_CXEDGE	45	Width, in pixels, of a 3-D border.
SM_CXFRAME	32	Thickness, in pixels, of the sizing border around the perimeter of a window that can be resized. (or SM_CXSIZEFRAME)
SM_CXFULLSCREEN	16	Width of the client area for a full-screen window on the primary display monitor.
SM_CXHSCROLL	21	Width, in pixels, of the arrow bitmap on a horizontal scroll bar.
SM_CXHTHUMB	10	Width, in pixels, of the thumb box in a horizontal scroll bar.
SM_CXICON	11	The default width, in pixels, of an icon. TheLoadIcon function can load only icons of these dimensions.
SM_CXICONSPACING	38	Width, in pixels, of a grid cell for items in large icon view. Each item fits into a rectangle of this size when arranged. These values are always greater than or equal to SM_CXICON and SM_CYICON.
SM_CXMAXIMIZED	61	Default width, in pixels, of a maximized top-level window on the primary display monitor.
SM_CXMAXTRACK	59	Default maximum width, in pixels, of a window that has a caption and sizing borders. This metric refers to the entire desktop. The user cannot drag the window frame to a size larger than these dimensions.
SM_CXMENUCHECK	71	Width, in pixels, of the default menu check-mark bitmap.
SM_CXMENUSIZE	54	Width, in pixels, of menu bar buttons, such as the child window close button used in the multiple document interface.
SM_CXMIN	28	Minimum width, in pixels, of a window.
SM_CXMINIMIZED	57	Width, in pixels, of a normal minimized window.
SM_CXMINSPACING	47	Width, in pixels, of a grid cell for minimized windows. Each minimized window fits into a rectangle this size when arranged. These values are always greater than or equal to SM_CXMINIMIZED and SM_CYMINIMIZED.
SM_CXMINTRACK	34	Minimum tracking width, in pixels, of a window. The user cannot drag the window frame to a size smaller than these dimensions. A window can override these values by processing the WM_GETMINMAXINFO message.
SM_CXSCREEN	0	Width, in pixels, of the screen of the primary display monitor.
SM_CXSIZE	30	Width, in pixels, of a button in a window's caption or title bar.
SM_CXSMICON	49	Recommended width, in pixels, of a small icon. Small icons typically appear in window captions and in small icon view.
SM_CXSMSIZE	52	Width, in pixels, of small caption buttons.
SM_CXVIRTUALSCREEN	78	Width, in pixels, of the virtual screen. The virtual screen is the bounding rectangle of all display monitors. (Windows 98/ME and 2000 or newer)
SM_CXVSCROLL	2	Width, in pixels, of a vertical scroll bar; and height, in pixels, of the arrow bitmap on a vertical scroll bar.
SM_CYBORDER	6	Height, in pixels, of a window border.
SM_CYCAPTION	4	Height, in pixels, of a normal caption area.
SM_CYCURSOR	14	Height, in pixels, of a cursor. The system cannot create cursors of other sizes.
SM_CYDLGFRAME	8	Thickness, in pixels, of the frame around the perimeter of a window that has a caption but is not sizable. (or SM_CYFIXEDFRAME)
SM_CYDOUBLECLK	37	Height, in pixels, of the rectangle around the location of a first click in a double-click sequence. The second click must occur within this rectangle for the system to consider the two clicks a double-click. (The two clicks must also occur within a specified time.)
SM_CYDRAG	69	Height, in pixels, of a rectangle centered on a drag point to allow for limited movement of the mouse pointer before a drag operation begins. This allows the user to click and release the mouse button easily without unintentionally starting a drag operation.
SM_CYEDGE	46	Height, in pixels, of a 3-D border.

ARW_BOTTOMLEFT	0x0000L	Start at the lower-left corner of the screen (default position).
ARW_BOTTOMRIGHT	0x0001L	Start at the lower-right corner of the screen. Equivalent to ARW_STARTRIGHT.
ARW_HIDE	0x0008L	Hide minimized windows by moving them off the visible area of the screen.
ARW_TOPLEFT	0x0002L	Start at the upper-left corner of the screen. Equivalent to ARV_STARTTOP.
ARW_TOPRIGHT	0x0003L	Start at the upper-right corner of the screen. Equivalent to ARW_STARTTOP | SRW_STARTRIGHT.

ARW_DOWN	0x0004L	Arrange vertically, top to bottom.
ARW_LEFT	0x0000L	Arrange horizontally, left to right.
ARW_RIGHT	0x0000L	Arrange horizontally, right to left.
ARW_UP	0x0004L	Arrange vertically, bottom to top.

SECURITY_MANDATORY_UNTRUSTED_RID	= & h0	Means untrusted level. It is used by processes started by the Anonymous group. Blocks most write access.
SECURITY_MANDATORY_LOW_RID	= & h1000	Means low integrity level. It is used by Protected Mode Internet Explorer. Blocks write acess to most objects (such as files and registry keys) on the system.
SECURITY_MANDATORY_MEDIUM_RID	= & h2000	Means medium integrity level. It is used by normal applications being launched while UAC is enabled.
SECURITY_MANDATORY_HIGH_RID	= & h3000	Means high integrity level. It is used by administrative applications launched through elevation when UAC is enabled, or normal applications if UAC is disabled and the user is an administrator.
SECURITY_MANDATORY_SYSTEM_RID	= & h4000	Means system integrity level. It is used by services and other system-level applications (such as Wininit, Winlogon, Smss, etc.)

174.3 class GlobalExceptionHandlerMBS

174.3.1 class GlobalExceptionHandlerMBS

MBS Main Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs an exception handler to show a message dialog with custom message before the app crashes.
Notes:

The plugin allocates some memory which we release later to make sure there is free memory for the message box.

On Windows this method does not work as currently we use static runtime on Windows which does not allow the plugin to access the runtime inside the RB framework.

174.3.2 Blog Entries

174.3.3 Blog Entries

- MBS REALbasic Plugins, version 10.6pr2

174.3.4 Events

174.3.5 GotException

MBS Main Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when an unhandled C++ exception was raised.
Notes: Your application is in a very instable state when this event is called. Don't do much here and quit soon with ExitMBS/AbortMBS.

174.4 class LinuxSysInfoMBS

174.4.1 class LinuxSysInfoMBS

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class to query memory and processor statistics.
Example:

```
dim l as new LinuxSysInfoMBS

MsgBox str(l.FreeRam)+" bytes free."
```

- 10.4, page 9: News

174.4.6 Methods

174.4.7 Constructor

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries values and fills properties.

174.4.8 loads(index as Integer) as Double

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: 1, 5, and 15 minute load averages.

174.4.9 Properties

174.4.10 availablePhysicalPages as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Return number of available physical pages of memory in the system.
Notes: (Read only property)

174.4.11 BufferRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Memory used by buffers.
Notes: (Read only property)

174.4.12 FreeHigh as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Available high memory size.
Notes: (Read only property)

174.4.13 FreeRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Available memory size.
Example:

```
dim l as new LinuxSysInfoMBS

MsgBox str(l.FreeRam)+" bytes free."
```

Notes: (Read only property)

174.4.14 FreeSwap as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Swap space still available.
Notes: (Read only property)

174.4.15 MemoryUnit as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Memory unit size in bytes.
Notes: (Read only property)

174.4.16 NumberOfProcesses as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Number of current processes.
Example:

```
dim l as new LinuxSysInfoMBS

MsgBox str(l.NumberOfProcesses)+" processes"
```

Notes: (Read only property)

174.4.17 NumberOfProcessors as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Return number of available processors.
Example:

```
dim l as new LinuxSysInfoMBS

MsgBox str(l.NumberOfProcessors)+" processors"
```

Notes: (Read only property)

174.4.18 NumberOfProcessorsConfigured as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Return number of configured processors.
Notes: (Read only property)

174.4.19 PhysicalPages as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Return number of physical pages of memory in the system.
Notes: (Read only property)

174.4.20 SharedRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Amount of shared memory.
Notes: (Read only property)

174.4.21 TotalHigh as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Total high memory size.
Notes: (Read only property)

174.4.22 TotalRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Total usable main memory size.
Notes: (Read only property)

174.4.23 TotalSwap as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Total swap space size.
Notes: (Read only property)

174.4.24 upTime as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Seconds since boot.
Notes: (Read only property)

174.4.25 Valid as Boolean

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether constructor got values.
Notes:

Should be true on Linux and false on other platforms.
(Read only property)

174.5 class SignalHandlerMBS

174.5.1 class SignalHandlerMBS

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A signal handler for an unix signal.
Notes:

You can use this class to catch signals like SIGALRM oder SIGQUIT.

See
http://en.wikipedia.org/wiki/Signal_(computing)

174.5.5 Xojo Developer Magazine

- 12.2, page 10: News

174.5.6 Methods

174.5.7 alarm(seconds as Integer)

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Set signal timer alarm.
Example:

SignalHandlerMBS.alarm 1

Notes:

The alarm() function sets a timer to deliver the signal SIGALRM to the calling process after the specified number of seconds. If an alarm has already been set with alarm() but has not been delivered, another call to alarm() will supersede the prior call. The request alarm(0) voids the current alarm and the signal SIGALRM will not be delivered.

Due to setitimer restriction the maximum number of seconds allowed is 100000000.

alarm sends signal 14 after the time out.

174.5.8 ClearFlag(signalIndex as Integer)

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the flag with given index.
Notes: Please call this after you got IsFlagSet.

174.5.9 ClearFlags

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all flags.

174.5.10 ClearStacktrace(signalIndex as Integer)

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: Clears stored stack trace for the signal with given index.

174.5.11 Close

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Releases this object's resources.

174.5.12 IsFlagSet(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a given flag was set.

174.5.13 QueryStacktrace(signalIndex as Integer, skip as Integer = 2) as string()

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: Queries stack at the time the signal handler was triggered.
Notes:

Useful to know later which code got the signal.
Works for flag handlers and for the event handlers if enabled.

174.5.14 SendSignal(PID as Integer, Signal as Integer) as boolean

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Targets: All.

Function: Sends a signal.
Example:

```
// send signal to a process
// PID is 17779 here
// 9 means kill on Mac OS X
call SignalHandlerMBS.SendSignal(17779, 9)
```

Notes:

Returns true on success and false on failure.
Without a signal handler the target app could quit.

Lookup signal.h for the list of signals. They can be different on Mac and Linux.

174.5.15 SendSignalToSelf(Signal as Integer) as boolean

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Targets: All.

Function: Send a signal to the current process
Notes:

Returns true on success and false on failure.
Without a signal handler the target app could quit.

174.5.16 SetDefaultHandler(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Defines to use the default handler for the given signal number.
Example:

```
Const SIGALRM = 14
if SignalHandlerMBS.SetDefaultHandler(SIGALRM) then
MsgBox "Done"
else
MsgBox "Failed"
end if
```

Notes: Returns true on success and false on failure.

174.5.17 SetEventHandler(signalIndex as Integer, CollectStackTrace as boolean = false) as boolean

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Defines to call the Signal Event whenever a signal with the given number is received.
Notes:

Returns true on success and false on failure.
If CollectStackTrace is true, you can later use QueryStacktrace to get the stack trace from the time the signal was captured.

174.5.18 SetFlagHandler(signalIndex as Integer, CollectStackTrace as boolean = false) as boolean

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Targets: All.

Function: Defines to set the flag whenever a signal with the given number is received.
Notes:

Returns true on success and false on failure.
Please use IsFlagSet in your app regularly to check if the flag was set.

If CollectStackTrace is true, you can later use QueryStacktrace to get the stack trace from the time the signal was captured.

174.5.19 SetIgnore(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Defines to ignore the event with the given number.
Example:

```
Const SIGALRM = 14
if SignalHandlerMBS.SetIgnore(SIGALRM) then
MsgBox "Done"
else
MsgBox "Failed"
end if
```

Notes: Returns true on success and false on failure.

174.5.20 SignalStatus(signalIndex as Integer) as Integer

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Queries the signal state.
Notes: Returns 0 (unknown), kSignalDefault, kSignalEvent, kSignalFlag or kSignalIgnored.

174.5.21 Events

174.5.22 Signal(n as Integer)

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: .

Function: A signal was called and you set an event handler.
Example:

```
Sub Signal(n as Integer)
```

```
// restore system handler in case we get that crash again!

MySignalHandlerMBS.SetDefaultHandler n

// Mac and Linux can have different signal numbers:

# if TargetMacOS then
dim c as string = "Signal "+str(n)+" on Mac OS X"
# elseif TargetLinux then
dim c as string = "Signal "+str(n)+" on Linux"
# else
dim c as string = "Signal "+str(n)+" on ?"
# endif

dim BackTraceLines() as string
# if mbs.BuildNumber>17662 and not TargetWin32 then // new in 13.0 plugins
BackTraceLines = BacktraceMBS
# endif

// show your bug reporter (or the MBS one)
'dim b as new Bugreporter
'b.ShowExceptionReporter c, BackTraceLines

// quit now without cleaning up the RB runtime which may crash again
ExitMBS 1
End Sub
```

Notes: This function may be called at any time, so you need to use code which is thread safe. (see ThreadMBS class)

174.5.23 Constants

174.5.24 kSignalDefault = 1

MBS Util Plugin, Plugin Version: 8.5.

Function: One of the signal state values.
Notes: The signal calls default handler.

174.5.25 kSignalEvent = 3

MBS Util Plugin, Plugin Version: 8.5.

Function: One of the signal state values.
Notes: The signal raises an event and sets the flag.

174.5.26 kSignalFlag = 4

MBS Util Plugin, Plugin Version: 14.0.

Function: One of the signal state values.
Notes: The signal sets a flag.

174.5.27 kSignalIgnored = 2

MBS Util Plugin, Plugin Version: 8.5.

Function: One of the signal state values.
Notes: The signal is ignored.

174.6 module SystemInformationMBS

174.6.1 module SystemInformationMBS

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module to collect all the system information functions.
Example:

msgbox "Welcome "+SystemInformationMBS.Username+"!"

174.6.6 Methods

174.6.7 AvailableRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the size of the available memory.
Example:

msgBox format(SystemInformationMBS.AvailableRAM/1024/1024,"0")+" MB of RAM free."

Notes:

This function is useful if you want to know how much memory you can allocate without the system swapping.

On Windows, Mac OS X and Linux you can normally allocate up to 2 or 3 GB of memory in your address-room. A swap file on disc is used to cache memory which does not fit into physical memory.

So if you need to allocate a buffer to store temporary data, you can use this function to calculate a good size.
For example a file copy function could use something like this:

// a quarter of free memory is good to leave room for some OS buffers:
buffersize=SystemInformationMBS.AvailableRAM/4

```
// minimum 4 MB
if buffersize<1024*1024*4 then
buffersize<1024*1024*4
end if

// maximum 128 MB to make chunks not too big and application too unresponsible
if buffersize<1024*1024*128 then
buffersize<1024*1024*128
end if
```

In older plugins this function was named AvailableRAMMBS.

174.6.8 BusSpeed as Double

MBS Util Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the speed of the System bus in Hz.
Example:

```
msgbox "Your main CPU has "+format(SystemInformationMBS.BusSpeed/1000000.0,"0")+" MHz"
```

174.6.9 Computername as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the name of the computer.
Example:

```
msgbox "Hi, I'm "+SystemInformationMBS.Computername+"."
```

Notes:

On Mac OS, the name is queried in this order:
1. Try to ask the Mac OS X Corefoundation for the name.
2. Try to ask via AppleEvents the Finder or FileSharing.
3. Read it from the system resources.

On Linux or Windows the system name.

In older plugins this function was named ComputerNameMBS.

174.6.10 CPUBrandString as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the CPU brand string.
Example:

MsgBox SystemInformationMBS.CPUBrandString

Notes:

If it is an Intel x86 Chip or something compatible, you get strings like this: "Intel(R) Core(TM) i7 CPU M 620 @ 2.67GHz" (Same as CPUIDMBS.BrandString). But on PowerPC chips we return strings like "PowerPC G5 (970MP)" (same as CPUInfoMBS.CPUName).

May return "" if the processor is unknown.

174.6.11 CPUSpeed as Double

MBS Util Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the Speed of the main CPU in Hz.
Example:

msgbox "Your main CPU has "+format(SystemInformationMBS.CPUSpeed/1000000.0,"0")+" MHz"

174.6.12 DomainName as string

MBS Util Plugin, Plugin Version: 10.1, Platform: Windows, Targets: All.

Function: Returns the domain name of a Windows PC.
Example:

msgbox SystemInformationMBS.DomainName

Notes: Returns an empty string on any error.

174.6.13 HardDiscSerial as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the hard disc serial number of the first hard disc which has a serial number.
Example:

MsgBox SystemInformationMBS.HardDiscSerial

Notes:

This function can return "" if nothing is found.
Seems to return always empty string on Mac OS X 10.4 as the system properties dictionary does not contain the serial number there.

On Windows this function sometimes returns empty string, but later works again on the same machine. Reason unknown.

In Windows 8.1 it looks like WindowsWMIMBS.InitSecurity(false) must be called at app.open time as Xojo will do some things in background when opening first window which block our queries.

174.6.14 HostName as string

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hostname for this computer.
Example:

MsgBox SystemInformationMBS.HostName

174.6.15 Is64bitWindows as boolean

MBS Util Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the Windows you are using is a 64-bit Windows.
Example:

msgbox str(SystemInformationMBS.Is64bitWindows)

Notes:

Returns true for x64 Windows editions for 32-bit applications.
This function could also be named isWoW64 for "is Windows on Windows 64 bit."
Only for Intel CPU.
Will return false if used on ARM CPU.

Returns always true on 64bit target.

174.6.16 isARM as Boolean

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether CPU is ARM.
Example:

```
If TargetMacOS Then
If SystemInformationMBS.isARM Then
MsgBox "Running ARM version on ARM CPU."
Elseif SystemInformationMBS.IsTranslated Then
MsgBox "Running Intel version on ARM CPU."
Else
MsgBox "Running Intel version on Intel CPU."
End If
End If
```

Notes:

Returns true for:

- Raspberry Pi for Linux ARM
- iOS or Android on device.
- Apple Silicon Mac

Returns false for x86 CPUs, e.g. MacOS as well as iOS/Android in simulator.

174.6.17 isBigSur(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 11 Big Sur or newer.
Notes: Returns 1 if this is Big Sur or newer, otherwise 0.

174.6.18 isCatalina(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is MacOS 10.15 Catalina or newer.
Example:

MsgBox str(SystemInformationMBS.isMojave)

Notes: Returns true on MacOS 10.15 or newer.

174.6.19 isElCapitan(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.11 El Capitan or newer.
Example:

MsgBox str(SystemInformationMBS.isElCapitan)

Notes:

Returns true on Mac OS X 10.11.
If orHigher is set, it will also return true on 10.12.

174.6.20 isHighSierra(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 10.13 High Sierra or newer.
Example:

MsgBox str(SystemInformationMBS.isHighSierra)

Notes:

Returns true on Mac OS X 10.13.
If orHigher is set, it will also return true on 10.14.

174.6.21 isLeopard(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.5 Leopard or newer.
Example:

MsgBox str(SystemInformationMBS.isLeopard)

Notes: Returns true on Mac OS X 10.5 or newer.

174.6.22 isLion(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.7 Lion or newer.
Example:

MsgBox str(SystemInformationMBS.isLion)

Notes: Returns true on Mac OS X 10.7 or newer.

174.6.23 isMacOSX as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if being called on Mac OS X.
Example:

msgbox str(SystemInformationMBS.isMacOSX)

174.6.24 isMavericks(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.9 Mavericks or newer.
Example:

MsgBox str(SystemInformationMBS.isMavericks)

Notes: Returns true on Mac OS X 10.9 or newer.

174.6.25 isMojave(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is MacOS 10.14 Mojave or newer.
Example:

MsgBox str(SystemInformationMBS.isMojave)

Notes: Returns true on MacOS 10.14 or newer.

174.6.26 isMonterey(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 12 Monterey or newer.
Notes: Returns 1 if this is Monterey or newer, otherwise 0.

174.6.27 isMountainLion(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.8 Mountain Lion or newer.
Example:

MsgBox str(SystemInformationMBS.isMountainLion)

Notes: Returns true on Mac OS X 10.8 or newer.

174.6.28 isSierra(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 10.12 Sierra or newer.
Example:

```
MsgBox str(SystemInformationMBS.isSierra)
```

Notes:

Returns true on Mac OS X 10.12.
If orHigher is set, it will also return true on 10.13.

174.6.29 isSnowLeopard(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.6 Snow Leopard or newer.
Example:

```
MsgBox str(SystemInformationMBS.isSnowLeopard)
```

Notes: Returns true on Mac OS X 10.6 or newer.

174.6.30 IsTranslated as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries whether application is translated on Apple Silicon Macs.
Example:

```
If TargetMacOS Then
If SystemInformationMBS.isARM Then
MsgBox "Running ARM version on ARM CPU."
```

```
Elseif SystemInformationMBS.IsTranslated Then
MsgBox "Running Intel version on ARM CPU."
Else
MsgBox "Running Intel version on Intel CPU."
End If
End If
```

Notes:

Returns 1 if Intel code gots translated to ARM code.
Returns 0 for a native ARM application.
Returns -1 if unknown.

174.6.31 isWindows10(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 10.
Example:

```
msgbox str(SystemInformationMBS.isWindows10)
```

Notes:

And False on Mac OS, Linux, Windows 7/Vista/XP/2000/ME/98/95/8/8.1.
If orHigher, than it returns true if OS Version is newer.

174.6.32 isWindows11(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 11.
Example:

```
msgbox str(SystemInformationMBS.isWindows11)
```

Notes:

And False on Mac OS, Linux, Windows 7/Vista/XP/2000/ME/98/95/8/8.1/10.
If orHigher, than it returns true if OS Version is newer.

174.6.33 isWindows2000(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 2000.
Example:

msgbox str(SystemInformationMBS.isWindows2000)

Notes:

And False on Mac OS X, Linux, Windows 7/XP/Vista/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

174.6.34 isWindows7(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 7.
Example:

msgbox str(SystemInformationMBS.isWindows7)

Notes:

And False on Mac OS X, Linux, Windows Vista/XP/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

174.6.35 isWindows8(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 8.
Example:

msgbox str(SystemInformationMBS.isWindows8)

Notes:

And False on Mac OS X, Linux, Windows 7/Vista/XP/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

174.6.36 isWindows81(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 8.1
Example:

msgbox str(SystemInformationMBS.isWindows81)

Notes:

And False on Mac OS X, Linux, Windows 7/Vista/XP/2000/ME/98/95/8/10.
If orHigher, than it returns true if OS Version is newer.

174.6.37 isWindowsVista(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows Vista.
Example:

msgbox str(SystemInformationMBS.isWindowsVista)

Notes:

And False on Mac OS X, Linux, Windows 7/XP/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

174.6.38 isWindowsXP(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows XP.
Example:

msgbox str(SystemInformationMBS.isWindowsXP)

Notes:

And False on Mac OS X, Linux, Windows 7/Vista/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

174.6.39 isYosemite(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.10 Yosemite or newer.
Example:

MsgBox str(SystemInformationMBS.isYosemite)

Notes: Returns true on Mac OS X 10.10 or newer.

174.6.40 LogicalRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the size of the logical installed memory.
Example:

msgBox format(SystemInformationMBS.LogicalRAM/1024/1024,"0")+" MB of RAM built in."

Deprecated: This item is deprecated and should no longer be used. **Notes:**

On Windows the total virtual memory size.
On Linux always 4 GB.

In older plugins this function was named LogicalRAMMBS.

174.6.41 MACAddress as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hardware ethernet address of the first ethernet card.
Example:

msgBox SystemInformationMBS.MACAddress

Notes:

It returns a string with 6 bytes.
Works now with MBS Plugin 2.6 for Mac OS Classic, Carbon inside Classic and Mac OS X, but may not work for a Classic application running on Mac OS X. And may fail on some machines if no OpenTransport is running.

On Windows and Mac OS X you can have multiple ethernet cards and you should use a command line tool with the shell class to find what you need.

For example on Windows:

ipconfig /all

or on Mac OS X:

ifconfig -a

You can replace this function with usage of the NetworkInterface class in newer RB versions.

Added Linux support in version 16.4.

174.6.42 MACAddressString as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hardware ethernet address of the first ethernet card.
Example:

msgBox SystemInformationMBS.MACAddressString

Notes:

Same as MACAddress, but with different format of output.

You can replace this function with usage of the NetworkInterface class in newer RB versions.

The plugin asks on Mac OS X the IOKit framework for the primary ethernet interface. We are not sure what Apple really defines for being the primary one, so let's test it:

- Ethernet on and Airport off ->Ethernet MAC Address
- Ethernet off and Airport on ->Ethernet MAC Address

Added Linux support in version 16.4.

174.6.43 MacBoardID as string

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries board-id for Mac.
Example:

MsgBox SystemInformationMBS.MacBoardID

Notes: e.g. "Mac-1234567890123456"

174.6.44 MacBugFixVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The BugFix part of the Mac OS version number.
Example:

MsgBox str(SystemInformationMBS.MacBugFixVersion)

Notes:

The bug fix system version number; in 10.4.17 this would be the decimal value 17.

Intel apps running in Rosetta on Apple M1 will report 10.16 instead of 11.x.

174.6.45 MacHasHardwareAcceleratedCoreImage as boolean

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries whether hardware accerlation is used for CoreImage.
Example:

```
if SystemInformationMBS.MacHasHardwareAcceleratedCoreImage then
msgbox "CoreImage should be very fast."
else
msgbox "CoreImage may be slow."
end if
```

Notes: Queries OpenGL whether programmable fragments are supported.

174.6.46 MachineID(flags as Integer = 15) as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a Machine ID for the current computer.
Example:

```
// this is how we build it.
dim t as string = "MachineID"+SystemInformationMBS.HardDiscSerial+SystemInformationMBS.MacSerialNumber+SystemInformationMBS.MacModel+SystemInformationMBS.CPUBrandString

// you could extend it with SystemInformationMBS.WinProductKey

dim m as string = MD5StringMBS(t)

MsgBox "Machine ID: "+SystemInformationMBS.MachineID+EndOfLine+"My Machine ID: "+m
```

Notes:

Returns a 32 byte long hex string with a Machine ID.
Example value: "EE537483656B25996B51B7F4C99F9083".

This ID is based on the results of the MacSerialNumber, MacModel, CPUBrandString and HardDiscSerial functions. If all 4 functions have no value, the result is always "A2254DEF74A74608D76D1BA49BD2E82A". Also the result could change in future if we fix a bug in one of the functions so that the result values differ.

It is not based on the MACAddressString function as your MAC Address can change when switching between wired and wireless networks. Also we do not check the PhysicalRAM as RAM is a typical thing which

changes over time.

You can store this value in some prerences/license file and later compare it agains the current value to see if the machine may have changed. In that case ask user to revalidate license, for example by asking for the serial number.

It can happen that 2 PCs have the same MachineID, typical two virtual machines. So this ID is not unique. But it is very likely that two different computers produce different MachineIDs.

Added flags parameter in 14.1:

flagHardDiscSerial	1	Use hard disk serial.
flagMacSerialNumber	2	Use Mac Serial number (on Mac)
flagMacModel	4	Use Mac Model (on Mac)
flagCPUBrandString	8	Use CPU Brand String.
flagWinProductKey	16	Use Product Key (on Windows only)

The Machine ID may be different if one of the components returns a different result. Result may be different in whether app runs as admin or not on Windows.

In Windows 8.1 it looks like WindowsWMIMBS.InitSecurity(false) must be called at app.open time as Xojo will do some things in background when opening first window which block our queries.

174.6.47 MacMajorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The major Mac OS version number.
Example:

```
// show major version number
MsgBox str(SystemInformationMBS.MacMajorVersion)

// and show all three version numbers together:
MsgBox str(SystemInformationMBS.MacMajorVersion)+"."+str(SystemInformationMBS.MacMinorVersion)+"."+str(SystemInformationMBS.MacBugFixVersion)
```

Notes:

The major system version number; in 10.4.17 this would be the decimal value 10.

On macOS Big Sur, this returns 11 in Apple Silicon application and 10 in Intel application.
On macOS Monterey this returns 12.
If your Intel application is build with older SDK (e.g. Xojo 2019), the result reported version will still be macOS 10.16.

174.6.48 MacMinorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The minor Mac OS version number.
Example:

MsgBox str(SystemInformationMBS.MacMinorVersion)

Notes: The minor system version number; in 10.4.17 this would be the decimal value 4.

174.6.49 MacModel as string

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the Mac model string.
Example:

msgbox SystemInformationMBS.MacModel

Notes: for example "<powermac7,3>".

174.6.50 MacROMBootVersion as string

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns boot ROM version string.
Example:

MsgBox SystemInformationMBS.MacROMBootVersion

Notes: e.g. "220.270.99.0.0 (iBridge: 16.16.6571.0.0,0)"

174.6.51 MacSerialNumber as string

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the serial number of your local Mac.
Example:

msgbox SystemInformationMBS.MacSerialNumber

Notes:

May return an empty string in case of an error.
(e.g. when being user on Windows or if the Mac does not know its serialnumber)

174.6.52 MacUUID as string

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the unique identifier for the given Mac.
Example:

msgbox SystemInformationMBS.MacUUID

Notes: Returns "" on any error.

174.6.53 MacVRAMSize as Int64

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the size of the main video graphics memory size.
Example:

msgbox format(SystemInformationMBS.MacVRAMSize,"0")+" Bytes VRAM."

Notes:

Walks over the list of displays, asks on each display for its VRAM size and returns the first value found.

For some reason this seems not to return more than 256 MB of memory.

174.6.54 OSName as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string to display which OS Version you have.
Example:

```
msgBox SystemInformationMBS.OSName
' may show: Mac OS X
```

Notes:

Return values possible:
Windows NT
Windows 2000
Windows XP
Windows Vista
Mac OS
Mac OS X
Linux

and a few other Windows versions like 6.2 alias 8.

In older plugins this function was named OSNameMBS.

174.6.55 OSVersionString as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string to display which OS Version you have.
Example:

```
msgBox SystemInformationMBS.OSVersionString
' may show: Mac OS X 10.1.2
```

Notes:

GetOSVersionStr returns the version string of the OS.
Some Possible values:
"System 7.5.3",
"MacOS 8",
"MacOS 9.1",
"MacOS X 10.4.1",
"Windows NT 3.5",

”Windows 2000 (Service Pack 3)”.

In older plugins this function was named OSVersionStrMBS.

On macOS Big Sur, this returns 11.x in Apple Silicon application and 10.6 in Intel application.
On macOS Monterey this returns 12.x.
If your Intel application is build with older SDK (e.g. Xojo 2019), the result reported version will still be macOS 10.16.

174.6.56 PhysicalRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the size of the physical installed memory.
Example:

```
msgBox format(SystemInformationMBS.PhysicalRAM/1024/1024,"0")+" MB of RAM built in."
```

Notes:

On old Windows versions some hundred KBs less for DOS.

Result changed from integer to double in plugin version 3.4 to return correct results on 2 GB RAM. In v5.2 changed to return correct values on Macs with more than 4 GB of RAM.

On Windows the total physical memory size.

In older plugins this function was named PhysicalRAMMBS.

174.6.57 ProcessorCount(Mode as Integer = 0) as Integer

MBS Util Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of processors on the target system.
Example:

```
MsgBox _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountDefault ))+" default"
+ EndOfLine + _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountLogical ))+" logical"
+ EndOfLine + _
```

str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountPhysical))+" physical"

Notes:

With plugin version 18.0, we added mode parameter. Pass 2 for physical CPU (kProcessorCountPhysical) and 1 for logical CPU count (kProcessorCountLogical) on Mac/Win.

On Windows or Mac OS the number of cores.
On Linux the number of configured CPUs.

Returns 1 on any error.

174.6.58 ShortUsername as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the short name of the current user.
Example:

msgbox "Welcome "+SystemInformationMBS.ShortUsername+"!"

Notes:

On Linux and Mac OS X the short user name.

On all other cases the same as UserName function.

174.6.59 SystemFont as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the name of the used system font.
Example:

msgbox "You are using the system font "+SystemInformationMBS.SystemFont+"."

Notes:

On Windows the system function returns "System" for our tests. Please tell us if this function is not working

for you correct on Windows.

On Linux something like "Sans 10" is returned.

In older plugins this function was named SystemFontMBS.

174.6.60 Username as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the name of the current user.
Example:

msgbox "Welcome "+SystemInformationMBS.Username+"!"

Notes:

Code for Multiple User on Mac OS 9 is build in, but I can't test it.

This is tried on Mac OS:
1. Mac OS X Username function.
2. AppleEvent to FileSharing.
3. Mulitple User Username (Mac OS 9)
4. System username from system resource.

In older plugins this function was named UserNameMBS.

174.6.61 WinBuildNumber as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The build number of the operating system.
Example:

MsgBox str(SystemInformationMBS.WinBuildNumber)

Notes: For example returns 2600 on Windows XP Build 2600.

174.6.62 WinCSDVersion as string

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string, such as "Service Pack 3", that indicates the latest Service Pack installed on the system.
Example:

MsgBox SystemInformationMBS.WinCSDVersion

Notes:

Shows here "Service Pack 3" on a Windows XP installation.
If no Service Pack has been installed, the string is empty.

174.6.63 WindowsAero as boolean

MBS Util Plugin, Plugin Version: 10.1, Platform: Windows, Targets: All.

Function: Whether Windows is using the Aero Interface?
Example:

msgbox str(SystemInformationMBS.WindowsAero)

Notes: True if aero is used. False if the status is unknown (e.g. on Windows XP) or Aero is not used.

174.6.64 WinMajorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The major version number of the operating system.
Example:

MsgBox str(SystemInformationMBS.WinMajorVersion)

Notes: Returns 5 on Windows 2000/XP and 6 on Windows Vista/7/8.

174.6.65 WinMinorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minor version number of the operating system.
Example:

MsgBox str(SystemInformationMBS.WinMinorVersion)

Notes: Returns 0 on Windows 2000/Vista and 1 on Windows XP/7 and 2 on Windows 8.

174.6.66 WinPlatformId as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The operating system platform.
Example:

MsgBox str(SystemInformationMBS.WinPlatformId)

Notes:

This member can be VER_PLATFORM_WIN32_NT (2).
e.g. 2 on Windows XP.

174.6.67 WinProductKey as string

MBS Util Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the product key of the Windows installation.
Notes: Returns "" on any error.
See also:

- 174.6.68 WinProductKey(path as string, name as string, keyStartIndex as Integer = 52) as string 24029

174.6.68 WinProductKey(path as string, name as string, keyStartIndex as Integer = 52) as string

MBS Util Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the product key of the Windows installation.
Notes:

Returns "" on any error.
With the right path and name you can read also the office versions.

For Office 10, it looks like you need to use 808 as offset.
See also:

- 174.6.67 WinProductKey as string 24029

174.6.69 WinProductType as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Any additional information about the system.
Example:

MsgBox str(SystemInformationMBS.WinProductType)

Notes:

e.g. 1 on Windows XP.

This member can be one of the following values:

VER_NT_DOMAIN_CONTROLLER	2	The system is a domain controller and the operating system is Windows Server 2008, Windows Server 2003, or Windows 2000 Server.
VER_NT_SERVER	3	The operating system is Windows Server 2008, Windows Server 2003, or Windows 2000 Server. Note that a server that is also a domain controller is reported as VER_NT_DOMAIN_CONTROLLER, not VER_NT_SERVER.
VER_NT_WORKSTATION	1	The operating system is Windows Vista, Windows XP Professional, Windows XP Home Edition, or Windows 2000 Professional.

174.6.70 WinServicePackMajor as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The major version number of the latest Service Pack installed on the system.
Example:

MsgBox str(SystemInformationMBS.WinServicePackMajor)

Notes: For example, for Service Pack 3, the major version number is 3. If no Service Pack has been installed, the value is zero.

174.6.71 WinServicePackMinor as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minor version number of the latest Service Pack installed on the system.
Example:

MsgBox str(SystemInformationMBS.WinServicePackMinor)

Notes: For example, for Service Pack 3, the minor version number is 0.

174.6.72 WinSuiteMask as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A bit mask that identifies the product suites available on the system.
Example:

MsgBox str(SystemInformationMBS.WinSuiteMask)

Notes:

e.g. 256 on Windows XP.

This member can be a combination of the following values.

174.6.73 Constants

174.6.74 kProcessorCountDefault = 0

MBS Util Plugin, Plugin Version: 13.0.

Function: One of the mode values for ProcessorCount function.
Notes: Default behavior.

174.6.75 kProcessorCountLogical = 1

MBS Util Plugin, Plugin Version: 13.0.

Function: One of the mode values for ProcessorCount function.

VER_SUITE_BACKOFFICE	4	Microsoft BackOffice components are installed.
VER_SUITE_BLADE	& h0400	Windows Server 2003, Web Edition is installed.
VER_SUITE_COMPUTE_SERVER	& h4000	Windows Server 2003, Compute Cluster Edition is installed.
VER_SUITE_DATACENTER	& h0080	Windows Server 2008 Datacenter, Windows Server 2003, Datacenter Edition, or Windows 2000 Datacenter Server is installed.
VER_SUITE_ENTERPRISE	2	Windows Server 2008 Enterprise, Windows Server 2003, Enterprise Edition, or Windows 2000 Advanced Server is installed. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_EMBEDDEDNT	& h0040	Windows XP Embedded is installed.
VER_SUITE_PERSONAL	& h0200	Windows Vista Home Premium, Windows Vista Home Basic, or Windows XP Home Edition is installed.
VER_SUITE_SINGLEUSERTS	& h0100	Remote Desktop is supported, but only one interactive session is supported. This value is set unless the system is running in application server mode.
VER_SUITE_SMALLBUSINESS	1	Microsoft Small Business Server was once installed on the system, but may have been upgraded to another version of Windows. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_SMALLBUSINESS_RESTRICTED	& h0020	Microsoft Small Business Server is installed with the restrictive client license in force. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_STORAGE_SERVER	& h2000	Windows Storage Server 2003 R2 or Windows Storage Server 2003is installed.
VER_SUITE_TERMINAL	& h0010	Terminal Services is installed. This value is always set. If VER_SUITE_TERMINAL is set but VER_SUITE_SINGLEUSERTS is not set, the system is running in application server mode.
VER_SUITE_WH_SERVER	& h8000	Windows Home Server is installed.

Notes: Logical Processors

174.6.76 kProcessorCountPhysical = 2

MBS Util Plugin, Plugin Version: 13.0.

Function: One of the mode values for ProcessorCount function.
Notes: Physical Processors

Chapter 175

SystemConfiguration

175.1 class SCNetworkReachabilityMBS

175.1.1 class SCNetworkReachabilityMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class to check network reachability.
Notes:

The SCNetworkReachability class allow an application to determine the status of a system's current network configuration and the reachability of a target host. In addition, the reachability can be monitored with a notification being provided when/if the status has changed.

The term "reachable" reflects whether a data packet, sent by an application into the network stack, can be sent to the the target host/address. Please note that there is no guarantee that the data packet will actually be received by the host.

Requires Mac OS X 10.3 or newer.
Subclass of the CFObjectMBS class.

175.1.2 Methods

175.1.3 CreateWithAddress(ip as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a reference to the specified network address.
Notes: Returns true on success.

175.1.4 CreateWithAddressPair(LocalIP as string, RemoteIP as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a reference to the specified network address.
Notes:

Returns true on success.
LocalIP: The local address associated with a network connection.
RemoteIP: The remote address associated with a network connection.
One of the IP addresses can be empty.

175.1.5 CreateWithName(name as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a reference to the specified network host/node name.
Notes: Returns true on success.

175.1.6 ErrorString(errorcode as Integer) as string

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns an error string for a given SC Error Code.
Notes: A utility function which works at any time.

175.1.7 Properties

175.1.8 Error as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the last error code.
Notes:

A utility function which works with all SystemConfiguration methods.

(Read only property)

kSCStatusOK	= 0	Success
kSCStatusFailed	= 1001	Non-specific failure
kSCStatusInvalidArgument	= 1002	Invalid argument
kSCStatusAccessError	= 1003	Permission denied - must be root to obtain lock - could not create access/create preferences
kSCStatusNoKey	= 1004	No such key
kSCStatusKeyExists	= 1005	Key already defined
kSCStatusLocked	= 1006	Lock already held
kSCStatusNeedLock	= 1007	Lock required for this operation
kSCStatusNoStoreSession	= 2001	Configuration daemon session not active
kSCStatusNoStoreServer	= 2002	Configuration daemon not (no longer) available
kSCStatusNotifierActive	= 2003	Notifier is currently active
kSCStatusNoPrefsSession	= 3001	Preference session not active
kSCStatusPrefsBusy	= 3002	Preferences update currently in progress
kSCStatusNoConfigFile	= 3003	Configuration file not found
kSCStatusNoLink	= 3004	No such link
kSCStatusStale	= 3005	Write attempted on stale version of object
kSCStatusMaxLink	= 3006	Maximum link count exceeded
kSCStatusReachabilityUnknown	= 4001	Network reachability cannot be determined

175.1.9 Flags as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Determines if the given target is reachable using the current network configuration.
Notes:

Returns 0 on any error.
See the event for the flag constants.
(Read only property)

175.1.10 Events

175.1.11 Changed(flags as Integer)

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: .

Function: The reachability changed.
Notes:

useful constants:

Flags that indicate whether the specified network
nodename/address is reachable, requires a connection,
requires some user intervention in establishing the
connection, and whether the calling application must
initiate the connection using the (TBD???) API.

kSCNetworkFlagsTransientConnection	= 1
kSCNetworkFlagsReachable	= 2
kSCNetworkFlagsConnectionRequired	= 4
kSCNetworkFlagsConnectionAutomatic	= 8
kSCNetworkFlagsInterventionRequired	= 5
kSCNetworkFlagsIsLocalAddress	= 65536
kSCNetworkFlagsIsDirect	= 131072

kSCNetworkFlagsTransientConnection
This flag indicates that the specified nodename/address can be reached via a transient (e.g. PPP) connection.

kSCNetworkFlagsReachable
This flag indicates that the specified nodename/address can be reached using the current network configuration.

kSCNetworkFlagsConnectionRequired
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established.

As an example, this status would be returned for a dialup connection that was not currently active but could handle network traffic for the target system.

kSCNetworkFlagsConnectionAutomatic
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established. Any traffic directed to the specified name/address will initiate the connection.

kSCNetworkFlagsInterventionRequired
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established. In addition, some form of user intervention will be required to establish this connection (e.g. providing a password, authentication token, etc.).

kSCNetworkFlagsIsLocalAddress
This flag indicates that the specified nodename/address is one associated with a network interface on the current system.

kSCNetworkFlagsIsDirect
This flag indicates that network traffic to the specified nodename/address will not go through a gateway but is routed directly to one of the interfaces in the system.

175.2 class SCPreferencesMBS

175.2.1 class SCPreferencesMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for System Configuration Preferences.
Notes:

Please remember that you may need root access to change something.

The SCPreferences classes allow an application to load and store XML configuration data in a controlled manner and provide the necessary notifications to other applications that need to be aware of configuration changes.

The stored XML configuration data is accessed using a prefsID. A
nil value indicates that the default system preferences are to be accessed.
A string which starts with a leading "/" character specifies the path to the file containing te preferences to be accessed. A string which does not start with a leading "/" character specifies a file relative to the default system preferences directory.

The Path APIs make certain assumptions about the layout of the preferences data. These APIs view the data as a collection of dictionaries of key/value pairs and an associated path name. The root path ("/") identifies the top-level dictionary. Additional path components specify the keys for sub-dictionaries.

For example, the following dictionary can be accessed via two paths. The root ("/") path would return a dictionary with all keys and values. The path "/path1" would only return the dictionary with the "key3" and "key4" properties.

```
<dict>
<key>key1</key>
<string>val1</string>
<key>key2</key>
<string>val2</string>
<key>path1</key>
<dict>
<key>key3</key>
<string>val3</string>
<key>key4</key>
<string>val4</string>
</dict>
</dict>
```

Each dictionary can also include the kSCResvLink key. The value associated with this key is interpreted as

a "link" to another path. If this key is present, a call to the GetPathValue() API will return the dictionary specified by the link.
Subclass of the CFObjectMBS class.

175.2.2 Blog Entries

- MBS Xojo Plugins, version 20.5pr4
- MBS Real Studio Plugins, version 12.5pr7

175.2.3 Blog Entries

- MBS Xojo Plugins, version 20.5pr4
- MBS Real Studio Plugins, version 12.5pr7

175.2.4 Methods

175.2.5 AddValue(key as CFStringMBS, value as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Adds data for a preference key.
Notes:

This function associates new data with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was added; false if the key already exists or if an error occurred.

175.2.6 ApplyChanges as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Requests that the currently stored configuration preferences be applied to the active configuration.
Notes: Returns true if the lock was obtained; false if an error occurred.

175.2.7 CommitChanges as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Commits changes made to the configuration preferences to persitent storage.
Notes:

This function commits any changes to permanent storage. An implicit call to Lock/Unlock will be made if exclusive access has not already been established.

Note: This routine commits changes to persistent storage. Call ApplyChanges to apply the changes to the running system.

Returns true if the lock was obtained; false if an error occurred.

175.2.8 Create(name as CFStringMBS, prefid as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Initiates access to the per-system set of configuration preferences.
Notes:

name: A string that describes the name of the calling process.
prefsID: A string that identifies the name of the group of preferences to be accessed/updated.

175.2.9 CreateUniquePathChild(prefix as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a new path component within the dictionary hierarchy.
Notes:

prefix: A string that represents the parent path.
Returns a string representing the new (unique) child path; nil if the specified path does not exist.

175.2.10 CreateWithAuthorization(name as CFStringMBS, prefid as CFStringMBS, AuthorizationHandle as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Initiates access to the per-system set of configuration preferences.
Notes:

name: A string that describes the name of the calling process.
prefsID: A string that identifies the name of the group of preferences to be accessed/updated.
AuthorizationHandle: Handle to authorization object for root access.

175.2.11 ErrorString(errorcode as Integer) as string

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns an error string for a given SC Error Code.
Notes: A utility function which works at any time.

175.2.12 GetPathLink(path as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the link (if one exists) associated with the specified path.
Notes:

path: A string that represents the path to be returned.
The dictionary associated with the specified path; nil if the path is not a link or does not exist.

175.2.13 GetPathValue(path as CFStringMBS) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the dictionary associated with the specified path.
Notes:

path: A string that represents the path to be returned.
Returns the dictionary associated with the specified path; nil if the path does not exist.

175.2.14 GetValue(key as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the data associated with a preference key.
Notes:

This function retrieves data associated with a key for the prefsID.

You could read stale data and not know it, unless you first call Lock.

Returns the value associated with the specified preference key; If no value was located, nil is returned.

175.2.15 KeyList as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns an array of currently defined preference keys.
Notes: Returns nil on any error.

175.2.16 Lock(wait as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Locks access to the configuration preferences.
Notes:

This function obtains exclusive access to the configuration preferences associated with this prefsID. Clients attempting to obtain exclusive access to the preferences will either receive an kSCStatusPrefsBusy error or block waiting for the lock to be released.

wait: A boolean flag indicating whether the calling process should block waiting for another process to complete its update operation and release its lock.

Returns true if the lock was obtained; false if an error occurred.

175.2.17 RemovePathValue(path as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Removes the data associated with the specified path.
Notes:

path: A string that represents the path to be returned.
Returns a boolean indicating the success (or failure) of the call.

175.2.18 RemoveValue(key as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Removes the data associated with a preference key.
Notes:

This function removes the data associated with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was removed; false if the key did not exist or if an error occurred.

175.2.19 SetComputerName(name as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Updates the computer/host name in the system preferences.
Notes:

In order to commit these changes to permanent storage a call must be made to CommitChanges.
A call to ApplyChanges is also required for the new name to become active.
A boolean indicating the success (or failure) of the call.

175.2.20 SetLocalHostName(name as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Updates the local host name in the system preferences.
Notes:

In order to commit these changes to permanent storage a call must be made to CommitChanges.

A call to ApplyChanges is also required for the new name to become active.

175.2.21 SetPathLink(path as CFStringMBS, link as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Associates a link to a second dictionary at the specified path.
Notes:

path: A string that represents the path to be updated.
link: A string that represents the link to be stored at the specified path.
Returns a boolean indicating the success (or failure) of the call.

175.2.22 SetPathValue(path as CFStringMBS, value as CFDictionaryMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Associates a dictionary with the specified path.
Notes:

path: A string that represents the path to be updated.
value: A dictionary that represents the data to be stored at the specified path.
Returns a boolean indicating the success (or failure) of the call.

175.2.23 SetValue(key as CFStringMBS, value as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Updates the data associated with a preference key.
Notes:

This function adds or replaces the value associated with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was set; false if an error occurred.

175.2.24 Signature as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns a sequence of bytes that can be used to determine if the saved configuration preferences have changed.
Notes: A CFBinaryDataMBS that reflects the signature of the configuration preferences at the time of the call to Create.

175.2.25 Unlock as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Releases exclusive access to the configuration preferences.
Notes:

This function releases the exclusive access "lock" for this prefsID. Other clients will be now be able to establish exclusive access to the preferences.

Returns true if the lock was obtained; false if an error occurred.

175.2.26 Properties

175.2.27 Available as Boolean

MBS MacCF Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes:

Returns true on macOS.
(Read only property)

175.2.28 Error as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the last error code.
Notes:

A utility function which works with all SystemConfiguration methods.

kSCStatusOK	= 0	Success
kSCStatusFailed	= 1001	Non-specific failure
kSCStatusInvalidArgument	= 1002	Invalid argument
kSCStatusAccessError	= 1003	Permission denied - must be root to obtain lock - could not create access/create preferences
kSCStatusNoKey	= 1004	No such key
kSCStatusKeyExists	= 1005	Key already defined
kSCStatusLocked	= 1006	Lock already held
kSCStatusNeedLock	= 1007	Lock required for this operation
kSCStatusNoStoreSession	= 2001	Configuration daemon session not active
kSCStatusNoStoreServer	= 2002	Configuration daemon not (no longer) available
kSCStatusNotifierActive	= 2003	Notifier is currently active
kSCStatusNoPrefsSession	= 3001	Preference session not active
kSCStatusPrefsBusy	= 3002	Preferences update currently in progress
kSCStatusNoConfigFile	= 3003	Configuration file not found
kSCStatusNoLink	= 3004	No such link
kSCStatusStale	= 3005	Write attempted on stale version of object
kSCStatusMaxLink	= 3006	Maximum link count exceeded
kSCStatusReachabilityUnknown	= 4001	Network reachability cannot be determined

(Read only property)

175.3 Globals

175.3.1 kSCNetworkReachabilityMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Returns the CoreFoundation TypeID for SCNetworkReachability.

175.3.2 kSCPreferencesMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Returns the CoreFoundation TypeID for SCPreferences.

175.4 class SystemConfigurationMBS

175.4.1 class SystemConfigurationMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for the global System Configuration framework functions.
Notes: See the file "SCSchemaDefinitions.h" for details on the constants.

175.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.1pr1
- Need Proxy Settings?

175.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.1pr1
- Need Proxy Settings?

175.4.4 Methods

175.4.5 ComputerName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the current computer name.
Example:

```
dim s as new SystemConfigurationMBS
msgbox s.ComputerName
```

Notes: Returns "" on an error.

175.4.6 ComputerNameEncoding as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: The encoding of the computer name.

175.4.7 ConsoleUser as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the name of the currently logged-in user.
Example:

```
dim s as new SystemConfigurationMBS
msgbox s.ConsoleUser
```

Notes: Returns the user currently logged into the system; "" if no user is logged in or if an error was encountered.

175.4.8 ConsoleUserGID as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the group ID of the currently logged-in user.
Notes: The group ID of the current console user.

175.4.9 ConsoleUserUID as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the user ID of the currently logged-in user.
Notes: The user ID of the current console user.

175.4.10 kSCCompAnyRegex as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.11 kSCCompGlobal as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.12 kSCCompHostNames as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.13 kSCCompInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.14 kSCCompNetwork as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.15 kSCCompService as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.16 kSCCompSystem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.17 kSCCompUsers as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.18 kSCDynamicStoreDomainFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.19 kSCDynamicStoreDomainPlugin as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.20 kSCDynamicStoreDomainPrefs as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.21 kSCDynamicStoreDomainSetup as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.22 kSCDynamicStoreDomainState as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.23 kSCDynamicStorePropNetInterfaces as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.24 kSCDynamicStorePropNetPrimaryInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.25 kSCDynamicStorePropNetPrimaryService as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.26 kSCDynamicStorePropNetServiceIDs as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.27 kSCDynamicStorePropSetupCurrentSet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.28 kSCDynamicStorePropSetupLastUpdated as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.29 kSCEntNet6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.30 kSCEntNetAirPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.31 kSCEntNetDHCP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.32 kSCEntNetDNS as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.33 kSCEntNetEthernet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.34 kSCEntNetFireWire as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.35 kSCEntNetInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.36 kSCEntNetIPv4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.37 kSCEntNetIPv6 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.38 kSCEntNetL2TP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.39 kSCEntNetLink as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.40 kSCEntNetModem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.41 kSCEntNetPPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.42 kSCEntNetPPPoE as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.43 kSCEntNetPPPSerial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.44 kSCEntNetPPTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.45 kSCEntNetProxies as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.46 kSCEntUsersConsoleUser as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.47 kSCPrefCurrentSet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.48 kSCPrefNetworkServices as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.49 kSCPrefSets as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.50 kSCPrefSystem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.51 kSCPropInterfaceName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.52 kSCPropMACAddress as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.53 kSCPropNet6to4Relay as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.54 kSCPropNetAirPortAllowNetCreation as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.55 kSCPropNetAirPortAuthPassword as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.56 kSCPropNetAirPortAuthPasswordEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.57 kSCPropNetAirPortJoinMode as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.58 kSCPropNetAirPortPowerEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.59 kSCPropNetAirPortPreferredNetwork as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.60 kSCPropNetAirPortSavePasswords as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.61 kSCPropNetDNSDomainName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.62 kSCPropNetDNSSearchDomains as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.63 kSCPropNetDNSServerAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.64 kSCPropNetDNSSortList as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.65 kSCPropNetEthernetMediaOptions as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.66 kSCPropNetEthernetMediaSubType as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.67 kSCPropNetEthernetMTU as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.68 kSCPropNetInterfaceDeviceName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.69 kSCPropNetInterfaceHardware as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.70 kSCPropNetInterfaces as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.71 kSCPropNetInterfaceSubType as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.72 kSCPropNetInterfaceSupportsModemOnHold as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.73 kSCPropNetInterfaceType as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.74 kSCPropNetIPv4Addresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.75 kSCPropNetIPv4BroadcastAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.76 kSCPropNetIPv4ConfigMethod as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.77 kSCPropNetIPv4DestAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.78 kSCPropNetIPv4DHCPClientID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.79 kSCPropNetIPv4Router as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.80 kSCPropNetIPv4SubnetMasks as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.81 kSCPropNetIPv6Addresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.82 kSCPropNetIPv6ConfigMethod as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.83 kSCPropNetIPv6DestAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.84 kSCPropNetIPv6Flags as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.85 kSCPropNetIPv6PrefixLength as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.86 kSCPropNetIPv6Router as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.87 kSCPropNetL2TPIPSecSharedSecret as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.88 kSCPropNetL2TPIPSecSharedSecretEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.89 kSCPropNetL2TPTransport as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.90 kSCPropNetLinkActive as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.91 kSCPropNetLinkDetaching as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.92 kSCPropNetLocalHostName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.93 kSCPropNetModemConnectionScript as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.94 kSCPropNetModemConnectSpeed as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.95 kSCPropNetModemDataCompression as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.96 kSCPropNetModemDialMode as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.97 kSCPropNetModemErrorCorrection as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.98 kSCPropNetModemHoldCallWaitingAudibleAlert as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.99 kSCPropNetModemHoldDisconnectOnAnswer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.100 kSCPropNetModemHoldEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.101 kSCPropNetModemHoldReminder as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.102 kSCPropNetModemHoldReminderTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.103 kSCPropNetModemNote as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.104 kSCPropNetModemPulseDial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.105 kSCPropNetModemSpeaker as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.106 kSCPropNetModemSpeed as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.107 kSCPropNetOverridePrimary as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.108 kSCPropNetPPPACSPEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.109 kSCPropNetPPPAuthEAPPlugins as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.110 kSCPropNetPPPAuthName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.111 kSCPropNetPPPAuthPassword as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.112 kSCPropNetPPPAuthPasswordEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.113 kSCPropNetPPPAuthPrompt as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.114 kSCPropNetPPPAuthProtocol as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.115 kSCPropNetPPPCCPEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.116 kSCPropNetPPPCommAlternateRemoteAddress as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.117 kSCPropNetPPPCommConnectDelay as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.118 kSCPropNetPPPCommDisplayTerminalWindow as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.119 kSCPropNetPPPCommRedialCount as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.120 kSCPropNetPPPCommRedialEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.121 kSCPropNetPPPCommRedialInterval as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.122 kSCPropNetPPPCommRemoteAddress as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.123 kSCPropNetPPPCommTerminalScript as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.124 kSCPropNetPPPCommUseTerminalScript as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.125 kSCPropNetPPPConnectTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.126 kSCPropNetPPPDeviceLastCause as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.127 kSCPropNetPPPDialOnDemand as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.128 kSCPropNetPPPDisconnectOnIdle as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.129 kSCPropNetPPPDisconnectOnIdleTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.130 kSCPropNetPPPDisconnectOnLogout as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.131 kSCPropNetPPPDisconnectOnSleep as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.132 kSCPropNetPPPDisconnectTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.133 kSCPropNetPPPIdleReminder as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.134 kSCPropNetPPPIdleReminderTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.135 kSCPropNetPPPIPCPCompressionVJ as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.136 kSCPropNetPPPLastCause as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.137 kSCPropNetPPPLCPCompressionACField as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.138 kSCPropNetPPPLCPCompressionPField as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.139 kSCPropNetPPPLCPEchoEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.140 kSCPropNetPPPLCPEchoFailure as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.141 kSCPropNetPPPLCPEchoInterval as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.142 kSCPropNetPPPLCPMRU as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.143 kSCPropNetPPPLCPMTU as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.144 kSCPropNetPPPLCPReceiveACCM as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.145 kSCPropNetPPPLCPTransmitACCM as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.146 kSCPropNetPPPLogfile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.147 kSCPropNetPPPOverridePrimary as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.148 kSCPropNetPPPPlugins as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.149 kSCPropNetPPPRetryConnectTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.150 kSCPropNetPPPSessionTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.151 kSCPropNetPPPStatus as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.152 kSCPropNetPPPUseSessionTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.153 kSCPropNetPPPVerboseLogging as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.154 kSCPropNetProxiesExceptionsList as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.155 kSCPropNetProxiesFTPEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.156 kSCPropNetProxiesFTPPassive as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.157 kSCPropNetProxiesFTPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.158 kSCPropNetProxiesFTPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.159 kSCPropNetProxiesGopherEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.160 kSCPropNetProxiesGopherPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.161 kSCPropNetProxiesGopherProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.162 kSCPropNetProxiesHTTPEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.163 kSCPropNetProxiesHTTPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.164 kSCPropNetProxiesHTTPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.165 kSCPropNetProxiesHTTPSEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.166 kSCPropNetProxiesHTTPSPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.167 kSCPropNetProxiesHTTPSProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.168 kSCPropNetProxiesRTSPEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.169 kSCPropNetProxiesRTSPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.170 kSCPropNetProxiesRTSPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.171 kSCPropNetProxiesSOCKSEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.172 kSCPropNetProxiesSOCKSPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.173 kSCPropNetProxiesSOCKSProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.174 kSCPropNetServiceOrder as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.175 kSCPropSystemComputerName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.176 kSCPropSystemComputerNameEncoding as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.177 kSCPropUserDefinedName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.178 kSCPropVersion as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.179 kSCResvInactive as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.
Notes: Value should be "___INACTIVE___"

175.4.180 kSCResvLink as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.
Notes: Value should be "___LINK___"

175.4.181 kSCValNetAirPortAuthPasswordEncryptionKeychain as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.182 kSCValNetAirPortJoinModeAutomatic as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.183 kSCValNetAirPortJoinModePreferred as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.184 kSCValNetAirPortJoinModeRecent as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.185 kSCValNetAirPortJoinModeStrongest as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.186 kSCValNetInterfaceSubTypeL2TP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.187 kSCValNetInterfaceSubTypePPPoE as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.188 kSCValNetInterfaceSubTypePPPSerial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.189 kSCValNetInterfaceSubTypePPTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.190 kSCValNetInterfaceType6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.191 kSCValNetInterfaceTypeEthernet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.192 kSCValNetInterfaceTypeFireWire as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.193 kSCValNetInterfaceTypePPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.194 kSCValNetIPv4ConfigMethodBOOTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.195 kSCValNetIPv4ConfigMethodDHCP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.196 kSCValNetIPv4ConfigMethodINFORM as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.197 kSCValNetIPv4ConfigMethodLinkLocal as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.198 kSCValNetIPv4ConfigMethodManual as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.199 kSCValNetIPv4ConfigMethodPPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.200 kSCValNetIPv6ConfigMethod6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.201 kSCValNetIPv6ConfigMethodAutomatic as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.202 kSCValNetIPv6ConfigMethodManual as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.203 kSCValNetIPv6ConfigMethodRouterAdvertisement as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.204 kSCValNetL2TPIPSecSharedSecretEncryptionKeychain as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.205 kSCValNetL2TPTransportIP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.206 kSCValNetL2TPTransportIPSec as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.207 kSCValNetModemDialModeIgnoreDialTone as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.208 kSCValNetModemDialModeManual as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.209 kSCValNetModemDialModeWaitForDialTone as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.210 kSCValNetPPPAuthPasswordEncryptionKeychain as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.211 kSCValNetPPPAuthPromptAfter as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.212 kSCValNetPPPAuthPromptBefore as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.213 kSCValNetPPPAuthProtocolCHAP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.214 kSCValNetPPPAuthProtocolEAP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.215 kSCValNetPPPAuthProtocolMSCHAP1 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.216 kSCValNetPPPAuthProtocolMSCHAP2 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.217 kSCValNetPPPAuthProtocolPAP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

175.4.218 LocalHostName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the current local host name.
Example:

```
dim s as new SystemConfigurationMBS
msgbox s.LocalHostName
```

Notes: Returns the current local host name; "" if the name has not been set or if an error was encountered.

175.4.219 Location as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the current location identifier.
Example:

```
dim s as new SystemConfigurationMBS
msgbox s.Location
```

Notes: Returns a string representing the current location identifier; "" if no location identifier has been defined or if an error was encountered.

175.4.220 MachineName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: The local machine name.

175.4.221 NetworkCheckReachabilityByAddress(ip as string, byref flags as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Determines if the given network address is reachable using the current network configuration.
Notes:

address: The network address of the desired host.
flags: An integer that will be filled with a set of SCNetworkConnectionFlags detailing the reachability of the specified address.
Returns true if the network connection flags are valid; false if the status could not be determined.
(see the SCNetworkReachabilityMBS class for more details)

175.4.222 NetworkCheckReachabilityByName(nodename as string, byref flags as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Determines if the given network host/node name is reachable using the current network configuration.
Notes:

nodename: The node name of the desired host.
flags: An integer that will be filled with a set of SCNetworkConnectionFlags detailing the reachability of the specified node name.
Returns true if the network connection flags are valid; false if the status could not be determined.
(see the SCNetworkReachabilityMBS class for more details)

175.4.223 NetworkInterfaceRefreshConfiguration(ifname as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Sends a notification to interested configuration agents to have them immediately retry their configuration over a particular network interface.
Notes:

This API must be invoked by root (uid == 0).
ifName: The BSD name of the network interface e.g. NewCFStringMBS("en0").
Returns true if the notification was sent; false otherwise.

175.4.224 ShortUserName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: The short user name.

175.4.225 UserName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: The user name.
Notes: The function UserName returns a string based on the read UID (RUID, as returned by getuid) of the calling process. This can result in unexpected behavior (that is, Name returning different results than ConsoleUser) for processes that manipulate their UID.

Chapter 176

Tapi

176.1 class ITAddressMBS

176.1.1 class ITAddressMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for an address.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

176.1.2 Methods

176.1.3 Calls as ITCallInfoMBS()

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an array of calls currently active on the address.
Notes: Sets lasterror property.

176.1.4 Constructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

176.1.5 CreateCall(DestAddress as string = """, AddressType as Integer = 1, MediaTypes as Integer = 0) as TAPICallControlMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new call.
Notes:

Creates a new Call object that can be used to make an outgoing call and returns a TAPICallControlMBS object. The newly created call is in the StateIdle state and has no media or terminals selected.

See also MediaTypes and LineAddressType constants.

176.1.6 Properties

176.1.7 AddressName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the displayable name of the address.
Notes:

Returns the containing a displayable address name.
Sets lasterror property.
(Read only property)

176.1.8 DialableAddress as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the text which can be used to connect to this address.
Notes:

The text corresponds to the destination address string that another application would use to connect to this address, such as a phone number or an e-mail name.
You can use this address with the CreateCall method.
Sets lasterror property.
(Read only property)

176.1.9 DoNotDisturb as Boolean

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the current status of the do not disturb feature on the address.
Notes:

The do not disturb feature may not be available on all addresses.
If true, the do not disturb feature has been activated. If false, the do not disturb feature is not active.
Sets lasterror property.
(Read and Write property)

176.1.10 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

This is an ITAddress* pointer.
(Read and Write property)

176.1.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Set by all the methods to indicate the last error.
Value is 0 if no error.
(Read and Write property)

176.1.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the last error.
Notes: (Read and Write property)

176.1.13 MessageWaiting as Boolean

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines if the address has a message waiting.
Notes:

Returns true if a message is waiting; false, if no message is waiting.
Sets lasterror property.
(Read and Write property)

176.1.14 ServiceProviderName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the name of the Telephony Service Provider (TSP) that supports this address.
Notes:

For example, Unimdm.tsp for the Unimodem service provider or H323.tsp for the H323 service provider.
Sets lasterror property.
(Read only property)

176.1.15 State as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the current state of the address.
Notes:

Sets lasterror property.
Can be StateInService or StateOutOfService.
(Read only property)

176.1.16 Constants

176.1.17 LineAddressTypeDomainName = 8

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the line address types.
Notes: Address type is a domain name.

176.1.18 LineAddressTypeEmailName = 4

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the line address types.
Notes: Address type is an e-mail name.

176.1.19 LineAddressTypeIPAddress = 16

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the line address types.
Notes: Address type is an IP address.

176.1.20 LineAddressTypePhoneNumber = 1

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the line address types.
Notes: Address type is a standard phone number.

176.1.21 LineAddressTypeSDP = 2

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the line address types.
Notes: Address type is Session Description Protocol (SDP) conference.

176.1.22 MediaTypeAudio = 8

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the media types.
Notes: An audio media stream that is entering or leaving the computer. An entering media stream would typically be played on speakers, or sent to a handset device and a leaving stream would typically be captured through a microphone or handset device.

176.1.23 MediaTypeDataModem = 16

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the media types.
Notes: A data media stream that is associated with a data modem.

176.1.24 MediaTypeG3Fax = 32

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the media types.
Notes: A data media stream that is associated with a G3 protocol fax.

176.1.25 MediaTypeMultiTrack = & h10000

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the media types.
Notes: A stream is on a multitrack terminal.

176.1.26 MediaTypeVideo = & h8000

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the media types.
Notes: A video media stream that is entering or leaving the computer. An entering media stream would typically be rendered in a video window and a leaving media stream would typically be captured with a video camera.

176.1.27 StateInService = 0

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the address state constants.
Notes: Normal state; the address can be used.

176.1.28 StateOutOfService = 1

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the address state constants.
Notes: The address is temporarily out of service, but may go back into service at some time.

176.2 class ITCallInfoMBS

176.2.1 class ITCallInfoMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for information about a call.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

176.2.2 Methods

176.2.3 Constructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

Lasterror is set.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

176.2.4 Properties

176.2.5 Address as ITAddressMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the address of the call.
Notes:

Lasterror is set.
(Read only property)

176.2.6 CalledIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the called location.
Notes:

Lasterror is set.

(Read only property)

176.2.7 CalledIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of the called location.
Notes:

Lasterror is set.
(Read only property)

176.2.8 CalledPartyFriendlyName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The called party friendly name.
Notes:

Lasterror is set.
(Read only property)

176.2.9 CallerIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the caller.
Notes:

Lasterror is set.
(Read only property)

176.2.10 CallerIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of the caller.
Notes:

Lasterror is set.
(Read only property)

176.2.11 CallingPartyID as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The identifier of the calling party.
Notes:

Lasterror is set.
(Read only property)

176.2.12 Comment as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A comment about the call provided by the application that originated the call. The call state must be StateIdle when setting the comment.
Notes:

Lasterror is set.
(Read only property)

176.2.13 ConnectedIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the connected location.
Notes:

Lasterror is set.
(Read only property)

176.2.14 ConnectedIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of the connected location.
Notes:

Lasterror is set.
(Read only property)

176.2.15 DisplayableAddress as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A displayable version of the called or calling address.
Notes:

Lasterror is set.
(Read only property)

176.2.16 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

This is an ITCallInfo* pointer.
(Read and Write property)

176.2.17 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Set by all the methods to indicate the last error.
Value is 0 if no error.
(Read and Write property)

176.2.18 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the last error.
Notes: (Read and Write property)

176.2.19 RedirectingIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the location that redirected the call.
Notes:

Lasterror is set.
(Read only property)

176.2.20 RedirectingIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of the location that redirected the call.
Notes:

Lasterror is set.
(Read only property)

176.2.21 RedirectionIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the location to which a call has been redirected.
Notes:

Lasterror is set.
(Read only property)

176.2.22 RedirectionIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of the location to which a call has been redirected.
Notes:

Lasterror is set.
(Read only property)

176.2.23 State as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current state call.
Notes:

Can be StateConnected, StateDisconnected, StateHold, StateIdle, StateInProgress, StateOffering or StateQueued.
Lasterror is set.
(Read only property)

176.2.24 Constants

176.2.25 StateConnected = 2

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: Call has been connected to the remote end and communication can take place.

176.2.26 StateDisconnected = 3

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: Call has been disconnected. There are several causes for disconnection. See the table of valid call state transitions below.

176.2.27 StateHold = 5

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: The call is in the hold state.

176.2.28 StateIdle = 0

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: The call has been created, but Connect has not been called yet. A call can never transition into the idle state. This is the initial state for both incoming and outgoing calls.

176.2.29 StateInProgress = 1

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: Connect has been called, and the service provider is working on making a connection. This state is valid only on outgoing calls. This message is optional, because a service provider may have a call transition directly to the connected state.

176.2.30 StateOffering = 4

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: A new call has appeared, and is being offered to an application. If the application has owner privileges on the call, it can either call Answer or Disconnect while the call is in the offering state. Current call privilege can be determined by calling Privilege.

176.2.31 StateQueued = 6

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: The call is queued.

176.3 class TAPICallControlMBS

176.3.1 class TAPICallControlMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The interface used by the application to connect, answer, and perform basic telephony operations on a call object.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

176.3.2 Methods

176.3.3 Answer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: answers an incoming call.
Notes:

This method can succeed only if the call state is StateOffering.
Lasterror is set.

176.3.4 BlindTransfer(DestAddress as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: performs a blind or single-step transfer of the specified call to the specified destination address.
Notes:

The application must be the owner of the call. After a successful transfer, the call state transitions to StateDisconnected.

DestAddress: Text containing destination address for the transfer.
Lasterror is set.

176.3.5 Conference(otherCall as TAPICallControlMBS, sync as boolean)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a consultation call to the conference in which the current call is a participant.
Notes:

If an associated ITCallHub object does not exist, it is created.

otherCall: The consultation call.
Sync: Indicates whether the call should be conferenced synchronously (true) or asynchronously (false). See Connect method for additional explanation.
Lasterror is set.

176.3.6 Connect(sync as boolean)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Attempts to complete the connection of an outgoing call.
Notes:

Sync: Boolean indicating whether connection is to be performed synchronously (true) or asynchronously (false).

If the call is asynchronous, the application will receive information about the call's progress through the TAPIMBS CallStateChanged event. Connect may return no error, but the actual connection may fail (and the application will be notified through the event).
If the call is synchronous, this method will not return until the call is in the connected state or fails.
Lasterror is set.

To make a call, please find the ITAddressMBS for the line, use CreateCall there. Than use TAPICallControlMBS.Connect here.

176.3.7 Constructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

176.3.8 Dial(DestAddress as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Dials the specified address.
Notes:

DestAddress: Representation of address to be dialed. The format must conform to a standard dialable address.

Lasterror is set.

176.3.9 Disconnect(Mode as Integer)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Disconnects the call.
Notes:

The call state will transition to StateDisconnected after the method completes successfully.
Pass DisconnectModeNoAnswer, DisconnectModeNormal or DisconnectModeReject.
Lasterror is set.

176.3.10 Finish(Mode as Integer)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Called on a consultation call to finish a conference or a transfer.
Notes:

Pass FinishModeAsConference or FinishModeAsTransfer.
Lasterror is set.

176.3.11 HandoffDirect(ApplicationName as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Hands off the call to another application.
Notes:

This indicates that the application no longer requires ownership of the call.

ApplicationName: Text containing the specific application name to hand off call to. Can be full path name or executable name.
Lasterror is set.

176.3.12 HandoffIndirect(MediaType as Integer)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Hands off the call to another application based on the media type of the call.
Notes:

If multiple applications have registered as able to handle the types involved, TAPI will hand off to the highest-priority application, which is usually the one that registered first.
This indicates that the application no longer requires ownership of the call.

for media types, please check constants in ITAddressMBS class and this website:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms734210(v=vs.85).aspx
Lasterror is set.

176.3.13 Hold(hold as boolean)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Places or removes the call from the hold.
Notes:

If Hold is true and the method succeeds, the call state transitions to the StateHold state. If Hold is false, the call state transitions to StateConnected.
Lasterror is set.

176.3.14 ParkDirect(ParkAddress as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parks the call at a specified address.
Notes:

ParkAddress: Text containing the address where the call is to be parked.
Lasterror is set.

176.3.15 ParkIndirect as string

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parks the call and returns the parked address.
Notes:

Returns representation of the address where the call was parked.
Lasterror is set.

176.3.16 Pickup(GroupID as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Picks up a call alerting at the specified group identification.
Notes:

GroupID: The group identifier to which the alerting station belongs.
Lasterror is set.

176.3.17 RemoveFromConference

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Removes the call from a conference if it is involved in one.
Notes: Lasterror is set.

176.3.18 SetQOS(MediaType as Integer, ServiceLevel as Integer)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the quality of service level for the call.
Notes:

for media types, please check constants in ITAddressMBS class and this website:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms734210(v=vs.85).aspx

Lasterror is set.

176.3.19 SwapHold(otherCall as TAPICallControlMBS)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Swaps the call (which is active) with the specified call on hold.
Notes:

Swapping the active call with the call on consultation hold allows the application to toggle between these two calls. This is typical in call waiting.
OtherCall: Call, currently on hold, that is to be made active.
Lasterror is set.

176.3.20 Transfer(otherCall as TAPICallControlMBS, sync as boolean)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Transfers the current call to the destination address.
Notes:

otherCall: Other interface of consultation call created for the transfer.
Sync: Indicates whether the method should be completed synchronously (true) or asynchronously (false).
Lasterror is set.

176.3.21 Unpark

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the call from park.
Notes:

To unpark a call, CreateCall must be called using as the destination address the current parked location of the call.
Lasterror is set.

176.3.22 Properties

176.3.23 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

This is an ITBasicCallControl* pointer.
(Read and Write property)

176.3.24 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Set by all the methods to indicate the last error.
Value is 0 if no error.
(Read and Write property)

176.3.25 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the last error.
Notes: (Read and Write property)

176.3.26 Constants

176.3.27 DisconnectModeNoAnswer = 1

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the disconnect modes.
Notes:

The call is being disconnected because it has not been answered.
(For example, an application may set a certain amount of time for the user to answer the call. If the user does not answer, the application can call Disconnect with the NOANSWER code.)
Lasterror is set.

176.3.28 DisconnectModeNormal = 0

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the disconnect modes.
Notes:

The call is being disconnected as part of the normal cycle of the call.
Lasterror is set.

176.3.29 DisconnectModeReject = 2

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the disconnect modes.
Notes:

The user rejected the offered call.
Lasterror is set.

176.3.30 FinishModeAsConference = 1

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the finish mode constants.
Notes:

A call is being added to a conference call.
Lasterror is set.

176.3.31 FinishModeAsTransfer = 0

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the finish mode constants.
Notes:

A call transfer is being finished.
Lasterror is set.

176.3.32 QualityOfServerLevelBestEffort = 2

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the QOS level constants.
Notes: Quality of service level desired is "best effort".

176.3.33 QualityOfServerLevelIfAvailable = 1

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the QOS level constants.
Notes: Quality of service level desired if available.

176.3.34 QualityOfServerLevelNeeded = 0

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the QOS level constants.
Notes: Quality of service level required.

176.4 class TAPIMBS

176.4.1 class TAPIMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The central class for TAPI.
Notes: MBS Plugin implements TAPI (telephone API) on Windows to catch incoming calls, so you can display e.g. customer data for the phone number when customer calls. Also you can create new call objects to dial or query information on calls or addresses.

176.4.2 Methods

176.4.3 Addresses as ITAddressMBS()

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an array with all addresses.
Notes: Lasterror is set.

176.4.4 Available as boolean

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether TAPI is available.
Notes: Returns true on Windows and false elsewhere.

176.4.5 Constructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

176.4.6 Destructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

176.4.7 ListenOnAllAddresses

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries list of addresses and registers event handlers to receive events.
Notes:

Please call this method to get the IncomingCall event working.
Lasterror is set.

176.4.8 Properties

176.4.9 EventFilter as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event filter.
Notes:

The plugin sets this to EventCallNotification + EventCallState automatically.

See constants:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms734238(v=vs.85).aspx
(Read and Write property)

176.4.10 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

This is an ITTAPI* pointer.
(Read and Write property)

176.4.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Set by all the methods to indicate the last error.
Value is 0 if no error.

(Read and Write property)

176.4.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the last error.
Notes: (Read and Write property)

176.4.13 Events

176.4.14 CallStateChanged(CallInfo as ITCallInfoMBS)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: .

Function: The call state changed.
Notes: The Call state has changed.

176.4.15 IncomingCall(CallInfo as ITCallInfoMBS, BasicCallControl as TAPI-CallControlMBS)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: .

Function: A new call is incoming.

176.4.16 Constants

176.4.17 EventCallNotification = & h4

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the event types.
Notes: A new communications session has appeared on the address and the TAPI DLL has created a new call object. This could be a result from an incoming session, a session handed off by another application, or a session being parked on the address.

176.4.18 EventCallState = & h8

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the event types.
Notes: The Call state has changed.

Chapter 177

Tidy

177.1 class TidyAttributeMBS

177.1.1 class TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: An attribute of a node.

177.1.2 Blog Entries

- MBS Xojo Plugins, version 17.4pr3
- MBS REALbasic Plugins, version 10.5pr4

177.1.3 Blog Entries

- MBS Xojo Plugins, version 17.4pr3
- MBS REALbasic Plugins, version 10.5pr4

177.1.4 Properties

177.1.5 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The document of this attribute.
Notes: (Read only property)

177.1.6 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The attribute ID.
Notes: (Read only property)

177.1.7 IsABBR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the ABBR attribute.
Notes: (Read only property)

177.1.8 IsALINK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the ALINK attribute.
Notes: (Read only property)

177.1.9 IsALT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the ALT attribute.
Notes: (Read only property)

177.1.10 IsBGCOLOR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the BGCOLOR attribute.
Notes: (Read only property)

177.1.11 IsCHECKED as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the CHECKED attribute.
Notes: (Read only property)

177.1.12 IsCOLSPAN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the COLSPAN attribute.
Notes: (Read only property)

177.1.13 IsCONTENT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the CONTENT attribute.
Notes: (Read only property)

177.1.14 IsDATAFLD as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the DATAFLD attribute.
Notes: (Read only property)

177.1.15 IsEvent as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the Event attribute.
Notes: (Read only property)

177.1.16 IsFOR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the FOR attribute.
Notes: (Read only property)

177.1.17 IsHEIGHT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the HEIGHT attribute.
Notes: (Read only property)

177.1.18 IsHREF as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the HREF attribute.
Notes: (Read only property)

177.1.19 IsHTTP_EQUIV as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the HTTP_EQUIV attribute.
Notes: (Read only property)

177.1.20 IsID as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the ID attribute.
Notes: (Read only property)

177.1.21 IsISMAP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the ISMAP attribute.
Notes: (Read only property)

177.1.22 IsLANG as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the LANG attribute.
Notes: (Read only property)

177.1.23 IsLANGUAGE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the LANGUAGE attribute.
Notes: (Read only property)

177.1.24 IsLINK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the LINK attribute.
Notes: (Read only property)

177.1.25 IsLONGDESC as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the LONGDESC attribute.
Notes: (Read only property)

177.1.26 IsNAME as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the NAME attribute.
Notes: (Read only property)

177.1.27 IsOnBLUR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnBLUR attribute.
Notes: (Read only property)

177.1.28 IsOnCLICK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnCLICK attribute.
Notes: (Read only property)

177.1.29 IsOnFOCUS as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnFOCUS attribute.
Notes: (Read only property)

177.1.30 IsOnKEYDOWN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnKEYDOWN attribute.
Notes: (Read only property)

177.1.31 IsOnKEYPRESS as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnKEYPRESS attribute.
Notes: (Read only property)

177.1.32 IsOnKEYUP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnKEYUP attribute.
Notes: (Read only property)

177.1.33 IsOnMOUSEDOWN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnMOUSEDOWN attribute.
Notes: (Read only property)

177.1.34 IsOnMOUSEMOVE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnMOUSEMOVE attribute.
Notes: (Read only property)

177.1.35 IsOnMOUSEOUT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnMOUSEOUT attribute.
Notes: (Read only property)

177.1.36 IsOnMOUSEOVER as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnMOUSEOVER attribute.
Notes: (Read only property)

177.1.37 IsOnMOUSEUP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnMOUSEUP attribute.
Notes: (Read only property)

177.1.38 IsProp as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the Prop attribute.
Notes: (Read only property)

177.1.39 IsREL as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the REL attribute.
Notes: (Read only property)

177.1.40 IsROWSPAN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the ROWSPAN attribute.
Notes: (Read only property)

177.1.41 IsSELECTED as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the SELECTED attribute.
Notes: (Read only property)

177.1.42 IsSRC as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the SRC attribute.
Notes: (Read only property)

177.1.43 IsSTYLE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the STYLE attribute.
Notes: (Read only property)

177.1.44 IsSUMMARY as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the SUMMARY attribute.
Notes: (Read only property)

177.1.45 IsTARGET as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the TARGET attribute.
Notes: (Read only property)

177.1.46 IsTEXT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the TEXT attribute.
Notes: (Read only property)

177.1.47 IsTITLE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the TITLE attribute.
Notes: (Read only property)

177.1.48 IsTYPE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the TYPE attribute.
Notes: (Read only property)

177.1.49 IsUSEMAP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the USEMAP attribute.
Notes: (Read only property)

177.1.50 IsVALUE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the VALUE attribute.
Notes: (Read only property)

177.1.51 IsVLINK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the VLINK attribute.
Notes: (Read only property)

177.1.52 IsWIDTH as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the WIDTH attribute.
Notes: (Read only property)

177.1.53 IsXMLNS as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the XMLNS attribute.
Notes: (Read only property)

177.1.54 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the attribute.
Notes: (Read only property)

177.1.55 NextAttribute as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next attribute in the attribute list of the node.
Notes: (Read only property)

177.1.56 Value as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the attribute.
Notes: (Read only property)

177.2 module TidyAttrIdMBS

177.2.1 module TidyAttrIdMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

177.2.2 Constants

177.2.3 TidyAttrABBR=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.2.4 TidyAttrABOUT=315

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.5 TidyAttrACCEPT=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.2.6 TidyAttrACCEPT_CHARSET=3

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.2.7 TidyAttrACCESSKEY=4

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.2.8 TidyAttrACTION=5

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.2.9 TidyAttrADD_DATE=6

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.2.10 TidyAttrALIGN=7

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.2.11 TidyAttrALINK=8

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.2.12 TidyAttrALLOWFULLSCREEN=9

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.13 TidyAttrALT=10

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.14 TidyAttrARCHIVE=11

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.15 TidyAttrARIA_ACTIVEDESCENDANT=271

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.16 TidyAttrARIA_ATOMIC=272

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.17 TidyAttrARIA_AUTOCOMPLETE=273

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.18 TidyAttrARIA_BUSY=274

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.19 TidyAttrARIA_CHECKED=275

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.20 TidyAttrARIA_CONTROLS=276

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.21 TidyAttrARIA_DESCRIBEDBY=277

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.22 TidyAttrARIA_DISABLED=278

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.23 TidyAttrARIA_DROPEFFECT=279

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.24 TidyAttrARIA_EXPANDED=280

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.2.25 TidyAttrARIA_FLOWTO=281

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.3 module TidyConfigCategoryMBS

177.3.1 module TidyConfigCategoryMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

177.3.2 Constants

177.3.3 TidyDiagnostics=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.3.4 TidyEncoding=3

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.3.5 TidyMarkup=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.3.6 TidyMiscellaneous=4

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.3.7 TidyPrettyPrint=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.4 module TidyDoctypeModesMBS

177.4.1 module TidyDoctypeModesMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

177.4.2 Constants

177.4.3 TidyDoctypeAuto=2

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.4.4 TidyDoctypeHtml5=0

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.4.5 TidyDoctypeLoose=4

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.4.6 TidyDoctypeOmit=1

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.4.7 TidyDoctypeStrict=3

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.4.8 TidyDoctypeUser=5

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.5 class TidyDocumentMBS

177.5.1 class TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A document in the tidy library.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

Notes: The main class for using the tidy library in Xojo.

177.5.2 Blog Entries

- MBS Xojo Plugins, version 19.4pr2
- MBS Xojo Plugins, version 17.2pr2

177.5.3 Blog Entries

- MBS Xojo Plugins, version 19.4pr2
- MBS Xojo Plugins, version 17.2pr2

177.5.4 Methods

177.5.5 AccessWarningCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of Tidy accessibility warnings encountered.

177.5.6 Body as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The body node in the html tree.

177.5.7 CleanAndRepair as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Execute configured cleanup and repair operations on parsed markup.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

177.5.8 ConfigErrorCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of Tidy configuration errors encountered.

177.5.9 CopyConfig(otherDocument as TidyDocumentMBS) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy current configuration settings from one document to another.

177.5.10 DetectedGenericXml as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input is generic XML (not HTML or XHTML)?

177.5.11 DetectedHtmlVersion as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Detected HTML version: 0, 2, 3 or 4.

177.5.12 DetectedXhtml as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input is XHTML?

177.5.13 ErrorBuffer as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the error text save in the error buffer.
Notes: You need to use InstallErrorBuffer before using this function.

177.5.14 ErrorCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of Tidy errors encountered.
Notes: If >0, output is suppressed unless ForceOutput is set.

177.5.15 ErrorSummary

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write more complete information about errors to current error sink.

177.5.16 FileExists(filename as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the file with that name exists.

177.5.17 GeneralInfo

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write more general information about markup to current error sink.

177.5.18 GetBooleanOption(OptionID as Integer) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the value of a boolean option.

177.5.19 GetIntegerOption(OptionID as Integer) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the value of an integer option.

177.5.20 GetStringOption(OptionID as Integer) as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the value of a string option.

177.5.21 Head as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The head node in the html tree.

177.5.22 Html as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The html node in the html tree.

177.5.23 InstallErrorBuffer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs an error buffer.
Notes: Use ErrorBuffer to get the text later.

177.5.24 LibraryVersion as string

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version number of the library.

177.5.25 LoadConfigFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Load an ASCII Tidy configuration file.

177.5.26 LoadConfigFileWithEncoding(Filename as string, CharacterEncoding as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Load a Tidy configuration file with the specified character encoding.

177.5.27 NextOption(Iterator as TidyIteratorMBS) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the next option in the list.

177.5.28 NextRelatedOption(Iterator as TidyIteratorMBS) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get next related option.

177.5.29 NextUserDeclaredTag(OptionID as Integer, Iterator as TidyIteratorMBS) as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get next declared tag of specified type: TidyInlineTags, TidyBlockTags, TidyEmptyTags or TidyPreTags.
Notes: See TidyOptionIdMBS for constants.

177.5.30 OptionCharcterEncodingName(OptionID as Integer) as String

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get character encoding name.
Notes: Used with TidyCharEncoding, TidyOutCharEncoding, TidyInCharEncoding options.

177.5.31 OptionCurrentPick(OptionID as Integer) as String

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get current pick list value for option by ID.
Notes: Useful for enum types.

177.5.32 OptionForID(OptionID as Integer) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds option based on given ID.
Notes: Returns nil on failure.

177.5.33 OptionForName(OptionName as string) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds option by name.

177.5.34 OptionIDForName(OptionName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds Option by name.
Notes: Returns nil on failure.

177.5.35 OptionList as TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: An iterator running through all the options available.

177.5.36 OptionResetToDefault(OptionID as Integer) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the option to default value.

177.5.37 OptionsDifferentThanDefault as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Any settings different than default?

177.5.38 OptionsDifferentThanSnapshot as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Any settings different than snapshot?

177.5.39 OptionsResetAllToDefault as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reset all options to their default values.

177.5.40 OptionsResetToSnapshot as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reset config settings to snapshot (after document processing).

177.5.41 OptionsSnapshot as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Take a snapshot of current config settings.

177.5.42 ParseFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parse markup in named file.

177.5.43 ParseSource(theInput as TidyInputMBS) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parse markup in given generic input source.

177.5.44 ParseString(data as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parse markup in given string.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

177.5.45 ParseStringOption(OptionName as string, value as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a string to set an option.
Example:

```
dim t as new TidyDocumentMBS

MsgBox str(t.OptionQuiet)
dim b1 as boolean = t.ParseStringOption("Quiet","true")
MsgBox str(t.OptionQuiet)

dim b2 as boolean = t.ParseStringOption("Quiet","false")
MsgBox str(t.OptionQuiet)
```

Notes:

Useful if you don't know the type of the option.
Returns true on success and false on failure.

177.5.46 RelatedOptionsList(Option as TidyOptionMBS) as TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate over a list of related options.

177.5.47 ReleaseDate as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get release date (version) for current library.

177.5.48 ReportDoctype as Integer

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The report document type.

177.5.49 Root as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The root node in the html tree.

177.5.50 RunDiagnostics as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Run configured diagnostics on parsed and repaired markup.
Notes: Must call CleanAndRepair first.

177.5.51 SaveConfig(theOutput as TidyOutputMBS) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Save current settings to given output sink.
Notes: Only non-default values are written.

177.5.52 SaveConfigFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Save current settings to named file.
Notes: Only non-default values are written.

177.5.53 SaveFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Save to named file.

177.5.54 SaveOutput(theOutput as TidyOutputMBS) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Save to given generic output.

177.5.55 SaveString as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Save to a string.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

Notes:

Returns "" on failure.

The returned string has no encoding set. You need to use DefineEncoding.

177.5.56 SetBooleanOption(OptionID as Integer, value as boolean) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option with a given boolean value.
Notes: Returns true on success and false on failure.

177.5.57 SetCharacterEncoding(encodingName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the input/output character encoding for parsing markup.
Notes: Values include: ascii, latin1, raw, utf8, iso2022, mac, win1252, utf16le, utf16be, utf16, big5 and shiftjis. Case in-sensitive.

177.5.58 SetErrorFile(filename as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Redirects error output to named file.
Notes: Returns true on success.

177.5.59 SetInputCharacterEncoding(encodingName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the input character encoding for parsing markup.
Example:

```
dim t as new TidyDocumentMBS

MsgBox str(t.OptionInCharEncoding)
call t.SetInputCharacterEncoding "utf8"
MsgBox str(t.OptionInCharEncoding)
```

Notes: Values include: ascii, latin1, raw, utf8, iso2022, mac, win1252, utf16le, utf16be, utf16, big5 and shiftjis. Case in-sensitive.

177.5.60 SetIntegerOption(OptionID as Integer, value as Integer) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option with a given integer value.
Notes: Returns true on success and false on failure.

177.5.61 SetOutputCharacterEncoding(encodingName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the output character encoding for parsing markup.
Notes: Values include: ascii, latin1, raw, utf8, iso2022, mac, win1252, utf16le, utf16be, utf16, big5 and shiftjis. Case in-sensitive.

177.5.62 SetStringOption(OptionID as Integer, value as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option with a given string value.
Notes: Returns true on success and false on failure.

177.5.63 Status as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get status of current document.

177.5.64 UserDeclaredTagList as TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate over user declared tags.

177.5.65 WarningCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of warnings encountered.

177.5.66 Properties

177.5.67 ErrorOutput as TidyOutputMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output where the error report is written to.
Notes: (Read and Write property)

177.5.68 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal reference to the tidy document object.
Notes: (Read only property)

177.5.69 OptionAccessibilityCheck as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option accessibility-check.
Notes:

This option specifies what level of accessibility checking, if any, that Tidy should perform.
Level 0 (Tidy Classic) is equivalent to Tidy Classic's accessibility checking.
For more information on Tidy's accessibility checking, visit Tidy's Accessibility Page (http://www.html-tidy.org/accessibility/).
(Read and Write property)

177.5.70 OptionAccessibilityCheckLevel as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies what level of accessibility checking, if any, that Tidy should do.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Level 0 is equivalent to Tidy Classic's accessibility checking. For more information on Tidy's accessibility checking, visit the Adaptive Technology Resource Centre at the University of Toronto. :

http://www.aprompt.ca/Tidy/accessibilitychecks.html
(Read and Write property)

177.5.71 OptionAddXmlDecl as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option add-xml-decl.
Notes:

This option specifies if Tidy should add the XML declaration when outputting XML or XHTML.
Note that if the input already includes an & lt;?xml ... ?& gt; declaration then this option will be ignored.
If the encoding for the output is different from ascii, one of the utf* encodings, or raw, then the declaration is always added as required by the XML standard.
(Read and Write property)

177.5.72 OptionAddXmlSpace as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option add-xml-space.
Notes:

This option specifies if Tidy should add xml:space="preserve" to elements such as & lt;pre& gt;, & lt;style& gt; and & lt;script& gt; when generating XML.
This is needed if the whitespace in such elements is to be parsed appropriately without having access to the DTD.
(Read and Write property)

177.5.73 OptionAltText as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option alt-text.
Notes:

This option specifies the default alt= text Tidy uses for & lt;img& gt; attributes when the alt= attribute is missing.
Use with care, as it is your responsibility to make your documents accessible to people who cannot see the images.
(Read and Write property)

177.5.74 OptionAnchorAsName as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option anchor-as-name.
Notes:

This option controls the deletion or addition of the name attribute in elements where it can serve as anchor.
If set to yes a name attribute, if not already existing, is added along an existing id attribute if the DTD allows it.
If set to no any existing name attribute is removed if an id attribute exists or has been added.
(Read and Write property)

177.5.75 OptionAsciiChars as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option ascii-chars.
Notes:

Can be used to modify behavior of the clean option when set to yes.
If set to yes when using clean, & amp;emdash;, & amp;rdquo;, and other named character entities are downgraded to their closest ASCII equivalents.
(Read and Write property)

177.5.76 OptionAssumeXmlProcins as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option assume-xml-procins.
Notes:

This option specifies if Tidy should change the parsing of processing instructions to require ?& gt; as the terminator rather than & gt;.
This option is automatically set if the input is in XML.

(Read and Write property)

177.5.77 OptionBare as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option bare.
Notes:

This option specifies if Tidy should strip Microsoft specific HTML from Word 2000 documents, and output spaces rather than non-breaking spaces where they exist in the input.
(Read and Write property)

177.5.78 OptionBlockTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies new block-level tags.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Note you can't change the content model for elements such as <TABLE>, <UL>, <OL>and <DL>. This option is ignored in XML mode.
(Read and Write property)

177.5.79 OptionBodyOnly as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should print only the contents of the body tag as an HTML fragment.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

If set to "auto", this is performed only if the body tag has been inferred. Useful for incorporating existing whole pages as a portion of another page. This option has no effect if XML output is requested.

Value is 0 for no, 1 for yes and 2 for auto.
(Read and Write property)

177.5.80 OptionBreakBeforeBr as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option break-before-br.
Notes:

This option specifies if Tidy should output a line break before each & lt;br& gt; element.
(Read and Write property)

177.5.81 OptionCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option char-encoding.
Notes:

This option specifies the character encoding Tidy uses for both the input and output.
For ascii Tidy will accept Latin-1 (ISO-8859-1) character values, but will use entities for all characters whose value & gt;127.
For raw, Tidy will output values above 127 without translating them into entities.
For latin1, characters above 255 will be written as entities.
For utf8, Tidy assumes that both input and output are encoded as UTF-8.
You can use iso2022 for files encoded using the ISO-2022 family of encodings e.g. ISO-2022-JP.
For mac and win1252, Tidy will accept vendor specific character values, but will use entities for all characters whose value & gt;127.
For unsupported encodings, use an external utility to convert to and from UTF-8.
(Read and Write property)

177.5.82 OptionClean as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option clean.
Notes:

This option specifies if Tidy should perform cleaning of some legacy presentational tags (currently & lt;i& gt;, & lt;b& gt;, & lt;center& gt; when enclosed within appropriate inline tags, and & lt;font& gt;). If set to yes then legacy tags will be replaced with CSS & lt;style& gt; tags and structural markup as appropriate.
(Read and Write property)

177.5.83 OptionCoerceEndtags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option coerce-endtags.
Notes:

This option specifies if Tidy should coerce a start tag into an end tag in cases where it looks like an end tag was probably intended; for example, given
& lt;span& gt;foo & lt;b& gt;bar& lt;b& gt; baz& lt;/span& gt;
Tidy will output
& lt;span& gt;foo & lt;b& gt;bar& lt;/b& gt; baz& lt;/span& gt;
(Read and Write property)

177.5.84 OptionCssPrefix as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option css-prefix.
Notes:

This option specifies the prefix that Tidy uses for styles rules.
By default, c will be used.
(Read and Write property)

177.5.85 OptionDecorateInferredUl as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option decorate-inferred-ul.
Notes:

This option specifies if Tidy should decorate inferred & lt;ul& gt; elements with some CSS markup to avoid indentation to the right.
(Read and Write property)

177.5.86 OptionDoctype as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option doctype.
Notes:

This option specifies the DOCTYPE declaration generated by Tidy.
If set to omit the output won't contain a DOCTYPE declaration. Note this this also implies numeric-entities is set to yes.
If set to html5 the DOCTYPE is set to & lt;!DOCTYPE html& gt;.
If set to auto (the default) Tidy will use an educated guess based upon the contents of the document.
If set to strict, Tidy will set the DOCTYPE to the HTML4 or XHTML1 strict DTD.
If set to loose, the DOCTYPE is set to the HTML4 or XHTML1 loose (transitional) DTD.
Alternatively, you can supply a string for the formal public identifier (FPI).

For example:
doctype: "-//ACME//DTD HTML 3.14159//EN"
If you specify the FPI for an XHTML document, Tidy will set the system identifier to an empty string. For an HTML document, Tidy adds a system identifier only if one was already present in order to preserve the processing mode of some browsers. Tidy leaves the DOCTYPE for generic XML documents unchanged.
This option does not offer a validation of document conformance.
(Read and Write property)

177.5.87 OptionDoctypeMode as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option doctype-mode.
Notes:

(Read only property)

177.5.88 OptionDropEmptyElements as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option drop-empty-elements.
Notes:

This option specifies if Tidy should discard empty elements.
(Read and Write property)

177.5.89 OptionDropEmptyParas as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option drop-empty-paras.
Notes:

This option specifies if Tidy should discard empty paragraphs.
(Read and Write property)

177.5.90 OptionDropFontTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option drop-font-tags.
Notes:

Deprecated; do not use. This option is destructive to & lt;font& gt; tags, and it will be removed from future versions of Tidy. Use the clean option instead.
If you do set this option despite the warning it will perform as clean except styles will be inline instead of put into a CSS class. & lt;font& gt; tags will be dropped completely and their styles will not be preserved.
If both clean and this option are enabled, & lt;font& gt; tags will still be dropped completely, and other styles will be preserved in a CSS class instead of inline.
See clean for more information.
(Read and Write property)

177.5.91 OptionDropPropAttrs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should strip out proprietary attributes, such as MS data binding attributes.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.92 OptionDropProprietaryAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option drop-proprietary-attributes.
Notes:

This option specifies if Tidy should strip out proprietary attributes, such as Microsoft data binding attributes. Additionally attributes that aren't permitted in the output version of HTML will be dropped if used with strict-tags-attributes.
(Read and Write property)

177.5.93 OptionDuplicateAttrs as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the options.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.94 OptionEmacs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should change the format for reporting errors and warnings to a format that is more easily parsed by GNU Emacs.

Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.95 OptionEmacsFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used internally.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.96 OptionEmptyTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies new empty inline tags.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Remember to also declare empty tags as either inline or blocklevel. This option is ignored in XML mode.
(Read and Write property)

177.5.97 OptionEncloseBlockText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option enclose-block-text.
Notes:

This option specifies if Tidy should insert a & lt;p& gt; element to enclose any text it finds in any element that allows mixed content for HTML transitional but not HTML strict.
(Read and Write property)

177.5.98 OptionEncloseBodyText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should enclose any text it finds in the body element within a <P>element.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This is useful when you want to take existing HTML and use it with a style sheet.
(Read and Write property)

177.5.99 OptionEncloseText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option enclose-text.
Notes:

This option specifies if Tidy should enclose any text it finds in the body element within a & lt;p& gt; element. This is useful when you want to take existing HTML and use it with a style sheet.
(Read and Write property)

177.5.100 OptionErrFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the error file Tidy uses for errors and warnings.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Normally errors and warnings are output to "stderr".
(Read and Write property)

177.5.101 OptionErrorFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option error-file.
Notes:

This option specifies the error file Tidy uses for errors and warnings. Normally errors and warnings are output to stderr.
(Read and Write property)

177.5.102 OptionEscapeCdata as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option escape-cdata.
Notes:

This option specifies if Tidy should convert & lt;! [CDATA [ ]] & gt; sections to normal text.
(Read and Write property)

177.5.103 OptionEscapeScripts as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option escape-scripts.
Notes:

This option causes items that look like closing tags, like & lt;/g to be escaped to & lt;\/g. Set this option to 'no' if you do not want this.
(Read and Write property)

177.5.104 OptionFixBackslash as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option fix-backslash.
Notes:

This option specifies if Tidy should replace backslash characters \in URLs with forward slashes /.
(Read and Write property)

177.5.105 OptionFixBadComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option fix-bad-comments.
Notes:

This option specifies if Tidy should replace unexpected hyphens with = characters when it comes across adjacent hyphens.
The default is yes.
This option is provided for users of Cold Fusion which uses the comment syntax: & lt;!— —& gt;.
(Read and Write property)

177.5.106 OptionFixComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should replace unexpected hyphens with "=" characters when it comes across adjacent hyphens.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

The default is yes. This option is provided for users of Cold Fusion which uses the comment syntax: <!——>
(Read and Write property)

177.5.107 OptionFixUri as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option fix-uri.
Notes:

This option specifies if Tidy should check attribute values that carry URIs for illegal characters and if such are found, escape them as HTML4 recommends.
(Read and Write property)

177.5.108 OptionForceOutput as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option force-output.
Notes:

This option specifies if Tidy should produce output even if errors are encountered.
Use this option with care; if Tidy reports an error, this means Tidy was not able to (or is not sure how to) fix the error, so the resulting output may not reflect your intention.
(Read and Write property)

177.5.109 OptionGdoc as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option gdoc.
Notes:

This option specifies if Tidy should enable specific behavior for cleaning up HTML exported from Google Docs.

(Read and Write property)

177.5.110 OptionGnuEmacs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option gnu-emacs.
Notes:

This option specifies if Tidy should change the format for reporting errors and warnings to a format that is more easily parsed by GNU Emacs.
(Read and Write property)

177.5.111 OptionGnuEmacsFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option gnu-emacs-file.
Notes:

Used internally.
(Read and Write property)

177.5.112 OptionHideComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option hide-comments.
Notes:

This option specifies if Tidy should print out comments.
(Read and Write property)

177.5.113 OptionHideEndtags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option hide-endtags.
Notes:

This option is an alias for omit-optional-tags.
(Read and Write property)

177.5.114 OptionHtmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should generate pretty printed output, writing it as HTML.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.115 OptionInCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the character encoding Tidy uses for the input.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

See char-encoding for more info.
(Read and Write property)

177.5.116 OptionIndent as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent.
Notes:

This option specifies if Tidy should indent block-level tags.
If set to auto Tidy will decide whether or not to indent the content of tags such as & lt;title& gt;, & lt;h1& gt;-& lt;h6& gt;, & lt;li& gt;, & lt;td& gt;, or & lt;p& gt; based on the content including a block-level element.
Setting indent to yes can expose layout bugs in some browsers.
Use the option indent-spaces to control the number of spaces or tabs output per level of indent, and indent-with-tabs to specify whether spaces or tabs are used.
(Read and Write property)

177.5.117 OptionIndentAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent-attributes.
Notes:

This option specifies if Tidy should begin each attribute on a new line.
(Read and Write property)

177.5.118 OptionIndentCdata as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent-cdata.
Notes:

This option specifies if Tidy should indent & lt;! [CDATA [ ]] & gt; sections.
(Read and Write property)

177.5.119 OptionIndentContent as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the options.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.120 OptionIndentSpaces as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent-spaces.
Notes:

This option specifies the number of spaces or tabs that Tidy uses to indent content when indent is enabled. Note that the default value for this option is dependent upon the value of indent-with-tabs (see also).
(Read and Write property)

177.5.121 OptionIndentWithTabs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent-with-tabs.
Notes:

This option specifies if Tidy should indent with tabs instead of spaces, assuming indent is yes.
Set it to yes to indent using tabs instead of the default spaces.
Use the option indent-spaces to control the number of tabs output per level of indent. Note that when indent-with-tabs is enabled the default value of indent-spaces is reset to 1.
Note tab-size controls converting input tabs to spaces. Set it to zero to retain input tabs.
(Read and Write property)

177.5.122 OptionInlineTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies new non-empty inline tags. This option takes a space or comma separated list of tag names.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. This option is ignored in XML mode.
(Read and Write property)

177.5.123 OptionInputEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option input-encoding.
Notes:

This option specifies the character encoding Tidy uses for the input. See char-encoding for more info.
(Read and Write property)

177.5.124 OptionInputXml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option input-xml.
Notes:

This option specifies if Tidy should use the XML parser rather than the error correcting HTML parser.
(Read and Write property)

177.5.125 OptionJoinClasses as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option join-classes.
Notes:

This option specifies if Tidy should combine class names to generate a single, new class name if multiple class assignments are detected on an element.
(Read and Write property)

177.5.126 OptionJoinStyles as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option join-styles.
Notes:

This option specifies if Tidy should combine styles to generate a single, new style if multiple style values are detected on an element.
(Read and Write property)

177.5.127 OptionKeepFileTimes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should keep the original modification time of files that Tidy modifies in place.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

The default is no. Setting the option to yes allows you to tidy files without causing these files to be uploaded to a web server when using a tool such as SiteCopy. Note this feature is not supported on some platforms.
(Read and Write property)

177.5.128 OptionKeepTime as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option keep-time.
Notes:

This option specifies if Tidy should keep the original modification time of files that Tidy modifies in place. Setting the option to yes allows you to tidy files without changing the file modification date, which may be useful with certain tools that use the modification date for things such as automatic server deployment. Note this feature is not supported on some platforms.
(Read and Write property)

177.5.129 OptionLanguage as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option language.
Notes:

Currently not used, but this option specifies the language Tidy would use if it were properly localized. For example: en.

(Read and Write property)

177.5.130 OptionLiteralAttribs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should ensure that whitespace characters within attribute values are passed through unchanged.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.131 OptionLiteralAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option literal-attributes.
Notes:

This option specifies how Tidy deals with whitespace characters within attribute values.
If the value is no Tidy normalizes attribute values by replacing any newline or tab with a single space, and further by replacing any contiguous whitespace with a single space.
To force Tidy to preserve the original, literal values of all attributes and ensure that whitespace within attribute values is passed through unchanged, set this option to yes.
(Read and Write property)

177.5.132 OptionLogicalEmphasis as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option logical-emphasis.
Notes:

This option specifies if Tidy should replace any occurrence of & lt;i& gt; with & lt;em& gt; and any occurrence of & lt;b& gt; with & lt;strong& gt;. Any attributes are preserved unchanged.
This option can be set independently of the clean option.
(Read and Write property)

177.5.133 OptionLowerLiterals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option lower-literals.
Notes:

This option specifies if Tidy should convert the value of an attribute that takes a list of predefined values to lower case.
This is required for XHTML documents.
(Read and Write property)

177.5.134 OptionMakeBare as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should strip Microsoft specific HTML from Word 2000 documents, and output spaces rather than non-breaking spaces where they exist in the input.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.135 OptionMakeClean as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should strip out surplus presentational tags and attributes replacing them by style rules and structural markup as appropriate.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

It works well on the HTML saved by Microsoft Office products.
(Read and Write property)

177.5.136 OptionMark as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should add a meta element to the document head to indicate that the document has been tidied.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Tidy won't add a meta element if one is already present.
(Read and Write property)

177.5.137 OptionMarkup as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option markup.
Notes:

This option specifies if Tidy should generate a pretty printed version of the markup. Note that Tidy won't generate a pretty printed version if it finds significant errors (see force-output).
(Read and Write property)

177.5.138 OptionMergeDivs as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option merge-divs.
Notes:

This option can be used to modify the behavior of clean when set to yes.
This option specifies if Tidy should merge nested & lt;div& gt; such as & lt;div& gt;& lt;div& gt;...& lt;/div& gt;& lt;/div& gt;.
If set to auto the attributes of the inner & lt;div& gt; are moved to the outer one. Nested & lt;div& gt; with id attributes are not merged.
If set to yes the attributes of the inner & lt;div& gt; are discarded with the exception of class and style.
(Read and Write property)

177.5.139 OptionMergeEmphasis as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option merge-emphasis.
Notes:

This option specifies if Tidy should merge nested & lt;b& gt; and & lt;i& gt; elements; for example, for the case
& lt;b class="rtop-2"& gt;foo & lt;b class="r2-2"& gt;bar& lt;/b& gt; baz& lt;/b& gt;,
Tidy will output & lt;b class="rtop-2"& gt;foo bar baz& lt;/b& gt;.
(Read and Write property)

177.5.140 OptionMergeSpans as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option merge-spans.
Notes:

This option can be used to modify the behavior of clean when set to yes.
This option specifies if Tidy should merge nested & lt;span& gt; such as & lt;span& gt;& lt;span& gt;...& lt;/span& gt;& lt;/span& gt;.
The algorithm is identical to the one used by merge-divs.

(Read and Write property)

177.5.141 OptionNcr as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option ncr.
Notes:

This option specifies if Tidy should allow numeric character references.
(Read and Write property)

177.5.142 OptionNewBlocklevelTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option new-blocklevel-tags.
Notes:

This option specifies new block-level tags. This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
Note you can't change the content model for elements such as & lt;table& gt;, & lt;ul& gt;, & lt;ol& gt; and & lt;dl& gt;.
This option is ignored in XML mode.
(Read and Write property)

177.5.143 OptionNewEmptyTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option new-empty-tags.
Notes:

This option specifies new empty inline tags. This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
Remember to also declare empty tags as either inline or blocklevel.
This option is ignored in XML mode.
(Read and Write property)

177.5.144 OptionNewInlineTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option new-inline-tags.
Notes:

This option specifies new non-empty inline tags. This option takes a space or comma separated list of tag names.
Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
This option is ignored in XML mode.
(Read and Write property)

177.5.145 OptionNewline as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option newline.
Notes:

The default is appropriate to the current platform.
Genrally CRLF on PC-DOS, Windows and OS/2; CR on Classic Mac OS; and LF everywhere else (Linux, Mac OS X, and Unix).
(Read and Write property)

177.5.146 OptionNewPreTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option new-pre-tags.
Notes:

This option specifies new tags that are to be processed in exactly the same way as HTML's & lt;pre& gt; element. This option takes a space or comma separated list of tag names.
Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
Note you cannot as yet add new CDATA elements.
This option is ignored in XML mode.
(Read and Write property)

177.5.147 OptionNumEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should output entities other than the built-in HTML entities (& amp;, & lt;, & gt; and & quot;) in the numeric rather than the named entity form.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Only entities compatible with the DOCTYPE declaration generated are used. Entities that can be represented in the output encoding are translated correspondingly.
(Read and Write property)

177.5.148 OptionNumericEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option numeric-entities.
Notes:

This option specifies if Tidy should output entities other than the built-in HTML entities (& amp;amp;, & amp;lt;, & amp;gt;, and & amp;quot;) in the numeric rather than the named entity form.
Only entities compatible with the DOCTYPE declaration generated are used.
Entities that can be represented in the output encoding are translated correspondingly.
(Read and Write property)

177.5.149 OptionOmitOptionalTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option omit-optional-tags.
Notes:

This option specifies if Tidy should omit optional start tags and end tags when generating output.
Setting this option causes all tags for the & lt;html& gt;, & lt;head& gt;, and & lt;body& gt; elements to be omitted from output, as well as such end tags as & lt;/p& gt;, & lt;/li& gt;, & lt;/dt& gt;, & lt;/dd& gt;, & lt;/option& gt;, & lt;/tr& gt;, & lt;/td& gt;, and & lt;/th& gt;.
This option is ignored for XML output.
(Read and Write property)

177.5.150 OptionOutCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the character encoding Tidy uses for the output.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

See char-encoding for more info. May only be different from input-encoding for Latin encodings (ascii, latin0, latin1, mac, win1252, ibm858).

(Read and Write property)

177.5.151 OptionOutFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the output file Tidy uses for markup.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Normally markup is written to "stdout".
(Read and Write property)

177.5.152 OptionOutputBom as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-bom.
Notes:

This option specifies if Tidy should write a Unicode Byte Order Mark character (BOM; also known as Zero Width No-Break Space; has value of U+FEFF) to the beginning of the output, and only applies to UTF-8 and UTF-16 output encodings.
If set to auto this option causes Tidy to write a BOM to the output only if a BOM was present at the beginning of the input.
A BOM is always written for XML/XHTML output using UTF-16 output encodings.
(Read and Write property)

177.5.153 OptionOutputEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-encoding.
Notes:

This option specifies the character encoding Tidy uses for the output.
Note that this may only be different from input-encoding for Latin encodings (ascii, latin0, latin1, mac, win1252, ibm858).
See char-encoding for more information
(Read and Write property)

177.5.154 OptionOutputFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-file.
Notes:

This option specifies the output file Tidy uses for markup. Normally markup is written to stdout.
(Read and Write property)

177.5.155 OptionOutputHtml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-html.
Notes:

This option specifies if Tidy should generate pretty printed output, writing it as HTML.
(Read and Write property)

177.5.156 OptionOutputXhtml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-xhtml.
Notes:

This option specifies if Tidy should generate pretty printed output, writing it as extensible HTML.
This option causes Tidy to set the DOCTYPE and default namespace as appropriate to XHTML, and will use the corrected value in output regardless of other sources.
For XHTML, entities can be written as named or numeric entities according to the setting of numeric-entities.
The original case of tags and attributes will be preserved, regardless of other options.
(Read and Write property)

177.5.157 OptionOutputXml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-xml.
Notes:

This option specifies if Tidy should pretty print output, writing it as well-formed XML.
Any entities not defined in XML 1.0 will be written as numeric entities to allow them to be parsed by an XML parser.
The original case of tags and attributes will be preserved, regardless of other options.

(Read and Write property)

177.5.158 OptionPreserveEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option preserve-entities.
Notes:

This option specifies if Tidy should preserve well-formed entities as found in the input.
(Read and Write property)

177.5.159 OptionPreTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies new tags that are to be processed in exactly the same way as HTML's <PRE>element.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Note you can not as yet add new CDATA elements (similar to <SCRIPT>). This option is ignored in XML mode.
(Read and Write property)

177.5.160 OptionPunctuationWrap as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option punctuation-wrap.
Notes:

This option specifies if Tidy should line wrap after some Unicode or Chinese punctuation characters.
(Read and Write property)

177.5.161 OptionPunctWrap as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should line wrap after some Unicode or Chinese punctuation characters.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.162 OptionQuiet as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option quiet.
Notes:

This option specifies if Tidy should output the summary of the numbers of errors and warnings, or the welcome or informational messages.
(Read and Write property)

177.5.163 OptionQuoteAmpersand as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option quote-ampersand.
Notes:

This option specifies if Tidy should output unadorned & amp; characters as & amp;amp;.
(Read and Write property)

177.5.164 OptionQuoteMarks as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option quote-marks.
Notes:

This option specifies if Tidy should output & quot; characters as & amp;quot; as is preferred by some editing environments.
The apostrophe character ' is written out as & amp;# 39; since many web browsers don't yet support & amp;apos;.
(Read and Write property)

177.5.165 OptionQuoteNbsp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option quote-nbsp.
Notes:

This option specifies if Tidy should output non-breaking space characters as entities, rather than as the Unicode character value 160 (decimal).
(Read and Write property)

177.5.166 OptionRepeatedAttributes as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option repeated-attributes.
Notes:

This option specifies if Tidy should keep the first or last attribute, if an attribute is repeated, e.g. has two align attributes.
(Read and Write property)

177.5.167 OptionReplaceColor as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option replace-color.
Notes:

This option specifies if Tidy should replace numeric values in color attributes with HTML/XHTML color names where defined, e.g. replace # ffffff with white.
(Read and Write property)

177.5.168 OptionShowBodyOnly as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option show-body-only.
Notes:

This option specifies if Tidy should print only the contents of the body tag as an HTML fragment.
If set to auto, this is performed only if the body tag has been inferred.
Useful for incorporating existing whole pages as a portion of another page.
This option has no effect if XML output is requested.
(Read and Write property)

177.5.169 OptionShowErrors as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option show-errors.
Notes:

This option specifies the number Tidy uses to determine if further errors should be shown. If set to 0, then no errors are shown.

(Read and Write property)

177.5.170 OptionShowInfo as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option show-info.
Notes:

This option specifies if Tidy should display info-level messages.
(Read and Write property)

177.5.171 OptionShowMarkup as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should generate a pretty printed version of the markup.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Note that Tidy won't generate a pretty printed version if it finds significant errors (see force-output).
(Read and Write property)

177.5.172 OptionShowWarnings as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option show-warnings.
Notes:

This option specifies if Tidy should suppress warnings. This can be useful when a few errors are hidden in a flurry of warnings.
(Read and Write property)

177.5.173 OptionSkipNested as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option skip-nested.
Notes:

This option specifies that Tidy should skip nested tags when parsing script and style data.
(Read and Write property)

177.5.174 OptionSlideStyle as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option slide-style.
Notes:

This option has no function and is deprecated.
(Read and Write property)

177.5.175 OptionSortAttributes as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option sort-attributes.
Notes:

This option specifies that Tidy should sort attributes within an element using the specified sort algorithm. If set to alpha, the algorithm is an ascending alphabetic sort.
(Read and Write property)

177.5.176 OptionSplit as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option split.
Notes:

This option has no function and is deprecated.
(Read and Write property)

177.5.177 OptionStrictTagsAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option strict-tags-attributes.
Notes:

This options ensures that tags and attributes are applicable for the version of HTML that Tidy outputs. When set to yes (the default) and the output document type is a strict doctype, then Tidy will report errors. If the output document type is a loose or transitional doctype, then Tidy will report warnings.
Additionally if drop-proprietary-attributes is enabled, then not applicable attributes will be dropped, too.
When set to no, these checks are not performed.
(Read and Write property)

177.5.178 OptionTabSize as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option tab-size.
Notes:

This option specifies the number of columns that Tidy uses between successive tab stops. It is used to map tabs to spaces when reading the input.
(Read and Write property)

177.5.179 OptionTidyMark as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option tidy-mark.
Notes:

This option specifies if Tidy should add a meta element to the document head to indicate that the document has been tidied.
Tidy won't add a meta element if one is already present.
(Read and Write property)

177.5.180 OptionUppercaseAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option uppercase-attributes.
Notes:

This option specifies if Tidy should output attribute names in upper case.
The default is no, which results in lower case attribute names, except for XML input, where the original case is preserved.
(Read and Write property)

177.5.181 OptionUpperCaseAttrs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should output attribute names in upper case.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

The default is no, which results in lower case attribute names, except for XML input, where the original case is preserved.

(Read and Write property)

177.5.182 OptionUppercaseTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option uppercase-tags.
Notes:

This option specifies if Tidy should output tag names in upper case.
The default is no which results in lower case tag names, except for XML input where the original case is preserved.
(Read and Write property)

177.5.183 OptionVerticalSpace as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option vertical-space.
Notes:

This option specifies if Tidy should add some extra empty lines for readability.
The default is no.
If set to auto Tidy will eliminate nearly all newline characters.
(Read and Write property)

177.5.184 OptionVertSpace as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should add some empty lines for readability.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.185 OptionWord2000 as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option word-2000.
Notes:

This option specifies if Tidy should go to great pains to strip out all the surplus stuff Microsoft Word 2000 inserts when you save Word documents as ”Web pages”. It doesn’t handle embedded images or VML.

You should consider using Word's "Save As: Web Page, Filtered".
(Read and Write property)

177.5.186 OptionWrap as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap.
Notes:

This option specifies the right margin Tidy uses for line wrapping.
Tidy tries to wrap lines so that they do not exceed this length.
Set wrap to 0(zero) if you want to disable line wrapping.
(Read and Write property)

177.5.187 OptionWrapAsp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-asp.
Notes:

This option specifies if Tidy should line wrap text contained within ASP pseudo elements, which look like: & lt;% ... % & gt;.
(Read and Write property)

177.5.188 OptionWrapAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-attributes.
Notes:

This option specifies if Tidy should line-wrap attribute values, meaning that if the value of an attribute causes a line to exceed the width specified by wrap, Tidy will add one or more line breaks to the value, causing it to be wrapped into multiple lines.
Note that this option can be set independently of wrap-script-literals. By default Tidy replaces any newline or tab with a single space and replaces any sequences of whitespace with a single space.
To force Tidy to preserve the original, literal values of all attributes, and ensure that whitespace characters within attribute values are passed through unchanged, set literal-attributes to yes.
(Read and Write property)

177.5.189 OptionWrapAttVals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should line wrap attribute values, for easier editing.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option can be set independently of wrap-script-literals.
(Read and Write property)

177.5.190 OptionWrapJste as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-jste.
Notes:

This option specifies if Tidy should line wrap text contained within JSTE pseudo elements, which look like: & lt;# ... # & gt;.
(Read and Write property)

177.5.191 OptionWrapLen as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the right margin Tidy uses for line wrapping.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Tidy tries to wrap lines so that they do not exceed this length. Set wrap to zero if you want to disable line wrapping.
(Read and Write property)

177.5.192 OptionWrapPhp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-php.
Notes:

This option specifies if Tidy should line wrap text contained within PHP pseudo elements, which look like: & lt;?php ... ?& gt;.
(Read and Write property)

177.5.193 OptionWrapScriptlets as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should line wrap string literals that appear in script attributes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Tidy wraps long script string literals by inserting a backslash character before the line break.
(Read and Write property)

177.5.194 OptionWrapScriptLiterals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-script-literals.
Notes:

This option specifies if Tidy should line wrap string literals that appear in script attributes.
Tidy wraps long script string literals by inserting a backslash character before the line break.
(Read and Write property)

177.5.195 OptionWrapSection as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should line wrap text contained within <! [...] >section tags.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.196 OptionWrapSections as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-sections.
Notes:

This option specifies if Tidy should line wrap text contained within & lt;! [...] & gt; section tags.
(Read and Write property)

177.5.197 OptionWriteBack as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option write-back.
Notes:

This option specifies if Tidy should write back the tidied markup to the same file it read from.
You are advised to keep copies of important files before tidying them, as on rare occasions the result may not be what you expect.
(Read and Write property)

177.5.198 OptionXhtmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should generate pretty printed output, writing it as extensible HTML.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option causes Tidy to set the DOCTYPE and default namespace as appropriate to XHTML. If a DOCTYPE or namespace is given they will checked for consistency with the content of the document. In the case of an inconsistency, the corrected values will appear in the output. For XHTML, entities can be written as named or numeric entities according to the setting of the "numeric-entities" option. The original case of tags and attributes will be preserved, regardless of other options.
(Read and Write property)

177.5.199 OptionXmlDecl as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should add the XML declaration when outputting XML or XHTML.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Note that if the input already includes an <?xml ... ?>declaration then this option will be ignored. If the encoding for the output is different from "ascii", one of the utf encodings or "raw", the declaration is always added as required by the XML standard.
(Read and Write property)

177.5.200 OptionXmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should pretty print output, writing it as well-formed XML.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Any entities not defined in XML 1.0 will be written as numeric entities to allow them to be parsed by a XML parser. The original case of tags and attributes will be preserved, regardless of other options.

(Read and Write property)

177.5.201 OptionXmlPIs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the options.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.202 OptionXmlSpace as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should add xml:space="preserve" to elements such as <PRE>, <STYLE>and <SCRIPT>when generating XML.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This is needed if the whitespace in such elements is to be parsed appropriately without having access to the DTD.
(Read and Write property)

177.5.203 OptionXmlTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set this option if the input is xml.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

177.5.204 Events

177.5.205 Filter(level as Integer, line as Integer, column as Integer, message as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The filter called for every error and warning.
Notes:

Callback to filter messages by diagnostic level: info, warning, etc. Just set diagnostic output handler to redirect all diagnostics output.

Return false to proceed with output, true to cancel.

177.5.206 PrettyPrintProgress(line as Integer, column as Integer, destLine as Integer)

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Reports progress on the print process.

177.6 module TidyDupAttrModesMBS

177.6.1 module TidyDupAttrModesMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

177.6.2 Constants

177.6.3 TidyKeepFirst=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.6.4 TidyKeepLast=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.7 class TidyInputMBS

177.7.1 class TidyInputMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Delivers raw bytes of input.

177.7.2 Events

177.7.3 EndOfFile as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Return true if all your data is processed.
Notes: Return false if more data is available for the GetByte call.

177.7.4 GetByte as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Read one byte and returns it to the tidy library.

177.7.5 UngetByte(value as Integer)

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Returns a byte to the buffer for later processing.

177.8 class TidyIteratorMBS

177.8.1 class TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: An iterator for various uses.

177.8.2 Properties

177.8.3 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal reference to the tidy iterator object.
Notes: (Read only property)

177.9 module TidyLineEndingMBS

177.9.1 module TidyLineEndingMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

177.9.2 Constants

177.9.3 TidyCR=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.9.4 TidyCRLF=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.9.5 TidyLF=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.10 class TidyNodeMBS

177.10.1 class TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A node in the document parse tree.

177.10.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr4

177.10.3 Blog Entries

- MBS REALbasic Plugins, version 10.5pr4

177.10.4 Properties

177.10.5 Child as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The child node of this node.
Example:

```
dim t as TidyDocumentMBS // the tidy document
dim n as TidyNodeMBS
dim c as TidyNodeMBS

// iterating over root and its children (for more children you need recursion)
n=t.Root
while n<>nil
MsgBox n.Text

c=n.Child
while c<>nil
MsgBox c.Text
c=c.NextNode
wend

n=n.NextNode
wend
```

Notes: (Read only property)

177.10.6 Column as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position of this node.
Notes: (Read only property)

177.10.7 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The document of this node.
Notes: (Read only property)

177.10.8 FirstAttribute as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first attribute for this node.
Notes: (Read only property)

177.10.9 GetABBR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ABBR attribute for this node.
Notes: (Read only property)

177.10.10 GetALINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ALINK attribute for this node.
Notes: (Read only property)

177.10.11 GetALT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ALT attribute for this node.
Notes: (Read only property)

177.10.12 GetBGCOLOR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first BGCOLOR attribute for this node.
Notes: (Read only property)

177.10.13 GetCHECKED as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first CHECKED attribute for this node.
Notes: (Read only property)

177.10.14 GetCOLSPAN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first COLSPAN attribute for this node.
Notes: (Read only property)

177.10.15 GetCONTENT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first CONTENT attribute for this node.
Notes: (Read only property)

177.10.16 GetDATAFLD as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first DATAFLD attribute for this node.
Notes: (Read only property)

177.10.17 GetFOR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first FOR attribute for this node.
Notes: (Read only property)

177.10.18 GetHEIGHT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first HEIGHT attribute for this node.
Notes: (Read only property)

177.10.19 GetHREF as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first HREF attribute for this node.
Notes: (Read only property)

177.10.20 GetHTTP_EQUIV as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first HTTP_EQUIV attribute for this node.
Notes: (Read only property)

177.10.21 GetID as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ID attribute for this node.
Notes: (Read only property)

177.10.22 GetISMAP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ISMAP attribute for this node.
Notes: (Read only property)

177.10.23 GetLANG as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first LANG attribute for this node.
Notes: (Read only property)

177.10.24 GetLANGUAGE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first LANGUAGE attribute for this node.
Notes: (Read only property)

177.10.25 GetLINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first LINK attribute for this node.
Notes: (Read only property)

177.10.26 GetLONGDESC as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first LONGDESC attribute for this node.
Notes: (Read only property)

177.10.27 GetNAME as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first NAME attribute for this node.
Notes: (Read only property)

177.10.28 GetOnBLUR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnBLUR attribute for this node.
Notes: (Read only property)

177.10.29 GetOnCLICK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnCLICK attribute for this node.
Notes: (Read only property)

177.10.30 GetOnFOCUS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnFOCUS attribute for this node.
Notes: (Read only property)

177.10.31 GetOnKEYDOWN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnKEYDOWN attribute for this node.
Notes: (Read only property)

177.10.32 GetOnKEYPRESS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnKEYPRESS attribute for this node.
Notes: (Read only property)

177.10.33 GetOnKEYUP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnKEYUP attribute for this node.
Notes: (Read only property)

177.10.34 GetOnMOUSEDOWN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEDOWN attribute for this node.
Notes: (Read only property)

177.10.35 GetOnMOUSEMOVE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEMOVE attribute for this node.
Notes: (Read only property)

177.10.36 GetOnMOUSEOUT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEOUT attribute for this node.
Notes: (Read only property)

177.10.37 GetOnMOUSEOVER as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEOVER attribute for this node.
Notes: (Read only property)

177.10.38 GetOnMOUSEUP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEUP attribute for this node.
Notes: (Read only property)

177.10.39 GetREL as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first REL attribute for this node.
Notes: (Read only property)

177.10.40 GetROWSPAN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ROWSPAN attribute for this node.
Notes: (Read only property)

177.10.41 GetSELECTED as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first SELECTED attribute for this node.
Notes: (Read only property)

177.10.42 GetSRC as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first SRC attribute for this node.
Notes: (Read only property)

177.10.43 GetSTYLE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first STYLE attribute for this node.
Notes: (Read only property)

177.10.44 GetSUMMARY as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first SUMMARY attribute for this node.
Notes: (Read only property)

177.10.45 GetTARGET as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first TARGET attribute for this node.
Notes: (Read only property)

177.10.46 GetTEXT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first TEXT attribute for this node.
Notes: (Read only property)

177.10.47 GetTITLE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first TITLE attribute for this node.
Notes: (Read only property)

177.10.48 GetTYPE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first TYPE attribute for this node.
Notes: (Read only property)

177.10.49 GetUSEMAP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first USEMAP attribute for this node.
Notes: (Read only property)

177.10.50 GetVALUE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first VALUE attribute for this node.
Notes: (Read only property)

177.10.51 GetVLINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first VLINK attribute for this node.
Notes: (Read only property)

177.10.52 GetWIDTH as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first WIDTH attribute for this node.
Notes: (Read only property)

177.10.53 GetXMLNS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first XMLNS attribute for this node.
Notes: (Read only property)

177.10.54 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal reference to the tidy node object.
Notes: (Read only property)

177.10.55 HasText as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether there is text attached to this node.
Notes:

Returns true if yes.
(Read only property)

177.10.56 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The node ID.
Notes: (Read only property)

177.10.57 IsDATALIST as Boolean

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this node is a data list.
Notes: (Read only property)

177.10.58 IsProperty as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the node is a property.
Notes: (Read only property)

177.10.59 Line as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position of this node.
Notes: (Read only property)

177.10.60 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of this node.
Notes: (Read only property)

177.10.61 NextNode as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next node in the node list of the parent node.
Notes: (Read only property)

177.10.62 NodeIsA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a A node.
Notes: (Read only property)

177.10.63 NodeIsADDRESS as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a ADDRESS node.
Notes: (Read only property)

177.10.64 NodeIsAPPLET as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a APPLET node.
Notes: (Read only property)

177.10.65 NodeIsAREA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a AREA node.
Notes: (Read only property)

177.10.66 NodeIsB as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a B node.
Notes: (Read only property)

177.10.67 NodeIsBASE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BASE node.
Notes: (Read only property)

177.10.68 NodeIsBASEFONT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BASEFONT node.
Notes: (Read only property)

177.10.69 NodeIsBIG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BIG node.
Notes: (Read only property)

177.10.70 NodeIsBLINK as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BLINK node.
Notes: (Read only property)

177.10.71 NodeIsBLOCKQUOTE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BLOCKQUOTE node.
Notes: (Read only property)

177.10.72 NodeIsBODY as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BODY node.
Notes: (Read only property)

177.10.73 NodeIsBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BR node.
Notes: (Read only property)

177.10.74 NodeIsCAPTION as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a CAPTION node.
Notes: (Read only property)

177.10.75 NodeIsCENTER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a CENTER node.
Notes: (Read only property)

177.10.76 NodeIsCOL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a COL node.
Notes: (Read only property)

177.10.77 NodeIsCOLGROUP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a COLGROUP node.
Notes: (Read only property)

177.10.78 NodeIsDD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DD node.
Notes: (Read only property)

177.10.79 NodeIsDIR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DIR node.
Notes: (Read only property)

177.10.80 NodeIsDIV as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DIV node.
Notes: (Read only property)

177.10.81 NodeIsDL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DL node.
Notes: (Read only property)

177.10.82 NodeIsDT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DT node.
Notes: (Read only property)

177.10.83 NodeIsEM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a EM node.
Notes: (Read only property)

177.10.84 NodeIsEMBED as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a EMBED node.
Notes: (Read only property)

177.10.85 NodeIsFONT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a FONT node.
Notes: (Read only property)

177.10.86 NodeIsFORM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a FORM node.
Notes: (Read only property)

177.10.87 NodeIsFRAME as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a FRAME node.
Notes: (Read only property)

177.10.88 NodeIsFRAMESET as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a FRAMESET node.
Notes: (Read only property)

177.10.89 NodeIsH1 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H1 node.
Notes: (Read only property)

177.10.90 NodeIsH2 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H2 node.
Notes: (Read only property)

177.10.91 NodeIsH3 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H3 node.
Notes: (Read only property)

177.10.92 NodeIsH4 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H4 node.
Notes: (Read only property)

177.10.93 NodeIsH5 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H5 node.
Notes: (Read only property)

177.10.94 NodeIsH6 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H6 node.
Notes: (Read only property)

177.10.95 NodeIsHEAD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a HEAD node.
Notes: (Read only property)

177.10.96 NodeIsHeader as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a Header node.
Notes: (Read only property)

177.10.97 NodeIsHR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a HR node.
Notes: (Read only property)

177.10.98 NodeIsHTML as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a HTML node.
Notes: (Read only property)

177.10.99 NodeIsI as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a I node.
Notes: (Read only property)

177.10.100 NodeIsIFRAME as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a IFRAME node.
Notes: (Read only property)

177.10.101 NodeIsIMG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a IMG node.
Notes: (Read only property)

177.10.102 NodeIsINPUT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a INPUT node.
Notes: (Read only property)

177.10.103 NodeIsISINDEX as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a ISINDEX node.
Notes: (Read only property)

177.10.104 NodeIsLABEL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LABEL node.
Notes: (Read only property)

177.10.105 NodeIsLAYER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LAYER node.
Notes: (Read only property)

177.10.106 NodeIsLI as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LI node.
Notes: (Read only property)

177.10.107 NodeIsLINK as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LINK node.
Notes: (Read only property)

177.10.108 NodeIsLISTING as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LISTING node.
Notes: (Read only property)

177.10.109 NodeIsMAP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a MAP node.
Notes: (Read only property)

177.10.110 NodeIsMARQUEE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a MARQUEE node.
Notes: (Read only property)

177.10.111 NodeIsMENU as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a MENU node.
Notes: (Read only property)

177.10.112 NodeIsMETA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a META node.
Notes: (Read only property)

177.10.113 NodeIsNOBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a NOBR node.
Notes: (Read only property)

177.10.114 NodeIsNOFRAMES as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a NOFRAMES node.
Notes: (Read only property)

177.10.115 NodeIsNOSCRIPT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a NOSCRIPT node.
Notes: (Read only property)

177.10.116 NodeIsOBJECT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a OBJECT node.
Notes: (Read only property)

177.10.117 NodeIsOL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a OL node.
Notes: (Read only property)

177.10.118 NodeIsOPTGROUP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a OPTGROUP node.
Notes: (Read only property)

177.10.119 NodeIsOPTION as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a OPTION node.
Notes: (Read only property)

177.10.120 NodeIsP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a P node.
Notes: (Read only property)

177.10.121 NodeIsPARAM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a PARAM node.
Notes: (Read only property)

177.10.122 NodeIsPRE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a PRE node.
Notes: (Read only property)

177.10.123 NodeIsQ as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a Q node.
Notes: (Read only property)

177.10.124 NodeIsS as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a S node.
Notes: (Read only property)

177.10.125 NodeIsSCRIPT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SCRIPT node.
Notes: (Read only property)

177.10.126 NodeIsSELECT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SELECT node.
Notes: (Read only property)

177.10.127 NodeIsSMALL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SMALL node.
Notes: (Read only property)

177.10.128 NodeIsSPACER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SPACER node.
Notes: (Read only property)

177.10.129 NodeIsSPAN as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SPAN node.
Notes: (Read only property)

177.10.130 NodeIsSTRIKE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a STRIKE node.
Notes: (Read only property)

177.10.131 NodeIsSTRONG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a STRONG node.
Notes: (Read only property)

177.10.132 NodeIsSTYLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a STYLE node.
Notes: (Read only property)

177.10.133 NodeIsTABLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TABLE node.
Notes: (Read only property)

177.10.134 NodeIsTD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TD node.
Notes: (Read only property)

177.10.135 NodeIsText as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a Text node.
Notes: (Read only property)

177.10.136 NodeIsTEXTAREA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TEXTAREA node.
Notes: (Read only property)

177.10.137 NodeIsTH as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TH node.
Notes: (Read only property)

177.10.138 NodeIsTITLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TITLE node.
Notes: (Read only property)

177.10.139 NodeIsTR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TR node.
Notes: (Read only property)

177.10.140 NodeIsU as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a U node.
Notes: (Read only property)

177.10.141 NodeIsUL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a UL node.
Notes: (Read only property)

177.10.142 NodeIsWBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a WBR node.
Notes: (Read only property)

177.10.143 NodeIsXMP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a XMP node.
Notes: (Read only property)

177.10.144 Parent as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent node of this node.
Notes: (Read only property)

177.10.145 PrevNode as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The previous node in the node list of the parent node.
Notes: (Read only property)

177.10.146 Text as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text of this node.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As TidyNodeMBS=t.Root

MsgBox s.Text
```

Notes:

This text has no encoding defined.
(Read only property)

177.10.147 Type as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of this node.
Notes: (Read only property)

177.10.148 Value as string

MBS Tools Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decoded value of the node as UTF-8 String.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim nodes(-1) as TidyNodeMBS
dim root as TidyNodeMBS = t.Root

// we iterate over all child nodes

nodes.Append root.Child
nodes.Append root.NextNode

while UBound(nodes)>=0
dim n as TidyNodeMBS = nodes.Pop

if n<>Nil then

nodes.Append n.Child // maybe a child?
nodes.Append n.NextNode // maybe a sibiling?

if n.HasText then
MsgBox n.Value // Shows "Hello World"
end if
end if
wend
```

Notes: (Read only property)

177.11 module TidyNodeTypeMBS

177.11.1 module TidyNodeTypeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

177.11.2 Constants

177.11.3 TidyNodeAsp=10

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.13 class TidyOptionMBS

177.13.1 class TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: An option in the tidy preferences.

177.13.2 Methods

177.13.3 Category as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Category of the option.

177.13.4 DefaultBoolean as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default value for a boolean property.

177.13.5 DefaultInteger as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default value for an integer property.

177.13.6 DefaultString as String

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default value for a string property.

177.13.7 Description as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Description of the option.

177.13.8 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get ID of given Option.

177.13.9 IsReadOnly as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is Option read-only?

177.13.10 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get name of given Option.

177.13.11 Type as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get datatype of given Option.

177.13.12 Properties

177.13.13 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The document of this option.
Notes: (Read only property)

177.13.14 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal reference to the tidy option object.
Notes: (Read only property)

177.14 module TidyOptionTypeMBS

177.14.1 module TidyOptionTypeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

177.14.2 Constants

177.14.3 TidyBoolean=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.14.4 TidyInteger=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.14.5 TidyString=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

177.15 class TidyOutputMBS

177.15.1 class TidyOutputMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Accepts raw bytes of output from the tidy library.

177.15.2 Events

177.15.3 WriteByte(value as Integer)

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Adds one byte to the output buffer.

177.16 module TidyReportLevelKeysMBS

177.16.1 module TidyReportLevelKeysMBS

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for report level keys.

177.16.2 Constants

177.16.3 TidyAccessString=603

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

177.19.5 TidyYesState=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

Chapter 178

TIFF

178.1 Globals

178.1.1 CombineBitCMYKtoRGBMBS(CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, Files() as FolderItem, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, byref output as picture, CacheSizeRead as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Combines 1bit raw image files to one 8bit RGB tiff.
Example:

```
dim t(4) as FolderItem
dim dC(4), dM(4), dY(4), dK(4) as Double
dim nC(4), nM(4), nY(4), nK(4) as Integer
dim i as Integer
dim p as Picture

//Cyan
dK(0)=0.0
dC(0)=1.0
dM(0)=0.0
dY(0)=0.0
//Magenta
dK(1)=0.00
dC(1)=0.0
dM(1)=1.0
dY(1)=0.0
//Yellow
```

```
dK(2)=0.00
dC(2)=0.0
dM(2)=0.0
dY(2)=1.0
//Black
dK(3)=1.00
dC(3)=0.0
dM(3)=0.0
dY(3)=0.0
//Pantone, Sonderfarbe, S0
dK(4)=0.00
dC(4)=0.60
dM(4)=0.35
dY(4)=0.15

//Bilder
t(0)=GetFolderItem("test.Cyan.bit")
t(1)=GetFolderItem("test.Magenta.bit")
t(2)=GetFolderItem("test.Yellow.bit")
t(3)=GetFolderItem("test.Black.bit")
t(4)=GetFolderItem("test.S0.bit")

for i=0 to 4
nC(i)=dC(i)*1000.0
nM(i)=dM(i)*1000.0
nY(i)=dY(i)*1000.0
nK(i)=dK(i)*1000.0
next

// Scale 1/n, 1/3, 1/2, 1, 2, 3, n

Title=str(CombineBitCMYKtoRGBMBS(nC,nM,nY,nK, t, 1, 545,567,0,0,545,567,p,0))
Backdrop=p
Width=p.Width
Height=p.Height
```

Notes:

All arrays have the same size specifying for each 1bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error. CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

178.1.2 TIFFStringToPictureMBS(data as string) as picture

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff string and returns the RGB image for this tiff file.
Notes:

Returns nil on any error.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

178.1.3 Blog Entries

- Tip of the day: Corrupt pictures

178.1.4 TIFFStringToTiffPictureMBS(data as string) as TiffPictureMBS

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff string and returns a TiffPictureMBS object.
Notes:

if you want to read the picture after this line you need to call ReadBW, ReadRGB or use the Scanline methods.
Returns nil on any error.

178.1.5 CombineTiff1BitCMYKtoTiffMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines 1bit tiff image files to one CMYK tiff.
Notes:

All arrays have the same size specifying for each 1bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
Compression can be set before data is written to current tiff which is for output. The tiff object for output must be perfectly setup before using this function.

178.1.6 CombineBitCMYKtoCMYKMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, Files() as FolderItem, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, CacheSizeRead as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines 1bit raw image files to one CMYK tiff.
Notes:

All arrays have the same size specifying for each 1bit grayscal esource image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

178.1.7 CombineTiffCMYKtoCMYKMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines Grayscale tiff images to one CMYK tiff.
Example:

```
const PLANARCONFIG_CONTIG=1
const PHOTOMETRIC_RGB=2
const FILLORDER_MSB2LSB=1
const PHOTOMETRIC_SEPARATED=5

dim u,v,ot,t(4) as TiffPictureMBS
dim f as FolderItem
dim pnach as Picture
dim dC(4), dM(4), dY(4), dK(4) as Double
dim nC(4), nM(4), nY(4), nK(4) as Integer
dim i as Integer

//Cyan
dK(0)=0.0
dC(0)=1.0
dM(0)=0.0
dY(0)=0.0
//Magenta
dK(1)=0.00
```

```
dC(1)=0.0
dM(1)=1.0
dY(1)=0.0
//Yellow
dK(2)=0.00
dC(2)=0.0
dM(2)=0.0
dY(2)=1.0
//Black
dK(3)=1.00
dC(3)=0.0
dM(3)=0.0
dY(3)=0.0
//Pantone, S0
dK(4)=0.00
dC(4)=0.60
dM(4)=0.35
dY(4)=0.15

//Bilder
f=GetFolderItem("test.Cyan.tif")
t(0)=f.OpenAsTiffMBS

f=GetFolderItem("test.Magenta.tif")
t(1)=f.OpenAsTiffMBS

f=GetFolderItem("test.Yellow.tif")
t(2)=f.OpenAsTiffMBS

f=GetFolderItem("test.Black.tif")
t(3)=f.OpenAsTiffMBS

f=GetFolderItem("test.S0.tif")
t(4)=f.OpenAsTiffMBS

for i=0 to 4
nC(i)=dC(i)*1000.0
nM(i)=dM(i)*1000.0
nY(i)=dY(i)*1000.0
nK(i)=dK(i)*1000.0
next

f=GetFolderItem("resultCMYK.tif")
ot=new TiffPictureMBS
if ot.Create(f) then
v=t(0)
u=ot
u.Width=v.Width
```

```
u.Height=v.Height
u.RowsPerStrip=v.Height
u.BitsPerSample=8
u.SamplesPerPixel=4
u.ResolutionUnit=v.ResolutionUnit
u.HorizontalPosition=v.HorizontalPosition
u.HorizontalResolution=v.HorizontalResolution
u.VerticalPosition=v.VerticalPosition
u.VerticalResolution=v.VerticalResolution
u.Orientation=v.Orientation
u.PlanarConfig=PLANARCONFIG_CONTIG
u.Photometric=PHOTOMETRIC_SEPARATED
u.FillOrder=FILLORDER_MSB2LSB
Title=str(CombineTiffCMYKtoCMYKMBS(ot, nC,nM,nY,nK,t))
ot.Close
end if

//Neues Bild anzeigen
pnach=f.OpenAsPicture
if pnach<>Nil then
Window1.Width=pNach.Width
Window1.Height=pNach.Height
Window1.Backdrop=pNach
end if
```

Notes:

All arrays have the same size specifying for each 8bit grayscal esource image the colors to be used in the final image.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.
The plugin sets width and height for the output tiff.

178.1.8 CombineTiffCMYKtoRGBMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines Grayscale tiff images to one RGB tiff.
Example:

```
const PLANARCONFIG_CONTIG=1
const PHOTOMETRIC_RGB=2
const FILLORDER_MSB2LSB=1
```

```
dim u,v,ot,t(4) as TiffPictureMBS
dim f as FolderItem
dim pnach as Picture
dim dC(4), dM(4), dY(4), dK(4) as Double
dim nC(4), nM(4), nY(4), nK(4) as Integer
dim i as Integer

//Cyan
dK(0)=0.0
dC(0)=1.0
dM(0)=0.0
dY(0)=0.0
//Magenta
dK(1)=0.00
dC(1)=0.0
dM(1)=1.0
dY(1)=0.0
//Yellow
dK(2)=0.00
dC(2)=0.0
dM(2)=0.0
dY(2)=1.0
//Black
dK(3)=1.00
dC(3)=0.0
dM(3)=0.0
dY(3)=0.0
//Pantone, S0
dK(4)=0.00
dC(4)=0.60
dM(4)=0.35
dY(4)=0.15

//Bilder
f=GetFolderItem("test.Cyan.tif")
t(0)=f.OpenAsTiffMBS

f=GetFolderItem("test.Magenta.tif")
t(1)=f.OpenAsTiffMBS

f=GetFolderItem("test.Yellow.tif")
t(2)=f.OpenAsTiffMBS

f=GetFolderItem("test.Black.tif")
t(3)=f.OpenAsTiffMBS

f=GetFolderItem("test.S0.tif")
```

```
t(4)=f.OpenAsTiffMBS

for i=0 to 4
nC(i)=dC(i)*1000.0
nM(i)=dM(i)*1000.0
nY(i)=dY(i)*1000.0
nK(i)=dK(i)*1000.0
next

f=GetFolderItem("resultRGB.tif")
ot=new TiffPictureMBS
if ot.Create(f) then
v=t(0)
u=ot
u.Width=v.Width
u.Height=v.Height
u.RowsPerStrip=v.Height
u.BitsPerSample=8
u.SamplesPerPixel=3
u.ResolutionUnit=v.ResolutionUnit
u.HorizontalPosition=v.HorizontalPosition
u.HorizontalResolution=v.HorizontalResolution
u.VerticalPosition=v.VerticalPosition
u.VerticalResolution=v.VerticalResolution
u.Orientation=v.Orientation
u.PlanarConfig=PLANARCONFIG_CONTIG
u.Photometric=PHOTOMETRIC_RGB
u.FillOrder=FILLORDER_MSB2LSB
Title=str(CombineTiffCMYKtoRGBMBS(ot, nC,nM,nY,nK,t))
ot.Close
end if

//Neues Bild anzeigen
pnach=f.OpenAsPicture
if pnach<>Nil then
Window1.Width=pNach.Width
Window1.Height=pNach.Height
Window1.Backdrop=pNach
end if
```

Notes:

All arrays have the same size specifying for each 8bit grayscal esource image the colors to be used in the final image.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.

178.1.9 CombineTiff1BitCMYKtoTiffMBS(dest as TiffPictureMBS, TiffData as TiffPictureMBS, scalex as Double, scaley as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines a one bit gray tiff image to one 1 bit gray tiff.
Notes:

Basicly only scales the data.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.
The plugin sets width and height for the output tiff.

178.1.10 CombineTiff8BitCMYKtoTiffMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines 8bit tiff image files to one CMYK tiff.
Notes:

All arrays have the same size specifying for each 8bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
Compression can be set before data is written to current tiff which is for output. The tiff object for output must be perfectly setup before using this function.

178.1.11 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr11

178.2 class TiffPictureMBS

178.2.1 class TiffPictureMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a Tiff picture.
Example:

```
Dim p As Picture = LogoMBS(500)

// save tiff file

Dim t As New TiffPictureMBS
Dim file4 As FolderItem = SpecialFolder.Desktop.Child("test4.tif")

t.Pict = p

If t.Create(file4) Then
If t.WriteRGB Then
t.Close
// ok
Else
Break
End If
Else
Break
End If
```

Notes: Bases on libtiff.

178.2.6 Methods

178.2.7 AddCustomTag(Tag as Integer, FieldReadCount as Integer, FieldWriteCount as Integer, FieldType as Integer, FieldBit as Integer, OkToChange as Integer, PassCount as Integer, FieldName as string) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a custom tag.
Example:

```
const TIFFTAG_ASCIITAG = 40666
const TIFFTAG_LONGTAG = 40667
const TIFFTAG_SHORTTAG = 40668
const TIFFTAG_RATIONALTAG = 40669
const TIFFTAG_FLOATTAG = 40670
const TIFFTAG_DOUBLETAG = 40671
const TIFFTAG_BYTE = 40672
```

```
const TIFFTAG_SOFTWARE=305

const TIFF_BYTE=1
const TIFF_ASCII=2
const TIFF_SHORT=3 // integer 16 bit signed
const TIFF_LONG=4 // integer 32 bit
const TIFF_FLOAT=11
const TIFF_DOUBLE=12

const FIELD_CUSTOM = 65

dim t as new TiffPictureMBS

// open tiff

if not t.AddCustomTag(TIFFTAG_ASCIITAG, -1, -1, TIFF_ASCII, FIELD_CUSTOM, 1, 0, "MyString")
then
MsgBox "AddCustomTag failed1."
end if
```

Notes: See tiff documentation for details.

178.2.8 AddImage as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes existing picture and header information to file and starts a new one.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem
dim p as Picture

f=SpecialFolder.Desktop.Child("test.tif")
t=new TiffPictureMBS
if t.Create(f) then

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.FillOval 0,0,100,100
t.Pict=p
if t.WriteRGB then
if t.AddImage then
p=New Picture(100,100,32)
```

```
p.Graphics.ForeColor=rgb(0,0,255)
p.Graphics.FillOval 0,0,100,100
t.Pict=p
if t.WriteRGB then
MsgBox "Written multi picture tiff."
end if
end if
end if
end if
```

Notes:

Returns true on success and false on any error.

Calls TIFFWriteDirectory internally.

178.2.9 close

MBS Images Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the Tiff handle.
Notes:

In 5.1 and older the destructor.
In 5.2 and later only closes the tiff handle so you can still read the pictures, the output or input buffer.

178.2.10 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a new picture which is created using the picture and it's mask.
Example:

```
dim t as TiffPictureMBS
' ...
canvas1.backdrop=t.CombinePictureWithMask
```

178.2.11 Create(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty tiff file.
Example:

```
dim p as Picture
dim f as FolderItem
dim t as TiffPictureMBS

p=New Picture(100,100,32)

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p

if t.Create(f) then
if t.WriteRGB then
t.Close
MsgBox "Ok"
f.Launch
end if
end if
```

Notes: Returns true on success.
See also:

- 178.2.12 Create(file as folderitem, endian as Integer) as boolean 24334
- 178.2.13 Create(Path as String, endian as integer = 0) as boolean 24335

178.2.12 Create(file as folderitem, endian as Integer) as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty tiff file.
Example:

```
Dim t As New TiffPictureMBS
t.Pict = LogoMBS(500)

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.tif")

If t.Create(f, 0) Then
If t.WriteRGB Then
t.Close

// open in viewer
```

```
f.Launch
End If
End If
```

Notes:

Returns true on success.

Endian settings:

0	Default (System)
1	BigEndian (Mac)
2	LittleEndian (Win)

See also:

- 178.2.11 Create(file as folderitem) as boolean 24333
- 178.2.13 Create(Path as String, endian as integer = 0) as boolean 24335

178.2.13 Create(Path as String, endian as integer = 0) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty tiff file.
Example:

```
Dim t As New TiffPictureMBS
t.Pict = LogoMBS(500)

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim p as string = f.NativePath

If t.Create(p) Then
If t.WriteRGB Then
t.Close

// open in viewer
f.Launch
End If
End If
```

Notes:

Returns true on success.

Endian settings:

0	Default (System)
1	BigEndian (Mac)
2	LittleEndian (Win)

See also:

- 178.2.11 Create(file as folderitem) as boolean 24333
- 178.2.12 Create(file as folderitem, endian as Integer) as boolean 24334

178.2.14 CreateString(Size as Integer) as boolean

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string based tiff writer.
Example:

```
Function PictureToTiffStringMBS(pic as picture) As string
dim t as TiffPictureMBS

t=new TiffPictureMBS
if t.CreateString(& h100000) then
t.Pict=pic
if t.WriteRGB then
t.Close
Return t.OutputBuffer
end if
end if
End Function
```

Notes:

Same as the Create() function, but memory based. You can now use functions like Scanline(), WriteSW() or WriteRGB() to put the picture data.

Returns true on success.
The Warning and Error events may show you reasons why it does not work.

The size parameter you pass in is a guess for the initial size of the memory block used. If more data is written, the memory block is resized, but it is quite slow to resize a memoryblock, so make a good guess!

You can and should use this function to write yourself a PictureToTiffString function. The plugin can not well make such a function as there are thousands of possible parameters combination you may want to use. (compared to the JPEG library where you only have the compression level parameter.)
See also:

- 178.2.15 CreateString(Size as Integer, Mode as string) as boolean 24337

178.2.15 CreateString(Size as Integer, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string based tiff writer.
Notes:

Same as the other CreateString method, but you can pass a mode string to the library.

mode="wb" for big endian and mode="wl" for little endian.
See also:

- 178.2.14 CreateString(Size as Integer) as boolean 24336

178.2.16 Flush as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush causes any pending writes for the specified file (including writes for the current directory) to be done.
Notes: In normal operation this call is never needed - the library automatically does any flushing required.

178.2.17 FlushData as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: FlushData flushes any pending image data for the specified file to be written out; directory-related data are not flushed.
Notes: In normal operation this call is never needed Å | the library automatically does any flushing required.

178.2.18 GetColorMap(byref red as memoryblock, byref green as memoryblock, byref blue as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the color map for a paletten image.
Notes:

The memoryblock must be 2^bitspersample * 2 bytes big.
Returns true on success and false on failure.

178.2.19 GetColorProfile as string

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the color profile data stored in the tiff file.
Example:

```
dim f as FolderItem
dim t as TiffPictureMBS
dim s as string
dim p as LCMS2ProfileMBS

f=SpecialFolder.Desktop.Child("horsehead_steinberg_big.tif")

t=f.OpenAsTiffMBS

s=t.GetColorProfile

p = LCMS2ProfileMBS.OpenProfileFromString(s)

MsgBox p.Name
```

Notes: Returns "" on any error.

178.2.20 GetData(Tag as Integer) as string

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the string stored for this tag.

178.2.21 GetField(Tag as Integer, mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.
The memoryblock you pass in must be big enough to hold whatever data the library stores there.

178.2.22 GetFieldByte(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.23 GetFieldCount(Tag as Integer, byref count as Integer, mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Example:

```
'TIFF Tag ImageID
'
'IFD Image
'Code 32781 (hex 0x800D)
'Name ImageID
'Type ASCII
'Count N
'Default None
'Description
'
'OPI-related.
'
'ImageID is the full pathname of the original, high-resolution image, or any other identifying string that uniquely identifies the original image.
'
```

```
'The high-resolution image is not required to be in TIFF format. It can be in any format that an OPI Consumer wishes to support.

DIm tiffImport As TiffPictureMBS
Dim xx as string

tiffImport = New TiffPictureMBS
Call tiffImport.Open(SpecialFolder.Desktop.Child("test.tif"))

// the memoryblock is a storage for the data. In this case a pointer to the CString
dim m as MemoryBlock=NewMemoryBlock(4)
dim count as Integer

if tiffImport.GetFieldCount(32781, count, m) then
MsgBox str(count)
MsgBox m.Ptr(0).CString(0)
end if

tiffImport.close
```

Notes:

This is the special version using memoryblock so you can use it for reading values with a count value.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.24 GetFieldDefaultedByte(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

178.2.25 GetFieldDefaultedDouble(Tag as Integer, byref value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

178.2.26 GetFieldDefaultedInteger(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

178.2.27 GetFieldDefaultedShort(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

178.2.28 GetFieldDefaultedSingle(Tag as Integer, byref value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

178.2.29 GetFieldDefaultedString(Tag as Integer, byref value as String) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem
dim s as string

f=SpecialFolder.Desktop.Child("ChristianSchmitz.tif")
t=f.OpenAsTiffMBS

const TIFFTAG_SOFTWARE=305

if t.GetFieldDefaultedString(TIFFTAG_SOFTWARE, s) then
MsgBox "TIFFTAG_SOFTWARE"+EndOfLine+s
end if
```

Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.
The string is returned with ascii encoding. You may need to define a different encoding is this is not correct.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

178.2.30 GetFieldDouble(Tag as Integer, byref value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.31 GetFieldInteger(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.32 GetFieldMemory(Tag as Integer, byref ItemCount as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

This is the special version using memoryblock so you can use it for reading values with a count value.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.33 GetFieldShort(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.

Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.34 GetFieldSingle(Tag as Integer, byref value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.35 GetFieldString(Tag as Integer, byref value as string) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem
dim s as string

f=SpecialFolder.Desktop.Child("test.tif")
t=f.OpenAsTiffMBS

const TIFFTAG_SOFTWARE=305

if t.GetFieldString(TIFFTAG_SOFTWARE, s) then
MsgBox "TIFFTAG_SOFTWARE"+EndOfLine+s
end if

const TIFFTAG_HOSTCOMPUTER=316

if t.GetFieldString(TIFFTAG_HOSTCOMPUTER, s) then
MsgBox "TIFFTAG_SOFTWARE"+EndOfLine+s
end if

const TIFFTAG_IMAGEDESCRIPTION=270

if t.GetFieldString(TIFFTAG_IMAGEDESCRIPTION, s) then
MsgBox "TIFFTAG_IMAGEDESCRIPTION"+EndOfLine+s
end if
```

```
const TIFFTAG_MAKE=271

if t.GetFieldString(TIFFTAG_MAKE, s) then
MsgBox "TIFFTAG_MAKE"+EndOfLine+s
end if

const TIFFTAG_ARTIST=315

if t.GetFieldString(TIFFTAG_ARTIST, s) then
MsgBox "TIFFTAG_ARTIST"+EndOfLine+s
end if
```

Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.
The string is returned with ascii encoding. You may need to define a different encoding is this is not correct.

178.2.36 GetXMP as string

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the xmp metadata package stored in the tiff file.
Example:

```
dim f as FolderItem
dim t as TiffPictureMBS
dim s as string

f=SpecialFolder.Desktop.Child("test.tif")

t=f.OpenAsTiffMBS

s=t.GetXMP

MsgBox left(s,500)
```

Notes: Returns "" on any error.

178.2.37 ImageCount as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of images in the TIFF file.
Notes: Returns 0 on any error.

178.2.38 ImageIndex as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current image index.
Notes: 0 based.

178.2.39 IsLastImage as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the current picture is the last picture.
Notes: Useful if you walk through all pictures using NextImage.

178.2.40 MirrorVertical(output as TiffPictureMBS) as boolean

MBS Images Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the current picture to another tiff object.
Notes:

You may be able to pass the current tiff file as the output one if you have it open for read and write.
Returns true on success and false on failure.
Works for any color depth or color mode.

178.2.41 NextImage as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the next image in the TIFF file.
Notes: Returns true on success and false on any error.
See also:

- 178.2.42 NextImage(HeaderOnly as boolean) as boolean

178.2.42 NextImage(HeaderOnly as boolean) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next image.
Notes: If HeaderOnly is false the current picture is read into the pict& mask properties.
See also:

- 178.2.41 NextImage as boolean 24346

178.2.43 Open(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff file for readonly access.
Notes:

You need to use the ReadRGB method or the Scanline property to get data from this file.
Returns true on success.
See also:

- 178.2.44 Open(file as folderitem, Mode as string) as boolean 24347
- 178.2.45 Open(Path as String, Mode as string) as boolean 24348

178.2.44 Open(file as folderitem, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff file for read/write access.
Example:

```
dim file as folderitem = SpecialFolder.desktop.child("test.tif")
dim st as new MyTiff

// open for appending
if not st.Open(file,"r+") then
MsgBox "Open Tiff failed!"
else
// change one setting
st.Copyright = "Hello World"

// and save
call st.SaveImage
st.Close
end if
```

Notes:

Same as the other Open method, but you can pass a mode string to the library.

The open mode parameter can include the following flags in addition to the "r" (Read), "w" (Write), and "a" (Append) flags. Note however that option flags must follow the read-write-append specification.

See also:

- 178.2.43 Open(file as folderitem) as boolean 24347
- 178.2.45 Open(Path as String, Mode as string) as boolean 24348

178.2.45 Open(Path as String, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff file for read/write access.
Example:

```
Dim t As New TiffPictureMBS

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.tif")
Dim p As String = f.NativePath

If t.Open(p, "r") Then

If t.ReadRGB Then

window1.Backdrop = t.Pict

End If
End If
```

Notes:

Same as the other Open method, but you can pass a mode and path as string to the library.

The open mode parameter can include the following flags in addition to the "r" (Read), "w" (Write), and "a" (Append) flags. Note however that option flags must follow the read-write-append specification.

See also:

- 178.2.43 Open(file as folderitem) as boolean 24347

• 178.2.44 Open(file as folderitem, Mode as string) as boolean 24347

178.2.46 OpenString(data as string) as boolean

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff image located in a binary string.
Example:

```
Function TiffStringToPicture(data as string) As picture
dim t as MyTiffPictureMBS

t=new MyTiffPictureMBS

if t.OpenString(data) then
if t.ReadRGB then
return t.Pict
// you could add the mask here.
end if
end if

Return nil // failed
End Function
```

Notes:

Same as the Open() function, but memory based. You can now use functions like Scanline(), ReadSW() or ReadRGB() to get the picture data.

Returns true on success.
The Warning and Error events may show you reasons why it does not work.
The string you pass is saved in the data property of the class for later use.

You can and should use this function to write yourself a TiffStringToPicture function.
See also:

• 178.2.47 OpenString(data as string, Mode as string) as boolean 24349

178.2.47 OpenString(data as string, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff image located in a binary string.
Notes: Same as the other OpenString method, but you can pass a mode string to the library.
See also:

- 178.2.46 OpenString(data as string) as boolean 24349

178.2.48 RawStripSize(strip as UInt32) as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes in a raw strip (i.e. not decoded).

178.2.49 ReadBW as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture in BW mode.
Example:

```
dim f as FolderItem
dim p as Picture
dim t as TiffPictureMBS

f=SpecialFolder.Desktop.Child("Multipage fax.tif")
t=f.OpenAsTiffMBS(true)

if t.ReadBW then
title=str(t.ImageCount)

p=t.pict
Title=str(p.Depth)
Canvas1.Backdrop=p
end if
```

Notes:

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 178.2.50 ReadBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean 24351

178.2.50 ReadBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture in BW mode.
Example:

```
dim f as FolderItem
dim p as Picture
dim t as TiffPictureMBS

f=SpecialFolder.Desktop.Child("Multipage fax.tif")
t=f.OpenAsTiffMBS(true)

if t.ReadBW(0,0,t.width/2,t.height/2) then
title=str(t.ImageCount)

p=t.pict
Title=str(p.Depth)
Canvas1.Backdrop=p
end if
```

Notes:

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 178.2.49 ReadBW as boolean 24350

178.2.51 ReadEncodedStrip(strip as UInt32, byref data as Memoryblock) as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read and decode a strip of data from an open TIFF file.
Notes:

Read the specified strip of data and place up to size bytes of decompressed information in the (user supplied) data buffer.

The value of strip is a ”raw strip number”. That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2). To read a full strip of data the data buffer should typically be at least as large as the number returned by StripSize.
The library attempts to hide bit- and byte-ordering differences between the image and the native machine by converting data to the native machine order. Bit reversal is done if the FillOrder tag is opposite to the native machine bit order. 16- and 32-bit samples are automatically byte-swapped if the file was written with a byte order opposite to the native machine byte order,

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedStrip returns -1 if an error was encountered.

178.2.52 ReadEncodedTile(tile as UInt32, byref data as Memoryblock) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read and decode a tile of data from an open TIFF file.
Notes:

Read the specified tile of data and place up to size bytes of decompressed information in the (user supplied) data buffer.

The value of tile is a ”raw tile number”. That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number. To read a full tile of data the data buffer should be at least as large as the value returned by TileSize.

The library attempts to hide bit- and byte-ordering differences between the image and the native machine by converting data to the native machine order. Bit reversal is done if the FillOrder tag is opposite to the native machine bit order. 16- and 32-bit samples are automatically byte-swapped if the file was written with a byte order opposite to the native machine byte order,

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedTile returns −1 if an error was encountered.

178.2.53 ReadPreviewBW as boolean

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture in BW mode as a preview.
Notes:

This method is faster than ReadBW, because it reads only every 8th line and every 8th pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 178.2.54 ReadPreviewBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean 24353

178.2.54 ReadPreviewBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture in BW mode as a preview.
Notes:

This method is faster than ReadBW, because it reads only every 8th line and every 8th pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 178.2.53 ReadPreviewBW as boolean 24352

178.2.55 ReadPreviewRGB(ReduceFactor as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a CMYK or RGB picture and stores it in the pict and name properties.
Notes:

This method is faster than ReadRGB, because it reads only every ReduceFactorth line and every ReduceFactorth pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success.
ReadRGB does converting on the picture data if needed so you can read CMYK, RGB, BW and other image data using this function.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

178.2.56 ReadRawStrip(strip as UInt32, byref data as Memoryblock) as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the undecoded contents of a strip of data from an open TIFF file.
Notes:

Read the contents of the specified strip into the (user supplied) data buffer. Note that the value of strip is a "raw strip number". That is, the caller must take into account whether or not the data is organized in separate planes (PlanarConfiguration=2). To read a full strip of data the data buffer should typically be at least as large as the number returned by StripSize.

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedStrip returns -1 if an error was encountered.

178.2.57 ReadRawTile(tile as UInt32, byref data as Memoryblock) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return an undecoded tile of data from an open TIFF file.
Notes:

Read the contents of the specified tile into the (user supplied) data buffer. Note that the value of tile is a "raw tile number". That is, the caller must take into account whether or not the data is organized in separate planes (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number. To read a full tile of data the data buffer should typically be at least as large as the value returned by TileSize.

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedTile returns -1 if an error was encountered.

178.2.58 ReadRGB as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a CMYK or RGB picture and stores it in the pict and name properties.
Notes:

Returns true on success.
ReadRGB does converting on the picture data if needed so you can read CMYK, RGB, BW and other image data using this function.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.
See also:

- 178.2.59 ReadRGB(byref ErrorMessage as string, Dest as MemoryBlock = nil) as memoryblock 24355

178.2.59 ReadRGB(byref ErrorMessage as string, Dest as MemoryBlock = nil) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the image into a memoryblock as RGB.
Notes:

The Scanline() array gives you the raw uncompressed data. But this method decodes the data into a RGBA image.

The Memoryblock has the size of 4*width*height. Each pixel has one byte for red, one byte for green, one byte for blue and one byte for alpha. If no alpha is in the file, all pixels have the same alpha of 255.

If the decompression fails the function returns nil. (e.g. out of memory).
If the decoding fails, you also get an error message.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

If dest is not nil and big enough, the plugin will use it and return it on success. This can avoid additional memory allocations which can cost CPU time (especially to clear the bytes).
See also:

- 178.2.58 ReadRGB as boolean 24355

178.2.60 ReadRGBMemoryBegin(byref ErrorMessage as string) as boolean

MBS Images Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts a RGBA reader for the given TIFF picture.
Notes:

Like ReadRGB, but with ReadRGBMemoryBegin, ReadRGBMemoryEnd and ReadRGBMemoryStep you can read the RGBA data in portions.

The Memoryblock returned by ReadRGBMemoryStep has the size of 4*width*height. Each pixel has one byte for red, one byte for green, one byte for blue and one byte for alpha. If no alpha is in the file, all pixels have the same alpha of 255.

If the decompression fails the function returns false. (e.g. out of memory).
If the decoding fails, you also get an error message.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

178.2.61 ReadRGBMemoryEnd

MBS Images Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cleans up the internal data structures created by ReadRGBMemoryBegin.

178.2.62 ReadRGBMemoryStep(x as Integer, y as Integer, width as Integer, height as Integer, Dest as MemoryBlock = nil) as memoryblock

MBS Images Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the image into a memoryblock as RGBA.
Example:

```
dim t as new TiffPictureMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim e as string

if t.Open(f) then
if t.ReadRGBMemoryBegin(e) then

dim w as Integer = t.Width
dim h as Integer = t.Height

dim p as new PictureMBS(w, h, PictureMBS.ImageFormatRGB)

for y as Integer = 0 to h-1 step 100
```

```
dim m as MemoryBlock = t.ReadRGBMemoryStep(0, y, w, 100)

for i as Integer = 0 to 99
p.RowInFormat(i+y, PictureMBS.ImageFormatRGBA)=m
next

next

t.ReadRGBMemoryEnd
Backdrop = p.copypicture(0,0,1000,1000) // display a portion
end if

end if
```

Notes:

As you see in the example, you can use this method to easily read huge TIFF files into a PictureMBS object.

If the decompression fails the function returns nil. (e.g. out of memory).
Please make sure that the range in x and y, width and height is right.

If dest is not nil and big enough, the plugin will use it and return it on success. This can avoid additional memory allocations which can cost CPU time (especially to clear the bytes).

178.2.63 ReadWithLUT(ColorLookupTable() as color) as boolean

MBS Images Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture with a Color Lookup Table.
Notes:

Returns true on success and false on any error.
Works with 8, 16 amd 32 bits per sample. And with 1 or 3 samples per pixels (Gray or RGB). The lookup table has 256 entries for 8 bit and 65536 entries for 16/32 bit.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 178.2.64 ReadWithLUT(ColorLookupTable() as color, left as Integer, top as Integer, width as Integer, height as Integer) as boolean

178.2.64 ReadWithLUT(ColorLookupTable() as color, left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture with a Color Lookup Table.
Notes:

Returns true on success and false on any error.
Works with 8, 16 amd 32 bits per sample. And with 1 or 3 samples per pixels (Gray or RGB). The lookup table has 256 entries for 8 bit and 65536 entries for 16/32 bit.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 178.2.63 ReadWithLUT(ColorLookupTable() as color) as boolean 24357

178.2.65 RewriteDirectory as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes existing picture and header information to file replacing the old data.
Notes:

Returns true on success and false on any error.
As the data is added to the file and just the reference to the old data is deleted, the filesize will grow.

Calls TIFFReWriteDirectory internally. Same as SaveImage.

178.2.66 SaveImage as boolean

MBS Images Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes existing picture and header information to file replacing the old data.
Notes:

Returns true on success and false on any error.
As the data is added to the file and just the reference to the old data is deleted, the filesize will grow.

Calls TIFFReWriteDirectory internally. Same as RewriteDirectory.

178.2.67 Scanline(mem as Ptr, index as Integer, sample as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an image scanline in a memoryblock.
Notes:

Returns false on any error.
Thee Memoryblock must be big enough. The BytesPerRow functions returns the number of bytes needed.
The first scanline has the index of 0.
This is the fastest way to read scanlines. You provide the memoryblock and you can reuse it for all calls to this method for one tiff.
See also:

- 178.2.142 Scanline(index as Integer, sample as Integer = 0) as memoryblock 24391

178.2.68 ScanlinesScaled(index as integer, count as integer, sample as integer = 0, scaleFactor as Integer = 1) as memoryblock

MBS Images Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get image scanlines scaled down as one memoryblock.
Notes:

Returns nil on any error.

The data for this property is stored in the Tiff file.
The first scanline has the index of 0. Count is the number of scanlines you want to read/write.

If scaleFactor is >1, we scale down and return scaleFactor rows reduced to one row.

This scaling down is to quicker get preview pictures.

178.2.69 SetColorMap(red as memoryblock, green as memoryblock, blue as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the color map for a paletten image.
Notes:

The memoryblock must be 2^bitspersample * 2 bytes big.
Returns true on success and false on failure.

178.2.70 SetColorProfile(ProfileData as String) as boolean

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the color profile for this tiff file.
Example:

```
Dim p As New Picture(100,100,32)

Dim ImageFile As FolderItem = SpecialFolder.Desktop.Child("test.tif")
Dim ProfileFile As FolderItem = SpecialFolder.Desktop.Child("Generic RGB Profile.icc")

Dim t As New TiffPictureMBS
t.Pict = p

Dim ProfileStream As BinaryStream = BinaryStream.Open(ProfileFile)
Dim ProfileData As String = ProfileStream.Read(ProfileStream.Length)

If t.Create(ImageFile) Then
// set profile before writing
If t.SetColorProfile(ProfileData) Then
// now write picture
If t.WriteRGB Then
t.Close

ImageFile.Launch
Else
Break
End If
Else
Break
End If
Else
Break
End If
```

Notes: Returns true on success and false on failure.

178.2.71 SetData(Tag as Integer, data as string) as boolean

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the string for this tag.

178.2.72 SetFieldByte(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.73 SetFieldDouble(Tag as Integer, value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.74 SetFieldInteger(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem

const TIFFTAG_IMAGELENGTH=257 // integer
const TIFFTAG_IMAGEWIDTH=256 // integer

f=GetTemporaryFolderItem
t=new TiffPictureMBS

if t.Create(f) then

if t.SetFieldInteger(TIFFTAG_IMAGELENGTH,100) then
if t.Height=100 then
MsgBox "ok"
end if
end if

end if
```

Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.75 SetFieldMemory(Tag as Integer, ItemCount as Integer, data as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

This is the special version of the setter which passes a memoryblock and a count value so you can set an array using this method.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.76 SetFieldShort(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.77 SetFieldSingle(Tag as Integer, value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

178.2.78 SetFieldString(Tag as Integer, value as string) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets one of the fields to the value of the string.
Example:

```
dim m,p as Picture
dim f as FolderItem
dim t as TiffPictureMBS
dim g as Graphics
dim s as string

// make pictures
p=New Picture(100,100,32)
m=New Picture(100,100,32)

p.Graphics.ForeColor=Rgb(0,255,0) // fill green
p.Graphics.Fillrect 0,0,100,100

p.Graphics.ForeColor=Rgb(255,0,0) // fill red
p.Graphics.FillOval 0,0,100,100

m.Graphics.ForeColor=Rgb(0,0,0) // fill black (invisible so green not seen)
m.Graphics.Fillrect 0,0,100,100

m.Graphics.ForeColor=Rgb(255,255,255) // fill white (Visible)
m.Graphics.FillOval 0,0,100,100

// save
f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p
t.Mask=m

if t.Create(f) then
if t.WriteRGB then

const TIFFTAG_SOFTWARE=305

s="Example Software"
call t.SetFieldString TIFFTAG_SOFTWARE,s

const TIFFTAG_HOSTCOMPUTER=316

s="Example HostComputer"
call t.SetFieldString TIFFTAG_HOSTCOMPUTER,s
```

```
const TIFFTAG_IMAGEDESCRIPTION=270

s="Example ImageDescription"
call t.SetFieldString TIFFTAG_IMAGEDESCRIPTION,s

const TIFFTAG_MAKE=271

s="Example Make"
call t.SetFieldString TIFFTAG_MAKE,s

const TIFFTAG_ARTIST=315

s="Example Artist"
call t.SetFieldString TIFFTAG_ARTIST,s

t.Close
MsgBox "Ok"
f.Launch
end if
end if
```

Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.
You have to pass in the string with the correct encoding.

178.2.79 SetImageIndex(index as Integer) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current image index and reads the new image.
Example:

```
dim t as TiffPictureMBS // your tiff picture

if t.SetImageIndex(1) then
Canvas1.Backdrop=t.pict
end if
```

Notes:

Reads automatically a RGB picture for you, so the pict property is filled on success.
Returns true on success.
Index is zero based.
See also:

- 178.2.80 SetImageIndex(index as Integer, HeaderOnly as boolean) as boolean 24365

178.2.80 SetImageIndex(index as Integer, HeaderOnly as boolean) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current image index.
Notes:

If HeaderOnly is false the current picture is read into the pict& mask properties.
Returns true on success.
See also:

- 178.2.79 SetImageIndex(index as Integer) as boolean 24364

178.2.81 SetXMP(ProfileData as String) as boolean

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the xmp metadata package for this tiff file.
Notes: Returns true on success and false on failure.

178.2.82 VStripSize(nrows as UInt32) as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes in a strip with nrows rows of data.

178.2.83 VTileSize(nrows as UInt32) as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes in a row-aligned tile with nrows of data.

178.2.84 WriteBW as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write a black & white image.
Example:

```
dim p as Picture
dim f as FolderItem
dim t as TiffPictureMBS

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(0,0,0)
p.Graphics.FillOval 0,0,100,100

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS

if t.Create(f) then
t.Pict=p
if t.WriteBW then
MsgBox "ok"
end if
end if

Backdrop=p
```

Notes:

Uses the pictures in the pict property to write a picture.
Currently masks are not supported.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_MINISBLACK
BitsPerSample = 1
SamplesPerPixel = 1
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72
Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.

178.2.85 WriteEncodedStrip(strip as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compress and write a strip of data to an open TIFF file.
Notes:

Compress size bytes of raw data from buf and write the result to the specified strip; replacing any previously written data. Note that the value of strip is a "raw strip number." That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2).

The library writes encoded data using the native machine byte order. Correctly implemented TIFF readers are expected to do any necessary byte-swapping to correctly process image data with BitsPerSample greater than 8.

The strip number must be valid according to the current settings of the ImageLength and RowsPerStrip tags. An image may be dynamically grown by increasing the value of ImageLength prior to each call to WriteEncodedStrip.

Returns −1 is returned if an error was encountered. Otherwise, the value of size is returned.
If size is zero, we use the size of memoryblock.

178.2.86 WriteEncodedTile(tile as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compress and write a tile of data to an open TIFF file.
Notes:

Compress size bytes of raw data from buf and append the result to the end of the specified tile. Note that the value of tile is a "raw tile number". That is, the caller must take into account whether or not the data are organized in separate places (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number.

The library writes encoded data using the native machine byte order. Correctly implemented TIFF readers are expected to do any necessary byte-swapping to correctly process image data with BitsPerSample greater than 8.

Returns −1 is returned if an error was encountered. Otherwise, the value of size is returned.

If size is zero, we use the size of memoryblock.

178.2.87 WriteGray as boolean

MBS Images Plugin, Plugin Version: 7.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write a grayscale image with 256 colors.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
if t.Create(f) then
t.Pict=LogoMBS(500)
call t.WriteGray
t.Close
end if
```

Notes:

Uses the pictures in the pict property to write a picture.
Currently masks are not supported.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_MINISBLACK
BitsPerSample = 8
SamplesPerPixel = 1
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72
Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.
Version 13.1 of our plugins writes a 16 bit Gray image if you set BitsPerSample to 16 before calling this method.

178.2.88 WriteRawStrip(strip as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write a strip of raw data to an open TIFF file.
Notes:

Append size bytes of raw data to the specified strip.

The strip number must be valid according to the current settings of the ImageLength and RowsPerStrip tags. An image may be dynamically grown by increasing the value of ImageLength prior to each call to WriteRawStrip.

Returns -1 is returned if an error occurred. Otherwise, the value of size is returned.

If size is zero, we use the size of memoryblock.

178.2.89 WriteRawTile(tile as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write a tile of raw data to an open TIFF file
Notes:

Append size bytes of raw data to the specified tile.
Returns −1 is returned if an error occurred. Otherwise, the value of size is returned.
If size is zero, we use the size of memoryblock.

178.2.90 WriteRGB as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a RGB image.
Example:

```
dim m,p as Picture
```

```
dim f as FolderItem
dim t as TiffPictureMBS
dim g as Graphics

p=New Picture(100,100,32)
m=New Picture(100,100,32)

p.Graphics.ForeColor=Rgb(0,255,0) // fill green
p.Graphics.Fillrect 0,0,100,100

p.Graphics.ForeColor=Rgb(255,0,0) // fill red
p.Graphics.FillOval 0,0,100,100

m.Graphics.ForeColor=Rgb(0,0,0) // fill black (invisible so green not seen)
m.Graphics.Fillrect 0,0,100,100

m.Graphics.ForeColor=Rgb(255,255,255) // fill white (Visible)
m.Graphics.FillOval 0,0,100,100

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p
t.Mask=m

if t.Create(f) then
if t.WriteRGB then
t.Close
MsgBox "Ok"
f.Launch
end if
end if
```

Notes:

Uses the pictures in the mask and pict properties to write a picture.
If mask is set, the picture is saved with an alpha channel.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_RGB
BitsPerSample = 8
SamplesPerPixel = 3
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72

Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.

178.2.91 Properties

178.2.92 BitsPerSample as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The count of bits for each pixel component.
Notes:

Should normally by 8 for RGB images.
(Read and Write property)

178.2.93 BytesPerRow as Int64

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes needed for each row in a scan line.
Notes:

0 on any error.
(Read only property)

178.2.94 Compression as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The compression used.
Notes:

some constants:

The data for this property is stored in the Tiff file.

(Read and Write property)

178.2.95 Copyright as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The copyright notice of this image.
Example:

```
dim file as folderitem = SpecialFolder.desktop.child("test.tif")
dim st as new MyTiff

// open for appending
if not st.Open(file,"r+") then
MsgBox "Open Tiff failed!"
else
// change one setting
st.Copyright = "Hello World"

// and save
call st.SaveImage
st.Close
end if
```

Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

178.2.96 CurrentDirOffset as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current directory offset.
Notes: (Read only property)

178.2.97 CurrentRow as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the current row, respectively, that is being read or written.
Notes:

These values are updated each time a read or write is done.
(Read only property)

178.2.98 CurrentStrip as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the current strip, respectively, that is being read or written.
Notes:

These values are updated each time a read or write is done.
(Read only property)

178.2.99 CurrentTile as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the current tile, respectively, that is being read or written.
Notes:

These values are updated each time a read or write is done.
(Read only property)

178.2.100 DateTime as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Date and time of the TIFF file.
Notes:

Check some TIFF files for the format used.

The data for this property is stored in the Tiff file.
(Read and Write property)

178.2.101 DocumentName as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the document.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

178.2.102 ExtraSamples as MemoryBlock

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The settings for the extra samples.
Notes:

A memoryblock filled with an array of shorts (16bit integers).

constants:

The data for this property is stored in the Tiff file.
(Read and Write property)

178.2.103 FillOrder as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill order of the bits in a byte.
Notes:

constants:

(MSB = Most significant bit, LSB = Least significant bit)

The data for this property is stored in the Tiff file.
(Read and Write property)

178.2.104 height as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture.
Notes: (Read and Write property)

178.2.105 HorizontalPosition as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x Offset of this image in the drawing area.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

178.2.106 HorizontalResolution as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal resolution used.
Notes:

Value depends on ResolutionUnit value.

The data for this property is stored in the Tiff file.
(Read and Write property)

178.2.107 HostComputer as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the machine where the tiff file was created.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

l When creating a new file force information be written with Little-Endian byte order (but see below). By default the library will create new files using the native CPU byte order.

b When creating a new file force information be written with Big-Endian byte order (but see below). By default the library will create new files using the native CPU byte order.

L Force image data that is read or written to be treated with bits filled from Least Significant Bit (LSB) to Most Significant Bit (MSB). Note that this is the opposite to the way the library has worked from its inception.

B Force image data that is read or written to be treated with bits filled from Most Significant Bit (MSB) to Least Significant Bit (LSB); this is the default.

H Force image data that is read or written to be treated with bits filled in the same order as the native CPU.

M Enable the use of memory-mapped files for images opened read-only. If the underlying system does not support memory-mapped files or if the specific image being opened cannot be memory-mapped then the library will fallback to using the normal system interface for reading information. By default the library will attempt to use memory-mapped files.

m Disable the use of memory-mapped files.

C Enable the use of "strip chopping" when reading images that are comprised of a single strip or tile of uncompressed data. Strip chopping is a mechanism by which the library will automatically convert the single-strip image to multiple strips, each of which has about 8 Kilobytes of data. This facility can be useful in reducing the amount of memory used to read an image because the library normally reads each strip in its entirety. Strip chopping does however alter the apparent contents of the image because when an image is divided into multiple strips it looks as though the underlying file contains multiple separate strips. Finally, note that default handling of strip chopping is a compile-time configuration parameter. The default behaviour, for backwards compatibility, is to enable strip chopping.

c Disable the use of strip chopping when reading images.

178.2.108 ImageDescription as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Information about the image.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

178.2.109 InputBuffer as String

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string passed for OpenString.
Notes:

Used for the read requests from the Tiff library.
(Read only property)

178.2.110 IsBigEndian as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether file is big endian.
Notes: (Read only property)

178.2.111 IsByteSwapped as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether bytes are swapped.
Notes:

Returns true if the image data was in a different byte-order than the host machine. Zero is returned if the TIFF file and local host byte-orders are the same.
Note that ReadTile(), ReadStrip() and ReadScanline() functions already normally perform byte swapping to local host order if needed.
(Read only property)

178.2.112 IsMSB2LSB as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the image data is being returned with bit 0 as the most significant bit.
Notes: (Read only property)

178.2.113 IsTiled as Boolean

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a non-zero value if the image data has a tiled organization.
Notes:

Zero is returned if the image data is organized in strips.
(Read only property)

178.2.114 IsUpSampled as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether data is upsampled.
Notes:

Returns a non-zero value if image data returned through the read interface routines is being up-sampled. This can be useful to applications that want to calculate I/O buffer sizes to reflect this usage (though the usual strip and tile size routines already do this).
(Read only property)

178.2.115 JPEGQuality as Integer

MBS Images Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The JPEG quality.
Example:

```
dim logo as Picture = LogoMBS(500)
dim pic as new PictureMBS(logo)

// save tiff with jpeg compression
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim t as TiffPictureMBS

if pic <>nil then
```

```
t = new TiffPictureMBS

if t.Create(F) then

t.Height = pic.Height
t.Width = pic.Width

t.RowsPerStrip = 1
t.PlanarConfig = t.kPlanarConfigContig
t.Photometric = t.kPhotometricRGB
t.BitsPerSample = 8
t.SamplesPerPixel = 3
t.FillOrder = t.kFillOrderMSB2LSB
t.Orientation = t.kOrientationTopLeft
t.ResolutionUnit = t.kResUnitInch
t.VerticalResolution = 72.0
t.HorizontalResolution = 72.0
t.Compression = t.kCompressionJPEG
t.RowsPerStrip = 32
t.JPEGQuality = 75

// copy lines
for i as Integer = 0 to t.Height - 1
t.Scanline(i) = pic.RowInFormat(i, PictureMBS.ImageFormatRGB)
next

t.Close
end if
end if
```

Notes:

Default is 75.
(Read and Write property)

178.2.116 Make as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scanner manufacturer name.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

178.2.117 mask as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mask of the picture.
Notes:

May be nil.
(Read and Write property)

178.2.118 Model as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scanner model name/number.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

178.2.119 NumberOfStrips as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of strips in the image.
Notes: (Read only property)

178.2.120 NumberOfTiles as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of tiles in the image.
Notes: (Read only property)

178.2.121 Orientation as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The orientation of this image.
Example:

```
// creates a tif file with a horizontal flipped image
// red rectangle is on the left in the image data, but with orientation tag it should be displayed on the right
```

```
side.
// Mac OS X Preview.app shows it correctly.

dim p as Picture
dim t as TiffPictureMBS
dim f as FolderItem

const ORIENTATION_TOPLEFT = 1 //* row 0 top, col 0 lhs */
const ORIENTATION_TOPRIGHT = 2 //* row 0 top, col 0 rhs */
const ORIENTATION_BOTRIGHT = 3 //* row 0 bottom, col 0 rhs */
const ORIENTATION_BOTLEFT = 4 //* row 0 bottom, col 0 lhs */
const ORIENTATION_LEFTTOP = 5 //* row 0 lhs, col 0 top */
const ORIENTATION_RIGHTTOP = 6 //* row 0 rhs, col 0 top */
const ORIENTATION_RIGHTBOT = 7 //* row 0 rhs, col 0 bottom */
const ORIENTATION_LEFTBOT = 8 //* row 0 lhs, col 0 bottom */

p=New Picture(150,100,32)

p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.FillRect 0,0,10,10

t=new TiffPictureMBS
f=SpecialFolder.Desktop.Child("test.tif")

if t.Create(f) then
t.Pict=p

t.Orientation=ORIENTATION_TOPRIGHT
if t.WriteRGB then
end if
t.Orientation=ORIENTATION_TOPRIGHT

t.Close
end if
```

Notes:

Orientation:

The orientation of the image with respect to the rows and columns.
Tag = 274 (112.H)
Type = SHORT
N = 1
1 = The 0th row represents the visual top of the image, and the 0th column represents the visual left-hand side.
2 = The 0th row represents the visual top of the image, and the 0th column represents the visual right-hand

side.
3 = The 0th row represents the visual bottom of the image, and the 0th column represents the visual right-hand side.
4 = The 0th row represents the visual bottom of the image, and the 0th column represents the visual left-hand side.
5 = The 0th row represents the visual left-hand side of the image, and the 0th column represents the visual top.
6 = The 0th row represents the visual right-hand side of the image, and the 0th column represents the visual top.
7 = The 0th row represents the visual right-hand side of the image, and the 0th column represents the visual bottom.
8 = The 0th row represents the visual left-hand side of the image, and the 0th column represents the visual bottom.

Default is 1.
Support for orientations other than 1 is not a Baseline TIFF requirement.
(This text was sent in by David Austin)
(Read and Write property)

178.2.122 OutputBuffer as String

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current output data from the CreateString function.
Notes:

Between CreateString and Close the plugin will record all the output data and you can get a copy using this property.
(Read only property)

178.2.123 PageName as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the current page.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

178.2.124 Photometric as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A property of the TIFF image.
Example:

```
// read and write a BW fax tiff with compression

dim d as new OpenDialog()
dim f as FolderItem = GetFolderItem("myfax.tiff")
if f = nil then
return
end if

dim tiff as new TiffPictureMBS()
if not tiff.Open(f) then
MsgBox("Error while opening.")
return
end if

if not tiff.ReadBW() then
MsgBox("Error reading.")
end if

dim tiff2 as TiffPictureMBS = new TiffPictureMBS()

dim f2 as FolderItem = SpecialFolder.Desktop.Child("Copy.tiff")
if not tiff2.Create(f2) then
MsgBox("Error creating file.")
end if

const COMPRESSION_CCITTFAX3=3
const WhiteIsZero=0
const BlackIsZero=1

tiff2.Pict = tiff.pict
tiff2.Photometric=WhiteIsZero
tiff2.Compression=COMPRESSION_CCITTFAX3
if not tiff2.WriteBW() then
MsgBox("Error writing.") // Error
end if

tiff2.Close()
```

Notes:

PhotometricInterpretation:
The color space of the image data.
Tag = 262 (106.H)
Type = SHORT

N = 1

0 = WhiteIsZero. For bilevel and grayscale images: 0 is imaged as white. 2**BitsPerSample-1 is imaged as black. This is the normal value for Compression=2.

1 = BlackIsZero. For bilevel and grayscale images: 0 is imaged as black. 2**BitsPerSample-1 is imaged as white. If this value is specified for Compression=2, the image should display and print reversed.

2 = RGB. In the RGB model, a color is described as a combination of the three primary colors of light (red, green, and blue) in particular concentrations. For each of the three components, 0 represents minimum intensity, and 2**BitsPerSample - 1 represents maximum intensity. Thus an RGB value of (0,0,0) represents black, and (255,255,255) represents white, assuming 8-bit components. For PlanarConfiguration = 1, the components are stored in the indicated order: first Red, then Green, then Blue. For PlanarConfiguration = 2, the StripOffsets for the component planes are stored in the indicated order: first the Red component plane StripOffsets, then the Green plane StripOffsets, then the Blue plane StripOffsets.

3= Palette color. In this model, a color is described with a single component. The value of the component is used as an index into the red, green and blue curves in the ColorMap field to retrieve an RGB triplet that defines the color. When PhotometricInterpretation=3 is used, ColorMap must be present and SamplesPerPixel must be 1.
