- 87.3.23 PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean 15991
- 87.3.24 PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean 15993
- 87.3.25 PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean 15995

- 87.3.26 PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 15996
- 87.3.27 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean 15999
- 87.3.28 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean 16000
- 87.3.29 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean 16002
- 87.3.30 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean 16004
- 87.3.31 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 16006
- 87.3.33 PictureCopyPixelFastMBS(DestImage As Picture, Source As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer) as boolean 16008
- 109.8.4 PictureToJPEGStringMBS(pic as picture, quality as Integer = 80) as string 19182
- 141.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 22131
- 141.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22132
- 141.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 22132
- 141.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22133
- 141.1.6 PNGStringToPictureMBS(data as string, gamma as single = 0.0, AllowDamaged as boolean = false) as picture 22134
- 141.1.8 PNGStringToPNGPictureMBS(data as string, gamma as single = 0.0, AllowDamaged as boolean = false) as PNGPictureMBS 22135
- 123.4.69 PowMBS(x as Double, y as Double) as Double 20394
- 126.1.4 ptr2MemoryblockMBS(Value as Integer) as memoryblock 20495

- 87.3.55 PtrABGRtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer) as picture 16024
- 87.3.56 PtrABGRtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer) as picture 16025
- 87.3.57 PtrARGBtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer) as picture 16025
- 87.3.58 PtrARGBtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer) as picture 16026
- 87.3.59 PtrARGBtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, LittleEndian as boolean) as picture 16026
- 87.3.60 PtrBGRAtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer) as picture 16027
- 87.3.61 PtrBGRAtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer) as picture 16027
- 87.3.62 PtrBGRtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer) as picture 16028
- 87.3.63 PtrBGRtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer) as picture 16028
- 87.3.64 PtrGrayToPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer) as picture 16029
- 87.3.65 PtrGrayToPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer, Red as Integer, Blue as Integer, Green as Integer) as picture 16030
- 87.3.66 PtrGrayToPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer, Red() as Integer, Blue() as Integer, Green() as Integer) as picture 16030
- 87.3.67 PtrRGBAtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture 16031
- 87.3.68 PtrRGBAtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture 16032
- 87.3.69 PtrRGBtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer) as picture 16032
- 87.3.70 PtrRGBtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer) as picture 16033
- 175.1.73 RandomBytesStringMBS(Length as Integer, ASCII as boolean=false) as string 24888
- 151.2.7 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as string) as boolean 22800
- 175.1.12 RemoveAccentsMBS(text as string, IgnoreCase as boolean = false) as string 24864

2915

- 175.1.76 RemoveHTMLTagsMBS(AsciiTextWithTags as string) as string 24889
- 175.1.78 RemoveHTMLTagsWithMBS(AsciiTextWithTags as string, Replacement as string) as string 24890
- 87.3.12 RenderSamplesMBS(Samples as memoryblock, SampleCount as Integer, Smooth as Integer, Width as Integer, Height as Integer, outlinewidth as Integer, BackColor as color=& c88B5C4, ForeColor as color=& c274C5A, OutLineColor as color=& c203F4E, Bits as Integer = 8, AutoScale as boolean = false) as Picture 15983
- 175.1.79 ReplaceLineEndingsMBS(Text as String, NewLine as String, yield as boolean = false) as String 24890
- 175.1.81 ReplaceNonPrintableCharactersMBS(s as string, replacevalue as Integer=46) as string 24891
- 123.4.71 RoundMBS(x as Double, decimals as Integer = 0) as Double 20395
- 177.1.50 RunningOnCarbonXMBS as boolean 24965
- 175.1.83 ScientificStrMBS(d as Double, digits as Integer) as string 24891
- 159.1.1 ScreenshotDisplayMBS(index as Integer) as picture 23773
- 159.1.3 ScreenshotFromStringMBS(Width as Integer, Height as Integer, RowBytes as Integer, data as string) as picture 23774
- 159.1.4 ScreenshotMBS as picture 23774
- 159.1.6 ScreenshotRectMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture 23775
- 159.1.9 ScreenshotStringDisplayMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer, index as Integer) as string 23776
- 159.1.10 ScreenshotStringMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer) as string 23776
- 82.13.23 SetCurrentWorkingDirectoryMBS(path as folderitem) as boolean 15495
- 52.1.73 SetDefaultCFTimeZoneMBS(timezone as CFTimeZoneMBS) 9670
- 120.1.2 SetDesktopPictureMBS(file as folderitem) as Integer 19959
- 213.1.53 SetEncodingOfStringMBS(s as string, encoding as UInt32) 27538
- 177.1.51 SetMaximumOpenFileCountMacOSXMBS(Value as Integer) 24965
- 72.6.3 SetNextDragImageMBS(Img as NSImageMBS) 13869
- 151.2.8 SetRegistrationMessageMBS(ID as Integer, message as string) 22800
- 14.16.5 SetSoundMuteMBS(mute as boolean) 3514
- 14.16.6 SetSoundVolumeLeftMBS(percent as Double) 3514
- 14.16.7 SetSoundVolumeMBS(percent as Double) 3514

- 14.16.8 SetSoundVolumeRightMBS(percent as Double) 3515
- 177.1.52 SetSystemUIModeMBS(mode as Integer, Options as Integer) 24966
- 144.4.23 SetThreadNameMBS(name as string) 22423
- 213.1.49 SetVariantArrayValueMBS(v as Variant, index as Integer, value as Variant) 27536
- 177.1.53 ShowCharacterPaletteMBS 24966
- 21.1.10 ShowCursorMBS 4650
- 123.1.50 ShowModalThreadSafeMBS(extends theMessageDialog as MessageDialog) 20298
- 49.3.1 ShowModalWithinThreadSafeMBS(extends theMessageDialog as MessageDialog, parent as DesktopWindow) 9571
- 49.3.5 ShowModalWithinThreadSafeMBS(extends theMessageDialog as MessageDialog, parent as window) 9572
- 123.4.73 SinHMBS(x as Double) as Double 20396
- 123.4.75 SinMBS(x as Double) as Double 20396
- 177.1.20 SleepMBS(time as Double) 24955
- 140.1.6 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer) as Integer 22120
- 140.1.7 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer, ReadLines as Integer, WriteLines as Integer) as Integer 22121
- 175.1.15 SplitCommaSeparatedValuesMBS(text as string, delimiter as string = """, quote as string = """) as string() 24865
- 175.1.85 SplitMBS(value as String, delimiter as String = " ") as String() 24892
- 171.4.1 SpotlightMBS(searchString as string) as Integer 24479
- 175.1.88 SQLReplaceBooleanMBS(SQL as string) as string 24893
- 123.4.77 SqrtMBS(x as Double, y as Double) as Double 20397
- 177.1.35 StartDictationMBS 24960
- 175.1.90 StrCompBytesMBS(a as string, b as string) as Integer 24893
- 175.1.91 StrCompCharactersMBS(a as string, b as string) as Integer 24893
- 175.1.92 StringANDMBS(a as string,b as string) as string 24894
- 175.1.118 StringCodePointsMBS(text as string) as UInt32() 24906
- 21.1.17 StringFromOSTypeMBS(value as Integer) as string 4652

2917

- 175.1.93 StringIsHTMLreadyMBS(s as string) as boolean 24894
- 175.1.94 StringIsXMLreadyMBS(s as string) as boolean 24895
- 175.1.95 StringORMBS(a as string,b as string) as string 24895
- 21.1.18 StringToMemoryBlockMBS(s as string) as memoryblock 4653
- 175.1.96 StringXOR2MBS(data as string, XorMask as string, MaskOffset as Integer = 0) as string 24896
- 175.1.98 StringXORMBS(data as string, XorMask as string, MaskOffset as Integer = 0) as string 24896
- 175.1.99 StrMBS(d as Double) as string 24897
- 52.1.74 SystemCFTimeZoneMBS as CFTimeZoneMBS 9671
- 177.1.54 SystemControlByNameMBS(name as string) as memoryblock 24967

# Accessibility

## 8.1 module AccessibilityMBS

### 8.1.1 module AccessibilityMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** A class to handle all the global stuff of the Accessibility API.
**Notes:**

This class has a lot of CFStringMBS functions to return you constants. Please check Apple's documentation about those constants.
If you miss a function or a constant, please email.

### 8.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr7
- MBS Xojo / Real Studio Plugins, version 13.4pr1
- MBS Real Studio Plugins, version 13.0pr9
- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr6

### 8.1.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr7
- MBS Xojo / Real Studio Plugins, version 13.4pr1

- MBS Real Studio Plugins, version 13.0pr9
- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr6

### 8.1.4 Methods

### 8.1.5 ApplicationAXUIElement(pid as Integer) as AXUIElementMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** The AXUIElement for the current application.

### 8.1.6 Available as Boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** True if the Accessibility API is available.
**Notes:** Should always be true on Mac OS X 10.2.

### 8.1.7 AXAPIEnabled as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** True if the user permitts Accessibility services.

### 8.1.8 IsProcessTrusted(Prompt as Boolean = false) as boolean

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

**Function:** Returns whether the current process is a trusted accessibility client.
**Notes:** Added prompt flag for version 18.1.

### 8.1.9 kAXAllowedValuesAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.10 kAXAMPMFieldAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.11 kAXApplicationActivatedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.12 kAXApplicationDeactivatedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.13 kAXApplicationDockItemSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.14 kAXApplicationHiddenNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.15 kAXApplicationRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.16 kAXApplicationShownNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.17 kAXAscendingSortDirectionValue as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** A constant used for the AXUIElement class.

### 8.1.18 kAXAttributedStringForRangeParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.19 kAXBoundsForRangeParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.20 kAXBrowserRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.21 kAXBusyIndicatorRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.22 kAXButtonRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.23 kAXCancelAction as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the action names used for the AXUIElement class.

### 8.1.24 kAXCancelButtonAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.25 kAXCellForColumnAndRowParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.26 kAXCellRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.27 kAXCheckBoxRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.28 kAXChildrenAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.29 kAXClearButtonAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.30 kAXCloseButtonAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.31 kAXCloseButtonSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.32 kAXColorWellRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.33 kAXColumnCountAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.34 kAXColumnHeaderUIElementsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.35 kAXColumnIndexRangeAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.36 kAXColumnRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.37 kAXColumnsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.38 kAXColumnTitleAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.39 kAXColumnTitlesAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.40 kAXComboBoxRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.41 kAXConfirmAction as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the action names used for the AXUIElement class.

### 8.1.42 kAXContentListSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.43 kAXContentsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.44 kAXCreatedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants.

### 8.1.45 kAXCriticalValueAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.46 kAXDateFieldRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.47 kAXDayFieldAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.48 kAXDecrementAction as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the action names used for the AXUIElement class.

### 8.1.49 kAXDecrementArrowSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.50 kAXDecrementButtonAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.51 kAXDecrementPageSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.52 kAXDefaultButtonAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.53 kAXDefinitionListSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.54 kAXDescendingSortDirectionValue as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** A constant used for the AXUIElement class.

### 8.1.55 kAXDescription as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.56 kAXDescriptionAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.57 kAXDialogSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.58 kAXDisclosedByRowAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.59 kAXDisclosedRowsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.60 kAXDisclosingAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.61 kAXDisclosureLevelAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.62 kAXDisclosureTriangleRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.63 kAXDockExtraDockItemSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.64 kAXDockItemRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.65 kAXDocumentAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.66 kAXDocumentDockItemSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.67 kAXDrawerCreatedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants.

### 8.1.68 kAXDrawerRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.69 kAXEditedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.70 kAXEnabledAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.71 kAXExpandedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.72 kAXFilenameAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.73 kAXFloatingWindowSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.74 kAXFocusedApplicationAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.75 kAXFocusedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.76 kAXFocusedUIElementAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.77 kAXFocusedUIElementChangedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.78 kAXFocusedWindowAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.79 kAXFocusedWindowChangedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.80 kAXFolderDockItemSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.81 kAXFrontmostAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.82 kAXGridRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.83 kAXGroupRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.84 kAXGrowAreaAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.85 kAXGrowAreaRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.86 kAXHandleRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.87 kAXHandlesAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.88 kAXHeaderAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.89 kAXHelpAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.90 kAXHelpTagCreatedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants.

### 8.1.91 kAXHelpTagRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.92 kAXHiddenAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.93 kAXHorizontalOrientationValue as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** A constant used for the AXUIElement class.

### 8.1.94 kAXHorizontalScrollBarAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.95 kAXHorizontalUnitDescriptionAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.96 kAXHorizontalUnitsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.97 kAXHourFieldAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.98 kAXImageRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.99 kAXIncrementAction as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the action names used for the AXUIElement class.

### 8.1.100 kAXIncrementArrowSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.101 kAXIncrementButtonAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.102 kAXIncrementorAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.103 kAXIncrementorRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.104 kAXIncrementPageSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.105 kAXIndexAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.106 kAXInsertionPointLineNumberAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.107 kAXIsApplicationRunningAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.108 kAXIsEditableAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.109 kAXLabelUIElementsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.110 kAXLabelValueAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.111 kAXLayoutAreaRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.112 kAXLayoutItemRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.113 kAXLayoutPointForScreenPointParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.114 kAXLayoutSizeForScreenSizeParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.115 kAXLevelIndicatorRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.116 kAXLineForIndexParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.117 kAXLinkedUIElementsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.118 kAXListRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.119 kAXMainAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.120 kAXMainWindowAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.121 kAXMainWindowChangedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.122 kAXMarkerTypeAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.123 kAXMarkerTypeDescriptionAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.124 kAXMarkerUIElementsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.125 kAXMatteContentUIElementAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.126 kAXMatteHoleAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.127 kAXMatteRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.128 kAXMaxValueAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.129 kAXMenuBarAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.130 kAXMenuBarItemRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.131 kAXMenuBarRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.132 kAXMenuButtonRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.133 kAXMenuClosedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.134 kAXMenuItemCmdCharAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.135 kAXMenuItemCmdGlyphAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.136 kAXMenuItemCmdModifiersAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.137 kAXMenuItemCmdVirtualKeyAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.138 kAXMenuItemMarkCharAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.139 kAXMenuItemPrimaryUIElementAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.140 kAXMenuItemRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.141 kAXMenuItemSelectedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.142 kAXMenuOpenedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.143 kAXMenuRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.144 kAXMinimizeButtonAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.145 kAXMinimizeButtonSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.146 kAXMinimizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.147 kAXMinimizedWindowDockItemSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.148 kAXMinuteFieldAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.149 kAXMinValueAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.150 kAXModalAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.151 kAXMonthFieldAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.152 kAXMovedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants.

### 8.1.153 kAXNextContentsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.154 kAXNumberOfCharactersAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.155 kAXOrderedByRowAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.156 kAXOrientationAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.157 kAXOutlineRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.158 kAXOutlineRowSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.159 kAXOverflowButtonAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.160 kAXParentAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.161 kAXPickAction as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the action names used for the AXUIElement class.

### 8.1.162 kAXPlaceholderValueAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.163 kAXPopUpButtonRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.164 kAXPositionAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.165 kAXPressAction as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the action names used for the AXUIElement class.

### 8.1.166 kAXPreviousContentsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.167 kAXProcessSwitcherListSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.168 kAXProgressIndicatorRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.169 kAXProxyAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.170 kAXRadioButtonRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.171 kAXRadioGroupRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.172 kAXRaiseAction as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the action names used for the AXUIElement class.

### 8.1.173 kAXRangeForIndexParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.174 kAXRangeForLineParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.175 kAXRangeForPositionParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.176 kAXRatingIndicatorSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.177 kAXRelevanceIndicatorRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.178 kAXResizedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants.

### 8.1.179 kAXRoleAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.180 kAXRoleDescriptionAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.181 kAXRowCollapsedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the outline notification constants.

### 8.1.182 kAXRowCountAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.183 kAXRowCountChangedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants.

### 8.1.184 kAXRowExpandedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the outline notification constants.

### 8.1.185 kAXRowHeaderUIElementsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.186 kAXRowIndexRangeAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.187 kAXRowRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.188 kAXRowsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.189 kAXRTFForRangeParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.190 kAXRulerMarkerRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.191 kAXRulerRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.192 kAXScreenPointForLayoutPointParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.193 kAXScreenSizeForLayoutSizeParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.194 kAXScrollAreaRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.195 kAXScrollBarRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.196 kAXSearchButtonAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.197 kAXSearchFieldSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.198 kAXSecondFieldAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.199 kAXSecureTextFieldSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.200 kAXSelectedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.201 kAXSelectedCellsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.202 kAXSelectedCellsChangedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the cell-based table notification constants.

### 8.1.203 kAXSelectedChildrenAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.204 kAXSelectedChildrenChangedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants.

### 8.1.205 kAXSelectedChildrenMovedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the layout area notification constants.

### 8.1.206 kAXSelectedColumnsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.207 kAXSelectedColumnsChangedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants.

### 8.1.208 kAXSelectedRowsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.209 kAXSelectedRowsChangedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants.

### 8.1.210 kAXSelectedTextAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.211 kAXSelectedTextChangedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants.

### 8.1.212 kAXSelectedTextRangeAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.213 kAXSelectedTextRangesAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.214 kAXServesAsTitleForUIElementsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.215 kAXSharedCharacterRangeAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.216 kAXSharedTextUIElementsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.217 kAXSheetCreatedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants.

### 8.1.218 kAXSheetRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.219 kAXShowMenuAction as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the action names used for the AXUIElement class.

### 8.1.220 kAXShownMenuUIElementAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.221 kAXSizeAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.222 kAXSliderRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.223 kAXSortButtonSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.224 kAXSortDirectionAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.225 kAXSplitGroupRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.226 kAXSplitterRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.227 kAXSplittersAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.228 kAXStandardWindowSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.229 kAXStaticTextRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.230 kAXStringForRangeParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.231 kAXStyleRangeForIndexParameterizedAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.232 kAXSubroleAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.233 kAXSystemDialogSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.234 kAXSystemFloatingWindowSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.235 kAXSystemWideRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.236 kAXTabGroupRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.237 kAXTableRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.238 kAXTableRowSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.239 kAXTabsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.240 kAXTextAreaRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.241 kAXTextAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.242 kAXTextFieldRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.243 kAXTimeFieldRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.244 kAXTimelineSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.245 kAXTitleAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.246 kAXTitleChangedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification constants.

### 8.1.247 kAXTitleUIElementAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.248 kAXToolbarButtonAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.249 kAXToolbarButtonSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.250 kAXToolbarRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.251 kAXTopLevelUIElementAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.252 kAXTrashDockItemSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.253 kAXUIElementDestroyedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.254 kAXUIElementMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the TypeID of the AXUIElement class.

### 8.1.255 kAXUnitDescriptionAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.256 kAXUnitsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.257 kAXUnitsChangedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the layout area notification constants.

### 8.1.258 kAXUnknownOrientationValue as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** A constant used for the AXUIElement class.

### 8.1.259 kAXUnknownRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.260 kAXUnknownSortDirectionValue as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** A constant used for the AXUIElement class.

### 8.1.261 kAXUnknownSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.262 kAXURLAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.263 kAXURLDockItemSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.264 kAXValueAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.265 kAXValueChangedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.266 kAXValueDescriptionAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.267 kAXValueIncrementAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.268 kAXValueIndicatorRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.269 kAXValueWrapsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.270 kAXVerticalOrientationValue as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** A constant used for the AXUIElement class.

### 8.1.271 kAXVerticalScrollBarAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.272 kAXVerticalUnitDescriptionAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.273 kAXVerticalUnitsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.274 kAXVisibleCellsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.275 kAXVisibleCharacterRangeAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.276 kAXVisibleChildrenAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.277 kAXVisibleColumnsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.278 kAXVisibleRowsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.279 kAXVisibleTextAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.280 kAXWarningValueAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.

### 8.1.281 kAXWindowAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.282 kAXWindowCreatedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.283 kAXWindowDeminiaturizedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.284 kAXWindowMiniaturizedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.285 kAXWindowMovedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.286 kAXWindowResizedNotification as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used for the axobserver class.

### 8.1.287 kAXWindowRole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.288 kAXWindowsAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.289 kAXYearFieldAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute constants.
**Notes:** Convenience attribute that yields the year field of a date field element.

### 8.1.290 kAXZoomButtonAttribute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the attribute names used for the AXUIElement class.

### 8.1.291 kAXZoomButtonSubrole as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the role names used for the AXUIElement class.

### 8.1.292 MakeAXValue(theCFObject as CFObjectMBS) as AXValueMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates an AXValue object containing the CFObject.
**Notes:**

Actually only the RB object around the cfobject handle is replaced.
You can't do this using a cast in RB, so this function was created.

### 8.1.293 MakeAXValueFromCFRange(location as Integer, length as Integer) as AXValueMBS

MBS MacCF Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** Creates an AXValue object for a CFRange structure with the given values.
**Example:**

```
// create with values and read them back
dim a as AXValueMBS = AccessibilityMBS.MakeAXValueFromCFRange(5, 9)

if a.AXIsCFRange then
dim lo, le as Integer

if a.AXGetCFRange(lo, le) then
MsgBox str(lo)+" "+str(le)
else
break // error
end if
else
break // error
end if
```

### 8.1.294 MakeAXValueFromCGPoint(x as single, y as single) as AXValueMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates an AXValue object for a CGPoint structure with the given values.

### 8.1.295 MakeAXValueFromCGRect(x as single, y as single, width as single, height as single) as AXValueMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates an AXValue object for a CGRect structure with the given values.

### 8.1.296 MakeAXValueFromCGSize(width as single, height as single) as AXValueMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates an AXValue object for a CGSize structure with the given values.

### 8.1.297 MakeProcessTrusted(path as string) as Integer

MBS MacCF Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

**Function:** Attempts to make the process represented by the specified path a trusted accessibility client.
**Notes:**

Use this function to make a process a trusted accessibility client.
Note: The caller must be running as root to successfully call this function. In addition, the caller should relaunch the process after this function returns successfully for the trusted status to take effect.

Path: The path to the executable of the process to make trusted.

Returns an error code that indicates success or failure.

### 8.1.298 SystemWideAXUIElement as AXUIElementMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns a AXUIElement which covers the whole system.
**Example:**

```
// displays the current window title if accessibility is enabled in Mac OS X 10.2 or newer

dim SystemWideElement,FocusedApplicationElement,FocusedWindowElement as AXUIElementMBS
```

```
dim FocusedApplication,FocusedWindow,Title as AXValueMBS
dim s as String
dim cs as CFStringMBS

// show a window so there is one which can be found
window1.show

SystemWideElement=AccessibilityMBS.SystemWideAXUIElement
if SystemWideElement<>nil then
FocusedApplication=SystemWideElement.AttributeValue(AccessibilityMBS.kAXFocusedApplicationAttribute)
if FocusedApplication.Type=AccessibilityMBS.kAXUIElementMBSTypeID then
FocusedApplicationElement=new AXUIElementMBS
FocusedApplicationElement.Handle=FocusedApplication.Handle
FocusedApplicationElement.RetainObject

FocusedWindow=FocusedApplicationElement.AttributeValue(AccessibilityMBS.kAXFocusedWindowAttribute)

if FocusedWindow<>nil and AccessibilityMBS.kAXUIElementMBSTypeID=FocusedWindow.Type then

FocusedWindowElement=new AXUIElementMBS
FocusedWindowElement.Handle=FocusedWindow.Handle
FocusedWindowElement.RetainObject

Title=FocusedWindowElement.AttributeValue(AccessibilityMBS.kAXTitleAttribute)
if Title<>nil and Title.Type=kCFStringMBSTypeID then
cs=new CFStringMBS
cs.handle=Title.Handle
cs.RetainObject
msgbox cs.str
end if
end if
end if
end if
```

**Notes:** In the current implementation you can use this to get the AXUIElement for the frontmost application.

### 8.1.299 Constants

### 8.1.300 kAXErrorActionUnsupported = -25206

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.301 kAXErrorAPIDisabled = -25211

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.302 kAXErrorAttributeUnsupported = -25205

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.303 kAXErrorCannotComplete = -25204

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.304 kAXErrorFailure = -25200

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.305 kAXErrorIllegalArgument = -25201

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.306 kAXErrorInvalidUIElement = -25202

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.307 kAXErrorInvalidUIElementObserver = -25203

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.308 kAXErrorNotEnoughPrecision = -25214

MBS MacCF Plugin, Plugin Version: 13.0.

**Function:** One of the error values used for the lasterror property.

### 8.1.309 kAXErrorNotificationAlreadyRegistered = -25209

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.310 kAXErrorNotificationNotRegistered = -25210

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.311 kAXErrorNotificationUnsupported = -25207

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.312 kAXErrorNotImplemented = -25208

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.313 kAXErrorNoValue = -25212

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

### 8.1.314 kAXErrorParameterizedAttributeUnsupported = -25213

MBS MacCF Plugin, Plugin Version: 13.0.

**Function:** One of the error values used for the lasterror property.

### 8.1.315 kAXErrorSuccess = 0

MBS MacCF Plugin, Plugin Version: 3.3.

**Function:** One of the error values used for the lasterror property.

## 8.2 class AXObserverMBS

### 8.2.1 class AXObserverMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** A class to observes notifications sent by the Accessibility services.
**Notes:**

This class requires Mac OS X 10.2 to work.
Subclass of the CFObjectMBS class.

### 8.2.2 Methods

### 8.2.3 AddNotification(element as AXUIElementMBS, notification as CFStringMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Adds a notification to the observer.
**Notes:** Returns an error code. (0 for no error and -1 if the function is not available)

### 8.2.4 Create(pid as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new observer for the given process.
**Notes:** You need a valid process ID to observe the target application. The ProcessMBS class can help you.

### 8.2.5 RemoveNotification(element as AXUIElementMBS, notification as CFStringMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Removes a notification from the observer.
**Notes:** Returns an error code. (0 for no error and -1 if the function is not available)

### 8.2.6 Events

### 8.2.7 Action(element as AXUIElementMBS, notification as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: .

**Function:** Called whenever an action occurs.

## 8.3 class AXUIElementMBS

### 8.3.1 class AXUIElementMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** This class represents an element of the User Interface of an application.
**Example:**

```
// displays the current window title if accessibility is enabled in Mac OS X 10.2 or newer

dim SystemWideElement,FocusedApplicationElement,FocusedWindowElement as AXUIElementMBS
dim FocusedApplication,FocusedWindow,Title as AXValueMBS
dim s as String
dim cs as CFStringMBS

SystemWideElement=AccessibilityMBS.SystemWideAXUIElement
if SystemWideElement<>nil then
FocusedApplication=SystemWideElement.AttributeValue(AccessibilityMBS.kAXFocusedApplicationAttribute)
if FocusedApplication.Type=AccessibilityMBS.kAXUIElementMBSTypeID then
FocusedApplicationElement=new AXUIElementMBS
FocusedApplicationElement.Handle=FocusedApplication.Handle
FocusedApplicationElement.RetainObject

FocusedWindow=FocusedApplicationElement.AttributeValue(AccessibilityMBS.kAXFocusedWindowAttribute)

if FocusedWindow<>nil and AccessibilityMBS.kAXUIElementMBSTypeID=FocusedWindow.Type then

FocusedWindowElement=new AXUIElementMBS
FocusedWindowElement.Handle=FocusedWindow.Handle
FocusedWindowElement.RetainObject

Title=FocusedWindowElement.AttributeValue(AccessibilityMBS.kAXTitleAttribute)
if Title<>nil and Title.Type=kCFStringMBSTypeID then
cs=new CFStringMBS
cs.handle=Title.Handle
cs.RetainObject
msgbox cs.str
end if
end if
end if
end if
```

**Notes:**

e.g. a window, a menuitem or a button.
This class requires Mac OS X 10.2 to work.

Subclass of the CFObjectMBS class.

### 8.3.2 Methods

### 8.3.3 ActionDescription(action as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the description of the action with the given name.
**Notes:** Returns nil on any error.

### 8.3.4 ActionNames as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** An CF array with all the possible action names.
**Notes:** Returns nil on any error.

### 8.3.5 AttributeNames as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns a CF array with all the possible attribute names.

### 8.3.6 AttributeValue(attribute as CFStringMBS) as AXValueMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the value of an attribute.

### 8.3.7 AttributeValues(attribute as CFStringMBS, minindex as Integer, maxindex as Integer) as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the values of an attribute as a CF array.

### 8.3.8 ElementAtPosition(x as single, y as single) as AXUIElementMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the element which is on the given position.
**Notes:** e.g. on a window.

### 8.3.9 GetAttributeValueCount(attribute as CFStringMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Counts how much attributes of the given name exists.

### 8.3.10 IsAttributeSettable(attribute as CFStringMBS) as Boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the attribute with the given name is setable.
**Notes:** Returns false on any error.

### 8.3.11 PerformAction(action as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Performs a named action.

### 8.3.12 PostKeyboardEvent(keyChar as Integer, virtualKey as Integer, keydown as boolean)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Posts a keyboard event.
**Example:**

```
// For example, to produce a 'Z',
// the SHIFT key must be down,
// the 'z' key must go down,
// and then the SHIFT and 'z' key must be released:

dim a as AXUIElementMBS
// get the element
```

```
a.PostKeyboardEvent( 0, 56, true ) // shift down
a.PostKeyboardEvent( asc("Z"), 6, true ) // 'z' down
a.PostKeyboardEvent( asc("Z"), 6, false ) // 'z' up
a.PostKeyboardEvent( 0, 56, false ) // shift up
```

**Notes:**

You can only pass the root or application uielement.
The KeyCodesMBS class may help you to find the correct codes.

Synthesize keyboard events. Based on the values entered, the appropriate key down, key up, and flags changed events are generated.
If keyChar is NUL (0), an appropriate value will be guessed at, based on the default keymapping.

All keystrokes needed to generate a character must be entered, including SHIFT, CONTROL, OPTION, and COMMAND keys.

To find the virtual keys, well check the RB documentation for the keyboard class.

### 8.3.13 ProcessID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** The Process ID of an application.
**Notes:** The unix PID.

### 8.3.14 SetAttributeValue(attribute as CFStringMBS, value as CFObjectMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Sets the value of an attribute.
**Notes:** Changed type of value to CFObject in plugin version 6.3. Before it was an AXValue.

## 8.4 class AXValueMBS

### 8.4.1 class AXValueMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** An AXValue is a CFObject but some extra data types are allowed.
**Notes:**

Every AXValue is a CFObject. In case the CFObject contains unknown data or just binary data it can be a AXValue object.
This class requires Mac OS X 10.2 to work.
Subclass of the CFObjectMBS class.

### 8.4.2 Methods

### 8.4.3 AXGetCFRange(byref location as Integer, byref length as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the values of a CFRange in case the AXValue holds a CFRange.
**Notes:** Returns true if it's a CFRange.

### 8.4.4 AXGetCGPoint(byref x as single, byref y as single) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the values of the CGPoint structure inside the AXValue.
**Notes:** Returns true if successfull.

### 8.4.5 AXGetCGRect(byref x as single, byref y as single, byref width as single, byref height as single) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the values of the CGRect inside the AXValue in case there is one.
**Notes:** Returns true if successfull.

### 8.4.6 AXGetCGSize(byref width as single, byref height as single) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the values of the CGSize structure inside the AXValue in case there is one.
**Notes:** Returns true if successfull.

### 8.4.7 Properties

### 8.4.8 AXIsCFRange as Boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the AXValue contains a CFRange structure.
**Notes:** (Read only property)

### 8.4.9 AXIsCGPoint as Boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the AXValue contains a CGPoint structure.
**Notes:** (Read only property)

### 8.4.10 AXIsCGRect as Boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the AXValue contains a CGRect structure.
**Notes:** (Read only property)

### 8.4.11 AXIsCGSize as Boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the AXValue contains a CGSize structure.
**Notes:** (Read only property)

### 8.4.12 AXTypeID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the Type ID of the AXValue.
**Notes:**

Values:

Types from CoreGraphics:
kAXValueCGPointType = 1,
kAXValueCGSizeType = 2,
kAXValueCGRectType = 3,

Types from CFBase:
kAXValueCFRangeType = 4,

Other:
kAXValueIllegalType = 0

In case this function returns 0 the object may be a normal CFObject.
(Read only property)

## 8.5 Globals

### 8.5.1 InstallNSAccessibilityPatchMBS

MBS MacExtras Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop only.

**Function:** Patches crashes with [ NSMenuItem accessibilityIsAttributeSettable: ] .
**Notes:** The plugin adds a method [ NSMenuItem accessibilityIsAttributeSettable: ] if missing to make sure the app doesn't crash when some framework method from Apple calls it.

### 8.5.2 Blog Entries

# Chapter 9

# Addressbook

## 9.1 class ABAccountMBS

### 9.1.1 class ABAccountMBS

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The class for an addressbook account.
**Example:**

```
dim a as new ABAddressBookMBS
dim accounts() as ABAccountMBS = a.allAccounts

for each c as ABAccountMBS in accounts
MsgBox c.Name + EndOfLine + c.Identifier + EndOfLine + c.BaseURL
next
```

**Deprecated:** This item is deprecated and should no longer be used. You can use CNContainerMBS class instead. **Notes:**

The ABAccount functions are not documented by Apple, but work well on OS X version 10.8 to 10.10.
They may work in newer versions if Apple does not change them. They may work in past OS X versions if Apple hat the same features there, too.
If the functions are not available in a OS X version, you will see NSExceptionMBS being raised.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo / Real Studio Plugins, version 15.0pr10

### 9.1.3 Blog Entries

- Saying goodbye to AddressBook framework
- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 15.0
- MBS Xojo / Real Studio Plugins, version 15.0pr10

### 9.1.4 Methods

### 9.1.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The private constructor.

### 9.1.6 Properties

### 9.1.7 BaseURL as String

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The base URL for this account.
**Notes:** (Read only property)

### 9.1.8 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 9.1.9 Identifier as String

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The identifier.
**Notes:** (Read only property)

### 9.1.10 isMainAccount as Boolean

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Whether this account is the main account.
**Notes:** (Read only property)

### 9.1.11 Name as String

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Name of account.
**Example:**

```
dim a as new ABAddressBookMBS
dim accounts() as ABAccountMBS = a.allAccounts

dim c as ABAccountMBS = accounts(0)
MsgBox c.Name
```

**Notes:** (Read only property)

## 9.2 class ABAddressBookMBS

### 9.2.1 class ABAddressBookMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** The Addressbook class for Mac OS X 10.2 and newer.
**Deprecated:** This item is deprecated and should no longer be used. You can use CNContactStoreMBS class instead. **Notes:** All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

### 9.2.4 Methods

### 9.2.5 ABAddressBookErrorDomain as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The error domain for Addressbook.

### 9.2.6 ABMultiValueIdentifiersErrorKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the error keys for the addressbook.

### 9.2.7 accountWithIdentifier(Identifier as string) as ABAccountMBS

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Finds account with matching identifier.

### 9.2.8 addRecord(record as ABRecordMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Adds a record (ABPersonMBS or ABGroup) to the AddressBook Database
**Example:**

```
dim a as new ABAddressBookMBS
dim p as new ABPersonMBS

if not p.setValue("Miller",a.kABLastNameProperty) then
MsgBox "Failed to set field "+a.LocalizedPropertyOrLabel(a.kABLastNameProperty)
end if

if not p.setValue("Ben",a.kABFirstNameProperty) then
MsgBox "Failed to set field "+a.LocalizedPropertyOrLabel(a.kABFirstNameProperty)
end if

if a.addRecord(p) then
```

```
MsgBox "Record added"
else
MsgBox "Failed to add record"
end if

if a.save then
MsgBox "Changes saved"
else
MsgBox "Failed to save changes"
end if
```

**Notes:** Returns true if the addition was successful
See also:

- 9.2.9 addRecord(record as ABRecordMBS, Account as ABAccountMBS, byref error as NSErrorMBS) as boolean 2992
- 9.2.10 addRecord(record as ABRecordMBS, byref error as NSErrorMBS) as boolean 2992

### 9.2.9 addRecord(record as ABRecordMBS, Account as ABAccountMBS, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Adds a record (ABPersonMBS or ABGroup) to the AddressBook Database with given account.
**Notes:**

Returns true if the addition was successful.
On Mac OS X 10.7 the error parameter is set to describe the error.
See also:

- 9.2.8 addRecord(record as ABRecordMBS) as boolean 2991
- 9.2.10 addRecord(record as ABRecordMBS, byref error as NSErrorMBS) as boolean 2992

### 9.2.10 addRecord(record as ABRecordMBS, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Adds a record (ABPersonMBS or ABGroup) to the AddressBook Database.
**Notes:**

Returns true if the addition was successful.
On Mac OS X 10.7 the error parameter is set to describe the error.
See also:

- 9.2.8 addRecord(record as ABRecordMBS) as boolean 2991
- 9.2.9 addRecord(record as ABRecordMBS, Account as ABAccountMBS, byref error as NSErrorMBS) as boolean 2992

### 9.2.11 addressBook as ABAddressBookMBS

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

**Function:** Returns a new instance of ABAddressBook, or nil if the Address Book database can't be initialized.
**Notes:**

If you're just making one-off lookups and edits, the sharedAddressBook method is probably more appropriate.
If the user denies your application access to the Address Book database, this method returns nil.

Available in OS X v10.5 and later.
You need to use this method if you want to get an addressbook for ABPersonViewMBS.

### 9.2.12 allAccounts as ABAccountMBS()

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Queries list of all accounts.
**Example:**

```
dim a as new ABAddressBookMBS
dim accounts() as ABAccountMBS = a.allAccounts
Break // look in debugger
```

### 9.2.13 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** The constructor.

### 9.2.14 enabledAccounts as ABAccountMBS()

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Queries list of enabled accounts.
**Example:**

```
dim a as new ABAddressBookMBS
dim accounts() as ABAccountMBS = a.enabledAccounts
Break // look in debugger
```

### 9.2.15 EnableEvent

MBS MacCocoa Plugin, Plugin Version: 12.0, Platform: macOS, Targets: Desktop only.

**Function:** Activates the events in this class.
**Notes:** You only need to call this if you use AddHandler command in Xojo to add event handlers. The plugin automatically does that in the constructor, but that is too early for AddHandler. And plugin on enables events if you use them.

### 9.2.16 formattedAddressFromDictionary(address as Dictionary) as NSAttributedStringMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns an attributed string containing the formatted address.
**Notes:**

The string's attributes match address dictionary keys (kABAddressStreetKey for example).
Each attribute value contains the localized description of the key. (For example, the value of a Canadian kABAddressZIPKey field would be Postal Code)

### 9.2.17 GotSharedAddressbook as boolean

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether some other part of your app queried the shared addressbook already.
**Notes:**

sharedAddressbook asks for permissions the first time you call it.
So with this function you can check if some other application part already queried the sharedAddressbook function. If true, a call to sharedAddressbook should return quickly. Either with nil (no permissions) or the addressbook.

### 9.2.18 groupForName(name as string) as ABGroupMBS

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Searches the group with the given name.
**Example:**

```
dim a as new ABAddressBookMBS
dim name as string = "Some Group"
dim g as ABGroupMBS = a.groupForName(name)
MsgBox g.DisplayName+": "+str(g.members.Ubound+1)
```

### 9.2.19 groupForUniqueId(uniqueid as string) as ABGroupMBS

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns a ABGroupMBS matching a given unique ID.
**Example:**

```
dim a as new ABAddressBookMBS

// you have some uid
dim groups() as ABGroupMBS = a.groups
dim uid as string = groups(0).valueForProperty(a.kABUIDProperty)

// later you want to find the group
dim g as ABGroupMBS = a.groupForUniqueId(uid)

// shows the name
MsgBox g.valueForProperty(a.kABGroupNameProperty)
```

**Notes:**

Returns nil if the record could not be found or matches to a person.
Available in Mac OS X 10.3 or newer.
see also recordForUniqueId.
See also:

- 9.2.20 groupForUniqueId(uniqueid as string, account as ABAccountMBS) as ABGroupMBS 2995

### 9.2.20 groupForUniqueId(uniqueid as string, account as ABAccountMBS) as ABGroupMBS

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Finds a group for given unique ID for given account.
See also:

- 9.2.19 groupForUniqueId(uniqueid as string) as ABGroupMBS 2995

### 9.2.21 groups as ABGroupMBS()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of all the groups in the AddressBook database
**Example:**

```
// list all email addresses in one group

Dim book as ABAddressBookMBS
dim groups() as ABGroupMBS
dim person as ABPersonMBS
dim data as ABMultiValueMBS
dim s as string

book=new ABAddressBookMBS

groups=book.groups

for each group as ABGroupMBS in groups
If group.valueForProperty(book.kABGroupNameProperty)= "test" then // or any valid group
dim members() as ABPersonMBS = group.members

for each member as ABPersonMBS in members

data=person.valueForProperty(book.kABEmailProperty)

if data<>nil then
for k as Integer=data.count-1 downto 0
s=s+data.valueAtIndex(k)+EndOfLine
next
end if
next
end if
Next
msgBox s
```

**Notes:**

Returns an empty array in case the DB doesn't contain any groups.
Returns nil on any error.

### 9.2.22 groupsForAccount(account as ABAccountMBS) as ABGroupMBS()

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of all the groups for this account.
**Example:**

```
dim a as new ABAddressBookMBS
dim c as ABAccountMBS = a.defaultAccount
dim groups() as ABGroupMBS = a.groupsForAccount(c)

Break // look in debugger
```

**Notes:** Returns an empty array in case the DB doesn't contain any body.

### 9.2.23 kABAddressCityKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the dictionary keys for the address.

### 9.2.24 kABAddressCountryCodeKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The Country Code of an address.
**Notes:**

kABAddressCountryCodeKey code must be one of the following:
iso country codes

ae = United Arab Emirates
ar = Argentina
at = Austria
au = Australia

### 9.2.25 kABAddressCountryKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the dictionary keys for the address.
**Notes:**

kABAddressCountryCodeKey code must be one of the following:
iso country codes

### 9.2.26 kABAddressHomeLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the home address.

### 9.2.27 kABAddressProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Street Addresses - kABMultiDictionaryProperty
**Notes:** This property is used for persons only.

### 9.2.28 kABAddressStateKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the dictionary keys for the address.

### 9.2.29 kABAddressStreetKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the dictionary keys for the address.

### 9.2.30 kABAddressWorkLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the work address.

### 9.2.31 kABAddressZIPKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the dictionary keys for the address.

### 9.2.32 kABAIMHomeLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the home AIM Instant Messaging account.

### 9.2.33 kABAIMInstantProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** AIM Instant Messaging - kABMultiStringProperty
**Notes:**

This property is used for persons only.
Deprecated in Mac OS 10.7. You should use kABInstantMessageProperty.

### 9.2.34 kABAIMMobileMeLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for the multistring value for the kABAIMInstantProperty property.
**Notes:**

Available on Mac OS X 10.7 or later.
none

### 9.2.35 kABAIMWorkLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the work AIM Instant Messaging account.

### 9.2.36 kABAlternateBirthdayComponentsProperty as string

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** Alternate non-Gregorian birth date.

### 9.2.37 kABAnniversaryLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The label for the anniversary date.

### 9.2.38 kABAssistantLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for the related names.

### 9.2.39 kABBirthdayComponentsProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the property names for the addressbook records.
**Notes:**

Available on Mac OS X 10.7 or later.
Birth date - kABDateComponentsProperty

### 9.2.40 kABBirthdayProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Birth date - kABDateProperty
**Notes:** This property is used for persons only.

### 9.2.41 kABBrotherLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for the related names.

### 9.2.42 kABCalendarURIsProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The calendars associated to a person.
**Notes:** Calendar URIs - kABMultiStringProperty

### 9.2.43 kABChildLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for the related names.

### 9.2.44 kABCreationDateProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Creation Date (when first saved) - kABDateProperty
**Notes:** A property for all records.

### 9.2.45 kABDatabaseChangedExternallyNotification as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The notification name to use with NSNotificationObserverMBS class.
**Notes:**

Posted when a process other than the current one has changed the Address Book database.
Depending on the operation performed on the address book, one or more of the following keys may be included in the user-info dictionary: kABInsertedRecords, kABUpdatedRecords, and kABDeletedRecords. The values for each of the keys are the unique IDs of the records that were inserted, updated, or deleted, respectively. If the values for all the keys are nil, every record has changes. For example, this happens when

the Address Book database is restored from a backup copy.

The plugin implements this notification for you and calls the DatabaseChanged event in ABAddressBookMBS class.

### 9.2.46 kABDatabaseChangedNotification as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The notification name to use with NSNotificationObserverMBS class.
**Notes:**

Posted when this process has changed the Address Book database.
Depending on the operation performed on the address book, one or more of the following keys may be included in the user-info dictionary: kABInsertedRecords, kABUpdatedRecords, and kABDeletedRecords. The values for each of the keys are the unique IDs of the records that were inserted, updated, or deleted, respectively. If the values for all the keys are nil, every record has changes. For example, this happens when the Address Book database is restored from a backup copy.

The plugin implements this notification for you and calls the DatabaseChanged event in ABAddressBookMBS class.

### 9.2.47 kABDeletedRecords as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys contained by the user-info dictionary of the notifications posted by the Address Book framework.
**Notes:** Records that have been deleted.

### 9.2.48 kABDepartmentProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Department name - (Person)
**Notes:** This property is used for persons only.

### 9.2.49 kABEmailHomeLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the home email address.

### 9.2.50 kABEmailMobileMeLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for emails.
**Notes:**

Available on Mac OS X 10.7 or later.
MobileMe email

### 9.2.51 kABEmailProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Email(s) - kABMultiStringProperty
**Notes:** This property is used for persons only.

### 9.2.52 kABEmailWorkLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the work email address.

### 9.2.53 kABFatherLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for the related names.

### 9.2.54 kABFirstNamePhoneticProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** First name Phonetic - kABStringProperty
**Notes:** This property is used for persons only.

### 9.2.55 kABFirstNameProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** First name - kABStringProperty
**Example:**

```
dim a as new ABAddressBookMBS
dim p as new ABPersonMBS

if not p.setValue("Ben",a.kABFirstNameProperty) then
MsgBox "Failed to set field "+a.LocalizedPropertyOrLabel(a.kABFirstNameProperty)
end if
```

**Notes:** This property is used for persons only.

### 9.2.56 kABFriendLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for the related names.

### 9.2.57 kABGroupNameProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Name of the group - kABStringProperty
**Example:**

```
dim theAB as new ABAddressBookMBS
dim result as new ABGroupMBS
dim error as NSErrorMBS
dim b as Boolean=result.SetValue("test",TheAB.kABGroupNameProperty,error)
if not b then
Msgbox("Failed to name group test."+error.description)
else
MsgBox "OK"
end if
```

**Notes:** This property is used for groups only.

### 9.2.58 kABHomeLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A generic label.
**Notes:** All kABXXXXHomeLabel are equivalent to this label.

### 9.2.59 kABHomePageLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Homepage URL label for the kABURLsProperty.

### 9.2.60 kABHomePageProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Home Web page - kABStringProperty
**Notes:**

This property is used for persons only.
Deprecated in Mac OS 10.4. You should use kABURLsProperty.

### 9.2.61 kABICQHomeLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the home ICQ Instant Messaging account.

### 9.2.62 kABICQInstantProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** ICQ Instant Messaging - kABMultiStringProperty
**Notes:**

Deprecated in Mac OS 10.7. You should use kABInstantMessageProperty.
This property is used for persons only.

### 9.2.63 kABICQWorkLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the work ICQ Instant Messaging account.

### 9.2.64 kABInsertedRecords as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys contained by the user-info dictionary of the notifications posted by the Address Book framework.
**Notes:** Records that have been inserted.

### 9.2.65 kABInstantMessageProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for the addressbook record properties.
**Notes:**

Available on Mac OS X 10.7 or later.
Instant Messaging - kABMultiDictionaryProperty

### 9.2.66 kABInstantMessageServiceAIM as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the kABInstantMessageUsernameKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
AIM

### 9.2.67 kABInstantMessageServiceFacebook as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the kABInstantMessageUsernameKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
Facebook

### 9.2.68 kABInstantMessageServiceGaduGadu as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the kABInstantMessageUsernameKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
Gadu-Gadu

### 9.2.69 kABInstantMessageServiceGoogleTalk as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the kABInstantMessageUsernameKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
Google Talk

### 9.2.70 kABInstantMessageServiceICQ as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the kABInstantMessageUsernameKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
ICQ

### 9.2.71 kABInstantMessageServiceJabber as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the kABInstantMessageUsernameKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
Jabber

### 9.2.72 kABInstantMessageServiceKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for the dictionary for an instant message.
**Notes:**

Available on Mac OS X 10.7 or later.
Dictionary key for the service type, not guaranteed to be present; possible values follow.

### 9.2.73 kABInstantMessageServiceMSN as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the kABInstantMessageUsernameKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
MSN

### 9.2.74 kABInstantMessageServiceQQ as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the kABInstantMessageUsernameKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
QQ

### 9.2.75 kABInstantMessageServiceSkype as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the kABInstantMessageUsernameKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
Skype

### 9.2.76 kABInstantMessageServiceYahoo as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the kABInstantMessageUsernameKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
Yahoo!

### 9.2.77 kABInstantMessageUsernameKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for the dictionary for an instant message.
**Notes:**

Available on Mac OS X 10.7 or later.
Dictionary key for the instant messaging handle/username

### 9.2.78 kABJabberHomeLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the home jabber Instant Messaging account.

### 9.2.79 kABJabberInstantProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Jabber Instant Messaging - kABMultiStringProperty
**Notes:**

Deprecated in Mac OS 10.7. You should use kABInstantMessageProperty.
This property is used for persons only.

### 9.2.80 kABJabberWorkLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the work jabber Instant Messaging account.

### 9.2.81 kABJobTitleProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Job Title - kABStringProperty
**Notes:** This property is used for persons only.

### 9.2.82 kABLastNamePhoneticProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Last name Phonetic - kABStringProperty
**Notes:** This property is used for persons only.

### 9.2.83 kABLastNameProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Last name - kABStringProperty
**Example:**

```
dim a as new ABAddressBookMBS
dim p as new ABPersonMBS

if not p.setValue("Miller",a.kABLastNameProperty) then
MsgBox "Failed to set field "+a.LocalizedPropertyOrLabel(a.kABLastNameProperty)
end if
```

**Notes:** This property is used for persons only.

### 9.2.84 kABMaidenNameProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The maiden name of the person - kABStringProperty
**Example:**

```
dim a as new ABAddressBookMBS
dim p as ABPersonMBS = a.owner // get my card
MsgBox p.valueForProperty(a.kABMaidenNameProperty) // show my maiden name
```

**Notes:** This property is used for persons only.

### 9.2.85 kABManagerLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for the related names.

### 9.2.86 kABMiddleNamePhoneticProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The middle name phonic - kABStringProperty
**Notes:** This property is used for persons only.

### 9.2.87 kABMiddleNameProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The middle name - kABStringProperty
**Notes:** This property is used for persons only.

### 9.2.88 kABMobileMeLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the generic labels.
**Notes:**

Available on Mac OS X 10.7 or later.
MobileMe - for AIM or email values

### 9.2.89 kABModificationDateProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Last saved date - kABDateProperty
**Notes:** A property for all records.

### 9.2.90 kABMotherLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for the related names.

### 9.2.91 kABMSNHomeLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the home MSN Instant Messaging account.

### 9.2.92 kABMSNInstantProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** MSN Instant Messaging - kABMultiStringProperty
**Notes:**

This property is used for persons only.
Deprecated in Mac OS 10.7. You should use kABInstantMessageProperty.

### 9.2.93 kABMSNWorkLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the work MSN Instant Messaging account.

### 9.2.94 kABNicknameProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The nick name of the person - kABStringProperty
**Notes:** This property is used for persons only.

### 9.2.95 kABNoteProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Note - kABStringProperty
**Example:**

```
dim a as new ABAddressBookMBS
dim p as ABPersonMBS = a.owner
```

```
// read
MsgBox p.valueForProperty(a.kABNoteProperty).StringValue

// write
if p.setValue("Hello World", a.kABNoteProperty) then
if a.save then
MsgBox "Changed."
end if
end if
```

**Notes:** This property is used for persons only.

### 9.2.96 kABOrganizationProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Company name - kABStringProperty
**Example:**

```
dim a as new ABAddressBookMBS
dim p as new ABPersonMBS

if not p.setValue("My Company",a.kABOrganizationProperty) then
MsgBox "Failed to set field "+a.LocalizedPropertyOrLabel(a.kABOrganizationProperty)
end if
```

**Notes:** This property is used for persons only.

### 9.2.97 kABOtherDateComponentsProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the properties for a addressbook records.
**Notes:**

Available on Mac OS X 10.7 or later.
Dates associated with this person - kABMultiDateComponentsProperty - (Person)

### 9.2.98 kABOtherDatesProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Dates associated with this person - kABMultiDateProperty - (Person)
**Notes:** This property is used for persons only.

### 9.2.99 kABOtherLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A generic label.
**Notes:** Can be used with any multi-value property.

### 9.2.100 kABParentLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for the related names.

### 9.2.101 kABPartnerLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for the related names.

### 9.2.102 kABPersonFlags as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Various flags - kABIntegerProperty
**Example:**

```
dim a as new ABAddressBookMBS
dim p as new ABPersonMBS

if not p.setValue("Miller",a.kABLastNameProperty) then
MsgBox "Failed to set field "+a.LocalizedPropertyOrLabel(a.kABLastNameProperty)
end if

if not p.setValue("Ben",a.kABFirstNameProperty) then
MsgBox "Failed to set field "+a.LocalizedPropertyOrLabel(a.kABFirstNameProperty)
```

```
end if

if not p.setValue("My Company",a.kABOrganizationProperty) then
MsgBox "Failed to set field "+a.LocalizedPropertyOrLabel(a.kABOrganizationProperty)
end if

if not p.setValue(a.kABShowAsCompany,a.kABPersonFlags) then
MsgBox "Failed to set field "+a.LocalizedPropertyOrLabel(a.kABPersonFlags)
end if

if a.addRecord(p) then
MsgBox "Record added"
else
MsgBox "Failed to add record"
end if

if a.save then
MsgBox "Changes saved"
else
MsgBox "Failed to save changes"
end if
```

**Notes:** This property is used for persons only.

### 9.2.103 kABPhoneHomeFAXLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The label for the home fax number.

### 9.2.104 kABPhoneHomeLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The label for the home phone number.

### 9.2.105 kABPhoneiPhoneLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The label for the mobile phone number (for iPhone).

### 9.2.106 kABPhoneMainLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The label for the main phone number.

### 9.2.107 kABPhoneMobileLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The label for the mobile phone number.

### 9.2.108 kABPhonePagerLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The label for the pager number.

### 9.2.109 kABPhoneProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Generic phone number - kABMultiStringProperty
**Notes:** This property is used for persons only.

### 9.2.110 kABPhoneWorkFAXLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The label for the work fax number.

### 9.2.111 kABPhoneWorkLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The label for the work phone number.

### 9.2.112 kABRelatedNamesProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** names related to this person - kABMultiStringProperty
**Notes:** This property is used for persons only.

### 9.2.113 kABSisterLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for the related names.

### 9.2.114 kABSocialProfileProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Social Profiles - kABMultiDictionaryProperty
**Notes:**

Available on Mac OS X 10.7 or later.
The multi dictionary contains dictionaries. Each has keys like kABSocialProfileURLKey, kABSocialProfileUsernameKey, kABSocialProfileUserIdentifierKey and kABSocialProfileServiceKey.

kABSocialProfileServiceKey has values like kABSocialProfileServiceTwitter, kABSocialProfileServiceFacebook, kABSocialProfileServiceLinkedIn, kABSocialProfileServiceFlickr and kABSocialProfileServiceMySpace.

### 9.2.115 kABSocialProfileServiceFacebook as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the social profile dictionary's kABSocialProfileServiceKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
Facebook

### 9.2.116 kABSocialProfileServiceFlickr as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the social profile dictionary's kABSocialProfileServiceKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
Flickr

### 9.2.117 kABSocialProfileServiceKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for addressbook record values.
**Notes:**

Available on Mac OS X 10.7 or later.
The service for this social profile. Can be kABSocialProfileServiceTwitter, kABSocialProfileServiceFacebook, kABSocialProfileServiceLinkedIn, kABSocialProfileServiceFlickr or kABSocialProfileServiceMySpace.

### 9.2.118 kABSocialProfileServiceLinkedIn as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the social profile dictionary's kABSocialProfileServiceKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
LinkedIn

### 9.2.119 kABSocialProfileServiceMySpace as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the social profile dictionary's kABSocialProfileServiceKey key.
**Notes:**

MySpace
Available on Mac OS X 10.7 or later.

### 9.2.120 kABSocialProfileServiceSinaWeibo as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the social profile dictionary's kABSocialProfileServiceKey key.
**Notes:**

SinaWeibo
Available in Mac OS X 10.8 and newer.

### 9.2.121 kABSocialProfileServiceTencentWeibo as string

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the social profile dictionary's kABSocialProfileServiceKey key.
**Notes:**

Available on Mac OS X 10.9 or later.
Tencent Weibo

### 9.2.122 kABSocialProfileServiceTwitter as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the social profile dictionary's kABSocialProfileServiceKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
Twitter

### 9.2.123 kABSocialProfileServiceYelp as string

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the values for the social profile dictionary's kABSocialProfileServiceKey key.
**Notes:**

Available on Mac OS X 10.7 or later.
Yelp

### 9.2.124 kABSocialProfileURLKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for addressbook record values.
**Notes:**

Available on Mac OS X 10.7 or later.
Service name. Possible values follow.

### 9.2.125 kABSocialProfileUserIdentifierKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for addressbook record values.
**Notes:**

Available on Mac OS X 10.7 or later.
Service-specific identifier.

### 9.2.126 kABSocialProfileUsernameKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for addressbook record values.
**Notes:**

Available on Mac OS X 10.7 or later.
User-visible profile name.

### 9.2.127 kABSpouseLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the labels for the related names.

### 9.2.128 kABSuffixProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The name suffix - kABStringProperty
**Notes:**

e.g. ”Sr.” ”Jr.” ”III”
This property is used for persons only.

### 9.2.129 kABTitleProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** the title of the person - kABStringProperty
**Notes:**

e.g. "Sir" "Duke" "General" "Lord"
This property is used for persons only.

### 9.2.130 kABUIDProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The UID property - kABStringProperty
**Notes:** A property for all records.

### 9.2.131 kABUpdatedRecords as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys contained by the user-info dictionary of the notifications posted by the Address Book framework.
**Notes:** Records that have been updated.

### 9.2.132 kABURLsProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** URLs - kABMultiStringProperty
**Example:**

```
// shows all websites with labels

dim a as new ABAddressBookMBS
dim p as ABPersonMBS = a.owner
dim m as ABMultiValueMBS = p.valueForProperty(a.kABURLsProperty)

dim u as Integer = m.count-1
for i as Integer = 0 to u
dim label as string = m.labelAtIndex(i)
dim value as string = m.valueAtIndex(i)

MsgBox label+" ->"+value
```

next

**Notes:** This property is used for persons only.

### 9.2.133 kABWorkLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A generic label.
**Notes:** All kABXXXXWorkLabel are equivalent to this label

### 9.2.134 kABYahooHomeLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the home yahoo Instant Messaging account.

### 9.2.135 kABYahooInstantProperty as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Yahoo Instant Messaging - kABMultiStringProperty
**Notes:**

This property is used for persons only.
Deprecated in Mac OS 10.7. You should use kABInstantMessageProperty.

### 9.2.136 kABYahooWorkLabel as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A label for the work yahoo Instant Messaging account.

### 9.2.137 LocalizedPropertyOrLabel(propertyOrLabel as string) as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the localized version of built in properties, labels or keys
**Notes:** Returns propertyOrLabel if not found (e.g. if not built in).

### 9.2.138 NewPersonWithVCardRepresentation(data as memoryblock) as ABPersonMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Create a person from a vCard.
**Notes:**

Returns nil on failure.
Convenience function which cen be used instead of the ABPersonMBS constructor.

### 9.2.139 people as ABPersonMBS()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of all the people in the AddressBook database
**Example:**

```
dim a as new ABAddressBookMBS

// get all people
dim p(-1) as ABPersonMBS = a.people

// walk over people list
for each m as ABPersonMBS in p
try
// ask for image

dim j as NSImageMBS = m.image

// do something with image
if j<>nil then
Backdrop=j.CopyPictureWithMask
end if

catch x as NSExceptionMBS
// raises exception if there is no image
end try
next
```

**Notes:**

Returns an empty array in case the DB doesn't contain any body.
Returns nil on any error.

### 9.2.140 peopleForAccount(account as ABAccountMBS) as ABPersonMBS()

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of all the people for this account.
**Example:**

```
dim a as new ABAddressBookMBS
dim c as ABAccountMBS = a.defaultAccount
dim people() as ABPersonMBS = a.peopleForAccount(c)

Break // look in debugger
```

**Notes:** Returns an empty array in case the DB doesn't contain any body.

### 9.2.141 peopleForEmail(email as string) as ABPersonMBS()

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Searches a contact for the given email.
**Example:**

```
dim a as new ABAddressBookMBS
dim persons() as ABPersonMBS = a.peopleForEmail("support@monkeybreadsoftware.de")

if UBound(persons) >= 0 then
MsgBox persons(0).DisplayName
else
MsgBox "nothing found."
end if
```

### 9.2.142 persistentAccounts as ABAccountMBS()

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Queries list of all persistent accounts.
**Example:**

```
dim a as new ABAddressBookMBS
dim accounts() as ABAccountMBS = a.persistentAccounts
Break // look in debugger
```

### 9.2.143 personForUniqueId(uniqueid as string) as ABPersonMBS

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns a ABPersonMBS matching a given unique ID.
**Example:**

```
dim a as new ABAddressBookMBS

// you have some uid
dim uid as string = a.owner.valueForProperty(a.kABUIDProperty)

// later you want to find the person
dim p as ABPersonMBS = a.personForUniqueId(uid)

// shows the name
MsgBox p.valueForProperty(a.kABFirstNameProperty)
```

**Notes:**

Returns nil if the record could not be found or matches to a group.
Available in Mac OS X 10.3 or newer.
see also recordForUniqueId.
See also:

- 9.2.144 personForUniqueId(uniqueid as string, account as ABAccountMBS) as ABPersonMBS 3027

### 9.2.144 personForUniqueId(uniqueid as string, account as ABAccountMBS) as ABPersonMBS

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Finds a person for given unique ID for given account.
See also:

- 9.2.143 personForUniqueId(uniqueid as string) as ABPersonMBS 3027

### 9.2.145 recordClassFromUniqueId(uniqueid as string) as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Given a record uniqueId returns the record class name.
**Notes:** Return "ABPersonMBS" or "ABGroup" or "" for a given uniqueid.

### 9.2.146 recordForUniqueId(uniqueid as string) as ABRecordMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns a record (ABPersonMBS or ABGroup) matching a given unique ID.
**Example:**

```
dim a as new ABAddressBookMBS

// you have some uid
dim uid as string = a.owner.valueForProperty(a.kABUIDProperty)

// later you want to find the person
dim r as ABRecordMBS = a.recordForUniqueId(uid)
if r isa ABPersonMBS then
dim p as ABPersonMBS = ABPersonMBS(r)

// shows the name
MsgBox p.valueForProperty(a.kABFirstNameProperty)
end if
```

**Notes:**

Returns nil if the record could not be found.
Available in Mac OS X 10.3 or newer.
See also:

- 9.2.147 recordForUniqueId(uniqueid as string, account as ABAccountMBS) as ABRecordMBS 3028

### 9.2.147 recordForUniqueId(uniqueid as string, account as ABAccountMBS) as ABRecordMBS

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Finds a record for given unique ID for given account.
See also:

- 17.3.13 recordForUniqueId(uniqueid as string) as ABRecordMBS 4310

### 9.2.148 recordsMatchingSearchElement(search as ABSearchElementMBS) as ABRecordMB

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of records matching the given search element
**Example:**

```
dim ab as new ABAddressBookMBS

// search for people with birthday, by searching for dates starting 1901.
dim searchDate as new date( 1901, 1, 1 )
dim search as ABSearchElementMBS = ab.SearchElementForPersonProperty( ab.kABBirthdayProperty, "",
"", searchDate, ab.kABGreaterThan )

// do the search
dim people() as ABRecordMBS = ab.RecordsMatchingSearchElement( search )

for each person as ABRecordMBS in people
dim p as ABPersonMBS = ABPersonMBS( person )
// now work on them
next
```

**Notes:** Returns an empty array if no matches or an error.

### 9.2.149 removeRecord(record as ABRecordMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Removes a record (ABPersonMBS or ABGroup) from the AddressBook Database
**Notes:** Returns true if the removal was successful.
See also:

- 9.2.150 removeRecord(record as ABRecordMBS, byref error as NSErrorMBS) as boolean 3029

### 9.2.150 removeRecord(record as ABRecordMBS, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Removes a record (ABPersonMBS or ABGroup) from the AddressBook Database.
**Notes:**

Returns true if the removal was successful.
On Mac OS X 10.7 the error parameter is set to describe the error.

See also:

- 9.2.149 removeRecord(record as ABRecordMBS) as boolean 3029

### 9.2.151 save as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Saves changes made since the last save.
**Notes:** Return true if successful (or there was no change).
See also:

- 9.2.152 save(byref error as NSErrorMBS) as boolean 3030

### 9.2.152 save(byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

**Function:** Saves changes made since the last save.
**Notes:**

Return true if successful (or there was no change).
On Mac OS X 10.5 the error object is returned. On Mac OS X 10.4 this error property is nil and you only can use the result.
See also:

- 9.2.151 save as boolean 3030

### 9.2.153 searchElementForConjunction(conjunction as Integer, children() as ABSearchElementMBS) as ABSearchElementMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a search element combining several sub search elements.
**Notes:** Convenience function which can be used instead of ABSearchElementMBS.searchElementForConjunction.

### 9.2.154 searchElementForGroupProperty(PropertyName as string, Label as string, Key as string, value as Variant, comparison as Integer) as ABSearchElementMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns a search element that will search groups.
**Notes:** Convenience function to be used instead of the searchElementForProperty method in the ABGroupMBS class.

### 9.2.155 searchElementForPersonProperty(PropertyName as string, Label as string, Key as string, value as Variant, comparison as Integer) as ABSearchElementMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns a search element that will search people.
**Example:**

```
// search person by record's unique ID
// this is same as calling recordForUniqueId function directly
dim a as new ABAddressBookMBS
dim e as ABSearchElementMBS

dim PropertyName as string = a.kABUIDProperty
const Label = ""
const Key = ""
const value = "637FA922-7A2B-4F9A-BFA3-023253D4A3D5:ABPerson" // some person ID
const comparison = a.kABEqual

e = ABPersonMBS.searchElementForProperty(PropertyName, label, key, value, comparison)

dim records() as ABRecordMBS = a.recordsMatchingSearchElement(e)

for each r as ABRecordMBS in records
dim p as ABPersonMBS = ABPersonMBS(r)

MsgBox p.DisplayName
next
```

**Notes:** Convenience function to be used instead of the searchElementForProperty method in the ABPersonMBS class.

### 9.2.156 setMe(moi as ABPersonMBS)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Sets "Me" to moi.
**Notes:** Pass nil to clear "Me".

### 9.2.157 sharedAddressbook as ABAddressBookMBS

MBS MacCocoa Plugin, Plugin Version: 12.0, Platform: macOS, Targets: Desktop only.

**Function:** Returns the shared addressbook object.
**Example:**

```
// quickly find the addressbook, locate me and display my name:
MsgBox ABAddressBookMBS.sharedAddressbook.owner.DisplayName
```

**Notes:**

If you call this method several times, the object is cached, so it's only created the first time (singleton). Returns nil on Windows or Linux or low memory or missing permissions.

### 9.2.158 sharedAddressbookMT as ABAddressBookMBS

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the shared addressbook object.
**Notes:**

On Mac OS X 10.8, the user will be asked to allow access to the addressbook for your application. As the call to sharedAddressbook blocks in this case, this method can be called on a thread to avoid the blocking of your app.

If you call this method several times, the object is cached, so it's only created the first time (singleton). Returns nil on Windows or Linux or low memory or missing permissions.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 9.2.159 Properties

### 9.2.160 defaultAccount as ABAccountMBS

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Queries default account.

**Example:**

```
dim a as new ABAddressBookMBS
MsgBox a.defaultAccount.Name
```

**Notes:** (Read only property)

### 9.2.161 defaultCountryCode as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the default country code for records without specified codes.
**Notes:**

Available in Mac OS X 10.3 or newer.
(Read only property)

### 9.2.162 defaultNameOrdering as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the default name ordering defined by the user in the Address Book preferences.
**Notes:**

Possible values: kABFirstNameFirst or kABLastNameFirst
Available in Mac OS X 10.3 or newer.
(Read only property)

### 9.2.163 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** The handle to the used ABAddressbook object.
**Notes:** (Read and Write property)

### 9.2.164 hasUnsavedChanges as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if they are unsaved changes.
**Notes:**

The unsaved changes flag is automatically set when changes are made.
(Read only property)

### 9.2.165 owner as ABPersonMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the person that represents the user.
**Notes:**

Returns nil if "me" was never set.
(function is not named me as me is a reserved word in Xojo)
(Read only property)

### 9.2.166 Events

### 9.2.167 DatabaseChanged(Externally as boolean, InsertedRecords() as string, UpdatedRecords() as string, DeletedRecords() as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** The database has changed.
**Notes:**

Externally: true if changes were made by another application.
InsertedRecords: Record UIDs of records changed. (can be empty)
UpdatedRecords: Record UIDs of records updated. (can be empty)
DeletedRecords: Record UIDs of records deleted. (can be empty)

### 9.2.168 Constants

### 9.2.169 ABAddRecordsError = 1001

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the error constants.

### 9.2.170 ABPropertyReadOnlyError = 1014

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the error constants.

### 9.2.171 ABPropertyUnsupportedBySourceError = 1013

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the error constants.

### 9.2.172 ABPropertyValueValidationError = 1012

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the error constants.

### 9.2.173 ABRemoveRecordsError = 1002

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the error constants.

### 9.2.174 kABArrayProperty = 5

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** Array object.

### 9.2.175 kABBitsInBitFieldMatch = 11

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.3 and newer versions.

### 9.2.176 kABContainsSubString = 7

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.

### 9.2.177 kABContainsSubStringCaseInsensitive = 8

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.

### 9.2.178 kABDataProperty = 7

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** Data object.

### 9.2.179 kABDateComponentsProperty = 8

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:**

Available on Mac OS X 10.7 or later.
Date component.

### 9.2.180 kABDateProperty = 4

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** Date.

### 9.2.181 kABDefaultNameOrdering = 0

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the flags constants for the integer value stored in the properrty kABPersonFlags.

### 9.2.182 kABDictionaryProperty = 6

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** Dictionary.

### 9.2.183 kABDoesNotContainSubString = 12

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

### 9.2.184 kABDoesNotContainSubStringCaseInsensitive = 13

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

### 9.2.185 kABEqual = 0

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.

### 9.2.186 kABEqualCaseInsensitive = 6

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.

### 9.2.187 kABErrorInProperty = 0

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** Invalid property.

### 9.2.188 kABFirstNameFirst = & h40

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the flags constants for the integer value stored in the properrty kABPersonFlags.

### 9.2.189 kABGreaterThan = 4

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.

### 9.2.190 kABGreaterThanOrEqual = 5

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.

### 9.2.191 kABIntegerProperty = 2

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** Integer.

### 9.2.192 kABLastNameFirst = & h20

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the flags constants for the integer value stored in the properrty kABPersonFlags.

### 9.2.193 kABLessThan = 2

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.

### 9.2.194 kABLessThanOrEqual = 3

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.

### 9.2.195 kABMultiArrayProperty = 261

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** Multiple arrays.

### 9.2.196 kABMultiDataProperty = 263

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** Multiple data values.

### 9.2.197 kABMultiDateComponentsProperty = 264

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:**

Available on Mac OS X 10.7 or later.
Date components.

### 9.2.198 kABMultiDateProperty = 260

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** Multiple date values.

### 9.2.199 kABMultiDictionaryProperty = 262

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.

### 9.2.200 kABMultiIntegerProperty = 258

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** Multiple integer values.

### 9.2.201 kABMultiRealProperty = 259

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** Multiple floating point values.

### 9.2.202 kABMultiStringProperty = 257

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** Multiple strings

### 9.2.203 kABMultiValueMask = & h100

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** This value is combined with other values to define multi value defined.

### 9.2.204 kABNameOrderingMask = & h70

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the flags constants for the integer value stored in the properrty kABPersonFlags.

### 9.2.205 kABNotEqual = 1

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.

### 9.2.206 kABNotEqualCaseInsensitive = 14

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

### 9.2.207 kABNotWithinIntervalAroundToday = 19

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

### 9.2.208 kABNotWithinIntervalAroundTodayYearless = 20

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

### 9.2.209 kABNotWithinIntervalFromToday = 23

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

### 9.2.210 kABNotWithinIntervalFromTodayYearless = 24

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

### 9.2.211 kABPrefixMatch = 9

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.

### 9.2.212 kABPrefixMatchCaseInsensitive = 10

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.

### 9.2.213 kABRealProperty = 3

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** a floating point number

### 9.2.214 kABSearchAnd = 0

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** A search conjunction.

### 9.2.215 kABSearchOr = 1

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** A search conjunction.

### 9.2.216 kABShowAsCompany = 1

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the flags constants for the integer value stored in the properrty kABPersonFlags.

### 9.2.217 kABShowAsMask = 7

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the flags constants for the integer value stored in the properrty kABPersonFlags.

### 9.2.218 kABShowAsPerson = 0

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the flags constants for the integer value stored in the properrty kABPersonFlags.

### 9.2.219 kABShowAsResource = 2

MBS MacCocoa Plugin, Plugin Version: 9.6.

**Function:** One of the flags constants for the integer value stored in the properrty kABPersonFlags.
**Notes:** for Mac OS X 10.6.

### 9.2.220 kABShowAsRoom = 3

MBS MacCocoa Plugin, Plugin Version: 9.6.

**Function:** One of the flags constants for the integer value stored in the properrty kABPersonFlags.
**Notes:** for Mac OS X 10.6.

### 9.2.221 kABStringProperty = 1

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** One of the property type constants.
**Notes:** String

### 9.2.222 kABSuffixMatch = 15

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

### 9.2.223 kABSuffixMatchCaseInsensitive = 16

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

### 9.2.224 kABWithinIntervalAroundToday = 17

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

### 9.2.225 kABWithinIntervalAroundTodayYearless = 18

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

### 9.2.226 kABWithinIntervalFromToday = 21

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

### 9.2.227 kABWithinIntervalFromTodayYearless = 22

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** One of the search comparison modes.
**Notes:** Supported in Mac OS X 10.4 and newer versions.

## 9.3 class ABGroupMBS

### 9.3.1 class ABGroupMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** ABGroup is a subclass of ABRecord.
**Example:**

```
dim a as new ABAddressBookMBS
dim g() as ABGroupMBS = a.groups
dim names() as string
for each gg as ABGroupMBS in g
names.append gg.DisplayName
next
MsgBox Join(names,EndOfLine)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use CNGroupMBS class instead. **Notes:**

It represents a group of people or other groups. No recursions allowed.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the ABRecordMBS class.

### 9.3.2 Blog Entries

- Saying goodbye to AddressBook framework
- MBS Real Studio Plugins, version 12.4pr1
- Addressbook classes updated

### 9.3.3 Blog Entries

- Saying goodbye to AddressBook framework
- MBS Real Studio Plugins, version 12.4pr1
- Addressbook classes updated

### 9.3.4 Methods

### 9.3.5 addMember(group as ABPersonMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Adds person to this group.
**Example:**

```
dim wbook As new ABAddressBookMBS
dim Group as new ABGroupMBS

if not Group.setValue("Test Group", wbook.kABGroupNameProperty) then
MsgBox "Failed to set group name."
Return
end if

if not wbook.addRecord(Group) then
MsgBox "Failed to add group to database."
return
end if

dim Person as new ABPersonMBS

if not person.setValue("John", wbook.kABFirstNameProperty) then
MsgBox "Failed to set first name."
Return
end if

if not person.setValue("Miller", wbook.kABLastNameProperty) then
MsgBox "Failed to set last name."
Return
end if

if not wbook.addRecord(person) then
MsgBox "Failed to add person to database."
return
end if

if not group.addMember(person) then
MsgBox "Failed to add person to group."
Return
end if

if not wbook.save then
MsgBox "Failed to save addressbook."
return
end if
```

MsgBox "Created test group with a person."

**Notes:**

Does nothing if person is already part of this group (returns false)
Returns true if successful.

### 9.3.6 addProperty(propertyName as string, type as Integer) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Adds property to all group records.
**Example:**

call ABGroupMBS.addProperty "GroupWeight",1

**Notes:**

Property name must be unique.
For types see typeOfProperty.
Returns the number of properties successfully added.

### 9.3.7 addSubgroup(group as ABGroupMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Add group to this group.
**Notes:**

Does nothing if group is already part of this group (returns false)
Recursions are not allowed (returns false)
Returns true if successful

### 9.3.8 Constructor

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new ABGroup object.
**Notes:** Available in Mac OS X 10.5 or newer.
See also:

• 9.3.9 Constructor(addressBook as ABAddressBookMBS) 3048

### 9.3.9 Constructor(addressBook as ABAddressBookMBS)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new ABGroup object in the given addressbook.
See also:

• 9.3.8 Constructor 3047

### 9.3.10 members as ABPersonMBS()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of ABPersonMBS.
**Notes:**

Returns an empty array if this group doesn't contain any people.
Returns an empty array on any error.

### 9.3.11 parentGroups as ABGroupMBS()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of ABGroup this group belongs to.
**Notes:**

Returns an empty array if this group doesn't belong to any groups.
Returns an empty array on any error.

### 9.3.12 properties as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of property names.
**Notes:** Returns nil on any error.

### 9.3.13 removeMember(group as ABPersonMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Removes group from this group.
**Notes:**

Does nothing if group is not part of this group (returns false)
Returns true if successful.

### 9.3.14 removeProperties(properties() as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Removes properties from all groups.
**Notes:** Returns the number of properties successfully removed.

### 9.3.15 removeProperty(propertyName as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Removes property from all groups
**Notes:** Returns the number of properties successfully removed.

### 9.3.16 removeSubgroup(group as ABGroupMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Removes group from this group.
**Notes:**

Does nothing if group is not part of this group (returns false).
Returns true if successful.

### 9.3.17 searchElementForProperty(PropertyName as string, Label as string, Key as string, value as Variant, comparison as Integer) as ABSearchElementMBS

MBS MacCocoa Plugin, Plugin Version: 12.4, Platform: macOS, Targets: Desktop only.

**Function:** Returns a search element object that searches for records of this type.
**Notes:**

property: The name of the property to search on. It cannot be "".
label: The label name for a multivalue list. If property does not have multiple values, pass "". If property does have multiple values, pass "" to search all the values. By default, ABGroup records don't contain any

multivalue list properties.
key: The key name for a dictionary. Pass "" if property is not a dictionary. If property is a dictionary, pass "" to search all keys. By default, ABGroup records don't contain any properties that are dictionaries.
value: What you're searching for. If "", the only supported value for comparison is kABEqual or kABNotEqual.
comparison: The type of comparison to perform and is an ABSearchComparison, such as kABEqual or kABPrefixMatchCaseInsensitive.

### 9.3.18 subgroups as ABGroupMBS()

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of ABGroup
**Notes:**

Returns an empty array if this group doesn't contain any other groups.
Returns an empty array on any error.

### 9.3.19 typeOfProperty(propertyName as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the type of a given property.
**Notes:**

Possible values:

const kABMultiValueMask = & h100
const kABErrorInProperty = & h0
const kABStringProperty = & h1
const kABIntegerProperty = & h2
const kABRealProperty = & h3
const kABDateProperty = & h4
const kABArrayProperty = & h5
const kABDictionaryProperty = & h6
const kABDataProperty = & h7
const kABMultiStringProperty = kABMultiValueMask + kABStringProperty
const kABMultiIntegerProperty = kABMultiValueMask + kABIntegerProperty
const kABMultiRealProperty = kABMultiValueMask + kABRealProperty
const kABMultiDateProperty = kABMultiValueMask + kABDateProperty
const kABMultiArrayProperty = kABMultiValueMask + kABArrayProperty
const kABMultiDictionaryProperty = kABMultiValueMask + kABDictionaryProperty
const kABMultiDataProperty = kABMultiValueMask + kABDataProperty

### 9.3.20 Properties

### 9.3.21 distributionIdentifierForProperty(propertyName as string, person as ABPersonMBS) as String

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the distribution identifier for a given property and person.
**Notes:**

If not set then returns the property primary identifier.
Returns the distribution identifier or "" if not successful.
(Read and Write computed property)

## 9.4 class ABMultiValueMBS

### 9.4.1 class ABMultiValueMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Represents values of type ABMultiXXXXXProperty.
**Example:**

```
// shows all websites with labels

dim a as new ABAddressBookMBS
dim p as ABPersonMBS = a.owner
dim m as ABMultiValueMBS = p.valueForProperty(a.kABURLsProperty)

dim u as Integer = m.count-1
for i as Integer = 0 to u
dim label as string = m.labelAtIndex(i)
dim value as string = m.valueAtIndex(i)

MsgBox label+" ->"+value
next
```

**Deprecated:** This item is deprecated and should no longer be used. You can use CNLabeledValueMBS class instead. **Notes:**

All values in an ABMultiValue must be of the same type (kABMultiStringProperty: all values must be strings....)

In case your application needs to store away a reference to a specific value/label pair, use the identifier. Index won't work in this case because any client can add/remove/reorder a multivalue making your index point to the wrong pair. Identifiers are unique Ids.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- 13.2, page 8: News

### 9.4.6 Methods

### 9.4.7 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The private constructor.

### 9.4.8 copy as ABMultiValueMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates an immutable copy of the data.
**Notes:** Returns nil on any error.

### 9.4.9 edit as ABMutableMultiValueMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a mutable copy of the data.
**Notes:** Returns nil on any error.

### 9.4.10 identifierAtIndex(index as UInt32) as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns an identifier at a given index
**Notes:**

Returns "" on any error.
Index is zero based.

### 9.4.11 identifiers as string()

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Returns list of identifiers.

### 9.4.12 indexForIdentifier(identifier as string) as UInt32

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the index of a given identifier
**Notes:** Returns NotFound (& h7ffffffff) on any error.

### 9.4.13 indexForLabel(label as string) as UInt32

MBS MacCocoa Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the index of a given label
**Notes:** Returns NotFound (& h7ffffffff) on any error.

### 9.4.14 labelAtIndex(index as UInt32) as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns a label at a given index.
**Example:**

```
// get an entry
dim a as new ABAddressBookMBS
dim p as ABPersonMBS = a.owner

// query all emails
dim e as ABMultiValueMBS = p.valueForProperty(a.kABEmailProperty)

// walk over all
dim u as Integer = e.count-1
for i as Integer = 0 to u
dim label as string = e.labelAtIndex(i)
dim value as string = e.valueAtIndex(i)

// show label and value for this entry
MsgBox str(i)+": "+label+", "+value

// is it home?
if label = a.kABEmailHomeLabel then
MsgBox "Home: "+value
end if
next
```

**Notes:**

Returns "" on any error.
Index is zero based.

### 9.4.15 labelForIdentifier(identifier as string) as string

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

**Function:** Returns the label with the given identifier.
**Example:**

```
// same as the following code, but with index bound checking:

dim s as string
dim identifier as string = "fill the identifier here"
dim a as ABMultiValueMBS
// get multivalue somehow

s=a.labelAtIndex(a.indexForIdentifier(identifier))
```

**Notes:**

Returns "" if identifier is not found.
A convenience method.

### 9.4.16 labels as string()

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Returns list of labels.

### 9.4.17 valueAtIndex(index as UInt32) as Variant

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns a value at a given index
**Example:**

```
// shows all websites with labels

dim a as new ABAddressBookMBS
dim p as ABPersonMBS = a.owner
dim m as ABMultiValueMBS = p.valueForProperty(a.kABURLsProperty)

dim u as Integer = m.count-1
for i as Integer = 0 to u
dim label as string = m.labelAtIndex(i)
dim value as string = m.valueAtIndex(i)

MsgBox label+" ->"+value
next
```

**Notes:**

Returns nil on any error.
Index is zero based.

### 9.4.18 valueForIdentifier(identifier as string) as Variant

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

**Function:** Returns the value with the given identifier.
**Notes:**

Returns nil if identifier is not found.
A convenience method.

### 9.4.19 valueForLabel(label as string) as Variant

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

**Function:** Returns the value for the value with the given label.
**Example:**

```
dim a as new ABAddressBookMBS
dim p as ABPersonMBS
dim m as ABMultiValueMBS

a=new ABAddressBookMBS
p=a.owner

m=p.valueForProperty(a.kABPhoneProperty)

MsgBox "Work phone: "+m.valueForLabel(a.kABPhoneWorkLabel)
MsgBox "Mobile phone: "+m.valueForLabel(a.kABPhoneMobileLabel)
```

**Notes:**

Returns nil if not value exists for the label.
A convenience method.

### 9.4.20 values as Variant()

MBS MacCocoa Plugin, Plugin Version: 16.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns list of all values.
**Notes:**

Returns nil on any error.
Useful to get all email addresses as array.

### 9.4.21 Properties

### 9.4.22 Addressbook as ABAddressBookMBS

MBS MacCocoa Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Reference to parent addressbook.
**Notes:**

Plugin sets this for most objects to keep reference to addressbook and avoid this addressbook from being closed too early.
(Read and Write property)

### 9.4.23 Content as Dictionary

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Returns content of multi value as dictionary.
**Notes:**

This is more for inspection in debugger.
The plugin will add key and value for all values.
Values will be twice in the dictionary, once with label and once with identifier as key.
So if two items have same label, one will overwrite other in dictionary.
(Read only property)

### 9.4.24 count as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the number of value/label pairs.
**Notes:**

Returns 0 on any error.
(Read only property)

### 9.4.25 Description as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The description for this multi value.
**Example:**

```
dim a as new ABAddressBookMBS
dim m as new ABMutableMultiValueMBS
```

```
call m.insertValue("Hello World", "Owner", 0)
MsgBox m.Description
```

**Notes:** (Read only property)

### 9.4.26 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** The handle of the used ABMultiValue object.
**Notes:** (Read and Write property)

### 9.4.27 primaryIdentifier as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Identifier for the primary value.
**Notes:**

Returns "" on any error.
(Read only property)

### 9.4.28 propertyType as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Type of this multivalue (kABMultiXXXXProperty)
**Notes:**

Returns kABErrorInProperty if this multi-value is empty or not all values have the same type.

Possible values:

```
const kABMultiValueMask = & h100
const kABErrorInProperty = & h0
const kABStringProperty = & h1
const kABIntegerProperty = & h2
const kABRealProperty = & h3
const kABDateProperty = & h4
const kABArrayProperty = & h5
const kABDictionaryProperty = & h6
```

const kABDataProperty = & h7
const kABMultiStringProperty = kABMultiValueMask + kABStringProperty
const kABMultiIntegerProperty = kABMultiValueMask + kABIntegerProperty
const kABMultiRealProperty = kABMultiValueMask + kABRealProperty
const kABMultiDateProperty = kABMultiValueMask + kABDateProperty
const kABMultiArrayProperty = kABMultiValueMask + kABArrayProperty
const kABMultiDictionaryProperty = kABMultiValueMask + kABDictionaryProperty
const kABMultiDataProperty = kABMultiValueMask + kABDataProperty
(Read only property)

## 9.5 class ABMutableMultiValueMBS

### 9.5.1 class ABMutableMultiValueMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Mutable variant of ABMultiValueMBS.
**Deprecated:** This item is deprecated and should no longer be used. You can use CNLabeledValueMBS class instead. **Notes:**

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the ABMultiValueMBS class.

### 9.5.2 Blog Entries

- Saying goodbye to AddressBook framework

### 9.5.3 Blog Entries

- Saying goodbye to AddressBook framework

### 9.5.4 Methods

### 9.5.5 addValue(value as Variant, label as string) as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Adds a value with its label.
**Notes:**

Returns the identifier if successful, "" otherwise.

Note: No type checking is made when adding a value. But trying to set a multivalue property with a multivalue that doesn't have all its values of the same type will return an error.

Supported types: Date, Integer, String, Dictionary.

### 9.5.6 Constructor

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new ABMutableMultiValue object.

### 9.5.7 insertValue(value as Variant, label as string, index as UInt32) as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Insert a value/label pair at a given index.
**Notes:**

Returns the identifier if successful. "" otherwise

Note: No type checking is made when adding a value. But trying to set a multivalue property with a multivalue that doesn't have all its values of the same type will return an error

Index is zero based.

### 9.5.8 removeValueAndLabelAtIndex(index as UInt32) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Removes a value/label pair at a given index
**Notes:**

Returns true if successful.

Index is zero based.

### 9.5.9 replaceLabelAtIndex(index as UInt32, label as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Replaces a label at a given index.
**Notes:**

Index is zero based.
Returns true on success.

### 9.5.10 replaceValueAtIndex(index as UInt32, value as Variant) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Replaces a value at a given index
**Notes:**

Index is zero based.
Returns true on success.

### 9.5.11 setPrimaryIdentifier(identifier as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Sets the primary value given its identifier.
**Notes:** Returns true if successful.

## 9.6 control ABPeoplePickerViewControlMBS

### 9.6.1 control ABPeoplePickerViewControlMBS

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The control to host a people picker view.
**Deprecated:** This item is deprecated and should no longer be used. You can use CNContactPickerMBS class instead. **Notes:** Shows people and groups from Addressbook and allows picking them.

### 9.6.6 Properties

### 9.6.7 View as ABPeoplePickerViewMBS

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The view used.
**Notes:**

Access properties of the view hosted in the control via this variable.
(Read only property)

### 9.6.8 Events

### 9.6.9 BoundsChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 9.6.10 DisplayedPropertyDidChange

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

**Function:** Called when the displayed property in the record list is changed.

### 9.6.11 EnableMenuItems

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event where you can enable menu items.

### 9.6.12 FrameChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 9.6.13 GotFocus

MBS MacControls Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** The control itself got focus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 9.6.14 GroupDoubleClick

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

**Function:** The event to be invoked when a group is double-clicked.

### 9.6.15 GroupSelectionDidChange

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

**Function:** Called when the selection in the group list is changed.

### 9.6.16 LostFocus

MBS MacControls Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** The control lost focus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 9.6.17 MenuAction(HitItem as MenuItem) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 9.6.18 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control's region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 9.6.19 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 9.6.20 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 9.6.21 NameDoubleClick

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

**Function:** The event to be invoked when a name is double-clicked.

### 9.6.22 NameSelectionDidChange

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

**Function:** Called when the selection in the name list is changed.

### 9.6.23 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

### 9.6.24 ValueSelectionDidChange

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

**Function:** Called when the selection in a multivalue property is changed.

## 9.7 class ABPeoplePickerViewMBS

### 9.7.1 class ABPeoplePickerViewMBS

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** This is a view for Mac applications to select people from the addressbook.
**Deprecated:** This item is deprecated and should no longer be used. You can use CNContactViewControllerMBS class instead. **Notes:**

The ABPeoplePickerView class allows you to customize the behavior of people-picker views in an application's user interface.

Use CocoaControlMBS control to put this view on a window.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

### 9.7.2 Blog Entries

- Saying goodbye to AddressBook framework
- MBS Real Studio Plugins, version 13.0pr7
- MBS Real Studio Plugins, version 12.3pr10

### 9.7.3 Blog Entries

- Saying goodbye to AddressBook framework
- MBS Real Studio Plugins, version 13.0pr7
- MBS Real Studio Plugins, version 12.3pr10

### 9.7.4 Methods

### 9.7.5 ABPeoplePickerDisplayedPropertyDidChangeNotification as string

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names.
**Notes:**

Use this string with NSNotificationObserverMBS class. Or use the DisplayedPropertyDidChange event.
Posted when the displayed property in the record list is changed.

### 9.7.6 ABPeoplePickerGroupSelectionDidChangeNotification as string

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names.
**Notes:**

Use this string with NSNotificationObserverMBS class. Or use the GroupSelectionDidChange event.
Posted when the selection in the group list is changed.

### 9.7.7 ABPeoplePickerNameSelectionDidChangeNotification as string

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names.
**Notes:**

Use this string with NSNotificationObserverMBS class. Or use the NameSelectionDidChange event.
Posted when the selection in the name list is changed.

### 9.7.8 ABPeoplePickerValueSelectionDidChangeNotification as string

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names.
**Notes:**

Use this string with NSNotificationObserverMBS class. Or use the ValueSelectionDidChange event.
Posted when the selection in a multivalue property is changed.

### 9.7.9 addProperty(PropertyName as string)

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Adds a property to the group of properties whose values are shown in the record list.

### 9.7.10 clearSearchField

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Clears the search field and resets the list of displayed records.

### 9.7.11 Constructor

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The constructor for a new people picker view object.
See also:

- 9.7.12 Constructor(Handle as Integer) 3071
- 9.7.13 Constructor(left as Double, top as Double, width as Double, height as Double) 3071

### 9.7.12 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The constructor for a new people picker view object.
**Notes:** Pass a handle to a Cocoa ABPeoplePickerView object.
See also:

- 9.7.11 Constructor 3071
- 9.7.13 Constructor(left as Double, top as Double, width as Double, height as Double) 3071

### 9.7.13 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The constructor for a new people picker view object.
**Notes:** Pass rectangle for new control.
See also:

- 9.7.11 Constructor 3071
- 9.7.12 Constructor(Handle as Integer) 3071

### 9.7.14 deselectAll

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Deselects all selected groups, records, and values in multivalue properties.

### 9.7.15 deselectGroup(group as ABGroupMBS)

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Deselects a group selected in the group list.

### 9.7.16 deselectIdentifier(identifier as string, person as ABPersonMBS)

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Deselects a value selected in a multivalue property.
**Notes:**

identifier: The identifier of the value that will be deselected.
person: The person whose value will be deselected.

### 9.7.17 deselectRecord(record as ABRecordMBS)

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Deselects a record selected in the record list.
**Notes:** record: The record to deselect.

### 9.7.18 editInAddressBook

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Launches Address Book to edit the item selected in the people picker.

### 9.7.19 properties as string()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of the properties whose values are shown in the record list.

### 9.7.20 removeProperty(PropertyName as string)

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Removes a property from the group of properties whose values are shown in the record list.

### 9.7.21 selectedGroups as ABGroupMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The groups selected in the group list.
**Notes:**

The selected groups are returned as an array of ABGroupMBS objects.
Available in Mac OS X v10.6 and later.

### 9.7.22 selectedIdentifiersForPerson(person as ABPersonMBS) as string()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the identifiers of the selected values in a multivalue property.
**Notes:**

person: The person whose identifiers for selected values will be returned.

Returns nil if the property displayed is a single-value property.

### 9.7.23 selectedRecords as ABRecordMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The selection in the records list.
**Notes:**

The selection is returned as an array of ABGroupMBS or ABPersonMBS objects.
Available in Mac OS X v10.6 and later.

### 9.7.24 selectedValues as Variant()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of all the values selected in the displayed multivalue property.

### 9.7.25 selectGroup(group as ABGroupMBS, byExtendingSelection as boolean)

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Selects a group or a set of groups in the group list.
**Notes:**

group: The group to be selected, or to be added to the current selection.
byExtendingSelection: True to extend the current selection; otherwise, false.

### 9.7.26 selectIdentifier(identifier as string, person as ABPersonMBS, byExtendingSelection as boolean)

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Selects a value or a set of values in a multivalue property.
**Notes:**

identifier: The identifier to be selected, or to be added to the current selection.
person: The person that the value to be selected is associated with.
byExtendingSelection: True to extend the current selection; otherwise, false.

### 9.7.27 selectInAddressBook

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Launches Address Book and selects the item selected in the people picker.

### 9.7.28 selectRecord(group as ABRecordMBS, byExtendingSelection as boolean)

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Selects a record or a set of records in the record list.
**Notes:**

record: The record to be selected, or to be added to the current selection.
byExtendingSelection: True to extend the current selection; otherwise, false.

### 9.7.29 Properties

### 9.7.30 accessoryView as NSViewMBS

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The view that is placed to the left of the search field.
**Notes:**

Available in Mac OS X v10.6 and later.
If accessory is nil, the accessory view is removed.
(Read and Write property)

### 9.7.31 allowsGroupSelection as boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value that specifies whether the user can select entire groups in the group column.
**Notes:**

If true, the user can to select entire groups. If false, the user is required to select at least one person in the group.

Available in Mac OS X v10.6 and later.
(Read and Write property)

### 9.7.32 allowsMultipleSelection as boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value that specifies whether multiple groups, records, or values of multivalue properties can be selected at a time.
**Notes:**

Available in Mac OS X v10.6 and later.
(Read and Write property)

### 9.7.33 autosaveName as string

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The name under which the column positions and the filter selection are saved.
**Notes:**

Available in Mac OS X v10.6 and later.
(Read and Write property)

### 9.7.34 displayedProperty as string

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The property currently displayed in the record list.
**Notes:**

Available in Mac OS X v10.6 and later.
(Read and Write property)

### 9.7.35 valueSelectionBehavior as Integer

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The current selection behavior.
**Notes:**

The default behavior is ABSingleValueSelection.
Available in Mac OS X v10.6 and later.
(Read and Write property)

### 9.7.36 columnTitleForProperty(propertyName as string) as string

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The title of a custom property.
**Notes:** (Read and Write computed property)

### 9.7.37 Events

### 9.7.38 DisplayedPropertyDidChange

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** Called when the displayed property in the record list is changed.

### 9.7.39 GroupDoubleClick

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** The event to be invoked when a group is double-clicked.

### 9.7.40 GroupSelectionDidChange

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** Called when the selection in the group list is changed.

### 9.7.41 NameDoubleClick

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** The event to be invoked when a name is double-clicked.

### 9.7.42 NameSelectionDidChange

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** Called when the selection in the name list is changed.

### 9.7.43 ValueSelectionDidChange

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** Called when the selection in a multivalue property is changed.

### 9.7.44 Constants

### 9.7.45 ABMultipleValueSelection = 2

MBS MacControls Plugin, Plugin Version: 11.2.

**Function:** One of the constants for the Selection Behavior type.
**Notes:** The user can select multiple values.

### 9.7.46 ABNoValueSelection = 0

MBS MacControls Plugin, Plugin Version: 11.2.

**Function:** One of the constants for the Selection Behavior type.
**Notes:** The user cannot select individual values.

### 9.7.47 ABSingleValueSelection = 1

MBS MacControls Plugin, Plugin Version: 11.2.

**Function:** One of the constants for the Selection Behavior type.
**Notes:** The user can select a single value.

## 9.8 class ABPersonMBS

### 9.8.1 class ABPersonMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** ABPersonMBS is a subclass of ABRecord and represents a person.
**Example:**

```
dim a as new ABAddressBookMBS // get addressbook
dim p as ABPersonMBS = a.owner // and find me

// read note
MsgBox p.valueForProperty(a.kABNoteProperty).StringValue

// write note
if p.setValue("Hello World", a.kABNoteProperty) then
if a.save then
MsgBox "Changed."
end if
end if
```

**Deprecated:** This item is deprecated and should no longer be used. You can use CNContactMBS class instead. **Notes:**

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the ABRecordMBS class.

### 9.8.2 Blog Entries

- Saying goodbye to AddressBook framework
- Using dash if to reduce app size by referencing less plugins
- MBS Real Studio Plugins, version 12.4pr1
- Tipp of the day: Jump to anchor in htmlviewer

### 9.8.3 Blog Entries

- Saying goodbye to AddressBook framework
- Using dash if to reduce app size by referencing less plugins

- MBS Real Studio Plugins, version 12.4pr1
- Tipp of the day: Jump to anchor in htmlviewer

### 9.8.4 Methods

### 9.8.5 addProperty(propertyName as string, type as Integer) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Adds property to all people records.
**Example:**

```
dim p as ABPersonMBS
// get a person

call p.addProperty "Distance",1
```

**Notes:**

Property name must be unique.
For types see typeOfProperty.
Returns the number of properties successfully added.

### 9.8.6 Constructor

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new ABPersonMBS object.
See also:

- 9.8.7 Constructor(addressBook as ABAddressBookMBS) 3080
- 9.8.8 Constructor(vCardData as Memoryblock) 3081

### 9.8.7 Constructor(addressBook as ABAddressBookMBS)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new ABPersonMBS object in the given addressbook.
**Notes:** Available in Mac OS X 10.5 or newer.
See also:

- 9.8.6 Constructor 3080
- 9.8.8 Constructor(vCardData as Memoryblock) 3081

### 9.8.8 Constructor(vCardData as Memoryblock)

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Create a person from a vCard
**Notes:**

Handle is 0 on failure after constructor finished.
(e.g. because of invalid vCard data)

This gives a temporary ABPersonMBS object which is only useful in the same method.
At least we observed problems and crashes when this person is stored in a property of a window and used later.
See also:

- 9.8.6 Constructor 3080
- 9.8.7 Constructor(addressBook as ABAddressBookMBS) 3080

### 9.8.9 EditInAddressbook as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Opens addressbook entry in the addressbook for editing.
**Notes:** Returns true on success and false on failure.

### 9.8.10 linkedPeople as ABPersonMBS()

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of all linked people, including this person.
**Notes:**

Returns an array of only this person if this person is not linked.
Available in Mac OS X 10.8 and newer.

### 9.8.11 parentGroups as ABGroupMBS()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of ABGroup this group belongs to.
**Notes:**

Returns an empty array if this person doesn't belong to any groups.
Returns an empty array on any error.

### 9.8.12 properties as string()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of property names.
**Notes:** Returns an empty array on any error.

### 9.8.13 removeProperties(properties() as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Removes properties from all people
**Notes:** Returns the number of properties successfully removed.

### 9.8.14 removeProperty(propertyName as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Removes property from all people
**Notes:** Returns the number of properties successfully removed.

### 9.8.15 searchElementForProperty(PropertyName as string, Label as string, Key as string, value as Variant, comparison as Integer) as ABSearchElementMBS

MBS MacCocoa Plugin, Plugin Version: 12.4, Platform: macOS, Targets: Desktop only.

**Function:** Returns a search element object that specifies a query for records of this type.
**Notes:**

property: The name of the property to search on, such as kABAddressProperty or kABLastNameProperty. This name cannot be "".
label: The label name for a multivalue list, such as kABAddressHomeLabel, kABPhoneWorkLabel, or a user-specified label, such as Summer Home. If the specified property does not have multiple values, pass "". If the specified property does have multiple values, pass "" to search all the values.
key: The key name for a dictionary, such as kABAddressCityKey or kABAddressStreetKey. If the specified property is not a dictionary, pass "". If the specified property is a dictionary, pass nil to search all keys.
value: What you're searching for. If nil, then the only supported value for comparison is kABEqual or kABNotEqual.

comparison: The type of comparison to perform, such as kABEqual or kABPrefixMatchCaseInsensitive.

### 9.8.16 setImageData(data as Memoryblock) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Set the image of a person to data. data should be in an NSImage/QuickTime compatible format.
**Notes:** Pass "" to clear the image.

### 9.8.17 ShowInAddressbook as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Shows addressbook entry in the addressbook.
**Example:**

```
// open addressbook
dim a as new ABAddressBookMBS

// pick a person, in this case me
dim p as ABPersonMBS = a.owner

// show in AddressBook
call p.ShowInAddressbook
```

**Notes:** Returns true on success and false on failure.

### 9.8.18 typeOfProperty(propertyName as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the type of a given property.
**Notes:**

Possible values:

```
const kABMultiValueMask = & h100
const kABErrorInProperty = & h0
const kABStringProperty = & h1
const kABIntegerProperty = & h2
const kABRealProperty = & h3
const kABDateProperty = & h4
```

const kABArrayProperty = & h5
const kABDictionaryProperty = & h6
const kABDataProperty = & h7
const kABMultiStringProperty = kABMultiValueMask + kABStringProperty
const kABMultiIntegerProperty = kABMultiValueMask + kABIntegerProperty
const kABMultiRealProperty = kABMultiValueMask + kABRealProperty
const kABMultiDateProperty = kABMultiValueMask + kABDateProperty
const kABMultiArrayProperty = kABMultiValueMask + kABArrayProperty
const kABMultiDictionaryProperty = kABMultiValueMask + kABDictionaryProperty
const kABMultiDataProperty = kABMultiValueMask + kABDataProperty

### 9.8.19 vCardRepresentation as Memoryblock

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the vCard representation of a person
**Notes:** Returns nil on any error.

### 9.8.20 Properties

### 9.8.21 image as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

**Function:** Synchronously returns data containing an image for this person.
**Example:**

```
dim a as new ABAddressBookMBS
dim p as ABPersonMBS = a.owner

Backdrop=p.image.CopyPictureWithMask
```

**Notes:**

Only does local file system searches.
Raises an exception if no image exists.

Convenience function which calls imageData and converts data to and from NSImage.
(Read and Write computed property)

### 9.8.22 imageData as Memoryblock

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Synchronously returns data containing an image for this person.
**Example:**

```
dim a as new ABAddressBookMBS
dim owner as ABPersonMBS = a.owner
dim s as string = owner.imageData
dim p as Picture

p=JPEGStringToPictureMBS(s) // try jpeg
if p<>Nil then
Title="jpeg"
Backdrop=p
Return
end if

p=TIFFStringToPictureMBS(s) // try tiff
if p<>Nil then
Title="tiff"
Backdrop=p
Return
end if
```

**Notes:**

Only does local file system searches. Data will be in an NSImage/QuickTime compatible format.
Raises an exception if no image exists.
(Read and Write computed property)

## 9.9 control ABPersonViewControlMBS

### 9.9.1 control ABPersonViewControlMBS

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The control to host a Person view.
**Deprecated:** This item is deprecated and should no longer be used. You can use CNContactViewControllerMBS class instead. **Notes:** Shows people from Addressbook and allows editing.

### 9.9.2 Blog Entries

- Saying goodbye to AddressBook framework
- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 15.0
- MBS Xojo / Real Studio Plugins, version 15.0pr9

### 9.9.3 Blog Entries

- Saying goodbye to AddressBook framework
- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 15.0
- MBS Xojo / Real Studio Plugins, version 15.0pr9

### 9.9.4 Methods

### 9.9.5 retainObject

MBS MacControls Plugin, Plugin Version: 16.0, Platform: macOS, Targets: Desktop only.

**Function:** Retains the viewer object.
**Notes:**

This method is to workaround a bug which your app may see in OS X 10.11.
So to avoid crashes with releasing an view, you can retain it an extra time.

### 9.9.6 Properties

### 9.9.7 View as ABPersonViewMBS

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The view used.
**Notes:**

Access properties of the view hosted in the control via this variable.
(Read only property)

### 9.9.8 Events

### 9.9.9 BoundsChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 9.9.10 EnableMenuItems

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event where you can enable menu items.

### 9.9.11 FrameChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 9.9.12 GotFocus

MBS MacControls Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** The control itself got focus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 9.9.13 LostFocus

MBS MacControls Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** The control lost focus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 9.9.14 MenuAction(HitItem as MenuItem) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 9.9.15 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control's region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 9.9.16 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 9.9.17 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 9.9.18 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

## 9.10 class ABPersonViewMBS

### 9.10.1 class ABPersonViewMBS

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** ABPersonViewMBS provides a view for displaying and editing ABPersonMBS objects in your user interface.
**Deprecated:** This item is deprecated and should no longer be used. You can use CNContactViewControllerMBS instead. **Notes:**

Available on Mac OS X 10.7 or later.
Please also check the documentation from Apple for the ABPersonView class.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

### 9.10.2 Blog Entries

### 9.10.4 Methods

### 9.10.5 available as Boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Whether this class is available.
**Example:**

msgbox "ABPersonView available: "+str(ABPersonViewMBS.available)

**Notes:** Returns true on Mac OS X 10.7 or later.

### 9.10.6 Constructor

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The constructor for a new people picker view object.
See also:

- 9.10.7 Constructor(Handle as Integer) 3091
- 9.10.8 Constructor(left as Double, top as Double, width as Double, height as Double) 3091

### 9.10.7 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The constructor for a new people picker view object.
**Notes:** Pass a handle to a Cocoa ABPersonView object.
See also:

- 9.10.6 Constructor 3091
- 9.10.8 Constructor(left as Double, top as Double, width as Double, height as Double) 3091

### 9.10.8 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The constructor for a new people picker view object.
**Notes:** Pass rectangle for new control.
See also:

- 9.10.6 Constructor 3091
- 9.10.7 Constructor(Handle as Integer) 3091

### 9.10.9 Properties

### 9.10.10 editing as Boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value that determines whether the receiver is in editing mode.
**Notes:**

When true, ABPersonView includes additional controls to manipulate person properties.
(Read and Write property)

### 9.10.11 person as ABPersonMBS

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** An ABPersonMBS record for display.
**Notes:**

Raises if person originates from ABAddressBook's sharedAddressBook. Use ABAddressBookMBS constructor.
Person must be exist in an ABAddressBook created and manipulated on the main thread only.
When person is nil, displays an empty selection state.
(Read and Write property)

### 9.10.12 shouldShowLinkedPeople as Boolean

MBS MacControls Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Indicates whether the view should include information for linked contacts in addition to the set contact.
**Notes:**

If true, information is included from linked contacts. If false, only the information on this person is shown.
Available in Mac OS X 10.8 and newer.
(Read and Write property)

## 9.11 class ABPickerMBS

### 9.11.1 class ABPickerMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** A class to control a people picker window.
**Example:**

```
dim p as ABPickerMBS // a global property

p = new ABPickerMBS
p.Create
p.visible = True
```

**Deprecated:** This item is deprecated and should no longer be used. You can use CNContactPickerMBS class instead. **Notes:**

Requires Mac OS X 10.3 or newer.

This class is for Carbon as event handling does not work on Cocoa.
For Cocoa better use ABPeoplePickerViewMBS.

### 9.11.2 Blog Entries

- Saying goodbye to AddressBook framework
- MBS Xojo Plugins, version 20.5pr9
- MBS Xojo / Real Studio Plugins, version 13.2pr6
- MBS Real Studio Plugins, version 12.3pr10

### 9.11.3 Blog Entries

- Saying goodbye to AddressBook framework
- MBS Xojo Plugins, version 20.5pr9
- MBS Xojo / Real Studio Plugins, version 13.2pr6
- MBS Real Studio Plugins, version 12.3pr10

### 9.11.4 Methods

### 9.11.5 AddProperty(propertyname as String)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Adds a property to the value column.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.6 ClearSearchField

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Clear the search field and reset the list of displayed names.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.7 Create

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new window.
**Example:**

```
dim p as ABPickerMBS // a global property

p = new ABPickerMBS
p.Create

p.visible = True
```

**Notes:**

The window is created invisible.
Requires Mac OS X 10.3 or newer.
The handle property is not 0 if this call was successfull.

### 9.11.8 DeselectAll

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Remove selection.

### 9.11.9 DeselectGroup(group as ABGroupMBS)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Removes selection.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.10 DeselectIdentifier(person as ABPersonMBS, Identifier as String)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Removes selection.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.11 DeselectPerson(person as ABPersonMBS)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Removes selection.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.12 EditInAddressBook

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Launch AddressBook and edit the current selection
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.13 InstallEvents(targetwindow as window)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Installs the event handler.
**Notes:**

Requires Mac OS X 10.3 or newer.
The target window is only used as an anchor to send and receive events. You can use any window for that.

### 9.11.14 Properties as string()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** A list of all the properties shown in the value columns.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.15 RemoveEvents

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Removes the event handler.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.16 RemoveProperty(propertyname as String)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Removes a property from the value column.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.17 SelectedDictionaries as Dictionary()

MBS MacCocoa Plugin, Plugin Version: 9.0, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array containing dictionaries for each item selected in the values column.
**Notes:**

Use this method if you select single addresses.
Requires Mac OS X 10.3 or newer.

### 9.11.18 SelectedGroups as ABGroupMBS()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns group column selection as an array of ABGroup object handles.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.19 SelectedIdentifiers(person as ABPersonMBS) as string()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** This method returns an array of selected multi-value identifiers.
**Notes:**

Requires Mac OS X 10.3 or newer.
Returns empty array if the displayed property is a single value type.

### 9.11.20 SelectedRecords as ABRecordMBS()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns names column selection as an array of ABGroup or ABPersonMBS objects.
**Notes:**

Requires Mac OS X 10.3 or newer.
You need to cast the objects from the array to ABGroupMBS or ABPersonMBS to use them better. And IsA can tell you whether an object is from the group or the person class.

### 9.11.21 SelectedStrings as String()

MBS MacCocoa Plugin, Plugin Version: 9.0, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array containing strings for each item selected in the values column.
**Notes:**

Use this method if you select single strings like a phone number.
Requires Mac OS X 10.3 or newer.

### 9.11.22 SelectedValues as Variant()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array containing variants for each item selected in the values column.
**Notes:**

Use this method if you select single strings like a phone number.
Requires Mac OS X 10.3 or newer.
Changed from string to variant in plugin version 13.2, so you don't need to use SelectedDictionaries.

### 9.11.23 SelectGroup(group as ABGroupMBS, ExtendSelection as boolean)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Select group programatically.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.24 SelectIdentifier(person as ABPersonMBS, Identifier as String, ExtendSelection as boolean)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Individual values contained within an multi-value property can be selected with this method.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.25 SelectInAddressBook

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Launch AddressBook and select the current selection
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.26 SelectPerson(person as ABPersonMBS, ExtendSelection as boolean)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Select person programatically.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.27 Properties

### 9.11.28 AllowGroupSelection as Boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Allow the user to select entire groups in the group column.
**Notes:**

Requires Mac OS X 10.3 or newer.
If false, at least one person in the group will be selected. Defaults to false.
(Read and Write property)

### 9.11.29 AllowMultipleSelection as Boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Allow the user to select more than one group/record at a time.
**Notes:**

Default is true.
Requires Mac OS X 10.3 or newer.
(Read and Write property)

### 9.11.30 AllowMultipleValueSelection as Boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Allow user to choose multiple values for a person.
**Notes:**

Requires Mac OS X 10.3 or newer.
Choose the selection behavior for the value column. If multiple behaviors are selected, the most restrictive behavior will be used. Defaults to SingleValueSelection set.
(Read and Write property)

### 9.11.31 AllowSingleValueSelection as Boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Allow user to choose a single value for a person.
**Notes:**

Requires Mac OS X 10.3 or newer.
Choose the selection behavior for the value column. If multiple behaviors are selected, the most restrictive behavior will be used. Defaults to SingleValueSelection set.
(Read and Write property)

### 9.11.32 Available as Boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** True if the picker is available.
**Notes:**

Returns true on Mac OS X 10.3 or newer.
(Read only property)

### 9.11.33 DisplayedProperty as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Which property is displayed currently.
**Notes:**

Returns nil on any error.
(Read and Write property)

### 9.11.34 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The handle of the ABPickerRef used internally.
**Notes:** (Read and Write property)

### 9.11.35 Height as Single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The current height of the picker window.
**Notes:**

Requires Mac OS X 10.3 or newer.
(Read and Write property)

### 9.11.36 Left as Single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The current position of the picker window.
**Notes:**

Requires Mac OS X 10.3 or newer.
(Read and Write property)

### 9.11.37 Top as Single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The current position of the picker window.
**Notes:**

Requires Mac OS X 10.3 or newer.

top=0 is on the bottom of the screen as this is the Cocoa coordinate system.
(Read and Write property)

### 9.11.38 Visible as Boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Whether the picker window is visible.
**Notes:**

The window is created invisible, so you must make it visible to show it to the user.
Requires Mac OS X 10.3 or newer.
(Read and Write property)

### 9.11.39 Width as Single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** The current width of the picker window.
**Notes:**

Requires Mac OS X 10.3 or newer.
(Read and Write property)

### 9.11.40 ColumnTitle(columntitle as String) as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

**Function:** Localized titles for third party properties.
**Notes:**

Requires Mac OS X 10.3 or newer.
(Read and Write computed property)

### 9.11.41 Events

### 9.11.42 DisplayedPropertyChanged

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: .

**Function:** One of the events of a People Picker.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.43 GroupDoubleClicked

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: .

**Function:** One of the events of a People Picker.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.44 GroupSelectionChanged

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: .

**Function:** One of the events of a People Picker.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.45 NameDoubleClicked

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: .

**Function:** One of the events of a People Picker.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.46 NameSelectionChanged

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: .

**Function:** One of the events of a People Picker.
**Notes:** Requires Mac OS X 10.3 or newer.

### 9.11.47 ValueSelectionChanged

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: .

**Function:** One of the events of a People Picker.
**Notes:** Requires Mac OS X 10.3 or newer.

## 9.12 class ABRecordMBS

### 9.12.1 class ABRecordMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** A class to hold an Addressbook Record.
**Deprecated:** This item is deprecated and should no longer be used. You can use CNContactMBS class instead. **Notes:**

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 9.12.2 Blog Entries

- Saying goodbye to AddressBook framework
- MBS Real Studio Plugins, version 12.3pr2
- MBS Real Studio Plugins, version 11.4pr2

### 9.12.3 Blog Entries

- Saying goodbye to AddressBook framework
- MBS Real Studio Plugins, version 12.3pr2
- MBS Real Studio Plugins, version 11.4pr2

### 9.12.4 Methods

### 9.12.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The private constructor.

### 9.12.6 removeValueForProperty(propertyName as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Remove the value of a given property.
**Notes:**

Subsequent calls to valueForProperty on the same property will return nil.
Returns true if the value was removed successfully and false on any error.

### 9.12.7 setValue(value as Variant, propertyName as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Set the value of a given property. The type of the value must match the property type.
**Example:**

```
dim a as ABAddressBookMBS
dim p as ABPersonMBS
// get a somehow
// get p somehow

if not p.setValue("My Company",a.kABOrganizationProperty) then
MsgBox "Failed to set field "+a.LocalizedPropertyOrLabel(a.kABOrganizationProperty)
end if
```

**Notes:**

Value can be Date, Integer, Double, Dictionary, MultiValueMBS/MutableMultiValueMBS or String.
Returns true if the value was set successfully
See also:

- 9.12.8 setValue(value as Variant, propertyName as string, byref error as NSErrorMBS) as boolean 3104

### 9.12.8 setValue(value as Variant, propertyName as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Set the value of a given property. The type of the value must match the property type.
**Notes:**

Value can be Date, Integer, Double, Dictionary, MultiValueMBS/MutableMultiValueMBS or String.
Returns true if the value was set successfully

On Mac OS X 10.7 or later, we set the error property on any error.
See also:

- 9.12.7 setValue(value as Variant, propertyName as string) as boolean 3104

### 9.12.9 valueForProperty(PropertyName as string) as Variant

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the value of a given property.
**Example:**

```
dim a as new ABAddressBookMBS // get addressbook
dim p as ABPersonMBS = a.owner // and find me

// read note
MsgBox p.valueForProperty(a.kABNoteProperty).StringValue
```

**Notes:**

The type of the value depends on the property type.
Returns nil on any error.

Tip: Put the result in a variant, so you can see the type in the debugger. Emails for example can be a ABMultiValueMBS object while name is normally a string.

### 9.12.10 Properties

### 9.12.11 account as ABAccountMBS

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Queries account for this record.
**Notes:** (Read only property)

### 9.12.12 Addressbook as ABAddressBookMBS

MBS MacCocoa Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Reference to parent addressbook.
**Notes:**

Plugin sets this for most objects to keep reference to addressbook and avoid this addressbook from being closed too early.
(Read and Write property)

### 9.12.13 Description as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The description for this record.
**Example:**

```
dim a as new ABAddressBookMBS
dim m as ABPersonMBS = a.owner
MsgBox m.Description
```

**Notes:** (Read only property)

### 9.12.14 DisplayName as string

MBS MacCocoa Plugin, Plugin Version: 12.0, Platform: macOS, Targets: Desktop only.

**Function:** The display name.
**Example:**

```
// quickly find the addressbook, locate me and display my name:
MsgBox ABAddressBookMBS.sharedAddressbook.owner.DisplayName
```

**Notes:**

For a group, the group name, for an organization the organization name and for a normal person the first name, last name, prefix/suffix and middle name. Name order depends on the settings for person or addressbook.
(Read only property)

### 9.12.15 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** The handle of the ABGroup or ABPersonMBS object being used.
**Notes:** (Read and Write property)

### 9.12.16 isReadOnly as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns whether or not the record is read only.
**Notes:**

Available on Mac OS X 10.4.
Returns false on older systems or other errors.
(Read only property)

### 9.12.17 uniqueId as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Convenience method to return the unique ID of a record.
**Example:**

```
dim a as new ABAddressBookMBS
dim o as ABPersonMBS = a.owner

// the unique ID for this record including the type
dim u as string = o.uniqueId

// the raw ID as Apple stores it
dim i as string = o.valueForProperty("com.apple.uuid")

// show it
MsgBox u+EndOfLine+i
```

**Notes:**

Equivalent to valueForProperty(kABUIDProperty).
(Read only property)

## 9.13 class ABSearchElementMBS

### 9.13.1 class ABSearchElementMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** A class for a search element.
**Example:**

```
// search and display all entries with a given name in a 2 column listbox with address

// Save reference to caller.
dim addr as new ABAddressBookMBS // Initialise the Address Book plugin
dim searchName as string = "Schmitz" // search on.

// Do the search
dim srch as ABSearchElementMBS = addr.searchElementForPersonProperty(addr.kABLastNameProperty,
"", "", searchName, addr.kABContainsSubStringCaseInsensitive)
dim srchRes() as ABRecordMBS = addr.recordsMatchingSearchElement(srch) // Get the results into an
array

for each rc as ABRecordMBS in srchRes
if rc isa ABPersonMBS then // Is it a person record?
dim pers as ABPersonMBS = ABPersonMBS(rc) // Get it into a personnel record

// Now get out the names and addresses.
listbox1.AddRow(pers.valueForProperty(addr.kABFirstNameProperty) + " " + pers.valueForProperty(addr.kABLast-
NameProperty))
listbox1.RowTag(listbox1.LastIndex) = pers.valueForProperty(addr.kABUIDProperty)

// Need to find the home address.
dim mlv as ABMultiValueMBS = pers.valueForProperty(addr.kABAddressProperty)
if mlv <>nil Then
// get home address
dim d as Dictionary = mlv.valueForLabel(addr.kABHomeLabel)

if d = nil then
// get primary
d = mlv.valueForIdentifier(mlv.primaryIdentifier)
end if

if d<>Nil then
// show address with street and city
listbox1.Cell(listbox1.LastIndex,1) = d.Lookup(addr.kABAddressStreetKey,"")+" "+d.Lookup(addr.kABAd-
dressCityKey,"")
end if
end if
end if
```

next

**Deprecated:** This item is deprecated and should no longer be used. You can use CNContactFetchRequestMBS class instead. **Notes:**

Use searchElementForProperty in ABPersonMBS and ABGroupMBS classes to create objects.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 9.13.2 Blog Entries

- Saying goodbye to AddressBook framework
- MBS Real Studio Plugins, version 12.3pr2

### 9.13.3 Blog Entries

- Saying goodbye to AddressBook framework
- MBS Real Studio Plugins, version 12.3pr2

### 9.13.4 Methods

### 9.13.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The private constructor.

### 9.13.6 matchesRecord(record as ABRecordMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Whether a record matches the search element.
**Notes:** Returns false if handle=0 or record=nil or record does not match. Else yes.

### 9.13.7 searchElementForConjunction(conjunction as Integer, children() as ABSearchElementMBS) as ABSearchElementMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a search element combining several sub search elements.
**Notes:**

conjunction can be kABSearchAnd or kABSearchOr.
Returns nil on any error.

Pass kABSearchOr or kABSearchAnd for conjunction.

This is a class method. No need to have a valid handle.

### 9.13.8 Properties

### 9.13.9 Addressbook as ABAddressBookMBS

MBS MacCocoa Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Reference to parent addressbook.
**Notes:**

Plugin sets this for most objects to keep reference to addressbook and avoid this addressbook from being closed too early.
(Read and Write property)

### 9.13.10 Description as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** The description for this search element.
**Example:**

```
dim a as new ABAddressBookMBS
dim m as ABSearchElementMBS = a.searchElementForPersonProperty(a.kABFirstNameProperty, "", "", "John", a.kABContainsSubStringCaseInsensitive)
MsgBox m.Description
```

**Notes:** (Read only property)

### 9.13.11 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** The handle to the Cocoa object being used.
**Notes:** (Read and Write property)

### 9.13.12 Constants

### 9.13.13 kABSearchAnd = 0

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** A search conjunction.

### 9.13.14 kABSearchOr = 1

MBS MacCocoa Plugin, Plugin Version: 7.1.

**Function:** A search conjunction.

# Chapter 10

# Alias

## 10.1 class AliasInfoMBS

### 10.1.1 class AliasInfoMBS

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for information about an alias.
**Example:**

```
// select an alias file. use TrueChild so it's not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("Development")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS

// show info
MsgBox "alias points to "+a.TargetName+" in path "+a.PathString+" of volume "+a.VolumeName
```

**Deprecated:** This item is deprecated and should no longer be used. You can use CFBookmarkMBS module instead. **Notes:**

Only for Mac OS X.
This is for resource fork based alias files.
Newer OS X version use the newer bookmark format, so please use CFBookmarkMBS module there.

### 10.1.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr3

- MBS Plugins updated for Xojo 2019r2
- MBS Xojo / Real Studio Plugins, version 16.4pr8
- MBS Real Studio Plugins, version 13.1pr16

### 10.1.3 Blog Entries

- MBS Xojo Plugins, version 20.6pr3
- MBS Plugins updated for Xojo 2019r2
- MBS Xojo / Real Studio Plugins, version 16.4pr8
- MBS Real Studio Plugins, version 13.1pr16

### 10.1.4 Methods

### 10.1.5 Constructor

MBS MacClassic Plugin, Plugin Version: 5.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A dummy constructor used only for automatic plugin testing.
See also:

- 10.1.6 Constructor(AliasHandle as Integer) 3114

### 10.1.6 Constructor(AliasHandle as Integer)

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor: Loads object properties with information about the alias inside the Alias Handle.
**Notes:** Check Lasterror code to see whether it was successfull.
See also:

- 10.1.5 Constructor 3114

### 10.1.7 InfoForAliasData(data as string) as AliasInfoMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Query information for alias data.
**Example:**

```
dim folder as FolderItem = SpecialFolder.Desktop
dim m as new MacAliasMBS
```

```
dim error as Integer = m.Create(nil, folder)
if error = 0 then
dim data as string = m.GetRecord
dim info as AliasInfoMBS = AliasInfoMBS.InfoForAliasData(data)
MsgBox info.PathString
else
MsgBox "Failed to create the alias. Error "+str(error)
end if
```

**Notes:** Returns nil on any error.

### 10.1.8 InfoForSaveInfo(data as string) as AliasInfoMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Query information about alias in SaveInfo.
**Example:**

```
dim folder as FolderItem = SpecialFolder.Desktop
dim SaveInfo as string = folder.GetSaveInfo(nil, FolderItem.SaveInfoDefaultMode)
dim info as AliasInfoMBS = AliasInfoMBS.InfoForSaveInfo(SaveInfo)
MsgBox info.PathString
```

**Notes:**

This is for saveinfo data returns by GetSaveInfo function in folderitem class.
Returns nil on any error.

### 10.1.9 Properties

### 10.1.10 FileCreator as String

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The file creator code.
**Example:**

```
// select an alias file. use TrueChild so it's not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("IMG_0793.jpg")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS
```

```
// show info
MsgBox "FileCreator: "+a.FileCreator // shows Mac OS creator code like GKON
```

**Notes:** (Read only property)

### 10.1.11 FilesystemID as Integer

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The file system ID of the target file system.
**Notes:** (Read only property)

### 10.1.12 FileType as String

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The file type code.
**Example:**

```
// select an alias file. use TrueChild so it's not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("IMG_0793.jpg")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS

// show info
MsgBox "FileType: "+a.FileType // shows Mac OS creator code like JPEG
```

**Notes:** (Read only property)

### 10.1.13 Flags as Integer

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Which properties do have valid content.
**Notes:**

some contants:

| | | |
|---|---|---|
| AliasInfoNone | = & h00000000 | no valid info |
| AliasInfoVolumeCreateDate | = & h00000001 | volume creation date is valid |
| AliasInfoTargetCreateDate | = & h00000002 | target creation date is valid |
| AliasInfoFinderInfo | = & h00000004 | file type and creator are valid |
| AliasInfoIsDirectory | = & h00000008 | isDirectory boolean is valid |
| AliasInfoIDs | = & h00000010 | parentDirID and nodeID are valid |
| AliasInfoFSInfo | = & h00000020 | filesystemID and signature are valid |
| AliasInfoVolumeFlags | = & h00000040 | volumeIsBootVolume, volumeIsAutomounted, volumeIsEjectable and volumeHasPersistentFileIDs are valid |

(Read only property)

### 10.1.14 IsDirectory as Boolean

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the target item is a directory or not.
**Example:**

```
// select an alias file. use TrueChild so it's not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("IMG_0793.jpg")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS

// show info
MsgBox "IsDirectory: "+str(a.IsDirectory)
```

**Notes:** (Read only property)

### 10.1.15 LastError as Integer

MBS MacClassic Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:** (Read only property)

### 10.1.16 NodeID as Integer

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The node ID of the target file.

**Notes:** (Read only property)

### 10.1.17 ParentDirID as Integer

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The Directory ID of the parent directory.
**Notes:** (Read only property)

### 10.1.18 PathString as String

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The POSIX path to target.
**Example:**

```
// select an alias file. use TrueChild so it's not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("IMG_0793.jpg")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS

// show info
MsgBox "TargetName: "+a.PathString // shows target file path
```

**Notes:** (Read only property)

### 10.1.19 Signature as Integer

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The signature of the target file system.
**Notes:** (Read only property)

### 10.1.20 TargetCreateDate as Double

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Target file creation date.
**Notes:**

Value should be in absolute seconds.
(Read only property)

### 10.1.21 TargetName as String

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the target item.
**Example:**

```
// select an alias file. use TrueChild so it's not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("IMG_0793.jpg")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS

// show info
MsgBox "TargetName: "+a.TargetName // shows target file name
```

**Notes:** (Read only property)

### 10.1.22 VolumeCreateDate as Double

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The creation date of the target volume.
**Notes:** (Read only property)

### 10.1.23 VolumeHasPersistentFileIDs as Boolean

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The target volume has persistent file IDs, so the NodeID and parentDirID are useable.
**Example:**

```
// select an alias file. use TrueChild so it's not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("IMG_0793.jpg")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS

// show info
```

```
MsgBox "VolumeHasPersistentFileIDs: "+str(a.VolumeHasPersistentFileIDs)
```

**Notes:** (Read only property)

### 10.1.24 VolumeIsAutomounted as Boolean

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the volume is automounted.
**Notes:**

```
// select an alias file. use TrueChild so it's not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("IMG_0793.jpg")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS

// show info
MsgBox "VolumeIsAutomounted: "+str(a.VolumeIsAutomounted)
```

(Read only property)

### 10.1.25 VolumeIsBootVolume as Boolean

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the target volume is bootable.
**Example:**

```
// select an alias file. use TrueChild so it's not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("IMG_0793.jpg")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS

// show info
MsgBox "VolumeIsBootVolume: "+str(a.VolumeIsBootVolume)
```

**Notes:** (Read only property)

### 10.1.26 VolumeIsEjectable as Boolean

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the target file is on an ejectable volume.
**Example:**

```
// select an alias file. use TrueChild so it's not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("IMG_0793.jpg")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS

// show info
MsgBox "VolumeIsEjectable: "+str(a.VolumeIsEjectable)
```

**Notes:** (Read only property)

### 10.1.27 VolumeName as String

MBS MacClassic Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the volume the target resides on.
**Example:**

```
// select an alias file. use TrueChild so it's not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("IMG_0793.jpg")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS

// show info
MsgBox "VolumeName: "+a.VolumeName // shows target volume name
```

**Notes:** (Read only property)

### 10.1.28 Constants

### 10.1.29 kAliasInfoFinderInfo = 4

MBS MacClassic Plugin, Plugin Version: 13.4.

**Function:** One of the flag constants.
**Notes:** File type and creator are valid.

### 10.1.30 kAliasInfoFSInfo = 32

MBS MacClassic Plugin, Plugin Version: 13.4.

**Function:** One of the flag constants.
**Notes:** FilesystemID and signature are valid.

### 10.1.31 kAliasInfoIDs = 16

MBS MacClassic Plugin, Plugin Version: 13.4.

**Function:** One of the flag constants.
**Notes:** ParentDirID and nodeID are valid.

### 10.1.32 kAliasInfoIsDirectory = 8

MBS MacClassic Plugin, Plugin Version: 13.4.

**Function:** One of the flag constants.
**Notes:** IsDirectory boolean is valid.

### 10.1.33 kAliasInfoNone = 0

MBS MacClassic Plugin, Plugin Version: 13.4.

**Function:** One of the flag constants.
**Notes:** No valid info.

### 10.1.34 kAliasInfoTargetCreateDate = 2

MBS MacClassic Plugin, Plugin Version: 13.4.

**Function:** One of the flag constants.
**Notes:** Target creation date is valid.

### 10.1.35 kAliasInfoVolumeCreateDate = 1

MBS MacClassic Plugin, Plugin Version: 13.4.

**Function:** One of the flag constants.
**Notes:** Volume creation date is valid.

### 10.1.36 kAliasInfoVolumeFlags = 64

MBS MacClassic Plugin, Plugin Version: 13.4.

**Function:** One of the flag constants.
**Notes:** VolumeIsBootVolume, volumeIsAutomounted, volumeIsEjectable and volumeHasPersistentFileIDs are valid.

## 10.2 module CFBookmarkMBS

### 10.2.1 module CFBookmarkMBS

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** The module for Mac OS X bookmark/alias functions.
**Notes:**

Bookmark data strings have no text encoding. If you use ConvertEncoding on them, you destroy them.
Available with Mac OS X 10.6 or newer.
For older systems, please use MacAliasMBS class.

### 10.2.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr3
- MBS Xojo Plugins, version 17.1pr3
- MBS Xojo / Real Studio Plugins, version 14.2pr4
- MBS Xojo / Real Studio Plugins, version 14.1pr2
- MBS Real Studio Plugins, version 11.3pr12
- MBS Real Studio Plugins, version 11.3pr10

### 10.2.3 Blog Entries

- MBS Xojo Plugins, version 20.6pr3
- MBS Xojo Plugins, version 17.1pr3
- MBS Xojo / Real Studio Plugins, version 14.2pr4
- MBS Xojo / Real Studio Plugins, version 14.1pr2
- MBS Real Studio Plugins, version 11.3pr12
- MBS Real Studio Plugins, version 11.3pr10

### 10.2.4 Methods

### 10.2.5 Available as boolean

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Whether bookmark functions are available.
**Notes:** Returns true on Mac OS X 10.6 or newer.

### 10.2.6 CreateBookmarkData(file as folderitem, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Create a string containing an externalizable representation from a folderitem, modified with the given options, including ( at the minimum ) any properties in the propertiesToInclude array which are retrievable from the given url.
**Example:**

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim Bookmark as string = CFBookmarkMBS.CreateBookmarkData(file, CFBookmarkMBS.kCreationSuitableForBookmarkFile)

MsgBox str(lenb(Bookmark))+" bytes"
```

**Notes:**

file: the folderitem to create a bookmark data from.
options: a set of options which control creation of the bookmark data
resourcePropertiesToInclude: Optional, If non-empty, an array of additional properties copied from the url to include in the created bookmark data.
relativeToURL: If non-nil, the created bookmark will be relative to the given url

Lasterror is set.
Returns a string containing an data, which can be later be passed to ResolveBookmarkData.
See also:

- 10.2.7 CreateBookmarkData(file as folderitem, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3126
- 10.2.8 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as CFURLMBS = nil) as string 3126
- 10.2.9 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3127
- 10.2.10 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as CFURLMBS = nil) as string 3128
- 10.2.11 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3129
- 10.2.12 CreateBookmarkData(URL as string, options as UInt32 = 1024, relativeToURL as string = "") as string 3130
- 10.2.13 CreateBookmarkData(URL as string, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as string = "") as string 3131

### 10.2.7 CreateBookmarkData(file as folderitem, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Create a string containing an externalizable representation from a folderitem, modified with the given options, including ( at the minimum ) any properties in the propertiesToInclude array which are retrievable from the given url.
**Notes:**

file: the folderitem to create a bookmark data from.
options: a set of options which control creation of the bookmark data
resourcePropertiesToInclude: Optional, If non-empty, an array of additional properties copied from the url to include in the created bookmark data.
relativeToURL: If non-nil, the created bookmark will be relative to the given url

Lasterror is set.
Returns a string containing an data, which can be later be passed to ResolveBookmarkData.
See also:

- 10.2.6 CreateBookmarkData(file as folderitem, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3125
- 10.2.8 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as CFURLMBS = nil) as string 3126
- 10.2.9 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3127
- 10.2.10 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as CFURLMBS = nil) as string 3128
- 10.2.11 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3129
- 10.2.12 CreateBookmarkData(URL as string, options as UInt32 = 1024, relativeToURL as string = ””) as string 3130
- 10.2.13 CreateBookmarkData(URL as string, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as string = ””) as string 3131

### 10.2.8 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as CFURLMBS = nil) as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

**Function:** Create a string containing an externalizable representation from a URL, modified with the given options, including ( at the minimum ) any properties in the propertiesToInclude array which are retrievable

from the given url.
**Notes:**

URL: the URL to create a bookmark data from.
options: a set of options which control creation of the bookmark data
resourcePropertiesToInclude: Optional, If non-empty, an array of additional properties copied from the url to include in the created bookmark data.
relativeToURL: If non-nil, the created bookmark will be relative to the given url

Lasterror is set.
Returns a string containing an data, which can be later be passed to ResolveBookmarkData.
See also:

- 10.2.6 CreateBookmarkData(file as folderitem, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3125
- 10.2.7 CreateBookmarkData(file as folderitem, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3126
- 10.2.9 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3127
- 10.2.10 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as CFURLMBS = nil) as string 3128
- 10.2.11 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3129
- 10.2.12 CreateBookmarkData(URL as string, options as UInt32 = 1024, relativeToURL as string = ””) as string 3130
- 10.2.13 CreateBookmarkData(URL as string, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as string = ””) as string 3131

### 10.2.9 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

**Function:** Create a string containing an externalizable representation from a URL, modified with the given options, including ( at the minimum ) any properties in the propertiesToInclude array which are retrievable from the given url.
**Notes:**

URL: the URL to create a bookmark data from.
options: a set of options which control creation of the bookmark data
resourcePropertiesToInclude: Optional, If non-empty, an array of additional properties copied from the url to include in the created bookmark data.
relativeToURL: If non-nil, the created bookmark will be relative to the given url

Lasterror is set.
Returns a string containing an data, which can be later be passed to ResolveBookmarkData.
See also:

- 10.2.6 CreateBookmarkData(file as folderitem, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3125
- 10.2.7 CreateBookmarkData(file as folderitem, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3126
- 10.2.8 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as CFURLMBS = nil) as string 3126
- 10.2.10 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as CFURLMBS = nil) as string 3128
- 10.2.11 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3129
- 10.2.12 CreateBookmarkData(URL as string, options as UInt32 = 1024, relativeToURL as string = "") as string 3130
- 10.2.13 CreateBookmarkData(URL as string, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as string = "") as string 3131

### 10.2.10 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as CFURLMBS = nil) as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

**Function:** Create a string containing an externalizable representation from a URL, modified with the given options, including ( at the minimum ) any properties in the propertiesToInclude array which are retrievable from the given url.
**Notes:**

URL: the URL to create a bookmark data from.
options: a set of options which control creation of the bookmark data
resourcePropertiesToInclude: Optional, If non-empty, an array of additional properties copied from the url to include in the created bookmark data.
relativeToURL: If non-nil, the created bookmark will be relative to the given url

Lasterror is set.
Returns a string containing an data, which can be later be passed to ResolveBookmarkData.
See also:

- 10.2.6 CreateBookmarkData(file as folderitem, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3125

- 10.2.7 CreateBookmarkData(file as folderitem, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3126
- 10.2.8 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as CFURLMBS = nil) as string 3126
- 10.2.9 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3127
- 10.2.11 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3129
- 10.2.12 CreateBookmarkData(URL as string, options as UInt32 = 1024, relativeToURL as string = "") as string 3130
- 10.2.13 CreateBookmarkData(URL as string, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as string = "") as string 3131

### 10.2.11 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

**Function:** Create a string containing an externalizable representation from a URL, modified with the given options, including ( at the minimum ) any properties in the propertiesToInclude array which are retrievable from the given url.
**Notes:**

URL: the URL to create a bookmark data from.
options: a set of options which control creation of the bookmark data
resourcePropertiesToInclude: Optional, If non-empty, an array of additional properties copied from the url to include in the created bookmark data.
relativeToURL: If non-nil, the created bookmark will be relative to the given url

Lasterror is set.
Returns a string containing an data, which can be later be passed to ResolveBookmarkData.
See also:

- 10.2.6 CreateBookmarkData(file as folderitem, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3125
- 10.2.7 CreateBookmarkData(file as folderitem, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3126
- 10.2.8 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as CFURLMBS = nil) as string 3126
- 10.2.9 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3127

- 10.2.10 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as CFURLMBS = nil) as string 3128
- 10.2.12 CreateBookmarkData(URL as string, options as UInt32 = 1024, relativeToURL as string = "") as string 3130
- 10.2.13 CreateBookmarkData(URL as string, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as string = "") as string 3131

### 10.2.12 CreateBookmarkData(URL as string, options as UInt32 = 1024, relativeToURL as string = "") as string

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Create a string containing an externalizable representation from a URL, modified with the given options, including ( at the minimum ) any properties in the propertiesToInclude array which are retrievable from the given url.
**Notes:**

URL: the URL to create a bookmark data from.
options: a set of options which control creation of the bookmark data
resourcePropertiesToInclude: Optional, If non-empty, an array of additional properties copied from the url to include in the created bookmark data.
relativeToURL: If non-nil, the created bookmark will be relative to the given url

Lasterror is set.
Returns a string containing an data, which can be later be passed to ResolveBookmarkData.
See also:

- 10.2.6 CreateBookmarkData(file as folderitem, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3125
- 10.2.7 CreateBookmarkData(file as folderitem, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3126
- 10.2.8 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as CFURLMBS = nil) as string 3126
- 10.2.9 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3127
- 10.2.10 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as CFURLMBS = nil) as string 3128
- 10.2.11 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3129
- 10.2.13 CreateBookmarkData(URL as string, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as string = "") as string 3131

### 10.2.13 CreateBookmarkData(URL as string, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as string = "") as string

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Create a string containing an externalizable representation from a URL, modified with the given options, including ( at the minimum ) any properties in the propertiesToInclude array which are retrievable from the given url.
**Notes:**

URL: the URL to create a bookmark data from.
options: a set of options which control creation of the bookmark data
resourcePropertiesToInclude: Optional, If non-empty, an array of additional properties copied from the url to include in the created bookmark data.
relativeToURL: If non-nil, the created bookmark will be relative to the given url

Lasterror is set.
Returns a string containing an data, which can be later be passed to ResolveBookmarkData.
See also:

- 10.2.6 CreateBookmarkData(file as folderitem, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3125
- 10.2.7 CreateBookmarkData(file as folderitem, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3126
- 10.2.8 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as CFURLMBS = nil) as string 3126
- 10.2.9 CreateBookmarkData(URL as CFURLMBS, options as UInt32 = 1024, relativeToURL as folderitem = nil) as string 3127
- 10.2.10 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as CFURLMBS = nil) as string 3128
- 10.2.11 CreateBookmarkData(URL as CFURLMBS, options as UInt32, resourcePropertiesToInclude() as string, relativeToURL as folderitem = nil) as string 3129
- 10.2.12 CreateBookmarkData(URL as string, options as UInt32 = 1024, relativeToURL as string = "") as string 3130

### 10.2.14 CreateBookmarkDataFromAliasRecord(AliasRecordData as string) as string

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Create a string containing bookmarkdata by converting the alias data in aliasRecordData which should be the contents of an AliasRecord copied into a string.
**Notes:**

The created bookmarkdata can be passed into ResolveBookmarkData to resolve the item into a folderitem or URL, or a small set of information can be returned from ResourcePropertiesForKeysFromBookmarkData / ResourcePropertyForKeyFromBookmarkData.
AliasRecordData: the contents of an AliasRecord to create bookmark data for

Returns a string containing bookmark data.

### 10.2.15 LastError as CFErrorMBS

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** The last error.
**Notes:** This ia CFErrorMBS object.

### 10.2.16 ReadBookmarkDataFromFile(file as folderitem) as string

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Given a file which is a Finder "alias" file, return a string with the bookmark data from the file.
**Notes:**

If file points to an alias file created before SnowLeopard which contains Alias Manager information and no bookmark data, then a bookmark data string will be synthesized which contains a approximation of the alias information in a format which can be used to resolve the bookmark. If an error prevents reading the data or if it is corrupt, nil will be returned and lasterror will be filled in if error object.

File: a folderitem to to the alias file to create the bookmark data from.

Returns a string containing bookmark data, or nil if there was an error creating bookmark data from the file, such as if the file is not an alias file.

### 10.2.17 ResolveBookmarkData(bookmark as string, options as UInt32, relativeToURL as folderitem, byref isStale as boolean) as folderitem

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Given a bookmark data string, returns a folderitem of the item it was a bookmark to.
**Example:**

```
dim AliasFile as FolderItem = SpecialFolder.Desktop.trueChild("test.alias")
dim Bookmark as string = CFBookmarkMBS.ReadBookmarkDataFromFile(AliasFile)
dim isStale as Boolean
```

```
dim options as UInt32 = CFBookmarkMBS.kResolutionWithoutUIMask + CFBookmarkMBS.kResolution-
WithoutMountingMask
dim file as FolderItem = CFBookmarkMBS.ResolveBookmarkData(Bookmark, options, nil, isStale)

if file<>Nil then
MsgBox file.NativePath
else
dim e as CFErrorMBS = CFBookmarkMBS.LastError
if e = nil then
MsgBox "Failed to resolve."
else
MsgBox e.Description
end if
end if
```

**Notes:**

| | |
|---|---|
| If in the process of resolving the bookmark into the folderitem | it points to this determines that some properties in the bookmark are out of date or not correct for the item it resolves to, set isStale to true, which the client may want to use to decide to make a new bookmark from the returned item and replace the saved bookmark it has. If the bookmarked item cannot be found, return nil. If an error ( other than "original item can not be found" ) occurs during the process, return nil and fill in lasterror property ) |

bookmark: a string containing a bookmark data, created with CreateBookmarkData
options: options which affect the resolution
relativeToURL: If non-nil, and if the bookmark was created relative to another file/folder, then resolve it relative to this file/folder.
resourcePropertiesToInclude: Optional, if non-empty, an array containing those properties which the caller would like to already be cached on the given url.
isStale: On exit will be set to true if during resolution any of the properties in the bookmark no longer seemed to match the corresponding properties on the returned file. Clients, upon seeing a stale representation, may want to replace whatever stored bookmark data they have saved and create a new one.

Lasterror is set.

Returns a folderitem of a file which is the closest match to the file the bookmark data.

- 10.2.19 ResolveBookmarkData(bookmark as string, options as UInt32, relativeToURL as string, byref isStale as boolean) as string 3134

### 10.2.21 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as CFURLMBS, byref isStale as boolean) as CFURLMBS

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

**Function:** Given a bookmark data string, returns a CFURL of the item it was a bookmark to.
**Notes:**

| | |
|---|---|
| If in the process of resolving the bookmark into the folderitem | it points to this determines that some properties in the bookmark are out of date or not correct for the item it resolves to, set isStale to true, which the client may want to use to decide to make a new bookmark from the returned item and replace the saved bookmark it has. If the bookmarked item cannot be found, return nil. If an error ( other than "original item can not be found" ) occurs during the process, return nil and fill in lasterror property ) |

bookmark: a string containing a bookmark data, created with CreateBookmarkData
options: options which affect the resolution
relativeToURL: If non-nil, and if the bookmark was created relative to another file/folder, then resolve it relative to this file/folder.
resourcePropertiesToInclude: Optional, if non-empty, an array containing those properties which the caller would like to already be cached on the given url.
isStale: On exit will be set to true if during resolution any of the properties in the bookmark no longer seemed

to match the corresponding properties on the returned file. Clients, upon seeing a stale representation, may want to replace whatever stored bookmark data they have saved and create a new one.

Lasterror is set.

Returns a CFURLMBS of a file which is the closest match to the file the bookmark data.
See also:

- 10.2.22 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as CFURLMBS, resourcePropertiesToInclude() as string, byref isStale as boolean) as CFURLMBS 3137

### 10.2.22 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as CFURLMBS, resourcePropertiesToInclude() as string, byref isStale as boolean) as CFURLMBS

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

**Function:** Given a bookmark data string, returns a CFURL of the item it was a bookmark to.
**Notes:**

| | |
|---|---|
| If in the process of resolving the bookmark into the folderitem | it points to this determines that some properties in the bookmark are out of date or not correct for the item it resolves to, set isStale to true, which the client may want to use to decide to make a new bookmark from the returned item and replace the saved bookmark it has. If the bookmarked item cannot be found, return nil. If an error ( other than "original item can not be found" ) occurs during the process, return nil and fill in lasterror property ) |

bookmark: a string containing a bookmark data, created with CreateBookmarkData
options: options which affect the resolution
relativeToURL: If non-nil, and if the bookmark was created relative to another file/folder, then resolve it relative to this file/folder.
resourcePropertiesToInclude: Optional, if non-empty, an array containing those properties which the caller would like to already be cached on the given url.
isStale: On exit will be set to true if during resolution any of the properties in the bookmark no longer seemed to match the corresponding properties on the returned file. Clients, upon seeing a stale representation, may want to replace whatever stored bookmark data they have saved and create a new one.

Lasterror is set.

Returns a CFURLMBS of a file which is the closest match to the file the bookmark data.
See also:

- 10.2.21 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as CFURLMBS, byref isStale as boolean) as CFURLMBS 3136

- 10.2.24 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as folderitem, resourcePropertiesToInclude() as string, byref isStale as boolean) as CFURLMBS 3139

### 10.2.23 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as folderitem, byref isStale as boolean) as CFURLMBS

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

**Function:** Given a bookmark data string, returns a CFURL of the item it was a bookmark to.
**Notes:**

| | |
|---|---|
| If in the process of resolving the bookmark into the folderitem | it points to this determines that some properties in the bookmark are out of date or not correct for the item it resolves to, set isStale to true, which the client may want to use to decide to make a new bookmark from the returned item and replace the saved bookmark it has. If the bookmarked item cannot be found, return nil. If an error ( other than "original item can not be found" ) occurs during the process, return nil and fill in lasterror property ) |

bookmark: a string containing a bookmark data, created with CreateBookmarkData
options: options which affect the resolution
relativeToURL: If non-nil, and if the bookmark was created relative to another file/folder, then resolve it relative to this file/folder.
resourcePropertiesToInclude: Optional, if non-empty, an array containing those properties which the caller would like to already be cached on the given url.
isStale: On exit will be set to true if during resolution any of the properties in the bookmark no longer seemed to match the corresponding properties on the returned file. Clients, upon seeing a stale representation, may want to replace whatever stored bookmark data they have saved and create a new one.

Lasterror is set.

Returns a CFURLMBS of a file which is the closest match to the file the bookmark data.
See also:

- 10.2.21 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as CFURLMBS, byref isStale as boolean) as CFURLMBS 3136
- 10.2.22 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as CFURLMBS, resourcePropertiesToInclude() as string, byref isStale as boolean) as CFURLMBS 3137

- 10.2.24 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as folderitem, resourcePropertiesToInclude() as string, byref isStale as boolean) as CFURLMBS 3139

### 10.2.24 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as folderitem, resourcePropertiesToInclude() as string, byref isStale as boolean) as CFURLMBS

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

**Function:** Given a bookmark data string, returns a CFURL of the item it was a bookmark to.
**Notes:**

| | |
|---|---|
| If in the process of resolving the bookmark into the folderitem | it points to this determines that some properties in the bookmark are out of date or not correct for the item it resolves to, set isStale to true, which the client may want to use to decide to make a new bookmark from the returned item and replace the saved bookmark it has. If the bookmarked item cannot be found, return nil. If an error ( other than "original item can not be found" ) occurs during the process, return nil and fill in lasterror property ) |

bookmark: a string containing a bookmark data, created with CreateBookmarkData
options: options which affect the resolution
relativeToURL: If non-nil, and if the bookmark was created relative to another file/folder, then resolve it relative to this file/folder.
resourcePropertiesToInclude: Optional, if non-empty, an array containing those properties which the caller would like to already be cached on the given url.
isStale: On exit will be set to true if during resolution any of the properties in the bookmark no longer seemed to match the corresponding properties on the returned file. Clients, upon seeing a stale representation, may want to replace whatever stored bookmark data they have saved and create a new one.

Lasterror is set.

Returns a CFURLMBS of a file which is the closest match to the file the bookmark data.
See also:

- 10.2.21 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as CFURLMBS, byref isStale as boolean) as CFURLMBS 3136
- 10.2.22 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as CFURLMBS, resourcePropertiesToInclude() as string, byref isStale as boolean) as CFURLMBS 3137
- 10.2.23 ResolveBookmarkDataToCFURLMBS(bookmark as string, options as UInt32, relativeToURL as folderitem, byref isStale as boolean) as CFURLMBS 3138

### 10.2.25 ResourcePropertiesForKeysFromBookmarkData(BookmarkData as string) as dictionary

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Given a bookmark, return a dictionary of all properties.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("Webseiten")

dim data as string = CFBookmarkMBS.ReadBookmarkDataFromFile(f)

if data.lenb >0 then
dim dic as Dictionary = CFBookmarkMBS.ResourcePropertiesForKeysFromBookmarkData(data)

Break // see in debugger
end if
```

**Notes:**

This returns only the properties stored within the bookmark and will not attempt to resolve the bookmark or do i/o.

BookmarkData: a string containing a bookmark data, created with CreateBookmarkData

Returns a dictionary containing the values for all properties passed in obtained from the bookmark data ( not by attempting to resolve it or do i/o in any way )

Version 17.1 of our plugin knows a list of keys, so it tries all keys and returns the dictionary with matching ones.
See also:

- 194.44.18 ResourcePropertiesForKeysFromBookmarkData(BookmarkData as string, resourcePropertiesToReturn() as string) as dictionary 26860

### 10.2.26 ResourcePropertiesForKeysFromBookmarkData(BookmarkData as string, resourcePropertiesToReturn() as string) as dictionary

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Given a bookmark, return a dictionary of properties.
**Notes:**

This returns only the properties stored within the bookmark and will not attempt to resolve the bookmark or do i/o.

BookmarkData: a string containing a bookmark data, created with CreateBookmarkData
resourcePropertiesToReturn: Optional an array of string of the properties of the bookmark data which the client would like returned.

Returns a dictionary containing the values for the properties passed in obtained from the bookmark data ( not by attempting to resolve it or do i/o in any way )
See also:

- 10.2.25 ResourcePropertiesForKeysFromBookmarkData(BookmarkData as string) as dictionary 3140

### 10.2.27 ResourcePropertyForKeyFromBookmarkData(BookmarkData as string, resourcePropertyKey as string) as Variant

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Given a bookmark, return the value for a given property from the bookmark data.
**Notes:**

This returns only the properties stored within the bookmark and will not attempt to resolve the bookmark or do i/o.
BookmarkData: a string containing a bookmark data, created with CreateBookmarkData
resourcePropertyKey: the property key to return.

Returns a variant value for the property passed in obtained from the bookmark data ( not by attempting to resolve it or do i/o in any way )

### 10.2.28 StartAccessingSecurityScopedResource(URL as CFURLMBS) as boolean

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

**Function:** Given a file URL created by resolving a bookmark data created with security scope, make the resource referenced by the url accessible to the process.
**Notes:**

When access to this resource is no longer needed the client should call StopAccessingSecurityScopedResource().
Each call to StartAccessingSecurityScopedResource() must be balanced with a call to StopAccessingSecurityScopedResource().
URL: the file URL for the resource returned by CreateByResolvingBookmarkData() using kResolutionWithSecurityScope.

Returns true if access was granted and false if the url does not reference a security scoped resource, or if some error occurred which didn't allow access to be granted.

Available on Mac OS X 10.7 or newer.

### 10.2.29 StopAccessingSecurityScopedResource(URL as CFURLMBS)

MBS MacCF Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

**Function:** Revokes the access granted to the url by a prior successful call toStartAccessingSecurityScopedResource().
**Notes:** Available on Mac OS X 10.7 or newer.

### 10.2.30 WriteBookmarkDataToFile(BookmarkData as string, file as folderitem, options as UInt32) as boolean

MBS MacCF Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Given a created bookmarkData object, create a new Finder "alias" file at file which contains the bookmark data.
**Example:**

```
dim file as FolderItem = SpecialFolder.Desktop.TrueChild("test.rtf")
dim Bookmark as string = CFBookmarkMBS.CreateBookmarkData(file, CFBookmarkMBS.kCreationSuitableForBookmarkFile)

dim AliasFile as FolderItem = SpecialFolder.Desktop.TrueChild("test.alias")
if CFBookmarkMBS.WriteBookmarkDataToFile(Bookmark, AliasFile, 0) then
MsgBox "OK"
else
dim e as CFErrorMBS = CFBookmarkMBS.lasterror
MsgBox "Failed: "+e.Description
end if
```

**Notes:**

If file points to a directory, an alias file will be created with the same name as the bookmarked item and a ".alias" extension. If file points to a file and it exists it will be overwritten. If a .alias extension is not present it will be added. In addition to the bookmark data, sufficient pre-SnowLeopard alias data will added to the file to allow systems running something before SnowLeopard to resolve this file using Alias Manager routines and get back the same file as the bookmark routines.

The bookmark data must have been created with the kCFURLBookmarkCreationSuitableForBookmarkFile option and an error will be returned if not.

bookmark: A string containing a bookmark data, created with CreateBookmarkData
file: The file/folder to write the alias to.
options: options flags

Lasterror is set.

### 10.2.31 Constants

### 10.2.32 kCreationMinimalBookmarkMask = 512

MBS MacCF Plugin, Plugin Version: 11.3.

**Function:** One of the creation option constants.
**Notes:** Creates a bookmark with "less" information, which may be smaller but still be able to resolve in certain ways.

### 10.2.33 kCreationPreferFileIDResolutionMask = 256

MBS MacCF Plugin, Plugin Version: 11.3.

**Function:** One of the creation option constants.
**Notes:** At resolution time, this alias will prefer resolving by the embedded fileID to the path.

### 10.2.34 kCreationSecurityScopeAllowOnlyReadAccess = 4096

MBS MacCF Plugin, Plugin Version: 12.4.

**Function:** One of the creation option constants.
**Notes:** Mac OS X 10.7.3 and later, if used with kCFURLBookmarkCreationWithSecurityScope, at resolution time only read access to the resource will be granted.

### 10.2.35 kCreationSuitableForBookmarkFile = 1024

MBS MacCF Plugin, Plugin Version: 11.3.

**Function:** One of the creation option constants.
**Notes:** Includes in the created bookmark those properties which are needed for a bookmark/alias file.

### 10.2.36 kCreationWithSecurityScope = 2048

MBS MacCF Plugin, Plugin Version: 12.4.

**Function:** One of the creation option constants.
**Notes:** Mac OS X 10.7.3 and later, include information in the bookmark data which allows the same sandboxed process to access the resource after being relaunched.

### 10.2.37 kResolutionWithoutMountingMask = 512

MBS MacCF Plugin, Plugin Version: 11.3.

**Function:** One of the resolving option constants.
**Notes:** Don't mount a volume during bookmark resolution.

### 10.2.38 kResolutionWithoutUIMask = 256

MBS MacCF Plugin, Plugin Version: 11.3.

**Function:** One of the resolving option constants.
**Notes:** Don't perform any UI during bookmark resolution.

### 10.2.39 kResolutionWithSecurityScope = 1024

MBS MacCF Plugin, Plugin Version: 12.4.

**Function:** One of the resolving option constants.
**Notes:** Mac OS X 10.7.3 and later, extract the security scope included at creation time to provide the ability to access the resource.

## 10.3 class MacAliasMBS

### 10.3.1 class MacAliasMBS

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Gives access to Aliases on Mac.
**Example:**

```
// Store the reference to a FolderItem in a Binary File

Dim alias as MacAliasMBS
dim t,f as FolderItem
Dim bf as BinaryStream, s as String
t=SpecialFolder.Desktop.Child("test")
bf = t.CreateBinaryFile("") // open your binary file here
f = SpecialFolder.Desktop // the FolderItem you want to save
alias = new MacAliasMBS
if alias.Create(nil, f) = 0 then
s = alias.GetRecord
bf.WriteLong LenB(s) // this saves the length of the record
bf.Write s // this saves the record itself
end
bf.Close

// Retrieve the reference to a FolderItem from a Binary File

dim l as Integer

t=SpecialFolder.Desktop.Child("test")
bf = t.OpenAsBinaryFile(false) // open your binary file here
alias = new MacAliasMBS
l = bf.ReadLong
alias.SetRecord bf.Read(l)
f = alias.Resolve(nil, alias.attemptMount)
if alias.needsUpdate then
if alias.Update(nil, f) = 1 then
// ... you might want to save the updated alias in your file here
end
end
// f now describes the FolderItem again.
// It may not be existing any more, however, so here's a check for that:
if not f.exists then
msgBox "oops! the file is not available any more. Select a new one, please"
//... let the user locate the file
end
```

**Deprecated:** This item is deprecated and should no longer be used. You can use CFBookmarkMBS module instead. **Notes:**

This Plugin implements a new Class for handling Mac OS Alias Records.

AliasRecords are like FolderItems, but can be made persistent: You can convert a FolderItem into a AliasRecord and store that AliasRecord in a file (like your Preferences file). Later you can retrieve that information again and convert it back into a FolderItem.

AliasRecords also appear inside Alias Files, that are usually created by the Finder. The enclosed sample application (Alias Mgr Plugin Demo.) shows how to create and resolve such Alias Files.

Additional Background Information
The purpose of the class is to store paths to files and/or folders between runs of a RB application.
To store a path to a file/folder in an RB app, currently your only option is to get the abolute path as a string, and store that string in a file, usually your preferences file.
However, there is problem with using this technique: If, between runs of your app, the user changes the path of the file by moving it, or by renaming the file or any of its parent folders (including the volume name), your app will fail to locate the file next time
it is looking for it.
Fortunately, at least in Mac OS, there is a solution to this, which helps you to track your files in such a case. This is done by using Alias Records: they are the basic data structure that is also used in Alias Files as created and used in the Finder.
This class attempts to give the flexibility of Alias Records to your RB apps.

The meaning of the Relative path
When no relative path is specified, then the file is only located by its folder hierarchy down to the root of the volume. However, if a relative path is given, then the file is optionally located relative to that point.
So, if you locate files relatively to some folder, like the folder your application is in, you should specify your app's folder as the relative path so that the target is even found easily when the user moved the whole folder including your app and its related files. This is even more important when using this Alias class under Windows than under Mac OS (if files are moved in Mac OS, they often still can be found even without the help of the original folder hierarchy, while this is not possible under Windows 9x).

For Mac OS X 10.6 or newer, please also check CFBookmarkMBS module.

- MBS Real Studio Plugins, version 13.1pr12

### 10.3.4 Methods

### 10.3.5 AliasInfo as AliasInfoMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries alias info for the alias.
**Example:**

```
dim m as new MacAliasMBS
dim f as FolderItem = SpecialFolder.Desktop

if m.Create(nil, f) = 0 then
dim info as AliasInfoMBS = m.AliasInfo

MsgBox info.TargetName + EndOfLine + info.VolumeName + EndOfLine + info.PathString
end if
```

### 10.3.6 close

MBS MacClassic Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 10.3.7 Create(relPath as FolderItem, target as FolderItem, isDirectory as boolean = false) as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates an AliasRecord for a given file or folder.
**Example:**

```
dim m as new MacAliasMBS

dim e as Integer = m.Create(nil, SpecialFolder.Desktop.Child("test.txt"), true)

// shows -43 as we created alias for non existing file
MsgBox str(e)
MsgBox m.AliasInfo.TargetName
```

**Notes:**

Returns zero if successful, otherwise a negative Mac OS error code.

Version 16.0 can create alias for non existing files. In that case you can tell with function isDirectory whether the target should be a directory. Still returns fnfErr (-43) if file doesn't exist but the alias will still be created.

### 10.3.8 CreateAliasFromPath(targetPath as string, fromFilePath as String = "", isDirectory as boolean = false) as Integer

MBS MacClassic Plugin, Plugin Version: 16.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates an alias given a POSIX style utf-8 path to the target.
**Example:**

```
dim m as new MacAliasMBS

dim e as Integer = m.CreateAliasFromPath("/Users/test", "", true)

// shows -43 as we created alias for non existing file
MsgBox str(e)
MsgBox m.AliasInfo.TargetName
```

**Notes:**

Returns OS error code.

If the target file does not exist but the path up to the leaf does then fnfErr (-43) will be returned but the alias will still be created.

fromFilePath: The starting point for a relative search.
targetPath: POSIX style UTF-8 path to target.

IsDirectory: On input, if target does not exist, a flag to indicate whether or not the target is a directory.

### 10.3.9 CreateFSRef(relPath as memoryblock, target as memoryblock) as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates an AliasRecord for a given file or folder.
**Notes:**

The two memoryblocks are FSRefs which you can get by FolderItem.FSRef.
Returns zero if successful, otherwise a negative Mac OS error code.

### 10.3.10 CreateMinimal(target as FolderItem, isDirectory as boolean = false) as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates an AliasRecord for a given file or folder. Returns zero if successful, otherwise a negative Mac OS error code.
**Notes:**

Minimal creates an alias without path, so it is smaller.

Version 16.0 can create alias for non existing files. In that case you can tell with function isDirectory whether the target should be a directory. Still returns fnfErr (-43) if file doesn't exist but the alias will still be created.

### 10.3.11 CreateMinimalFSRef(target as memoryblock) as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a minimal AliasRecord for a given file or folder.
**Notes:**

The memoryblock is a FSRefs which you can get by FolderItem.FSRef.
Returns zero if successful, otherwise a negative Mac OS error code.

### 10.3.12 GetRecord as String

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the AliasRecord in a String so that you can store it in a file, and pass it SetRecord for re-creating the AliasRecord (this string might contain any byte values, including zeros, so you can not display it or store it in a text file - you have to store it in a binary file or in a resource, instead!).
**Notes:** Attention: The length of the String is not fixed! When the Alias changes, its length usually changes, too. If you want to save this string into a binary file, you must also save its current length so that you know how much bytes to retrieve if you read it back from the file later. An easier way to store Aliases in a file is by using the Resource Manager. The sample code "FolderItems in Preferences.rbp" shows how to accomplish this.

### 10.3.13 PathString as String

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries path of the alias.
**Example:**

```
dim m as new MacAliasMBS
dim f as FolderItem = SpecialFolder.Desktop

if m.Create(nil, f) = 0 then
MsgBox m.PathString
end if
```

### 10.3.14 Resolve(relPath as FolderItem, mode as Integer) as FolderItem

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Converts an AliasRecord back into a FolderItem. For values to the mode parameter see the class constants or pass in 0 for default searching (will not attempt to mount unavailable volumes).
**Notes:** After calling this method, the property needsUpdate tells you whether the target has been renamed or moved, which suggests that you call Update in order to reflect the change in the AliasRecord. See the demo "FolderItems in Preferences.rbp" for an example.

### 10.3.15 SetRecord(record as String)

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Use this method to revive an AliasRecord with the string you inquired from GetRecord earlier.

### 10.3.16 TargetName as String

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries target name of the alias.
**Example:**

```
dim m as new MacAliasMBS
dim f as FolderItem = SpecialFolder.Desktop

if m.Create(nil, f) = 0 then
MsgBox m.TargetName
end if
```

### 10.3.17 Update(relPath as FolderItem, target as FolderItem) as Integer

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Updates an already created AliasRecord. Returns either a negative Mac OS error code, zero if the update didn't actually change the AliasRecord, or one if the record was changed (in this case you might want to update your record of the alias if you had stored it in a file).

### 10.3.18 VolumeName as String

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries volume name of the alias.
**Example:**

```
dim m as new MacAliasMBS
dim f as FolderItem = SpecialFolder.Desktop

if m.Create(nil, f) = 0 then
MsgBox m.VolumeName
end if
```

### 10.3.19 Properties

### 10.3.20 needsUpdate as boolean

MBS MacClassic Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Does the Alias Record need no Update?
**Notes:**

after having called Resolve successfullly, this property indicates whether the AliasRecord is still up to date:
true: the target of the Alias is still at the same location where it was last seen.
false: the target has been moved or renamed. The Update method should be invoked.
(Read only property)

### 10.3.21 Constants

### 10.3.22 allVols=8

MBS MacClassic Plugin, Plugin Version: 7.7.

**Function:** One of the constants to use in Resolve.
**Notes:**

search on multiple volumes
This is the old constant name used for compatibility to older Xojo code.
Use BitwiseOr or Bitwise.Or to combine this constants values.

### 10.3.23 attemptMount=1

MBS MacClassic Plugin, Plugin Version: 7.7.

**Function:** One of the constants to use in Resolve.
**Notes:**

mount the volume automatically
This is the old constant name used for compatibility to older Xojo code.
Use BitwiseOr or Bitwise.Or to combine this constants values.

### 10.3.24 exhaustive=& h200

MBS MacClassic Plugin, Plugin Version: 7.7.

**Function:** One of the constants to use in Resolve.
**Notes:**

search further
This is the old constant name used for compatibility to older Xojo code.
Use BitwiseOr or Bitwise.Or to combine this constants values.

### 10.3.25 kARMMountVol=1

MBS MacClassic Plugin, Plugin Version: 7.7.

**Function:** One of the constants to use in Resolve.
**Notes:**

mount the volume automatically
Use BitwiseOr or Bitwise.Or to combine this constants values.

### 10.3.26 kARMMultVols=8

MBS MacClassic Plugin, Plugin Version: 7.7.

**Function:** One of the constants to use in Resolve.
**Notes:**

search on multiple volumes
Use BitwiseOr or Bitwise.Or to combine this constants values.

### 10.3.27 kARMNoUI=2

MBS MacClassic Plugin, Plugin Version: 7.7.

**Function:** One of the constants to use in Resolve.
**Notes:**

no user interface allowed during resolution
Use BitwiseOr or Bitwise.Or to combine this constants values.

### 10.3.28 kARMSearch=& h100

MBS MacClassic Plugin, Plugin Version: 7.7.

**Function:** One of the constants to use in Resolve.
**Notes:**

search quickly
Use BitwiseOr or Bitwise.Or to combine this constants values.

### 10.3.29 kARMSearchMore=& h200

MBS MacClassic Plugin, Plugin Version: 7.7.

**Function:** One of the constants to use in Resolve.
**Notes:**

search further
Use BitwiseOr or Bitwise.Or to combine this constants values.

### 10.3.30 kARMSearchRelFirst=& h400

MBS MacClassic Plugin, Plugin Version: 7.7.

**Function:** One of the constants to use in Resolve.
**Notes:**

search target on a relative path first
Use BitwiseOr or Bitwise.Or to combine this constants values.

### 10.3.31 kARMTryFileIDFirst=& h800

MBS MacClassic Plugin, Plugin Version: 7.7.

**Function:** One of the constants to use in Resolve.
**Notes:**

search by file id before path
Use BitwiseOr or Bitwise.Or to combine this constants values.

### 10.3.32 noDialogs=2

MBS MacClassic Plugin, Plugin Version: 7.7.

**Function:** One of the constants to use in Resolve.
**Notes:**

no user interface allowed during resolution
This is the old constant name used for compatibility to older Xojo code.
Use BitwiseOr or Bitwise.Or to combine this constants values.

### 10.3.33 relFirst=& h400

MBS MacClassic Plugin, Plugin Version: 7.7.

**Function:** One of the constants to use in Resolve.
**Notes:**

search target on a relative path first
This is the old constant name used for compatibility to older Xojo code.
Use BitwiseOr or Bitwise.Or to combine this constants values.

# Chapter 11

# Apple Remote

## 11.1 class AppleRemoteMBS

### 11.1.1 class AppleRemoteMBS

MBS MacExtras Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** A class to handle an Apple Remote device from Xojo.
**Notes:**

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

With Mac OS X 10.6 Apple made changes to the behavior of the driver so the exclusive mode does no longer work.

### 11.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8
- Plugins 10.1

### 11.1.3 Xojo Developer Magazine

- 5.4, page 50: The Case of the Top 20, The mayor is caught in an explosive situation, and our boys are on the case by Toby Rush

### 11.1.4 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8
- Plugins 10.1

### 11.1.5 Xojo Developer Magazine

- 5.4, page 50: The Case of the Top 20, The mayor is caught in an explosive situation, and our boys are on the case by Toby Rush

### 11.1.6 Methods

### 11.1.7 startListening

MBS MacExtras Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Starts listening to device.

### 11.1.8 stopListening

MBS MacExtras Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Stops listening to device.

### 11.1.9 Properties

### 11.1.10 ClickCountEnabledButtons as Integer

MBS MacExtras Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Which buttons to enable for click counting.
**Notes:** (Read and Write property)

### 11.1.11 ClickCountingEnabled as Boolean

MBS MacExtras Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Whether to do click counting.
**Notes:**

Click counting makes it possible to recognize if the user has pressed a button repeatedly click counting does delay each event as it has to wait if there is another event (second click) therefore there is a slight time difference (maximumClickCountTimeDifference) between a single click of the user and the call of your delegate method click counting can be enabled individually for specific buttons. Use the property clickCountEnableButtons to set the buttons for which click counting shall be enabled
(Read and Write property)

### 11.1.12 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** The handle to the used AppleRemote Cocoa object.
**Notes:** (Read and Write property)

### 11.1.13 ListeningOnAppActivate as Boolean

MBS MacExtras Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Sets an NSApplication delegate which starts listening when application is becoming active and stops listening when application resigns being active.
**Notes:**

If an NSApplication delegate has been already set all method calls will be forwarded to this delegate, too.
(Read and Write property)

### 11.1.14 ListeningToRemote as boolean

MBS MacExtras Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Whether object is currently listening to the devices.
**Notes:**

True if yes and false if no.
(Read and Write property)

### 11.1.15 MaximumClickCountTimeDifference as Double

MBS MacExtras Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The maximum time difference till which clicks are recognized as multi clicks.
**Notes:** (Read and Write property)

### 11.1.16 OpenInExclusiveMode as boolean

MBS MacExtras Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Whether device should be opened in exclusive mode.
**Notes:**

True if yes and False if no.
(Read and Write property)

### 11.1.17 ProcessesBacklog as Boolean

MBS MacExtras Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** When your application needs to much time on the main thread when processing an event other events may already be received which are put on a backlog.
**Notes:**

As soon as your main thread has some spare time this backlog is processed and may flood your delegate with calls. Backlog processing is turned off by default.
(Read and Write property)

### 11.1.18 RemoteAvailable as boolean

MBS MacExtras Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** Whether the needed drivers are installed to handle the device.
**Notes:**

True if driver was found.
(Read only property)

### 11.1.19 remoteId as Integer

MBS MacExtras Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

**Function:** The device ID.
**Notes:** (Read only property)

### 11.1.20 SimulatesPlusMinusHold as Boolean

MBS MacExtras Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** Simulating plus/minus hold does deactivate sending of individual requests for plus/minus pressed down/released.
**Notes:**

Instead special hold events are being triggered when the user is pressing and holding plus/minus for a small period. With simulating enabled the plus/minus buttons do behave as the left/right buttons.
(Read and Write property)

### 11.1.21 Events

### 11.1.22 ButtonPressed(ButtonID as Integer, PressedDown as boolean, clickCount as Integer)

MBS MacExtras Plugin, Plugin Version: 7.1, Platform: macOS, Targets: .

**Function:** The event being called whenever a button is pressed or released.
**Notes:**

ButtonID is one of the kRemote* constants in this class.
PressedDown is true if the button was pressed down. If false the button is now no longer pressed after holding it.

### 11.1.23 Constants

### 11.1.24 kRemoteButtonFullscreen2009 = 32768

MBS MacExtras Plugin, Plugin Version: 15.0.

**Function:** The constant for the fullscreen button (older modell).

### 11.1.25 kRemoteButtonLeft = 64

MBS MacExtras Plugin, Plugin Version: 7.1.

**Function:** The constant for the left button.

### 11.1.26 kRemoteButtonLeftHold = 256

MBS MacExtras Plugin, Plugin Version: 7.1.

**Function:** The constant for the left button being hold.

### 11.1.27 kRemoteButtonMenu = 8

MBS MacExtras Plugin, Plugin Version: 7.1.

**Function:** The constant for the menu button.

### 11.1.28 kRemoteButtonMenuHold = 512

MBS MacExtras Plugin, Plugin Version: 7.1.

**Function:** The constant for the menu button being hold.

### 11.1.29 kRemoteButtonPlay = 16

MBS MacExtras Plugin, Plugin Version: 7.1.

**Function:** The constant for the play button.

### 11.1.30 kRemoteButtonPlay2009 = 16384

MBS MacExtras Plugin, Plugin Version: 15.0.

**Function:** The constant for the play button (older model).

### 11.1.31 kRemoteButtonPlaySleep = 1024

MBS MacExtras Plugin, Plugin Version: 7.1.

**Function:** The constant for the play button being hold.

### 11.1.32 kRemoteButtonRight = 32

MBS MacExtras Plugin, Plugin Version: 7.1.

**Function:** The constant for the right button.

### 11.1.33 kRemoteButtonRightHold = 128

MBS MacExtras Plugin, Plugin Version: 7.1.

**Function:** The constant for the right button being hold.

### 11.1.34 kRemoteButtonVolumeMinus = 4

MBS MacExtras Plugin, Plugin Version: 7.1.

**Function:** The constant for the volume minus button.

### 11.1.35 kRemoteButtonVolumeMinus_Hold = 8192

MBS MacExtras Plugin, Plugin Version: 15.0.

**Function:** The constant for the volume minus button (hold).

### 11.1.36 kRemoteButtonVolumePlus = 2

MBS MacExtras Plugin, Plugin Version: 7.1.

**Function:** The constant for the volume plus button.

### 11.1.37 kRemoteButtonVolumePlus_Hold = 4096

MBS MacExtras Plugin, Plugin Version: 15.0.

**Function:** The constant for the volume plus button (hold).

### 11.1.38 kRemoteControlSwitched = 2048

MBS MacExtras Plugin, Plugin Version: 7.1.

**Function:** The constant for the device switch event.

# Chapter 12

# Apple Script

## 12.1 class AppleScriptErrorMBS

### 12.1.1 class AppleScriptErrorMBS

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for detailed error information.
**Example:**

```
// a simply example using the AppleScriptErrorMBS class:

dim s As new AppleScriptMBS
dim ASErr As AppleScriptErrorMBS

dim text As string = "seet x to 1" // intentional error

s.Compile text

if s.LastError<>0 Then
dim errorMsg As String = "Compile error: " + str(s.Lasterror) + EndOfLine
ASErr = s.Error
MsgBox errorMsg + "Details: " + ASErr.BriefMessage
end if
```

### 12.1.2 Properties

### 12.1.3 AppName as String

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the application.
**Notes:**

Value is "" if no application is used (e.g. on compiling).
(Read and Write property)

### 12.1.4 AppSerial as MemoryBlock

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The application serial number.
**Notes:**

Nil if no application is used.
You can create a ProcessMBS class using this serial.s
(Read and Write property)

### 12.1.5 BriefMessage as String

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The brief error message.
**Example:**

```
dim ASErr as AppleScriptErrorMBS
MsgBox "Details: " + ASErr.BriefMessage
```

**Notes:** (Read and Write property)

### 12.1.6 Errorcode as Integer

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The error code.
**Example:**

```
dim a as new AppleScriptMBS
```

```
a.Compile "hello"
a.Execute

MsgBox str(a.Error.Errorcode) // -2753
```

**Notes:** (Read and Write property)

### 12.1.7 ErrorCodeAvailable as Boolean

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** whether the error code is known in the ErrorCode property.
**Example:**

```
dim a as new AppleScriptMBS

a.Compile "hello"
a.Execute

MsgBox str(a.Error.ErrorCodeAvailable)
```

**Notes:**

The error code property may be 0, but still there may be an error.
(Read and Write property)

### 12.1.8 Message as String

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The error message.
**Example:**

```
dim a as new AppleScriptMBS

a.Compile "hello"
a.Execute

MsgBox a.Error.Message
```

**Notes:** (Read and Write property)

### 12.1.9 RangeAvailable as Boolean

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** whether the rangestart and rangeend properties have valid values.
**Example:**

```
dim a as new AppleScriptMBS

a.Compile "hello"
a.Execute

MsgBox str(a.error.RangeAvailable)+": "+str(a.error.RangeStart)+"-"+str(a.error.RangeEnd)
```

**Notes:** (Read and Write property)

### 12.1.10 RangeEnd as Integer

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The end of the source text range.
**Example:**

```
dim a as new AppleScriptMBS

a.Compile "hello"
a.Execute

MsgBox str(a.error.RangeAvailable)+": "+str(a.error.RangeStart)+"-"+str(a.error.RangeEnd)
```

**Notes:** (Read and Write property)

### 12.1.11 RangeStart as Integer

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The start of the source text range.
**Example:**

```
dim a as new AppleScriptMBS

a.Compile "hello"
a.Execute

MsgBox str(a.error.RangeAvailable)+": "+str(a.error.RangeStart)+"-"+str(a.error.RangeEnd)
```

**Notes:** (Read and Write property)

## 12.2 class AppleScriptMBS

### 12.2.1 class AppleScriptMBS

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for compiling and executing Apple Scripts in RB.
**Example:**

```
dim a as new AppleScriptMBS
dim lines(-1) as string

lines.Append "tell application ""Finder"""
lines.Append " activate"
lines.Append " display dialog ""Now is "" & (current date)"
lines.Append "end tell"

a.Compile Join(lines, EndOfLine.Macintosh)
a.Execute
```

**Notes:**

Your application may need the NSAppleEventsUsageDescription entry in info.plist to do any AppleScript usage:
https://developer.apple.com/documentation/bundleresources/information_property_list/nsappleeventsusagedescription

If you use hardened runtime, which you need for notarization, you may need the entitlement for Apple Events, too:
https://developer.apple.com/documentation/bundleresources/entitlements/com_apple_security_automation_apple-events

- AppleScript

### 12.2.8 Methods

### 12.2.9 close

MBS MacClassic Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The destructor.
**Example:**

```
dim a as new AppleScriptMBS
// later
a.close
```

**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 12.2.10 Compile(text as string)

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Compiles the given source code.
**Example:**

```
// the code below workarounds a limitation in AppleScript on processing unicode strings

dim theScript as new AppleScriptMBS
dim scripttext as string
dim chars(-1) as string
dim n as string
dim i,c as Integer

const text="Hello World" // add unicode characters here!

c=len(text)
for i=1 to c
n=hex(asc(mid(text,i,1)))
while len(n)<4
n="0"+n
wend
chars.Append n
next

scripttext="display dialog (Åsdata utxt"+join(chars,"")+"Åt as Unicode text)"

MsgBox scripttext

// must use unicode to avoid error -1753
scripttext=ConvertEncoding(scripttext,encodings.UTF16)
theScript.UnicodeText=true
theScript.compile ScriptText
theScript.execute
```

**Notes:**

Lasterror is set.
Text should be in MacRoman or UTF16 text encoding for best results.

### 12.2.11 CountScriptProperties as Integer

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the number of properties in the script.
**Example:**

```
dim s as String
dim a as AppleScriptMBS
dim i,c,cc as Integer
dim z,t as String

s=s+"property hello : ""Hallo Leute""""+chr(13)
s=s+"property just : ""Just a test""""+chr(13)
s=s+"display dialog hello"+chr(13)
s=s+"return just"+chr(13)

MsgBox "The script:"+chr(13)+s
a=new AppleScriptMBS

a.Compile s

MsgBox str(a.CountScriptProperties)+" properties"
```

**Notes:** Lasterror is set.

### 12.2.12 Error as AppleScriptErrorMBS

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an AppleScriptError object for details error information.
**Example:**

```
dim a as AppleScriptMBS
dim e as AppleScriptErrorMBS
a=new AppleScriptMBS

a.Compile "tell application ""Finder""""+chr(13)+"open file ""test""""+chr(13)+"end tell"+chr(13)

// You may check for errors here.

a.Execute

e=a.Error

// in a breakpoint you can see an error message here.
```

**Notes:**

Returns nil on any error.
The returned object may be empty.
The error information is changed whenever you compile or execute.

### 12.2.13 Execute

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Runs the current script.
**Example:**

```
dim a as new AppleScriptMBS

a.Compile "beep"
a.Execute
```

**Notes:**

Lasterror is set.
If you use this method, please make sure your own Application's HandleAppleEvent method doesn't block executing by returning true for unknown events.

### 12.2.14 ExecuteEvent(eventname as string, parameters() as string)

MBS MacClassic Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Executes an event inside the current script with the given parameters.
**Example:**

```
dim a as new AppleScriptMBS
dim lines(-1) as string

lines.append "on test(a,b,c)"
lines.append "display dialog a"
lines.append "display dialog b"
lines.append "display dialog c"
lines.append "end test"

a.Compile join(lines,EndOfLine.Macintosh)
a.Execute
```

```
dim s(2) as string
s(0)="Hello"
s(1)="World"
s(2)="!"

a.ExecuteEvent("test",s)
```

**Notes:**

The eventname must be the name of the event in pure ASCII or MacRoman encoding (and lowercase!).
The parameters can be unicode. The array is based on 0, so string in parameters(0) is the first parameter.

Lasterror is set.

### 12.2.15 Result as string

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The result of the executed script as a string.
**Example:**

```
dim a as new AppleScriptMBS

a.Compile "return ""hello"""
a.Execute

MsgBox a.Result
```

**Notes:**

Returns "" on any error.

If unicode is enabled, this string is unicode (UTF16).

### 12.2.16 ResultAsStringArray as string()

MBS MacClassic Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The result of the executed script as a string array.
**Example:**

```
dim a as new AppleScriptMBS

a.Compile "return { ""Hello"", ""World"" } "
a.Execute

MsgBox join(a.ResultAsStringArray,EndOfLine) // Shows Hello World in two lines

a.Compile "tell application ""Mail""""+EndOfLine.Macintosh+"return name of every mailbox"+EndOfLine.Macintosh+"end tell"
a.Execute

MsgBox join(a.ResultAsStringArray,EndOfLine) // shows your Mailboxes
```

**Notes:**

On any error the array is empty.
If unicode is enabled, this strings are unicode (UTF16).

### 12.2.17 ResultDisplayString as string

MBS MacClassic Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The result of the executed script as a string.
**Example:**

```
dim a as new AppleScriptMBS

a.Compile "return ""hello""""
a.Execute

MsgBox a.ResultDisplayString
```

**Notes:**

This is the same as Result, but a flag is set to tell AppleScript that the string is for display to a human. So it may not be good for input to the AppleScript compiler.

Returns "" on any error.
If unicode is enabled, this string is unicode (UTF16).

### 12.2.18 ScriptProperty(index as Integer) as string

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the property with the given index.
**Example:**

```
dim s as String
dim a as AppleScriptMBS
dim i,c,cc as Integer
dim z,t as String

s=s+"property hello : ""Hallo Leute""""+chr(13)
s=s+"property just : ""Just a test""""+chr(13)
s=s+"display dialog hello"+chr(13)
s=s+"return just"+chr(13)

MsgBox "The script:"+chr(13)+s
a=new AppleScriptMBS

a.Compile s

c=a.CountScriptProperties

cc=c-1
for i=0 to cc
z=a.ScriptProperty(i)
if z<>"" then
if i=0 then
t=z
elseif i=cc then
t=t+" and "+z
else
t=t+", "+z
end if
end if
next

MsgBox str(c)+" properties in the script: "+t

t=a.ScriptProperty(0)
z=a.ScriptPropertyValue(t)
MsgBox "Value of the property named "+t+" is: "+z

a.ScriptPropertyValue(t)="Hello World!"

z=a.ScriptPropertyValue(t)
MsgBox "The new value of the property named "+t+" is: "+z
```

```
a.Execute

MsgBox "The result is: "+a.Result
```

**Notes:**

Index is from 0 to CountScriptProperties-1.
Lasterror is set.

### 12.2.19 Source as string

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Decompiles the current script and returns the source code.
**Example:**

```
dim a as new AppleScriptMBS

a.compile "beep"

MsgBox a.Source
```

### 12.2.20 SourceTextStyle as string

MBS MacClassic Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Decompiles the current script and returns the source code text style.
**Example:**

```
dim a as new AppleScriptMBS

a.compile "beep"

EditField1.SetTextAndStyle a.Source, a.SourceTextStyle
```

**Notes:** Doesn't work for unicode text.

### 12.2.21 Properties

### 12.2.22 AllowInteraction as Boolean

MBS MacClassic Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether to allow user interaction.
**Notes:**

Default is false to disallow.
You can set to true to allow GUI.
(Read and Write property)

### 12.2.23 CanUnicodeText as Boolean

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** True if AppleScript can handle Unicode text.
**Example:**

```
dim a as new AppleScriptMBS

MsgBox str(a.CanUnicodeText)
```

**Notes:**

This property is set to true if AppleScript 1.3 or newer is installed.
(AppleScript 1.3 was introduced around the time of Mac OS 8.6)
(Read only property)

### 12.2.24 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The handle of the used AppleScript component.
**Example:**

```
dim a as new AppleScriptMBS
MsgBox str(a.Handle)
```

**Notes:** (Read and Write property)

### 12.2.25 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Example:**

```
dim a as new AppleScriptMBS
MsgBox str(a.Lasterror)
```

**Notes:**

Value is 0 for successfull and -1 if function is not available.
All other values are normal Mac OS error codes.

Some common error codes for this class:

| | | |
|---|---|---|
| OSASystemError | -1750 | |
| OSAInvalidID | -1751 | |
| OSABadStorageType | -1752 | |
| OSAScriptError | -1753 | |
| OSABadSelector | -1754 | |
| OSASourceNotAvailable | -1756 | |
| OSANoSuchDialect | -1757 | |
| OSADataFormatObsolete | -1758 | |
| OSADataFormatTooNew | -1759 | |
| OSACorruptData | -1702 | |
| OSARecordingIsAlreadyOn | -1732 | |
| OSAComponentMismatch | -1761 | Parameters are from 2 different components |
| OSACantOpenComponent | -1762 | Can't connect to scripting system with that ID |
| OSACantCoerce | -1700 | Signaled when a value can't be coerced to the desired type. |
| OSACantAccess | -1728 | Signaled when an object is not found in a container |
| OSACantAssign | -10006 | Signaled when an object cannot be set in a container. |
| OSAGeneralError | -2700 | Signaled by user scripts or applications when no actual error code is to be returned. |
| OSADivideByZero | -2701 | Signaled when there is an attempt to divide by zero |
| OSANumericOverflow | -2702 | Signaled when integer or real value is too large to be represented |
| OSACantLaunch | -2703 | Signaled when application can't be launched or when it is remote and program linking is not enabled |
| OSAAppNotHighLevelEventAware | -2704 | Signaled when an application can't respond to AppleEvents |
| OSACorruptTerminology | -2705 | Signaled when an application's terminology resource is not readable |
| OSAStackOverflow | -2706 | Signaled when the runtime stack overflows |
| OSAInternalTableOverflow | -2707 | Signaled when a runtime internal data structure overflows |
| OSADataBlockTooLarge | -2708 | Signaled when an intrinsic limitation is exceeded for the size of a value or data structure. |
| OSACantGetTerminology | -2709 | |
| OSACantCreate | -2710 | |

(Read and Write property)

### 12.2.26 ResultID as Integer

MBS MacClassic Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal result ID for the current script.
**Example:**

```
dim a as new AppleScriptMBS

a.Compile "return ""hello"""
a.Execute

MsgBox str(a.ResultID)
```

**Notes:**

May be useful for Toolbox calls.
(Read and Write property)

### 12.2.27 ScriptID as Integer

MBS MacClassic Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal script ID for the current script.
**Example:**

```
dim a as new AppleScriptMBS

a.compile "beep"

MsgBox str(a.ScriptID)
```

**Notes:**

May be useful for Toolbox calls.
(Read and Write property)

### 12.2.28 UnicodeText as Boolean

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** True if you want to use unicode.
**Example:**

```
dim a as AppleScriptMBS

a=new AppleScriptMBS
a.UnicodeText=true

dim s as string="tell application ""iTunes""""+chr(13)+"set rating of (track ""Flintstones áé"") to 40"+chr(13)+"end tell"
a.compile ConvertEncoding(s,Encodings.UTF16)
MsgBox str(a.Lasterror)

a.Execute
MsgBox str(a.Lasterror)

MsgBox a.Result
```

**Notes:**

If this property is true, all functions try to get strings as 16 bit Unicode strings.
Strings you pass which are in 16 bit Unicode are passed in Unicode to AppleScript.
You may get trouble if the strings you give this class are not in the system encoding (MacRoman?) or 16 bit Unicode. UTF8 will not work!
(Read and Write property)

### 12.2.29 Binary as string

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The binary representation of the current compiled script.
**Example:**

```
// create our own compiled AppleScript file

dim a as AppleScriptMBS
dim b as BinaryStream
dim f as FolderItem
dim r as ResourceFork

a=new AppleScriptMBS

// compile a simply applescript:
a.Compile "beep"

// Mac OS X format
f=GetFolderItem("My Apple Script X")
```

```
b=f.CreateBinaryFile("applescript")
b.Write a.Binary
b.Close

// Mac OS 9 format
f=GetFolderItem("My Apple Script 9")

r=f.CreateResourceFork("applescript")
r.AddResource a.Binary,"scpt",128,""
r.Close
```

**Notes:**

You can save and load this value to store scripts.
Lasterror is set.
(Read and Write computed property)

### 12.2.30 ScriptPropertyValue(name as string) as string

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The value of a script property.
**Example:**

```
Sub NewEmailinMail(subject as string, body as string, sender as string, receiver as string)
// make a new email in Apple Mail using AppleScript

dim lines(-1) as string

lines.append ""
lines.append "property MySubject : ""My Subject"""
lines.append "property MyBody : ""My Body"""
lines.append "property MyReceiver : ""test@test.test"""
lines.append "property MySender : ""test@test.test"""
lines.append ""
lines.append "tell application ""Mail"""
lines.append " activate"
lines.append " set NewMail to make new outgoing message with properties { visible:true, subject:MySubject,
content:MyBody } "
lines.append " "
lines.append " tell NewMail"
lines.append " make new to recipient at beginning of to recipients with properties { address:MyReceiver } "
lines.append " end tell"
```

```
lines.append " "
lines.append " set the sender of NewMail to MySender"
lines.append "end tell"

dim a as new AppleScriptMBS

a.Compile Join(lines,EndOfLine.Macintosh)

// Change encoding
subject = ConvertEncoding(subject, encodings.MacRoman)
body = ConvertEncoding(body, encodings.MacRoman)
sender = ConvertEncoding(sender, encodings.MacRoman)
receiver = ConvertEncoding(receiver, encodings.MacRoman)

// replace line endoings
subject = ReplaceLineEndings(subject, EndOfLine.Macintosh)
body = ReplaceLineEndings(body, EndOfLine.Macintosh)
sender = ReplaceLineEndings(sender, EndOfLine.Macintosh)
receiver = ReplaceLineEndings(receiver, EndOfLine.Macintosh)

// set properties in Script
a.ScriptPropertyValue("MySubject")=subject
a.ScriptPropertyValue("MyBody")=body
a.ScriptPropertyValue("MySender")=sender
a.ScriptPropertyValue("MyReceiver")=receiver

a.Execute
End Sub
```

**Notes:**

If name or value are UTF16 encoding, than the plugin passes UTF16. Else it passes the bytes and AppleScript may assume MacRoman encoding.
(Read and Write computed property)

### 12.2.31 Events

### 12.2.32 Periodic as Integer

MBS MacClassic Plugin, Plugin Version: 7.7, Platform: macOS, Targets: .

**Function:** This event is called periodical on long operations like Compile or Execute.
**Notes:** Return 0 to continue or some other value to report an error.

## 12.3 control DesktopOSAScriptControlMBS

### 12.3.1 control DesktopOSAScriptControlMBS

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The Xojo control for a OSAScriptView.
**Notes:**

This control embeds a special OSAScriptView subclass.
Designed for Xojo 2021r3 and newer.
Please use view property to access the underlaying object and set properties.

### 12.3.2 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls

### 12.3.3 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls

### 12.3.4 Properties

### 12.3.5 AcceptTabs as Boolean

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Whether the control should accept tab keys.
**Notes:**

If true, the plugin will not forward the tab keydown/keyup events to Xojo, because Xojo would do switch to next control.
(Read and Write property)

### 12.3.6 Scrollview as Variant

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The scrollview for this textview.
**Notes:** (Read only property)

### 12.3.7 View as OSAScriptViewMBS

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The view used in the control.
**Notes:**

Use this object to set more options on the control.
(Read only property)

### 12.3.8 Events

### 12.3.9 BoundsChanged

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 12.3.10 ContextualMenuItemSelected(selectedItem as Variant) As Boolean

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 12.3.11 FocusLost

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The control lost focus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 12.3.12 FocusReceived

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The control itself got focus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 12.3.13 FrameChanged

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 12.3.14 MenuBarSelected

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event where you can enable menu items.

### 12.3.15 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control's region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 12.3.16 MouseDrag(x as Integer, y as Integer)

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the

mouse has really moved.

### 12.3.17 MouseUp(x as Integer, y as Integer)

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 12.3.18 ScaleFactorChanged(NewFactor as Double)

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

### 12.3.19 shouldChangeTextInRange(affectedCharRange as NSRangeMBS, replacementString as string) as boolean

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Sent when a text view needs to determine if text in a specified range should be changed.
**Notes:**

affectedCharRange: The range of characters to be replaced.
replacementString: The characters that will replace the characters in affectedCharRange; nil if only text attributes are being changed.

Return true to allow the replacement, or false to reject the change.

### 12.3.20 textDidBeginEditing

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Informs you that the text object has begun editing (that the user has begun changing it).

### 12.3.21 textDidChange

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Informs you that the text object has changed its characters or formatting attributes.

### 12.3.22 textDidEndEditing

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Informs you that the text object has finished editing (that it has resigned first responder status).

### 12.3.23 textShouldBeginEditing as boolean

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Invoked when a text object begins to change its text, this method requests permission to begin editing.
**Notes:** If the delegate returns false, the text object proceeds to make changes. If the delegate returns true, the text object abandons the editing operation. This method is also invoked when the user drags and drops a file onto the text object.

### 12.3.24 textShouldEndEditing as boolean

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Invoked from a text object's implementation of resignFirstResponder, this method requests permission to end editing.
**Notes:** If the delegate returns false, the text object proceeds to finish editing and resign first responder status. If the delegate returns true, the text object selects all of its text and remains the first responder.

### 12.3.25 textViewDidChangeSelection

MBS MacExtras Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Sent when the selection changes in the text view.

## 12.4 class NSAppleEventDescriptorMBS

### 12.4.1 class NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An instance of NSAppleEventDescriptor represents a descriptor—the basic building block for Apple events.
**Notes:**

This class is a wrapper for the underlying Apple event descriptor data type, AEDesc. Scriptable Cocoa applications frequently work with instances of NSAppleEventDescriptor, but should rarely need to work directly with the AEDesc data structure.

A descriptor is a data structure that stores data and an accompanying four-character code. A descriptor can store a value, or it can store a list of other descriptors (which may also be lists). All the information in an Apple event is stored in descriptors and lists of descriptors, and every Apple event is itself a descriptor list that matches certain criteria.

Important: An instance of NSAppleEventDescriptor can represent any kind of descriptor, from a simple value descriptor, to a descriptor list, to a full-fledged Apple event.
Descriptors can be used to build arbitrarily complex containers, so that one Apple event can represent a script statement such as tell application "TextEdit" to get word 3 of paragraph 6 of document 3.

In working with Apple event descriptors, it can be useful to understand some of the underlying data types. You'll find terms such as descriptor, descriptor list, Apple event record, and Apple event defined in Building an Apple Event in Apple Events Programming Guide. You'll also find information on the four-character codes used to identify information within a descriptor. Apple event data types are defined in Apple Event Manager Reference. The values of many four-character codes used by Apple (and in some cases reused by developers) can be found in AppleScript Terminology and Apple Event Codes.

The most common reason to construct an Apple event with an instance of NSAppleEventDescriptor is to supply information in a return Apple event. The most common situation where you might need to extract information from an Apple event (as an instance of NSAppleEventDescriptor) is when an Apple event handler installed by your application is invoked, as described in "Installing an Apple Event Handler" in How Cocoa Applications Handle Apple Events. In addition, if you execute an AppleScript script using the NSAppleScript class, you get an instance of NSAppleEventDescriptor as the return value, from which you can extract any required information.

When you work with an instance of NSAppleEventDescriptor, you can access the underlying descriptor directly, if necessary, with the aeDesc method. Other methods, including descriptorWithDescriptorType make it possible to create and initialize instances of NSAppleEventDescriptor without creating temporary instances of memoryblock.

Cocoa doesn't currently provide a mechanism for applications to directly send raw Apple events (though compiling and executing an AppleScript script with NSAppleScript may result in Apple events being sent). However, Cocoa applications have full access to the Apple Event Manager C APIs for working with Apple events. So, for example, you might use an instance of NSAppleEventDescriptor to assemble an Apple event and call the Apple Event Manager function AESend to send it.

If you need to send Apple events, or if you need more information on some of the Apple event concepts described here, see Apple Events Programming Guide and Apple Event Manager Reference.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Real Studio Plugins, version 11.2pr9

### 12.4.4 Methods

### 12.4.5 appleEventWithEventClass(eventClass as string, eventID as string, targetDescriptor as NSAppleEventDescriptorMBS, returnID as Int16, transactionID as UInt32) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor that represents an Apple event, initialized according to the specified information.
**Notes:**

eventClass: The event class to be set in the returned descriptor.
eventID: The event ID to be set in the returned descriptor.
addressDescriptor: A pointer to a descriptor that identifies the target application for the Apple event. Passing nil results in an Apple event descriptor that has no keyAddressAttr attribute (it is valid for an Apple event to have no target address attribute).
returnID: The return ID to be set in the returned descriptor. If you pass a value of kAutoGenerateReturnID, the Apple Event Manager assigns the created Apple event a return ID that is unique to the current session. If you pass any other value, the Apple Event Manager assigns that value for the ID.
transactionID: The transaction ID to be set in the returned descriptor. A transaction is a sequence of Apple events that are sent back and forth between client and server applications, beginning with the client's initial request for a service. All Apple events that are part of a transaction must have the same transaction ID. You can specify kAnyTransactionID if the Apple event is not one of a series of interdependent Apple events.

Returns a descriptor for an Apple event, initialized according to the specified parameter values, or nil if an error occurs.

Constants such as kAutoGenerateReturnID and kAnyTransactionID are defined in AE.framework, a subframework of ApplicationServices.framework.

### 12.4.6 attributeDescriptorForKeyword(keyword as string) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a descriptor for the receiver's Apple event attribute identified by the specified keyword.
**Notes:**

keyword: A keyword (a four-character code) that identifies the descriptor to obtain.

Returns the attribute descriptor for the specified keyword, or nil if an error occurs.

### 12.4.7 coerceToDescriptorType(descriptorType as string) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a descriptor obtained by coercing the receiver to the specified type.
**Notes:**

descriptorType: The descriptor type to coerce the receiver to.

Returns a descriptor of the specified type, or nil if an error occurs.

### 12.4.8 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 12.4.9 copy as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of the apple event descriptor.

### 12.4.10 currentProcessDescriptor as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Create and return an application address descriptor using the current process.
**Example:**

```
dim d as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.currentProcessDescriptor
MsgBox "Process ID: "+str(d.processIDValue)
```

**Notes:** The result is suitable for use as the "targetDescriptor" parameter of appleEventWithEventClass.

### 12.4.11 descriptorAtIndex(index as Integer) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the descriptor at the specified (one-based) position in the receiving descriptor list.
**Example:**

```
dim n as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.listDescriptor
dim d as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithString("Hello")
dim e as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithString("World")

n.insertDescriptor(d,1)
n.insertDescriptor(e,2)
```

```
MsgBox str(n.numberOfItems)

dim x1 as NSAppleEventDescriptorMBS = n.descriptorAtIndex(1)
dim x2 as NSAppleEventDescriptorMBS = n.descriptorAtIndex(2)
MsgBox x1.stringValue+" "+x2.stringvalue
```

**Notes:**

Index: The one-based descriptor list position of the descriptor to return.

Returns the descriptor from the specified position (one-based) in the descriptor list, or nil if the specified descriptor cannot be obtained.

### 12.4.12 descriptorForKeyword(keyword as string) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the receiver's descriptor for the specified keyword.
**Example:**

```
dim n as new NSAppleScriptMBS("return system info")
dim r as NSAppleEventDescriptorMBS = n.execute

dim lines(-1) as string

dim u as Integer = r.numberOfItems
for i as Integer = 1 to u
dim keyword as string = r.keywordForDescriptorAtIndex(i)
dim value as string
dim p as NSAppleEventDescriptorMBS = r.descriptorForKeyword(keyword)
if p<>Nil then value = p.stringValue
lines.Append keyword+": "+value
next

MsgBox Join(lines,EndOfLine)
```

**Notes:**

keyword: A keyword (a four-character code) that identifies the descriptor to obtain.

Returns a descriptor for the specified keyword, or nil if an error occurs.

### 12.4.13 descriptorWithAlias(item as folderitem) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor initialized with type typeAlias that stores the specified folderitem reference.
**Example:**

```
// pick a folderitem
dim folder as FolderItem = SpecialFolder.Desktop

// create value with file reference
dim d as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithAlias(folder)

// convert back to FolderItem
dim file as FolderItem = d.FSRefValue

// show path
MsgBox file.NativePath
```

**Notes:** This type can be converted internally to FSRef descriptor.

### 12.4.14 descriptorWithApplicationURL(fileURL as string) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Create and return an application address descriptor using the file URL for an application.
**Example:**

```
dim f as FolderItem = SpecialFolder.Applications.Child("Stickies.app")
dim u as string = f.URLPath
dim d as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithApplicationURL(u)
MsgBox d.applicationURLValue
```

**Notes:** The result is suitable for use as the "targetDescriptor" parameter of appleEventWithEventClass.
See also:

- 12.4.15 descriptorWithApplicationURL(item as folderitem) as NSAppleEventDescriptorMBS 3195

### 12.4.15 descriptorWithApplicationURL(item as folderitem) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Create and return an application address descriptor using the folderitem for an application.
**Example:**

```
dim f as FolderItem = SpecialFolder.Applications.Child("Stickies.app")
dim d as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithApplicationURL(f)
MsgBox d.applicationURLValue
```

**Notes:** The result is suitable for use as the "targetDescriptor" parameter of appleEventWithEventClass.
See also:

- 12.4.14 descriptorWithApplicationURL(fileURL as string) as NSAppleEventDescriptorMBS 3195

### 12.4.16 descriptorWithBoolean(value as Boolean) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor initialized with type typeBoolean that stores the specified Boolean value.
**Example:**

```
dim a as NSAppleEventDescriptorMBS
a = NSAppleEventDescriptorMBS.descriptorWithBoolean(true)
MsgBox a.stringValue // shows true
```

**Notes:** Returns a descriptor with the specified Boolean value, or nil if an error occurs.

### 12.4.17 descriptorWithBundleIdentifier(BundleID as String) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Create and return an application address descriptor using the bundle identifier.
**Example:**

```
dim d as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithBundleIdentifier("com.apple.iCal")
MsgBox d.bundleIDValue
```

**Notes:** The result is suitable for use as the "targetDescriptor" parameter of appleEventWithEventClass.

### 12.4.18 descriptorWithCurrentProcessSerialNumber as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 16.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates descriptor with current process serial number.
**Example:**

```
dim n as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithCurrentProcessSerialNumber
MsgBox n.stringValue // shows app name
```

### 12.4.19 descriptorWithDate(value as date) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor with a date value.
**Example:**

```
dim d as new date
dim n as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithDate(d)

dim x as date = n.dateValue
MsgBox x.LongDate+" "+x.LongTime // shows today
```

### 12.4.20 descriptorWithDateTime(value as dateTime) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor with a date value.

### 12.4.21 descriptorWithDescriptorType(descriptorType as string, data as memoryblock) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor initialized with the specified event type that stores the specified data.
**Notes:**

descriptorType: The descriptor type to be set in the returned descriptor.
data: The data, as a memoryblock, to be set in the returned descriptor.

Returns a descriptor with the specified type and data, or nil if an error occurs.

You can use this method to create a descriptor that you can build into a complete Apple event by calling methods such as setAttributeDescriptor, setDescriptor, and setParamDescriptor.
See also:

- 12.4.22 descriptorWithDescriptorType(descriptorType as string, data as memoryblock, offset as UInt32, length as UInt32) as NSAppleEventDescriptorMBS 3198

### 12.4.22 descriptorWithDescriptorType(descriptorType as string, data as memoryblock, offset as UInt32, length as UInt32) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor initialized with the specified event type that stores the specified data (from a series of bytes).
**Notes:**

descriptorType: The descriptor type to be set in the returned descriptor.
bytes: The data, as a sequence of bytes, to be set in the returned descriptor.
offset: offset in memoryblock.
length: The length, in bytes, of the data to be set in the returned descriptor.

Returns a descriptor with the specified type and data, or nil if an error occurs.
See also:

- 12.4.21 descriptorWithDescriptorType(descriptorType as string, data as memoryblock) as NSAppleEventDescriptorMBS 3197

### 12.4.23 descriptorWithDouble(value as Double) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor with a double value.
**Example:**

```
dim a as NSAppleEventDescriptorMBS
a = NSAppleEventDescriptorMBS.descriptorWithDouble(5)
MsgBox a.stringValue // shows 5
```

### 12.4.24 descriptorWithEnumCode(enumerator as string) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor initialized with type typeEnumerated that stores the specified enumerator data type value.
**Notes:**

enumerator: A type code that identifies the type of enumerated data to be stored in the returned descriptor.

Returns a descriptor with the specified enumerator data type value, or nil if an error occurs.

### 12.4.25 descriptorWithFileURL(fileURL as string) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor for a file URL.
**Example:**

```
dim f as FolderItem = SpecialFolder.Applications.Child("Stickies.app")
dim u as string = f.URLPath
dim d as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithFileURL(u)
MsgBox d.fileURLValue
```

See also:

- 12.4.26 descriptorWithFileURL(item as folderitem) as NSAppleEventDescriptorMBS 3199

### 12.4.26 descriptorWithFileURL(item as folderitem) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor for a file URL based on the folderitem.
**Example:**

```
dim f as FolderItem = SpecialFolder.Applications.Child("Stickies.app")
dim d as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithFileURL(f)
MsgBox d.fileURLValue
```

See also:

• 12.4.25 descriptorWithFileURL(fileURL as string) as NSAppleEventDescriptorMBS 3199

### 12.4.27 descriptorWithInt16(value as Int16) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor initialized with Apple event type typeSInt16 that stores the specified integer value.
**Example:**

```
dim a as NSAppleEventDescriptorMBS

a = NSAppleEventDescriptorMBS.descriptorWithInt16(5)

MsgBox a.stringValue // shows 5
```

### 12.4.28 descriptorWithInt32(value as Int32) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor initialized with Apple event type typeSInt32 that stores the specified integer value.
**Example:**

```
dim a as NSAppleEventDescriptorMBS
a = NSAppleEventDescriptorMBS.descriptorWithInt32(5)

MsgBox a.stringValue // shows 5
```

**Notes:** Returns a descriptor containing the specified integer value, or nil if an error occurs.

### 12.4.29 descriptorWithProcessIdentifier(PID as Integer) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Create and return an application address descriptor using the process identifier.
**Example:**

```
// get my PID
dim p as new ProcessMBS
p.GetCurrentProcess
```

```
dim pid as Integer = p.ProcessID

// make process ID descriptor
dim n as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithProcessIdentifier(pid)

// show it
MsgBox "ProcessID: "+str(n.processIDValue) + EndOfLine + n.stringValue
```

**Notes:** The result is suitable for use as the "targetDescriptor" parameter of appleEventWithEventClass.

### 12.4.30 descriptorWithSingle(value as single) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor with a single value.
**Example:**

```
dim a as NSAppleEventDescriptorMBS
a = NSAppleEventDescriptorMBS.descriptorWithSingle(5)
MsgBox a.stringValue // shows 5
```

### 12.4.31 descriptorWithString(text as string) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor initialized with type typeUnicodeText that stores the text from the specified string.
**Example:**

```
dim a as NSAppleEventDescriptorMBS
a = NSAppleEventDescriptorMBS.descriptorWithString("Hello World")

MsgBox a.stringValue
```

**Notes:** Returns a descriptor that contains the text from the specified string, or nil if an error occurs.

### 12.4.32 descriptorWithTypeCode(typeCode as string) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor initialized with type typeType that stores the specified type value.
**Notes:**

typeCode: The type value to be set in the returned descriptor.

Returns a descriptor with the specified type, or nil if an error occurs.

### 12.4.33 descriptorWithUInt32(value as UInt32) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a descriptor with an unsigned integer value.
**Example:**

```
dim a as NSAppleEventDescriptorMBS
a = NSAppleEventDescriptorMBS.descriptorWithUInt32(5)
MsgBox a.stringValue // shows 5
```

### 12.4.34 insertDescriptor(descriptor as NSAppleEventDescriptorMBS, index as Integer)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Inserts a descriptor at the specified (one-based) position in the receiving descriptor list, replacing the existing descriptor, if any, at that position.
**Notes:**

descriptor: The descriptor to insert in the receiver. Specifying an index of 0 or count + 1 causes appending to the end of the list.
Index: The one-based descriptor list position at which to insert the descriptor.

Because it actually replaces the descriptor, if any, at the specified position, this method might better be called replaceDescriptor. The receiver must be a list descriptor. The indices are one-based. Currently provides no indication if an error occurs.

### 12.4.35 keywordForDescriptorAtIndex(index as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the keyword for the descriptor at the specified (one-based) position in the receiver.
**Example:**

```
dim n as new NSAppleScriptMBS("return system info")
dim r as NSAppleEventDescriptorMBS = n.execute

dim lines(-1) as string

dim u as Integer = r.numberOfItems
for i as Integer = 1 to u
dim keyword as string = r.keywordForDescriptorAtIndex(i)
dim value as string
dim p as NSAppleEventDescriptorMBS = r.descriptorForKeyword(keyword)
if p<>Nil then value = p.stringValue
lines.Append keyword+": "+value
next

MsgBox Join(lines,EndOfLine)
```

**Notes:**

Index: The one-based descriptor list position of the descriptor to get the keyword for.

Returns the keyword (a four-character code) for the descriptor at the one-based location specified by anIndex, or 0 if an error occurs.

### 12.4.36 listDescriptor as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates and initializes an empty list descriptor.
**Notes:**

Returns an empty list descriptor, or nil if an error occurs.

A list descriptor is a descriptor whose data consists of one or more descriptors. You can add items to the list by calling insertDescriptor or remove them with removeDescriptorAtIndex.

### 12.4.37 nullDescriptor as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates and initializes a descriptor with no parameter or attribute values set.
**Notes:**

Returns a descriptor with no parameter or attribute values set, or nil if an error occurs.

You don't typically call this method, as most NSAppleEventDescriptor instance methods can't be safely called on the returned empty descriptor.

### 12.4.38 paramDescriptorForKeyword(keyword as string) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a descriptor for the receiver's Apple event parameter identified by the specified keyword.
**Notes:**

keyword: A keyword (a four-character code) that identifies the parameter descriptor to obtain.

Returns a descriptor for the specified keyword, or nil if an error occurs.

### 12.4.39 print

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Writes description for this event descriptor to the console.
**Notes:** You can see result in Console.app.

### 12.4.40 recordDescriptor as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates and initializes a descriptor for an Apple event record whose data has yet to be set.
**Notes:**

Returns an Apple event descriptor whose data has yet to be set, or nil if an error occurs.

An Apple event record is a descriptor whose data is a set of descriptors keyed by four-character codes. You can add information to the descriptor with methods such as setAttributeDescriptor, setDescriptor, and set-

ParamDescriptor.

### 12.4.41 removeDescriptorAtIndex(index as Integer)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Removes the descriptor at the specified (one-based) position in the receiving descriptor list.
**Notes:**

Index: The one-based position of the descriptor to remove.

The receiver must be a list descriptor. The indices are one-based. Currently provides no indication if an error occurs.

### 12.4.42 removeDescriptorWithKeyword(keyword as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Removes the receiver's descriptor identified by the specified keyword.
**Notes:**

keyword: A keyword (a four-character code) that identifies the descriptor to remove.

The receiver must be an Apple event or Apple event record. Currently provides no indication if an error occurs.

### 12.4.43 removeParamDescriptorWithKeyword(keyword as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Removes the receiver's parameter descriptor identified by the specified keyword.
**Notes:**

keyword: A keyword (a four-character code) that identifies the parameter descriptor to remove. Currently provides no indication if an error occurs.

The receiver must be an Apple event or Apple event record, both of which can contain parameters.

### 12.4.44 send(options as Integer, timeoutInSeconds as Double, byref error as NSErrorMBS) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sends an Apple event.
**Example:**

```
// pick a file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
// make a descriptor for file
dim fd as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithFSRef(f)
// make a descriptor for target app. here by bundle id
dim bd as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithBundleIdentifier("com.apple.finder")
// make a descriptor for apple event, here OpenDocument event
dim ad as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.appleEventWithEventClass("aevt", "odoc", bd, fd.kAutoGenerateReturnID, fd.kAnyTransactionID)

// assign parameter
ad.setParamDescriptor(fd, "—-")

// now run
dim e as NSErrorMBS
dim rd as NSAppleEventDescriptorMBS = ad.send(ad.NSAppleEventSendDefaultOptions, 0.1, e)

// error sending?
if e <>nil then
MsgBox e.LocalizedDescription
end if

Break // inspect rd for success or failure of event?
```

### 12.4.45 setAttributeDescriptor(descriptor as NSAppleEventDescriptorMBS, keyword as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Adds a descriptor to the receiver as an attribute identified by the specified keyword.
**Notes:**

descriptor: The attribute descriptor to add to the receiver.
keyword: A keyword (a four-character code) that identifies the attribute descriptor to add. If a descriptor with that keyword already exists in the receiver, it is replaced.

The receiver must be an Apple event. Currently provides no indication if an error occurs.

### 12.4.46 setDescriptor(descriptor as NSAppleEventDescriptorMBS, keyword as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Adds a descriptor, identified by a keyword, to the receiver.
**Notes:**

descriptor: The descriptor to add to the receiver.
keyword: A keyword (a four-character code) that identifies the descriptor to add. If a descriptor with that keyword already exists in the receiver, it is replaced.

The receiver must be an Apple event or Apple event record. Currently provides no indication if an error occurs.

### 12.4.47 setParamDescriptor(descriptor as NSAppleEventDescriptorMBS, keyword as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Adds a descriptor to the receiver as an Apple event parameter identified by the specified keyword.
**Notes:**

descriptor: The parameter descriptor to add to the receiver.
keyword: A keyword (a four-character code) that identifies the parameter descriptor to add. If a descriptor with that keyword already exists in the receiver, it is replaced.

The receiver must be an Apple event or Apple event record, both of which can contain parameters.

### 12.4.48 Properties

### 12.4.49 aeDesc as Ptr

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a pointer to the AEDesc structure that is encapsulated by the receiver, if it has one.
**Notes:**

If the receiver has a valid AEDesc structure, returns a pointer to it; otherwise returns nil.
(Read only property)

### 12.4.50 applicationURLValue as String

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The application URL.
**Example:**

```
dim f as FolderItem = SpecialFolder.Applications.Child("Stickies.app")
dim u as string = f.URLPath
dim d as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithApplicationURL(u)
MsgBox d.applicationURLValue
```

**Notes:** (Read only property)

### 12.4.51 booleanValue as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the contents of the receiver as a Boolean value, coercing (to typeBoolean) if necessary.
**Example:**

```
dim lines(-1) as string

lines.Append "set a to 1"
lines.Append "set b to 1"
lines.Append "return a = b" // return a boolean result

// compile, run and show value
dim source as string = Join(lines,EndOfLine)
dim n as new NSAppleScriptMBS(source)

dim error as Dictionary
dim d as NSAppleEventDescriptorMBS = n.execute(Error)

MsgBox str(d.booleanValue)
```

**Notes:**

Returns the contents of the descriptor, as a Boolean value, or false if an error occurs.
(Read only property)

### 12.4.52 bundleIDValue as String

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries the bundle identifier.
**Example:**

```
dim d as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithBundleIdentifier("com.apple.iCal")
MsgBox d.bundleIDValue
```

**Notes:** (Read only property)

### 12.4.53 data as Memoryblock

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the receiver's data as a memoryblock.
**Notes:**

Returns an instance of memoryblock containing the receiver's data, or nil if an error occurs.
(Read only property)

### 12.4.54 dateTimeValue as DateTime

MBS MacCocoa Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the contents of the receiver as a date value.
**Notes:** (Read only property)

### 12.4.55 dateValue as date

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the contents of the receiver as a date value.
**Example:**

```
dim d as new date
dim n as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithDate(d)

dim x as date = n.dateValue
MsgBox x.LongDate+" "+x.LongTime // shows today
```

**Notes:** (Read only property)

### 12.4.56 description as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The descriptor for this event.
**Example:**

```
dim n as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithString("Hello")
MsgBox n.description
```

**Notes:**

This is a text representation for debugging.
(Read only property)

### 12.4.57 descriptorType as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the descriptor type of the receiver.
**Notes:** (Read only property)

### 12.4.58 doubleValue as Double

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the contents of the receiver as a double.
**Example:**

```
dim a as NSAppleEventDescriptorMBS
a = NSAppleEventDescriptorMBS.descriptorWithString("5")
MsgBox str(a.doubleValue) // shows 5
```

**Notes:** (Read only property)

### 12.4.59 enumCodeValue as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the contents of the receiver as an enumeration type, coercing (to typeEnumerated) if necessary.
**Notes:**

Returns the contents of the descriptor, as an enumeration type, or 0 if an error occurs.
(Read only property)

### 12.4.60 eventClass as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the event class for the receiver.
**Notes:**

Returns the event class (a four-character code) for the receiver, or 0 if an error occurs.

The receiver must be an Apple event. An Apple event is identified by its event class and event ID, a pair of four-character codes stored as 32-bit integers. For example, most events in the Standard suite have the four-character code 'core' (defined as the constant kAECoreSuite in AE.framework, a subframework of ApplicationServices.framework). For more information on event classes and event IDs, see Building an Apple Event in Apple Events in Apple Events Programming Guide.
(Read only property)

### 12.4.61 eventID as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the event ID for the receiver.
**Notes:**

The event ID (a four-character code) for the receiver, or 0 if an error occurs.

The receiver must be an Apple event. An Apple event is identified by its event class and event ID, a pair of four-character codes stored as 32-bit integers. For example, the open Apple event from the Standard suite has the four-character code 'odoc' (defined as the constant kAEOpen in AE.framework, a subframework of ApplicationServices.framework).
(Read only property)

### 12.4.62 fileURLValue as String

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The file URL.
**Example:**

```
dim f as FolderItem = SpecialFolder.Applications.Child("Stickies.app")
dim d as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithFileURL(f)
MsgBox d.fileURLValue
```

**Notes:** (Read only property)

### 12.4.63 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the internal reference to the NSAppleEventDescriptor object.
**Notes:** (Read and Write property)

### 12.4.64 int16Value as Int16

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the contents of the receiver as an int16.
**Example:**

```
dim a as NSAppleEventDescriptorMBS
a = NSAppleEventDescriptorMBS.descriptorWithString("5")
MsgBox str(a.int16Value) // shows 5
```

**Notes:** (Read only property)

### 12.4.65 int32Value as Int32

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the contents of the receiver as an integer, coercing (to typeSInt32) if necessary.
**Example:**

```
dim a as NSAppleEventDescriptorMBS
```

```
a = NSAppleEventDescriptorMBS.descriptorWithString("5")
MsgBox str(a.int32Value) // shows 5
```

**Notes:**

Returns the contents of the descriptor, as an integer value, or 0 if an error occurs.
(Read only property)

### 12.4.66 isRecordDescriptor as Boolean

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Return whether or not a descriptor is a record-like descriptor.
**Notes:**

Record-like descriptors function as records, but may have a descriptorType other than AERecord, such as ObjectSpecifier.
(Read only property)

### 12.4.67 numberOfItems as Integer

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the number of descriptors in the receiver's descriptor list.
**Example:**

```
dim n as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.listDescriptor
dim d as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithString("Hello")
dim e as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithString("World")

n.insertDescriptor(d,1)
n.insertDescriptor(e,2)

MsgBox str(n.numberOfItems)

dim x1 as NSAppleEventDescriptorMBS = n.descriptorAtIndex(1)
dim x2 as NSAppleEventDescriptorMBS = n.descriptorAtIndex(2)
MsgBox x1.stringValue+" "+x2.stringvalue
```

**Notes:**

Returns the number of descriptors in the receiver's descriptor list (possibly 0); returns 0 if an error occurs.
(Read only property)

### 12.4.68 processIDValue as Integer

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries the process ID.
**Example:**

```
// get my PID
dim p as new ProcessMBS
p.GetCurrentProcess
dim pid as Integer = p.ProcessID

// make process ID descriptor
dim n as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithProcessIdentifier(pid)

// show it
MsgBox "ProcessID: "+str(n.processIDValue) + EndOfLine + n.stringValue
```

**Notes:** (Read only property)

### 12.4.69 returnID as Int16

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the receiver's return ID (the ID for a reply Apple event).
**Notes:**

Returns the receiver's return ID (an integer value), or 0 if an error occurs.
(Read only property)

### 12.4.70 singleValue as single

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the contents of the receiver as a single value.
**Example:**

```
dim a as NSAppleEventDescriptorMBS
a = NSAppleEventDescriptorMBS.descriptorWithString("5")
MsgBox str(a.singleValue) // shows 5
```

**Notes:** (Read only property)

### 12.4.71 stringValue as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the contents of the receiver as a Unicode text string, coercing (to typeUnicodeText) if necessary.
**Example:**

```
dim a as NSAppleEventDescriptorMBS

a = NSAppleEventDescriptorMBS.descriptorWithString("Hello World")

MsgBox a.stringValue
```

**Notes:**

Returns the contents of the descriptor, as a string, or "" if an error occurs.
(Read only property)

### 12.4.72 transactionID as Int32

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the receiver's transaction ID, if any.
**Notes:**

Returns the receiver's transaction ID (an integer value), or 0 if an error occurs.

The receiver must be an Apple event. Currently provides no indication if an error occurs. For more information on transactions, see the description for appleEventWithEventClass.
(Read only property)

### 12.4.73 typeCodeValue as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the contents of the receiver as a type, coercing (to typeType) if necessary.
**Notes:** (Read only property)

### 12.4.74 UInt32Value as UInt32

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the contents of the receiver as an UInt32.
**Example:**

```
dim a as NSAppleEventDescriptorMBS
a = NSAppleEventDescriptorMBS.descriptorWithString("5")
MsgBox str(a.UInt32Value) // shows 5
```

**Notes:** (Read only property)

### 12.4.75 Constants

### 12.4.76 kAnyTransactionID = 0

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** Special constant for transaction ID.
**Notes:** no transaction is in use

### 12.4.77 kAutoGenerateReturnID = -1

MBS MacCocoa Plugin, Plugin Version: 11.2.

**Function:** Special constant for return ID.
**Notes:** AECreateAppleEvent will generate a session-unique ID internally.

### 12.4.78 NSAppleEventSendAlwaysInteract = & h30

MBS MacCocoa Plugin, Plugin Version: 16.2.

**Function:** One of the send options.
**Notes:** Server should always interact with user where appropriate.

### 12.4.79 NSAppleEventSendCanInteract = & h20

MBS MacCocoa Plugin, Plugin Version: 16.2.

**Function:** One of the send options.
**Notes:** Server may try to interact with user.

### 12.4.80 NSAppleEventSendCanSwitchLayer = & h40

MBS MacCocoa Plugin, Plugin Version: 16.2.

**Function:** One of the send options.
**Notes:** Interaction may switch layer.

### 12.4.81 NSAppleEventSendDefaultOptions = & h23

MBS MacCocoa Plugin, Plugin Version: 16.2.

**Function:** One of the send options.
**Notes:** Default options: WaitForReply with CanInteract.

### 12.4.82 NSAppleEventSendDontAnnotate = & h10000

MBS MacCocoa Plugin, Plugin Version: 16.2.

**Function:** One of the send options.
**Notes:** Don't automatically add any sandbox or other annotations to the event.

### 12.4.83 NSAppleEventSendDontExecute = & h2000

MBS MacCocoa Plugin, Plugin Version: 16.2.

**Function:** One of the send options.
**Notes:** Don't execute this event; used for recording.

### 12.4.84 NSAppleEventSendDontRecord = & H1000

MBS MacCocoa Plugin, Plugin Version: 16.2.

**Function:** One of the send options.
**Notes:** Don't record this event.

### 12.4.85 NSAppleEventSendNeverInteract = & h10

MBS MacCocoa Plugin, Plugin Version: 16.2.

**Function:** One of the send options.
**Notes:** Server should not interact with user.

### 12.4.86 NSAppleEventSendNoReply = 1

MBS MacCocoa Plugin, Plugin Version: 16.2.

**Function:** One of the send options.
**Notes:** Sender doesn't want a reply to event.

### 12.4.87 NSAppleEventSendQueueReply = 2

MBS MacCocoa Plugin, Plugin Version: 16.2.

**Function:** One of the send options.
**Notes:** Sender wants a reply but won't wait.

### 12.4.88 NSAppleEventSendWaitForReply = 3

MBS MacCocoa Plugin, Plugin Version: 16.2.

**Function:** One of the send options.
**Notes:** Sender wants a reply and will wait.

## 12.5 class NSAppleEventHandlerMBS

### 12.5.1 class NSAppleEventHandlerMBS

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for an apple event handler.

### 12.5.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr3

### 12.5.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr3

### 12.5.4 Methods

### 12.5.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 12.5.6 Destructor

MBS MacCocoa Plugin, Plugin Version: 16.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 12.5.7 Properties

### 12.5.8 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 12.5.9 Events

### 12.5.10 handleAppleEvent(theEvent as NSAppleEventDescriptorMBS, replyEvent as NSAppleEventDescriptorMBS)

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called when an event needs to be handled.

## 12.6 class NSAppleEventManagerMBS

### 12.6.1 class NSAppleEventManagerMBS

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for the Apple Event Manager.
**Notes:**

Provides a mechanism for registering handler routines for specific types of Apple events and dispatching events to those handlers.

Cocoa provides built-in scriptability support that uses scriptability information supplied by an application to automatically convert Apple events into script command objects that perform the desired operation. However, some applications may want to perform more basic Apple event handling, in which an application registers handlers for the Apple events it can process, then calls on the Apple Event Manager to dispatch received Apple events to the appropriate handler. NSAppleEventManager supports these mechanisms by providing methods to register and remove handlers and to dispatch Apple events to the appropriate handler, if one exists. For related information, see How Cocoa Applications Handle Apple Events (on Apple Developer Website).

For information about the Apple Event Manager, see Apple Event Manager Reference and Apple Events Programming Guide (on Apple Developer Website).

### 12.6.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr3

### 12.6.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr3

### 12.6.4 Methods

### 12.6.5 appleEventForSuspensionID(id as NSAppleEventManagerSuspensionIDMBS) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Given a suspensionID returned by an invocation of suspendCurrentAppleEvent, returns the descriptor for the event whose handling was suspended.

### 12.6.6 Constructor

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 12.6.7 currentAppleEvent as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the descriptor for currentAppleEvent if an Apple event is being handled on the current thread.
**Notes:** An Apple event is being handled on the current thread if a handler that was registered with setEventHandler is being messaged at this instant or setCurrentAppleEventAndReplyEventWithSuspensionID has just been invoked. Returns nil otherwise. The effects of mutating or retaining the returned descriptor are undefined, although it may be copied.

### 12.6.8 currentReplyAppleEvent as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the corresponding reply event descriptor if an Apple event is being handled on the current thread.
**Notes:** An Apple event is being handled on the current thread if currentAppleEvent does not return nil. Returns nil otherwise. This descriptor, including any mutations, will be returned to the sender of the current event when all handling of the event has been completed, if the sender has requested a reply. The effects of retaining the descriptor are undefined; it may be copied, but mutations of the copy are not returned to the sender of the current event.

### 12.6.9 NSAppleEventManagerWillProcessFirstEventNotification as string

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the notification names you can use with NSNotificationObserverMBS.
**Notes:** Posted by NSAppleEventManager before it first dispatches an Apple event. Your application can use this notification to avoid registering any Apple event handlers until the first time at which they may be needed. The notification object is the NSAppleEventManager. This notification does not contain a userInfo dictionary.

### 12.6.10 removeEventHandlerForEventClass(eventClass as string, eventID as string)

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** If an Apple event handler has been registered for the event specified by eventClass and eventID, removes it.

### 12.6.11 replyAppleEventForSuspensionID(id as NSAppleEventManagerSuspensionIDMBS) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Given a nonzero suspensionID returned by an invocation of suspendCurrentAppleEvent, returns the corresponding reply event descriptor.
**Notes:** This descriptor, including any mutations, will be returned to the sender of the suspended event when handling of the event is resumed, if the sender has requested a reply. The effects of retaining the descriptor are undefined; it may be copied, but mutations of the copy are returned to the sender of the suspended event. replyAppleEventForSuspensionID may be invoked in any thread, not just the one in which the corresponding invocation of suspendCurrentAppleEvent occurred.

### 12.6.12 resumeWithSuspensionID(id as NSAppleEventManagerSuspensionIDMBS)

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Given a suspensionID returned by an invocation of suspendCurrentAppleEvent, signal that handling of the suspended event may now continue.
**Notes:** This may result in the immediate sending of the reply event to the sender of the suspended event, if the sender has requested a reply. If suspensionID has been used in a previous invocation of setCurrentAppleEventAndReplyEventWithSuspensionID the effects of that invocation are completely undone. Redundant invocations of resumeWithSuspensionID are ignored. Subsequent invocations of other NSAppleEventManager methods using the same suspension ID are invalid. resumeWithSuspensionID may be invoked in any thread, not just the one in which the corresponding invocation of suspendCurrentAppleEvent occurred.

### 12.6.13 setCurrentAppleEventAndReplyEventWithSuspensionID(id as NSAppleEventManagerSuspensionIDMBS)

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Given a nonzero suspensionID returned by an invocation of suspendCurrentAppleEvent, sets the values that will be returned by subsequent invocations of currentAppleEvent and currentReplyAppleEvent to be the event whose handling was suspended and its corresponding reply event, respectively.
**Notes:** Redundant invocations of setCurrentAppleEventAndReplyEventWithSuspensionID are ignored.

### 12.6.14 setEventHandler(handler as NSAppleEventHandlerMBS, eventClass as string, eventID as string)

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Registers the Apple event handler specified by handler for the event specified by eventClass and eventID.

### 12.6.15 suspendCurrentAppleEvent as NSAppleEventManagerSuspensionIDMBS

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Suspends the handling of the current event and returns an ID that must be used to resume the handling of the event if an Apple event is being handled on the current thread.
**Notes:** An Apple event is being handled on the current thread if currentAppleEvent does not return nil. Returns zero otherwise. The suspended event is no longer the current event after this method returns.

### 12.6.16 Properties

### 12.6.17 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

## 12.7 class NSAppleEventManagerSuspensionIDMBS

### 12.7.1 class NSAppleEventManagerSuspensionIDMBS

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Identifies an Apple event whose handling has been suspended.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 12.7.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr3

### 12.7.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr3

### 12.7.4 Methods

### 12.7.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 12.7.6 Properties

### 12.7.7 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

## 12.8 class NSAppleScriptMBS

### 12.8.1 class NSAppleScriptMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The NSAppleScriptMBS class provides the ability to load, compile, and execute scripts.
**Example:**

```
dim source as string = "tell Application ""iTunes"" to pause"
dim n as new NSAppleScriptMBS(source)
call n.execute
```

**Notes:**

Your application may need the NSAppleEventsUsageDescription entry in info.plist to do any AppleScript usage:
https://developer.apple.com/documentation/bundleresources/information_property_list/nsappleeventsusagedescription

If you use hardened runtime, which you need for notarization, you may need the entitlement for Apple Events, too:
https://developer.apple.com/documentation/bundleresources/entitlements/com_apple_security_automation_apple-events

Important: You should access NSAppleScriptMBS only from the main thread.

This class provides applications with the ability to

- load a script from a URL or from a text string
- compile or execute a script or an individual Apple event
- obtain an NSAppleEventDescriptorMBS containing the reply from an executed script or event
- obtain an attributed string for a compiled script, suitable for display in a script editor
- obtain various kinds of information about any errors that may occur

Important: NSAppleScriptMBS provides the execute method so that you can send an Apple event to invoke a handler in a script. (In an AppleScript script, a handler is the equivalent of a function.) However, you cannot use this method to send Apple events to other applications.

When you create an instance of NSAppleScriptMBS object, you can use a URL or a folderitem to specify a script that can be in either text or compiled form, or you can supply the script as a string. Should an error

occur when compiling or executing the script, several of the methods return a dictionary containing error information. The keys for obtaining error information, such as NSAppleScriptErrorMessage, are described in the Constants section.

### 12.8.6 Methods

### 12.8.7 compile as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Compiles the receiver, if it is not already compiled.
**Example:**

```
dim source as string = "tell application ""iTunes""""+EndOfLine+"pause"+EndOfLine+"end tell"
dim n as new NSAppleScriptMBS(source)

dim error as Dictionary
if n.compile then
MsgBox "OK"
else
MsgBox error.Value(n.NSAppleScriptErrorMessage)
end if
```

**Notes:**

error: Optional, on return, if an error occurs, an error information dictionary.
Return Value
Returns true for success or if the script was already compiled, false otherwise.
See also:

- 12.8.8 compile(byref error as dictionary) as boolean 3228

### 12.8.8 compile(byref error as dictionary) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Compiles the receiver, if it is not already compiled.
**Example:**

```
dim source as string = "tell application ""iTunes""""+EndOfLine+"pause"+EndOfLine+"end tell"
dim n as new NSAppleScriptMBS(source)

dim error as Dictionary
if n.compile(error) then
```

```
MsgBox "OK"
else
MsgBox error.Value(n.NSAppleScriptErrorMessage)
end if
```

**Notes:**

error: Optional, on return, if an error occurs, an error information dictionary.
Return Value
Returns true for success or if the script was already compiled, false otherwise.
See also:

- 12.8.7 compile as boolean 3228

### 12.8.9 Constructor(file as folderitem, byref error as Dictionary)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes a newly allocated script instance from the source identified by the passed folderitem.
**Example:**

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.scpt")
dim error as Dictionary
dim n as new NSAppleScriptMBS(file, error)

if n.handle = 0 then
dim err as Integer = error.lookup(n.NSAppleScriptErrorNumber,0)
if err = -43 then
MsgBox "File not found."
else
MsgBox "Some other error. "+str(n)
end if
else
MsgBox n.source
end if
```

**Notes:**

file: A folderitem that locates a script, in either text or compiled form.
error: On return, if an error occurs, the error information dictionary.

Handle is zero in case of error.
See also:

- 12.8.10 Constructor(source as string) 3230

- 12.8.11 Constructor(sourceLines() as string) 3230
- 12.8.12 Constructor(URL as string, byref error as Dictionary) 3231

### 12.8.10 Constructor(source as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes a newly allocated script instance from the passed source.
**Example:**

```
dim source as string = "beep"
dim n as new NSAppleScriptMBS(source)
```

**Notes:** Handle is zero in case of error.
See also:

- 12.8.9 Constructor(file as folderitem, byref error as Dictionary) 3229
- 12.8.11 Constructor(sourceLines() as string) 3230
- 12.8.12 Constructor(URL as string, byref error as Dictionary) 3231

### 12.8.11 Constructor(sourceLines() as string)

MBS MacCocoa Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes a newly allocated script instance from the passed source.
**Example:**

```
dim lines() as string

lines.Append "property hello : ""Hallo Leute"""
lines.Append "property just : ""Just a test"""
lines.Append "display dialog hello"
lines.Append "return just"

dim a as new NSAppleScriptMBS(lines)

// compile
call a.Compile

// show names
dim names() as string = a.properties
MsgBox Join(names,EndOfLine)

// query value
```

```
MsgBox a.valueDescriptorForProperty("hello").stringValue

// change value
dim o as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithString("just a test")
call a.setValueDescriptorForProperty("hello", o)

// and query again
MsgBox a.valueDescriptorForProperty("hello").stringValue
```

**Notes:** Handle is zero in case of error.
See also:

- 12.8.9 Constructor(file as folderitem, byref error as Dictionary) 3229
- 12.8.10 Constructor(source as string) 3230
- 12.8.12 Constructor(URL as string, byref error as Dictionary) 3231

### 12.8.12 Constructor(URL as string, byref error as Dictionary)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes a newly allocated script instance from the source identified by the passed URL.
**Notes:**

file: A folderitem that locates a script, in either text or compiled form.
error: On return, if an error occurs, the error information dictionary.

Handle is zero in case of error.
See also:

- 12.8.9 Constructor(file as folderitem, byref error as Dictionary) 3229
- 12.8.10 Constructor(source as string) 3230
- 12.8.11 Constructor(sourceLines() as string) 3230

### 12.8.13 copy as NSAppleScriptMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of this object.
**Example:**

```
dim source as string = "tell application ""iTunes""""+EndOfLine+"pause"+EndOfLine+"end tell"
dim n as new NSAppleScriptMBS(source)
```

```
dim copy as NSAppleScriptMBS = n.copy
call copy.execute
```

### 12.8.14 DeterminePermissionToAutomateTarget(target as NSAppleEventDescriptorMBS, theAEEventClass as string = "****", theAEEventID as String = "****", askUserIfNeeded as boolean) as Integer

MBS MacCocoa Plugin, Plugin Version: 18.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Determines whether the current application is able to send an AppleEvent with the given eventClass and eventID to the application described as target.
**Example:**

```
dim target as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithBundleIdentifier("com.apple.Safari")

// we ask for all apple events
dim e as integer = NSAppleScriptMBS.DeterminePermissionToAutomateTarget(target, "****", "****", true)

MsgBox str(e)
```

**Notes:**

Mac OS 10.14 and later impose additional requirements on applications when they send AppleEvents to other applications in order to insure that users are aware of and consent to allowing such control or information exchange. Generally this involves the user being prompted in a secure fashion the first time an application attempts to send an AppleEvent to another application. If the user consents then this application can send events to the target. If the user does not consent then any future attempts to send AppleEvents will result in a failure with errAEEventNotPermitted (-1743) being returned.

Certain AppleEvents are allowed to be sent without prompting the user. Pass typeWildCard for the eventClass and eventID to determine if every event is allowed to be sent from this application to the target.

Applications can determine, without sending an AppleEvent to a target application, whether they are allowed to send AppleEvents to the target with this function. If askUserIfNeeded is true, and this application does not yet have permission to send AppleEvents to the target, then the user will be asked if permission can be granted; if askUserIfNeeded is false and permission has not been granted, then errAEEventWouldRequireUserConsent (-1744) will be returned.
The target must refer to an already running application.

If the current application is permitted to send the given AppleEvent to the target, then noErr (0) will be

returned. If the current application is not permitted to send the event, errAEEventNotPermitted (-1743) will be returned. If the target application is not running, then procNotFound (-600) will be returned. If askUserIfNeeded is false, and this application is not yet permitted to send AppleEvents to the target, then errAEEventWouldRequireUserConsent (-1744) will be returned.

Mac OS X threading: Thread safe since version 10.14. Do not call this function on your main thread because it may take arbitrarily long to return if the user needs to be prompted for consent.

target: The address descriptor. Before calling AEDeterminePermissionToAutomateTarget, you set the descriptor to identify the target application for the Apple event. The target address descriptor must refer to a running application. If the target application is on another machine, then Remote AppleEvents must be enabled on that machine for the user.
theAEEventClass: The event class of the Apple event to determine permission for.
theAEEventID: The event ID of the Apple event to determine permission for.
askUserIfNeeded: a Boolean; if true, and if this application does not yet have permission to send events to the target application, then prompt the user to obtain permission. If false, do not prompt the user.

Plugin returns -1 if the function is not available, e.g. older MacOS versions.

### 12.8.15 execute as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Executes the receiver, compiling it first if it is not already compiled.
**Example:**

```
dim source as string = "tell Application ""iTunes"" to pause"
dim n as new NSAppleScriptMBS(source)
call n.execute
```

**Notes:**

error: Optional, on return, if an error occurs, an error information dictionary.
Returns the result of executing the event, or nil if an error occurs.
Any changes to property values caused by executing the script do not persist.
See also:

- 12.8.16 execute(byref error as dictionary) as NSAppleEventDescriptorMBS 3233

### 12.8.16 execute(byref error as dictionary) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Executes the receiver, compiling it first if it is not already compiled.
**Example:**

```
dim source as string = "tello Application ""iTunes"" to play"
dim error as dictionary
dim n as new NSAppleScriptMBS(source)
dim p as NSAppleEventDescriptorMBS = n.execute(Error)
if p <>nil then
MsgBox "OK"
else
MsgBox error.Lookup(n.NSAppleScriptErrorMessage,"unknown error")
end if
```

**Notes:**

error: Optional, on return, if an error occurs, an error information dictionary.
Returns the result of executing the event, or nil if an error occurs.
Any changes to property values caused by executing the script do not persist.
See also:

- 12.8.15 execute as NSAppleEventDescriptorMBS 3233

### 12.8.17 executeAppleEvent(event as NSAppleEventDescriptorMBS, byref error as dictionary) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Executes an Apple event in the context of the receiver, as a means of allowing the application to invoke a handler in the script.
**Notes:**

event: The Apple event to execute.
error: On return, if an error occurs, an error information dictionary.

Returns the result of executing the event, or nil if an error occurs.

Compiles the receiver before executing it if it is not already compiled.

Important: You cannot use this method to send Apple events to other applications.

### 12.8.18 executeSubroutine(Name as String, parameters() as NSAppleEventDescriptorMBS, byref error as dictionary) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 16.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Calls a subroutine in a script.
**Example:**

```
// our script

Dim CodeLines() as string

CodeLines.Append "on Add(Name1, Name2)"
CodeLines.Append "return Name1 & "" "" & Name2"
CodeLines.Append "end Add"

// now compile it
Dim a as new NSAppleScriptMBS(CodeLines)
Dim error as dictionary
Dim CompileOkay As Boolean = a.Compile(error)

if CompileOkay then

// script name and parameters
Dim ScriptFuncName As String = "Add"

Dim ScriptParams() As NSAppleEventDescriptorMBS
ScriptParams.Append NSAppleEventDescriptorMBS.descriptorWithString("Hello")
ScriptParams.Append NSAppleEventDescriptorMBS.descriptorWithString("World")

// bow run it
Dim p as NSAppleEventDescriptorMBS

p = a.executeSubroutine(ScriptFuncName, ScriptParams, Error)
if error = nil then
// show result
Dim ScriptResult As String = p.stringValue

MsgBox "ScriptResult:" + EndOfLine + EndOfLine + ScriptResult
else
MsgBox "Error running script." + _
EndOfLine + EndOfLine + _
error.Lookup(a.NSAppleScriptErrorMessage, "Unknown error") + _
EndOfLine + EndOfLine + _
error.Lookup(a.NSAppleScriptErrorBriefMessage, "Unknown error") + _
EndOfLine + EndOfLine + _
error.Lookup(a.NSAppleScriptErrorNumber, "Unknown error")
```

```
end if
else
// Compile Error
MsgBox "Error loading script." + _
EndOfLine + EndOfLine + _
error.Lookup(a.NSAppleScriptErrorMessage, "Unknown error") + _
EndOfLine + EndOfLine + _
error.Lookup(a.NSAppleScriptErrorBriefMessage, "Unknown error") + _
EndOfLine + EndOfLine + _
error.Lookup(a.NSAppleScriptErrorNumber, "Unknown error")
end if
```

**Notes:**

Similar to executeAppleEvent, but creates the apple event for you.

Name: The name of the subroutine to execute.
parameters: The parameters for the subroutine.
error: On return, if an error occurs, an error information dictionary.

Returns the result of executing the event, or nil if an error occurs.
Compiles the receiver before executing it if it is not already compiled.
Important: You cannot use this method to send Apple events to other applications.

### 12.8.19 NSAppleScriptErrorAppName as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys in the error dictionary.
**Notes:** Value for this key is a string that specifies the name of the application that generated the error.

### 12.8.20 NSAppleScriptErrorBriefMessage as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys in the error dictionary.
**Example:**

```
dim source as string = "tell application ""iTunes""""+EndOfLine+"pause"+EndOfLine+"end if"
dim n as new NSAppleScriptMBS(source)

dim error as Dictionary
if not n.compile(error) then
```

```
// shows error about missing tell where it found an if.
MsgBox error.Value(n.NSAppleScriptErrorBriefMessage)
end if
```

**Notes:** Value for this key is a string that provides a brief description of the error.

### 12.8.21 NSAppleScriptErrorMessage as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys in the error dictionary.
**Example:**

```
dim source as string = "tell application ""iTunes""""+EndOfLine+"pause"+EndOfLine+"end if"
dim n as new NSAppleScriptMBS(source)

dim error as Dictionary
if n.compile(error) then
MsgBox "OK"
else
// shows error about missing tell where it found an if.
MsgBox error.Value(n.NSAppleScriptErrorMessage)
end if
```

**Notes:** Value for this key is a NSRangeMBS object.

### 12.8.22 NSAppleScriptErrorNumber as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys in the error dictionary.
**Example:**

```
dim source as string = "tell application ""iTunes""""+EndOfLine+"pause"+EndOfLine+"end if"
dim n as new NSAppleScriptMBS(source)

dim error as Dictionary
if not n.compile(error) then
// error about missing tell where it found an if.
MsgBox error.Value(n.NSAppleScriptErrorNumber) // shows -2741
end if
```

**Notes:** Value for this key is a number that specifies the error number.

### 12.8.23 NSAppleScriptErrorRange as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys in the error dictionary.
**Example:**

```
dim source as string = "tell application ""iTunes""""+EndOfLine+"pause"+EndOfLine+"end if"
dim n as new NSAppleScriptMBS(source)

dim error as Dictionary
if not n.compile(error) then
// error about missing tell where it found an if.
dim r as NSRangeMBS = error.Value(n.NSAppleScriptErrorRange)
MsgBox r.String // { 36,2 } , the position of the if
end if
```

**Notes:** Value for this key is a string that supplies a detailed description of the error condition.

### 12.8.24 properties as string()

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries the names of all properties in the script.
**Example:**

```
dim s as String
dim a as NSAppleScriptMBS
dim i,c,cc as Integer
dim z,t as String

s=s+"property hello : ""Hallo Leute""""+chr(13)
s=s+"property just : ""Just a test""""+chr(13)
s=s+"display dialog hello"+chr(13)
s=s+"return just"+chr(13)

MsgBox "The script:"+chr(13)+s
a=new NSAppleScriptMBS(s)

// compile
```

```
call a.Compile

// show names
dim names() as string = a.properties
MsgBox Join(names,EndOfLine)

// query value
MsgBox a.valueDescriptorForProperty("hello").stringValue

// change value
dim o as NSAppleEventDescriptorMBS = NSAppleEventDescriptorMBS.descriptorWithString("just a test")
call a.setValueDescriptorForProperty("hello", o)

// and query again
MsgBox a.valueDescriptorForProperty("hello").stringValue
```

### 12.8.25 setValueDescriptorForProperty(propertyName as string, value as NSAppleEventDescriptorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets a property value.

### 12.8.26 valueDescriptorForProperty(propertyName as string) as NSAppleEventDescriptorMBS

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries a property value.

### 12.8.27 Properties

### 12.8.28 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal reference to the NSAppleScript object.
**Notes:** (Read and Write property)

### 12.8.29 isCompiled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a Boolean value that indicates whether the receiver's script has been compiled.
**Example:**

```
dim source as string = "tell Application ""iTunes"" to play"
dim n as new NSAppleScriptMBS(source)

MsgBox "isCompiled: "+str(n.isCompiled)

call n.compile

MsgBox "isCompiled: "+str(n.isCompiled)
```

**Notes:** (Read only property)

### 12.8.30 richTextSource as NSAttributedStringMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the syntax-highlighted source code of the receiver if the receiver has been compiled and its source code is available.
**Example:**

```
// init with some source
dim source as string = "tell Application ""iTunes"" to play"
dim n as new NSAppleScriptMBS(source)

// compile
call n.compile

// format text
dim richtext as NSAttributedStringMBS = n.richTextSource

if richtext = nil then
MsgBox "Failed to format source."
else
// write to RTF file
dim file as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim b as BinaryStream = file.CreateBinaryFile("")

b.Write richtext.RTF
b.close
```

```
file.Launch
end if
```

**Notes:**

Returns nil otherwise. It is possible for an instance of NSAppleScript that has been instantiated with Construtor to be a script for which the source code is not available, but is nonetheless executable.
(Read only property)

### 12.8.31 source as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the script source for the receiver.
**Notes:**

Returns the script source code of the receiver if it is available, "" otherwise.

It is possible for an NSAppleScript that has been instantiated with Constructor to be a script for which the source code is not available but is nonetheless executable.
(Read only property)

## 12.9 class OSALanguageInstanceMBS

### 12.9.1 class OSALanguageInstanceMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The class for a language instance.

### 12.9.2 Methods

### 12.9.3 Constructor(language as OSALanguageMBS)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new language instance with given language.

### 12.9.4 languageInstanceWithLanguage(language as OSALanguageMBS) as OSALanguageInstanceMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new language instance with given language.

### 12.9.5 richTextFromDescriptor(descriptor as NSAppleEventDescriptorMBS) as NSAttributedStringMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Get source text for a descriptor using the language instance for context.

### 12.9.6 Properties

### 12.9.7 componentInstance as Integer

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The component instance handle.
**Notes:**

If this is the shared instance for the language, this is the same as the language's component instance.

(Read only property)

### 12.9.8 defaultTarget as NSAppleEventDescriptorMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The default target application for Apple event sending.
**Notes:**

It also establishes the default target from which terminologies come. It is effectively like having an AppleScript "tell" statement around the entire program. When nil, the default target is the current application.
(Read and Write property)

### 12.9.9 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal object handle.
**Notes:** (Read and Write property)

### 12.9.10 language as OSALanguageMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The language for this instance.
**Notes:** (Read only property)

## 12.10 class OSALanguageMBS

### 12.10.1 class OSALanguageMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The class for a language.

### 12.10.2 Methods

### 12.10.3 availableLanguages as OSALanguageMBS()

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Queries available languages.
**Notes:** For 32-bit apps this is just AppleScript, but 64-bit apps see more entries.

### 12.10.4 Constructor(ComponentHandle as Integer)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new object with given component handle.

### 12.10.5 defaultLanguage as OSALanguageMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The default language.
**Example:**

```
dim l as OSALanguageMBS = OSALanguageMBS.defaultLanguage
MsgBox l.Name+EndOfLine+l.Manufacturer+EndOfLine+l.Info
```

### 12.10.6 languageForName(name as String) as OSALanguageMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Finds language for given name.
**Example:**

```
dim l as OSALanguageMBS = OSALanguageMBS.languageForName("AppleScript")
MsgBox l.Name
```

### 12.10.7 languageForScriptDataDescriptor(Descriptor as NSAppleEventDescriptorMBS) as OSALanguageMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Queries language for an Apple Event descriptor.

### 12.10.8 setDefaultLanguage(Language as OSALanguageMBS)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** sets the default language.

### 12.10.9 Properties

### 12.10.10 componentInstance as Integer

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Queries component instance handle.
**Notes:** (Read only property)

### 12.10.11 Features as Integer

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The language features.
**Notes:** (Read only property)

### 12.10.12 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 12.10.13 Info as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Queries info string.
**Example:**

```
dim l as OSALanguageMBS = OSALanguageMBS.defaultLanguage
MsgBox l.Name+EndOfLine+l.Manufacturer+EndOfLine+l.Info
```

**Notes:** (Read only property)

### 12.10.14 isThreadSafe as Boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether this language is thread safe.
**Example:**

```
dim l as OSALanguageMBS = OSALanguageMBS.defaultLanguage
MsgBox str(l.isThreadSafe)
```

**Notes:** (Read only property)

### 12.10.15 Manufacturer as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The manufacturer of the language.
**Example:**

```
dim l as OSALanguageMBS = OSALanguageMBS.defaultLanguage
MsgBox l.Name+EndOfLine+l.Manufacturer+EndOfLine+l.Info
```

**Notes:** (Read only property)

### 12.10.16 Name as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The name of the language.
**Example:**

```
dim l as OSALanguageMBS = OSALanguageMBS.defaultLanguage
MsgBox l.Name+EndOfLine+l.Manufacturer+EndOfLine+l.Info
```

**Notes:** (Read only property)

### 12.10.17 sharedLanguageInstance as OSALanguageInstanceMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The shared language instance if available.
**Notes:** (Read only property)

### 12.10.18 SubType as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The subtype.
**Example:**

```
dim l as OSALanguageMBS = OSALanguageMBS.defaultLanguage
MsgBox l.type+EndOfLine+l.SubType
```

**Notes:** (Read only property)

### 12.10.19 Type as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The type code.
**Example:**

```
dim l as OSALanguageMBS = OSALanguageMBS.defaultLanguage
MsgBox l.type+EndOfLine+l.SubType
```

**Notes:** (Read only property)

### 12.10.20 version as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The version of this language.
**Example:**

```
dim l as OSALanguageMBS = OSALanguageMBS.languageForName("AppleScript")
MsgBox l.version
```

**Notes:** (Read only property)

### 12.10.21 Constants

### 12.10.22 OSASupportsAECoercion = 8

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the feature constants.
**Notes:** Supports Apple Event coercion

### 12.10.23 OSASupportsAESending = 16

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the feature constants.
**Notes:** Supports Apple Event sending

### 12.10.24 OSASupportsCompiling = 2

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the feature constants.
**Notes:** Supports Compiling

### 12.10.25 OSASupportsConvenience = 64

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the feature constants.
**Notes:** Supports Convenience

### 12.10.26 OSASupportsDialects = 128

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the feature constants.
**Notes:** Supports Dialects

### 12.10.27 OSASupportsEventHandling = 256

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the feature constants.
**Notes:** Supports Event handling

### 12.10.28 OSASupportsGetSource = 4

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the feature constants.
**Notes:** Supports getting source

### 12.10.29 OSASupportsRecording = 32

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the feature constants.
**Notes:** Supports Recording

## 12.11 class OSAScriptControllerMBS

### 12.11.1 class OSAScriptControllerMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The script controller.

### 12.11.2 Methods

### 12.11.3 compileScript

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Compiles the script.

### 12.11.4 Constructor

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The constructor.

### 12.11.5 recordScript

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Records a script.

### 12.11.6 runScript

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Runs current script.

### 12.11.7 stopScript

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Stops the current script.

### 12.11.8 Properties

### 12.11.9 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 12.11.10 isCompiling as Boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether the view is currently compiling a script.
**Notes:** (Read only property)

### 12.11.11 language as OSALanguageMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The language to use.
**Notes:** (Read and Write property)

### 12.11.12 resultView as NSTextViewMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The view to show result of script run.
**Notes:** (Read and Write property)

### 12.11.13 script as OSAScriptMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The current script.
**Notes:** (Read and Write property)

### 12.11.14 scriptState as Integer

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The current script state.
**Notes:**

Can be OSAScriptStopped, OSAScriptRunning or OSAScriptRecording.
(Read only property)

### 12.11.15 scriptView as OSAScriptViewMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The script view for this controller.
**Notes:** (Read and Write property)

### 12.11.16 Constants

### 12.11.17 OSAScriptRecording = 2

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** The script state.
**Notes:** Script is recording.

### 12.11.18 OSAScriptRunning = 1

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** The script state.
**Notes:** Script is running.

### 12.11.19 OSAScriptStopped = 0

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** The script state.
**Notes:** Script is stopped.

## 12.12 control OSAScriptControlMBS

### 12.12.1 control OSAScriptControlMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The Xojo control for a OSAScriptView.
**Notes:**

This control embeds a special OSAScriptView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

### 12.12.2 Blog Entries

- New desktop controls

### 12.12.3 Blog Entries

- New desktop controls

### 12.12.4 Properties

### 12.12.5 AcceptTabs as Boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether the control should accept tab keys.
**Notes:**

If true, the plugin will not forward the tab keydown/keyup events to Xojo, because Xojo would do switch to next control.
(Read and Write property)

### 12.12.6 Scrollview as Variant

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The scrollview for this textview.
**Notes:** (Read only property)

### 12.12.7 View as OSAScriptViewMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The view used in the control.
**Notes:**

Use this object to set more options on the control.
(Read only property)

### 12.12.8 Events

### 12.12.9 BoundsChanged

MBS MacExtras Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 12.12.10 EnableMenuItems

MBS MacExtras Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event where you can enable menu items.

### 12.12.11 FrameChanged

MBS MacExtras Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 12.12.12 GotFocus

MBS MacExtras Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** The control itself got focus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 12.12.13 LostFocus

MBS MacExtras Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:** The control lost focus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 12.12.14 MenuAction(HitItem as MenuItem) As Boolean

MBS MacExtras Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 12.12.15 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacExtras Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control's region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 12.12.16 MouseDrag(x as Integer, y as Integer)

MBS MacExtras Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 12.12.17 MouseUp(x as Integer, y as Integer)

MBS MacExtras Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 12.12.18 ScaleFactorChanged(NewFactor as Double)

MBS MacExtras Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

### 12.12.19 shouldChangeTextInRange(affectedCharRange as NSRangeMBS, replacementString as string) as boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** Sent when a text view needs to determine if text in a specified range should be changed.
**Notes:**

affectedCharRange: The range of characters to be replaced.
replacementString: The characters that will replace the characters in affectedCharRange; nil if only text attributes are being changed.

Return true to allow the replacement, or false to reject the change.

### 12.12.20 textDidBeginEditing

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** Informs you that the text object has begun editing (that the user has begun changing it).

### 12.12.21 textDidChange

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** Informs you that the text object has changed its characters or formatting attributes.

### 12.12.22 textDidEndEditing

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** Informs you that the text object has finished editing (that it has resigned first responder status).

### 12.12.23 textShouldBeginEditing as boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** Invoked when a text object begins to change its text, this method requests permission to begin editing.
**Notes:** If the delegate returns false, the text object proceeds to make changes. If the delegate returns true, the text object abandons the editing operation. This method is also invoked when the user drags and drops a file onto the text object.

### 12.12.24 textShouldEndEditing as boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** Invoked from a text object's implementation of resignFirstResponder, this method requests permission to end editing.
**Notes:** If the delegate returns false, the text object proceeds to finish editing and resign first responder status. If the delegate returns true, the text object selects all of its text and remains the first responder.

### 12.12.25 textViewDidChangeSelection

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: .

**Function:** Sent when the selection changes in the text view.

## 12.13 class OSAScriptMBS

### 12.13.1 class OSAScriptMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The class for Open Scripting Architecture.

### 12.13.2 Methods

### 12.13.3 compile(byref error as dictionary) as boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Compiles the script.

### 12.13.4 compiledDataForType(type as string, options as Integer, byref error as dictionary) as MemoryBlock

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Compile data for a given type and options.

### 12.13.5 Constructor(Data as MemoryBlock, byref error as dictionary)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates new script from compiled data.
See also:

- 12.13.6 Constructor(Data as MemoryBlock, url as string, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.7 Constructor(Data as NSAppleEventDescriptorMBS, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.8 Constructor(File as FolderItem, byref error as dictionary) 3260
- 12.13.9 Constructor(File as FolderItem, language as OSALanguageMBS, byref error as dictionary) 3261
- 12.13.11 Constructor(Source as String) 3262
- 12.13.12 Constructor(Source as String, Language as OSALanguageMBS) 3263

- 12.13.13 Constructor(Source as String, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer) 3263
- 12.13.14 Constructor(URL as String, byref error as dictionary) 3264
- 12.13.15 Constructor(URL as String, language as OSALanguageMBS, byref error as dictionary) 3264
- 12.13.16 Constructor(URL as String, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3265

### 12.13.6 Constructor(Data as MemoryBlock, url as string, storageOptions as Integer, byref error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates new script from compiled data.
See also:

- 12.13.5 Constructor(Data as MemoryBlock, byref error as dictionary) 3258
- 12.13.7 Constructor(Data as NSAppleEventDescriptorMBS, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.8 Constructor(File as FolderItem, byref error as dictionary) 3260
- 12.13.9 Constructor(File as FolderItem, language as OSALanguageMBS, byref error as dictionary) 3261
- 12.13.10 Constructor(File as FolderItem, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3261
- 12.13.11 Constructor(Source as String) 3262

- 12.13.15 Constructor(URL as String, language as OSALanguageMBS, byref error as dictionary) 3264
- 12.13.16 Constructor(URL as String, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3265

### 12.13.7 Constructor(Data as NSAppleEventDescriptorMBS, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates new script from data.
See also:

- 12.13.5 Constructor(Data as MemoryBlock, byref error as dictionary) 3258
- 12.13.6 Constructor(Data as MemoryBlock, url as string, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.8 Constructor(File as FolderItem, byref error as dictionary) 3260
- 12.13.9 Constructor(File as FolderItem, language as OSALanguageMBS, byref error as dictionary) 3261
- 12.13.10 Constructor(File as FolderItem, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3261
- 12.13.11 Constructor(Source as String) 3262
- 12.13.12 Constructor(Source as String, Language as OSALanguageMBS) 3263
- 12.13.13 Constructor(Source as String, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer) 3263
- 12.13.14 Constructor(URL as String, byref error as dictionary) 3264
- 12.13.16 Constructor(URL as String, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3265

### 12.13.8 Constructor(File as FolderItem, byref error as dictionary)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates new script from file.
See also:

- 12.13.6 Constructor(Data as MemoryBlock, url as string, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.7 Constructor(Data as NSAppleEventDescriptorMBS, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.9 Constructor(File as FolderItem, language as OSALanguageMBS, byref error as dictionary) 3261
- 12.13.10 Constructor(File as FolderItem, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3261
- 12.13.11 Constructor(Source as String) 3262
- 12.13.12 Constructor(Source as String, Language as OSALanguageMBS) 3263
- 12.13.13 Constructor(Source as String, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer) 3263
- 12.13.14 Constructor(URL as String, byref error as dictionary) 3264
- 12.13.15 Constructor(URL as String, language as OSALanguageMBS, byref error as dictionary) 3264
- 12.13.16 Constructor(URL as String, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3265

### 12.13.9 Constructor(File as FolderItem, language as OSALanguageMBS, byref error as dictionary)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates new script from file.
See also:

- 12.13.5 Constructor(Data as MemoryBlock, byref error as dictionary) 3258
- 12.13.7 Constructor(Data as NSAppleEventDescriptorMBS, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.8 Constructor(File as FolderItem, byref error as dictionary) 3260
- 12.13.10 Constructor(File as FolderItem, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3261
- 12.13.11 Constructor(Source as String) 3262
- 12.13.12 Constructor(Source as String, Language as OSALanguageMBS) 3263
- 12.13.13 Constructor(Source as String, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer) 3263
- 12.13.14 Constructor(URL as String, byref error as dictionary) 3264
- 12.13.15 Constructor(URL as String, language as OSALanguageMBS, byref error as dictionary) 3264
- 12.13.16 Constructor(URL as String, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3265

### 12.13.10 Constructor(File as FolderItem, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates new script from file.
See also:

- 12.13.5 Constructor(Data as MemoryBlock, byref error as dictionary) 3258
- 12.13.6 Constructor(Data as MemoryBlock, url as string, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.7 Constructor(Data as NSAppleEventDescriptorMBS, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.8 Constructor(File as FolderItem, byref error as dictionary) 3260
- 12.13.9 Constructor(File as FolderItem, language as OSALanguageMBS, byref error as dictionary) 3261

- 12.13.11 Constructor(Source as String) 3262
- 12.13.12 Constructor(Source as String, Language as OSALanguageMBS) 3263
- 12.13.13 Constructor(Source as String, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer) 3263
- 12.13.15 Constructor(URL as String, language as OSALanguageMBS, byref error as dictionary) 3264
- 12.13.16 Constructor(URL as String, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3265

### 12.13.11 Constructor(Source as String)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates new script from source code.
**Example:**

```
dim s as new OSAScriptMBS("display dialog ""Hello""")
MsgBox s.source
```

See also:

- 12.13.5 Constructor(Data as MemoryBlock, byref error as dictionary) 3258
- 12.13.6 Constructor(Data as MemoryBlock, url as string, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.8 Constructor(File as FolderItem, byref error as dictionary) 3260
- 12.13.9 Constructor(File as FolderItem, language as OSALanguageMBS, byref error as dictionary) 3261
- 12.13.10 Constructor(File as FolderItem, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3261
- 12.13.12 Constructor(Source as String, Language as OSALanguageMBS) 3263
- 12.13.13 Constructor(Source as String, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer) 3263
- 12.13.14 Constructor(URL as String, byref error as dictionary) 3264
- 12.13.15 Constructor(URL as String, language as OSALanguageMBS, byref error as dictionary) 3264
- 12.13.16 Constructor(URL as String, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3265

### 12.13.12 Constructor(Source as String, Language as OSALanguageMBS)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates new script from source code.
See also:

- 12.13.5 Constructor(Data as MemoryBlock, byref error as dictionary) 3258
- 12.13.6 Constructor(Data as MemoryBlock, url as string, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.7 Constructor(Data as NSAppleEventDescriptorMBS, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.8 Constructor(File as FolderItem, byref error as dictionary) 3260
- 12.13.9 Constructor(File as FolderItem, language as OSALanguageMBS, byref error as dictionary) 3261
- 12.13.10 Constructor(File as FolderItem, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3261
- 12.13.11 Constructor(Source as String) 3262
- 12.13.13 Constructor(Source as String, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer) 3263
- 12.13.14 Constructor(URL as String, byref error as dictionary) 3264
- 12.13.15 Constructor(URL as String, language as OSALanguageMBS, byref error as dictionary) 3264

### 12.13.13 Constructor(Source as String, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates new script from source code.
See also:

- 12.13.5 Constructor(Data as MemoryBlock, byref error as dictionary) 3258
- 12.13.6 Constructor(Data as MemoryBlock, url as string, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.7 Constructor(Data as NSAppleEventDescriptorMBS, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.8 Constructor(File as FolderItem, byref error as dictionary) 3260
- 12.13.9 Constructor(File as FolderItem, language as OSALanguageMBS, byref error as dictionary) 3261
- 12.13.11 Constructor(Source as String) 3262

- 12.13.12 Constructor(Source as String, Language as OSALanguageMBS) 3263
- 12.13.14 Constructor(URL as String, byref error as dictionary) 3264
- 12.13.15 Constructor(URL as String, language as OSALanguageMBS, byref error as dictionary) 3264
- 12.13.16 Constructor(URL as String, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3265

### 12.13.14 Constructor(URL as String, byref error as dictionary)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates new script from file.
See also:

- 12.13.6 Constructor(Data as MemoryBlock, url as string, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.7 Constructor(Data as NSAppleEventDescriptorMBS, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.8 Constructor(File as FolderItem, byref error as dictionary) 3260
- 12.13.9 Constructor(File as FolderItem, language as OSALanguageMBS, byref error as dictionary) 3261
- 12.13.10 Constructor(File as FolderItem, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3261
- 12.13.11 Constructor(Source as String) 3262
- 12.13.12 Constructor(Source as String, Language as OSALanguageMBS) 3263
- 12.13.13 Constructor(Source as String, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer) 3263
- 12.13.15 Constructor(URL as String, language as OSALanguageMBS, byref error as dictionary) 3264
- 12.13.16 Constructor(URL as String, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3265

### 12.13.15 Constructor(URL as String, language as OSALanguageMBS, byref error as dictionary)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates new script from file.
See also:

- 12.13.5 Constructor(Data as MemoryBlock, byref error as dictionary) 3258

- 12.13.6 Constructor(Data as MemoryBlock, url as string, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.7 Constructor(Data as NSAppleEventDescriptorMBS, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.9 Constructor(File as FolderItem, language as OSALanguageMBS, byref error as dictionary) 3261
- 12.13.10 Constructor(File as FolderItem, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3261
- 12.13.11 Constructor(Source as String) 3262
- 12.13.12 Constructor(Source as String, Language as OSALanguageMBS) 3263
- 12.13.13 Constructor(Source as String, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer) 3263
- 12.13.14 Constructor(URL as String, byref error as dictionary) 3264
- 12.13.16 Constructor(URL as String, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3265

### 12.13.16 Constructor(URL as String, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates new script from file.
See also:

- 12.13.5 Constructor(Data as MemoryBlock, byref error as dictionary) 3258
- 12.13.6 Constructor(Data as MemoryBlock, url as string, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.7 Constructor(Data as NSAppleEventDescriptorMBS, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3259
- 12.13.8 Constructor(File as FolderItem, byref error as dictionary) 3260
- 12.13.9 Constructor(File as FolderItem, language as OSALanguageMBS, byref error as dictionary) 3261
- 12.13.10 Constructor(File as FolderItem, languageInstance as OSALanguageInstanceMBS, storageOptions as Integer, byref error as NSErrorMBS) 3261
- 12.13.11 Constructor(Source as String) 3262
- 12.13.12 Constructor(Source as String, Language as OSALanguageMBS) 3263
- 12.13.13 Constructor(Source as String, URL as String, LanguageInstance as OSALanguageInstanceMBS, storageOptions as Integer) 3263
- 12.13.15 Constructor(URL as String, language as OSALanguageMBS, byref error as dictionary) 3264

### 12.13.17 copy as OSAScriptMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a copy of the script.

### 12.13.18 execute(byref error as dictionary) as NSAppleEventDescriptorMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Executes the script.
**Example:**

```
dim s as new OSAScriptMBS("display dialog ""Hello""")
dim d as Dictionary
call s.execute(d)
```

### 12.13.19 executeAndReturnDisplayValue(byref displayValue as NSAttributedStringMBS, byref error as dictionary) as NSAppleEventDescriptorMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Executes the script and returns the display value of result.

### 12.13.20 executeAppleEvent(event as NSAppleEventDescriptorMBS, byref error as dictionary) as NSAppleEventDescriptorMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Executes an apple event in the script.

### 12.13.21 executeHandlerWithName(Name as String, arguments() as String, byref error as dictionary) as NSAppleEventDescriptorMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Executes an event handler in the script.

### 12.13.22 OSAScriptErrorAppAddressKey as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Error Dictionary key for error app address.

### 12.13.23 OSAScriptErrorAppNameKey as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for the error dictionary.
**Notes:** String containing the target application name

### 12.13.24 OSAScriptErrorBriefMessageKey as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for the error dictionary.
**Example:**

```
dim s as new OSAScriptMBS("display dialXXX ""Hello""")
dim d as Dictionary
call s.compile(d)

MsgBox d.Value(OSAScriptMBS.OSAScriptErrorBriefMessageKey)
```

**Notes:** String containing just the failure; may or may not be the same value as NSLocalizedFailureReason-ErrorKey

### 12.13.25 OSAScriptErrorExpectedTypeKey as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for the error dictionary.
**Notes:** Should be NSAppleEventDescriptorMBS object in dictionary.

### 12.13.26 OSAScriptErrorMessageKey as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for the error dictionary.
**Example:**

```
dim s as new OSAScriptMBS("display dialXXX ""Hello""")
dim d as Dictionary
call s.compile(d)

MsgBox d.Value(OSAScriptMBS.OSAScriptErrorMessageKey)
```

**Notes:** String containing entire error message; may or may not be the same value as NSLocalizedDescriptionKey.

### 12.13.27 OSAScriptErrorNumberKey as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for the error dictionary.
**Example:**

```
dim s as new OSAScriptMBS("display dialXXX ""Hello""")
dim d as Dictionary
call s.compile(d)

// shows -2740
MsgBox d.Value(OSAScriptMBS.OSAScriptErrorNumberKey)
```

**Notes:** Number containing an OSAError; may or may not be the same value as the NSError code

### 12.13.28 OSAScriptErrorOffendingObjectKey as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for the error dictionary.
**Notes:** Should be NSAppleEventDescriptorMBS object in dictionary.

### 12.13.29 OSAScriptErrorPartialResultKey as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for the error dictionary.
**Notes:** Should be NSAppleEventDescriptorMBS object in dictionary.

### 12.13.30 OSAScriptErrorRangeKey as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for the error dictionary.
**Example:**

```
dim s as new OSAScriptMBS("display dialXXX ""Hello""")
dim d as Dictionary
call s.compile(d)

// shows { 0, 15 }
MsgBox d.Value(OSAScriptMBS.OSAScriptErrorRangeKey)
```

**Notes:** Value containing an range indicating the range of source characters where the error occurred

### 12.13.31 OSAStorageApplicationBundleType as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the storage types.
**Notes:** Application Bundle

### 12.13.32 OSAStorageApplicationType as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the storage types.
**Notes:** Application file

### 12.13.33 OSAStorageScriptBundleType as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the storage types.
**Notes:** Script bundle file

### 12.13.34 OSAStorageScriptType as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the storage types.
**Notes:** Script file

### 12.13.35 OSAStorageTextType as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the storage types.
**Notes:** Text file

### 12.13.36 richTextFromDescriptor(descriptor as NSAppleEventDescriptorMBS) as NSAttributedStringMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Queries rich text for an Appleevent descriptor.

### 12.13.37 scriptDataDescriptorWithContentsOfFile(file as FolderItem) as NSAppleEventDescriptorMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Reads script from file into AppleEventDescriptor.

### 12.13.38 scriptDataDescriptorWithContentsOfURL(URL as String) as NSAppleEventDescriptorMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Reads script from file into AppleEventDescriptor.

### 12.13.39 writeToFile(File as FolderItem, type as String, byref error as dictionary) as boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Writes script to a file.
See also:

- 12.13.40 writeToFile(File as FolderItem, type as String, storageOptions as Integer, byref error as dictionary) as boolean 3271

### 12.13.40 writeToFile(File as FolderItem, type as String, storageOptions as Integer, byref error as dictionary) as boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Writes script to a file.
See also:

- 12.13.39 writeToFile(File as FolderItem, type as String, byref error as dictionary) as boolean 3270

### 12.13.41 writeToURL(URL as String, type as String, byref error as dictionary) as boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Writes script to a file.
See also:

- 12.13.42 writeToURL(URL as String, type as String, storageOptions as Integer, byref error as dictionary) as boolean 3271

### 12.13.42 writeToURL(URL as String, type as String, storageOptions as Integer, byref error as dictionary) as boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Writes script to a file.
See also:

- 12.13.41 writeToURL(URL as String, type as String, byref error as dictionary) as boolean 3271

### 12.13.43 Properties

### 12.13.44 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 12.13.45 isCompiled as Boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Queries if script is compiled.
**Notes:** (Read only property)

### 12.13.46 language as OSALanguageMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The language of script.
**Example:**

```
dim s as new OSAScriptMBS("display dialog ""Hello""")
MsgBox s.language.Name
```

**Notes:** (Read and Write property)

### 12.13.47 languageInstance as OSALanguageInstanceMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The language instance of script.
**Notes:** (Read and Write property)

### 12.13.48 richTextSource as NSAttributedStringMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Queries rich text of script.
**Notes:** (Read only property)

### 12.13.49 Source as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The source code of script.
**Example:**

```
dim s as new OSAScriptMBS("display dialog ""Hello""")
MsgBox s.Source
```

**Notes:** (Read only property)

### 12.13.50 URL as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The URL if script has a solution.
**Notes:** (Read only property)

### 12.13.51 Constants

### 12.13.52 OSACompileIntoContext = 2

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the storage options.
**Notes:**

Compile in context.
May be used when getting compiled data.

### 12.13.53 OSADontSetScriptLocation = & h01000000

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the storage options.
**Notes:**

Set script location.
May be used when initing with a URL or fromURL.

### 12.13.54 OSANull = 0

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the storage options.
**Notes:** No option set.

### 12.13.55 OSAPreventGetSource = 1

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the storage options.
**Notes:**

Prevent user from getting source.
May be used when initing with a compiled script, writing or getting compiled data.

### 12.13.56 OSAShowStartupScreen = & h20000000

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the storage options.
**Notes:**

Show startup screen.
May be used when writing

### 12.13.57 OSAStayOpenApplet = & h10000000

MBS MacExtras Plugin, Plugin Version: 15.3.

**Function:** One of the storage options.
**Notes:**

Applet should stay open.
May be used when writing

## 12.14 class OSAScriptViewMBS

### 12.14.1 class OSAScriptViewMBS

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The class for a script view.
**Notes:** Subclass of the NSTextViewMBS class.

### 12.14.2 Methods

### 12.14.3 Constructor

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new text field with size 100/100 and position 0/0
**Example:**

```
dim t as new OSAScriptViewMBS
```

**Notes:** On success the handle property is not zero.
See also:

- 12.14.4 Constructor(Handle as Integer) 3275
- 12.14.5 Constructor(left as Double, top as Double, width as Double, height as Double) 3276

### 12.14.4 Constructor(Handle as Integer)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates an object based on the given OSAScriptView handle.
**Example:**

```
dim t as new OSAScriptViewMBS(0, 0, 100, 100)
dim v as new OSAScriptViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

**Notes:** The handle is casted to a OSAScriptView and the plugin retains this handle.
See also:

- 12.14.3 Constructor 3275

• 12.14.5 Constructor(left as Double, top as Double, width as Double, height as Double) 3276

### 12.14.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new script view with the given size and position.
**Example:**

```
dim x as new OSAScriptViewMBS(0, 0, 100, 100)
```

**Notes:** On success the handle property is not zero.
See also:

• 12.14.3 Constructor 3275

• 12.14.4 Constructor(Handle as Integer) 3275

### 12.14.6 Properties

### 12.14.7 indentsWrappedLines as Boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether to indent wrapped lines.
**Notes:** (Read and Write property)

### 12.14.8 indentWidth as Integer

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The indention width.
**Notes:** (Read and Write property)

### 12.14.9 source as String

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The source text of current script.
**Notes:** (Read and Write property)

### 12.14.10 tabWidth as Integer

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** The tab width.
**Notes:** (Read and Write property)

### 12.14.11 usesScriptAssistant as Boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether to use script assistant.
**Notes:** (Read and Write property)

### 12.14.12 usesTabs as Boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether to use tab character.
**Notes:** (Read and Write property)

### 12.14.13 wrapsLines as Boolean

MBS MacExtras Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

**Function:** Whether to wrap lines.
**Notes:** (Read and Write property)

# Chapter 13

# Archive

## 13.1 class ArchiveEntryMBS

### 13.1.1 class ArchiveEntryMBS

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an archive entry.
**Example:**

```
dim data as string = "Hello World test file. Hello World again."

dim e as new ArchiveEntryMBS
e.PathName = "Hello World.txt"
e.Size = lenb(data)
e.Permissions = & o0644
e.FileType = e.kFileTypeRegular
```

### 13.1.2 Blog Entries

- MBS Xojo Plugins, version 20.5pr6
- MBS Xojo Plugins, version 19.2pr7
- New Archive classes for handling zip and tar archives

### 13.1.3 Xojo Developer Magazine

- 19.4, page 81: Archives in Xojo, How to Use Zip Archives by Stefanie Juchmes

### 13.1.4 Blog Entries

- MBS Xojo Plugins, version 20.5pr6
- MBS Xojo Plugins, version 19.2pr7
- New Archive classes for handling zip and tar archives

### 13.1.5 Xojo Developer Magazine

- 19.4, page 81: Archives in Xojo, How to Use Zip Archives by Stefanie Juchmes

### 13.1.6 Methods

### 13.1.7 Clear

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears entry for later use.

### 13.1.8 ClearACL

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears access control lists.

### 13.1.9 ClearXAttr

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears extended attributes.

### 13.1.10 Clone as ArchiveEntryMBS

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a copy of the entry.
**Notes:** Does a deep copy; all of the strings are copied too.

### 13.1.11 Constructor

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new archive entry.
See also:

- 13.1.12 Constructor(Archive as ArchiverMBS) 3281

### 13.1.12 Constructor(Archive as ArchiverMBS)

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new archive entry for a given archive.
**Notes:** This will pick the character set from the archive.
See also:

- 13.1.11 Constructor 3281

### 13.1.13 Destructor

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 13.1.14 GetFFlags(byref FlagsSet as UInt64, byref FlagsClear as UInt64)

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries file flags.

### 13.1.15 SetFFlags(FlagsSet as UInt64, FlagsClear as UInt64)

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the file flags.

### 13.1.16 SetLink(link as string)

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the link.
**Notes:** Update only. For a symlink, update the destination. Otherwise, make the entry a hardlink and alter the destination for that.

### 13.1.17 UnsetATime

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unsets the last access timestamp.

### 13.1.18 UnsetBTime

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unsets the birth timestamp.

### 13.1.19 UnsetCTime

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unsets the last modification timestamp.

### 13.1.20 UnsetGName

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unsets the group name.

### 13.1.21 UnsetHardLink

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unset the hard link field.

### 13.1.22 UnsetMTime

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unsets the modification timestamp.

### 13.1.23 UnsetPathName

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unsets the pathname field.

### 13.1.24 UnsetSize

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unsets the size.

### 13.1.25 UnsetSymLink

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unsets the symbolic link field.

### 13.1.26 UnsetUName

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unsets the user name field.

### 13.1.27 Properties

### 13.1.28 ADateTime as DateTime

MBS Compression Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last access timestamp.
**Notes:**

For Xojo 2019r2 or newer.
(Read and Write property)

### 13.1.29 ATime as Date

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last access timestamp.
**Notes:** (Read and Write property)

### 13.1.30 ATimeSet as Boolean

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether last access timestamp is set.
**Notes:** (Read only property)

### 13.1.31 BDateTime as DateTime

MBS Compression Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The birth timestamp.
**Notes:**

This is the creation time.
For Xojo 2019r2 or newer.
(Read and Write property)

### 13.1.32 BTime as Date

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The birth timestamp.
**Notes:**

This is the creation time.
(Read and Write property)

### 13.1.33 BTimeSet as Boolean

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the birth timestamp field is set.

**Notes:** (Read only property)

### 13.1.34 CDateTime as DateTime

MBS Compression Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The attribute modification timestamp.
**Notes:**

Last time an inode property was changed.
For Xojo 2019r2 or newer.
(Read and Write property)

### 13.1.35 CTime as Date

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The attribute modification timestamp.
**Notes:**

Last time an inode property was changed.
(Read and Write property)

### 13.1.36 CTimeSet as Boolean

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether last modification timestamp is set.
**Notes:** (Read only property)

### 13.1.37 Dev as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The device number.
**Notes:** (Read and Write property)

### 13.1.38 DevMajor as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The minor part of the dev field.
**Notes:** (Read and Write property)

### 13.1.39 DevMinor as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The major part of the dev field.
**Notes:** (Read and Write property)

### 13.1.40 DevSet as Boolean

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether dev is set.
**Notes:** (Read only property)

### 13.1.41 FFlags as String

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The file flags.
**Notes:** (Read and Write property)

### 13.1.42 FileName as String

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The file name.
**Notes:**

Taken from PathName property at runtime.
(Read only property)

### 13.1.43 FileType as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries file type.
**Example:**

```
dim e as new ArchiveEntryMBS
e.FileType = e.kFileTypeRegular
```

**Notes:**

Check the kFileType* constants.
(Read and Write property)

### 13.1.44 GID as Int64

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The group ID.
**Notes:** (Read and Write property)

### 13.1.45 GName as String

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The group name.
**Notes:** (Read and Write property)

### 13.1.46 Handle as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 13.1.47 HardLink as String

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Destination of the hardlink.
**Notes:** (Read and Write property)

### 13.1.48 INo as Int64

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The inode number.
**Notes:** (Read and Write property)

### 13.1.49 INo64 as Int64

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The inode number.
**Notes:** (Read and Write property)

### 13.1.50 INoSet as Boolean

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether inode number is set.
**Notes:** (Read only property)

### 13.1.51 IsDataEncrypted as Boolean

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether data is encrypted.
**Notes:** (Read and Write property)

### 13.1.52 IsMetaDataEncrypted as Boolean

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether metadata is encrypted.
**Notes:** (Read and Write property)

### 13.1.53 MacMetadata as MemoryBlock

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Mac Metadata.
**Notes:**

Storage for Mac OS-specific AppleDouble metadata information. Apple-format tar files store a separate binary blob containing encoded metadata with ACL, extended attributes, etc. This provides a place to store that blob.
(Read and Write property)

### 13.1.54 MDateTime as DateTime

MBS Compression Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The modification timestamp.
**Notes:**

For Xojo 2019r2 or newer.
(Read and Write property)

### 13.1.55 Mode as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The permissions mode.
**Notes:** (Read and Write property)

### 13.1.56 ModeString as String

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The permissions mode as string.
**Notes:** (Read only property)

### 13.1.57 MTime as Date

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The modification timestamp.

**Notes:** (Read and Write property)

### 13.1.58 MTimeSet as Boolean

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the modification time stamp field is set.
**Notes:** (Read only property)

### 13.1.59 NLink as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of hardlinks.
**Notes:** (Read and Write property)

### 13.1.60 PathName as String

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Path in the archive.
**Example:**

```
dim e as new ArchiveEntryMBS
e.PathName = "Hello World.txt"
```

**Notes:**

Text encoding works partly.
Best to use only ASCII file paths.
(Read and Write property)

### 13.1.61 Permissions as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The permissions.
**Example:**

```
dim e as new ArchiveEntryMBS
e.Permissions = & o0644
```

**Notes:** (Read and Write property)

### 13.1.62 RDev as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The device ID (if special file).
**Notes:** (Read and Write property)

### 13.1.63 RDevMajor as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The major part of RDev field.
**Notes:** (Read and Write property)

### 13.1.64 RDevMinor as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The minor part of RDev field.
**Notes:** (Read and Write property)

### 13.1.65 Size as UInt64

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The size of the file.
**Notes:** (Read and Write property)

### 13.1.66 SizeSet as Boolean

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether size field is set.
**Notes:** (Read only property)

### 13.1.67 SourcePath as String

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Path on the disk for use.
**Notes:** (Read and Write property)

### 13.1.68 Stat as MemoryBlock

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get and set stat structure.
**Notes:**

Routines to bulk copy fields to/from a platform-native "struct stat."
Libarchive used to just store a struct stat inside of each archive entry object, but this created issues when trying to manipulate archives on systems different than the ones they were created on.
(Read and Write property)

### 13.1.69 SymLink as String

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Destination of the symbolic link..
**Notes:** (Read and Write property)

### 13.1.70 SymlinkType as Integer

MBS Compression Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of symlink for this entry.
**Notes:** (Read and Write property)

### 13.1.71 UID as UInt64

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The user ID.
**Notes:** (Read and Write property)

### 13.1.72 UName as String

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The user name.
**Notes:** (Read and Write property)

### 13.1.73 XAttrCount as Integer

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of extended attributes for this entry.
**Notes:** (Read only property)

### 13.1.74 Constants

### 13.1.75 kFileTypeBlock = & o0060000

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the file type constants.
**Notes:** Block device.

### 13.1.76 kFileTypeCharacter = & o0020000

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the file type constants.
**Notes:** Character device.

### 13.1.77 kFileTypeDirectory = & o0040000

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the file type constants.
**Notes:** Directory

### 13.1.78 kFileTypeIFO = & o0010000

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the file type constants.
**Notes:** Named pipe (fifo)

### 13.1.79 kFileTypeLink = & o0120000

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the file type constants.
**Notes:** Symbolic link

### 13.1.80 kFileTypeMT = & o0170000

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the file type constants.
**Notes:** MT?

### 13.1.81 kFileTypeRegular = & o0100000

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the file type constants.
**Notes:** Regular file.

### 13.1.82 kFileTypeSOCK = & o0140000

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the file type constants.
**Notes:** Socket

### 13.1.83 kSymlinkTypeDirectory = 2

MBS Compression Plugin, Plugin Version: 20.0.

**Function:** One of the symlink type constants.
**Notes:** Symlink is a directory.

### 13.1.84 kSymlinkTypeFile = 1

MBS Compression Plugin, Plugin Version: 20.0.

**Function:** One of the symlink type constants.
**Notes:** Symlink is a file.

### 13.1.85 kSymlinkTypeUndefined = 0

MBS Compression Plugin, Plugin Version: 20.0.

**Function:** One of the symlink type constants.
**Notes:** Symlink is of unknown type.

## 13.2 class ArchiveReadDiskMBS

### 13.2.1 class ArchiveReadDiskMBS

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The archive subclass class for reading files from disk.
**Notes:** Subclass of the ArchiveReaderMBS class.

### 13.2.2 Blog Entries

- MBS Xojo Plugins, version 20.3pr4
- MBS Xojo Plugins, version 18.6pr3

### 13.2.3 Blog Entries

- MBS Xojo Plugins, version 20.3pr4
- MBS Xojo Plugins, version 18.6pr3

### 13.2.4 Methods

### 13.2.5 CanDescend as Boolean

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether you can descend into current item.
**Notes:** True if current item is a folder.

### 13.2.6 Constructor

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Tbe constructor.

### 13.2.7 CurrentFileSystem as Integer

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries ID for current file system.
**Notes:** Lasterror is set.

### 13.2.8 CurrentFileSystemIsRemote as Integer

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether current file system is remote.
**Notes:** Lasterror is set.

### 13.2.9 CurrentFileSystemIsSynthetic as Integer

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether current file system is synthetic.
**Notes:** Lasterror is set.

### 13.2.10 Descend

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Request that current entry be visited.
**Notes:**

If you invoke it on every directory, you'll get a physical traversal. This is ignored if the current entry isn't a directory or a link to a directory. So, if you invoke this on every returned path, you'll get a full logical traversal.
Lasterror is set.

### 13.2.11 Destructor

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.
**Notes:** Lasterror is set.

### 13.2.12 GroupName(ID as Int64) as String

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries group name for given ID.
**Notes:**

May invoke GroupLookup event.
Lasterror is set.

### 13.2.13 Open(Folder as FolderItem) as Boolean

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a folderitem.
**Notes:**

Returns true on success and false on errors.
Lasterror is set.
See also:

- 13.2.14 Open(Path as String) as Boolean 3298

### 13.2.14 Open(Path as String) as Boolean

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a file path.
**Notes:**

Returns true on success and false on errors.
Lasterror is set.
See also:

- 13.2.13 Open(Folder as FolderItem) as Boolean 3298

### 13.2.15 SetAccessTimeRestored

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Request that the access time of the entry visited by traversal be restored.
**Notes:** Lasterror is set.

### 13.2.16 SetStandardLookup

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets standard lookup for mapping user and group IDs to names.
**Notes:**

”Standard” implementation uses getpwuid_r, getgrgid_r and caches the results for performance.
Lasterror is set.

### 13.2.17 SetSymlinkHybrid

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set to follow symlink initially, then not.
**Notes:** Lasterror is set.

### 13.2.18 SetSymlinkLogical

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets to follow all symlinks.
**Notes:** Lasterror is set.

### 13.2.19 SetSymlinkPhysical

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets to follow no symlinks.
**Notes:** Lasterror is set.

### 13.2.20 UserName(ID as Int64) as String

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries user name for given ID.
**Notes:**

May invoke UserLookup event.
Lasterror is set.

### 13.2.21 Properties

### 13.2.22 BehaviorFlags as Integer

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Select optional behavior.
**Notes:**

See kBehavior constants.
Setting the value sets Lasterror.

By default MBS Plugin sets kBehaviorRestoreAccessTime, kBehaviorRestoreHonorNoDump, kBehaviorRestoreMacCopyFile and kBehaviorRestoreNoTraverseMounts.
(Read and Write property)

### 13.2.23 Events

### 13.2.24 GroupLookup(ID as Int64) as String

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event to let you lookup manually the name for a group ID.

### 13.2.25 UserLookup(ID as Int64) as String

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event to let you lookup manually the name for a group ID.

### 13.2.26 Constants

### 13.2.27 kBehaviorRestoreAccessTime = 1

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the behavior flags.
**Notes:**

Request that the access time of the entry visited by traversal be restored.
This is the same as SetAccessTimeRestored.

### 13.2.28 kBehaviorRestoreHonorNoDump = 2

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the behavior flags.
**Notes:** Default: Do not skip an entry which has nodump flags.

### 13.2.29 kBehaviorRestoreMacCopyFile = 4

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the behavior flags.
**Notes:** Default: Skip a mac resource fork file whose prefix is "._" because of using copyfile.

### 13.2.30 kBehaviorRestoreNoACL = 32

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the behavior flags.
**Notes:** Default: ACLs are read from disk.

### 13.2.31 kBehaviorRestoreNoFFlags = 64

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the behavior flags.
**Notes:** Default: File flags are read from disk.

### 13.2.32 kBehaviorRestoreNoTraverseMounts = 8

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the behavior flags.
**Notes:** Default: Traverse mount points.

### 13.2.33 kBehaviorRestoreNoXAttr = 16

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the behavior flags.
**Notes:** Default: Xattrs are read from disk.

## 13.3 class ArchiveReaderMBS

### 13.3.1 class ArchiveReaderMBS

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class to read archive content.
**Example:**

```
dim a as new ArchiveReaderMBS
a.SupportFilterAll
a.SupportFormatAll

// open file

dim f as FolderItem = SpecialFolder.Desktop.Child("test.zip")

if not a.OpenFile(f) then
Break // path invalid?
end if

dim e as ArchiveEntryMBS = a.NextHeader
while e <>nil

print e.PathName

e = a.NextHeader
wend
```

**Notes:**

Can be used to read zip, tar and other image formats.
Subclass of the ArchiverMBS class.

### 13.3.2 Blog Entries

- MBS Xojo Plugins, version 18.6pr3
- New Archive classes for handling zip and tar archives

### 13.3.3 Blog Entries

- MBS Xojo Plugins, version 18.6pr3
- New Archive classes for handling zip and tar archives

### 13.3.4 Methods

### 13.3.5 AddPassphrase(passphrase as string)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a password to the archive.

### 13.3.6 AppendFilter(Filter as Integer)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a filter to the reader manually.
**Notes:**

This is useful to bypass the bidding process when the format and filters to use is known in advance.
Lasterror property is set.

### 13.3.7 AppendFilterProgram(Program as String)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a filter program.
**Notes:** Lasterror property is set.

### 13.3.8 Close

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Close the file and release most resources.
**Notes:** Lasterror property is set.

### 13.3.9 Constructor

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:**

To create an archive:
1) Ask Constructor for an archive writer object.
2) Set any global properties. In particular, you should set the compression and format to use.

3) Call one of the open methods to open the file (most people will use OpenFile, which provide convenient canned I/O callbacks for you).
4) For each entry, construct an appropriate ArchiveEntryMBS object, call WriteHeader to write the header, call WriteData methods to write the entry data.
5) call close method to close the output

### 13.3.10 Destructor

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 13.3.11 Extract(Entry as ArchiveEntryMBS, DestArchive as ArchiverMBS)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience function to recreate the current entry (whose header has just been read) on disk.
**Notes:**

This does quite a bit more than just copy data to disk. It also:

- Creates intermediate directories as required.
- Manages directory permissions: non-writable directories will be initially created with write permission enabled; when the archive is closed, dir permissions are edited to the values specified in the archive.
- Checks hardlinks: hardlinks will not be extracted unless the linked-to file was also extracted within the same session. (TODO)

Lasterror property is set.
See also:

- 13.3.12 Extract(Entry as ArchiveEntryMBS, flags as Integer = & h123F7) 3304

### 13.3.12 Extract(Entry as ArchiveEntryMBS, flags as Integer = & h123F7)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience function to recreate the current entry (whose header has just been read) on disk.
**Notes:**

This does quite a bit more than just copy data to disk. It also:

- Creates intermediate directories as required.
- Manages directory permissions: non-writable directories will be initially created with write permission enabled; when the archive is closed, dir permissions are edited to the values specified in the archive.
- Checks hardlinks: hardlinks will not be extracted unless the linked-to file was also extracted within the same session. (TODO)

The "flags" argument selects optional behavior, 'OR' the flags you want.
Lasterror property is set.
See also:

- 13.3.11 Extract(Entry as ArchiveEntryMBS, DestArchive as ArchiverMBS) 3304

### 13.3.13 NextHeader(entry as ArchiveEntryMBS = nil) as ArchiveEntryMBS

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads next header.
**Notes:**

If you pass in an existing entry, we can recycle the object.
Returns nil in case of error.
Lasterror property is set.

### 13.3.14 OpenData(Data as String) as Boolean

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens an archive from memory.
**Notes:**

Returns true on success and false on failure.
Lasterror property is set.

### 13.3.15 OpenFile(File as FolderItem, BlockSize as Integer = 10240) as Boolean

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens an archive from a folderitem.
**Notes:**

Returns true on success and false on failure.
Lasterror property is set.
See also:

• 13.3.16 OpenFile(Files() as FolderItem, BlockSize as Integer = 10240) as Boolean 3306

### 13.3.16 OpenFile(Files() as FolderItem, BlockSize as Integer = 10240) as Boolean

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Use this for reading multivolume files by filenames.
**Notes:**

Returns true on success and false on errors.
Lasterror property is set.
See also:

• 13.3.15 OpenFile(File as FolderItem, BlockSize as Integer = 10240) as Boolean 3305

### 13.3.17 OpenPath(Path as String, BlockSize as Integer = 10240) as Boolean

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens the file at the given path.
**Notes:** Lasterror property is set.
See also:

• 13.3.18 OpenPath(Paths() as String, BlockSize as Integer = 10240) as Boolean 3306

### 13.3.18 OpenPath(Paths() as String, BlockSize as Integer = 10240) as Boolean

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Use this for reading multivolume files by filenames.
**Notes:**

Returns true on success and false on errors.
Lasterror property is set.
See also:

• 13.3.17 OpenPath(Path as String, BlockSize as Integer = 10240) as Boolean 3306

### 13.3.19 ReadDataBlockMemory(byref offset as Int64) as MemoryBlock

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads next block of data.
**Notes:**

Size is given by archive reader used.
Offset is given so you know where you are in the file currently.
Data returned as new memory block.
Lasterror property is set.

A zero-copy version of archive_read_data that also exposes the file offset of each returned block. Note that the client has no way to specify the desired size of the block. The API does guarantee that offsets will be strictly increasing and that returned blocks will not overlap.

### 13.3.20 ReadDataBlockString(byref offset as Int64) as String

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads next block of data.
**Notes:**

Size is given by archive reader used.
Offset is given so you know where you are in the file currently.
Data returned as new string.
Lasterror property is set.

A zero-copy version of archive_read_data that also exposes the file offset of each returned block. Note that the client has no way to specify the desired size of the block. The API does guarantee that offsets will be strictly increasing and that returned blocks will not overlap.

### 13.3.21 ReadDataMemory(ByteCount as Integer) as MemoryBlock

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads data from current file into memoryblock.
**Notes:** Lasterror property is set.

### 13.3.22 ReadDataString(ByteCount as Integer) as String

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads data from current file into string.
**Notes:** Lasterror property is set.

### 13.3.23 Seek(Position as Int64, Mode as Integer = 0) as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Seek within the body of an entry.
**Notes:**

See kSeekSet, kSeekCur or kSeekEnd constants.
Returns new position.
Lasterror property is set.

### 13.3.24 SetExtractSkipFile(DeviceID as Int64, FileNo as Int64)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Record the dev/ino of a file that will not be written.
**Notes:**

This is generally set to the dev/ino of the archive being read.
Lasterror property is set.

### 13.3.25 SetFilterOption(Module as String, Option as String, Value as String)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Apply option to the filter only.
**Notes:** Lasterror property is set.

### 13.3.26 SetFormat(Format as Integer)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the format for the reader manually.
**Notes:**

This is useful to bypass the bidding process when the format and filters to use is known in advance.
Lasterror property is set.

### 13.3.27 SetFormatOption(Module as String, Option as String, Value as String)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Apply option to the format only.
**Notes:** Lasterror property is set.

### 13.3.28 SetOption(Module as String, Option as String, Value as String)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Apply option to both the format and the filter.
**Notes:** Lasterror property is set.

### 13.3.29 SetOptions(Options as String)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Apply option string to both the format and the filter.
**Notes:** Lasterror property is set.

### 13.3.30 Skip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Skips a file in the archive.

### 13.3.31 SupportFilterAll

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables all filters.
**Notes:** Lasterror property is set.

### 13.3.32 SupportFilterBZip2

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables bzip2 filter.
**Notes:** Lasterror property is set.

### 13.3.33 SupportFilterCompress

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables compress filter.
**Notes:** Lasterror property is set.

### 13.3.34 SupportFilterGRZip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables GRZip filter.
**Notes:** Lasterror property is set.

### 13.3.35 SupportFilterGZip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable gzip filter.
**Notes:** Lasterror property is set.

### 13.3.36 SupportFilterLRZip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable LRZip filter.
**Notes:** Lasterror property is set.

### 13.3.37 SupportFilterLZip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable LZip filter.
**Notes:** Lasterror property is set.

### 13.3.38 SupportFilterLzma

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable LZMA filter.
**Notes:** Lasterror property is set.

### 13.3.39 SupportFilterLzop

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable Lzop filter.
**Notes:** Lasterror property is set.

### 13.3.40 SupportFilterNone

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable none filter.
**Notes:** Lasterror property is set.

### 13.3.41 SupportFilterProgram(command as string)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable support for given filter program.
**Notes:** Lasterror property is set.

### 13.3.42 SupportFilterRpm

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable RPM filter.
**Notes:** Lasterror property is set.

### 13.3.43 SupportFilterUU

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable UU filter.
**Notes:** Lasterror property is set.

### 13.3.44 SupportFilterXz

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable XZ filter.
**Notes:** xz is a lossless data compression program and file format which incorporates the LZMA/LZMA2 compression algorithms.

### 13.3.45 SupportFormat7zip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable 7zip format.
**Notes:** Lasterror property is set.

### 13.3.46 SupportFormatAll

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable all formats.
**Notes:** Lasterror property is set.

### 13.3.47 SupportFormatAr

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables At format.
**Notes:** Lasterror property is set.

### 13.3.48 SupportFormatByCode(FilterCode as Integer)

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables format with given code.
**Notes:** Lasterror property is set.

### 13.3.49 SupportFormatCab

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables cab format.
**Notes:** Lasterror property is set.

### 13.3.50 SupportFormatCpio

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables cpio format.
**Notes:** Lasterror property is set.

### 13.3.51 SupportFormatEmpty

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables empty format.
**Notes:** Lasterror property is set.

### 13.3.52 SupportFormatGnutar

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables gnutar format.
**Notes:** Lasterror property is set.

### 13.3.53 SupportFormatIso9660

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables iso 9660 format.
**Notes:** Lasterror property is set.

### 13.3.54 SupportFormatLha

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables lha format.
**Notes:** Lasterror property is set.

### 13.3.55 SupportFormatLZ4

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables support for LZ4 format.
**Notes:** Lasterror property is set.

### 13.3.56 SupportFormatMTree

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables mtree format.
**Notes:** Lasterror property is set.

### 13.3.57 SupportFormatRar

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables rar format.
**Notes:** Lasterror property is set.

### 13.3.58 SupportFormatRar5

MBS Compression Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables rar v5 format.
**Notes:** Lasterror property is set.

### 13.3.59 SupportFormatRaw

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables raw format.
**Notes:** Lasterror property is set.

### 13.3.60 SupportFormatTar

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables tape archive files format.
**Notes:** Lasterror property is set.

### 13.3.61 SupportFormatWArc

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables support for WArc format.
**Notes:** Lasterror property is set.

### 13.3.62 SupportFormatXar

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables xar format.
**Notes:** Lasterror property is set.

### 13.3.63 SupportFormatZip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables zip format.
**Notes:**

Enables both streamable and seekable zip readers.
Lasterror property is set.

### 13.3.64 SupportFormatZipSeekable

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Allows only support for seekable zip archives.
**Notes:**

Reads starting from central directory; requires seekable input.
Lasterror property is set.

### 13.3.65 SupportFormatZipStreamable

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables support only for streamable zip archives.
**Notes:**

Reads Zip archives as stream from beginning to end. Doesn't correctly handle SFX ZIP files or ZIP archives that have been modified in-place.
Lasterror property is set.

### 13.3.66 Properties

### 13.3.67 FormatCapabilities as Integer

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a bitmask of capabilities that are supported by the archive format reader.
**Notes:**

If the reader has no special capabilities, kFormatCapabilitiesNone is returned.
See also kFormatCapabilitiesEncryptMetaData and kFormatCapabilitiesEncryptData.
(Read only property)

### 13.3.68 HasEncryptedEntries as Integer

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns 1 if the archive contains at least one encrypted entry.
**Notes:**

If the archive format not support encryption at all kEncryptionUnsupported is returned. If for any other reason (e.g. not enough data read so far) we cannot say whether there are encrypted entries, then kEncryptionDontKnow is returned. In general, this function will return values below zero when the reader is uncertain or totally uncapable of encryption support. When this function returns 0 you can be sure that the reader supports encryption detection but no encrypted entries have been found yet.

If the metadata/header of an archive is also encrypted, you cannot rely on the number of encrypted entries. That is why this function does not return the number of encrypted entries but# just shows that there are some.
(Read only property)

### 13.3.69 HeaderPosition as Int64

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current header position.

**Notes:**

Retrieve the byte offset in uncompressed data where last-read header started.
(Read only property)

### 13.3.70 ReadDataBlockSupported as Boolean

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this reader supports block operations.
**Notes:**

Some do and if you call ReadDataBlock on a reader which can't, it will return only errors.
(Read only property)

### 13.3.71 Events

### 13.3.72 ExtractProgress(entry as ArchiveEntryMBS)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Event called regularly while extracting to report progress.
**Notes:**

Check properties of archive on how many bytes have been processed.
Called only by Extract methods.

### 13.3.73 Constants

### 13.3.74 kEncryptionDontKnow = -1

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the Encryption Status constants.
**Notes:** If the reader for some other reason (e.g. not enough bytes read) cannot say if there are encrypted entries, kEncryptionDontKnow is returned.

### 13.3.75 kEncryptionUnsupported = -2

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the Encryption Status constants.
**Notes:** In case the archive does not support encryption detection at all kEncryptionUnsupported is returned.

### 13.3.76 kExtractACL = & h20

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Do not restore ACLs.

### 13.3.77 kExtractClearNoChangeFFlags = & h20000

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Do not clear no-change flags when unlinking object.

### 13.3.78 kExtractFileFlags = & h40

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Do not restore fflags.

### 13.3.79 kExtractHFSCompressionForced = & h8000

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:**

Default: Do not use HFS+ compression if it was not compressed.
This has no effect except on Mac OS v10.6 or later.

### 13.3.80 kExtractMacMetadata = & h2000

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:**

Default: Do not restore Mac extended metadata.
This has no effect except on Mac OS.

### 13.3.81 kExtractNoAutoDir = & h400

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Create parent directories as needed.

### 13.3.82 kExtractNoHFSCompression = & h4000

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:**

Default: Use HFS+ compression if it was compressed.
This has no effect except on Mac OS v10.6 or later.

### 13.3.83 kExtractNoOverwrite = 8

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Replace existing files.

### 13.3.84 kExtractNoOverwriteNewer = & h800

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Overwrite files, even if one on disk is newer.

### 13.3.85 kExtractOwner = 1

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Do not try to set owner/group.

### 13.3.86 kExtractPermission = 2

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Do obey umask, do not restore SUID/SGID/SVTX bits.

### 13.3.87 kExtractSecureNoAbsolutePath = & h10000

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Do not reject entries with absolute paths

### 13.3.88 kExtractSecureNoDotDot = & h200

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Do not reject entries with '..' as path elements.

### 13.3.89 kExtractSecureSymLinks = & h100

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:**

Default: Do not try to guard against extracts redirected by symlinks.
Note: With kExtractUnlink, will remove any intermediate symlink.

### 13.3.90 kExtractSparse = & h1000

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Detect blocks of 0 and write holes instead.

### 13.3.91 kExtractTime = 4

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Do not restore mtime/atime.

### 13.3.92 kExtractUnlink = & h10

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Try create first, unlink only if create fails with EEXIST.

### 13.3.93 kExtractXAttr = & h80

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the extract flags.
**Notes:** Default: Do not restore xattrs.

### 13.3.94 kFormatCapabilitiesEncryptData = 1

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the encryption capabilities constants.
**Notes:** Reader can detect encrypted data.

### 13.3.95 kFormatCapabilitiesEncryptMetaData = 2

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the encryption capabilities constants.
**Notes:** Reader can detect encryptable metadata (pathname, mtime, etc.).

### 13.3.96 kFormatCapabilitiesNone = 0

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the encryption capabilities constants.
**Notes:** Current format supports no encryption.

### 13.3.97 kSeekCur = 1

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the seek modes.
**Notes:** Seek relative to current position.

### 13.3.98 kSeekEnd = 2

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the seek modes.
**Notes:** Seek relative to end of file.

### 13.3.99 kSeekSet = 0

MBS Compression Plugin, Plugin Version: 19.0.

**Function:** One of the seek modes.
**Notes:** Seek relative to begin of file.

## 13.4 class ArchiverMBS

### 13.4.1 class ArchiverMBS

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The abstract super class for common archiver methods.
**Notes:**

Currently we build this library without lzma and lz4 support. That could be changed if needed.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 13.4.2 Blog Entries

- MBS Xojo Plugins, version 20.4pr9
- MBS Xojo Plugins, version 18.6pr3

### 13.4.3 Blog Entries

- MBS Xojo Plugins, version 20.4pr9
- MBS Xojo Plugins, version 18.6pr3

### 13.4.4 Methods

### 13.4.5 ClearError

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears error.

### 13.4.6 Constructor

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 13.4.7 CopyError(source as ArchiverMBS)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies error state from one archive object to other.

### 13.4.8 Destructor

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 13.4.9 FilterBytes(FilterIndex as Integer) as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current byte count for the filter with given index.
**Notes:**

Pass index of filter, e.g. 0 to FilterCount-1.
Pass -1 to query last filter.

### 13.4.10 FilterCode(FilterIndex as Integer) as Integer

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries ID of filter.
**Notes:**

Pass index of filter, e.g. 0 to FilterCount-1.
Pass -1 to query last filter.

### 13.4.11 FilterName(FilterIndex as Integer) as String

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries name of filter.
**Notes:**

Pass index of filter, e.g. 0 to FilterCount-1.
Pass -1 to query last filter.

### 13.4.12 LoadIconvLibrary(path as String, byref Error as String) as boolean

MBS Compression Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads the iconv library.
**Notes:**

The Archive classes may use libiconv for text encoding conversion.
If you explicitly need, you can load the library on start of solution.

MBS Plugin may try to load iconv.dll/dylib/so automatically when first iconv function is called.

### 13.4.13 NewReader as ArchiveReaderMBS

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new archive reader.

### 13.4.14 NewWriter as ArchiveWriterMBS

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new archive writer.

### 13.4.15 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets current working directory for the application.
**Notes:** Returns true on success or false on failure.
See also:

- 13.4.16 SetCurrentWorkingDirectory(path as String) as boolean 3325

### 13.4.16 SetCurrentWorkingDirectory(path as String) as boolean

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets current working directory for the application.
**Notes:** Returns true on success or false on failure.
See also:

- 13.4.15 SetCurrentWorkingDirectory(path as folderitem) as boolean 3325

### 13.4.17 Properties

### 13.4.18 BZLibVersion as String

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The bzlib version used in this plugin.
**Example:**

MsgBox ArchiverMBS.BZLibVersion

**Notes:**

This is empty if we compiled plugin without this library.
(Read only property)

### 13.4.19 Compression as Integer

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The ID of the compression algorithm.
**Notes:**

This is an alias for FilterCode(0).
(Read only property)

### 13.4.20 CompressionName as String

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the compression algorithm.
**Notes:**

This is an alias for FilterName(0).
(Read only property)

### 13.4.21 ErrNo as Integer

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Last error's errno value.
**Notes:**

The unix error code.
(Read only property)

### 13.4.22 ErrorString as String

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error string.
**Notes:** (Read only property)

### 13.4.23 FileCount as Integer

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The file count.
**Notes:**

May not be known before all files have been seen/processed.
(Read only property)

### 13.4.24 FilterCount as Integer

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of filters currently in use.
**Notes:**

An archive may have several filters, e.g. tar to archive and gzip to compress.
(Read only property)

### 13.4.25 Format as Integer

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The ID of the current format.
**Notes:** (Read only property)

### 13.4.26 FormatName as String

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the current format.
**Notes:** (Read only property)

### 13.4.27 Handle as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 13.4.28 Lasterror as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error code.
**Notes:**

See kArchive constants.
(Read only property)

### 13.4.29 LibVersion as Integer

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version of the archive C++ library.
**Example:**

MsgBox str(ArchiverMBS.LibVersion)

**Notes:**

e.g. 3001002 for version 3.1.2.
(Read only property)

### 13.4.30 LibVersionDetails as String

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The detailed version string for libArchive.
**Example:**

MsgBox ArchiverMBS.LibVersionDetails

**Notes:**

Detailed textual name/version of the library and its dependencies.

This has the form:
"libarchive x.y.z zlib/a.b.c liblzma/d.e.f ... etc ..."

the list of libraries described here will vary depending on how libarchive was compiled.
(Read only property)

### 13.4.31 LibVersionString as String

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version of the archive C++ library as text.
**Example:**

MsgBox ArchiverMBS.LibVersionString

**Notes:**

e.g. "libarchive 3.1.2"
(Read only property)

### 13.4.32 LZ4Version as String

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The lz4 version used in this plugin.
**Example:**

MsgBox ArchiverMBS.LZ4Version

**Notes:**

This is empty if we compiled plugin without this library.
(Read only property)

### 13.4.33 LzmaVersion as String

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The lzma version used in this plugin.
**Example:**

MsgBox ArchiverMBS.LzmaVersion

**Notes:**

This is empty if we compiled plugin without this library.
(Read only property)

### 13.4.34 Open as Boolean

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether an archive is currently open.
**Notes:** (Read only property)

### 13.4.35 PositionCompressed as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The position in the archive compressed.
**Notes:**

This is an alias for FilterBytes(-1).
(Read only property)

### 13.4.36 PositionUncompressed as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The position in the archive uncompressed.
**Notes:**

This is an alias for FilterBytes(0).
(Read only property)

### 13.4.37 Yield as Boolean

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to yield on extract methods.
**Notes:**

Set true to pass CPU time to other Xojo threads.
(Read only property)

### 13.4.38 ZLibVersion as String

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The zlib version used in this plugin.
**Example:**

MsgBox ArchiverMBS.ZLibVersion

**Notes:**

This is empty if we compiled plugin without this library.
(Read only property)

### 13.4.39 Events

### 13.4.40 Passphrase(byref password as String) as Boolean

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event to query for passphrase.
**Notes:** Please set password property and return true if you have one.

### 13.4.41 Constants

### 13.4.42 kArchiveEOF = 1

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the error constants.
**Notes:** Found end of archive.

### 13.4.43 kArchiveFailed = -25

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the error constants.
**Notes:**

Current operation cannot complete.
But if writeHeader is "fatal," then this archive is dead and useless.

### 13.4.44 kArchiveFatal = -30

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the error constants.
**Notes:** No more operations are possible.

### 13.4.45 kArchiveOK = 0

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the error constants.
**Notes:** Operation was successful.

### 13.4.46 kArchiveRetry = -10

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the error constants.
**Notes:** Retry might succeed.

### 13.4.47 kArchiveWarn = -20

MBS Compression Plugin, Plugin Version: 16.2.

**Function:** One of the error constants.
**Notes:**

Partial success.
For example, if writeHeader "fails", then you can't push data.

### 13.4.48 kFilterBZip2 = 2

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** bzip2 filter

### 13.4.49 kFilterCompress = 3

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** compress filter.

### 13.4.50 kFilterGRZip = 12

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** GRZip filter.

### 13.4.51 kFilterGZip = 1

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** gzip filter.

### 13.4.52 kFilterLRZip = 10

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** LRZip filter.

### 13.4.53 kFilterLZ4 = 13

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** LZ4 Filter.

### 13.4.54 kFilterLZip = 9

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** LZip filter.

### 13.4.55 kFilterLZMA = 5

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** LZMA filter.

### 13.4.56 kFilterLZOP = 11

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** Lzop filter.

### 13.4.57 kFilterNone = 0

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** No filter.

### 13.4.58 kFilterProgram = 4

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** Program filter.

### 13.4.59 kFilterRPM = 8

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** RPM filter.

### 13.4.60 kFilterUU = 7

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** UU filter.

### 13.4.61 kFilterXZ = 6

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the filter values.
**Notes:** XZ filter.

### 13.4.62 kFormat7Zip = & he0000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** 7Zip

### 13.4.63 kFormatAr = & h70000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Unix Archive format, base type.

### 13.4.64 kFormatArBsd = & h70002

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Archive, BSD format.

### 13.4.65 kFormatArGnu = & h70001

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Archive, GNU format.

### 13.4.66 kFormatBaseMask = & hff0000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Mask for Base Type.

### 13.4.67 kFormatCab = & hc0000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Windows CAB format.

### 13.4.68 kFormatCpio = & h10000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** CPIO base format.

### 13.4.69 kFormatCpioAfioLarge = & h10006

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** CPIO format, AFIO large variant.

### 13.4.70 kFormatCpioBinBe = & h10003

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** CPIO format, BIN BE variant.

### 13.4.71 kFormatCpioBinLe = & h10002

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** CPIO format, BIN LE variant.

### 13.4.72 kFormatCpioPosix = & h10001

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** CPIO format, Posix variant.

### 13.4.73 kFormatCpioSvr4Crc = & h10005

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** CPIO format, SVR4 CRC variant.

### 13.4.74 kFormatCpioSvr4Nocrc = & h10004

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** CPIO format, SVR4 no CRC variant.

### 13.4.75 kFormatEmpty = & h60000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Empty format.

### 13.4.76 kFormatIso9660 = & h40000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** IOS 9660 base type.

### 13.4.77 kFormatIso9660Rockridge = & h40001

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** IOS 9660, Rockridge variant.

### 13.4.78 kFormatLha = & hb0000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** LHA format.

### 13.4.79 kFormatMtree = & h80000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** MTree format.

### 13.4.80 kFormatRar = & hd0000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** RAR format.

### 13.4.81 kFormatRARv5 = & h10000

MBS Compression Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** Rar v5 format

### 13.4.82 kFormatRaw = & h90000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Raw format.

### 13.4.83 kFormatShar = & h20000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** SHAR base format.

### 13.4.84 kFormatSharBase = & h20001

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** SHAR base format, base variant.

### 13.4.85 kFormatSharDump = & h20002

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** SHAR base format, dump variant.

### 13.4.86 kFormatTar = & h30000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Tar base format.

### 13.4.87 kFormatTarGnutar = & h30004

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Tar format, GNU variant.

### 13.4.88 kFormatTarPaxInterchange = & h30002

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Tar format, Pax Interchange variant.

### 13.4.89 kFormatTarPaxRestricted = & h30003

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Tar format, Pax Restricted variant.

### 13.4.90 kFormatTarUstar = & h30001

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Tar format, US variant.

### 13.4.91 kFormatWarc = & hf0000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** WArc format.

### 13.4.92 kFormatXar = & ha0000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Xar format

### 13.4.93 kFormatZip = & h50000

MBS Compression Plugin, Plugin Version: 16.3.

**Function:** One of the format constants.
**Notes:** Zip format.

## 13.5 class ArchiveWriteDiskMBS

### 13.5.1 class ArchiveWriteDiskMBS

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The archive subclass class for writing files to disk.
**Notes:**

To create objects on disk:

1) Ask Constructor for a new ArchiveWriteDiskMBS object.
2) Set any global properties. In particular, you probably want to set the options.
3) For each entry: construct an appropriate ArchiveEntryMBS object, use WriteHeader to create the file/dir/etc on disk, use WriteData to write the entry data
4) Release object to cleanup the writer and release resources

In particular, you can use this in conjunction with ArchiveReaderMBS to pull entries out of an archive and create them on disk.
Subclass of the ArchiveWriterMBS class.

### 13.5.2 Blog Entries

- MBS Xojo Plugins, version 18.6pr3

### 13.5.3 Blog Entries

- MBS Xojo Plugins, version 18.6pr3

### 13.5.4 Methods

### 13.5.5 Constructor

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:** Connects GroupLookup and UserLookup events if set.

### 13.5.6 Destructor

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 13.5.7 GID(GroupName as string, DefaultGID as Int64) as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Query ID of group.
**Notes:**

Returns default ID if name not found.
This may invoke GroupLookup event.
Lasterror property is set.

### 13.5.8 SetSkipFile(DeviceID as Int64, FileNo as Int64)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Record the dev/ino of a file that will not be written.
**Notes:**

This is generally set to the dev/ino of the archive being written.
Lasterror property is set.

### 13.5.9 SetStandardLookup

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets standard lookup for mapping user and group names to IDs.
**Notes:**

Lasterror property is set.

The lookup functions are given uname/uid (or gname/gid) pairs and return a uid (gid) suitable for this system. These are used for restoring ownership and for setting ACLs. The default functions are naive, they just return the uid/gid. These are small, so reasonable for applications that don't need to preserve ownership; they are probably also appropriate for applications that are doing same-system backup and restore.

The "standard" lookup functions use common system calls to lookup the uname/gname, falling back to the uid/gid if the names can't be found. They cache lookups and are reasonably fast, but can be very large, so they are not used unless you ask for them. In particular, these match the specifications of POSIX "pax" and old POSIX "tar".

### 13.5.10 UID(UserName as string, DefaultUID as Int64) as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Query ID of user.
**Notes:**

Returns default ID if name not found.
This may invoke UserLookup event.
Lasterror property is set.

### 13.5.11 WriteDataBlock(data as MemoryBlock, offset as Int64) as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes data block to file.
**Notes:**

Returns number of bytes written.
Lasterror property is set.
See also:

- 13.5.12 WriteDataBlock(data as Ptr, Size as Int64, offset as Int64) as Int64 3344
- 13.5.13 WriteDataBlock(data as string, offset as Int64) as Int64 3344

### 13.5.12 WriteDataBlock(data as Ptr, Size as Int64, offset as Int64) as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes data block to file.
**Notes:**

Returns number of bytes written.
Lasterror property is set.
See also:

- 13.5.11 WriteDataBlock(data as MemoryBlock, offset as Int64) as Int64 3344
- 13.5.13 WriteDataBlock(data as string, offset as Int64) as Int64 3344

### 13.5.13 WriteDataBlock(data as string, offset as Int64) as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes data block to file.
**Notes:**

Returns number of bytes written.
Lasterror property is set.
See also:

- 13.5.11 WriteDataBlock(data as MemoryBlock, offset as Int64) as Int64 3344
- 13.5.12 WriteDataBlock(data as Ptr, Size as Int64, offset as Int64) as Int64 3344

### 13.5.14 Properties

### 13.5.15 Options as Integer

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The options flags set.
**Notes:**

Setting options sets lasterror property.
See ArchiveReaderMBS.kExtract* constants.
(Read and Write property)

### 13.5.16 Events

### 13.5.17 GroupLookup(Name as String, GID as Int64) as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event to let you lookup manually the ID for a group name.
**Notes:**

If you can't find the group, you can just pass through the given default ID.

If neither the default (naive) nor the standard (big) functions suit your needs, you can write your own in this event.

### 13.5.18 UserLookup(Name as String, GID as Int64) as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event to let you lookup manually the ID for a user name.
**Notes:**

If you can't find the user, you can just pass through the given default ID.

If neither the default (naive) nor the standard (big) functions suit your needs, you can write your own in this event.

## 13.6 class ArchiveWriterMBS

### 13.6.1 class ArchiveWriterMBS

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class to write archive content.
**Example:**

```
dim a as new ArchiveWriterMBS

a.SetFormatZip
a.ZipSetCompressionDeflate

dim f as FolderItem = SpecialFolder.Desktop.Child("test.zip")
if not a.CreateFile(f) then
break // failed

else

dim data as string = "Hello World test file. Hello World again."

dim e as new ArchiveEntryMBS
e.PathName = "Hello World.txt"
e.Size = lenb(data)
e.Permissions = & o0644
e.FileType = e.kFileTypeRegular

a.WriteHeader e
call a.WriteData data

a.FinishEntry

a.Close
end if
```

**Notes:**

Can be used to write zip, tar and other image formats.
Subclass of the ArchiverMBS class.

- 19.4, page 81: Archives in Xojo, How to Use Zip Archives by Stefanie Juchmes

### 13.6.6 Methods

### 13.6.7 AddFilter(FilterCode as Integer)

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds filter by code number.
**Notes:** Lasterror property is set.

### 13.6.8 AddFilterB64encode

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds base 64 filter.
**Notes:** Lasterror property is set.

### 13.6.9 AddFilterByName(Name as String)

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds filter by name.
**Notes:** Lasterror property is set.

### 13.6.10 AddFilterBZip2

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add bzip2 filter.
**Notes:** Lasterror property is set.

### 13.6.11 AddFilterCompress

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add compress filter.
**Notes:** Lasterror property is set.

### 13.6.12 AddFilterGRZip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add grzip filter.
**Notes:** Lasterror property is set.

### 13.6.13 AddFilterGZip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add gzip filter.
**Notes:** Lasterror property is set.

### 13.6.14 AddFilterLRZip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add lrzip filter.
**Notes:** Lasterror property is set.

### 13.6.15 AddFilterLZ4

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add support for LZ4 compression.
**Notes:** Lasterror property is set.

### 13.6.16 AddFilterLZip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add lzip filter.
**Notes:** Lasterror property is set.

### 13.6.17 AddFilterLZMA

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add lzma filter.
**Notes:** Lasterror property is set.

### 13.6.18 AddFilterLZOp

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add lzop filter.
**Notes:** Lasterror property is set.

### 13.6.19 AddFilterNone

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add none filter.
**Notes:** Lasterror property is set.

### 13.6.20 AddFilterProgram(Command as String)

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a filter calling external application.
**Notes:** Lasterror property is set.

### 13.6.21 AddFilterUUEncode

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add uu filter.
**Notes:** Lasterror property is set.

### 13.6.22 AddFilterXZ

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Add xy filter.
**Notes:** Lasterror property is set.

### 13.6.23 Close

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes the archive.
**Notes:** Lasterror property is set.

### 13.6.24 Constructor

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.

### 13.6.25 CreateFile(File as FolderItem) as boolean

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new archive file.
**Notes:** Returns true on success.

### 13.6.26 CreateMemoryFile as boolean

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates in memory output file.
**Notes:**

Please use later MemoryData, MemoryString, MemoryPointer, or MemorySize later to get data after closing archive.
Lasterror property is set.

### 13.6.27 Destructor

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 13.6.28 Fail

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Marks archive as failed.
**Notes:** We will not close the archive properly and you can delete file.

### 13.6.29 FinishEntry

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finishes an entry.
**Notes:** Lasterror property is set.

### 13.6.30 SetFilterOption(Module as String, Option as String, Value as String)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Apply option to the filter only.
**Notes:** Lasterror property is set.

### 13.6.31 SetFormat(FormatCode as Integer)

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format by code.
**Notes:** Lasterror property is set.

### 13.6.32 SetFormat7Zip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to 7zip.
**Notes:** Lasterror property is set.

### 13.6.33 SetFormatArBsd

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to ar bsd.
**Notes:** Lasterror property is set.

### 13.6.34 SetFormatArSvr4

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to ar svr4.
**Notes:** Lasterror property is set.

### 13.6.35 SetFormatByExtension(FileName as String, defaultExtension as String = "")

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set file format by extension of filename.
**Notes:**

e.g. pass "test.zip" for file name and ".zip" for default extension (if filename has none).
Lasterror property is set.

### 13.6.36 SetFormatByName(Name as String)

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format by name.
**Notes:** Lasterror property is set.

### 13.6.37 SetFormatCpio

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to cpio.
**Notes:** Lasterror property is set.

### 13.6.38 SetFormatCpioNewc

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to cpio newc.
**Notes:** Lasterror property is set.

### 13.6.39 SetFormatGnutar

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to gnu tape archive files.
**Notes:** Lasterror property is set.

### 13.6.40 SetFormatIso9660

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to iso 9660.
**Notes:** Lasterror property is set.

### 13.6.41 SetFormatMTree

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to mtree.
**Notes:** Lasterror property is set.

### 13.6.42 SetFormatMTreeClassic

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to mtree classic.
**Notes:** Lasterror property is set.

### 13.6.43 SetFormatOption(Module as String, Option as String, Value as String)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Apply option to the format only.
**Notes:** Lasterror property is set.

### 13.6.44 SetFormatPax

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to pax.
**Notes:** Lasterror property is set.

### 13.6.45 SetFormatPaxRestricted

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to pax restricted.
**Notes:** Lasterror property is set.

### 13.6.46 SetFormatRaw

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets raw format.
**Notes:** Lasterror property is set.

### 13.6.47 SetFormatShar

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to shar.
**Notes:** Lasterror property is set.

### 13.6.48 SetFormatSharDump

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to shar dump.
**Notes:** Lasterror property is set.

### 13.6.49 SetFormatUstar

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to Unix Standard TAR.
**Notes:** Lasterror property is set.

### 13.6.50 SetFormatV7tar

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to v7 tape archive files.
**Notes:** Lasterror property is set.

### 13.6.51 SetFormatWArc

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to web archive.
**Notes:** Lasterror property is set.

### 13.6.52 SetFormatXar

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to xar.
**Notes:** Lasterror property is set.

### 13.6.53 SetFormatZip

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets format to zip.
**Example:**

```
dim a as new ArchiveWriterMBS

a.SetFormatZip
a.ZipSetCompressionDeflate

dim f as FolderItem = SpecialFolder.Desktop.Child("test.zip")
if not a.CreateFile(f) then
break // failed

else

dim data as string = "Hello World test file. Hello World again."

dim e as new ArchiveEntryMBS
e.PathName = "Hello World.txt"
e.Size = lenb(data)
e.Permissions = & o0644
e.FileType = e.kFileTypeRegular

a.WriteHeader e
call a.WriteData data

a.FinishEntry

a.Close
end if
```

**Notes:** Lasterror property is set.

### 13.6.54 SetOption(Module as String, Option as String, Value as String)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Apply option to both the format and the filter.
**Notes:** Lasterror property is set.

### 13.6.55 SetOptions(Options as String)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Apply option string to both the format and the filter.
**Example:**

```
dim a as new ArchiveWriterMBS
a.SetOptions "zip:encryption=zipcrypt"
```

**Notes:**

Lasterror property is set.

The options to pass to writer.
This is a comma-separated list of options. Option names can be prefixed with module name.

Sample options:
compression=9
zip:encryption=zipcrypt
zip:encryption=aes128
zip:encryption=aes256
zip64
gzip:compression-level=9

### 13.6.56 SetPassphrase(Password as String)

MBS Compression Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the passphrase to use.
**Example:**

```
dim a as new ArchiveWriterMBS

a.SetFormatZip
a.ZipSetCompressionDeflate

a.SetOptions "zip:encryption=zipcrypt" // enable encryption
a.SetPassphrase "HelloWorld" // set password
```

**Notes:**

Alternatively you can use the Passphrase event.
Lasterror property is set.

### 13.6.57 SetSkipFile(DeviceID as Int64, FileNo as Int64)

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Record the dev/ino of a file that will not be written.
**Notes:**

This is generally set to the dev/ino of the archive being written.
Lasterror property is set.

### 13.6.58 WriteData(data as MemoryBlock) as Int64

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes data to current file.
**Notes:**

Returns number of bytes written.
Lasterror property is set.
See also:

- 13.6.59 WriteData(data as Ptr, Size as Int64) as Int64 3359
- 13.6.60 WriteData(data as string) as Int64 3360
- 13.6.61 WriteData(SourceArchive as ArchiveReaderMBS) as Int64 3360

### 13.6.59 WriteData(data as Ptr, Size as Int64) as Int64

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes data to current file.
**Notes:**

Returns number of bytes written.
Lasterror property is set.
See also:

- 13.6.58 WriteData(data as MemoryBlock) as Int64 3359

- 13.6.60 WriteData(data as string) as Int64 3360
- 13.6.61 WriteData(SourceArchive as ArchiveReaderMBS) as Int64 3360

### 13.6.60 WriteData(data as string) as Int64

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes data to current file.
**Notes:**

Returns number of bytes written.
Lasterror property is set.
See also:

- 13.6.58 WriteData(data as MemoryBlock) as Int64 3359
- 13.6.59 WriteData(data as Ptr, Size as Int64) as Int64 3359
- 13.6.61 WriteData(SourceArchive as ArchiveReaderMBS) as Int64 3360

### 13.6.61 WriteData(SourceArchive as ArchiveReaderMBS) as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes data to current file.
**Notes:**

Loops over blocks in source archive entry and copies them all to current archive.
Returns number of bytes written.
Lasterror property is set.
See also:

- 13.6.58 WriteData(data as MemoryBlock) as Int64 3359
- 13.6.59 WriteData(data as Ptr, Size as Int64) as Int64 3359
- 13.6.60 WriteData(data as string) as Int64 3360

### 13.6.62 WriteHeader(Entry as ArchiveEntryMBS)

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes an archive item.
**Notes:** Lasterror property is set.

### 13.6.63 ZipSetCompressionDeflate

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets compression for zip to deflate.
**Notes:** Lasterror property is set.

### 13.6.64 ZipSetCompressionStore

MBS Compression Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets compression for zip to store.
**Notes:**

Store is no compression.
Lasterror property is set.

### 13.6.65 Properties

### 13.6.66 MemoryData as MemoryBlock

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies data in memory buffer as MemoryBlock.
**Notes:** (Read only property)

### 13.6.67 MemoryPointer as Ptr

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries pointer for memory block.
**Notes:**

Only valid till more data is added, which may reallocate the buffer to grow it.
(Read only property)

### 13.6.68 MemorySize as Int64

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The memory size.
**Notes:**

Current memory used for memory output in bytes.
(Read only property)

### 13.6.69 MemoryString as String

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies data in memory buffer as String.
**Notes:** (Read only property)

### 13.6.70 WriteDataBlockSupported as Boolean

MBS Compression Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this writer supports block operations.
**Notes:**

Some do and if you call WriteDataBlock on a writer which can't, it will return only errors.
(Read only property)

# Chapter 14

# Audio

## 14.1 class AUPlayerMBS

### 14.1.1 class AUPlayerMBS

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The audio unit player.
**Notes:**

This is a better Core Audio based player which has a lot of features like pitch, rate, volume, equalizer and other features.
Beside playing audio you can also use this class to get sample data from audio files.

Currently only stereo is supported (2 channels maximum).

### 14.1.5 Xojo Developer Magazine

- 13.2, page 8: News
- 13.1, page 10: News
- 12.4, page 9: News

### 14.1.6 Methods

### 14.1.7 ChannelMap as Integer()

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Queries current channel map.
**Notes:** The map should have an entry for each input channel and inside the number of the output channel or -1 to keep it silent.

### 14.1.8 Data as Memoryblock

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Copies the data to play.
**Notes:**

The other data properties define what format this data has.
Typically 4 byte floats per sample interleaved for all channels.

### 14.1.9 LoadFile(file as folderitem, InputChannels as Integer = 2, OutputChannels as Integer = 2) as boolean

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Loads an audio file.
**Notes:**

InputChannels is the number of channels we want to get back from file reader.
OutputChannels is the number of channels we want to have for output.
Returns true on success or false on failure.

### 14.1.10 LoadFileMT(file as folderitem, InputChannels as Integer = 2, OutputChannels as Integer = 2) as boolean

MBS MacOSX Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Loads an audio file.
**Notes:**

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

InputChannels is the number of channels we want to get back from file reader.
OutputChannels is the number of channels we want to have for output.
Returns true on success or false on failure.

### 14.1.11 Pause

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Pauses playback.
**Notes:** Lasterror is set.

### 14.1.12 Play

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Starts playback.
**Notes:** Lasterror is set.

### 14.1.13 Reset

MBS MacOSX Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** Resets audio units.
**Notes:** Useful after changing options.

### 14.1.14 setChannelMap(values() as Integer)

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Sets a new channel map.
**Notes:** The map should have an entry for each input channel and inside the number of the output channel or -1 to keep it silent.

### 14.1.15 updateEQ(eqBands() as Double)

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Updates equalizer.
**Notes:**

Please pass array of 32 values from -12 to 12.
Lasterror is set.
See also:

- 14.1.16 updateEQ(eqBands() as single) 3367

### 14.1.16 updateEQ(eqBands() as single)

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Updates equalizer.
**Notes:**

Please pass array of 32 values from -12 to 12.
Lasterror is set.
See also:

- 14.1.15 updateEQ(eqBands() as Double) 3366

### 14.1.17 Properties

### 14.1.18 ClientFormatString as String

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The input format description string.
**Notes:** (Read only property)

### 14.1.19 ConverterHandle as Integer

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The handle to the converter audio unit.
**Notes:** (Read and Write property)

### 14.1.20 CurrentDeviceID as UInt32

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Get or set the current device.
**Notes:**

Please check OutputDevices dictionary for which devices are available.
(Read and Write property)

### 14.1.21 CurrentTime as Double

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The current time in seconds.
**Notes:**

Lasterror is set.
(Read and Write property)

### 14.1.22 DataIsFloat as Boolean

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Whether data is floating point.
**Notes:** (Read only property)

### 14.1.23 DataIsInterleaved as Boolean

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Whether data is interleaved.
**Notes:** (Read only property)

### 14.1.24 DataIsNativeEndian as Boolean

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Whether data is native endian.
**Notes:** (Read only property)

### 14.1.25 DataIsPCM as Boolean

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Whether data is PCM format.
**Notes:**

Linear PCM.
(Read only property)

### 14.1.26 DataIsSignedInteger as Boolean

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Whether data is signed integers.
**Notes:** (Read only property)

### 14.1.27 DataNumberChannels as Integer

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Number of channels.
**Notes:** (Read only property)

### 14.1.28 DataNumberChannelStreams as Integer

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Number of channels.
**Notes:** (Read only property)

### 14.1.29 DataNumberInterleavedChannels as Integer

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Number of interleaved channels.
**Notes:** (Read only property)

### 14.1.30 DataSampleWordSize as Integer

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The size of a sample word.
**Notes:** (Read only property)

### 14.1.31 DefaultDeviceID as UInt32

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Queries the Core Audio ID of the default device.
**Notes:** (Read only property)

### 14.1.32 EnablePeakLocking as Boolean

MBS MacOSX Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Whether peak locking is enabled.
**Notes:**

Default value is true.
Only if UseNewTimePitchUnit is set to true.
(Read and Write property)

### 14.1.33 EqualizerHandle as Integer

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The handle to the equalizer audio unit.
**Notes:** (Read and Write property)

### 14.1.34 File as FolderItem

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The reference to the folderitem used to load audio file.
**Notes:** (Read only property)

### 14.1.35 GraphHandle as Integer

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The handle to the audio graph.
**Notes:** (Read and Write property)

### 14.1.36 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:**

Zero is no error.
(Read and Write property)

### 14.1.37 LoopIn as Double

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The position where loop starts.
**Notes:** (Read and Write property)

### 14.1.38 Looping as Boolean

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Whether to loop.
**Notes:** (Read and Write property)

### 14.1.39 LoopOut as Double

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The position where loop ends.
**Notes:** (Read and Write property)

### 14.1.40 MaximumFramesPerSlice as Integer

MBS MacOSX Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

**Function:** The maximum number of frames per slice.
**Notes:**

Default seems to be 1156 by Core Audio.
(Read and Write property)

### 14.1.41 MeterLevel as Double

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Queries meter level.
**Notes:**

Lasterror is set.
Value is smaller than -120 if unknown.
(Read only property)

### 14.1.42 MixerHandle as Integer

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The handle to the mixer audio unit.
**Notes:** (Read and Write property)

### 14.1.43 OutputDevices as Dictionary

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Queries a dictionary with output devices.
**Example:**

```
Dim a As New AUPlayerMBS
Dim d As Dictionary = a.OutputDevices

For Each key As String In d.keys
dim name as string = d.Value(key)

MsgBox key+": "+name
Next
```

**Notes:**

Key is the ID and value is the name of the device.
(Read only property)

### 14.1.44 OutputFormatString as String

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The output format description string.
**Notes:** (Read only property)

### 14.1.45 OutputHandle as Integer

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The handle to the output audio unit.
**Notes:** (Read and Write property)

### 14.1.46 OutputUnit as Integer

MBS MacOSX Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

**Function:** Which output unit to use.
**Notes:**

Apple offer various output units and here you can decide which one to use.
Setting takes effect the next time you call LoadFile.
(Read and Write property)

### 14.1.47 OutputVolume as Double

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The output volume.
**Notes:**

Lasterror is set.
From 0.0 to 1.0.
(Read and Write property)

### 14.1.48 Overlap as Double

MBS MacOSX Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Defines the overlap.
**Notes:**

Range is 3.0 to 32.0 and default is 8.0.
Only if UseNewTimePitchUnit is set to true.
(Read and Write property)

### 14.1.49 Pan as Double

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The output pan.
**Notes:**

From -1.0 to 1.0.
Lasterror is set.
(Read and Write property)

### 14.1.50 PitchRate as Double

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The pitch rate.
**Notes:**

Lasterror is set.
(Read and Write property)

### 14.1.51 Playing as Boolean

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Whether the player is playing.
**Notes:** (Read and Write property)

### 14.1.52 SampleRate as Double

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The sample rate of the audio file.
**Notes:** (Read only property)

### 14.1.53 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The tag value.
**Notes:**

You can use this property to store whatever you like.
(Read and Write property)

### 14.1.54 TimePitchHandle as Integer

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The handle to the time audio unit.
**Notes:** (Read and Write property)

### 14.1.55 TimePitchUnit as Integer

MBS MacOSX Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

**Function:** Which time pitch unit to use.
**Notes:**

Apple offer various time pitch units and here you can decide which one to use.
Setting takes effect the next time you call LoadFile.
(Read and Write property)

### 14.1.56 TimeRate as Double

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The time rate.
**Notes:**

Lasterror is set.
(Read and Write property)

### 14.1.57 TrackLength as Double

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Length of the audio track in seconds.
**Notes:**

Lasterror is set.
(Read only property)

### 14.1.58 VariSpeedHandle as Integer

MBS MacOSX Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

**Function:** The handle to the vari speed audio unit.
**Notes:** (Read and Write property)

### 14.1.59 InputEnabled(inputNum as UInt32) as boolean

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Enable or disable input.
**Notes:**

Lasterror is set.
(Read and Write computed property)

### 14.1.60 InputVolume(inputNum as UInt32) as Double

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The input volume.
**Notes:**

Lasterror is set.
(Read and Write computed property)

### 14.1.61 Constants

### 14.1.62 OutputUnitDefault = 0

MBS MacOSX Plugin, Plugin Version: 15.0.

**Function:** One of the output units.
**Notes:** Plugin default, currently HALOutput.

### 14.1.63 OutputUnitDefaultOutput = 3

MBS MacOSX Plugin, Plugin Version: 15.0.

**Function:** One of the output units.
**Notes:** A specialisation of AUHAL that is used to track the user's selection of the default device as set in

the Sound Prefs

### 14.1.64 OutputUnitGenericOutput = 1

MBS MacOSX Plugin, Plugin Version: 15.0.

**Function:** One of the output units.
**Notes:** A generic output unit provides the start/stop API, and provides the basic services to convert Linear PCM formats.

### 14.1.65 OutputUnitHALOutput = 2

MBS MacOSX Plugin, Plugin Version: 15.0.

**Function:** One of the output units.
**Notes:** The audio unit that interfaces to any audio device. The user specifies which audio device to track. The audio unit can do input from the device as well as output to the device. Bus 0 is used for the output side, bus 1 is used to get audio input from the device.

### 14.1.66 OutputUnitSystemOutput = 4

MBS MacOSX Plugin, Plugin Version: 15.0.

**Function:** One of the output units.
**Notes:** A specialisation of AUHAL that is used to track the user's selection of the device to use for sound effects, alerts and other UI sounds.

### 14.1.67 TimePitchUnitDefault = 0

MBS MacOSX Plugin, Plugin Version: 15.0.

**Function:** One of the time pitch units.
**Notes:** Default, plugin chooses one. (normal TimePitch)

### 14.1.68 TimePitchUnitTimePitch = 1

MBS MacOSX Plugin, Plugin Version: 15.0.

**Function:** One of the time pitch units.
**Notes:** An audio unit that can be used to have independent control of both playback rate and pitch.

### 14.1.69 TimePitchUnitVarispeed = 2

MBS MacOSX Plugin, Plugin Version: 15.0.

**Function:** One of the time pitch units.
**Notes:** An audio unit that can be used to control playback rate (as the rate is faster, the pitch is higher).

## 14.2 class CAPlayThroughMBS

### 14.2.1 class CAPlayThroughMBS

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class to do active play through on Mac OS X using CoreAudio.
**Notes:** This class uses newer code than the AudioPlayThruMBS class and may work better for some people.

### 14.2.2 Blog Entries

- MBS Real Studio Plugins, version 13.0pr3
- MBS Real Studio Plugins, version 12.1pr7
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr10
- MBS Real Studio Plugins, version 11.1pr8

### 14.2.3 Blog Entries

- MBS Real Studio Plugins, version 13.0pr3
- MBS Real Studio Plugins, version 12.1pr7
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr10
- MBS Real Studio Plugins, version 11.1pr8

### 14.2.4 Methods

### 14.2.5 Constructor(InputDeviceID as Integer, OutputDeviceID as Integer)

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

Lasterror is set.
Device IDs are the IDs you get in the CoreAudio classes.

### 14.2.6 IsRunning as boolean

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether playthrough is running.

### 14.2.7 Start

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Starts play through.
**Notes:** Lasterror is set.

### 14.2.8 Stop

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Stops play through.
**Notes:** Lasterror is set.

### 14.2.9 Properties

### 14.2.10 ExtraLatency as Integer

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Extra latency.
**Notes:**

When the latency is calculated, we add this value.
Unit is bytes.

Calculation of the buffer size is like this:

if (UseMinimumLatency)
InToOutSampleOffset = ExtraLatency + InputDevice.SafetyOffset + OutputDevice.SafetyOffset
else
InToOutSampleOffset = ExtraLatency + InputDevice.SafetyOffset + InputDevice.BufferSizeFrames + OutputDevice.SafetyOffset + OutputDevice.BufferSizeFrames
(Read and Write property)

### 14.2.11 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The last error code reported.
**Notes:** (Read and Write property)

### 14.2.12 UseMinimumLatency as Boolean

MBS MacOSX Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether to reduce latency to the absolute minimum.
**Notes:**

By default a large latency is used to ensure a smoother playthrough.
But you can have it set to the absolute minimum.

Calculation of the buffer size is like this:

if (UseMinimumLatency)
InToOutSampleOffset = ExtraLatency + InputDevice.SafetyOffset + OutputDevice.SafetyOffset
else
InToOutSampleOffset = ExtraLatency + InputDevice.SafetyOffset + InputDevice.BufferSizeFrames + OutputDevice.SafetyOffset + OutputDevice.BufferSizeFrames
(Read and Write property)

### 14.2.13 Volume as Double

MBS MacOSX Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Get or set the volume of the output audio unit.
**Notes:**

Lasterror is set.
Range is from 0.0 to 1.0.
(Read and Write computed property)

## 14.3 class CoreAudioListenerMBS

### 14.3.1 class CoreAudioListenerMBS

MBS MacOSX Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

**Function:** The class to watch for changes to CoreAudio property.

### 14.3.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 15.0
- MBS Xojo / Real Studio Plugins, version 15.0pr7

### 14.3.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 15.0
- MBS Xojo / Real Studio Plugins, version 15.0pr7

### 14.3.4 Methods

### 14.3.5 Constructor(ObjectID as UInt32, PropertySelector as UInt32, PropertyScope as UInt32, PropertyElement as UInt32)

MBS MacOSX Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

**Function:** The constructor.
**Notes:**

Please pass object ID and property selector values (see example project).
Lasterror is zero on success.

### 14.3.6 Destructor

MBS MacOSX Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

**Function:** The destructor.

### 14.3.7 Properties

### 14.3.8 LastError as Integer

MBS MacOSX Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:** (Read only property)

### 14.3.9 ObjectID as UInt32

MBS MacOSX Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

**Function:** The object ID used in constructor.
**Notes:** (Read only property)

### 14.3.10 PropertyElement as UInt32

MBS MacOSX Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

**Function:** The element ID used in constructor.
**Notes:** (Read only property)

### 14.3.11 PropertyScope as UInt32

MBS MacOSX Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

**Function:** The scope value used in constructor.
**Notes:** (Read only property)

### 14.3.12 PropertySelector as UInt32

MBS MacOSX Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

**Function:** The selector value used in constructor.
**Notes:** (Read only property)

### 14.3.13 Events

### 14.3.14 Changed

MBS MacOSX Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

**Function:** The watched property changed.

## 14.4 class CoreAudioMBS

### 14.4.1 class CoreAudioMBS

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** A class for low level CoreAudio calls.
**Notes:** Currently not finished for the 4.0 release.

### 14.4.2 Blog Entries

- MBS Real Studio Plugins, version 11.4pr2
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr11

### 14.4.3 Blog Entries

- MBS Real Studio Plugins, version 11.4pr2
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr11

### 14.4.4 Methods

### 14.4.5 AudioDeviceGetPropertyCFString(AudioDeviceID as Integer, channel as Integer, isinput as boolean, propertyID as string) as string

MBS MacOSX Plugin, Plugin Version: 10.2, Platform: macOS, Targets: All.

**Function:** Gets a property value from the Audio Device.
**Notes:**

Lasterror is set.
The property you query must be one of the CFString properties.

### 14.4.6 AudioDeviceGetPropertyInfo(AudioDeviceID as Integer, channel as Integer, isinput as boolean, propertyID as string, byref size as Integer, byref writeable as boolean)

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Gets property information from an Audio Unit.
**Notes:** Lasterror is set.

### 14.4.7 AudioDeviceGetPropertyMemory(AudioDeviceID as Integer, channel as Integer, isinput as boolean, propertyID as string) as memoryblock

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Gets a property value from the Audio Device.
**Notes:** Lasterror is set.

### 14.4.8 AudioDeviceGetPropertyString(AudioDeviceID as Integer, channel as Integer, isinput as boolean, propertyID as string) as string

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Gets a property value from the Audio Device.
**Notes:** Lasterror is set.

### 14.4.9 AudioDeviceSetPropertyMemory(AudioDeviceID as Integer, when as memoryblock, channel as Integer, isinput as boolean, propertyID as string, data as memoryblock, offset as Integer, length as Integer)

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Sets a property value for the Audio Device.
**Notes:** Lasterror is set.

### 14.4.10 AudioDeviceSetPropertyString(AudioDeviceID as Integer, when as memoryblock, channel as Integer, isinput as boolean, propertyID as string, data as string)

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Sets a property value for the Audio Device.
**Notes:** Lasterror is set.

### 14.4.11 AudioHardwareGetPropertyCFString(propertyID as string) as string

MBS MacOSX Plugin, Plugin Version: 10.2, Platform: macOS, Targets: All.

**Function:** Gets a property value from the Audio Hardware.
**Notes:**

Lasterror is set.
The property you query must be one of the CFString properties.

### 14.4.12 AudioHardwareGetPropertyInfo(propertyID as string, byref size as Integer, byref writeable as boolean)

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Gets property information from the Audio Hardware.
**Notes:** Lasterror is set.

### 14.4.13 AudioHardwareGetPropertyMemory(propertyID as string) as memoryblock

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Gets a property value from the Audio Hardware.
**Notes:** Lasterror is set.

### 14.4.14 AudioHardwareGetPropertyString(propertyID as string) as string

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Gets a property value from the Audio Hardware.
**Notes:** Lasterror is set.

### 14.4.15 AudioHardwareSetPropertyMemory(propertyID as string, data as memoryblock, offset as Integer, length as Integer)

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Sets a property value for the Audio Hardware.
**Notes:** Lasterror is set.

### 14.4.16 AudioHardwareSetPropertyString(propertyID as string, data as string)

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Sets a property value for the Audio Hardware.
**Notes:** Lasterror is set.

### 14.4.17 AudioObjectGetPropertyData(inObjectID as Integer, AddressSelector as UInt32, AddressScope as UInt32, AddressElement as UInt32, QualifierData as memoryblock = nil, InputData as Memoryblock = nil) as memoryblock

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

**Function:** Queries an AudioObject to get the data of the given property and places it in the provided buffer.
**Notes:**

The plugin queries size and creates a buffer for the result.

inObjectID: The AudioObject to query.
AddressSelector, AddressScope or AddressElement: An audio object property address indicating which property is being queried.
QualifierData: A buffer of data to be used in determining the data of the property being queried. Note that not all properties require qualification, in which case this value will be nil.

If InputData is nil, we query size and allocate buffer of required size.
If InputData is not nil, we use this memoryblock with its size. Result is InputData on success.

Lasterror is set.

### 14.4.18 AudioObjectGetPropertyDataSize(inObjectID as Integer, AddressSelector as UInt32, AddressScope as UInt32, AddressElement as UInt32, QualifierData as memoryblock = nil) as UInt32

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

**Function:** Queries an AudioObject to find the size of the data for the given property.
**Notes:**

inObjectID: The AudioObject to query.
AddressSelector, AddressScope or AddressElement: An audio object property address indicating which property is being queried.
QualifierData: A buffer of data to be used in determining the data of the property being queried. Note that

not all properties require qualification, in which case this value will be nil.

Returns an UInt32 indicating how many bytes the data for the given property occupies.
Lasterror is set.

### 14.4.19 AudioObjectSetPropertyData(inObjectID as Integer, AddressSelector as UInt32, AddressScope as UInt32, AddressElement as UInt32, Data as Memoryblock, QualifierData as memoryblock = nil)

MBS MacOSX Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

**Function:** Tells an AudioObject to change the value of the given property using the provided data.
**Notes:**

inObjectID: The AudioObject to query.
AddressSelector, AddressScope or AddressElement: An audio object property address indicating which property is being queried.
QualifierData: A buffer of data to be used in determining the data of the property being queried. Note that not all properties require qualification, in which case this value will be nil.

Lasterror is set.

### 14.4.20 AudioOutputUnitStart(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop only.

**Function:** Starts the Audio Unit.
**Notes:** Errorcode is returned.

### 14.4.21 AudioOutputUnitStop(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop only.

**Function:** Stops the AudioUnit.
**Notes:** Errorcode is returned.

### 14.4.22 AudioStreamGetPropertyCFString(AudioStreamID as Integer, channel as Integer, propertyID as string) as string

MBS MacOSX Plugin, Plugin Version: 10.2, Platform: macOS, Targets: All.

**Function:** Gets a property value from the Audio Stream.
**Notes:**

Lasterror is set.
The property you query must be one of the CFString properties.

### 14.4.23 AudioStreamGetPropertyInfo(AudioStreamID as Integer, channel as Integer, propertyID as string, byref size as Integer, byref writeable as boolean)

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Gets property information from an Audio Stream.
**Notes:** Lasterror is set.

### 14.4.24 AudioStreamGetPropertyMemory(AudioStreamID as Integer, channel as Integer, propertyID as string) as memoryblock

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Gets a property value from the Audio Stream.
**Notes:** Lasterror is set.

### 14.4.25 AudioStreamGetPropertyString(AudioStreamID as Integer, channel as Integer, propertyID as string) as string

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Gets a property value from the Audio Stream.
**Notes:** Lasterror is set.

### 14.4.26 AudioStreamSetPropertyMemory(AudioStreamID as Integer, when as memoryblock, channel as Integer, propertyID as string, data as memoryblock, offset as Integer, length as Integer)

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Sets a property value for the Audio Stream.
**Notes:** Lasterror is set.

### 14.4.27 AudioStreamSetPropertyString(AudioStreamID as Integer, when as memoryblock, channel as Integer, propertyID as string, data as string)

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Sets a property value for the Audio Stream.
**Notes:** Lasterror is set.

### 14.4.28 AudioUnitGetParameter(AudioUnit as Integer, ParameterID as Integer, AudioUnitScope as Integer, AudioUnitElement as Integer) as single

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Gets an audio unit parameter.

### 14.4.29 AudioUnitGetPropertyCFString(AudioUnit as Integer, propertyID as Integer, AudioUnitScope as Integer, AudioUnitElement as Integer) as string

MBS MacOSX Plugin, Plugin Version: 10.2, Platform: macOS, Targets: All.

**Function:** Gets a property of an Audio Unit.
**Notes:**

Lasterror is set.
Constants for AudioUnitScope:

| | |
|---|---|
| kAudioUnitScope_Global | = 0 |
| kAudioUnitScope_Input | = 1 |
| kAudioUnitScope_Output | = 2 |
| kAudioUnitScope_Group | = 3 |
| kAudioUnitScope_Part | = 4 |

The property you query must be one of the CFString properties.

### 14.4.30 AudioUnitGetPropertyInfo(AudioUnit as Integer, propertyID as Integer, AudioUnitScope as Integer, AudioUnitElement as Integer, byref size as Integer, byref writeable as boolean)

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Gets property information from the Audio Unit.
**Notes:**

Lasterror is set.
Constants for AudioUnitScope:

| | |
|---|---|
| kAudioUnitScope_Global | = 0 |
| kAudioUnitScope_Input | = 1 |
| kAudioUnitScope_Output | = 2 |
| kAudioUnitScope_Group | = 3 |
| kAudioUnitScope_Part | = 4 |

### 14.4.31 AudioUnitGetPropertyMemory(AudioUnit as Integer, propertyID as Integer, AudioUnitScope as Integer, AudioUnitElement as Integer) as memoryblock

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Gets a property of an Audio Unit.
**Notes:**

Lasterror is set.
Constants for AudioUnitScope:

| | |
|---|---|
| kAudioUnitScope_Global | = 0 |
| kAudioUnitScope_Input | = 1 |
| kAudioUnitScope_Output | = 2 |
| kAudioUnitScope_Group | = 3 |
| kAudioUnitScope_Part | = 4 |

### 14.4.32 AudioUnitGetPropertyString(AudioUnit as Integer, propertyID as Integer, AudioUnitScope as Integer, AudioUnitElement as Integer) as string

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Gets a property of an Audio Unit.
**Notes:**

Lasterror is set.
Constants for AudioUnitScope:

kAudioUnitScope_Global = 0
kAudioUnitScope_Input = 1
kAudioUnitScope_Output = 2
kAudioUnitScope_Group = 3
kAudioUnitScope_Part = 4

### 14.4.33 AudioUnitInitialize(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop only.

**Function:** Initializes the Audio Unit.
**Notes:** Errorcode is returned.

### 14.4.34 AudioUnitReset(componenthandle as Integer, scope as Integer, element as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop only.

**Function:** Resets the Audio Unit.
**Notes:**

Errorcode is returned.

Useful constants:

kAudioUnitScope_Global = 0
kAudioUnitScope_Input = 1
kAudioUnitScope_Output = 2
kAudioUnitScope_Group = 3
kAudioUnitScope_Part = 4

### 14.4.35 AudioUnitSetParameter(AudioUnit as Integer, ParameterID as Integer, AudioUnitScope as Integer, AudioUnitElement as Integer, value as single, BufferOffsetInFrames as Integer)

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Sets an audio unit parameter.

### 14.4.36 AudioUnitSetPropertyMemory(AudioUnit as Integer, propertyID as Integer, AudioUnitScope as Integer, AudioUnitElement as Integer, data as memoryblock, offset as Integer, length as Integer)

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Sets a property of an Audio Unit.
**Notes:**

Lasterror is set.
Constants for AudioUnitScope:

| | |
|---|---|
| kAudioUnitScope_Global | = 0 |
| kAudioUnitScope_Input | = 1 |
| kAudioUnitScope_Output | = 2 |
| kAudioUnitScope_Group | = 3 |
| kAudioUnitScope_Part | = 4 |

### 14.4.37 AudioUnitSetPropertyString(AudioUnit as Integer, propertyID as Integer, AudioUnitScope as Integer, AudioUnitElement as Integer, data as string)

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Sets a property value for the Audio Unit.
**Notes:**

Lasterror is set.
Constants for AudioUnitScope:

| | |
|---|---|
| kAudioUnitScope_Global | = 0 |
| kAudioUnitScope_Input | = 1 |
| kAudioUnitScope_Output | = 2 |
| kAudioUnitScope_Group | = 3 |
| kAudioUnitScope_Part | = 4 |

### 14.4.38 AudioUnitUninitialize(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: Desktop only.

**Function:** Uninitializes the Audio Unit.
**Notes:** Errorcode is returned.

### 14.4.39 CloseComponent(componenthandle as Integer)

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

**Function:** Closes a component.
**Notes:** Do not use the componenthandle any more after this call!

### 14.4.40 CoreAudioConvertHostTimeToNanosMBS(inHostTime as UInt64) as UInt64

MBS MacOSX Plugin, Plugin Version: 7.0, Platform: macOS, Targets: All.

**Function:** Convert the given host time to a time in Nanoseconds.
**Notes:** Returns 0 on any error.

### 14.4.41 CoreAudioConvertNanosToHostTimeMBS(inNanos as UInt64) as UInt64

MBS MacOSX Plugin, Plugin Version: 7.0, Platform: macOS, Targets: All.

**Function:** Convert the given Nanoseconds time to a time in the host clock's time base.
**Notes:** Returns 0 on any error.

### 14.4.42 CoreAudioGetCurrentHostTimeMBS as UInt64

MBS MacOSX Plugin, Plugin Version: 7.0, Platform: macOS, Targets: All.

**Function:** Retrieve the current host time value.
**Notes:** Returns 0 on any error.

### 14.4.43 CoreAudioGetHostClockFrequencyMBS as Double

MBS MacOSX Plugin, Plugin Version: 7.0, Platform: macOS, Targets: All.

**Function:** Retrieve the number of ticks per second of the host clock.

### 14.4.44 GetHostClockMinimumTimeDeltaMBS as Integer

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** Retrieve the smallest number of ticks difference between two succeeding values of the host clock.
**Notes:**

For instance, if this value is 5 and the first value of the host clock is X then the next time after X will be at greater than or equal X+5.
Returns an unsigned integer value.

### 14.4.45 OpenDefaultComponent(type as string, subtype as string) as Integer

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

**Function:** Opens the default component for the given type and subtype string.
**Notes:**

You can check the "QT Components list" example project for which components are installed.
Returns 0 on any error.
type and subtype must be 4 letter codes.

useful constans:

```
kAudioUnitComponentType                = "aunt"
kAudioUnitSubType_Output               = "out "
kAudioUnitID_HALOutput                 = "ahal"
kAudioUnitID_DefaultOutput             = "def "
kAudioUnitID_SystemOutput              = "sys "
kAudioUnitID_GenericOutput             = "genr"
kAudioUnitSubType_MusicDevice          = "musd"
kAudioUnitID_DLSSynth                  = "dls "
kAudioUnitSubType_SampleRateConverter  = "srcv"
kAudioUnitID_PolyphaseSRC              = "poly"
kAudioUnitSubType_FormatConverter      = "fmtc"
kAudioUnitID_Interleaver               = "inlv"
kAudioUnitID_Deinterleaver             = "dnlv"
kAudioUnitID_AUConverter               = "conv"
kAudioUnitSubType_Effect               = "efct"
kAudioUnitID_MatrixReverb              = "mrev"
kAudioUnitID_Delay                     = "dely"
kAudioUnitID_LowPassFilter             = "lpas"
kAudioUnitID_HighPassFilter            = "hpas"
kAudioUnitID_BandPassFilter            = "bpas"
kAudioUnitID_PeakLimiter               = "lmtr"
kAudioUnitID_DynamicsProcessor         = "dcmp"
kAudioUnitSubType_Mixer                = "mixr"
kAudioUnitID_StereoMixer               = "smxr"
kAudioUnitID_3DMixer                   = "3dmx"
```

### 14.4.46 Properties

### 14.4.47 kAudioDeviceProcessorOverload as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.48 kAudioDevicePropertyActualSampleRate as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.49 kAudioDevicePropertyAvailableNominalSampleRates as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.50 kAudioDevicePropertyBufferFrameSize as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.51 kAudioDevicePropertyBufferFrameSizeRange as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.52 kAudioDevicePropertyBufferSize as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.53 kAudioDevicePropertyBufferSizeRange as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.54 kAudioDevicePropertyClockSource as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.55 kAudioDevicePropertyClockSourceNameForID as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.56 kAudioDevicePropertyClockSourceNameForIDCFString as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.57 kAudioDevicePropertyClockSources as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.58 kAudioDevicePropertyDataSource as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.59 kAudioDevicePropertyDataSourceNameForID as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.60 kAudioDevicePropertyDataSourceNameForIDCFString as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.61 kAudioDevicePropertyDataSources as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.62 kAudioDevicePropertyDeviceCanBeDefaultDevice as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.63 kAudioDevicePropertyDeviceCanBeDefaultSystemDevice as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.64 kAudioDevicePropertyDeviceIsAlive as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.65 kAudioDevicePropertyDeviceIsRunning as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.66 kAudioDevicePropertyDeviceIsRunningSomewhere as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.67 kAudioDevicePropertyDeviceManufacturer as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.68 kAudioDevicePropertyDeviceManufacturerCFString as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.69 kAudioDevicePropertyDeviceName as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.70 kAudioDevicePropertyDeviceNameCFString as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.71 kAudioDevicePropertyDeviceUID as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.72 kAudioDevicePropertyDriverShouldOwniSub as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.73 kAudioDevicePropertyHogMode as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.74 kAudioDevicePropertyIOProcStreamUsage as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.75 kAudioDevicePropertyJackIsConnected as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.76 kAudioDevicePropertyLatency as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.77 kAudioDevicePropertyMute as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.78 kAudioDevicePropertyNominalSampleRate as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.79 kAudioDevicePropertyPlayThru as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.80 kAudioDevicePropertyPlugIn as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.81 kAudioDevicePropertyPreferredChannelsForStereo as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.82 kAudioDevicePropertyRegisterBufferList as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.83 kAudioDevicePropertySafetyOffset as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.84 kAudioDevicePropertyStreamConfiguration as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.85 kAudioDevicePropertyStreamFormat as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.86 kAudioDevicePropertyStreamFormatMatch as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.87 kAudioDevicePropertyStreamFormats as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.88 kAudioDevicePropertyStreamFormatSupported as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.89 kAudioDevicePropertyStreams as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.90 kAudioDevicePropertySubMute as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.91 kAudioDevicePropertySubVolumeDecibels as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.92 kAudioDevicePropertySubVolumeDecibelsToScalar as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.93 kAudioDevicePropertySubVolumeRangeDecibels as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.94 kAudioDevicePropertySubVolumeScalar as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.95 kAudioDevicePropertySubVolumeScalarToDecibels as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.96 kAudioDevicePropertySupportsMixing as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.97 kAudioDevicePropertyTransportType as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.98 kAudioDevicePropertyUsesVariableBufferFrameSizes as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.99 kAudioDevicePropertyVolumeDecibels as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.100 kAudioDevicePropertyVolumeDecibelsToScalar as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.101 kAudioDevicePropertyVolumeRangeDecibels as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.102 kAudioDevicePropertyVolumeScalar as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.103 kAudioDevicePropertyVolumeScalarToDecibels as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.104 kAudioHardwarePropertyBootChimeVolumeDecibels as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:**

A Float32 that represents the value of the boot chime volume control in dB. This property is implemented by an AudioControl object that is a subclass of AudioBootChimeVolumeControl.
(Read only property)

### 14.4.105 kAudioHardwarePropertyBootChimeVolumeDecibelsToScalar as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.106 kAudioHardwarePropertyBootChimeVolumeRangeDecibels as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.107 kAudioHardwarePropertyBootChimeVolumeScalar as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.108 kAudioHardwarePropertyBootChimeVolumeScalarToDecibels as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.109 kAudioHardwarePropertyDefaultInputDevice as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.110 kAudioHardwarePropertyDefaultOutputDevice as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.111 kAudioHardwarePropertyDefaultSystemOutputDevice as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.112 kAudioHardwarePropertyDeviceForUID as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.113 kAudioHardwarePropertyDevices as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.114 kAudioHardwarePropertyRunLoop as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.115 kAudioHardwarePropertySleepingIsAllowed as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.116 kAudioHardwarePropertyUnloadingIsAllowed as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.117 kAudioPropertyWildcardChannel as Integer

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.118 kAudioPropertyWildcardPropertyID as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.119 kAudioPropertyWildcardSection as Integer

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.120 kAudioStreamPropertyDirection as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.121 kAudioStreamPropertyOwningDevice as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.122 kAudioStreamPropertyPhysicalFormat as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.123 kAudioStreamPropertyPhysicalFormatMatch as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.124 kAudioStreamPropertyPhysicalFormats as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.125 kAudioStreamPropertyPhysicalFormatSupported as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.126 kAudioStreamPropertyStartingChannel as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.127 kAudioStreamPropertyTerminalType as String

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** One of the constants for CoreAudio.
**Notes:** (Read only property)

### 14.4.128 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** The last error code returned.
**Notes:**

0 for success.
(Read and Write property)

## 14.5 class CoreAudioPlayerMBS

### 14.5.1 class CoreAudioPlayerMBS

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** A class to play sounds from a memoryblock using CoreAudio.
**Notes:**

This class uses an internal buffer of around 100000 samples which when played with a samplerate of 8000 will play for 10 seconds.
The music stops playing after this object is destroyed.
Mac OS X is required.

### 14.5.2 Blog Entries

- MBS Real Studio Plugins, version 11.4pr2

### 14.5.3 Blog Entries

- MBS Real Studio Plugins, version 11.4pr2

### 14.5.4 Methods

### 14.5.5 AddAudio(Data as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, BitSize as Integer=16, ClearBuffers as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

**Function:** Adds integer audio.
**Notes:**

Data: a memoryblock with the sound data
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset.

You need to set NumberOfChannels before calling this method.
NumberOfChannels can be 1 or 2. For 2 channels, sound data must be interleaved.

Values for bitsize:

| | |
|---|---|
| 7 | signed byte |
| 8 | unsigned byte |
| 15 | signed short |
| 16 | unsigned short |
| 24 | unsigned medium |
| 31 | signed integer |
| 32 | unsigned integer |

This method only copies the data to the internal queue. It returns directly.
If ClearBuffers is true the buffer list is cleared before this new data is added.

### 14.5.6 AddAudioStereo(Data1 as memoryblock, Data2 as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, BitSize as Integer=16, ClearBuffers as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

**Function:** Adds integer audio.
**Notes:**

This is a special version of PlayAudio which takes samples from both memoryblocks and interleaves them.

Data1: a memoryblock with the sound data
Data2: a memoryblock with the sound data
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset.

You need to set NumberOfChannels before calling this method.
NumberOfChannels must be 2 for this method.

Values for bitsize:

This method only copies the data to the internal queue. It returns directly.
If ClearBuffers is true the buffer list is cleared before this new data is added.

| | |
|---|---|
| 7 | signed byte |
| 8 | unsigned byte |
| 15 | signed short |
| 16 | unsigned short |
| 24 | unsigned medium |
| 31 | signed integer |
| 32 | unsigned integer |

### 14.5.7 AddFloatAudio(FloatData as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, ClearBuffers as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

**Function:** Adds float audio.
**Notes:**

FloatData: a memoryblock with the sound data filled with single values.
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset.

The samples are stored in 32bit float values (memoryblock.SingleValue)

You need to set NumberOfChannels before calling this method.
NumberOfChannels can be 1 or 2. For 2 channels, sound data must be interleaved.

This method only copies the data to the internal queue. It returns directly.
If ClearBuffers is true the buffer list is cleared before this new data is added.

### 14.5.8 AddFloatAudioStereo(FloatData1 as memoryblock, FloatData2 as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, ClearBuffers as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

**Function:** Adds float audio.
**Notes:**

This is a special version of PlayFloatAudio which takes samples from both memoryblocks and interleaves them.

FloatData1: a memoryblock with the sound data filled with single values.

FloatData2: a memoryblock with the sound data filled with single values.
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset.

The samples are stored in 32bit float values (memoryblock.SingleValue)

You need to set NumberOfChannels before calling this method.
NumberOfChannels must be 2 for this method.

This method only copies the data to the internal queue. It returns directly.
If ClearBuffers is true the buffer list is cleared before this new data is added.

### 14.5.9 Close

MBS MacOSX Plugin, Plugin Version: 5.1, Platform: macOS, Targets: All.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 14.5.10 FreeSpace as Integer

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

**Function:** Returns the number of buffer entries available in the queue.
**Notes:** The size of the buffers is not limited except your available memory.

### 14.5.11 HardwareNumberOfChannels as Integer

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

**Function:** Returns the actual number of channels in the default device; to set the number of channels being output, use numberOfChannels.
**Notes:**

This class can only play stereo to 2 channel devices or mono to all channels.
Returns 0 on any error.

### 14.5.12 HardwareSampleRate as single

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

**Function:** The hardware sample rate.
**Notes:** Today this is normally 44100 Hz. Or 0 on any error.

### 14.5.13 HasFreeSpace as boolean

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: All.

**Function:** Returns true if the internal sound buffer is not full.
**Notes:**

Returns true if freespace returns a value greater than zero.

This function was named IsQueueEmpty in plugin version 7.4.

### 14.5.14 PlayAudio(Data as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, BitSize as Integer=16, ClearBuffers as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

**Function:** Adds integer audio and starts playback.
**Notes:**

Data: a memoryblock with the sound data
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset.

You need to set NumberOfChannels before calling this method.
NumberOfChannels can be 1 or 2. For 2 channels, sound data must be interleaved.

Values for bitsize:

This method only copies the data to the internal queue. It returns directly.
If ClearBuffers is true the buffer list is cleared before this new data is added.

7 signed byte
8 unsigned byte
15 signed short
16 unsigned short
24 unsigned medium
31 signed integer
32 unsigned integer

### 14.5.15 PlayAudioStereo(Data1 as memoryblock, Data2 as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, BitSize as Integer=16, ClearBuffers as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

**Function:** Adds integer audio and starts playback.
**Notes:**

This is a special version of PlayAudio which takes samples from both memoryblocks and interleaves them.

Data1: a memoryblock with the sound data
Data2: a memoryblock with the sound data
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset.

You need to set NumberOfChannels before calling this method.
NumberOfChannels must be 2 for this method.

Values for bitsize:

7 signed byte
8 unsigned byte
15 signed short
16 unsigned short
24 unsigned medium
31 signed integer
32 unsigned integer

This method only copies the data to the internal queue. It returns directly.
If ClearBuffers is true the buffer list is cleared before this new data is added.

### 14.5.16 PlayFloatAudio(FloatData as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, ClearBuffers as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

**Function:** Adds float audio and starts playback.
**Notes:**

FloatData: a memoryblock with the sound data filled with single values.
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset.

The samples are stored in 32bit float values (memoryblock.SingleValue)

You need to set NumberOfChannels before calling this method.
NumberOfChannels can be 1 or 2. For 2 channels, sound data must be interleaved.

This method only copies the data to the internal queue. It returns directly.
If ClearBuffers is true the buffer list is cleared before this new data is added.

### 14.5.17 PlayFloatAudioStereo(FloatData1 as memoryblock, FloatData2 as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, ClearBuffers as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

**Function:** Adds float audio and starts playback.
**Notes:**

This is a special version of PlayFloatAudio which takes samples from both memoryblocks and interleaves them.

FloatData1: a memoryblock with the sound data filled with single values.
FloatData2: a memoryblock with the sound data filled with single values.
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset.

The samples are stored in 32bit float values (memoryblock.SingleValue)

You need to set NumberOfChannels before calling this method.

NumberOfChannels must be 2 for this method.

This method only copies the data to the internal queue. It returns directly.
If ClearBuffers is true the buffer list is cleared before this new data is added.

### 14.5.18 Start as boolean

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

**Function:** Starts playback.
**Notes:** use AddAudio, AddAudioStereo, AddFloatAudio and AddFloatAudioStereo first to fill buffers.

### 14.5.19 Stop

MBS MacOSX Plugin, Plugin Version: 5.1, Platform: macOS, Targets: All.

**Function:** Stops playback.

### 14.5.20 Properties

### 14.5.21 HadUnderflow as Boolean

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: All.

**Function:** A flag set if a data underflow was found while NoUnderflow is true.
**Notes:**

You may want to set this to false after your application recovered from a data underflow.
(Read and Write property)

### 14.5.22 IsRunning as Boolean

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

**Function:** Whether the class is playing something.
**Notes:**

Returns true while playing.
(Read only property)

### 14.5.23 NoUnderflow as Boolean

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: All.

**Function:** Whether underflows should be prevented.
**Notes:**

If no audio data is there and NoUnderflow=true, the flag HadUnderflow is set to true and 0 values (Silence) is played.

Switching from sound to no sound and back may add some noise.
(Read and Write property)

### 14.5.24 NumberOfChannels as Integer

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

**Function:** The number of output channels.
**Notes:**

Currently only 1 (default) and 2 are supported.
(Read and Write property)

### 14.5.25 OutputDeviceID as Integer

MBS MacOSX Plugin, Plugin Version: 5.1, Platform: macOS, Targets: All.

**Function:** The output device to use.
**Notes:**

0 for the default output device.
If you set this property to a bad value you risk a crash.
(Read and Write property)

### 14.5.26 OutputPosition as Double

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

**Function:** The current position in the playing stream.
**Notes:**

May point between samples.
(Read only property)

### 14.5.27 OutputPositionRelative as Double

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

**Function:** The current position in the playing buffer.
**Notes:**

May point between samples.
Will reset to 0 when a new buffer is used.
(Read only property)

### 14.5.28 SampleRate as Single

MBS MacOSX Plugin, Plugin Version: 4.3, Platform: macOS, Targets: All.

**Function:** The sample rate to use.
**Notes:**

You can use any value between 4000 and 100000.
Default is 44100 Hz.
(Read and Write property)

## 14.6 class PortAudioDeviceInfoMBS

### 14.6.1 class PortAudioDeviceInfoMBS

MBS Audio Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class providing information and capabilities of PortAudio devices.
**Notes:**

Devices may support input, output or both input and output.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 14.6.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

### 14.6.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

### 14.6.4 Methods

### 14.6.5 Constructor

MBS Audio Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 14.6.6 Properties

### 14.6.7 DefaultHighInputLatency as Double

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Default latency values for robust non-interactive applications (eg. playing sound files).
**Notes:** (Read only property)

### 14.6.8 DefaultHighOutputLatency as Double

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Default latency values for robust non-interactive applications (eg. playing sound files).
**Notes:** (Read only property)

### 14.6.9 DefaultLowInputLatency as Double

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Default latency values for interactive performance.
**Notes:** (Read only property)

### 14.6.10 DefaultLowOutputLatency as Double

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Default latency values for interactive performance.
**Notes:** (Read only property)

### 14.6.11 DefaultSampleRate as Double

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The default sample rate.
**Notes:** (Read only property)

### 14.6.12 HostApiIndex as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The host API index for this device.
**Notes:** (Read only property)

### 14.6.13 Index as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The index of this device.
**Notes:** (Read only property)

### 14.6.14 MaxInputChannels as Integer

MBS Audio Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of input channels.
**Notes:**

Returns 0 on any error.
(Read only property)

### 14.6.15 MaxOutputChannels as Integer

MBS Audio Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of output channels for this device.
**Notes:**

0 on any error.

Seems like an iMac returns two here, but the internal microphone has only one channel. So be aware that the memoryblocks in the events do have the actual size of the data that is coming in. So stereo has there a larger buffer.
(Read only property)

### 14.6.16 Name as String

MBS Audio Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of this device.
**Notes:**

Returns "" on any error.
(Read only property)

## 14.7 class PortAudioHostApiInfoMBS

### 14.7.1 class PortAudioHostApiInfoMBS

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class containing information about a particular host API.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 14.7.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

### 14.7.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

### 14.7.4 Methods

### 14.7.5 Constructor

MBS Audio Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 14.7.6 Properties

### 14.7.7 defaultInputDevice as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The default input device for this host API.
**Notes:**

The value will be a device index ranging from 0 to (PortAudioHostApiInfoMBS.deviceCount-1), or paNoDevice (-1) if no default input device is available.
(Read only property)

### 14.7.8 defaultOutputDevice as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The default output device for this host API.
**Notes:**

The value will be a device index ranging from 0 to (PortAudioHostApiInfoMBS.deviceCount-1), or paNoDevice (-1) if no default output device is available.
(Read only property)

### 14.7.9 deviceCount as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of devices belonging to this host API.
**Notes:**

This field may be used in conjunction with HostApiDeviceIndexToDeviceIndex() to enumerate all devices for this host API.
(Read only property)

### 14.7.10 Index as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The index of this host API.
**Notes:** (Read only property)

### 14.7.11 Name as String

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A textual description of the host API for display on user interfaces.
**Notes:** (Read only property)

### 14.7.12 Type as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The well known unique identifier of this host API.
**Notes:**

Useful constants for the different types:

| | |
|---|---|
| paInDevelopment | =0 |
| paDirectSound | =1 |
| paMME | =2 |
| paASIO | =3 |
| paSoundManager | =4 |
| paCoreAudio | =5 |
| paOSS | =7 |
| paALSA | =8 |
| paAL | =9 |
| paBeOS | =10 |
| paWDMKS | =11 |
| paJACK | =12 |
| paWASAPI | =13 |
| paAudioScienceHPI | =14 |

(Read only property)

## 14.8 class PortAudioHostErrorInfoMBS

### 14.8.1 class PortAudioHostErrorInfoMBS

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class used to return information about a host error condition.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 14.8.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

### 14.8.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

### 14.8.4 Methods

### 14.8.5 Constructor

MBS Audio Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 14.8.6 Properties

### 14.8.7 ErrorCode as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** the error code returned.
**Notes:** (Read only property)

### 14.8.8 ErrorText as String

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A textual description of the error if available, otherwise a zero-length string.
**Notes:** (Read only property)

### 14.8.9 HostApiType as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The host API which returned the error code.
**Notes:** (Read only property)

## 14.9 class PortAudioMBS

### 14.9.1 class PortAudioMBS

MBS Audio Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class to run the opensource PortAudio library in Xojo.
**Notes:**

Constants for error codes:

| | |
|---|---|
| paNoError | = 0 |
| Plugin parameter error | = -1 |
| paNotInitialized | = -10000, |
| paUnanticipatedHostError | = -9999 |
| paInvalidChannelCount | = -9998 |
| paInvalidSampleRate | = -9997 |
| paInvalidDevice | = -9996 |
| paInvalidFlag | = -9995 |
| paSampleFormatNotSupported | = -9994 |
| paBadIODeviceCombination | = -9993 |
| paInsufficientMemory | = -9992 |
| paBufferTooBig | = -9991 |
| paBufferTooSmall | = -9990 |
| paNullCallback | = -9989 |
| paBadStreamPtr | = -9988 |
| paTimedOut | = -9987 |
| paInternalError | = -9986 |
| paDeviceUnavailable | = -9985 |
| paIncompatibleHostApiSpecificStreamInfo | = -9984 |
| paStreamIsStopped | = -9983 |
| paStreamIsNotStopped | = -9982 |
| paInputOverflowed | = -9981 |
| paOutputUnderflowed | = -9980 |
| paHostApiNotFound | = -9979 |
| paInvalidHostApi | = -9978 |
| paCanNotReadFromACallbackStream | = -9977 |
| paCanNotWriteToACallbackStream | = -9976 |
| paCanNotReadFromAnOutputOnlyStream | = -9975 |
| paCanNotWriteToAnInputOnlyStream | = -9974 |
| paIncompatibleStreamHostApi | = -9973 |
| paBadBufferPtr | = -9972 |

Initialization and Termination of the PortAudio library are done in background automatically.

Requires libasound.so.2 on Linux to be installed.

### 14.9.2 Blog Entries

### 14.9.4 Methods

### 14.9.5 ASIOGetAvailableBufferSizes(DeviceIndex as Integer, byref minBufferSizeFrames as Integer, byref maxBufferSizeFrames as Integer, byref preferredBufferSizeFrames as Integer, byref granularity as Integer) as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve legal native buffer sizes for the specificed device, in sample frames.
**Notes:**

device: The global index of the device about which the query is being made.

minBufferSizeFrames: The minimum buffer size value.
maxBufferSizeFrames: The maximum buffer size value.
preferredBufferSizeFrames: The preferred buffer size value.
granularity: The "granularity". This value determines the step size used to compute the legal values between minBufferSizeFrames and maxBufferSizeFrames.

If granularity is -1 then available buffer size values are powers of two.

see ASIOGetBufferSize in the ASIO SDK.

### 14.9.6 ASIOGetInputChannelName(DeviceIndex as Integer, ChannelIndex as Integer) as String

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries name of input channel.
**Example:**

```
Dim po As New PortAudioMBS

// find ASIO device
Dim defaultASIOInputDevice As Integer

Dim hc As Integer = po.HostApiCount
For hi As Integer = 0 To hc
Dim host As PortAudioHostApiInfoMBS = po.HostApiInfo(hi)
If host<>Nil And host.Type = po.kHostApiASIO Then
defaultASIOInputDevice = host.defaultInputDevice
End If
Next

// show channel names
D2im names As String
Dim de As PortAudioDeviceInfoMBS = po.DeviceInfo(defaultASIOInputDevice)
For i As Integer = 0 To de.maxInputChannels-1
names.Append po.ASIOGetInputChannelName(defaultASIOInputDevice,i)
Next

MsgBox Join(names, EndOfLine)
```

**Notes:** The string will be no longer than 32 characters.

### 14.9.7 ASIOGetOutputChannelName(DeviceIndex as Integer, ChannelIndex as Integer) as String

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries name of output channel.
**Example:**

```
Dim po As New PortAudioMBS

// find ASIO device
Dim defaultASIOOutputDevice As Integer

Dim hc As Integer = po.HostApiCount
For hi As Integer = 0 To hc
Dim host As PortAudioHostApiInfoMBS = po.HostApiInfo(hi)
If host<>Nil And host.Type = po.kHostApiASIO Then
defaultASIOOutputDevice = host.defaultOutputDevice
```

```
End If
Next

// show channel names
D2im names As String
Dim de As PortAudioDeviceInfoMBS = po.DeviceInfo(defaultASIOOutputDevice)
For i As Integer = 0 To de.maxOutputChannels-1
names.Append po.ASIOGetOutputChannelName(defaultASIOOutputDevice,i)
Next

MsgBox Join(names, EndOfLine)
```

**Notes:** The string will be no longer than 32 characters.

### 14.9.8 ASIOGetSampleRate(byref rate as double) as Integer

MBS Audio Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries current sample rate.
**Example:**

```
Dim d As Double
Dim n As Integer

n = PortAudioMBS.ASIOGetSampleRate(d)

If n = 0 Then
MsgBox Str(d)
Else
MsgBox "Error: "+Str(n)
End If
```

**Notes:**

Rate will hold the current sample rate on return.
Returns error code.
If sample rate is unknown, sampleRate will be 0 and ASE_NoClock will be returned.
If no input/output is present ASE_NotPresent (-1000) will be returned.

### 14.9.9 ASIOShowControlPanel(device as integer, parentWindow as DesktopWindow) as Integer

MBS Audio Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Display the ASIO control panel for the specified device.
**Notes:**

device: The global index of the device whose control panel is to be displayed.
parentWindow: On Windows, the calling application's main window handle or nil.
See also:

- 14.9.10 ASIOShowControlPanel(device as integer, parentWindow as window = nil) as Integer 3435

### 14.9.10 ASIOShowControlPanel(device as integer, parentWindow as window = nil) as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Display the ASIO control panel for the specified device.
**Example:**

```
Dim po As New PortAudioMBS

// find ASIO device
Dim defaultASIOOutputDevice As Integer

Dim hc As Integer = po.HostApiCount
For hi As Integer = 0 To hc
Dim host As PortAudioHostApiInfoMBS = po.HostApiInfo(hi)
If host<>Nil And host.Type = po.kHostApiASIO Then
defaultASIOOutputDevice = host.defaultOutputDevice
End If
Next

// show dialog
Call po.ASIOShowControlPanel(defaultASIOOutputDevice, window1)
```

**Notes:**

device: The global index of the device whose control panel is to be displayed.
parentWindow: On Windows, the calling application's main window handle or nil.
See also:

- 14.9.9 ASIOShowControlPanel(device as integer, parentWindow as DesktopWindow) as Integer 3435

### 14.9.11 CountDevices as Integer

MBS Audio Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the number of available devices.
**Example:**

```
dim pa as new PortAudioMBS

Dim c as Integer = pa.CountDevices
msgbox str(c)+" devices found"

for i as Integer = 0 to c-1
MsgBox pa.DeviceInfo(i).Name
next
```

**Notes:**

The number of available devices may be zero.

Returns a non-negative value indicating the number of available devices or, a PaErrorCode (which are always negative) if PortAudio is not initialized or an error is encountered.

### 14.9.12 DefaultHostApiIndexd as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the index of the default host API.
**Example:**

```
dim pa as new PortAudioMBS

dim DefaultHostApiIndexd as Integer = pa.DefaultHostApiIndexd

if DefaultHostApiIndexd>=0 then
dim d as PortAudioHostApiInfoMBS = pa.HostApiInfo(DefaultHostApiIndexd)
MsgBox "Default host API is: "+d.Name
else
MsgBox "No default host API."
end if
```

**Notes:**

The default host API will be the lowest common denominator host API on the current platform and is

unlikely to provide the best performance.

Returns a non-negative value ranging from 0 to (HostApiCount-1)indicating the default host API index or, a PaErrorCode (which are always negative) if PortAudio is not initialized or an error is encountered.

### 14.9.13 DefaultInputDeviceID as Integer

MBS Audio Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the index of the default input device.
**Example:**

```
dim pa as new PortAudioMBS

dim DefaultInputDeviceID as Integer = pa.DefaultInputDeviceID

if DefaultInputDeviceID>=0 then
dim d as PortAudioDeviceInfoMBS = pa.DeviceInfo(DefaultInputDeviceID)
MsgBox "Default input device is: "+d.Name
else
MsgBox "No default input device."
end if
```

**Notes:**

The result can be used in the inputDevice parameter to OpenStream().

Returns the default input device index for the default host API, or paNoDevice (-1) if no default input device is available or an error was encountered.

### 14.9.14 DefaultOutputDeviceID as Integer

MBS Audio Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the index of the default output device.
**Example:**

```
dim pa as new PortAudioMBS

dim DefaultOutputDeviceID as Integer = pa.DefaultOutputDeviceID

if DefaultOutputDeviceID>=0 then
dim d as PortAudioDeviceInfoMBS = pa.DeviceInfo(DefaultOutputDeviceID)
```

```
MsgBox "Default output device is: "+d.Name
else
MsgBox "No default output device."
end if
```

**Notes:**

The result can be used in the outputDevice parameter to OpenStream().

Returns the default output device index for the defualt host API, or paNoDevice (-1) if no default output device is available or an error was encountered.

On the PC, the user can specify a default device by setting an environment variable. For example, to use device # 1.
set PA_RECOMMENDED_OUTPUT_DEVICE=1
The user should first determine the available device ids by using the supplied application "pa_devs".

### 14.9.15 DeviceInfo(DeviceIndex as Integer) as PortAudioDeviceInfoMBS

MBS Audio Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve an object containing information about the specified device.
**Example:**

```
dim pa as new PortAudioMBS

Dim u as Integer = pa.CountDevices-1
for i as Integer = 0 to u
dim d as PortAudioDeviceInfoMBS = pa.DeviceInfo(i)
MsgBox d.Name+" with default "+str(D.DefaultSampleRate)+" Hz"
next
```

**Notes:**

Returns an object of class PortAudioDeviceInfoMBS with the requested information. If the device parameter is out of range the function returns nil.

DeviceIndex: A valid device index in the range 0 to (PortAudioMBS.CountDevices-1)

### 14.9.16 DisableHostAPI(API as string) as boolean

MBS Audio Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Disables a PortAudio Host API.
**Example:**

```
if PortAudioMBS.DisableHostAPI("Core Audio") then // for Mac
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

This must be called before using any PortAudio function.
It removes the API from the list of APIs to be used when PortAudio initializes. This way you can avoid loading interfaces you don't need.
API name can be "MME", "Windows DirectSound", "Windows WASAPI", "ASIO", "Core Audio", "ALSA", "OSS".
Returns true on success.

### 14.9.17 ErrorText(ErrorNumber as Integer) as string

MBS Audio Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Translate the error number into a human readable message.

### 14.9.18 GetSampleSize(Format as Integer) as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the sample size in bytes of the given format.
**Example:**

```
dim pa as new PortAudioMBS

const paFloat32 = 1

MsgBox str(pa.GetSampleSize(paFloat32))+" bytes per sample"
```

### 14.9.19 HostApiCount as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the number of available host APIs.
**Example:**

```
dim pa as new PortAudioMBS

Dim c as Integer = pa.HostApiCount
msgbox str(c)+" host APIs found"
```

**Notes:**

Even if a host API is available it may have no devices available.

Returns a non-negative value indicating the number of available host APIs or, a PaErrorCode (which are always negative) if PortAudio is not initialized or an error is encountered.

### 14.9.20 HostApiDeviceIndexToDeviceIndex(hostApiIndex as Integer, hostApiDeviceIndex as Integer) as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convert a host-API-specific device index to standard PortAudio device index.
**Notes:**

This function may be used in conjunction with the deviceCount field of PaHostApiInfo to enumerate all devices for the specified host API.

hostApiIndex: A valid host API index ranging from 0 to (HostApiCount-1)
hostApiDeviceIndex: A valid per-host device index in the range 0 to (HostApiInfo(hostApi).deviceCount-1)

Returns a non-negative device index ranging from 0 to (DeviceCount-1) or, an error code (which are always negative) if PortAudio is not initialized or an error is encountered.

A paInvalidHostApi (-9978) error code indicates that the host API index specified by the hostApi parameter is out of range.

A paInvalidDevice (-9996) error code indicates that the hostApiDeviceIndex parameter is out of range.

### 14.9.21 HostApiInfo(hostApiIndex as Integer) as PortAudioHostApiInfoMBS

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve an PortAudioHostApiInfoMBS object containing information about a specific host Api.
**Example:**

```
dim pa as new PortAudioMBS
Dim u as Integer = pa.HostApiCount - 1

for i as Integer = 0 to u
dim d as PortAudioHostApiInfoMBS = pa.HostApiInfo(i)
MsgBox d.name
next
```

**Notes:**

hostApiIndex: A valid host API index ranging from 0 to (HostApiCount-1)

Returns the information object. If the hostApi parameter is out of range or an error is encountered, the function returns nil.

### 14.9.22 HostApiTypeIdToHostApiIndex(type as Integer) as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convert a static host API unique identifier, into a runtime host API index.
**Example:**

```
dim IndexDirectSound as Integer
dim p as new PortAudioMBS
const paDirectSound=1
IndexDirectSound=p.HostApiTypeIdToHostApiIndex(paDirectSound)
```

**Notes:**

type: A unique host API identifier. See PortAudioHostApiInfoMBS.Type for the list of constants.

Returns a valid PaHostApiIndex ranging from 0 to (HostApiCount-1) or, a PaErrorCode (which are always negative) if PortAudio is not initialized or an error is encountered.

The paHostApiNotFound (-9979) error code indicates that the host API specified by the type parameter is not available.

### 14.9.23 HostError as PortAudioHostErrorInfoMBS

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return information about the last host error encountered.
**Notes:**

This function is provided as a last resort, primarily to enhance debugging by providing clients with access to all available error information.

Returns an object constaining information about the host error. The values in this structure will only be valid if a PortAudio function has previously returned the paUnanticipatedHostError.

### 14.9.24 IsFormatSupported(input as PortAudioStreamParametersMBS, output as PortAudioStreamParametersMBS, sampleRate as Double) as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Determine whether it would be possible to open a stream with the specified parameters.
**Notes:**

input: An object that describes the input parameters used to open a stream. The suggestedLatency field is ignored. inputParameters must be nil for output-only streams.

output: An object that describes the output parameters used to open a stream. The suggestedLatency field is ignored. outputParameters must be nil for input-only streams.

sampleRate: The required sampleRate. For full-duplex streams it is the sample rate for both input and output

Returns 0 if the format is supported, and an error code indicating why the format is not supported otherwise. The constant paFormatIsSupported (0) is provided to compare with the return value for success.

### 14.9.25 MacCoreAudioChannelName(DeviceIndex as Integer, ChannelIndex as Integer, Input as Boolean) as String

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries channel name.

### 14.9.26 MacCoreAudioGetBufferSizeRange(DeviceIndex as Integer, byref minBufferSizeFrames as Integer, byref maxBufferSizeFrames as Integer) as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the range of legal native buffer sizes for the specificed device, in sample frames.
**Notes:**

device: The global index of the PortAudio device about which the query is being made.
minBufferSizeFrames: The minimum buffer size value.
maxBufferSizeFrames: The maximum buffer size value.

see kAudioDevicePropertyBufferFrameSizeRange in the CoreAudio SDK.

### 14.9.27 SampleSize(theFormat as Integer) as Integer

MBS Audio Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return size in bytes of a single sample in a given sample format or paSampleFormatNotSupported (-9994).
**Notes:**

Returns 0 on any error.

Constants for sample format:

```
const paFloat32          = 1
const paInt32            = 2
const paInt24            = 4
const paInt16            = 8
const paInt8             = 16
const paUInt8            = 32
const paCustomFormat     = 65536
const paNonInterleaved   = negative sign
```

The standard formats paFloat32, paInt16, paInt32, paInt24, paInt8 and aUInt8 are usually implemented by all implementations.

The floating point representation (paFloat32) uses +1.0 and -1.0 as the maximum and minimum respectively.

paUInt8 is an unsigned 8 bit format where 128 is considered ”ground”

The paNonInterleaved flag indicates that a multichannel buffer is passed as a set of non-interleaved pointers.

### 14.9.28 SetDebugLogFile(File as FolderItem) as boolean

MBS Audio Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the debug file to log all PortAudio calls with parameters.
**Notes:**

Pass nil to stop logging.
Returns true on success or false on failure.

### 14.9.29 Sleep(msec as Integer)

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Put the caller to sleep for at least ’msec’ milliseconds.
**Notes:**

This function is provided only as a convenience for authors of portable code (such as the tests and examples in the PortAudio distribution.)
The function may sleep longer than requested so don’t rely on this for accurate musical timing.

### 14.9.30 Version as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the release number of the currently running PortAudio build.
**Notes:** e.g. 1900

### 14.9.31 VersionControlRevision as String

MBS Audio Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve a version control revision text.

### 14.9.32 VersionText as String

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve a textual description of the current PortAudio build.
**Notes:** e.g. "PortAudio V19-devel 13 October 2002"

### 14.9.33 WinDefaultChannelMask(numChannels as Integer) as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** Map a channel count to a speaker channel mask for Windows.

### 14.9.34 Constants

### 14.9.35 kErrorBadBufferPtr = -9972

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Bad buffer pointer.

### 14.9.36 kErrorBadIODeviceCombination = -9993

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Bad IO Device combination

### 14.9.37 kErrorBadStreamPtr = -9988

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Bad stream pointer

### 14.9.38 kErrorBufferTooBig = -9991

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Buffer too big

### 14.9.39 kErrorBufferTooSmall = -9990

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Buffer too small

### 14.9.40 kErrorCanNotReadFromACallbackStream = -9977

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Can not read from a callback stream.

### 14.9.41 kErrorCanNotReadFromAnOutputOnlyStream = -9975

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Can not read from an output only stream.

### 14.9.42 kErrorCanNotWriteToACallbackStream = -9976

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Can not write to a callback stream.

### 14.9.43 kErrorCanNotWriteToAnInputOnlyStream = -9974

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Can not write to an input only stream.

### 14.9.44 kErrorDeviceUnavailable = -9985

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Device unavailable.

### 14.9.45 kErrorHostApiNotFound = -9979

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Host API not found.

### 14.9.46 kErrorIncompatibleHostApiSpecificStreamInfo = -9984

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Incompatible host api for specific stream info.

### 14.9.47 kErrorIncompatibleStreamHostApi = -9973

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Incompatible stream for host api.

### 14.9.48 kErrorInputOverflowed = -9981

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Input overflowed.

### 14.9.49 kErrorInsufficientMemory = -9992

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Insufficient memory

### 14.9.50 kErrorInternalError = -9986

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Internal error

### 14.9.51 kErrorInvalidChannelCount = -9998

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Invalid Channel Count

### 14.9.52 kErrorInvalidDevice = -9996

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Invalid Device

### 14.9.53 kErrorInvalidFlag = -9995

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Invalid flag

### 14.9.54 kErrorInvalidHostApi = -9978

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Invalid host API

### 14.9.55 kErrorInvalidSampleRate = -9997

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Invalid sample rate

### 14.9.56 kErrorNoError = 0

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** No error

### 14.9.57 kErrorNotInitialized = -10000

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Not initialized.

### 14.9.58 kErrorNullCallback = -9989

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Null callback.

### 14.9.59 kErrorOutputUnderflowed = -9980

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Output underflowed.

### 14.9.60 kErrorSampleFormatNotSupported = -9994

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Sampleformat not supported.

### 14.9.61 kErrorStreamIsNotStopped = -9982

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Stream is not stopped.

### 14.9.62 kErrorStreamIsStopped = -9983

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Stream is stopped.

### 14.9.63 kErrorTimedOut = -9987

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Timed out

### 14.9.64 kErrorUnanticipatedHostError = -9999

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the PortAudio error codes.
**Notes:** Unanticipated Host Error. See HostError function.

### 14.9.65 kHostApiAL = 9

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** AL

### 14.9.66 kHostApiALSA = 8

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** Linux ALSA

### 14.9.67 kHostApiASIO = 3

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** ASIO

### 14.9.68 kHostApiAudioScienceHPI = 14

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** AudioScienceHPI

### 14.9.69 kHostApiBeOS = 10

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** BeOS, not used in MBS Plugin.

### 14.9.70 kHostApiCoreAudio = 5

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** CoreAudio-specific PortAudio API extension

### 14.9.71 kHostApiDirectSound = 1

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** Windows DirectSound-specific PortAudio API extension

### 14.9.72 kHostApiInDevelopment = 0

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** Internally only.

### 14.9.73 kHostApiJACK = 12

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** Linux Jack

### 14.9.74 kHostApiMME = 2

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** Windos Multimedia Extension.

### 14.9.75 kHostApiOSS = 7

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** OSS

### 14.9.76 kHostApiSoundManager = 4

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** SoundManager (old MacOS Classic)

### 14.9.77 kHostApiWASAPI = 13

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** WASAPI-specific PortAudio API extension

### 14.9.78 kHostApiWDMKS = 11

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the host API types.
**Notes:** WDM Kernel Streaming-specific PortAudio API extension

### 14.9.79 kNoDevice = -1

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** The constant for no device.

## 14.10 class PortAudioStreamBaseMBS

### 14.10.1 class PortAudioStreamBaseMBS

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The base class for the portaudio streams.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 14.10.2 Blog Entries

- News from the MBS Xojo Plugins Version 20.1
- MBS Xojo Plugins, version 20.1pr1
- New in the MBS Xojo Plugins 20.0

### 14.10.3 Blog Entries

- News from the MBS Xojo Plugins Version 20.1
- MBS Xojo Plugins, version 20.1pr1
- New in the MBS Xojo Plugins 20.0

### 14.10.4 Methods

### 14.10.5 Abort as Integer

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Terminates audio processing immediately without waiting for pending buffers to complete.

### 14.10.6 AsioSetStreamSampleRate(sampleRate as double) as integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the sample rate of an open ASIO stream.
**Notes:**

sampleRate: The new sample rate.

Note that this function may fail if the stream is alredy running and the ASIO driver does not support switching the sample rate of a running stream.

Returns kErrorIncompatibleStreamHostApi if stream is not a paASIO stream.

### 14.10.7 Close as Integer

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes an audio stream.
**Notes:** If the audio stream is active it discards any pending buffers as if Abort() had been called.

### 14.10.8 Constructor

MBS Audio Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 14.10.9 HostError as PortAudioHostErrorInfoMBS

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return information about the last host error encountered.
**Notes:**

This function is provided as a last resort, primarily to enhance debugging by providing clients with access to all available error information.

Returns an object constaining information about the host error. The values in this structure will only be valid if a PortAudio function has previously returned the paUnanticipatedHostError.

### 14.10.10 Info as PortAudioStreamInfoMBS

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve a PortAudioStreamInfoMBS object containing information about the specified stream.
**Notes:** If the stream parameter invalid, or an error is encountered, the function returns nil.

### 14.10.11 Read(Buffer as Ptr, frameCount as integer) as integer

MBS Audio Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Read samples from an input stream.
**Notes:**

The function doesn't return until the entire buffer has been filled - this may involve waiting for the operating system to supply the data.

buffer: A buffer of sample frames. The buffer contains samples in the format specified by the input.sampleFormat field used to open the stream, and the number of channels specified by input.numChannels. If non-interleaved samples were requested, buffer is a pointer to the first element of an array of non-interleaved buffer pointers, one for each channel.

frameCount: The number of frames to be read into buffer. This parameter is not constrained to a specific range, however high performance applications will want to match this parameter to the framesPerBuffer parameter used when opening the stream.

Returns on success PaNoError will be returned, or PaInputOverflowed (-9981) if input data was discarded by PortAudio after the previous call and before this call.

### 14.10.12 Start as Integer

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Commences audio processing.
**Notes:**

Returns an error code.
(0 for success, -1 for no stream)

### 14.10.13 Stop as Integer

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Terminates audio processing.
**Notes:** It waits until all pending audio buffers have been played before it returns.

### 14.10.14 WinMMEStreamInputHandle(index as Integer) as Ptr

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve a wave in handle used by a PortAudio WinMME stream.
**Notes:**

handleIndex: The zero based index of the wave in handle to retrieve. This should be in the range [ 0, WinMMEStreamInputHandleCount-1 ] .

Returns a valid wave in handle, or nil if an error occurred.

### 14.10.15 WinMMEStreamInputHandleCount as integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the number of wave in handles used by a PortAudio WinMME stream.
**Notes:**

Returns zero if the stream is output only.

A non-negative value indicating the number of wave in handles or, an error code (which are always negative) if PortAudio is not initialized or an error is encountered.

### 14.10.16 WinMMEStreamOutputHandle(index as Integer) as Ptr

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve a wave out handle used by a PortAudio WinMME stream.
**Notes:**

handleIndex: The zero based index of the wave out handle to retrieve.
This should be in the range [ 0, WinMMEStreamOutputHandleCount - 1 ] .

Returns a valid wave out handle, or nil if an error occurred.

### 14.10.17 WinMMEStreamOutputHandleCount as integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the number of wave out handles used by a PortAudio WinMME stream.
**Notes:**

Returns zero if the stream is input only.

A non-negative value indicating the number of wave out handles or, a PaErrorCode (which are always negative) if PortAudio is not initialized or an error is encountered.

### 14.10.18 Write(Buffer as Ptr, frameCount as integer) as integer

MBS Audio Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Write samples to an output stream.
**Notes:**

This function doesn't return until the entire buffer has been consumed - this may involve waiting for the operating system to consume the data.

buffer: A buffer of sample frames. The buffer contains samples in the format specified by the outputParameters.sampleFormat field used to open the stream, and the number of channels specified by outputParameters.numChannels. If non-interleaved samples were requested, buffer is a pointer to the first element of an array of non-interleaved buffer pointers, one for each channel.

frameCount: The number of frames to be written from buffer. This parameter is not constrained to a specific range, however high performance applications will want to match this parameter to the framesPerBuffer parameter used when opening the stream.

On success PaNoError (0) will be returned, or paOutputUnderflowed (-9980) if additional output data was inserted after the previous call and before this call.

### 14.10.19 Properties

### 14.10.20 CPULoad as Double

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve CPU usage information for the specified stream.
**Notes:**

The "CPU Load" is a fraction of total CPU time consumed by a callback stream's audio processing routines including, but not limited to the client supplied stream callback. This function does not work with blocking read/write streams.

This function may be called from the stream callback function or the application.

Returns a floating point value, typically between 0.0 and 1.0, where 1.0 indicates that the stream event is consuming the maximum number of CPU cycles possible to maintain real-time operation. A value of 0.5 would imply that PortAudio and the stream event was consuming roughly 50% of the available CPU time. The return value may exceed 1.0. A value of 0.0 will always be returned for a blocking read/write stream, or if an error occurrs.

(Read only property)

### 14.10.21 IsStreamActive as Integer

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Determine whether the stream is active.
**Notes:**

A stream is active after a successful call to Start(), until it becomes inactive either as a result of a call to Stop() or Abort(), or as a result of a return value other than paContinue from the stream callback. In the latter case, the stream is considered inactive after the last buffer has finished playing.

Returns one (1) when the stream is active (ie playing or recording audio), zero (0) when not playing or, a PaErrorCode (which are always negative) if PortAudio is not initialized or an error is encountered.
(Read only property)

### 14.10.22 IsStreamStopped as Integer

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Determine whether the stream is stopped.
**Notes:**

A stream is considered to be stopped prior to a successful call to Start and after a successful call to Stop or Abort.
If a stream value returns a value other than paContinue (0) the stream is NOT considered to be stopped.

Returns one (1) when the stream is stopped, zero (0) when the stream is running or, a PaErrorCode (which are always negative) if PortAudio is not initialized or an error is encountered.
(Read only property)

### 14.10.23 MacCoreAudioStreamInputDevice as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the AudioDeviceID of the input device assigned to an open stream.
**Notes:**

Returns a valid AudioDeviceID, or 0 if an error occurred.
(Read only property)

### 14.10.24 MacCoreAudioStreamOutputDevice as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the AudioDeviceID of the output device assigned to an open stream.
**Notes:**

Returns a valid AudioDeviceID, or 0 if an error occurred.
(Read only property)

### 14.10.25 ReadAvailable as Integer

MBS Audio Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the number of frames that can be read from the stream without waiting.
**Notes:**

Returns a non-negative value representing the maximum number of frames that can be read from the stream without blocking or busy waiting or, a PaErrorCode (which are always negative) if PortAudio is not initialized or an error is encountered.
(Read only property)

### 14.10.26 Time as Double

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Determine the current time for the stream according to the same clock used to generate buffer timestamps.
**Notes:**

This time may be used for syncronising other events to the audio stream, for example synchronizing audio to MIDI.

Returns the stream's current time in seconds, or 0 if an error occurred.
(Read only property)

### 14.10.27 WriteAvailable as Integer

MBS Audio Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieve the number of frames that can be written to the stream without waiting.
**Notes:**

Returns a non-negative value representing the maximum number of frames that can be written to the stream without blocking or busy waiting or, a PaErrorCode (which are always negative) if PortAudio is not initial-

ized or an error is encountered.
(Read only property)

### 14.10.28 UseSafeThreading as boolean

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables or disables thread safe event handling.
**Notes:**

Xojo works normally only on one preemptive thread as the framework is not reentrant and not in general preemptive thread safe.
Still newer Xojo versions get better so you can switch it off and get a better performance.
For most usages you need to turn it off. See the examples. A lot of pragma lines are needed to disable everything which can slow down processing. Also you are limited in a preemptive thread to do only math and no object creating/deleting.
(Read and Write computed property)

### 14.10.29 Constants

### 14.10.30 kFlagsClipOff = 1

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the flag constants used to control the behavior of a stream.
**Notes:** Disable default clipping of out of range samples.

### 14.10.31 kFlagsDitherOff = 2

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the flag constants used to control the behavior of a stream.
**Notes:** Disable default dithering.

### 14.10.32 kFlagsNeverDropInput = 4

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the flag constants used to control the behavior of a stream.
**Notes:** Flag requests that where possible a full duplex stream will not discard overflowed input samples without calling the stream callback. This flag is only valid for full duplex callback streams and only when

used in combination with the paFramesPerBufferUnspecified (0) framesPerBuffer parameter. Using this flag incorrectly results in a paInvalidFlag error being returned from OpenStream and OpenDefaultStream.

### 14.10.33 kFlagsNoFlag = 0

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the flag constants used to control the behavior of a stream.
**Notes:** No flags.

### 14.10.34 kFlagsPlatformSpecificFlags = & hFFFF0000

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the flag constants used to control the behavior of a stream.
**Notes:** A mask specifying the platform specific bits.

### 14.10.35 kFlagsPrimeOutputBuffersUsingStreamCallback = 8

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the flag constants used to control the behavior of a stream.
**Notes:** Call the stream callback to fill initial output buffers, rather than the default behavior of priming the buffers with zeros (silence). This flag has no effect for input-only and blocking read/write streams.

## 14.11 class PortAudioStreamBufferedMBS

### 14.11.1 class PortAudioStreamBufferedMBS

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A portaudio stream class to use an internal buffer to feed its callback.
**Notes:**

Currently this class allows you to add 200 buffers to the internal playlist. The buffer size is not limited. FreeSpace returns you the number of buffers you have currently. Buffers are freed after they are played. Subclass of the PortAudioStreamBaseMBS class.

### 14.11.2 Blog Entries

### 14.11.4 Methods

### 14.11.5 AddAudio(Data as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, BitSize as Integer=16, ClearBuffers as boolean=false) as boolean

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds audio to the queue.
**Notes:**

Data: a memoryblock with the sound data
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset. If countBytes is zero, the memoryblock's size property is used.

You need to set numOutputChannels to 1 or 2 when opening the stream. For 2 channels, sound data must be interleaved.

Values for bitsize:

| | |
|---|---|
| 7 | signed byte |
| 8 | unsigned byte |
| 15 | signed short |
| 16 | unsigned short |
| 24 | unsigned medium |
| 31 | signed integer |
| 32 | unsigned integer |

This method copies the data to the internal queue. It returns directly.

If ClearBuffers is true, the buffer list will be cleared before this new data is added. This allows to have the next minute in the buffers and still do a change in the stream quick.

Returns true on success and false on failure (e.g. out of memory).

### 14.11.6 AddAudioStereo(Data1 as memoryblock, Data2 as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, BitSize as Integer=16, ClearBuffers as boolean=false) as boolean

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds audio to the queue.
**Notes:**

This is a special version of AddAudio which takes samples from both memoryblocks and interleaves them.

Data1: a memoryblock with the sound data
Data2: a memoryblock with the sound data
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset. If countBytes is zero, the memoryblock's size property is used.

The stream must use 2 channels for this method to work correctly.

Values for bitsize:

| | |
|---|---|
| 7 | signed byte |
| 8 | unsigned byte |
| 15 | signed short |
| 16 | unsigned short |
| 24 | unsigned medium |
| 31 | signed integer |
| 32 | unsigned integer |

This method copies the data to the internal queue. It returns directly.

If ClearBuffers is true, the buffer list will be cleared before this new data is added. This allows to have the next minute in the buffers and still do a change in the stream quick.

Returns true on success and false on failure (e.g. out of memory).

### 14.11.7 AddFloatAudio(FloatData as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, ClearBuffers as boolean=false) as boolean

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds audio to the queue.
**Notes:**

FloatData: a memoryblock with the sound data filled with single values.
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset. If countBytes is zero, the memoryblock's size property is used.

You need to set numOutputChannels to 1 or 2 when opening the stream. For 2 channels, sound data must be interleaved.

The samples are stored in 32bit float values (memoryblock.SingleValue)

This method copies the data to the internal queue. It returns directly.

If ClearBuffers is true, the buffer list will be cleared before this new data is added. This allows to have the next minute in the buffers and still do a change in the stream quick.

Returns true on success and false on failure (e.g. out of memory).

### 14.11.8 AddFloatAudioStereo(FloatData1 as memoryblock, FloatData2 as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, ClearBuffers as boolean=false) as boolean

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds audio to the queue.
**Notes:**

This is a special version of AddFloatAudio which takes samples from both memoryblocks and interleaves them.

FloatData1: a memoryblock with the sound data filled with single values.
FloatData2: a memoryblock with the sound data filled with single values.
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset. If countBytes is zero, the memoryblock's size property is used.

The samples are stored in 32bit float values (memoryblock.SingleValue)

This method copies the data to the internal queue. It returns directly.

The stream must use 2 channels for this method to work correctly.

If ClearBuffers is true, the buffer list will be cleared before this new data is added. This allows to have the next minute in the buffers and still do a change in the stream quick.

Returns true on success and false on failure (e.g. out of memory).

### 14.11.9 Constructor

MBS Audio Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.

### 14.11.10 FreeSpace as Integer

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of buffer entries available in the queue.
**Notes:** The size of the buffers is not limited except your available memory.

### 14.11.11 HasFreeSpace as boolean

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the internal sound buffer has free space.
**Notes:**

Returns true if freespace returns a value greater than zero.

This function was named IsQueueEmpty in plugin version 7.4.

### 14.11.12 OpenDefaultStream(numOutputChannels as Integer, sampleRate as Double) as Integer

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A simplified version of OpenStream() that opens the default input and/or output devices.
**Notes:**

Sampleformat is always 32bit float in this class. All data you add the queue is converted to float internally.

numOutputChannels: The number of channels of sound to be delivered to the stream callback or passed to Write. It can range from 1 to the value of maxOutputChannels in the PortAudioDeviceInfoMBS object for the default output device. If 0 the stream is opened as an output-only stream.

sampleRate: Same as OpenStream parameter of the same name.

Returns an error code.

### 14.11.13 OpenStream(outputParameters as PortAudioStreamParametersMBS, sampleRate as Double, framesPerBuffer as Integer, streamFlags as Integer) as Integer

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a stream for either input, output or both.
**Notes:**

Sampleformat is always 32bit float in this class. All data you add the queue is converted to float internally.

outputParameters: A object that describes the output parameters used by the opened stream. See PortAudioStreamParametersMBS for a description of these parameters.

sampleRate: The desired sampleRate. For full-duplex streams it is the sample rate for both input and output

framesPerBuffer: The number of frames passed to the stream callback function, or the preferred block granularity for a blocking read/write stream. The special value paFramesPerBufferUnspecified (0) may be used to request that the stream callback will recieve an optimal (and possibly varying) number of frames based on host requirements and the requested latency settings.
Note: With some host APIs, the use of non-zero framesPerBuffer for a callback stream may introduce an additional layer of buffering which could introduce additional latency. PortAudio guarantees that the additional latency will be kept to the theoretical minimum however, it is strongly recommended that a non-zero framesPerBuffer value only be used when your algorithm requires a fixed number of frames per stream callback.

const paFramesPerBufferUnspecified=0

streamFlags: Flags which modify the behaviour of the streaming process. This parameter may contain a combination of flags ORed together. Some flags may only be relevant to certain buffer formats.

| | | |
|---|---|---|
| const paNoFlag | = 0 | no flags |
| const paClipOff | = 1 | Disable default clipping of out of range samples. |
| const paDitherOff | = 2 | Flag requests that where possible a full duplex stream will not discard overflowed input samples without calling the stream callback. This flag is only valid for full duplex callback streams and only when used in combination with the paFramesPerBufferUnspecified (0) framesPerBuffer parameter. Using this flag incorrectly results in a paInvalidFlag error being returned from OpenStream and OpenDefaultStream. |
| const paNeverDropInput | = 4 | Flag requests that where possible a full duplex stream will not discard overflowed input samples without calling the stream callback. This flag is only valid for full duplex callback streams and only when used in combination with the paFramesPerBufferUnspecified (0) framesPerBuffer parameter. Using this flag incorrectly results in a paInvalidFlag error being returned from OpenStream and OpenDefaultStream. |
| const paPrimeOutputBuffersUsingStreamCallback | = 8 | Call the stream callback to fill initial output buffers, rather than the default behavior of priming the buffers with zeros (silence). This flag has no effect for input-only and blocking read/write streams. |

Upon success OpenStream() returns paNoError and places a pointer to a valid PaStream in the stream argument. The stream is inactive (stopped).
If a call to OpenStream() fails, a non-zero error code is returned (see PaError for possible error codes) and the value of stream is invalid.

### 14.11.14 PlayAudio(Data as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, BitSize as Integer=16, ClearBuffers as boolean=false) as boolean

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds audio to the queue and starts playback.
**Notes:**

Data: a memoryblock with the sound data
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset. If countBytes is zero, the memoryblock's size property is used.

You need to set numOutputChannels to 1 or 2 when opening the stream. For 2 channels, sound data must be interleaved.

Values for bitsize:

| | |
|---|---|
| 7 | signed byte |
| 8 | unsigned byte |
| 15 | signed short |
| 16 | unsigned short |
| 24 | unsigned medium |
| 31 | signed integer |
| 32 | unsigned integer |

This method copies the data to the internal queue. It returns directly.

If ClearBuffers is true, the buffer list will be cleared before this new data is added. This allows to have the next minute in the buffers and still do a change in the stream quick.

### 14.11.15 PlayAudioStereo(Data1 as memoryblock, Data2 as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, BitSize as Integer=16, ClearBuffers as boolean=false) as boolean

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds audio to the queue and starts playback.
**Notes:**

This is a special version of AddAudio which takes samples from both memoryblocks and interleaves them.

Data1: a memoryblock with the sound data
Data2: a memoryblock with the sound data
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset. If countBytes is zero, the memoryblock's size property is used.

The stream must use 2 channels for this method to work correctly.

Values for bitsize:

| | |
|---|---|
| 7 | signed byte |
| 8 | unsigned byte |
| 15 | signed short |
| 16 | unsigned short |
| 24 | unsigned medium |
| 31 | signed integer |
| 32 | unsigned integer |

This method copies the data to the internal queue. It returns directly.

If ClearBuffers is true, the buffer list will be cleared before this new data is added. This allows to have the next minute in the buffers and still do a change in the stream quick.#

### 14.11.16 PlayFloatAudio(FloatData as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, ClearBuffers as boolean=false) as boolean

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds audio to the queue and starts playback.
**Notes:**

FloatData: a memoryblock with the sound data filled with single values.
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset. If countBytes is zero, the memoryblock's size property is used.

You need to set numOutputChannels to 1 or 2 when opening the stream. For 2 channels, sound data must be interleaved.

The samples are stored in 32bit float values (memoryblock.SingleValue)

This method copies the data to the internal queue. It returns directly.

If ClearBuffers is true, the buffer list will be cleared before this new data is added. This allows to have the next minute in the buffers and still do a change in the stream quick.#

### 14.11.17 PlayFloatAudioStereo(FloatData1 as memoryblock, FloatData2 as memoryblock, offsetBytes as Integer=0, countBytes as Integer=0, ClearBuffers as boolean=false) as boolean

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds audio to the queue and starts playback.
**Notes:**

This is a special version of AddFloatAudio which takes samples from both memoryblocks and interleaves them.

FloatData1: a memoryblock with the sound data filled with single values.
FloatData2: a memoryblock with the sound data filled with single values.
offsetBytes: the number of the bytes to start playing (0=first)
countBytes: the number of bytes to play from offset. If countBytes is zero, the memoryblock's size property is used.

The samples are stored in 32bit float values (memoryblock.SingleValue)

This method copies the data to the internal queue. It returns directly.

The stream must use 2 channels for this method to work correctly.

If ClearBuffers is true, the buffer list will be cleared before this new data is added. This allows to have the next minute in the buffers and still do a change in the stream quick.

### 14.11.18 Properties

### 14.11.19 HadUnderflow as Boolean

MBS Audio Plugin, Plugin Version: 7.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A flag set if a data underflow was found while NoUnderflow is true.
**Notes:**

You may want to set this to false after your application recovered from a data underflow.
(Read and Write property)

### 14.11.20 NoUnderflow as Boolean

MBS Audio Plugin, Plugin Version: 7.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether underflows should be prevented.
**Notes:**

If no audio data is there and NoUnderflow=true, the flag HadUnderflow is set to true and 0 values (Silence) is played.

Switching from sound to no sound and back may add some noise.
(Read and Write property)

### 14.11.21 OutputPosition as Double

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current position in the playing stream.
**Notes:**

May point between samples.
(Read only property)

### 14.11.22 OutputPositionRelative as Double

MBS Audio Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current position in the playing buffer.
**Notes:**

May point between samples.
Will reset to 0 when a new buffer is used.

(Read only property)

### 14.11.23 Events

### 14.11.24 Finished

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is implemented by PortAudio clients.
**Notes:**

Once registered they are called when the stream becomes inactive (ie once a call to Stop() will not block). A stream will become inactive after the stream callback returns non-zero, or when Stop or Abort is called. For a stream providing audio output, if the stream callback returns paComplete, or Stop is called, the stream finished callback will not be called until all generated sample data has been played.

## 14.12 class PortAudioStreamInfoMBS

### 14.12.1 class PortAudioStreamInfoMBS

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class to hold time information of the current stream.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 14.12.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

### 14.12.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

### 14.12.4 Methods

### 14.12.5 Constructor

MBS Audio Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 14.12.6 Properties

### 14.12.7 InputLatency as Double

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The input latency of the stream in seconds.
**Notes:**

This value provides the most accurate estimate of input latency available to the implementation. It may differ significantly from the suggestedLatency value passed to OpenStream().
The value of this field will be zero (0.) for output-only streams.
(Read only property)

### 14.12.8 OutputLatency as Double

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The output latency of the stream in seconds.
**Notes:**

This value provides the most accurate estimate of output latency available to the implementation. It may differ significantly from the suggestedLatency value passed to OpenStream().
The value of this field will be zero (0.) for input-only streams.
(Read only property)

### 14.12.9 SampleRate as Double

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The sample rate of the stream in Hertz (samples per second).
**Notes:**

In cases where the hardware sample rate is inaccurate and PortAudio is aware of it, the value of this field may be different from the sampleRate parameter passed to OpenStream(). If information about the actual hardware sample rate is not available, this field will have the same value as the sampleRate parameter passed to OpenStream().
(Read only property)

## 14.13 class PortAudioStreamMBS

### 14.13.1 class PortAudioStreamMBS

MBS Audio Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A single PortAudioStreamMBS can provide multiple channels of real-time streaming audio input and output to a client application.
**Notes:**

A stream provides access to audio hardware represented by one or more devices. Depending on the underlying Host API, it may be possible to open multiple streams using the same device, however this behavior is implementation defined. Portable applications should assume that a device may be simultaneously used by at most one PortAudioStreamMBS.

You can use this class in two ways:

- with Callback event: Get event call when new data is needed or received.
- without Callback event: Use read/write methods to access buffers and move samples.

Subclass of the PortAudioStreamBaseMBS class.

### 14.13.2 Blog Entries

### 14.13.4 Methods

### 14.13.5 Constructor

MBS Audio Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.

### 14.13.6 OpenDefaultStream(numInputChannels as Integer, numOutputChannels as Integer, sampleFormat as Integer, sampleRate as Double, framesPerBuffer as Integer, Flags as Integer) as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A simplified version of OpenStream() that opens the default input and/or output devices.
**Notes:**

numInputChannels: The number of channels of sound that will be supplied to the stream callback or returned by ReadStream. It can range from 1 to the value of maxInputChannels in the PaDeviceInfo record for the default input device. If 0 the stream is opened as an output-only stream.

numOutputChannels: The number of channels of sound to be delivered to the stream callback or passed to Write. It can range from 1 to the value of maxOutputChannels in the PaDeviceInfo record for the default output dvice. If 0 the stream is opened as an output-only stream.

sampleFormat: The sample format of both the input and output buffers provided to the callback or passed to and from Read and Write.
sampleFormat may be any of the formats described by the PaSampleFormat enumeration.

sampleRate: Same as OpenStream parameter of the same name.
framesPerBuffer: Same as OpenStream parameter of the same name.

constants for the flags value:

| | | |
|---|---|---|
| const paNoFlag | = 0 | no flags |
| const paClipOff | = 1 | Disable default clipping of out of range samples. |
| const paDitherOff | = 2 | Flag requests that where possible a full duplex stream will not discard overflowed input samples without calling the stream callback. This flag is only valid for full duplex callback streams and only when used in combination with the paFramesPerBufferUnspecified (0) framesPerBuffer parameter. Using this flag incorrectly results in a paInvalidFlag error being returned from OpenStream and OpenDefaultStream. |
| const paNeverDropInput | = 4 | Flag requests that where possible a full duplex stream will not discard overflowed input samples without calling the stream callback. This flag is only valid for full duplex callback streams and only when used in combination with the paFramesPerBufferUnspecified (0) framesPerBuffer parameter. Using this flag incorrectly results in a paInvalidFlag error being returned from OpenStream and OpenDefaultStream. |
| const paPrimeOutputBuffersUsingStreamCallback | = 8 | Call the stream callback to fill initial output buffers, rather than the default behavior of priming the buffers with zeros (silence). This flag has no effect for input-only and blocking read/write streams. |

Returns an error code.

### 14.13.7 OpenStream(inputParameters as PortAudioStreamParametersMBS, outputParameters as PortAudioStreamParametersMBS, sampleRate as Double, framesPerBuffer as Integer, streamFlags as Integer) as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a stream for either input, output or both.
**Notes:**

inputParameters: A object that describes the input parameters used by the opened stream. See PortAudioStreamParametersMBS for a description of these parameters. inputParameters must be nil for output-only streams.

outputParameters: A object that describes the output parameters used by the opened stream. See PortAudioStreamParametersMBS for a description of these parameters. outputParameters must be nil for input-only streams.

sampleRate: The desired sampleRate. For full-duplex streams it is the sample rate for both input and output

framesPerBuffer: The number of frames passed to the stream callback function, or the preferred block granularity for a blocking read/write stream. The special value paFramesPerBufferUnspecified (0) may be used to request that the stream callback will recieve an optimal (and possibly varying) number of frames based on host requirements and the requested latency settings.
Note: With some host APIs, the use of non-zero framesPerBuffer for a callback stream may introduce an additional layer of buffering which could introduce additional latency. PortAudio guarantees that the additional latency will be kept to the theoretical minimum however, it is strongly recommended that a non-zero framesPerBuffer value only be used when your algorithm requires a fixed number of frames per stream callback.

const paFramesPerBufferUnspecified=0

streamFlags: Flags which modify the behaviour of the streaming process. This parameter may contain a combination of flags ORed together. Some flags may only be relevant to certain buffer formats.

If this the callback event is left empty the stream will be opened in 'blocking read/write' mode. In blocking mode, the client can receive sample data using Read and write sample data using Write, the number of samples that may be read or written without blocking is returned by ReadAvailable and WriteAvailable respectively.

Upon success OpenStream() returns paNoError and places a pointer to a valid PaStream in the stream argument. The stream is inactive (stopped).

| | | |
|---|---|---|
| const paNoFlag | = 0 | no flags |
| const paClipOff | = 1 | Disable default clipping of out of range samples. |
| const paDitherOff | = 2 | Flag requests that where possible a full duplex stream will not discard overflowed input samples without calling the stream callback. This flag is only valid for full duplex callback streams and only when used in combination with the paFramesPerBufferUnspecified (0) framesPerBuffer parameter. Using this flag incorrectly results in a paInvalidFlag error being returned from OpenStream and OpenDefaultStream. |
| const paNeverDropInput | = 4 | Flag requests that where possible a full duplex stream will not discard overflowed input samples without calling the stream callback. This flag is only valid for full duplex callback streams and only when used in combination with the paFramesPerBufferUnspecified (0) framesPerBuffer parameter. Using this flag incorrectly results in a paInvalidFlag error being returned from OpenStream and OpenDefaultStream. |
| const paPrimeOutputBuffersUsingStreamCallback | = 8 | Call the stream callback to fill initial output buffers, rather than the default behavior of priming the buffers with zeros (silence). This flag has no effect for input-only and blocking read/write streams. |

If a call to OpenStream() fails, a non-zero error code is returned (see PaError for possible error codes) and the value of stream is invalid.

### 14.13.8 Events

### 14.13.9 Callback(InputBuffer as memoryblock, outputBuffer as memoryblock, FrameCount as Integer, inputBufferAdcTime as Double, currentTime as Double, outputBufferDacTime as Double, statusFlags as Integer) as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when new data is needed or received.
**Notes:**

This event is implemented by PortAudio clients. They consume, process or generate audio in response to requests from an active PortAudio stream.

InputBuffer and outputBuffer are arrays of interleaved samples, the format, packing and number of channels used by the buffers are determined by parameters to OpenStream().

frameCount: The number of sample frames to be processed by the stream callback.

inputBufferAdcTime, currentTimeTiming and outputBufferDacTime: The time in seconds when the first sample of the input buffer was received at the audio input, the time in seconds when the first sample of the output buffer will begin being played at the audio output, and the time in seconds when the stream callback was called.

statusFlags: Flags indicating whether input and/or output buffers have been inserted or will be dropped to

overcome underflow or overflow conditions.

Returns the stream callback should return one of the values in the PaStreamCallbackResult enumeration. To ensure that the callback continues to be called, it should return paContinue (0). Either paComplete or paAbort can be returned to finish stream processing, after either of these values is returned the callback will not be called again. If paAbort is returned the stream will finish as soon as possible. If paComplete is returned, the stream will continue until all buffers generated by the callback have been played.
This may be useful in applications such as soundfile players where a specific duration of output is required. However, it is not necessary to utilise this mechanism as Stop(), Abort() or Close() can also be used to stop the stream. The callback must always fill the entire output buffer irrespective of its return value.

With the exception of CpuLoad() it is not permissable to call PortAudio API functions from within the stream callback.

Flag bit constants for the statusFlags to Callback:

paInputUnderflow = 1
In a stream opened with paFramesPerBufferUnspecified, indicates that input data is all silence (zeros) because no real data is available. In a stream opened without paFramesPerBufferUnspecified, it indicates that one or more zero samples have been inserted into the input buffer to compensate for an input underflow.

paInputOverflow = 2
In a stream opened with paFramesPerBufferUnspecified, indicates that data prior to the first sample of the input buffer was discarded due to an overflow, possibly because the stream callback is using too much CPU time. Otherwise indicates that data prior to one or more samples in the input buffer was discarded.

paOutputUnderflow = 4
Indicates that output data (or a gap) was inserted, possibly because the stream callback is using too much CPU time.

paOutputOverflow = 8
Indicates that output data will be discarded because no room is available.

paPrimingOutput = 16
Some of all of the output data will be used to prime the stream, input data may be zero.

Allowable return values for the callback: (PaStreamCallbackResult)

```
const paContinue    = 0
const paComplete    = 1
const paAbort       = 2
```

### 14.13.10 Finished

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is implemented by PortAudio clients.
**Notes:**

Once registered they are called when the stream becomes inactive (ie once a call to Stop() will not block). A stream will become inactive after the stream callback returns non-zero, or when Stop or Abort is called. For a stream providing audio output, if the stream callback returns paComplete, or Stop is called, the stream finished callback will not be called until all generated sample data has been played.

## 14.14 class PortAudioStreamParametersMBS

### 14.14.1 class PortAudioStreamParametersMBS

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parameters for one direction (input or output) of a stream.

### 14.14.2 Blog Entries

- MBS Xojo Plugins, version 20.1pr6

### 14.14.3 Blog Entries

- MBS Xojo Plugins, version 20.1pr6

### 14.14.4 Properties

### 14.14.5 ASIOFlags as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The flags for ASIO stream.
**Notes:**

Can include kAsioUseChannelSelectors constant.
(Read and Write property)

### 14.14.6 ChannelCount as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The requested channel count.
**Notes:**

The number of channels of sound to be delivered to the stream callback or accessed by Read() or Write(). It can range from 1 to the value of maxInputChannels in the DeviceInfo object for the device specified by the device parameter.
(Read and Write property)

### 14.14.7 Device as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The device ID to be used.
**Notes:**

A valid device index in the range 0 to (PortAudioMBS.CountDevices-1) specifying the device to be used or the special constant paUseHostApiSpecificDeviceSpecification which indicates that the actual device(s) to use are specified in hostApiSpecificStreamInfo.
This field must not be set to paNoDevice (-1).
(Read and Write property)

### 14.14.8 MacCoreAudioChannelMapSize as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Channel map for HAL channel mapping.
**Notes:**

Should be number of values.
(Read and Write property)

### 14.14.9 MacCoreAudioFlags as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The flags for CoreAudio.
**Notes:** (Read and Write property)

### 14.14.10 SampleFormat as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The sample format of the buffer provided to the stream callback, Read() or Write().
**Notes:**

Constants for sample format:

The standard formats paFloat32, paInt16, paInt32, paInt24, paInt8 and aUInt8 are usually implemented by all implementations.

The floating point representation (paFloat32) uses +1.0 and -1.0 as the maximum and minimum respectively.

| | |
|---|---|
| const paFloat32 | = 1 |
| const paInt32 | = 2 |
| const paInt24 | = 4 |
| const paInt16 | = 8 |
| const paInt8 | = 16 |
| const paUInt8 | = 32 |
| const paCustomFormat | = 65536 |
| const paNonInterleaved | = negative sign |

paUInt8 is an unsigned 8 bit format where 128 is considered "ground"

The paNonInterleaved flag indicates that a multichannel buffer is passed as a set of non-interleaved pointers.
(Read and Write property)

### 14.14.11 SuggestedLatency as Double

MBS Audio Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The desired latency in seconds.
**Notes:**

Where practical, implementations should configure their latency based on these parameters, otherwise they may choose the closest viable latency instead. Unless the suggested latency is greater than the absolute upper limit for the device implementations should round the suggestedLatency up to the next practial value - ie to provide an equal or higher latency than suggestedLatency wherever possible.
Actual latency values for an open stream may be retrieved using the inputLatency and outputLatency fields of the PortAudioStreamInfoMBS object returned by PortAudioStreamMBS.Info().
(Read and Write property)

### 14.14.12 WASChannelMask as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Support for WAVEFORMATEXTENSIBLE channel masks.
**Notes:**

If flags contains kWinWasapiUseChannelMask this allows you to specify which speakers to address in a multichannel stream. Will be used only if kWinWasapiUseChannelMask flag is specified.

See kWinChannelMask* constants.
(Read and Write property)

### 14.14.13 WASFlags as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The flags.
**Notes:**

Can be e.g. kWinWasapiUseChannelMask to use channel mask.
(Read and Write property)

### 14.14.14 WASStreamCategory as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Stream category.
**Notes:**

See constants.
(Read and Write property)

### 14.14.15 WASStreamOption as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Stream option.
**Notes:**

See constants.
(Read and Write property)

### 14.14.16 WASThreadPriority as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Specifies thread priority explicitly. Will be used only if paWinWasapiThreadPriority flag is specified.
**Notes:**

Please note, if Input/Output streams are opened simultaniously (Full-Duplex mode) you shall specify same value for threadPriority or othervise one of the values will be used to setup thread priority.
(Read and Write property)

### 14.14.17 WinDirectSoundChannelMask as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The channel mask.
**Notes:**

support for WAVEFORMATEXTENSIBLE channel masks. If flags contains kWinDirectSoundUseChannelMask this allows you to specify which speakers to address in a multichannel stream.

See kWinChannelMask* constants.
(Read and Write property)

### 14.14.18 WinDirectSoundFlags as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The flags for Direct Sound.
**Notes:**

Enable other features of this parameters.
(Read and Write property)

### 14.14.19 WinDirectSoundFramesPerBuffer as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Low-level latency setting support.
**Notes:**

Sets the size of the DirectSound host buffer.
When flags contains the kWinDirectSoundUseLowLevelLatencyParameters this size will be used instead of interpreting the generic latency parameters to Pa_OpenStream(). If the flag is not set this value is ignored.

If the stream is a full duplex stream the implementation requires that the values of framesPerBuffer for input and output match (if both are specified).
(Read and Write property)

### 14.14.20 WinMMEBufferCount as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of buffers.

**Notes:** (Read and Write property)

### 14.14.21 WinMMEChannelMask as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The channel mask.
**Notes:**

Support for WAVEFORMATEXTENSIBLE channel masks. If flags contains kWinMmeUseChannelMask this allows you to specify which speakers to address in a multichannel stream.

See kWinChannelMask* constants.
(Read and Write property)

### 14.14.22 WinMMEDeviceCount as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The device count.
**Notes:** (Read and Write property)

### 14.14.23 WinMMEFlags as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The field for flags for Win MME.
**Notes:** (Read and Write property)

### 14.14.24 WinMMEFramesPerBuffer as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Low-level latency setting support.
**Notes:**

These settings control the number and size of host buffers in order to set latency. They will be used instead of the generic parameters to OpenStream() if flags contains the kWinMmeUseLowLevelLatencyParameters flag.

If PortAudioStreamParametersMBS object with kWinMmeUseLowLevelLatencyParameters are supplied for both input and output in a full duplex stream, then the input and output framesPerBuffer must be the same,

or the larger of the two must be a multiple of the smaller, otherwise a kErrorIncompatibleHostApiSpecificStreamInfo error will be returned from OpenStream().
(Read and Write property)

### 14.14.25 WinWDMKSChannelMask as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The channel mask for WDM/KS.
**Notes:**

If kWinWDMKSUseGivenChannelMask bit is set in flags, use this as channelMask instead of default.

See kWinChannelMask* constants.
(Read and Write property)

### 14.14.26 WinWDMKSFlags as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Flags indicate which fields are valid.
**Notes:** (Read and Write property)

### 14.14.27 WinWDMKSNoOfPackets as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of packets to use for WaveCyclic devices, range is [ 2, 8 ] .
**Notes:**

Set to zero for default value of 2.
(Read and Write property)

### 14.14.28 ASIOChannelSelectors(Index as Integer) as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Support for opening only specific channels of an ASIO device.
**Notes:**

If the kAsioUseChannelSelectors flag is set, channelSelectors is a pointer to an array of integers specifying the device channels to use.

When used, the length of the channelSelectors array must match the corresponding channelCount parameter to OpenStream() otherwise a crash may result.
The values in the selectors array must specify channels within the range of supported channels for the device or kErrorInvalidChannelCount will result.
(Read and Write computed property)

### 14.14.29 MacCoreAudioChannelMap(Index as Integer) as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Channel map size for HAL channel mapping.
**Example:**

```
Dim pasp As New PortAudioStreamParametersMBS
pasp.ChannelCount = 1 // we produce one channel
pasp.MacCoreAudioChannelMap(0) = 0 // put our mono channel on Left
pasp.MacCoreAudioChannelMap(1) = 0 // put our mono channel on Right
pasp.MacCoreAudioChannelMapSize = 2
```

**Notes:**

This property is used to map input channels from an input (source) to a destination. The number of channels represented in the channel map is the number of channels of the destination. The channel map entries contain a channel number of the source that should be mapped to that destination channel. If -1 is specified, then that destination channel will not contain any channel from the source (so it will be silent)

Please set MacCoreAudioChannelMapSize to make this map to have effect.
(Read and Write computed property)

### 14.14.30 WinMMEDevicesChannelCount(Index as Integer) as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiple devices per direction support.
**Notes:**

If flags contains the PaWinMmeUseMultipleDevices flag, this functionality will be used, otherwise the device parameter to OpenStream() will be used instead.
If devices are specified here, the corresponding device parameter to OpenStream() should be set to kUseHostApiSpecificDeviceSpecification, otherwise an kErrorInvalidDevice error will result.
The total number of channels accross all specified devices must agree with the corresponding channelCount parameter to OpenStream() otherwise a kErrorInvalidChannelCount error will result.

Please always set WinMMEDevicesChannelCount and WinMMEDevicesDevice together.
(Read and Write computed property)

### 14.14.31 WinMMEDevicesDevice(Index as Integer) as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiple devices per direction support.
**Notes:**

If flags contains the PaWinMmeUseMultipleDevices flag, this functionality will be used, otherwise the device parameter to OpenStream() will be used instead.
If devices are specified here, the corresponding device parameter to OpenStream() should be set to kUseHostApiSpecificDeviceSpecification, otherwise an kErrorInvalidDevice error will result.
The total number of channels accross all specified devices must agree with the corresponding channelCount parameter to OpenStream() otherwise a kErrorInvalidChannelCount error will result.

Please always set WinMMEDevicesChannelCount and WinMMEDevicesDevice together.
(Read and Write computed property)

### 14.14.32 Constants

### 14.14.33 kAsioUseChannelSelectors = 1

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the ASIO flags.
**Notes:** Set to enable channel selectors.

### 14.14.34 kWASAudioCategoryAlerts = 4

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream category constants.
**Notes:** Alert sounds.

### 14.14.35 kWASAudioCategoryCommunications = 3

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream category constants.
**Notes:** Real-time communications, such as VOIP or chat.

### 14.14.36 kWASAudioCategoryGameChat = 8

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream category constants.
**Notes:** Game chat audio. Similar to kWASAudioCategoryCommunications except that kWASAudioCategoryGameChat will not attenuate other streams.

### 14.14.37 kWASAudioCategoryGameEffects = 6

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream category constants.
**Notes:** Game sound effects.

### 14.14.38 kWASAudioCategoryGameMedia = 7

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream category constants.
**Notes:** Background audio for games.

### 14.14.39 kWASAudioCategoryMedia = 11

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream category constants.
**Notes:** Stream that includes audio without dialog.

### 14.14.40 kWASAudioCategoryMovie = 10

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream category constants.
**Notes:** Stream that includes audio with dialog.

### 14.14.41 kWASAudioCategoryOther = 0

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream category constants.
**Notes:** Other audio stream.

### 14.14.42 kWASAudioCategorySoundEffects = 5

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream category constants.
**Notes:** Sound effects.

### 14.14.43 kWASAudioCategorySpeech = 9

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream category constants.
**Notes:** Speech.

### 14.14.44 kWASFlagExclusive = 1

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the WASAPI Flags.
**Notes:** Puts WASAPI into exclusive mode.

### 14.14.45 kWASFlagPolling = 8

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the WASAPI Flags.
**Notes:**

selects non-Event driven method of data read/write
Note: WASAPI Event driven core is capable of 2ms latency!!!, but Polling method can only provide 15-20ms latency.

### 14.14.46 kWASFlagRedirectHostProcessor = 2

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the WASAPI Flags.
**Notes:** Allows to skip internal PA processing completely.

### 14.14.47 kWASFlagThreadPriority = 16

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the WASAPI Flags.
**Notes:** forces custom thread priority setting, must be used if kWasapiStreamInfo::threadPriority is set to a custom value.

### 14.14.48 kWASFlagUseChannelMask = 4

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the WASAPI Flags.
**Notes:** Assigns custom channel mask.

### 14.14.49 kWASStreamOptionMatchFormat = 2

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream option constants.
**Notes:** Force WASAPI Audio Engine into a stream format, supported since Windows 10

### 14.14.50 kWASStreamOptionNone = 0

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream option constants.
**Notes:** Default

### 14.14.51 kWASStreamOptionRaw = 1

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the stream option constants.
**Notes:** Bypass WASAPI Audio Engine DSP effects, supported since Windows 8.1

### 14.14.52 kWASThreadPriorityAudio = 1

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the thread priority constants.
**Notes:** Audio. Default for Shared mode.

### 14.14.53 kWASThreadPriorityCapture = 2

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the thread priority constants.
**Notes:** Capture

### 14.14.54 kWASThreadPriorityDistribution = 3

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the thread priority constants.
**Notes:** Distribution

### 14.14.55 kWASThreadPriorityGames = 4

MBS Audio Plugin, Plugin Version: 20.0.

**Function:**

One of the thread priority constants.
w#
**Notes:** Games

### 14.14.56 kWASThreadPriorityNone = 0

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the thread priority constants.

### 14.14.57 kWASThreadPriorityPlayback = 5

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the thread priority constants.
**Notes:** Playback

### 14.14.58 kWASThreadPriorityProAudio = 6

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the thread priority constants.
**Notes:** ProAudio. Default for Exclusive mode.

### 14.14.59 kWASThreadPriorityWindowManager = 7

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the thread priority constants.
**Notes:** Window Manager

### 14.14.60 kWinChannelMask5Point1 = 63

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** 5.1 Speakers without side speakers.

### 14.14.61 kWinChannelMask5Point1Surround = 1551

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** 5.1 Speakers with side speakers.

### 14.14.62 kWinChannelMask7Point1 = 255

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** 7.1 Speakers without side speakers.

### 14.14.63 kWinChannelMask7Point1Surround = 1599

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** 7.1 Speakers with side speakers.

### 14.14.64 kWinChannelMaskAll = 2147483648

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Used to specify that any possible permutation of speaker configurations

### 14.14.65 kWinChannelMaskBackCenter = 256

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Back Center.

### 14.14.66 kWinChannelMaskBackLeft = 16

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Back Left.

### 14.14.67 kWinChannelMaskBackRight = 32

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Back Right.

### 14.14.68 kWinChannelMaskDirectout = 0

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** no speakers

### 14.14.69 kWinChannelMaskFrontCenter = 4

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Front center.

### 14.14.70 kWinChannelMaskFrontLeft = 1

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Front left

### 14.14.71 kWinChannelMaskFrontLeftOfCenter = 64

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Front Left or Center.

### 14.14.72 kWinChannelMaskFrontRight = 2

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Front right.

### 14.14.73 kWinChannelMaskFrontRightOfCenter = 128

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Front Right or Center.

### 14.14.74 kWinChannelMaskGroundFrontCenter = 4

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** DVD Speaker Positions: Ground Front Center

### 14.14.75 kWinChannelMaskGroundFrontLeft = 1

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** DVD Speaker Positions: Ground Front Left

### 14.14.76 kWinChannelMaskGroundFrontRight = 2

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** DVD Speaker Positions: Ground Front Right

### 14.14.77 kWinChannelMaskGroundRearLeft = 16

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** DVD Speaker Positions: Ground Rear Left

### 14.14.78 kWinChannelMaskGroundRearRight = 32

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** DVD Speaker Positions: Ground Rear Right

### 14.14.79 kWinChannelMaskLowFrequency = 8

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Low frequency speaker (bass)

### 14.14.80 kWinChannelMaskMono = 4

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Mono goes to center speaker, or if not available to left and right.

### 14.14.81 kWinChannelMaskQuad = 51

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Left and right in front and back.

### 14.14.82 kWinChannelMaskReserved = 2147221504

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Bit mask locations reserved for future use.

### 14.14.83 kWinChannelMaskSideLeft = 512

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Side speaker on left

### 14.14.84 kWinChannelMaskSideRight = 1024

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Side speaker on right.

### 14.14.85 kWinChannelMaskStereo = 3

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Left and right speakers.

### 14.14.86 kWinChannelMaskSuperWoofer = 8

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** DVD Speaker Positions: Super Woofer

### 14.14.87 kWinChannelMaskSurround = 263

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Front left and right, front and back center.

### 14.14.88 kWinChannelMaskTopBackCenter = 65536

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Top back center.

### 14.14.89 kWinChannelMaskTopBackLeft = 32768

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Top back left.

### 14.14.90 kWinChannelMaskTopBackRight = 131072

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Top back right.

### 14.14.91 kWinChannelMaskTopCenter = 2048

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Top center

### 14.14.92 kWinChannelMaskTopFrontCenter = 8192

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Top front center

### 14.14.93 kWinChannelMaskTopFrontLeft = 4096

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Top front left.

### 14.14.94 kWinChannelMaskTopFrontRight = 16384

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** Top front right.

### 14.14.95 kWinChannelMaskTopMiddle = 2048

MBS Audio Plugin, Plugin Version: 20.1.

**Function:** One of the windows channel mask values.
**Notes:** DVD Speaker Positions: Top Middle

### 14.14.96 kWinDirectSoundUseChannelMask = 4

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the flag constants for DirectShow.
**Notes:** The flag indicates that the WinDirectSoundChannelMask field is set.

### 14.14.97 kWinDirectSoundUseLowLevelLatencyParameters = 1

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the flag constants for DirectShow.
**Notes:** Indicates WinDirectSoundFramesPerBuffer field is set.

### 14.14.98 kWinMmeDontThrottleOverloadedProcessingThread = 8

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the Windows MME Flags.
**Notes:** By default, the mme implementation drops the processing thread's priority to THREAD_PRIORITY_NORMAL and sleeps the thread if the CPU load exceeds 100% This flag disables any priority throttling. The processing thread will always run at THREAD_PRIORITY_TIME_CRITICAL.

### 14.14.99 kWinMmeUseChannelMask = 4

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the Windows MME Flags.
**Notes:** Use channel mask.

### 14.14.100 kWinMmeUseLowLevelLatencyParameters = 1

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the Windows MME Flags.
**Notes:** Use low level latency.

### 14.14.101 kWinMmeUseMultipleDevices = 2

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the Windows MME Flags.
**Notes:** Use multiple devices.

### 14.14.102 kWinMmeWaveFormatDolbyAc3Spdif = 16

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the Windows MME Flags.
**Notes:** Flags for non-PCM spdif passthrough.

### 14.14.103 kWinMmeWaveFormatWmaSpdif = 32

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the Windows MME Flags.
**Notes:** Flags for non-PCM spdif passthrough.

### 14.14.104 kWinWDMKSOverrideFramesize = 1

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the constants to indicate valid fields in WinWDMKSFlags.
**Notes:** Makes WDMKS use the supplied latency figures instead of relying on the frame size reported by the WaveCyclic device. Use at own risk!

### 14.14.105 kWinWDMKSUseGivenChannelMask = 2

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the constants to indicate valid fields in WinWDMKSFlags.
**Notes:** Makes WDMKS (output stream) use the given channelMask instead of the default.

### 14.14.106 paCustomFormat = 65536

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** Custom format. Not supported by plugin.

### 14.14.107 paFloat32 = 1

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** Uses +1.0 and -1.0 as the maximum and minimum respectively.

### 14.14.108 paInt16 = 8

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** Signed 16 bit.

### 14.14.109 paInt24 = 4

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** Packed 24 bit format

### 14.14.110 paInt32 = 2

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** Signed 32 bit.

### 14.14.111 paInt8 = 16

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** 8 bit integer.

### 14.14.112 paNonInterleaved = & h80000000

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:**

Non interleaved.
The paNonInterleaved flag indicates that audio data is passed as an array of pointers to separate buffers, one buffer for each channel. Usually, when this flag is not used, audio data is passed as a single buffer with all channels interleaved.

### 14.14.113 paNonInterleavedFloat32 = & h80000001

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** Non interleaved, Uses +1.0 and -1.0 as the maximum and minimum respectively.

### 14.14.114 paNonInterleavedInt16 = & h80000008

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** Non interleaved, signed 16 bit.

### 14.14.115 paNonInterleavedInt24 = & h80000004

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** Non interleaved, Packed 24 bit format

### 14.14.116 paNonInterleavedInt32 = & h80000002

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** Non interleaved, signed 32 bit.

### 14.14.117 paNonInterleavedInt8 = & h80000010

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** Non interleaved, 8 bit integer.

### 14.14.118 paNonInterleavedUInt8 = & h80000020

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** Non interleaved, unsigned 8 bit format where 128 is considered ”ground”.

### 14.14.119 paUInt8 = 32

MBS Audio Plugin, Plugin Version: 15.1.

**Function:** One of the sample format constants.
**Notes:** unsigned 8 bit format where 128 is considered ”ground”

## 14.15 class PortAudioStreamRecorderMBS

### 14.15.1 class PortAudioStreamRecorderMBS

MBS Audio Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A portaudio stream class to use an internal buffer to record audio.
**Notes:**

This class has a ring buffer to store the audio samples which they are being recorded. Your application can in a timer or thread process this samples.
Subclass of the PortAudioStreamBaseMBS class.

### 14.15.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr2

### 14.15.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr2

### 14.15.4 Methods

### 14.15.5 Constructor(BufferSize as Integer)

MBS Audio Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new object using a buffer of the given size.
**Notes:**

The buffer must be a power of 2. For example one Megabyte (2^20). This defines the ring buffer used to buffer samples between data coming from sound device and you call ReadFrames method.

Automatically we take paFloat32 as format for sample buffer.

At 44100 Hz, and 4 bytes per value and 2 channels, you will need 352800 bytes per second on storage.

### 14.15.6 Flush

MBS Audio Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears the buffer and discards all current samples.

### 14.15.7 OpenDefaultStream(numInputChannels as Integer, sampleRate as Double) as Integer

MBS Audio Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A simplified version of OpenStream() that opens the default input devices.
**Notes:**

Sampleformat is always 32bit float in this class. (use memoryblock.singlevalue)

numInputChannels: The number of channels of sound to be delivered. It can range from 1 to the value of maxInputChannels in the PortAudioDeviceInfoMBS object for the default output device. If 0 the stream is opened as an output-only stream.

sampleRate: Same as OpenStream parameter of the same name.

Returns an error code.
Error -2 is from the plugin and reports that the buffer was not created before.

### 14.15.8 OpenStream(inputParameters as PortAudioStreamParametersMBS, sampleRate as Double, framesPerBuffer as Integer, streamFlags as Integer) as Integer

MBS Audio Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a stream for input.
**Notes:**

Sampleformat is always 32bit float in this class. (use memoryblock.singlevalue)

outputParameters: A object that describes the input parameters used by the opened stream. See PortAudioStreamParametersMBS for a description of these parameters.

sampleRate: The desired sampleRate.

framesPerBuffer: The number of frames passed to the stream callback function, or the preferred block granularity for a blocking read/write stream. The special value paFramesPerBufferUnspecified (0) may be used to request that the stream callback will recieve an optimal (and possibly varying) number of frames based on host requirements and the requested latency settings.
Note: With some host APIs, the use of non-zero framesPerBuffer for a callback stream may introduce an

additional layer of buffering which could introduce additional latency. PortAudio guarantees that the additional latency will be kept to the theoretical minimum however, it is strongly recommended that a non-zero framesPerBuffer value only be used when your algorithm requires a fixed number of frames per stream callback.

const paFramesPerBufferUnspecified=0

streamFlags: Flags which modify the behaviour of the streaming process. This parameter may contain a combination of flags ORed together. Some flags may only be relevant to certain buffer formats.

| | | |
|---|---|---|
| const paNoFlag | = 0 | no flags |
| const paClipOff | = 1 | Disable default clipping of out of range samples. |
| const paDitherOff | = 2 | Flag requests that where possible a full duplex stream will not discard overflowed input samples without calling the stream callback. This flag is only valid for full duplex callback streams and only when used in combination with the paFramesPerBufferUnspecified (0) framesPerBuffer parameter. Using this flag incorrectly results in a paInvalidFlag error being returned from OpenStream and OpenDefaultStream. |
| const paNeverDropInput | = 4 | Call the stream callback to fill initial output buffers, rather than the default behavior of priming the buffers with zeros (silence). This flag has no effect for input-only and blocking read/write streams. |
| const paPrimeOutputBuffersUsingStreamCallback | = 8 | Call the stream callback to fill initial output buffers, rather than the default behavior of priming the buffers with zeros (silence). This flag has no effect for input-only and blocking read/write streams. |

Upon success OpenStream() returns paNoError and places a pointer to a valid PaStream in the stream argument. The stream is inactive (stopped).
If a call to OpenStream() fails, a non-zero error code is returned (see PaError for possible error codes) and the value of stream is invalid.

Error -2 is from the plugin and reports that the buffer was not created before.

### 14.15.9 ReadFrames(mem as memoryblock, SizeInBytes as Integer) as Integer

MBS Audio Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads frames into the memoryblock.
**Example:**

```
dim s as PortAudioStreamRecorderMBS
dim m as memoryblock

m=newmemoryblock(1024*1024)
// initialize

dim frames as Integer
```

```
frames=s.ReadFrames(m,m.size)

msgbox "we got "+str(frames)+" frames."
```

**Notes:**

You pass a memoryblock and the size of this memoryblock in bytes.
Values are stored in floats (memoryblock.singlevalue) so you get at maximum SizeInBytes/4 values. And if you use more than one channel, you will receive them interlaced.

ReadFrames uses a mutex to access share data, so this call is expensive. Use a big buffer.

### 14.15.10 ResizeBuffer(BufferSize as Integer)

MBS Audio Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resizes the buffer.
**Notes:**

Do not resize while you are recording (this can crash).

The buffer must be a power of 2. For example one Megabyte (2^20).

At 44100 Hz, and 4 bytes per value and 2 channels, you will need 352800 bytes per second on storage.

### 14.15.11 Properties

### 14.15.12 Buffer as Memoryblock

MBS Audio Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a memoryblock which points to the ring buffer used in the recorder object.
**Notes:**

This memoryblock has no size.
It is only for debugging and only valid as long as the PortAudioStreamRecorderMBS object is living.
(Read only property)

### 14.15.13 BufferReadIndex as Integer

MBS Audio Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The read index inside the ring buffer.
**Notes:**

Only for debugging.
(Read only property)

### 14.15.14 BufferSize as Integer

MBS Audio Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The size of the ring buffer in bytes.
**Notes:** (Read only property)

### 14.15.15 BufferWriteIndex as Integer

MBS Audio Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The write index inside the ring buffer.
**Notes:**

Only for debugging.
(Read only property)

### 14.15.16 FramesAvailable as Integer

MBS Audio Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of frames available in the buffer.
**Notes:**

FramesAvailable uses a mutex to access share data, so this call is expensive. Do not call it to decide whether to call ReadFrames. ReadFrames calls FramesAvailable itself.
(Read only property)

### 14.15.17 NumInputChannels as Integer

MBS Audio Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of input channels used with the OpenStream function.
**Notes:** (Read only property)

## 14.16 Globals

### 14.16.1 GetSoundMuteMBS as boolean

MBS Util Plugin, Plugin Version: 6.2, Platforms: macOS, Windows, Targets: All.

**Function:** Checks the mute state of the sound output.
**Example:**

```
if GetSoundMuteMBS then
Title="on"
else
Title="off"
end if
```

**Notes:** Returns false on any error.

### 14.16.2 GetSoundVolumeLeftMBS as Double

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Windows, Targets: All.

**Function:** Gets the current volume for the left channel.
**Notes:** Same as GetSoundVolumeMBS, but only for the left channel.

### 14.16.3 GetSoundVolumeMBS as Double

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

**Function:** Gets the current volume.
**Example:**

```
dim d as Double

d=GetSoundVolumeMBS
```

**Notes:**

Volume is from 0 to 1.0
Uses QuickTime on Mac OS Classic, CoreAudio on Mac OS X and the Mixer on Windows.

### 14.16.4 GetSoundVolumeRightMBS as Double

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Windows, Targets: All.

**Function:** Gets the current volume for the right channel.
**Notes:** Same as GetSoundVolumeMBS, but only for the right channel.

### 14.16.5 SetSoundMuteMBS(mute as boolean)

MBS Util Plugin, Plugin Version: 6.2, Platforms: macOS, Windows, Targets: All.

**Function:** Sets sound mute to the give state.
**Example:**

```
SetSoundMuteMBS true // set mute on
```

### 14.16.6 SetSoundVolumeLeftMBS(percent as Double)

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Windows, Targets: All.

**Function:** Sets the volume on the left channel.
**Notes:**

Volume is from 0 to 1.0
Uses QuickTime on Mac OS Classic, CoreAudio on Mac OS X and the Mixer on Windows.

### 14.16.7 SetSoundVolumeMBS(percent as Double)

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

**Function:** Sets the volume.
**Example:**

```
SetSoundVolumeMBS 1.0
```

**Notes:**

Volume is from 0 to 1.0
Uses QuickTime on Mac OS Classic, CoreAudio on Mac OS X and the Mixer on Windows.

### 14.16.8 SetSoundVolumeRightMBS(percent as Double)

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Windows, Targets: All.

**Function:** Sets the volume on the right channel.
**Notes:**

Volume is from 0 to 1.0
Uses QuickTime on Mac OS Classic, CoreAudio on Mac OS X and the Mixer on Windows.

## 14.17 class SoundFileInfoMBS

### 14.17.1 class SoundFileInfoMBS

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for the file info of a sound file.
**Notes:**

When you open a sound file, the library will fill this and provide you the file format details.
When writing a sound file, you need to build valid format.

### 14.17.2 Properties

### 14.17.3 Channels as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of channels.
**Notes:** (Read and Write property)

### 14.17.4 Format as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The format ID.
**Notes:**

See kFormat constants.
(Read and Write property)

### 14.17.5 FormatEndianName as String

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The endian description for the format.
**Notes:** (Read only property)

### 14.17.6 FormatName as String

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The format description for the format.
**Notes:** (Read only property)

### 14.17.7 FormatSubName as String

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The sub format description for the format.
**Notes:** (Read only property)

### 14.17.8 Frames as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of frames.
**Notes:** (Read and Write property)

### 14.17.9 IsValid as Boolean

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether format is valid.
**Notes:**

Returns true if valid.
(Read only property)

### 14.17.10 SampleRate as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The sample rate in Hz.
**Notes:** (Read and Write property)

### 14.17.11 Sections as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of sections.
**Notes:** (Read and Write property)

### 14.17.12 Seekable as Boolean

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether format is seekable.
**Notes:** (Read and Write property)

### 14.17.13 Constants

### 14.17.14 kFormatAIFF = & h020000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Apple/SGI AIFF format (big endian).

### 14.17.15 kFormatALAC16 = & h0070

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** Apple Lossless Audio Codec (16 bit).

### 14.17.16 kFormatALAC20 = & h0071

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** Apple Lossless Audio Codec (20 bit).

### 14.17.17 kFormatALAC24 = & h0072

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** Apple Lossless Audio Codec (24 bit).

### 14.17.18 kFormatALAC32 = & h0073

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** Apple Lossless Audio Codec (32 bit).

### 14.17.19 kFormatALAW = & h0011

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** A-Law encoded.

### 14.17.20 kFormatAU = & h030000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Sun/NeXT AU format (big endian).

### 14.17.21 kFormatAVR = & h120000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Audio Visual Research

### 14.17.22 kFormatCAF = & h180000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Core Audio File format

### 14.17.23 kFormatDouble = & h0007

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** 64 bit float data

### 14.17.24 kFormatDPCM_16 = & h0051

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** 16 bit differential PCM (XI only)

### 14.17.25 kFormatDPCM_8 = & h0050

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** 8 bit differential PCM (XI only)

### 14.17.26 kFormatDWVW_12 = & h0040

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** 12 bit Delta Width Variable Word encoding.

### 14.17.27 kFormatDWVW_16 = & h0041

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** 16 bit Delta Width Variable Word encoding.

### 14.17.28 kFormatDWVW_24 = & h0042

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** 24 bit Delta Width Variable Word encoding.

### 14.17.29 kFormatDWVW_N = & h0043

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** N bit Delta Width Variable Word encoding.

### 14.17.30 kFormatEndianBig = & h20000000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the endian format constants.
**Notes:** Force big endian-ness.

### 14.17.31 kFormatEndianCPU = & h30000000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the endian format constants.
**Notes:** Force CPU endian-ness.

### 14.17.32 kFormatEndianFile = & h00000000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the endian format constants.
**Notes:** Default file endian-ness.

### 14.17.33 kFormatEndianLittle = & h10000000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the endian format constants.
**Notes:** Force little endian-ness.

### 14.17.34 kFormatEndianMask = & h30000000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Bitmask for the endian format.

### 14.17.35 kFormatFLAC = & h170000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** FLAC lossless file format

### 14.17.36 kFormatFloat = & h0006

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** 32 bit float data

### 14.17.37 kFormatG721_32 = & h0030

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** 32kbs G721 ADPCM encoding.

### 14.17.38 kFormatG723_24 = & h0031

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** 24kbs G723 ADPCM encoding.

### 14.17.39 kFormatG723_40 = & h0032

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** 40kbs G723 ADPCM encoding.

### 14.17.40 kFormatGSM610 = & h0020

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** GSM 6.10 encoding.

### 14.17.41 kFormatHTK = & h100000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** HMM Tool Kit format

### 14.17.42 kFormatIMA_ADPCM = & h0012

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** IMA ADPCM.

### 14.17.43 kFormatIRCAM = & h0A0000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Berkeley/IRCAM/CARL

### 14.17.44 kFormatMAT4 = & h0C0000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Matlab (tm) V4.2 / GNU Octave 2.0

### 14.17.45 kFormatMAT5 = & h0D0000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Matlab (tm) V5.0 / GNU Octave 2.1

### 14.17.46 kFormatMPC2K = & h210000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Akai MPC 2000 sampler

### 14.17.47 kFormatMS_ADPCM = & h0013

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** Microsoft ADPCM.

### 14.17.48 kFormatNIST = & h070000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Sphere NIST format.

### 14.17.49 kFormatOGG = & h200000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Xiph OGG container

### 14.17.50 kFormatPAF = & h050000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Ensoniq PARIS file format.

### 14.17.51 kFormatPCM16 = & h0002

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** Signed 16 bit data

### 14.17.52 kFormatPCM24 = & h0003

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** Signed 24 bit data

### 14.17.53 kFormatPCM32 = & h0004

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** Signed 32 bit data

### 14.17.54 kFormatPCMS8 = & h0001

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** Signed 8 bit data

### 14.17.55 kFormatPCMU8 = & h0005

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** Unsigned 8 bit data (WAV and RAW only)

### 14.17.56 kFormatPVF = & h0E0000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Portable Voice Format

### 14.17.57 kFormatRAW = & h040000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** RAW PCM data.

### 14.17.58 kFormatRF64 = & h220000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** RF64 WAV file

### 14.17.59 kFormatSD2 = & h160000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Sound Designer 2

### 14.17.60 kFormatSDS = & h110000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Midi Sample Dump Standard

### 14.17.61 kFormatSubMask = & h0000FFFF

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Bitmask for the sub format.

### 14.17.62 kFormatSVX = & h060000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Amiga IFF / SVX8 / SV16 format.

### 14.17.63 kFormatTypeMask = & h0FFF0000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Bitmask for the type format.

### 14.17.64 kFormatULAW = & h0010

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** U-Law encoded.

### 14.17.65 kFormatVOC = & h080000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** VOC files.

### 14.17.66 kFormatVORBIS = & h0060

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** Xiph Vorbis encoding.

### 14.17.67 kFormatVOX_ADPCM = & h0021

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the sub format constants.
**Notes:** OKI / Dialogix ADPCM

### 14.17.68 kFormatW64 = & h0B0000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Sonic Foundry's 64 bit RIFF/WAV

### 14.17.69 kFormatWAV = & h010000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Microsoft WAV format (little endian default).

### 14.17.70 kFormatWAVEX = & h130000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** MS WAVE with WAVEFORMATEX

### 14.17.71 kFormatWVE = & h190000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Psion WVE format

### 14.17.72 kFormatXI = & h0F0000

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the format constants.
**Notes:** Fasttracker 2 Extended Instrument

## 14.18 class SoundFileMBS

### 14.18.1 class SoundFileMBS

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A cross platform class to use sndfile library to read/write audio samples.
**Notes:**

As sndfile library is LGPL, you need to include library within your app folder and load it at runtime.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 14.18.2 Blog Entries

- MBS Xojo Plugins, version 17.4pr3
- LibSndfile and TagLib plugins for Xojo

### 14.18.3 Videos

- Presentation from Munich conference about MBS Plugins.

### 14.18.4 Blog Entries

- MBS Xojo Plugins, version 17.4pr3
- LibSndfile and TagLib plugins for Xojo

### 14.18.5 Videos

- Presentation from Munich conference about MBS Plugins.

### 14.18.6 Methods

### 14.18.7 Close

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes file now.
**Notes:** Same as destructor, but you can call it early.

### 14.18.8 Constructor

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Private constructor.

### 14.18.9 Create(file as folderitem, Info as SoundFileInfoMBS) as SoundFileMBS

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new audio file with given format.
**Notes:** On success returns new sound file object.

### 14.18.10 ErrorMessage(errorNumber as integer) as string

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries error message for error number.
See also:

- 14.18.42 ErrorMessage as String 3537

### 14.18.11 GetString(type as Integer) as string

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries one of the strings.
**Notes:**

See kString* constants.
Returns "" in case of error.

### 14.18.12 Loaded as Boolean

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether library is loaded.

### 14.18.13 LoadErrorMessage as String

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The error message from loading library.

### 14.18.14 LoadLibrary(file as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads sndfile library.
**Notes:** Returns true on error.

### 14.18.15 Open(data as MemoryBlock) as SoundFileMBS

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens an audio file from in memory data.
**Notes:** On success returns the sound file object.
See also:

- 14.18.16 Open(data as String) as SoundFileMBS 3531
- 14.18.17 Open(file as folderitem, readwrite As Boolean = False) as SoundFileMBS 3531

### 14.18.16 Open(data as String) as SoundFileMBS

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens an audio file from in memory data.
**Notes:** On success returns the sound file object.
See also:

- 14.18.15 Open(data as MemoryBlock) as SoundFileMBS 3531
- 14.18.17 Open(file as folderitem, readwrite As Boolean = False) as SoundFileMBS 3531

### 14.18.17 Open(file as folderitem, readwrite As Boolean = False) as SoundFileMBS

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens an audio file.
**Notes:**

On success returns the sound file object.
Pass readwrite = true to write to the file.
See also:

- 14.18.15 Open(data as MemoryBlock) as SoundFileMBS 3531
- 14.18.16 Open(data as String) as SoundFileMBS 3531

### 14.18.18 ReadDouble(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads data as double values, converts if necessary.
**Notes:**

Pointer should point to memmoryblock with 8 * Items in size.
Returns number of items read.

### 14.18.19 ReadDoubleFrames(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads frames as double values, converts if necessary.
**Notes:**

Pointer should point to memmoryblock with 8 * Items * Channels in size.
Returns number of items read.

### 14.18.20 ReadInt(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads data as Int32 values, converts if necessary.
**Notes:**

Pointer should point to memmoryblock with 4 * Items in size.
Returns number of items read.

### 14.18.21 ReadIntFrames(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads frames as Int32 values, converts if necessary.
**Notes:**

Pointer should point to memmoryblock with 4 * Items * Channels in size.
Returns number of items read.

### 14.18.22 ReadRaw(p as ptr, bytes as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Read raw data.
**Notes:**

Pointer should point to memmoryblock with Bytes in size.
Returns number of bytes read.

### 14.18.23 ReadShort(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads data as Int16 values, converts if necessary.
**Notes:**

Pointer should point to memmoryblock with 2 * Items in size.
Returns number of items read.

### 14.18.24 ReadShortFrames(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads frames as Int16 values, converts if necessary.
**Notes:**

Pointer should point to memmoryblock with 2 * Items * Channels in size.
Returns number of items read.

### 14.18.25 ReadSingle(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads data as single values, converts if necessary.
**Notes:**

Pointer should point to memmoryblock with 4 * Items in size.
Returns number of items read.

### 14.18.26 ReadSingleFrames(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads frames as single values, converts if necessary.
**Notes:**

Pointer should point to memmoryblock with 4 * Items * Channels in size.
Returns number of items read.

### 14.18.27 Seek(frames as Int64, whence as Integer) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Seeks within the audio file.
**Notes:** See kSeek* constants for whence parameter.

### 14.18.28 SetString(type as Integer, data as Memoryblock) as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets one of the strings.
**Notes:**

See kString* constants.
Returns zero on success.
See also:

- 14.18.29 SetString(type as Integer, text as string) as Integer 3534

### 14.18.29 SetString(type as Integer, text as string) as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets one of the strings.
**Notes:**

See kString* constants.
Returns zero on success.
See also:

- 14.18.28 SetString(type as Integer, data as Memoryblock) as Integer 3534

### 14.18.30 Version as string

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries version of the library.

### 14.18.31 WriteDouble(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes data to file in double format.
**Notes:**

Pointer should point to memmoryblock with 8 * Items in size.
Returns number of items written.

### 14.18.32 WriteDoubleFrames(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes frames to file in double format.
**Notes:**

Pointer should point to memmoryblock with 8 * Items * Channels in size.
Returns number of items written.

### 14.18.33 WriteInt(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes data to file in Int32 format.
**Notes:**

Pointer should point to memmoryblock with 4 * Items in size.
Returns number of items written.

### 14.18.34 WriteIntFrames(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes frames to file in Int32 format.
**Notes:**

Pointer should point to memmoryblock with 4 * Items * Channels in size.
Returns number of items written.

### 14.18.35 WriteRaw(p as ptr, bytes as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes raw data to file.
**Notes:**

Pointer should point to memmoryblock with Bytes in size.
Returns number of bytes written.

### 14.18.36 WriteShort(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes data to file in Int16 format.
**Notes:**

Pointer should point to memmoryblock with 2 * Items in size.
Returns number of items written.

### 14.18.37 WriteShortFrames(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes frames to file in Int16 format.
**Notes:**

Pointer should point to memmoryblock with 2 * Items * Channels in size.
Returns number of items written.

### 14.18.38 WriteSingle(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes data to file in single format.
**Notes:**

Pointer should point to memmoryblock with 4 * Items in size.
Returns number of items written.

### 14.18.39 WriteSingleFrames(p as ptr, items as Int64) as Int64

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes frames to file in single format.
**Notes:**

Pointer should point to memmoryblock with 4 * Items * Channels in size.
Returns number of items written.

### 14.18.40 WriteSync

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes recent changes in file to disk.

### 14.18.41 Properties

### 14.18.42 ErrorMessage as String

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error message.
**Notes:** (Read only property)
See also:

- 14.18.10 ErrorMessage(errorNumber as integer) as string 3530

### 14.18.43 ErrorNumber as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error number.
**Notes:** (Read only property)

### 14.18.44 Handle as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 14.18.45 Info as SoundFileInfoMBS

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries current format.
**Notes:** (Read only property)

### 14.18.46 Constants

### 14.18.47 kSeekCurrent = 1

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the seek mode constants.
**Notes:** Seek relative to current position.

### 14.18.48 kSeekEnd = 2

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the seek mode constants.
**Notes:** Seek relative to end.

### 14.18.49 kSeekSet = 0

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the seek mode constants.
**Notes:** Seek relative to begin.

### 14.18.50 kStringAlbum = 7

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the string constants.
**Notes:** Album

### 14.18.51 kStringArtist = 4

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the string constants.
**Notes:** Artist

### 14.18.52 kStringComment = 5

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the string constants.
**Notes:** Comment

### 14.18.53 kStringCopyright = 2

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the string constants.
**Notes:** Copyright

### 14.18.54 kStringDate = 6

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the string constants.
**Notes:** Date

### 14.18.55 kStringGenre = 10

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the string constants.
**Notes:** Genre

### 14.18.56 kStringLicense = 8

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the string constants.
**Notes:** License

### 14.18.57 kStringSoftware = 3

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the string constants.
**Notes:** Software

### 14.18.58 kStringTitle = 1

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the string constants.
**Notes:** Title

### 14.18.59 kStringTrackNumber = 9

MBS Tools Plugin, Plugin Version: 17.4.

**Function:** One of the string constants.
**Notes:** Track Number.

## 14.19 class TagLibAudioPropertiesMBS

### 14.19.1 class TagLibAudioPropertiesMBS

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for audio properties.

### 14.19.2 Properties

### 14.19.3 Bitrate as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The bit rate for the sound.
**Notes:**

Returns the most appropriate bit rate for the file in kb/s. For constant bitrate formats this is simply the bitrate of the file. For variable bitrate formats this is either the average or nominal bitrate.
(Read and Write property)

### 14.19.4 Channels as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of channels.
**Notes:** (Read and Write property)

### 14.19.5 Length as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The length of the file in second.
**Notes:** (Read and Write property)

### 14.19.6 SampleRate as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The sample rate in Hz.
**Notes:** (Read and Write property)

## 14.20 class TagLibFileRefMBS

### 14.20.1 class TagLibFileRefMBS

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for file loading in TagLib.
**Notes:**

Uses TagLib, an open source library to read metadata from audio files, e.g. ID3 tags.
Currently it supports both ID3v1 and ID3v2 for MP3 files, Ogg Vorbis comments and ID3 tags and Vorbis comments in FLAC, MPC, Speex, WavPack, TrueAudio, WAV, AIFF, MP4 and ASF files.

### 14.20.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.4
- MBS Xojo Plugins, version 19.4pr8
- TagLib to write ID3v2 Tags in Xojo
- MBS Xojo Plugins, version 19.3pr4
- MBS Xojo Plugins, version 19.3pr3
- MBS Xojo Plugins, version 17.5pr1

### 14.20.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.4
- MBS Xojo Plugins, version 19.4pr8
- TagLib to write ID3v2 Tags in Xojo
- MBS Xojo Plugins, version 19.3pr4
- MBS Xojo Plugins, version 19.3pr3
- MBS Xojo Plugins, version 17.5pr1

### 14.20.4 Methods

### 14.20.5 Constructor(file as folderitem)

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:**

Please point to valid audio file.
May raise error exception.

Uses TagLib, an open source library to read metadata from audio files, e.g. ID3 tags.
Currently it supports both ID3v1 and ID3v2 for MP3 files, Ogg Vorbis comments and ID3 tags and Vorbis comments in FLAC, MPC, Speex, WavPack, TrueAudio, WAV, AIFF, MP4 and ASF files.

### 14.20.6 Save as Boolean

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Saves changes to the file.

### 14.20.7 SetProperties(Dic as Dictionary)

MBS Tools Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets audio tags for audio file.
**Example:**

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.mp3")

Dim tag As New TagLibFileRefMBS(file)
Dim dic As Dictionary = tag.Properties

Break // inspect dictionary

dic.Value("ARTIST") = "John Doe"
dic.Value("ALBUM") = Nil // clear this one

tag.SetProperties(dic)

If tag.Save Then
MsgBox "OK"
Else
MsgBox "Failed to save"
End If
```

**Notes:**

Please provide dictionary with new tags.

If tags are nil values, we remove them. If they are text values, we update the text.

### 14.20.8 Properties

### 14.20.9 audioProperties as TagLibAudioPropertiesMBS

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries audio properties of the audio file.
**Notes:** (Read only property)

### 14.20.10 Handle as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 14.20.11 Properties as Dictionary

MBS Tools Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries properties for this file.
**Notes:**

Builds and returns a dictionary with all the properties found by the file handler.
This may include IDv3 tags.

List of ID3v2 tag names:
ALBUM, ALBUMARTIST, ALBUMARTISTSORT, ALBUMSORT, ARTIST, ARTISTSORT, ARTISTWEBPAGE, AUDIOSOURCEWEBPAGE, BPM, COMMENT, COMPOSER, CONDUCTOR, CONTENTGROUP, COPYRIGHT, COPYRIGHTURL, DATE, DISCNUMBER, ENCODEDBY, ENCODING, ENCODINGTIME, FILETYPE, FILEWEBPAGE, GENRE, INITIALKEY, INVOLVEDPEOPLE, ISRC, LABEL, LANGUAGE, LENGTH, LYRICIST, LYRICS, MEDIA, MOOD, MUSICIANCREDITS, ORIGINALALBUM, ORIGINALARTIST, ORIGINALDATE, ORIGINALFILENAME, ORIGINALLYRICIST, OWNER, PAYMENTWEBPAGE, PLAYLISTDELAY, PODCAST, PODCASTCATEGORY, PODCASTDESC, PODCASTID, PODCASTURL, PRODUCEDNOTICE, PUBLISHERWEBPAGE, RADIOSTATION, RADIOSTATIONOWNER, RADIOSTATIONWEBPAGE, RELEASEDATE, REMIXER, SUBTITLE, TAGGINGDATE, TITLE, TITLESORT, TRACKNUMBER, URL.
(Read only property)

### 14.20.12 tags as TagLibTagMBS

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tags in that file.
**Notes:** (Read only property)

## 14.21 class TagLibTagMBS

### 14.21.1 class TagLibTagMBS

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for tags.
**Notes:**

We do have common values in properties like title, comment and track.
Other properties can be found in tags dictionary.

Please use TagLibFileRefMBS to load file and query it for the tags.

This is an attempt to abstract away the difference in the meta data formats of various audio codecs and tagging schemes. As such it is generally a subset of what is available in the specific formats but should be suitable for most applications. This is meant to compliment the generic APIs found in TagLibAudioPropertiesMBS and TagLibFileRefMBS.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 14.21.2 Blog Entries

- MBS Xojo Plugins, version 17.4pr3
- LibSndfile and TagLib plugins for Xojo

### 14.21.5 Videos

- XDC 2020 MBS Plugins Presentation
- Presentation from Munich conference about MBS Plugins.

### 14.21.6 Methods

### 14.21.7 Constructor

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 14.21.8 setTags(Values as Dictionary) as Dictionary

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the tags.
**Notes:** Returns a new dictionary with values which are not supported.

### 14.21.9 Properties

### 14.21.10 Album as String

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the album.
**Notes:** (Read and Write property)

### 14.21.11 Artist as String

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the artist.
**Notes:** (Read and Write property)

### 14.21.12 Comment as String

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The comment field.
**Notes:** (Read and Write property)

### 14.21.13 Genre as String

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The genre.
**Notes:** (Read and Write property)

### 14.21.14 Handle as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 14.21.15 isEmpty as Boolean

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this tag set is empty.
**Notes:** (Read only property)

### 14.21.16 Tags as Dictionary

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries list of properties.
**Notes:**

You get a copy as a dictionary with all keys and values.
Values could be strings or array of strings.
(Read only property)

### 14.21.17 Title as String

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The title.
**Notes:** (Read and Write property)

### 14.21.18 Track as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The track number.
**Notes:** (Read and Write property)

### 14.21.19 Year as Integer

MBS Tools Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The year.
**Notes:** (Read and Write property)

## 14.22 class WindowsAudioMixerMBS

### 14.22.1 class WindowsAudioMixerMBS

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** The Windows Audio Mixer is a device to control the volume and mute state of all attached audio devices.
**Notes:**

Not all devices are present on all Windows machines.
What device is source and destination is a bit unlogic from Microsoft.

### 14.22.2 Methods

### 14.22.3 DeviceCount as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platform: Windows, Targets: All.

**Function:** Number of Mixer devices found in the system.

### 14.22.4 DeviceName(index as Integer) as string

MBS Audio Plugin, Plugin Version: 7.0, Platform: Windows, Targets: All.

**Function:** Name of the device with the given index.
**Notes:**

Index goes from 0 to DeviceCount-1.
Returns "" on invalid index.

### 14.22.5 Properties

### 14.22.6 DeviceIndex as Integer

MBS Audio Plugin, Plugin Version: 7.0, Platform: Windows, Targets: All.

**Function:** The index of the current used device.
**Notes:**

Default is 0.
(Read and Write property)

### 14.22.7 Lasterror as Integer

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** The last error code reported.
**Notes:** (Read and Write property)

### 14.22.8 DestinationDigitalMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether digital device is muted.
**Notes:**

Audio line is a digital destination (for example, digital input to a DAT or CD audio device).

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.9 DestinationDigitalVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of digital device.
**Notes:**

Audio line is a digital destination (for example, digital input to a DAT or CD audio device).

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.10 DestinationHeadPhonesMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether head phones are muted.
**Notes:**

Audio line is an adjustable (gain and/or attenuation) destination intended to drive headphones. Most audio

cards use the same audio destination line for speakers and headphones, in which case the mixer device simply uses the DestinationSpeakers.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.11 DestinationHeadPhonesVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of head phones.
**Notes:**

Audio line is an adjustable (gain and/or attenuation) destination intended to drive headphones. Most audio cards use the same audio destination line for speakers and headphones, in which case the mixer device simply uses the DestinationSpeakers.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.12 DestinationLineMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether line is muted.
**Notes:**

Audio line is a line level destination (for example, line level input from a CD audio device) that will be the final recording source for the analog-to-digital converter (ADC). Because most audio cards for personal computers provide some sort of gain for the recording audio source line, the mixer device will use the DestinationWaveIn.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.13 DestinationLineVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of line.
**Notes:**

Audio line is a line level destination (for example, line level input from a CD audio device) that will be the final recording source for the analog-to-digital converter (ADC). Because most audio cards for personal computers provide some sort of gain for the recording audio source line, the mixer device will use the DestinationWaveIn.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.14 DestinationMonitorMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether audio monitor is muted.
**Notes:**

Audio line is a destination used for a monitor.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.15 DestinationMonitorVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of audio monitor.
**Notes:**

Audio line is a destination used for a monitor.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.16 DestinationSpeakersMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether speakers are muted.
**Notes:**

Audio line is an adjustable (gain and/or attenuation) destination intended to drive speakers. This is the typical component type for the audio output of audio cards for personal computers.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.17 DestinationSpeakersVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of speakers.
**Notes:**

Audio line is an adjustable (gain and/or attenuation) destination intended to drive speakers. This is the typical component type for the audio output of audio cards for personal computers.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.18 DestinationTelephoneMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether telephone is muted.
**Notes:**

Audio line is a destination that will be routed to a telephone line.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.19 DestinationTelephoneVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of telephone.
**Notes:**

Audio line is a destination that will be routed to a telephone line.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.20 DestinationVoiceInMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether voice input is muted.
**Notes:**

Audio line is a destination that will be the final recording source for voice input. This component type is exactly like DestinationWaveIn but is intended specifically for settings used during voice recording/recognition. Support for this line is optional for a mixer device. Many mixer devices provide only DestinationWaveIn.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.21 DestinationVoiceInVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of voice input.
**Notes:**

Audio line is a destination that will be the final recording source for voice input. This component type is exactly like DestinationWaveIn but is intended specifically for settings used during voice recording/recognition. Support for this line is optional for a mixer device. Many mixer devices provide only DestinationWaveIn.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.

(Read and Write computed property)

### 14.22.22 DestinationWaveInMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether wave in is muted.
**Notes:**

Audio line is a destination that will be the final recording source for the waveform-audio input (ADC). This line typically provides some sort of gain or attenuation. This is the typical component type for the recording line of most audio cards for personal computers.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.23 DestinationWaveInVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of wave input device.
**Notes:**

Audio line is a destination that will be the final recording source for the waveform-audio input (ADC). This line typically provides some sort of gain or attenuation. This is the typical component type for the recording line of most audio cards for personal computers.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.24 SourceAnalogMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether analog device is muted.
**Notes:**

Audio line is an analog source (for example, analog output from a video-cassette tape).

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.25 SourceAnalogVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of analog device.
**Notes:**

Audio line is an analog source (for example, analog output from a video-cassette tape).

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.26 SourceAuxiliaryMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether auxiliary is muted.
**Notes:**

Audio line is a source originating from the auxiliary audio line. This line type is intended as a source with gain or attenuation that can be routed to the DestinationSpeakers destination and/or recorded from the DestinationWaveIn destination.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.27 SourceAuxiliaryVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of auxiliary.
**Notes:**

Audio line is a source originating from the auxiliary audio line. This line type is intended as a source with

gain or attenuation that can be routed to the DestinationSpeakers destination and/or recorded from the DestinationWaveIn destination.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.28 SourceCompactDiscMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether the CD device is muted.
**Notes:**

Audio line is a source originating from the output of an internal audio CD. This component type is provided for audio cards that provide an audio source line intended to be connected to an audio CD (or CD-ROM playing an audio CD).

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.29 SourceCompactDiscVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of CD device.
**Notes:**

Audio line is a source originating from the output of an internal audio CD. This component type is provided for audio cards that provide an audio source line intended to be connected to an audio CD (or CD-ROM playing an audio CD).

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.30 SourceDigitalMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether digital is muted.
**Notes:**

Audio line is a digital source (for example, digital output from a DAT or audio CD).

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.31 SourceDigitalVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of digital device.
**Notes:**

Audio line is a digital source (for example, digital output from a DAT or audio CD).

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.32 SourceLineMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether line is muted.
**Notes:**

Audio line is a line-level source (for example, line-level input from an external stereo) that can be used as an optional recording source. Because most audio cards for personal computers provide some sort of gain for the recording source line, the mixer device will use the SourceAuxiliary type.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.33 SourceLineVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of line.
**Notes:**

Audio line is a line-level source (for example, line-level input from an external stereo) that can be used as an optional recording source. Because most audio cards for personal computers provide some sort of gain for the recording source line, the mixer device will use the SourceAuxiliary type.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.34 SourceMicrophoneMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether microphone is muted.
**Notes:**

Audio line is a microphone recording source. Most audio cards for personal computers provide at least two types of recording sources: an auxiliary audio line and microphone input. A microphone audio line typically provides some sort of gain. Audio cards that use a single input for use with a microphone or auxiliary audio line should use the SourceMicrophone component type.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.35 SourceMicrophoneVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of microphone.
**Notes:**

Audio line is a microphone recording source. Most audio cards for personal computers provide at least two types of recording sources: an auxiliary audio line and microphone input. A microphone audio line typically provides some sort of gain. Audio cards that use a single input for use with a microphone or auxiliary audio line should use the SourceMicrophone component type.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.36 SourcePCSpeakerMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether PC Speaker is muted.
**Notes:**

Audio line is a source originating from personal computer speaker. Several audio cards for personal computers provide the ability to mix what would typically be played on the internal speaker with the output of an audio card. Some audio cards support the ability to use this output as a recording source.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.37 SourcePCSpeakerVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of PC Speakers.
**Notes:**

Audio line is a source originating from personal computer speaker. Several audio cards for personal computers provide the ability to mix what would typically be played on the internal speaker with the output of an audio card. Some audio cards support the ability to use this output as a recording source.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.38 SourceSynthesizerMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether synthesizer is muted.
**Notes:**

Audio line is a source originating from the output of an internal synthesizer. Most audio cards for personal computers provide some sort of MIDI synthesizer (for example, an Adlib®-compatible or OPL/3 FM synthesizer).

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.39 SourceSynthesizerVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of synthesizer.
**Notes:**

Audio line is a source originating from the output of an internal synthesizer. Most audio cards for personal computers provide some sort of MIDI synthesizer (for example, an Adlib®-compatible or OPL/3 FM synthesizer).

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.40 SourceTelephoneMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Whether telephone is muted.
**Notes:**

Audio line is a source originating from an incoming telephone line.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.41 SourceTelephoneVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of telephone.
**Notes:**

Audio line is a source originating from an incoming telephone line.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

### 14.22.42 SourceWaveOutMute as boolean

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of wave device.
**Notes:**

Audio line is a source originating from the waveform-audio output digital-to-analog converter (DAC). Most audio cards for personal computers provide this component type as a source to the DestinationSpeakers destination. Some cards also allow this source to be routed to the DestinationWaveIn destination.

Lasterror is set.
Value is true if device is muted, else false.
On any error or non Windows platforms value is always false.
(Read and Write computed property)

### 14.22.43 SourceWaveOutVolume as Double

MBS Audio Plugin, Plugin Version: 6.2, Platform: Windows, Targets: All.

**Function:** Volume of wave out device.
**Notes:**

Audio line is a source originating from the waveform-audio output digital-to-analog converter (DAC). Most audio cards for personal computers provide this component type as a source to the DestinationSpeakers destination. Some cards also allow this source to be routed to the DestinationWaveIn destination.

Lasterror is set.
Range is from 0 for no volume to 1.0 for maximum volume.
On any error or non Windows platforms the value is always 0.
(Read and Write computed property)

## 14.23 class WindowsMCIMBS

### 14.23.1 class WindowsMCIMBS

MBS Audio Plugin, Platform: Windows, Targets: All.

**Function:** Access to the Video for Windows API.
**Example:**

```
// open the CD Device and set time format to Track:Minute:Second:Frame

dim v as new WindowsMCIMBS
v.Command="open cdaudio"
v.run

v.Command="set cdaudio time format TMSF"
v.run
```

**Notes:**

Without QuickTime you can't play a movie in Windows with the Movieplayer control. This class allows you to play movies.

Possible devices:

vcr (ME, 98)
videodisc (ME, 98)
overlay
cdaudio (2000, ME, 98)
dat
scanner
animation
digitalvideo
waveaudio (2000, ME, 98)
sequencer (2000, ME, 98)
avivideo (2000, ME, 98)
mpegvideo (2000, ME, 98)

(I added on which OS I find the devices on my installation.)

On Windows 2000 we have this connection between devices and file extensions:

You can find this list in the Registry on Windows 2000 at "HKEY_LOCAL_MACHINE\Software\Microsoft\Windows NT\Currentversion\MCI Extensions".

vcr:
videodisc:
overlay:
cdaudio: cda.
dat:
scanner:
animation:
digitalvideo:
waveaudio: wav.
sequencer: mdi, midi, rmi.
avivideo: avi.
mpegvideo: aif*, asx, asf, au, dat, ivf, m1v, m3z, mov, mp*, qt, snd, wax, wm, wma, wmv, wvx.

Possible states of a device:

not ready
stopped
playing
recording
seeking
paused
open

Possible time units:

milliseconds - Default
hms - Hour:Minute:Second
msf - Minute:Second:Frame
frames
smpte 24
smpte 25
smpte 30
smpte 30 drop
bytes
samples
tmsf - Track:Minute:Second:Frame ->use for CD

A list of all commands can be found on the Microsoft Website at:

http://msdn.microsoft.com/library/en-us/multimed/mmcmdstr_85uz.asp

### 14.23.2 Methods

### 14.23.3 Run

MBS Audio Plugin, Platform: Windows, Targets: All.

**Function:** Executes a command.
**Example:**

```
dim v as new WindowsMCIMBS

v.command="pause cdaudio" // pauses the CD
v.run
```

### 14.23.4 Properties

### 14.23.5 Command as string

MBS Audio Plugin, Platform: Windows, Targets: All.

**Function:** Here you can store the next Command for the MCI.
**Example:**

```
dim v as new WindowsMCIMBS

v.command="pause cdaudio" // pauses the CD
v.run
```

**Notes:** (Read and Write property)

### 14.23.6 Errorcode as Integer

MBS Audio Plugin, Platform: Windows, Targets: All.

**Function:** The error code for the last error.
**Example:**

```
dim v as new WindowsMCIMBS
```

msgbox str(v.errorcode)+" "+v.errorstring

**Notes:**

This property can be set to make a list of possible error messages like in the example "List MCI Errormessages".
(Read and Write property)

### 14.23.7 Errorstring as string

MBS Audio Plugin, Platform: Windows, Targets: All.

**Function:** The error description for the last error.
**Example:**

dim v as new WindowsMCIMBS

msgbox str(v.errorcode)+" "+v.errorstring

**Notes:**

Here is a list of some error messages:

(Read and Write property)

### 14.23.8 Result as string

MBS Audio Plugin, Platform: Windows, Targets: All.

**Function:** The result of the last operation.
**Example:**

dim v as WindowsMCIMBS

// get the current position, track and track count to display for the CD Audio.

v.Command="Status cdaudio Current Track"
v.run
MsgBox v.result

v.command="Status cdaudio Number of Tracks"
v.run

```
MsgBox v.result

v.command="Status cdaudio position"
v.run
MsgBox v.result
```

**Notes:** (Read and Write property)

| | |
|---|---|
| 0 | The specified command was carried out. |
| 1 | Undefined external error. |
| 2 | A device ID has been used that is out of range for your system. |
| 3 | The driver was not enabled. |
| 4 | The specified device is already in use. Wait until it is free, and then try again. |
| 5 | The specified device handle is invalid. |
| 6 | There is no driver installed on your system. |
| 7 | There is not enough memory available for this task. Quit one or more applications to increase available memory, and then try again. |
| 8 | This function is not supported. Use the Capabilities function to determine which functions and messages the driver supports. |
| 9 | An error number was specified that is not defined in the system. |
| 10 | An invalid flag was passed to a system function. |
| 11 | An invalid parameter was passed to a system function. |
| 12 | Handle being used simultaneously on another thread (eg callback). |
| 13 | Specified alias not found in WIN.INI. |
| 14 | The registry database is corrupt. |
| 15 | The specified registry key was not found. |
| 16 | The registry could not be opened or could not be read. |
| 17 | The registry could not be written to. |
| 18 | The specified registry key could not be deleted. |
| 19 | The specified registry key value could not be found. |
| 20 | The driver did not generate a valid OPEN callback. |
| 32 | The specified format is not supported or cannot be translated. Use the Capabilities function to determine the supported formats. |
| 33 | Cannot perform this operation while media data is still playing. Reset the device, or wait until the data is finished playing. |
| 34 | The wave header was not prepared. Use the Prepare function to prepare the header, and then try again. |
| 35 | Cannot open the device without using the WAVE_ALLOWSYNC flag. Use the flag, and then try again. |
| 64 | The MIDI header was not prepared. Use the Prepare function to prepare the header, and then try again. |
| 65 | Cannot perform this operation while media data is still playing. Reset the device, or wait until the data is finished playing. |
| 66 | A MIDI map was not found. There may be a problem with the driver, or the MIDIMAP.CFG file may be corrupt or missing. |
| 67 | The port is transmitting data to the device. Wait until the data has been transmitted, and then try again. |
| 68 | The current MIDI Mapper setup refers to a MIDI device that is not installed on the system. Use MIDI Mapper to edit the setup. |
| 69 | The current MIDI setup is damaged. Copy the original MIDIMAP.CFG file to the Windows SYSTEM directory, and then try again. |
| 70 | A MIDI call was made which is invalid with the current open mode. Reopen the device with the correct mode. |
| 71 | Driver condition - do not callback this input event |
| 257 | Invalid MCI device ID. Use the ID returned when opening the MCI device. |
| 259 | The driver cannot recognize the specified command parameter. |

## 14.24 class WindowsPlayerDeviceMBS

### 14.24.1 class WindowsPlayerDeviceMBS

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** This class describes the capabilities of a waveform-audio output device.
**Example:**

```
// fill devices into a popupmenu
Dim c As Integer = WindowsPlayerMBS.DeviceCount
For i As Integer = 0 To c-1
Dim d As WindowsPlayerDeviceMBS = WindowsPlayerMBS.Device(i)

PopupMenu1.AddRow d.Name+" "+Str(d.Channels)
PopupMenu1.RowTag(i) = d
Next
```

### 14.24.2 Blog Entries

- New in the MBS Xojo Plugins 20.0
- MBS Xojo Plugins, version 20.0r7

### 14.24.3 Blog Entries

- New in the MBS Xojo Plugins 20.0
- MBS Xojo Plugins, version 20.0r7

### 14.24.4 Properties

### 14.24.5 Channels as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** Number specifying whether the device supports mono (1) or stereo (2) output.
**Notes:** (Read only property)

### 14.24.6 DriverVersion as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** Version number of the device driver for the device.
**Notes:**

The high-order byte is the major version number, and the low-order byte is the minor version number.
(Read only property)

### 14.24.7 Formats as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** Standard formats that are supported.
**Notes:**

Combination of kFormat* constants.
(Read only property)

### 14.24.8 Index as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** The device index.
**Notes:** (Read only property)

### 14.24.9 ManufacturerID as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** Manufacturer identifier for the device driver for the device.
**Notes:**

Manufacturer identifiers are defined in Manufacturer and Product Identifiers:
https://docs.microsoft.com/en-us/previous-versions/ms709440% 28v% 3dvs.85% 29
(Read only property)

### 14.24.10 Name as String

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** Product name.
**Notes:** (Read only property)

### 14.24.11 ProductID as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** Product identifier for the device.
**Notes:** (Read only property)

### 14.24.12 Support as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** Optional functionality supported by the device.
**Notes:**

Combination of kSupport* constants.
(Read only property)

### 14.24.13 Constants

### 14.24.14 kFormat1M08 = & h00000001

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 11.025 kHz, mono, 8-bit

### 14.24.15 kFormat1M16 = & h00000004

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 11.025 kHz, mono, 16-bit

### 14.24.16 kFormat1S08 = & h00000002

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 11.025 kHz, stereo, 8-bit

### 14.24.17 kFormat1S16 = & h00000008

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 11.025 kHz, stereo, 16-bit

### 14.24.18 kFormat2M08 = & h00000010

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 22.05 kHz, mono, 8-bit

### 14.24.19 kFormat2M16 = & h00000040

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 22.05 kHz, stereo, 8-bit

### 14.24.20 kFormat2S08 = & h00000020

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 22.05 kHz, mono, 16-bit

### 14.24.21 kFormat2S16 = & h00000080

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 22.05 kHz, stereo, 16-bit

### 14.24.22 kFormat44M08 = & h00000100

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 44.1 kHz, mono, 8-bit

### 14.24.23 kFormat44M16 = & h00000400

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 44.1 kHz, mono, 16-bit

### 14.24.24 kFormat44S08 = & h00000200

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 44.1 kHz, stereo, 8-bit

### 14.24.25 kFormat44S16 = & h00000800

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 44.1 kHz, stereo, 16-bit

### 14.24.26 kFormat48M08 = & h00001000

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 48 kHz, mono, 8-bit

### 14.24.27 kFormat48M16 = & h00004000

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 48 kHz, mono, 16-bit

### 14.24.28 kFormat48S08 = & h00002000

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 48 kHz, stereo, 8-bit

### 14.24.29 kFormat48S16 = & h00008000

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 48 kHz, stereo, 16-bit

### 14.24.30 kFormat96M08 = & h00010000

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 96 kHz, mono, 8-bit

### 14.24.31 kFormat96M16 = & h00040000

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 96 kHz, mono, 16-bit

### 14.24.32 kFormat96S08 = & h00020000

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 96 kHz, stereo, 8-bit

### 14.24.33 kFormat96S16 = & h00080000

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** 96 kHz, stereo, 16-bit

### 14.24.34 kFormatInvalid = 0

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the format constants.
**Notes:** Invalid value.

### 14.24.35 kSupportLRVolume = 8

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the support flags.
**Notes:** Supports separate left and right volume control.

### 14.24.36 kSupportPitch = 1

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the support flags.
**Notes:** Supports pitch control.

### 14.24.37 kSupportPlaybackRate = 2

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the support flags.
**Notes:** Supports playback rate control.

### 14.24.38 kSupportSampleAccurate = 32

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the support flags.
**Notes:** Returns sample-accurate position information.

### 14.24.39 kSupportSync = 16

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the support flags.
**Notes:** The driver is synchronous and will block while playing a buffer.

### 14.24.40 kSupportVolume = 4

MBS Audio Plugin, Plugin Version: 20.0.

**Function:** One of the support flags.
**Notes:** Supports volume control.

## 14.25 class WindowsPlayerMBS

### 14.25.1 class WindowsPlayerMBS

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** The Windows MP3 Player class.
**Notes:**

This is a little class to play a MP3 file (or data in memory).
Written for 44100 Hz, 2 channel MP3 files.

With plugin version 16.1 this class should work fine with any sample rate, any channel count and other formats as long as Microsoft drivers support them.

### 14.25.4 Methods

### 14.25.5 Constructor(data as MemoryBlock)

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Initializes the class with given data.
See also:

- 14.25.6 Constructor(data as String) 3580
- 14.25.7 Constructor(file as folderitem) 3580

### 14.25.6 Constructor(data as String)

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Initializes the class with given data.
See also:

- 14.25.5 Constructor(data as MemoryBlock) 3580
- 14.25.7 Constructor(file as folderitem) 3580

### 14.25.7 Constructor(file as folderitem)

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Initializes the class with a given file.
See also:

- 14.25.5 Constructor(data as MemoryBlock) 3580
- 14.25.6 Constructor(data as String) 3580

### 14.25.8 Device(index as Integer) as WindowsPlayerDeviceMBS

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** Retrieves the capabilities of a given audio output device.
**Example:**

```
// fill devices into a popupmenu
Dim c As Integer = WindowsPlayerMBS.DeviceCount
For i As Integer = 0 To c-1
Dim d As WindowsPlayerDeviceMBS = WindowsPlayerMBS.Device(i)

PopupMenu1.AddRow d.Name+" "+Str(d.Channels)
PopupMenu1.RowTag(i) = d
Next
```

**Notes:**

Index in range from 0 to DeviceCount-1.
You can use index -1 for the wave mapper.

### 14.25.9 GetVolume(byref VolumeLeft as Double, byref VolumeRight as Double)

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Queries left and right volume.
**Notes:** Range is from 0.0 for no sound to 1.0 for full sound.

### 14.25.10 Pause

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Pauses current playback.

### 14.25.11 Play(offset as Double = 0.0)

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Starts playing the sound.
**Notes:** With offset you can define the start point in seconds from beginning of sound. Range from 0 seconds to duration-1.

### 14.25.12 Resume

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Resumes current playback.

### 14.25.13 SetVolume(VolumeLeft as Double, VolumeRight as Double)

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Sets the left and right volume independent.
**Notes:** Range is from 0.0 for no sound to 1.0 for full sound.

### 14.25.14 Stop

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Stops current playback.

### 14.25.15 Properties

### 14.25.16 Buffer as MemoryBlock

MBS Audio Plugin, Plugin Version: 16.1, Platform: Windows, Targets: All.

**Function:** The buffer with audio samples.
**Notes:**

You get a copy of the buffer as memoryblock.
Please use BufferLength, SampleRate and ChannelCount to read it.
Data is always 16 bit with 2 * ChannelCount * SampleRate bytes per second.
(Read only property)

### 14.25.17 BufferLength as Integer

MBS Audio Plugin, Plugin Version: 16.1, Platform: Windows, Targets: All.

**Function:** The buffer length for audio samples.
**Notes:** (Read only property)

### 14.25.18 ChannelCount as Integer

MBS Audio Plugin, Plugin Version: 16.1, Platform: Windows, Targets: All.

**Function:** The channel count of the audio file.
**Notes:** (Read only property)

### 14.25.19 ChannelMask as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** The channel mask.
**Example:**

```
dim p as WindowsPlayerMBS // your player
p.DeviceID = 3 // 4th device
p.ChannelMask = 1 // left channel
```

**Notes:**

1 is left, 2 is right, 3 is center and so on.
Default is zero for automatic.

see list here:
https://docs.microsoft.com/en-us/previous-versions/ms713496% 28v% 3dvs.85% 29
(Read and Write property)

### 14.25.20 DeviceCount as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** Retrieves the number of audio output devices present in the system.
**Notes:**

A return value of zero means that no devices are present or that an error occurred.
(Read only property)

### 14.25.21 DeviceID as Integer

MBS Audio Plugin, Plugin Version: 20.0, Platform: Windows, Targets: All.

**Function:** The device ID to use.

**Example:**

```
dim p as WindowsPlayerMBS // your player
p.DeviceID = 3 // 4th device
p.ChannelMask = 1 // left channel
```

**Notes:**

Please set before calling Play method.
Default is -1 to use WAVE MAPPER device.
(Read and Write property)

### 14.25.22 Duration as Double

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Returns duration of sound in seconds.
**Notes:** (Read only property)

### 14.25.23 Lasterror as Integer

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 14.25.24 Pitch as Double

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** The pitch for the waveform-audio output device.
**Notes:**

Default 1.0.
pass e.g. 0.5 for half pitch or 2.0 to double pitch.
(Read and Write property)

### 14.25.25 Position as Double

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Returns current position.
**Notes:** (Read only property)

### 14.25.26 Rate as Double

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** The rate for the waveform-audio output device.
**Notes:**

Default 1.0.
pass e.g. 0.5 for half speed or 2.0 to double speed.
(Read and Write property)

### 14.25.27 SampleRate as Integer

MBS Audio Plugin, Plugin Version: 16.1, Platform: Windows, Targets: All.

**Function:** The sample rate of the audio file.
**Notes:** (Read only property)

### 14.25.28 Volume as Double

MBS Audio Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** The volume setting.
**Notes:**

Range is from 0.0 for no sound to 1.0 for full sound.
(Read and Write property)

# Chapter 15

# Authorization

## 15.1 class AuthorizationItemMBS

### 15.1.1 class AuthorizationItemMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** A class for an autorization right.

### 15.1.2 Properties

### 15.1.3 Flags as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Flags for this item.
**Notes:**

Flags returned in the flags field of ItemSet Items when calling Authorize:

| | |
|---|---|
| kAuthorizationFlagCanNotPreAuthorize | 1 |

(Read and Write property)

### 15.1.4 Name as String

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** The name of the item.
**Notes:** (Read and Write property)

### 15.1.5 Value as String

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** The value of the item.
**Notes:** (Read and Write property)

## 15.2 class AuthorizationItemSetMBS

### 15.2.1 class AuthorizationItemSetMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** A class for a set of autorization rights.

### 15.2.2 Methods

### 15.2.3 Append(item as AuthorizationItemMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Adds a new item to the list.

### 15.2.4 Remove(index as Integer)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Removes the item with the given index.

### 15.2.5 Properties

### 15.2.6 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the number of items in the list.
**Notes:** (Read and Write property)

### 15.2.7 Item(index as Integer) as AuthorizationItemMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns an item from the list.
**Notes:** (Read and Write computed property)

## 15.3 class AuthorizationMBS

### 15.3.1 class AuthorizationMBS

MBS MacCF Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** A class to run a root shell on Mac OS X.
**Notes:**

Some notes from Ilija Injac on this usage of this class:

The main problem for the execution of the perl script was, that perl is not able to find the required perl-modules at execution with the option "-U" (this switch is set for security reasons).
It was also neccessary to include the perl-modules from inside the perl script wich has to be executed.
Inside the Xojo code i created a AuthorizationItemMBS with the value "/usr/bin/perl":
...
i = new AuthorizationItemMBS

```
i.name  = a.kAuthorizationItemRightExecute
i.value = "/usr/bin/perl"
```

...
Actually it is the same source as in Christians "Authorization 1" example within the "test1" function. And it works !

### 15.3.4 Methods

### 15.3.5 Authorize(rights as AuthorizationItemSetMBS, flags as Integer)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Short for Authorize without the resulting rights set.
**Example:**

```
dim a as AuthorizationMBS
dim s as AuthorizationItemSetMBS
dim i as AuthorizationItemMBS
dim Flags as Integer

// check whether use is admin

a=new AuthorizationMBS

s=new AuthorizationItemSetMBS
i=new AuthorizationItemMBS
i.Name="com.mycompany.myapplication.command1"
s.Append i

if a.NewAuthorization(nil,a.kAuthorizationFlagDefaults) then // create
Flags=BitwiseOr(a.kAuthorizationFlagExtendRights,a.kAuthorizationFlagInteractionAllowed)

a.Authorize(s,flags)
MsgBox str(a.LastError)
// -60006 for cancel = no admin
// 0 on success
end if
```

See also:

- 15.3.6 Authorize(rights as AuthorizationItemSetMBS, flags as Integer, byref outrights as AuthorizationItemSetMBS) 3591

### 15.3.6 Authorize(rights as AuthorizationItemSetMBS, flags as Integer, byref outrights as AuthorizationItemSetMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Tries to extend authorization to have root rights.
**Notes:**

The Authorizated property is set if this function was successfull.
Lasterror is set.
outrights is on return a list of the rights which are authorized.

Extends the rights of the class.

When the kAuthorizationFlagInteractionAllowed flag is set, user interaction will happen when required. Failing to set this flag will result in this call failing with a errAuthorizationInteractionNotAllowed status when interaction is required.

Setting the kAuthorizationFlagExtendRights flag will extend the currently available rights.

Setting the kAuthorizationFlagPartialRights flag will cause this call to succeed if only some of the requested rights are being granted by the system. Unless this flag is set this API will fail if not all the requested rights could be obtained.

Setting the kAuthorizationFlagDestroyRights flag will prevent any additional rights obtained during this call from being preserved after returning from this API.

Setting the kAuthorizationFlagPreAuthorize flag will pre authorize the requested rights so that at a later time – by calling GetExternalForm() follow by NewAuthorizationFromExternalForm() – the obtained rights can be used in a different process. Rights that can't be preauthorized will be treated as if they were authorized for the sake of returning an error (in other words if all rights are either authorized or could not be preauthorized this call will still succeed).

The rights which could not be preauthorized are not currently authorized and may fail to authorize when a later call to Authorize() is made, unless the kAuthorizationFlagExtendRights and kAuthorizationFlagInteractionAllowed flags are set. Even then they might still fail if the user does not supply the correct credentials.

The reason for passing in this flag is to provide correct audit trail information and to avoid unnecessary user interaction.

Error codes:

| | | |
|---|---|---|
| errAuthorizationSuccess | 0 | No error. |
| errAuthorizationInvalidRef | -60002 | The authorization parameter is invalid. |
| errAuthorizationInvalidSet | -60001 | The rights parameter is invalid. |
| errAuthorizationInvalidPointer | -60004 | The authorizedRights parameter is invalid. |

See also:

- 15.3.5 Authorize(rights as AuthorizationItemSetMBS, flags as Integer) 3591

### 15.3.7 Available as boolean

MBS MacCF Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the Authorization Framework was loaded correctly.
**Notes:** Returns false on any error.

### 15.3.8 close

MBS MacCF Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.
**Notes:**

Strings made with the ExternalForm function will become invalid!

There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

### 15.3.9 closeStream

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Closes the stream.

### 15.3.10 EOFStream as boolean

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the Stream is at the end.

### 15.3.11 Execute(toolpath as string, parameters() as string)

MBS MacCF Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** Executes a command line application in the background.
**Notes:**

You may make some small shell script which you launch in background. This script can change some other utility to run as root (Setuid), so you can do admin stuff using the normal shell class.
Lasterror is set.
Currently this function is not available to RB versions before 3.5.

Note that the parameters parameter is an array of strings and not just one.
toolpath should use an absolute path in unix style.

Lasterror is set to -1 if the path is empty or you are not using Mac OS X.
See also:

- 15.3.12 Execute(toolpath as string, parameters() as string, openstream as boolean) 3594

### 15.3.12 Execute(toolpath as string, parameters() as string, openstream as boolean)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Same as Execute, but you can specify if the stream to the command line application should be opened.
**Notes:**

Currently this function is not available to RB versions before 3.5.
Note that the parameters parameter is an array of strings and not just one.
toolpath should use an absolute path in unix style.

Lasterror is set to -1 if the path is empty or you are not using Mac OS X.
See also:

- 15.3.11 Execute(toolpath as string, parameters() as string) 3593

### 15.3.13 ExternalForm as string

MBS MacCF Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** Returns a string with binary data about this Authorization object.
**Notes:**

This external representation depends on your process. You can't save it to disk or keep it longer than the Authorization object exists.
If the Authorization object is destroyed, your application quits or the authorization times out, this external form becomes invalid.

### 15.3.14 FlushStream

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Flushs the stream to the background application.

### 15.3.15 Info as AuthorizationItemSetMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the list of currently authorized rights.
**Notes:** Returns nil on any error.

### 15.3.16 MakeStreamAsyncron

MBS MacCF Plugin, Plugin Version: 6.3, Platform: macOS, Targets: Desktop only.

**Function:** Modifies the Stream created in the Execute method to run non blocking.

### 15.3.17 NewAuthorization(rights as AuthorizationItemSetMBS, flags as Integer) as Boolean

MBS MacCF Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new Authorization object.
**Notes:**

Lasterror is set. Returns true if successfull.

Create a new autorization object which can be used in other authorization calls.

When the kAuthorizationFlagInteractionAllowed flag is set, user interaction will happen when required. Failing to set this flag will result in this call failing with a errAuthorizationInteractionNotAllowed status in the lasterror property when interaction is required.

Setting the kAuthorizationFlagExtendRights flag will extend the currently available rights. If this flag is set the class will grant all the rights requested when errAuthorizationSuccess is returned in the lasterror property. If this flag is not set the operation will almost certainly succeed, but no attempt will be made to make the requested rights availible.

Call the Info function to figure out which of the requested rights are granted by the system.

Setting the kAuthorizationFlagPartialRights flag will cause this call to succeed if only some of the requested rights are being granted by the system. Unless this flag is set this API will fail if not all the requested rights could be obtained.

Setting the kAuthorizationFlagPreAuthorize flag will pre authorize the requested rights so that at a later time – by calling GetExternalForm() follow by NewAuthorizationFromExternalForm() in a different object

– the obtained rights can be used in a different process. Rights that can't be preauthorized will be treated as if they were authorized for the sake of returning an error (in other words if all rights are either authorized or could not be preauthorized this call will still succeed).

The rights which could not be preauthorized are not currently authorized and may fail to authorize when a later call to Authorize() is made, unless the kAuthorizationFlagExtendRights and kAuthorizationFlagInteractionAllowed flags are set. Even then they might still fail if the user does not supply the correct credentials.

The reason for passing in this flag is to provide correct audit trail information and to avoid unnecessary user interaction.

rights (input/optional):
An AuthorizationItemSet containing rights for which authorization is being requested. If nil are specified the class will authorize nothing at all.

flags (input) options specified using the different constants from this class.

Error codes:

| | | |
|---|---|---|
| errAuthorizationSuccess | 0 | Authorization or all requested rights succeeded. |
| errAuthorizationDenied | -60005 | The authorization for one or more of the requested rights was denied. |
| errAuthorizationCanceled | -60006 | The authorization was cancled by the user. |
| errAuthorizationInteractionNotAllowed | -60007 | The authorization was denied since no interaction with the user was allowed. |

### 15.3.18 NewAuthorizationFromExternalForm(s as string) as Boolean

MBS MacCF Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new Authorization object from data inside a string.
**Notes:**

You can store an authorization in a string for use in a subprocess. For example your application can ask the user for Root rights and you pass this string to a launched terminal application which will use it without having it's own interface.
Lasterror is set. Returns true if successfull.

### 15.3.19 ReadStream(count as Integer) as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Reads bytes from the output stream of the executing app.
**Example:**

```
dim s(0) as String
dim a as AuthorizationMBS
dim e as Integer

s(0)="-show"

a=new AuthorizationMBS

if a.SimpleNewAuthorization then // create

a.Execute("/usr/sbin/dsconfigad",s,true) // and run it

if a.LastError<>0 then
MsgBox "Lasterror on Execute: "+str(a.LastError)
else
e=a.Wait // wait for process to terminate. Returns PID
if a.LastError<>0 then
MsgBox "Lasterror on Wait: "+str(a.LastError)
end if
end if
msgbox a.ReadStream(1024)
end if
```

**Notes:**

Tries to read count bytes.

Lasterror is set.
The returned string will be as long as the number of strings read.

Lasterror is set to -1 by the plugin if the stream is not open, or you are not using Mac OS X or the memory allocation failed.

### 15.3.20 SimpleAuthorize

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Just asks for the Authorization.
**Notes:** This is the function from MBS Plugin 3.0.

### 15.3.21 SimpleNewAuthorization as Boolean

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new authorization handle.
**Example:**

```
// uses chmod on test.pdf on the desktop to make
// it read-, write- and executeable by everyone.

dim s(1) as String
dim a as AuthorizationMBS

a=new AuthorizationMBS

if a.SimpleNewAuthorization then
s(0)="777"
s(1)=SpecialFolder.Desktop.Child("test.pdf").NativePath

MsgBox s(1)
a.execute("/bin/chmod",s)
msgbox "Executed:"+str(a.lasterror)
end if
```

**Notes:** This is the function from MBS Plugin 3.0.

### 15.3.22 Wait as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Waits till the background application is done.
**Notes:**

Returns the Process ID or -1 on an error.
Lasterror is set.

### 15.3.23 WriteStream(s as string) as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** Writes the given bytes in the string to the stream.

### 15.3.24 Properties

### 15.3.25 Authorized as Boolean

MBS MacCF Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** Set to true if the last call to Authorizate was successfull.
**Notes:** (Read and Write property)

### 15.3.26 Handle as Integer

MBS MacCF Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** The handle to the Mac OS authorization object.
**Notes:**

The C type is AuthorizationRef.
(Read and Write property)

### 15.3.27 KeepRights as Boolean

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** whether the destructor will keep the rights allive for the next use.
**Notes:**

Normally the rights will be destroyed in the destructor so on the next use of the class the user has to reenter the password. If KeepRights=true the rights will not be destroyed.
(Read and Write property)

### 15.3.28 LastError as Integer

MBS MacCF Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** The last error code reported.
**Notes:**

Lasterror is -1 if the function is not supported (e.g. on Windows).

Authorization error codes:

Other Mac OS error codes like -50 for wrong parameters are also possible.
(Read and Write property)

| | | |
|---|---|---|
| errAuthorizationSuccess | 0, | The operation completed successfully. |
| errAuthorizationInvalidSet | -60001, | The set parameter is invalid. |
| errAuthorizationInvalidRef | -60002, | The authorization parameter is invalid. |
| errAuthorizationInvalidTag | -60003, | The tag parameter is invalid. |
| errAuthorizationInvalidPointer | -60004, | The authorizedRights parameter is invalid. |
| errAuthorizationDenied | -60005, | The authorization was denied. |
| errAuthorizationCanceled | -60006, | The authorization was cancled by the user. |
| errAuthorizationInteractionNotAllowed | -60007, | The authorization was denied since no user interaction was possible. |
| errAuthorizationInternal | -60008, | something else went wrong |
| errAuthorizationExternalizeNotAllowed | -60009, | authorization externalization denied |
| errAuthorizationInternalizeNotAllowed | -60010, | authorization internalization denied |
| errAuthorizationInvalidFlags | -60011, | invalid option flag(s) |
| errAuthorizationToolExecuteFailure | -60031, | cannot execute privileged tool |
| errAuthorizationToolEnvironmentError | -60032 | privileged tool environment error |

### 15.3.29 StreamHandle as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

**Function:** The handle to the stream for the terminal running in the background with your command line application.
**Notes:** (Read and Write property)

### 15.3.30 Constants

### 15.3.31 errAuthorizationCanceled = -60006

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** The authorization was cancelled by the user.

### 15.3.32 errAuthorizationDenied = -60005

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** The authorization was denied.

### 15.3.33 errAuthorizationExternalizeNotAllowed = -60009

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** The authorization is not allowed to be converted to an external format.

### 15.3.34 errAuthorizationInteractionNotAllowed = -60007

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** The authorization was denied since no user interaction was possible.

### 15.3.35 errAuthorizationInternal = -60008

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** Unable to obtain authorization for this operation.

### 15.3.36 errAuthorizationInternalizeNotAllowed = -60010

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** The authorization is not allowed to be created from an external format.

### 15.3.37 errAuthorizationInvalidFlags = -60011

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** The provided option flag(s) are invalid for this authorization operation.

### 15.3.38 errAuthorizationInvalidPointer = -60004

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** The returned authorization is invalid.

### 15.3.39 errAuthorizationInvalidRef = -60002

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** The authorization reference is invalid.

### 15.3.40 errAuthorizationInvalidSet = -60001

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** The authorization rights are invalid.

### 15.3.41 errAuthorizationInvalidTag = -60003

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** The authorization tag is invalid.

### 15.3.42 errAuthorizationSuccess = 0

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** No error.

### 15.3.43 errAuthorizationToolEnvironmentError = -60032

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** An invalid status was returned during execution of a privileged tool.

### 15.3.44 errAuthorizationToolExecuteFailure = -60031

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the error codes.
**Notes:** The specified program could not be executed.

### 15.3.45 kAuthorizationEmptyEnvironment = nil

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** Indicates an empty environment. You should pass this constant in functions with an environment parameter if you have no environment data to provide.

### 15.3.46 kAuthorizationExternalFormLength = 32

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** Indicates, in number of bytes, the length of the array in the AuthorizationExternalForm structure.

### 15.3.47 kAuthorizationFlagCanNotPreAuthorize = 1

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the flag values.
**Notes:** Indicates the Security Server could not preauthorize the right.

### 15.3.48 kAuthorizationFlagDefaults = 0

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the flag values.
**Notes:** If no bits are set, none of the following features are available.

### 15.3.49 kAuthorizationFlagDestroyRights = 8

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the flag values.
**Notes:** If the bit specified by this mask is set, the Security Server revokes authorization from the process

as well as from any other process that is sharing the authorization. If the bit specified by this mask is not set, the Security Server revokes authorization from the process but not from other processes that share the authorization.

### 15.3.50 kAuthorizationFlagExtendRights = 2

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the flag values.
**Notes:** If the bit specified by this mask is set, the Security Server attempts to grant the rights requested. Once the Security Server denies one right, it ignores the remaining requested rights.

### 15.3.51 kAuthorizationFlagInteractionAllowed = 1

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the flag values.
**Notes:** If the bit specified by this mask is set, you permit the Security Server to interact with the user when necessary.

### 15.3.52 kAuthorizationFlagPartialRights = 4

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the flag values.
**Notes:** If the bit specified by this mask and the kAuthorizationFlagExtendRights mask are set, the Security Server grants or denies rights on an individual basis and all rights are checked.

### 15.3.53 kAuthorizationFlagPreAuthorize = 16

MBS MacCF Plugin, Plugin Version: 14.2.

**Function:** One of the flag values.
**Notes:** If the bit specified by this mask is set, the Security Server preauthorizes the rights requested.

# Chapter 16

# AVFoundation

## 16.1 class AVAssetExportSessionMBS

### 16.1.1 class AVAssetExportSessionMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The AVFoundation class for media export.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.m4v")
dim a as AVAssetMBS = AVAssetMBS.assetWithFile(f)
dim p as string = AVAssetExportSessionMBS.AVAssetExportPresetAppleM4VCellular
dim e as new AVAssetExportSessionMBS(a, p)

dim FileTypes() as string = e.supportedFileTypes
e.outputFileType = FileTypes(0)
e.OutputFile = SpecialFolder.Desktop.Child("small.m4v")
e.exportAsynchronously

// instead of waiting for event, we simply wait for it to finish
do
app.YieldToNextThread
loop until e.status <>e.AVAssetExportSessionStatusExporting
```

**Notes:**

An AVAssetExportSession object transcodes the contents of an AVAsset source object to create an output of the form described by a specified export preset.

Prior to initializing an instance of AVAssetExportSession, you can use allExportPresets to get the complete list of presets available. Use exportPresetsCompatibleWithAsset to get a list of presets that are compatible with a specific asset.

After you have initialized an export session with the asset that contains the source media, the export preset name (presetName), and the output file type (outputFileType), you can start the export running by invoking exportAsynchronously. Because the export is performed asynchronously, this method returns immediately—you can use progress to check on the progress. Depending on the capabilities of the device, some exports may be queued when multiple exports are attempted. When this happens, the status of a queued export will indicate that it's waiting (AVAssetExportSessionStatusWaiting).

The exportAsynchronouslyCompleted event on AVFoundationMBS is called whether the export fails, completes, or is cancelled. Upon completion, the status property indicates whether the export has completed successfully. If it has failed, the value of the error property supplies additional information about the reason for the failure.
Available in OS X v10.7 and later.

### 16.1.2 Blog Entries

- Multithreaded plugin functions can increase speed of Xojo application
- MBS Xojo Plugins, version 18.4pr1
- MBS Xojo Plugins, version 18.2pr5

### 16.1.4 Methods

### 16.1.5 allExportPresets as string()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns all available export preset names.
**Notes:** Returns an array containing a string constant for each of the available preset names.

### 16.1.6 available as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.7 and newer.

### 16.1.7 AVAssetExportPreset1280x720 as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** You use these export options to produce QuickTime .mov files with a specified video size.
**Notes:** Specifies output at 1280x720 pixels.

### 16.1.8 AVAssetExportPreset1920x1080 as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** You use these export options to produce QuickTime .mov files with a specified video size.
**Notes:** Specifies output at 1920x1080 pixels.

### 16.1.9 AVAssetExportPreset3840x2160 as string

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** You use these export options to produce QuickTime .mov files with a specified video size.
**Notes:** Specifies output at 3840x2160 pixels (4K video).

### 16.1.10 AVAssetExportPreset640x480 as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** You use these export options to produce QuickTime .mov files with a specified video size.
**Notes:** Specifies output at 640x480 pixels.

### 16.1.11 AVAssetExportPreset960x540 as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** You use these export options to produce QuickTime .mov files with a specified video size.
**Notes:** Specifies output at 960x540 pixels.

### 16.1.12 AVAssetExportPresetAppleM4A as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** You use this export option to produce an audio-only .m4a file with appropriate iTunes gapless playback data.
**Notes:** Specifies an audio-only .m4a file with appropriate iTunes gapless playback data.

### 16.1.13 AVAssetExportPresetAppleM4V1080pHD as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** One of the export option presets to produce files that can be played on the specific Apple devices.
**Notes:** Specifies a 1080p High Definition format suitable for playing on Apple devices.

### 16.1.14 AVAssetExportPresetAppleM4V480pSD as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** One of the export option presets to produce files that can be played on the specific Apple devices.
**Notes:** Specifies a 480p Standard Definition format suitable for playing on Apple devices.

### 16.1.15 AVAssetExportPresetAppleM4V720pHD as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** One of the export option presets to produce files that can be played on the specific Apple devices.
**Notes:** Specifies a 720p High Definition format suitable for playing on Apple devices.

### 16.1.16 AVAssetExportPresetAppleM4VAppleTV as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** One of the export option presets to produce files that can be played on the specific Apple devices.
**Notes:** Specifies a format suitable for playing on AppleTV.

### 16.1.17 AVAssetExportPresetAppleM4VCellular as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** One of the export option presets to produce files that can be played on the specific Apple devices.
**Notes:** Specifies a format suitable for playing on Apple devices when streamed over a cellular network.

### 16.1.18 AVAssetExportPresetAppleM4ViPod as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** One of the export option presets to produce files that can be played on the specific Apple devices.
**Notes:** Specifies a format suitable for playing on an iPod.

### 16.1.19 AVAssetExportPresetAppleM4VWiFi as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** One of the export option presets to produce files that can be played on the specific Apple devices.
**Notes:** Specifies a format suitable for playing on Apple devices when streamed over a WiFi network.

### 16.1.20 AVAssetExportPresetAppleProRes422LPCM as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** One of the export option presets to produce files that can be played on the specific Apple devices.
**Notes:** Specifies a QuickTime movie with Apple ProRes 422 video and LPCM audio.

### 16.1.21 AVAssetExportPresetHEVC1920x1080 as string

MBS AVFoundation Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

**Function:** You use these export options to produce QuickTime .mov files with a specified video size.
**Notes:**

These export options can be used to produce movie files with the specified video size.
The export will not scale the video up from a smaller size. The video will be compressed using

HEVC and the audio will be compressed using AAC. Some devices cannot support some sizes.

### 16.1.22 AVAssetExportPresetHEVC3840x2160 as string

MBS AVFoundation Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

**Function:** You use these export options to produce QuickTime .mov files with a specified video size.
**Notes:**

These export options can be used to produce movie files with the specified video size.
The export will not scale the video up from a smaller size. The video will be compressed using HEVC and the audio will be compressed using AAC. Some devices cannot support some sizes.

### 16.1.23 AVAssetExportPresetHEVCHighestQuality as string

MBS AVFoundation Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

**Function:** You use these export options to produce QuickTime .mov files with a specified video size.
**Notes:**

These export options can be used to produce movie files with video size appropriate to the device.
The export will not scale the video up from a smaller size. The video will be compressed using HEVC and the audio will be compressed using AAC.

### 16.1.24 AVAssetExportPresetHighestQuality as string

MBS AVFoundation Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

**Function:** You use these export options to produce QuickTime .mov files with a specified video size.
**Notes:**

These export options can be used to produce movie files with video size appropriate to the device.
The export will not scale the video up from a smaller size. The video will be compressed using H.264 and the audio will be compressed using AAC.

### 16.1.25 AVAssetExportPresetLowQuality as string

MBS AVFoundation Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

**Function:** You use these export options to produce QuickTime .mov files with a specified video size.
**Notes:**

These export options can be used to produce movie files with video size appropriate to the device.
The export will not scale the video up from a smaller size. The video will be compressed using H.264 and the audio will be compressed using AAC.

### 16.1.26 AVAssetExportPresetMediumQuality as string

MBS AVFoundation Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

**Function:** You use these export options to produce QuickTime .mov files with a specified video size.
**Notes:**

These export options can be used to produce movie files with video size appropriate to the device.
The export will not scale the video up from a smaller size. The video will be compressed using H.264 and the audio will be compressed using AAC.

### 16.1.27 AVAssetExportPresetPassthrough as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** You use this export option to let all tracks pass through.
**Notes:** Specifies that all tracks pass through, unless it is not possible.

### 16.1.28 cancelExport

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Cancels the execution of an export session.

### 16.1.29 Constructor(asset as AVAssetMBS, presetName as string)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Initializes an asset export session with a specified asset and preset.
**Notes:**

asset: The asset you want to export.
presetName: A string constant specifying the name of the preset template for the export.

### 16.1.30 determineCompatibilityOfExportPreset(presetName as string, asset as AVAssetMBS, outputFileType as string, tag as Variant = nil)

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Reports the compatibility of an export present, asset, and output file type to the event.
**Notes:**

Calls later AVAssetExportSessionMBS.determineCompatibilityOfExportPresetCompleted event.

presetName: The name of the preset template for the export operation. For possible values, see "Export Preset Names for Device-Appropriate QuickTime Files," "Export Preset Names for QuickTime Files of a Given Size," AVAssetExportSessionStatusCancelled, "Export Preset Name for iTunes Audio," and "Export Preset Name for Pass-Through."
asset: The asset object that you are planning to export.
outputFileType: The UTI string corresponding to the file type. For example, to specify a QuickTime movie file format, you could specify the constant AVFileTypeQuickTimeMovie. For a list of constants specifying UTIs for standard file types, see AV Foundation Constants Reference.

Because not all export presets are compatible with all assets and file types, you can use this method to query the compatibility of specific combos before using them. To ensure that the export operation succeeds, you should not make any significant changes to the asset between the time of calling this method and performing the export operation.

This method performs its checks asynchronously on a secondary thread and returns immediately. The results are similarly reported to the event later.

Available in OS X v10.9 and later.

With tag you can pass any value you like to the event later. This can be for example an object reference or a number in an array. Be aware that the reference to this tag value is kept until the event is called and can cause memory reference cycles.

### 16.1.31 determineCompatibleFileTypes(tag as Variant = nil)

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Reports the compatible file types for the current export session to the event.
**Notes:**

calls later AVFoundationMBS.determineCompatibleFileTypesCompleted event.

This method operates on the asset object and preset information that was used to initialize the export session. It uses this information to determine the file types that the export session can write.

This method performs its checks asynchronously on a secondary thread and returns immediately. The results are similarly reported to the specified block on a secondary thread. Because this method actually inspects the asset's tracks, the tracks are loaded if they have not been already.
Available in OS X v10.9 and later.

With tag you can pass any value you like to the event later. This can be for example an object reference or a number in an array. Be aware that the reference to this tag value is kept until the event is called and can cause memory reference cycles.

### 16.1.32 exportAsynchronously(tag as Variant = nil)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Starts the asynchronous execution of an export session.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.m4v")
dim a as AVAssetMBS = AVAssetMBS.assetWithFile(f)
dim p as string = AVAssetExportSessionMBS.AVAssetExportPresetAppleM4VCellular
dim e as new AVAssetExportSessionMBS(a, p)

dim FileTypes() as string = e.supportedFileTypes
e.outputFileType = FileTypes(0)
e.OutputFile = SpecialFolder.Desktop.Child("small.m4v")
e.exportAsynchronously

// instead of waiting for event, we simply wait for it to finish
do
app.YieldToNextThread
loop until e.status <>e.AVAssetExportSessionStatusExporting
```

**Notes:**

This method starts an asynchronous export operation and returns immediately. status signals the terminal state of the export session, and if a failure occurs, error describes the problem.

This method calls AVFoundationMBS.exportAsynchronouslyCompleted event later. Tag is passed so you can pass information needed to finish work.

If internal preparation for export fails, event is invoked synchronously. The event may also be called asynchronously, after the method returns, in the following cases:

- If a failure occurs during the export, including failures of loading, re-encoding, or writing media data to the output.
- If cancelExport is invoked.
- After the export session succeeds, having completely written its output to the outputURL.

With tag you can pass any value you like to the event later. This can be for example an object reference or a number in an array. Be aware that the reference to this tag value is kept until the event is called and can cause memory reference cycles.

### 16.1.33 exportMT

MBS AVFoundation Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

**Function:** Starts the synchronous execution of an export session.
**Notes:**

Same as exportAsynchronously, but run synchronous, so the plugin waits.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 16.1.34 exportPresetsCompatibleWithAsset(asset as AVAssetMBS) as string()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns the identifiers compatible with a given asset.
**Notes:**

asset: An asset that is ready to be exported.

Returns an array of strings representing the identifiers compatible with asset.

The array is a complete list of the valid identifiers that can be used with exportSessionWithAsset with the specified asset.

Not all export presets are compatible with all assets. For example, a video-only asset is not compatible with an audio-only preset. This method returns only the identifiers for presets that are compatible with the given asset.

In order to ensure that the setup and running of an export operation will succeed using a given preset, you should not make significant changes to the asset (such as adding or deleting tracks) between retrieving compatible identifiers and performing the export operation.

If the asset's tracks are not currently loaded, they may be loaded by this method before any checks are performed.

### 16.1.35 exportSessionWithAsset(asset as AVAssetMBS, presetName as string) as AVAssetExportSessionMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an asset export session configured with a specified asset and preset.
**Notes:**

asset: The asset you want to export.
presetName: A string constant specifying the name of the preset template for the export.

Returns an asset export session initialized to export asset using preset presetName.

### 16.1.36 metadata as AVMetadataItemMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns the metadata to be written to the output file by the export session.

### 16.1.37 outputFileExtension as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Convenience method to query the preferred file extension for current output file type.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.m4v")
dim a as AVAssetMBS = AVAssetMBS.assetWithFile(f)
dim p as string = AVAssetExportSessionMBS.AVAssetExportPresetAppleM4VCellular
dim e as new AVAssetExportSessionMBS(a, p)
dim filetypes() as string = e.supportedFileTypes
e.outputFileType = FileTypes(0)

// shows the output file extension
MsgBox "outputFileExtension: "+e.outputFileExtension
```

### 16.1.38 setMetadata(items() as AVMetadataItemMBS)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Sets the metadata to be written to the output file by the export session.
**Example:**

```
dim e as AVAssetExportSessionMBS // your export session
dim asset as AVAssetMBS // your asset

// query metadata
dim a() as AVMetadataItemMBS = asset.metadata

// make new
dim m as new AVMutableMetadataItemMBS

// add common key with author
m.keySpace = AVFoundationMBS.AVMetadataKeySpaceCommon
m.key = AVFoundationMBS.AVMetadataCommonKeyAuthor
m.Value = "Hello World"

// append to array and use as metadata:
a.Append m
e.setMetadata a
```

**Notes:** If the array is empty, any existing metadata in the exported asset will be translated as accurately as possible into the appropriate metadata key space for the output file and written to the output.

### 16.1.39 supportedFileTypes as string()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The types of files the session can write. (read-only)
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.m4v")
dim a as AVAssetMBS = AVAssetMBS.assetWithFile(f)
dim p as string = AVAssetExportSessionMBS.AVAssetExportPresetAppleM4VCellular
dim e as new AVAssetExportSessionMBS(a, p)
// shows supported file types
MsgBox join(e.supportedFileTypes, EndOfLine)
```

**Notes:** The types of files the session can write are determined by the asset and and export preset with which the session was initialized. If you need to determine the compatible file formats before initiating the export operation, use the determineCompatibleFileTypesWithCompletionHandler: method.

### 16.1.40 Properties

### 16.1.41 asset as AVAssetMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The asset with which the export session was initialized. (read-only)
**Notes:** (Read only property)

### 16.1.42 audioMix as AVAudioMixMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether non-default audio mixing is enabled for export, and supplies the parameters for audio mixing.
**Notes:** (Read and Write property)

### 16.1.43 audioTimePitchAlgorithm as String

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Indicates the processing algorithm used to manage audio pitch for scaled audio edits.
**Notes:**

An exception (NSInvalidArgumentException) is raised if this property is set to a value other than the constants defined in Time_Pitch_Algorithm_Settings.

The default value is AVAudioTimePitchAlgorithmSpectral.
Available in OS X v10.9 and later.
(Read and Write property)

### 16.1.44 canPerformMultiplePassesOverSourceMediaData as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Determines whether the export session can perform multiple passes over the source media to achieve better results.
**Notes:**

When the value for this property is true, the export session can produce higher quality results at the expense of longer export times. Setting this property to true may also require the export session to write temporary data to disk during the export. To control the location of temporary data, use the property directoryForTemporaryFiles.

The default value is false. Not all export session configurations can benefit from performing multiple passes over the source media. In these cases, setting this property to true has no effect.

This property cannot be set after the export has started.

Available in Mac OS X 10.10 and newer.
(Read and Write property)

### 16.1.45 customVideoCompositor as AVVideoCompositingMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Indicates the custom video compositor instance used, if any. (read-only)
**Notes:**

The custom video compositor instance that is used during image generation is accessible via this property after the value of videoComposition is set to an AVVideoComposition instance that specifies a custom video compositor class. Any additional communication between the application and that instance of the custom video compositor, if any is required for configuration or other purposes, can only occur once that has happened.

If the value of videoComposition is changed from an AVVideoComposition that specifies a custom video compositor class to another instance of AVVideoComposition that specifies the same custom video compositor class, the instance of the custom video compositor that was previously created will receive the renderContextChanged: message and remain in use for subsequent image generation.

This property is nil if there is no video compositor, or if the internal video compositor is in use.
Available in OS X v10.9 and later.
(Read only property)

### 16.1.46 directoryForTemporaryFiles as FolderItem

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Specifies a directory that is suitable for containing temporary files generated during the export process.
**Notes:**

AVAssetExportSession may need to write temporary files when configured in certain ways, such as when canPerformMultiplePassesOverSourceMediaData is set to true. This property can be used to control where in the filesystem those temporary files are created. All temporary files will be deleted when the export is completed, is canceled, or fails.

When the value of this property is nil, the export session will choose a suitable location when writing temporary files. The default value is nil.

This property cannot be set after the export has started. The export will fail if the URL points to a location that is not a directory, does not exist, is not on the local file system, or if a file cannot be created in this directory (for example, due to insufficient permissions or sandboxing restrictions).

Available in Mac OS X 10.10 and newer.
(Read and Write property)

### 16.1.47 directoryForTemporaryFilesURL as String

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Specifies a directory that is suitable for containing temporary files generated during the export process.
**Notes:**

AVAssetExportSession may need to write temporary files when configured in certain ways, such as when canPerformMultiplePassesOverSourceMediaData is set to true. This property can be used to control where in the filesystem those temporary files are created. All temporary files will be deleted when the export is completed, is canceled, or fails.

When the value of this property is empty, the export session will choose a suitable location when writing temporary files. The default value is nil.

This property cannot be set after the export has started. The export will fail if the URL points to a location that is not a directory, does not exist, is not on the local file system, or if a file cannot be created in this directory (for example, due to insufficient permissions or sandboxing restrictions).

Available in Mac OS X 10.10 and newer.
(Read and Write property)

### 16.1.48 error as NSErrorMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Describes the error that occurred if the export status is AVAssetExportSessionStatusFailed or AVAssetExportSessionStatusCancelled. (read-only)
**Notes:**

If there is no error to report, the value of this property is nil.
(Read only property)

### 16.1.49 estimatedOutputFileLength as Int64

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Indicates the estimated size in bytes of the exported file. (read-only)
**Notes:**

Available in OS X v10.9 and later.
(Read only property)

### 16.1.50 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 16.1.51 metadataItemFilter as AVMetadataItemFilterMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Specifies a filter object to be used during export to determine which metadata items should be transferred from the source asset.
**Notes:**

If the value of this key is nil, no filter will be applied. This is the default.

The filter will not be applied to metadata set with via the metadata property. To apply the filter to metadata before it is set on the metadata property, see AVMetadataItem.

Available in OS X v10.9 and later.
(Read and Write property)

### 16.1.52 OutputFile as folderitem

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The file of the export session's output.
**Notes:** (Read and Write property)

### 16.1.53 outputFileType as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The type of file to be written by the session.
**Notes:**

The value is a UTI string corresponding to the file type to use when writing the asset. For a list of constants specifying UTIs for standard file types, see AV Foundation Constants Reference.
(Read and Write property)

### 16.1.54 outputURL as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The URL of the export session's output.
**Notes:** (Read and Write property)

### 16.1.55 presetName as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The name of the preset with which the session was initialized. (read-only)
**Notes:** (Read only property)

### 16.1.56 progress as Double

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The progress of the export on a scale from 0 to 1. (read-only)
**Notes:**

A value of 0 means the export has not yet begun, 1 means the export is complete.
(Read only property)

### 16.1.57 shouldOptimizeForNetworkUse as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether the movie should be optimized for network use.
**Notes:** (Read and Write property)

### 16.1.58 status as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The status of the export session. (read-only)
**Notes:** (Read only property)

### 16.1.59 videoComposition as AVVideoCompositionMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether video composition is enabled for export, and supplies the instructions for video composition.
**Notes:** (Read and Write property)

### 16.1.60 timeRange as CMTimeRangeMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The time range to be exported from the source.
**Example:**

```
dim a as AVAssetMBS // your asset to export
dim preset as string = AVAssetExportSessionMBS.AVAssetExportPresetPassthrough // your settings
dim e as new AVAssetExportSessionMBS(a, preset)

dim t as CMTimeMBS = CMTimeMBS.MakeWithSeconds(5) // start at 5
dim d as CMTimeMBS = CMTimeMBS.MakeWithSeconds(10) // duration 10
dim r as CMTimeRangeMBS = CMTimeRangeMBS.Make(t,d)

e.timeRange = r // or your time range!
e.shouldOptimizeForNetworkUse = true
```

```
dim filetypes() as string = e.supportedFileTypes
e.outputFileType = FileTypes(0)
e.OutputFile = SpecialFolder.Desktop.Child("test."+e.outputFileExtension)

e.exportAsynchronously(nil)

// keep e and check for events

// or instead of waiting for event, we simply wait for it to finish
do
app.YieldToNextThread
loop until e.status <>e.AVAssetExportSessionStatusExporting
```

**Notes:**

The default time range of an export session is kCMTimeZero to kCMTimePositiveInfinity, meaning that (modulo a possible limit on file length) the full duration of the asset will be exported.
(Read and Write computed property)

### 16.1.61 Constants

### 16.1.62 AVAssetExportSessionStatusCancelled = 5

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the status of the session.
**Notes:** Indicates that the export session was cancelled.

### 16.1.63 AVAssetExportSessionStatusCompleted = 3

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the status of the session.
**Notes:** Indicates that the export session completed successfully.

### 16.1.64 AVAssetExportSessionStatusExporting = 2

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the status of the session.

**Notes:** Indicates that the export session is in progress.

### 16.1.65 AVAssetExportSessionStatusFailed = 4

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the status of the session.
**Notes:** Indicates that the export session failed.

### 16.1.66 AVAssetExportSessionStatusUnknown = 0

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the status of the session.
**Notes:** Indicates that the status is unknown.

### 16.1.67 AVAssetExportSessionStatusWaiting = 1

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the status of the session.
**Notes:** Indicates that the session is waiting to export more data.

## 16.2 class AVAssetImageGeneratorMBS

### 16.2.1 class AVAssetImageGeneratorMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** An AVAssetImageGenerator object provides thumbnail or preview images of assets independently of playback.
**Notes:**

AVAssetImageGenerator uses the default enabled video track(s) to generate images. Generating a single image in isolation can require the decoding of a large number of video frames with complex interdependencies. If you require a series of images, you can achieve far greater efficiency using the asynchronous method, CGImageAtTime, which employs decoding efficiencies similar to those used during playback.

You create an asset generator using initWithAsset: or assetImageGeneratorWithAsset. These methods may succeed even if the asset possesses no visual tracks at the time of initialization. You can test whether an asset has any tracks with the visual characteristic using tracksWithMediaCharacteristic (AVAsset).

The actual time of a generated image is within the range [ requestedTime-requestedTimeToleranceBefore, requestedTime+requestedTimeToleranceAfter ] and may differ from the requested time for efficiency.

Assets that represent mutable compositions or mutable movies may gain visual tracks after initialization of an associated image generator.

### 16.2.2 Xojo Developer Magazine

- 12.2, page 45: Moving to AVFoundation, Leaving QuickTime behind by Christian Schmitz

### 16.2.3 Xojo Developer Magazine

- 12.2, page 45: Moving to AVFoundation, Leaving QuickTime behind by Christian Schmitz

### 16.2.4 Methods

### 16.2.5 assetImageGeneratorWithAsset(asset as AVAssetMBS) as AVAssetImageGeneratorMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an image generator for use with a specified asset.
**Notes:**

asset: The asset from which images will be extracted.

Returns an image generator for use with asset.
This method may succeed even if the asset possesses no visual tracks at the time of initialization.

### 16.2.6 available as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.7 and newer.

### 16.2.7 AVAssetImageGeneratorApertureModeCleanAperture as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** One of the constants to specify the aperture mode.
**Notes:** Both pixel aspect ratio and clean aperture will be applied..

### 16.2.8 AVAssetImageGeneratorApertureModeEncodedPixels as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** One of the constants to specify the aperture mode.
**Notes:** Neither pixel aspect ratio nor clean aperture will be applied.

### 16.2.9 AVAssetImageGeneratorApertureModeProductionAperture as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** One of the constants to specify the aperture mode.
**Notes:** Only pixel aspect ratio will be applied.

### 16.2.10 cancelAllCGImageGeneration

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Cancels all pending image generation requests.
**Notes:** This method calls the AVFoundationMBS.generateCGImagesAsynchronouslyForTimesCompleted

event with AVAssetImageGeneratorCancelled for each image time in every previous invocation of generateCGImagesAsynchronouslyForTimes for which images have not yet been supplied.

### 16.2.11 CGImageAtTime(time as CMTimeMBS, byref actualTime as CMTimeMBS, byref error as NSErrorMBS) as Variant

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns a CGImage for the asset at or near a specified time.
**Example:**

```
// open asset
dim f as FolderItem = SpecialFolder.Desktop.Child("test.mov")
dim a as AVAssetMBS = AVAssetMBS.assetWithFile(f)

// prepare generator
dim g as new AVAssetImageGeneratorMBS(a)
dim timeRequested as CMTimeMBS = CMTimeMBS.MakeWithSeconds(5, 30)
dim actualTime as CMTimeMBS
dim error as NSErrorMBS
// ask for an image
dim c as CGImageMBS = g.CGImageAtTime(timeRequested, actualTime, error)
// and show it
dim p as Picture = c.Picture
window1.backdrop = p
```

**Notes:**

requestedTime: The time at which the image of the asset is to be created.
actualTime: Upon return, contains the time at which the image was actually generated.
Error: If an error occurs, upon return contains an NSError object that describes the problem.

Returns a CGImageMBS for the asset at or near a specified time, or nil if the image could not be created.
This method returns the image synchronously.

### 16.2.12 Constructor(asset as AVAssetMBS)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Initializes an image generator for use with a specified asset.
**Notes:**

asset: The asset from which images will be extracted.

This method may succeed even if the asset possesses no visual tracks at the time of initialization.

### 16.2.13 generateCGImagesAsynchronouslyForTimes(times() as CMTimeMBS, tag as Variant = nil)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Creates a series of CGImage objects for an asset at or near specified times.
**Notes:**

requestedTimes: An array of CMTimeMBS, specifying the asset times at which an image is requested.

This method uses an efficient "batch mode" to get images in time order.

The client receives exactly one event call to AVFoundationMBS.generateCGImagesAsynchronouslyForTimesCompleted for each requested time in requestedTimes. Changes to the generator's properties (snap behavior, maximum size, and so on) do not affect pending asynchronous image generation requests.

With tag you can pass any value you like to the event later. This can be for example an object reference or a number in an array. Be aware that the reference to this tag value is kept until the event is called and can cause memory reference cycles.

### 16.2.14 Properties

### 16.2.15 apertureMode as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Specifies the aperture mode for the generated image.
**Notes:** (Read and Write property)

### 16.2.16 appliesPreferredTrackTransform as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Specifies whether to apply the track matrix (or matrices) when extracting an image from the asset.
**Notes:**

The default is false. AVAssetImageGenerator only supports rotation by 90, 180, or 270 degrees.
This property is ignored if you set a value for the videoComposition property.

(Read and Write property)

### 16.2.17 asset as AVAssetMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The asset with which the export session was initialized. (read-only)
**Notes:**

Available in OS X v10.8 and later.
(Read only property)

### 16.2.18 customVideoCompositor as AVVideoCompositingMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Indicates the custom video compositor instance used, if any. (read-only)
**Notes:**

The custom video compositor instance that is used during image generation is accessible via this property after the value of videoComposition is set to an AVVideoComposition instance that specifies a custom video compositor class. Any additional communication between the application and that instance of the custom video compositor, if any is required for configuration or other purposes, can only occur once that has happened.

If the value of videoComposition is changed from an AVVideoComposition that specifies a custom video compositor class to another instance of AVVideoComposition that specifies the same custom video compositor class, the instance of the custom video compositor that was previously created will receive the renderContextChanged message and remain in use for subsequent image generation.

This property is nil if there is no video compositor, or if the internal video compositor is in use.
Available in OS X v10.9 and later.
(Read only property)

### 16.2.19 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 16.2.20 videoComposition as AVVideoCompositionMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The video composition to use when extracting images from assets with multiple video tracks.
**Notes:**

If no video composition is specified, only the first enabled video track will be used. If a video composition is specified, the appliesPreferredTrackTransform property is ignored.
(Read and Write property)

### 16.2.21 maximumSize as CGSizeMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Specifies the maximum dimensions for generated image.
**Notes:**

The default value is CGSizeZero, which specifies the asset's unscaled dimensions.

AVAssetImageGenerator scales images such that they fit within the defined bounding box. Images are never scaled up. The aspect ratio of the scaled image is defined by the apertureMode property.
(Read and Write computed property)

### 16.2.22 requestedTimeToleranceAfter as CMTimeMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The maximum length of time after a requested time for which an image may be generated.
**Notes:**

The default value is kCMTimePositiveInfinity.

Set the values of requestedTimeToleranceBefore and requestedTimeToleranceAfter to kCMTimeZero to request frame-accurate image generation; this may incur additional decoding delay.
(Read and Write computed property)

### 16.2.23 requestedTimeToleranceBefore as CMTimeMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The maximum length of time before a requested time for which an image may be generated.
**Notes:**

The default value is kCMTimePositiveInfinity.

Set the values of requestedTimeToleranceBefore and requestedTimeToleranceAfter to kCMTimeZero to request frame-accurate image generation; this may incur additional decoding delay.
(Read and Write computed property)

### 16.2.24 Constants

### 16.2.25 AVAssetImageGeneratorCancelled = 2

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the outcome of image generation.
**Notes:** Indicates that generation was cancelled.

### 16.2.26 AVAssetImageGeneratorFailed = 1

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the outcome of image generation.
**Notes:** Indicates that generation failed.

### 16.2.27 AVAssetImageGeneratorSucceeded = 0

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the outcome of image generation.
**Notes:** Indicates that generation succeeded.

## 16.3 class AVAssetMBS

### 16.3.1 class AVAssetMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** AVAsset is an abstract class to represent timed audiovisual media such as videos and sounds.
**Notes:**

Each asset contains a collection of tracks that are intended to be presented or processed together, each of a uniform media type, including but not limited to audio, video, text, closed captions, and subtitles.

An AVAsset object defines the collective properties of the tracks that comprise the asset. (You can access the instances of AVAssetTrack representing tracks of the collection, so you can examine each of these independently if you need to.) You often instantiate an asset using a concrete subclass of AVAsset; for example, you can initialize an instance of AVURLAsset using an URL that refers to an audiovisual media file, such as a QuickTime movie file or an MP3 files (amongst other types). You can also instantiate an asset using other concrete subclasses that extend the basic model for audiovisual media in useful ways, as AVComposition does for temporal editing. To assemble audiovisual constructs from one or more source assets, you can insert assets into instances of AVMutableComposition.

You often instantiate an asset using AVURLAsset—a concrete subclass of AVAsset—with URLs that refer to audiovisual media resources, such as streams (including HTTP live streams), QuickTime movie files, MP3 files, and files of other types. You can also instantiate an asset using other concrete subclasses that extend the basic model for audiovisual media in useful ways, as AVComposition does for temporal editing.

Properties of assets as a whole are defined by AVAsset. Additionally, references to instances of AVAssetTrack representing tracks of the collection can be obtained, so that each of these can be examined independently.

Because of the nature of timed audiovisual media, upon successful initialization of an asset some or all of the values for its keys may not be immediately available. The value of any key can be requested at any time, and asset will always return its value synchronously, although it may have to block the calling thread in order to do so. In order to avoid blocking, you can register your interest in particular keys and to become notified when their values become available. For further details, see AVAsynchronousKeyValueLoading.

To play an instance of AVAsset, initialize an instance of AVPlayerItem with it, use the player item tem to set up its presentation state (such as whether only a limited timeRange of the asset should be played, etc.), and provide the player item to an AVPlayer object according to whether the items is to be played by itself or together with a collection of other items.

You can insert AVAsset objects can also be inserted into an AVMutableComposition object in order to assemble audiovisual constructs from one or more source assets.

Subclassing Notes

It is not currently possible to subclass AVAsset to handle streaming protocols or file formats that are not supported by the framework.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 16.3.6 Methods

### 16.3.7 assetWithData(Data as MemoryBlock, Options as Dictionary = nil) as AVAssetMBS

MBS AVFoundation Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

**Function:** Creates an AVMovie object from a movie header stored in an data parameter.
**Notes:**

data: An Memoryblock/String containing a movie header. We make a copy of that.
options: Dictionary object that contains keys for specifying options for the initialization of the AVMovie object. Currently no keys are defined.
Returns An AVMovie object or nil in case of error.
You can use this method to operate on movie headers that are not stored in files; this might include movie headers on the pasteboard (which do not contain media data). In general you should avoid loading an entire movie file with its media data into an instance of Memoryblock/String! By default, the defaultMediaDataStorage property will be nil and each associated AVMovieTrack's mediaDataStorage property will be nil.
If you want to create an AVMutableMovie from an NSData object and then append sample buffers to any of its tracks, you must first set one of these properties to indicate where the sample data should be written.
See also:

- 16.3.8 assetWithData(Data as String, Options as Dictionary = nil) as AVAssetMBS 3634

### 16.3.8 assetWithData(Data as String, Options as Dictionary = nil) as AVAssetMBS

MBS AVFoundation Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

**Function:** Creates an AVMovie object from a movie header stored in an data parameter.
**Example:**

```
// load movie in memory
dim f as FolderItem = SpecialFolder.Desktop.Child("test.m4v")
dim b as BinaryStream = BinaryStream.Open(f)

// now open it from memory
dim s as string = b.Read(b.Length)
dim m as AVAssetMBS = AVAssetMBS.movieWithData(s)

MsgBox str(m.duration.Seconds)+" seconds."
```

**Notes:**

data: An Memoryblock/String containing a movie header. We make a copy of that.
options: Dictionary object that contains keys for specifying options for the initialization of the AVMovie object. Currently no keys are defined.
Returns An AVMovie object or nil in case of error.
You can use this method to operate on movie headers that are not stored in files; this might include movie headers on the pasteboard (which do not contain media data). In general you should avoid loading an entire movie file with its media data into an instance of Memoryblock/String! By default, the defaultMediaDataStorage property will be nil and each associated AVMovieTrack's mediaDataStorage property will be nil.
If you want to create an AVMutableMovie from an NSData object and then append sample buffers to any of its tracks, you must first set one of these properties to indicate where the sample data should be written.

See also:

- 16.3.7 assetWithData(Data as MemoryBlock, Options as Dictionary = nil) as AVAssetMBS 3633

### 16.3.9 assetWithFile(file as folderitem) as AVAssetMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an asset for inspection of a media resource.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.mov")
dim a as AVAssetMBS = AVAssetMBS.assetWithFile(f)

MsgBox str(a.duration.Seconds)+" seconds"
```

### 16.3.10 assetWithURL(URL as string) as AVAssetMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an asset for inspection of a media resource.

### 16.3.11 available as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.7 and newer.

### 16.3.12 availableChapterLocales as NSLocaleMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The locales available for chapters in the asset. (read-only)

### 16.3.13 availableMediaCharacteristicsWithMediaSelectionOptions as string()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** An array of media characteristics for which a media selection option is available. (read-only)
**Notes:** The value of this property is an array of strings, each string indicating a media characteristic for which a media selection option is available.

### 16.3.14 availableMetadataFormats as string()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** An array of strings, each representing a metadata format that's available to the asset. (read-only)
**Notes:** Metadata formats may include ID3, iTunes metadata, and so on. For more details, see AVMetadataItem.

### 16.3.15 cancelLoading

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Cancels the loading of all values for all observers.
**Notes:** Deallocation of an instance of the asset will implicitly invoke this method if any loading requests are still outstanding.

### 16.3.16 chapterMetadataGroupsBestMatchingPreferredLanguages as AVTimedMetadataGroupMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an array of chapters whose locale best matches the the list of preferred languages.
**Notes:**

preferredLanguages: Optional, an array of strings, each of which contains a canonicalized IETF BCP 47 language identifier. The order of the identifiers in the array reflects the preferred language order, with the most preferred language being first in the array. Typically, you pass the user's preferred languages by retrieving this array from the preferredLanguages class method of NSLocale. If you don't pass an array, the plugin automatically passes NSLocaleMBS.preferredLanguages.

Returns an array of AVTimedMetadataGroup objects.

Each object in the returned array contains an AVMetadataItem object representing the chapter title. The time range property of the AVTimedMetadataGroup object is equal to the time range of the chapter title item.

All of the available chapter metadata is included in the metadata groups, including items with the common

key AVMetadataCommonKeyArtwork, if such items are present. Items not carrying chapter titles are added to an existing AVTimedMetadataGroup object if the time range (timestamp and duration) of the metadata item and that of the metadata group overlaps. The locale of such items need not match the locale of the chapter titles.

You can use the metadataItemsFromArray:filteredAndSortedAccordingToPreferredLanguages: method to further filter the metadata items in each group. You can also filter the returned items based on locale using the metadataItemsFromArray:withLocale: method.

Special Considerations
Becomes callable without blocking when the data in the availableChapterLocales property is already loaded.
See also:

- 16.3.17 chapterMetadataGroupsBestMatchingPreferredLanguages(preferredLanguages() as string) as AVTimedMetadataGroupMBS() 3637

### 16.3.17 chapterMetadataGroupsBestMatchingPreferredLanguages(preferredLanguages() as string) as AVTimedMetadataGroupMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an array of chapters whose locale best matches the the list of preferred languages.
**Notes:**

preferredLanguages: Optional, an array of strings, each of which contains a canonicalized IETF BCP 47 language identifier. The order of the identifiers in the array reflects the preferred language order, with the most preferred language being first in the array. Typically, you pass the user's preferred languages by retrieving this array from the preferredLanguages class method of NSLocale. If you don't pass an array, the plugin automatically passes NSLocaleMBS.preferredLanguages.

Returns an array of AVTimedMetadataGroup objects.

Each object in the returned array contains an AVMetadataItem object representing the chapter title. The time range property of the AVTimedMetadataGroup object is equal to the time range of the chapter title item.

All of the available chapter metadata is included in the metadata groups, including items with the common key AVMetadataCommonKeyArtwork, if such items are present. Items not carrying chapter titles are added to an existing AVTimedMetadataGroup object if the time range (timestamp and duration) of the metadata item and that of the metadata group overlaps. The locale of such items need not match the locale of the chapter titles.

You can use the metadataItemsFromArray:filteredAndSortedAccordingToPreferredLanguages: method to further filter the metadata items in each group. You can also filter the returned items based on locale using

the metadataItemsFromArray:withLocale: method.

Special Considerations
Becomes callable without blocking when the data in the availableChapterLocales property is already loaded.
See also:

- 16.3.16 chapterMetadataGroupsBestMatchingPreferredLanguages as AVTimedMetadataGroupMBS() 3636

### 16.3.18 chapterMetadataGroupsWithTitleLocale(locale as NSLocaleMBS, commonKeys() as string) as AVTimedMetadataGroupMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an array of chapters with a given title locale and containing specified keys.
**Notes:**

locale: The locale of the metadata items carrying chapter titles to be returned (the method supports the IETF BCP 47 specification of locales).
commonKeys: An array of common keys of AVMetadataItem to include in the returned array. AVMetadataCommonKeyArtwork is the only supported key.

Returns an array of AVTimedMetadataGroup objects.

Each object in the returned array contains an AVMetadataItem object representing the chapter title, and the time range property of the AVTimedMetadataGroup object is equal to the time range of the chapter title item.

An AVMetadataItem with the specified common key is added to an existing AVTimedMetadataGroup object if the time range (timestamp and duration) of the metadata item and the metadata group overlap.

The locale of items not carrying chapter titles need not match the specified locale parameter. You can filter the returned items based on locale using metadataItemsFromArray.

### 16.3.19 commonMetadata as AVMetadataItemMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** An array of metadata items for each common metadata key for which a value is available. (read-only)
**Notes:** The value is an array of AVMetadataItem objects, one for each common metadata key for which a value is available. You can filter the array by locale using metadataItemsFromArray (AVMetadataItem) or

by key using metadataItemsFromArray (AVMetadataItem).

### 16.3.20 Constructor

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 16.3.21 copy as AVAssetMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Creates a copy of the object.

### 16.3.22 duration as CMTimeMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The duration of the asset. (read-only)
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.mov")
dim a as AVAssetMBS = AVAssetMBS.assetWithFile(f)

MsgBox str(a.duration.Seconds)+" seconds"
```

**Notes:** If providesPreciseDurationAndTiming is false, a best-available estimate of the duration is returned. You can set the degree of precision required for timing-related properties at initialization time for assets initialized with URLs (see AVURLAssetPreferPreciseDurationAndTimingKey in AVURLAsset).

### 16.3.23 loadValuesAsynchronouslyForKeys(keys() as string, tag as Variant = nil)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Tells the asset to load the values of any of the specified keys that are not already loaded.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.m4v")
dim a as AVAssetMBS = AVAssetmbs.assetWithFile(f)
```

```
if a = nil then
MsgBox "failed to read file at all"
Return
end if

// request duration property
a.loadValuesAsynchronouslyForKeys array("duration")

dim e as NSErrorMBS
dim Status as Integer = a.statusOfValueForKey("duration", e)
while status <a.AVKeyValueStatusLoaded
// wait for loading in background
status = a.statusOfValueForKey("duration", e)
wend

// got it?
if status <>a.AVKeyValueStatusLoaded then
MsgBox "Failed to load duration."
if e <>nil then
MsgBox e.LocalizedDescription
end if

else
MsgBox str(a.duration.Seconds)+" seconds long."
end if
```

**Notes:**

keys: An array containing the required keys.

Calls AVFoundationMBS.AssetLoadValuesAsynchronouslyForKeysFinished on completion.
The completion event will be invoked exactly once per invocation of this method:

- Synchronously if an I/O error or other format-related error occurs immediately.
- Asynchronously at a subsequent time if a loading error occurs at a later stage of processing, or if cancelLoading is invoked on an AVAsset instance.

The completion states of the keys you specify in keys are not necessarily the same—some may be loaded, and others may have failed. You must check the status of each key individually.

If you want to receive error reporting for loading that's still pending, you can call this method at any time—even after an asset has begun to load data for operations in progress or already completed. If a fatal

error has already occurred, the completion event is invoked synchronously.

### 16.3.24 mediaSelectionGroupForMediaCharacteristic(mediaCharacteristic as string) as AVMediaSelectionGroupMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an AVMediaSelectionGroup object that contains one or more options with the specified media characteristic.
**Notes:**

mediaCharacteristic: A media characteristic for which you wish to obtain the available media selection options.
Only AVMediaCharacteristicAudible and AVMediaCharacteristicLegible are currently supported.
Pass AVMediaCharacteristicAudible to obtain the group of available options for audio media in various languages and for various purposes, such as descriptive audio.
Pass AVMediaCharacteristicLegible to obtain the group of available options for subtitles in various languages and for various purposes.

Returns an AVMediaSelectionGroup object that contains one or more options with the media characteristic specified by mediaCharacteristic, or nil if none could be found.

You can invoke this method without blocking when the key availableMediaCharacteristicsWithMediaSelectionOptions has been loaded.
You can filter the options in the returned media selection group according to playability, locale, and additional media characteristics can be accomplished using the filtering methods defined in the AVMediaSelectionGroup class.

### 16.3.25 metadata as AVMetadataItemMBS()

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Provides access to an array of AVMetadataItems for all metadata identifiers for which a value is available.
**Example:**

```
// load file and look for cover art

Dim file As FolderItem = SpecialFolder.Desktop.Child("test.m4a")
Dim a As AVURLAssetMBS = AVURLAssetMBS.URLAssetWithFile(file)

Dim iTunesMetadataKeyCoverArtString As String = AVFoundationMBS.AVMetadataiTunesMetadataKeyCoverArt
Dim iTunesMetadataKeyCoverArtNumber As Integer = OSTypeFromStringMBS(iTunesMetadataKeyCov-
```

```
erArtString)

Dim items() As AVMetadataItemMBS = a.metadata

For Each item As AVMetadataItemMBS In items

Dim key As Variant = item.key
Dim Val As Variant = item.value

If key.IntegerValue = iTunesMetadataKeyCoverArtNumber Or key.StringValue = iTunesMetadataKeyCoverArtString Then

Dim v As MemoryBlock = Val
window1.Backdrop = picture.FromData(v)
End If

Next
```

**Notes:** Available in Mac OS X 10.10.

### 16.3.26 metadataForFormat(Format as string) as AVMetadataItemMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an array of AVMetadataItem objects, one for each metadata item in the container of the specified format.
**Notes:**

format: The metadata format for which you want items.

Returns an array of AVMetadataItem objects, one for each metadata item in the container of the specified format, or nil if there is no metadata of the specified format.

You can filter the array by locale using metadataItemsFromArray (AVMetadataItem) or by key using metadataItemsFromArray (AVMetadataItem).
Becomes callable without blocking when availableMetadataFormats has been loaded.

### 16.3.27 naturalSize as CGSizeMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The encoded or authored size of the visual portion of the asset.

### 16.3.28 preferredTransform as CGAffineTransformMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The preferred transform to apply to the visual content of the asset for presentation or processing. (read-only)
**Notes:** The value is often, but not always, the identity transform.

### 16.3.29 readTimeCodeObjects as AVTimeCodeMBS()

MBS AVFoundation Plugin, Plugin Version: 17.5, Platform: macOS, Targets: All.

**Function:** Reads time codes from asset.
**Notes:**

Raises exception if not possible.
Returns empty array if nothing found.

Provides details on time codes.

### 16.3.30 readTimeCodes as String()

MBS AVFoundation Plugin, Plugin Version: 16.5, Platform: macOS, Targets: All.

**Function:** Reads time codes from asset.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.m4v")
dim a as AVAssetMBS = AVAssetMBS.assetWithFile(f)
dim timecodes() as string = a.readTimeCodes

break // see in debugger
```

**Notes:**

Raises exception if not possible.
Returns empty array if nothing found.

Format is 2 digit hours, double colon, 2 digit minutes, double colon, 2 digit seconds, double colon, 2 digit frames.

e.g. "01:02:03:04"

Please use readTimeCodeObjects for more options.

### 16.3.31 statusOfValueForKey(key as string, byref error as NSErrorMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Reports whether the value for a given key is immediately available without blocking. (required)
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.m4v")
dim a as AVAssetMBS = AVAssetmbs.assetWithFile(f)

if a = nil then
MsgBox "failed to read file at all"
Return
end if

// request duration property
a.loadValuesAsynchronouslyForKeys array("duration")

dim e as NSErrorMBS
dim Status as Integer = a.statusOfValueForKey("duration", e)
while status <a.AVKeyValueStatusLoaded
// wait for loading in background
status = a.statusOfValueForKey("duration", e)
wend

// got it?
if status <>a.AVKeyValueStatusLoaded then
MsgBox "Failed to load duration."
if e <>nil then
MsgBox e.LocalizedDescription
end if

else
MsgBox str(a.duration.Seconds)+" seconds long."
end if
```

**Notes:**

key: The key whose status you want.
error: If the status of the value for the key is AVKeyValueStatusFailed, upon return contains an NSError

object that describes the failure that occurred.

Returns the current loading status of the value for key. For possible values, see "Protocol Methods."

You use this method to determine the availability of the value for a key. This method does not cause an asset to load the value of a key that's not yet available. To request values for keys that may not already be loaded without blocking, use loadValuesAsynchronouslyForKeys and wait for invocation of the completion handler to be informed of availability.

### 16.3.32 trackGroups as AVAssetTrackGroupMBS()

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** An array containing all of the track groups in the asset. (read-only)
**Notes:**

This is an array of AVAssetTrackGroup instances, each representing a different grouping of tracks in the asset.
Available in OS X v10.9 and later.

### 16.3.33 tracks as AVAssetTrackMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The tracks contained by the asset. (read-only)
**Notes:** Tracks are instances of AVAssetTrack.

### 16.3.34 tracksWithMediaCharacteristic(mediaCharacteristic as string) as AVAssetTrackMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an array of AVAssetTrack objects of the asset that present media with a specified characteristic.
**Notes:**

mediaCharacteristic: The media characteristic according to which receiver filters its asset tracks.
Return san array of AVAssetTrack objects that present media with mediaCharacteristic, or nil if no tracks with the specified characteristic are available.
You can call this method without blocking when tracks has been loaded.

### 16.3.35 tracksWithMediaType(mediaType as string) as AVAssetTrackMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an array of the asset tracks of the asset that present media of a specified type.
**Notes:**

mediaType: The media type according to which the asset filters its tracks.
Media types are defined in AVAssetTrack.

Returns an array of AVAssetTrack objects of the asset that present media of mediaType.
You can call this method without blocking when tracks has been loaded.

### 16.3.36 trackWithTrackID(PersistentTrackID as Integer) as AVAssetTrackMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns the track with a specified track ID.
**Notes:**

trackID: The trackID of the requested asset track.

Returns the track with track ID trackID, or nil if no track with the specified ID is available.
You can call this method without blocking when tracks has been loaded.

### 16.3.37 unusedTrackID as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an ID that is currently unused by any of the tracks in the asset.

### 16.3.38 Properties

### 16.3.39 ClassName as String

MBS AVFoundation Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

**Function:** Returns the class name for the Objective-C class.
**Notes:**

Sometimes useful for debugging.
(Read only property)

### 16.3.40 creationDate as AVMetadataItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates the creation date of the asset. (read-only)
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.mov")
dim a as AVAssetMBS = AVAssetMBS.assetWithFile(f)

dim creationDate as date = a.creationDate.dateValue
MsgBox creationDate.LongDate + " " + creationDate.LongTime
```

**Notes:**

The value of this property may be nil.

If a creation date has been stored by the asset in a form that can be converted to an Date object, the dateValue property of the metadata item will provide an instance of NSDate. Otherwise the creation date is available only as a string value, using the AVMetadataItem stringValue method.
(Read only property)

### 16.3.41 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 16.3.42 hasProtectedContent as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether the asset has protected content. (read-only)
**Notes:** (Read only property)

### 16.3.43 isComposable as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether the asset can be used within a segment of an AVCompositionTrack object. (read-only)

**Notes:** (Read only property)

### 16.3.44 isExportable as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether the asset can be exported using AVAssetExportSession. (read-only)
**Notes:** (Read only property)

### 16.3.45 isPlayable as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether the asset, or its URL, can be used to initialize an instance of AVPlayerItem. (read-only)
**Notes:** (Read only property)

### 16.3.46 isReadable as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether the asset's media data can be extracted using AVAssetReader. (read-only)
**Notes:** (Read only property)

### 16.3.47 lyrics as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The lyrics of the asset suitable for the current locale. (read-only)
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.mov")
dim a as AVAssetMBS = AVAssetMBS.assetWithFile(f)

MsgBox "Lyrics: "+a.lyrics
```

**Notes:** (Read only property)

### 16.3.48 preferredRate as Double

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The natural rate at which the asset is to be played. (read-only)
**Notes:**

This value is often, but not always, 1.0.
(Read only property)

### 16.3.49 preferredVolume as Double

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The preferred volume at which the audible media of asset is to be played. (read-only)
**Notes:**

This value is often, but not always, 1.0.
(Read only property)

### 16.3.50 providesPreciseDurationAndTiming as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether the asset provides precise timing. (read-only)
**Example:**

```
dim options as new Dictionary
options.value(AVFoundationMBS.AVURLAssetPreferPreciseDurationAndTimingKey) = true
dim f as FolderItem = SpecialFolder.Desktop.Child("test.mov")
dim a as AVAssetMBS = AVURLAssetMBS.URLAssetWithFile(f, options)

MsgBox str(a.duration.Seconds)+" seconds with precision: "+str(a.providesPreciseDurationAndTiming)
```

**Notes:**

You can set the degree of precision required for timing-related properties at initialization time for assets initialized with URLs (see AVURLAssetPreferPreciseDurationAndTimingKey in AVURLAsset).
(Read only property)

### 16.3.51 referenceRestrictions as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The reference restrictions being used by the receiver. (read-only)
**Notes:**

For AVURLAsset, this property reflects the value passed in for AVURLAssetReferenceRestrictionsKey, if any.

The default value for this property is AVAssetReferenceRestrictionForbidNone. See AVURLAssetReferenceRestrictionsKey for a full discussion of reference restrictions.
(Read only property)

### 16.3.52 Constants

### 16.3.53 AVAssetReferenceRestrictionForbidAll = & hFFFF

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants for use with AVURLAssetReferenceRestrictionsKey to control the resolution of references to external media data.
**Notes:** Indicates that only references to media data stored within the asset's container file should be allowed.

### 16.3.54 AVAssetReferenceRestrictionForbidCrossSiteReference = 4

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants for use with AVURLAssetReferenceRestrictionsKey to control the resolution of references to external media data.
**Notes:** Indicates that references from a remote asset to remote media data stored at a different site should not be followed.

### 16.3.55 AVAssetReferenceRestrictionForbidLocalReferenceToLocal = 8

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants for use with AVURLAssetReferenceRestrictionsKey to control the resolution of references to external media data.
**Notes:** Indicates that references from a local asset to local media data stored outside the asset's container file should not be followed.

### 16.3.56 AVAssetReferenceRestrictionForbidLocalReferenceToRemote = 2

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants for use with AVURLAssetReferenceRestrictionsKey to control the resolution of references to external media data.
**Notes:** Indicates that references from a local asset to remote media data should not be followed.

### 16.3.57 AVAssetReferenceRestrictionForbidNone = 0

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants for use with AVURLAssetReferenceRestrictionsKey to control the resolution of references to external media data.
**Notes:** Indicates that all types of references should be followed.

### 16.3.58 AVAssetReferenceRestrictionForbidRemoteReferenceToLocal = 1

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants for use with AVURLAssetReferenceRestrictionsKey to control the resolution of references to external media data.
**Notes:** Indicates that references from a remote asset (for example, referenced via http URL) to local media data (for example, stored in a local file) should not be followed.

### 16.3.59 AVKeyValueStatusCancelled = 4

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the load status of a property.
**Notes:** Indicates that the attempt to load the property was cancelled.

### 16.3.60 AVKeyValueStatusFailed = 3

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the load status of a property.
**Notes:** Indicates that the attempt to load the property failed.

### 16.3.61 AVKeyValueStatusLoaded = 2

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the load status of a property.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.m4v")
dim a as AVAssetMBS = AVAssetmbs.assetWithFile(f)

if a = nil then
MsgBox "failed to read file at all"
Return
end if

// request duration property
a.loadValuesAsynchronouslyForKeys array("duration")

dim e as NSErrorMBS
dim Status as Integer = a.statusOfValueForKey("duration", e)
while status <a.AVKeyValueStatusLoaded
// wait for loading in background
status = a.statusOfValueForKey("duration", e)
wend

// got it?
if status <>a.AVKeyValueStatusLoaded then
MsgBox "Failed to load duration."
if e <>nil then
MsgBox e.LocalizedDescription
end if

else
MsgBox str(a.duration.Seconds)+" seconds long."
end if
```

**Notes:** Indicates that the property is ready for use.

### 16.3.62 AVKeyValueStatusLoading = 1

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the load status of a property.
**Notes:** Indicates that the property is not fully loaded.

### 16.3.63 AVKeyValueStatusUnknown = 0

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the load status of a property.
**Notes:** Indicates that the property status is unknown.

## 16.4 class AVAssetReaderAudioMixOutputMBS

### 16.4.1 class AVAssetReaderAudioMixOutputMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** AVAssetReaderAudioMixOutput is a concrete subclass of AVAssetReaderOutput that defines an interface for reading audio samples that result from mixing the audio from one or more tracks of an AVAssetReader object's asset.
**Notes:**

You can read the audio data mixed from one or more asset tracks by adding an instance of AVAssetReader-AudioMixOutput to an asset reader using addOutput. The samples can be read in a default format or can be converted to a different format.
Subclass of the AVAssetReaderOutputMBS class.

### 16.4.2 Methods

### 16.4.3 assetReaderAudioMixOutputWithAudioTracks(audioTracks() as AVAssetTrackMBS, outputSettings as dictionary) as AVAssetReaderAudioMixOutputMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an instance of AVAssetReaderAudioMixOutput for reading mixed audio from the specified audio tracks, with optional audio settings.
**Notes:**

audioTracks: An array of AVAssetTrack objects from which the created object should read sample buffers to be mixed.
Each track must be one of the tracks owned by the target AVAssetReader object's asset and must be of media type AVMediaTypeAudio.
audioSettings: The audio settings to be used for audio output; the dictionary must contain values for keys in AVAudioSettings.h (linear PCM only). Pass nil if you want to receive decoded samples in a convenient uncompressed format, with properties determined according to the properties of the specified audio tracks.

Returns an instance of AVAssetReaderAudioMixOutput for reading mixed audio from audioTracks, with audio settings specified by audioSettings.
Initialization will fail if audioSettings cannot be used with audioTracks.

### 16.4.4 audioSettings as dictionary

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The audio settings used for audio output. (read-only)
**Notes:**

The dictionary must contain values for keys in AVAudioSettings.h (linear PCM only).
nil indicates that the samples will be returned in the default format.

### 16.4.5 audioTracks as AVAssetTrackMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The tracks from which the receiver reads mixed audio. (read-only)
**Notes:** The value is an array of AVAssetTrack objects owned by the target AVAssetReader object's asset.

### 16.4.6 Constructor(audioTracks() as AVAssetTrackMBS, outputSettings as dictionary)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Initializes an instance of AVAssetReaderAudioMixOutput for reading mixed audio from the specified audio tracks, with optional audio settings.
**Notes:**

audioTracks: An array of AVAssetTrack objects from which the created object should read sample buffers to be mixed.
Each track must be one of the tracks owned by the target AVAssetReader object's asset and must be of media type AVMediaTypeAudio.
audioSettings: The audio settings to be used for audio output; the dictionary must contain values for keys in AVAudioSettings.h (linear PCM only).
Pass nil if you want to receive decoded samples in a convenient uncompressed format, with properties determined according to the properties of the specified audio tracks.

Returns an instance of AVAssetReaderAudioMixOutput initialized for reading mixed audio from audioTracks, with audio settings specified by audioSettings.

Initialization will fail if audioSettings cannot be used with audioTracks. So please check handle property.

### 16.4.7 Properties

### 16.4.8 audioMix as AVAudioMixMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The output's audio mix.
**Notes:**

You use the audio mix to specify how the volume of audio samples read from each source track will change over the timeline of the source asset.
(Read and Write property)

### 16.4.9 audioTimePitchAlgorithm as String

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The processing algorithm used to manage audio pitch for scaled audio edits.
**Notes:**

The supported constants are defined in Time Pitch Algorithm Settings.
An NSInvalidArgumentException will be raised if this property is set to a value other than the defined constants.
Available in OS X v10.9 and later.
(Read and Write property)

## 16.5 class AVAssetReaderMBS

### 16.5.1 class AVAssetReaderMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** You use an AVAssetReader object to obtain media data of an asset, whether the asset is file-based or represents an assemblage of media data from multiple sources (as with an AVComposition object).
**Notes:**

AVAssetReader lets you:

Read raw un-decoded media samples directly from storage, obtain samples decoded into renderable forms.
Mix multiple audio tracks of the asset and compose multiple video tracks (by using AVAssetReaderAudioMixOutput and AVAssetReaderVideoCompositionOutput).
AVAssetReader's pipelines are multithreaded internally. After you initiate reading with initWithAsset:error:, a reader loads and processes a reasonable amount of sample data ahead of use so that retrieval operations such as copyNextSampleBuffer (AVAssetReaderOutput) can have very low latency. Note, however, that AVAssetReader is not intended for use with real-time sources, and its performance is not guaranteed for real-time operations.

### 16.5.2 Methods

### 16.5.3 addOutput(output as AVAssetReaderOutputMBS)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Adds a given output to the receiver.
**Notes:**

output: The reader output to add.

Outputs are created with a reference to one or more AVAssetTrack objects. Adding an output to an asset reader indicates to the reader that it should source from those tracks. The tracks must be owned by the asset returned by the reader's asset property.
You cannot add an output after reading has started.

### 16.5.4 asset as AVAssetMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The asset with which the receiver was initialized. (read-only)
**Notes:** Concrete instances of AVAssetReader with specific AVAssetTrack instances must obtain those tracks

from the asset returned by this property.

### 16.5.5 assetReaderWithAsset(item as AVAssetMBS, byref error as NSErrorMBS) as AVAssetReaderMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an asset reader for reading media data from a specified asset.
**Notes:**

asset: The asset from which media data is to be read.
Error: If initialization of the reader fails, upon return contains an error that describes the problem.

Returns an asset reader, initialized for reading media data from asset.

### 16.5.6 available as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.7 and newer.

### 16.5.7 canAddOutput(output as AVAssetReaderOutputMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns a Boolean value that indicates whether a given output can be added to the receiver.
**Notes:**

output: The reader output to be tested.

Returns true if output can be added to the receiver, otherwise false.
You cannot add an output that reads from a track of an asset other than the asset used to initialize the receiver.

### 16.5.8 cancelReading

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Cancels any background work and prevents the receiver's outputs from reading more samples.
**Notes:** If you want to stop reading samples from the receiver before reaching the end of its time range,

you should call this method to stop any background read ahead operations that the may have been in progress.

### 16.5.9 Constructor(item as AVAssetMBS, byref error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Initializes an asset reader for reading media data from a specified asset.
**Notes:**

asset: The asset from which media data is to be read.
Error: If initialization of the reader fails, upon return contains an error that describes the problem.

### 16.5.10 error as NSErrorMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Describes the error that occurred if the status is AVAssetReaderStatusFailed. (read-only)
**Notes:**

This property is thread safe.

The value of this property describes what caused the reader to no longer be able to read its asset. If the reader's status is not AVAssetReaderStatusFailed, the value of this property is nil.

### 16.5.11 outputs as AVAssetReaderOutputMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The outputs from which clients of reader can read media data. (read-only)
**Notes:** The array contains concrete instances of AVAssetReaderOutput associated with the reader.

### 16.5.12 startReading

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Prepares the receiver for obtaining sample buffers from the asset.
**Notes:**

Returns true if the reader is able to start reading, otherwise false.

This method validates the entire collection of settings for outputs for tracks, for audio mixdown, and for

video composition and initiates reading of all outputs.

status signals the terminal state of the asset reader, and if a failure occurs, error describes the failure.

### 16.5.13 status as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The status of the reading of sample buffers from the asset. (read-only)
**Notes:**

This property is thread safe. For possible values, see "Reader Status Constants."

The value of this property indicates whether reading is in progress, has completed successfully, has been canceled, or has failed. You should check the value of this property copyNextSampleBuffer (AVAssetReader-Output) returns nil to determine why no more samples could be read.

### 16.5.14 Properties

### 16.5.15 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 16.5.16 timeRange as CMTimeRangeMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The time range of the asset that should be read.
**Notes:**

The intersection of the value of this property and CMTimeRangeMake(kCMTimeZero, asset.duration) determines the time range of the asset from which media data will be read.

The default value is CMTimeRangeMake(kCMTimeZero, kCMTimePositiveInfinity). You cannot change the value of this property after reading has started.
(Read and Write computed property)

### 16.5.17 Constants

### 16.5.18 AVAssetReaderStatusCancelled = 4

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the reader's status values.
**Notes:** Indicates that reading was cancelled using cancelReading.

### 16.5.19 AVAssetReaderStatusCompleted = 2

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the reader's status values.
**Notes:** Indicates that the reader has provided all available sample buffers to all of its outputs.

### 16.5.20 AVAssetReaderStatusFailed = 3

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the reader's status values.
**Notes:** Indicates that reading failed.

### 16.5.21 AVAssetReaderStatusReading = 1

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the reader's status values.
**Notes:** Indicates that the reader is ready to provide more sample buffers to its outputs.

### 16.5.22 AVAssetReaderStatusUnknown = 0

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the reader's status values.
**Notes:** Indicates that startReading has not yet been invoked.

## 16.6 class AVAssetReaderOutputMBS

### 16.6.1 class AVAssetReaderOutputMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** AVAssetReaderOutput is an abstract class that defines an interface for reading a single collection of samples of a common media type from an AVAssetReader object.
**Notes:**

There are several subclasses of AVAssetReaderOutput for specific tasks, such as AVAssetReaderTrackOutput or AVAssetReaderVideoCompositionOutput.

You can read the media data of an asset by adding one or more concrete instances of AVAssetReaderOutput to an AVAssetReader object using addOutput.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 16.6.2 Methods

### 16.6.3 available as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.7 and newer.

### 16.6.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 16.6.5 NextSampleBuffer as CMSampleBufferMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Synchronously copies the next sample buffer for the output.
**Notes:**

The output sample buffer, or nil if there are no more sample buffers available for the output within the time range specified by the asset reader's timeRange property.

If this method returns nil, you should check the value of the associated AVAssetReader object's status property to determine why no more samples could be read.

### 16.6.6 Properties

### 16.6.7 alwaysCopiesSampleData as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether the data in buffers gets copied before being vended.
**Notes:**

When the value of this property is true, the output always vends a buffer with copied data—you can freely modify data in such buffers.

When the value of this property is false, the buffers vended may not be copied—such buffers may still be referenced by other entities. The result of modifying a buffer whose data hasn't been copied is undefined. Requesting buffers whose data hasn't been copied when possible can lead to performance improvements.
The default value of this property is true.
Available in OS X v10.8 and later.
(Read and Write property)

### 16.6.8 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 16.6.9 mediaType as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** A string representing the media type of the track (or tracks) represented by the output. (read-only)
**Notes:**

The value of this property is one of the media type strings defined in AVMediaFormat.h.
(Read only property)

### 16.6.10 supportsRandomAccess as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Indicates whether the asset reader output supports reconfiguration of the time ranges to read.
**Notes:**

When the value of this property is true, the time ranges read by the asset reader output can be reconfigured during reading using the -resetForReadingTimeRanges method. This also prevents the attached AVAssetReader from progressing to AVAssetReaderStatusCompleted until markConfigurationAsFinal has been invoked.

The default value is false, which means that the asset reader output may not be reconfigured once reading has begin. When the value of this property is false, AVAssetReader may be able to read media data more efficiently, particularly when multiple asset reader outputs are attached.

This property may not be set after startReading has been called on the attached asset reader.
(Read and Write property)

## 16.7 class AVAssetReaderOutputMetadataAdaptorMBS

### 16.7.1 class AVAssetReaderOutputMetadataAdaptorMBS

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Creates a new timed metadata group adaptor for retrieving timed metadata group objects from an asset reader output.
**Notes:**

assetReaderOutput: An instance of AVAssetReaderTrackOutput that vends sample buffers containing metadata, e.g. an AVAssetReaderTrackOutput object initialized with a track of media type AVMediaTypeMetadata and nil outputSettings.

Returns an instance of AVAssetReaderOutputMetadataAdaptor

It is an error to create a timed metadata group adaptor with an asset reader output that does not vend metadata. It is also an error to create a timed metadata group adaptor with an asset reader output whose asset reader has already started reading, or an asset reader output that already has been used to initialize another timed metadata group adaptor.

Clients should not mix calls to AVAssetReaderTrackOutput.NextSampleBuffer and AVAssetReaderOutputMetadataAdaptor.nextTimedMetadataGroup. Once an AVAssetReaderTrackOutput instance has been used to initialize an AVAssetReaderOutputMetadataAdaptor, calling NextSampleBuffer on that instance will result in an exception being thrown.

Available on Mac OS X 10.10 or newer.

### 16.7.2 Methods

### 16.7.3 assetReaderOutputMetadataAdaptorWithAssetReaderTrackOutput(trackOutput as AVAssetReaderTrackOutputMBS) as AVAssetReaderOutputMetadataAdaptorMBS

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Creates a new timed metadata group adaptor for retrieving timed metadata group objects from an asset reader output.
**Notes:**

Parameter: an instance of AVAssetReaderTrackOutput that vends sample buffers containing metadata, e.g. an AVAssetReaderTrackOutput object initialized with a track of media type AVMediaTypeMetadata and nil outputSettings.

Returns an instance of AVAssetReaderOutputMetadataAdaptor

It is an error to create a timed metadata group adaptor with an asset reader output that does not vend metadata. It is also an error to create a timed metadata group adaptor with an asset reader output whose asset reader has already started reading, or an asset reader output that already has been used to initialize another timed metadata group adaptor.

Clients should not mix calls to AVAssetReaderTrackOutput.NextSampleBuffer and AVAssetReaderOutputMetadataAdaptor.nextTimedMetadataGroup. Once an AVAssetReaderTrackOutput instance has been used to initialize an AVAssetReaderOutputMetadataAdaptor, calling NextSampleBuffer on that instance will result in an exception being thrown.

### 16.7.4 available as boolean

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Should be true on Mac OS X 10.10 and newer.

### 16.7.5 Constructor(trackOutput as AVAssetReaderTrackOutputMBS)

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Creates a new timed metadata group adaptor for retrieving timed metadata group objects from an asset reader output.
**Notes:**

assetReaderOutput: An instance of AVAssetReaderTrackOutput that vends sample buffers containing metadata, e.g. an AVAssetReaderTrackOutput object initialized with a track of media type AVMediaTypeMetadata and nil outputSettings.

Returns an instance of AVAssetReaderTrackOutputTimedMetadataGroupAdaptor

It is an error to create a timed metadata group adaptor with an asset reader output that does not vend metadata. It is also an error to create a timed metadata group adaptor with an asset reader output whose asset reader has already started reading, or an asset reader output that already has been used to initialize another timed metadata group adaptor.

Clients should not mix calls to AVAssetReaderTrackOutput.NextSampleBuffer and AVAssetReaderOutputMetadataAdaptor.nextTimedMetadataGroup. Once an AVAssetReaderTrackOutput instance has been used to initialize an AVAssetReaderOutputMetadataAdaptor, calling NextSampleBuffer on that instance will result in an exception being thrown.

### 16.7.6 nextTimedMetadataGroup as AVTimedMetadataGroupMBS

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Returns the next timed metadata group for the asset reader output, synchronously.
**Notes:**

Returns an instance of AVTimedMetadataGroup, representing the next logical segment of metadata coming from the source asset reader output.

This method will return nil when all timed metadata groups have been read from the asset reader output, or if there is an error that prevents the timed metadata group adaptor from reading more timed metadata groups. When this method returns nil, clients should check the value of the associated AVAssetReader's status property to determine why no more samples could be read.

Before calling this method, you must ensure that the output which underlies the receiver is attached to an AVAssetReader via a prior call to addOutput and that startReading has been called on the asset reader.

### 16.7.7 Properties

### 16.7.8 assetReaderTrackOutput as AVAssetReaderTrackOutputMBS

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** The asset reader track output from which the receiver pulls timed metadata groups.
**Notes:** (Read only property)

### 16.7.9 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

## 16.8 class AVAssetReaderSampleReferenceOutputMBS

### 16.8.1 class AVAssetReaderSampleReferenceOutputMBS

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** AVAssetReaderSampleReferenceOutput is a concrete subclass of AVAssetReaderOutput that defines an interface for reading sample references from a single AVAssetTrack of an AVAssetReader's AVAsset.
**Notes:**

Clients can extract information about the location (file URL and offset) of samples in a track by adding an instance of AVAssetReaderSampleReferenceOutput to an AVAssetReader using the AVAssetReader.addOutput method. No actual sample data can be extracted using this class. The location of the sample data is described by the kCMSampleBufferAttachmentKey_SampleReferenceURL and kCMSampleBufferAttachmentKey_SampleReferenceByteOffset attachments on the extracted sample buffers. More information about sample buffers describing sample references can be found in the CMSampleBuffer documentation.

Sample buffers extracted using this class can also be appended to an AVAssetWriterInput to create movie tracks that are not self-contained and reference data in the original file instead. Currently, only instances of AVAssetWriter configured to write files of type AVFileTypeQuickTimeMovie can be used to write tracks that are not self-contained.

Since no sample data is ever returned by instances of AVAssetReaderSampleReferenceOutput, the value of the alwaysCopiesSampleData property is ignored.

Available on Mac OS X 10.10 or newer.
Subclass of the AVAssetReaderOutputMBS class.

### 16.8.2 Methods

### 16.8.3 assetReaderSampleReferenceOutputWithTrack(track as AVAssetTrackMBS) as AVAssetReaderSampleReferenceOutputMBS

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Returns an instance of AVAssetReaderSampleReferenceOutput for supplying sample references.
**Notes:**

Track: The AVAssetTrack for which the resulting AVAssetReaderSampleReferenceOutput should provide sample references.

Returns an instance of AVAssetReaderSampleReferenceOutput.
The track must be one of the tracks contained by the target AVAssetReader's asset.

### 16.8.4 Constructor(Track as AVAssetTrackMBS)

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** Returns an instance of AVAssetReaderSampleReferenceOutput for supplying sample references.
**Notes:**

Track: The AVAssetTrack for which the resulting AVAssetReaderSampleReferenceOutput should provide sample references.

The track must be one of the tracks contained by the target AVAssetReader's asset.

### 16.8.5 Properties

### 16.8.6 track as AVAssetTrackMBS

MBS AVFoundation Plugin, Plugin Version: 14.4, Platform: macOS, Targets: All.

**Function:** The track from which the receiver extracts sample references.
**Notes:**

The value of this property is an AVAssetTrack owned by the target AVAssetReader's asset.
(Read only property)

## 16.9 class AVAssetReaderTrackOutputMBS

### 16.9.1 class AVAssetReaderTrackOutputMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** AVAssetReaderTrackOutput defines an interface for reading media data from a single AVAsset-Track object of an asset reader's asset.
**Notes:**

You can read the media data of an asset track by adding an instance of AVAssetReaderTrackOutput to an asset reader using the AVAssetReader's addOutput method. The samples in the track can be read in read in the format in which they are stored in the asset, or can be converted to a different format.
Subclass of the AVAssetReaderOutputMBS class.

### 16.9.2 Methods

### 16.9.3 assetReaderTrackOutputWithTrack(track as AVAssetTrackMBS, output-Settings as dictionary) as AVAssetReaderTrackOutputMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an asset reader wrapping a specified track, with optional output settings.
**Notes:**

track: The track from which the reader should source sample buffers.
outputSettings: A dictionary of output settings to be used for sample output. Pass nil to receive samples as stored in the track.
You use keys from one of AVAudioSettings.h, AVVideoSettings.h, or <CoreVideo/CVPixelBuffer.h>, depending on the media type and the output format you want.
Initialization fails if the output settings cannot be used with the specified track.
Those keys are available in AVFoundationMBS class.

### 16.9.4 Constructor(track as AVAssetTrackMBS, outputSettings as dictionary)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Initializes an asset reader to wrap a specified track, with optional output settings.
**Notes:**

track: The track from which the reader should source sample buffers.
outputSettings: A dictionary of output settings to be used for sample output. Pass nil to receive samples as stored in the track.
You use keys from one of AVAudioSettings.h, AVVideoSettings.h, or <CoreVideo/CVPixelBuffer.h>, depending on the media type and the output format you want.

Initialization fails if the output settings cannot be used with the specified track.
Those keys are available in AVFoundationMBS class.

### 16.9.5 outputSettings as dictionary

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The output settings used by the output. (read-only)
**Notes:**

The value is a dictionary that contains values for keys from either AVAudioSettings.h (linear PCM only) for audio tracks or <CoreVideo/CVPixelBuffer.h>for video tracks. A value of nil indicates that the output will return samples in their original format as stored in the target track.
Those keys are available in AVFoundationMBS class.

### 16.9.6 track as AVAssetTrackMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The track from which the receiver reads sample buffers. (read-only)

### 16.9.7 Properties

### 16.9.8 audioTimePitchAlgorithm as string

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The processing algorithm used to manage audio pitch for scaled audio edits.
**Notes:**

The supported constants are defined in Time Pitch Algorithm Settings.
An NSInvalidArgumentException will be raised if this property is set to a value other than the defined constants.
Available in OS X v10.9 and later.
(Read and Write computed property)

## 16.10 class AVAssetReaderVideoCompositionOutputMBS

### 16.10.1 class AVAssetReaderVideoCompositionOutputMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** AVAssetReaderVideoCompositionOutput is a subclass of AVAssetReaderOutput you use to read video frames that have been composited together from the frames in one or more tracks of an AVAssetReader object's asset.
**Notes:**

You can read the video frames composited from one or more asset tracks by adding an instance of AVAssetReaderVideoCompositionOutput to an AVAssetReader object using the addOutput method.
Subclass of the AVAssetReaderOutputMBS class.

### 16.10.2 Methods

### 16.10.3 assetReaderVideoCompositionOutputWithVideoTracks(videoTracks() as AVAssetTrackMBS, videoSettings as dictionary) as AVAssetReaderVideoCompositionOutputMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an instance of AVAssetReaderVideoCompositionOutput for reading composited video from the specified video tracks, using optional video settings.
**Notes:**

videoTracks: An array of AVAssetTrack objects from which the created object should read video frames for compositing.
It is an error to include tracks of media types other than AVMediaTypeVideo.
videoSettings: A dictionary of video settings to be used for sample output, or nil if you want to receive decoded samples in a convenient uncompressed format, with properties determined according to the properties of the specified video tracks.
You use keys from <CoreVideo/CVPixelBuffer.h>, depending on the output format you want.
Initialization will fail if the video settings cannot be used with the specified video tracks.

Return san instance of AVAssetReaderVideoCompositionOutput wrapping videoTracks, using the settings specified by videoSettings, or nil if initialization failed.

### 16.10.4 Constructor(videoTracks() as AVAssetTrackMBS, videoSettings as dictionary)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns an instance of AVAssetReaderVideoCompositionOutput for reading composited video from the specified video tracks, using optional video settings.
**Notes:**

videoTracks: An array of AVAssetTrack objects from which the created object should read video frames for compositing.
It is an error to include tracks of media types other than AVMediaTypeVideo.
videoSettings: A dictionary of video settings to be used for sample output, or nil if you want to receive decoded samples in a convenient uncompressed format, with properties determined according to the properties of the specified video tracks.
You use keys from <CoreVideo/CVPixelBuffer.h>, depending on the output format you want.
Initialization will fail if the video settings cannot be used with the specified video tracks.
In that case handle property will be 0.

### 16.10.5 customVideoCompositor as AVVideoCompositingMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Returns the custom video compositor instance used by the receiver, if any. (read-only)
**Notes:**

The custom video compositor instance that is used during image generation is accessible via this property after the value of videoComposition is set to an AVVideoComposition instance that specifies a custom video compositor class. Any additional communication between the application and that instance of the custom video compositor, if any is required for configuration or other purposes, can only occur once that has happened.

If the value of videoComposition is changed from an AVVideoComposition that specifies a custom video compositor class to another instance of AVVideoComposition that specifies the same custom video compositor class, the instance of the custom video compositor that was previously created will receive the renderContextChanged message and remain in use for subsequent image generation.

This property is nil if there is no video compositor, or if the internal video compositor is in use.
Available in OS X v10.9 and later.

### 16.10.6 videoSettings as dictionary

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The video settings used by the output. (read-only)
**Notes:**

A value of nil indicates that the receiver will return video frames in a convenient uncompressed format, with properties determined according to the properties of the receiver's video tracks.

The dictionary's keys are from <CoreVideo/CVPixelBuffer.h>.

### 16.10.7 videoTracks as AVAssetTrackMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The tracks from which the output reads composited video. (read-only)
**Notes:** The array contains AVAssetTrack objects owned by the target asset reader's asset.

### 16.10.8 Properties

### 16.10.9 videoComposition as AVVideoCompositionMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The video composition to use for the output.
**Notes:**

The value is an AVVideoComposition object that can be used to specify the visual arrangement of video frames read from each source track over the timeline of the source asset.

See AVVideoComposition for options for configuring a video composition.
(Read and Write computed property)

## 16.11 class AVAssetResourceLoaderMBS

### 16.11.1 class AVAssetResourceLoaderMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The asset resource loader class.
**Notes:**

An AVAssetResourceLoader object mediates resource requests from an AVURLAsset object with a delegate object that you provide. When a request arrives, the resource loader asks your delegate if it is able to handle the request and reports the results back to the asset.

You do not create resource loader objects yourself. Instead, you retrieve a resource loader from the resourceLoader property of an AVURLAsset object and use it to assign your custom delegate object.

The delegate you associate with this object must adopt the AVAssetResourceLoaderDelegate protocol. For more information, see AVAssetResourceLoaderDelegate Protocol Reference.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 16.11.2 Methods

### 16.11.3 available as boolean

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.9 and newer.

### 16.11.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 16.11.5 Properties

### 16.11.6 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

## 16.12 class AVAssetResourceLoadingContentInformationRequestMBS

### 16.12.1 class AVAssetResourceLoadingContentInformationRequestMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The AVAssetResourceLoadingContentInformationRequest class represents a query for essential information about a resource referenced by an asset resource loading request.
**Notes:**

The event AVFoundationMBS.resourceLoaderShouldWaitForLoadingOfRequestedResource is invoked and accepts responsibility for loading the resource it must check whether the contentInformationRequest property of the AVAssetResourceLoadingRequest is not nil. Whenever the value is not nil, the request includes a query for the information that AVAssetResourceLoadingContentInformationRequest encapsulates. In response to such queries, the resource loading delegate should set the values of the content information request's properties appropriately before invoking the AVAssetResourceLoadingRequest method finishLoading.

When finishLoading is invoked, the values of the properties of its contentInformationRequest property will, in part, determine how the requested resource is processed. For example, if the requested resource's URL is the URL of an AVURLAsset and contentType is set by the resource loading delegate to a value that the underlying media system doesn't recognize as a supported media file type, operations on the AVURLAsset, such as playback, are likely to fail.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 16.12.2 Methods

### 16.12.3 available as boolean

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.9 and newer.

### 16.12.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 16.12.5 Properties

### 16.12.6 ByteRangeAccessSupported as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** A Boolean value that indicates whether random access to arbitrary ranges of bytes of the resource is supported.
**Notes:**

Before finishing loading an AVAssetResourceLoadingRequest instance, if its contentInformationRequest property is not nil, set the value of this property to true if it supports random access to arbitrary ranges of bytes of the resource.

If this property is not true for resources that must be loaded incrementally, loading of the resource may fail. Such resources include anything that contains media data.

If byte range access is supported portions of the resource can be requested more than once.
Available in OS X v10.9 and later.
(Read and Write property)

### 16.12.7 contentLength as Int64

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The length, in bytes, of the requested resource.
**Notes:**

Before finishing loading an AVAssetResourceLoadingRequest instance, if its contentInformationRequest property is not nil, set the value of the contentLength property to the number of bytes contained by the requested resource.
Available in OS X v10.9 and later.
(Read and Write property)

### 16.12.8 contentType as String

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The UTI that specifies the type of data contained by the requested resource.
**Notes:**

Before finishing loading an AVAssetResourceLoadingRequest instance, if its contentInformationRequest property is not nil, set the value of this property to a UTI indicating the type of data contained by the requested resource.
Available in OS X v10.9 and later.

(Read and Write property)

### 16.12.9 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

## 16.13 class AVAssetResourceLoadingDataRequestMBS

### 16.13.1 class AVAssetResourceLoadingDataRequestMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Use the AVAssetResourceLoadingDataRequest class to request data from a resource referenced by an AVAssetResourceLoadingRequest instance.
**Notes:**

The AVAssetResourceLoaderDelegate uses the AVAssetResourceLoadingDataRequest class to do the actual data reading, and its methods will be invoked, as necessary, to acquire data for the AVAssetResourceLoadingRequest instance.

When the resource loading delegate, which implements the AVAssetResourceLoaderDelegate protocol, receives an instance of AVAssetResourceLoadingRequest as the second parameter of the delegate's resourceLoader:shouldWaitForLoadingOfRequestedResource: method, it has the option of accepting responsibility for loading the referenced resource. If it accepts that responsibility, by returning YES, it must check whether the dataRequest property of the AVAssetResourceLoadingRequest instance is not nil. If it is not nil, the resource loading delegate is informed of the range of bytes within the resource that are required by the underlying media system. In response, the data is provided by one or more invocations of respondWithData: as required to provide the requested data. The data can be provided in increments determined by the resource loading delegate according to convenience or efficiency.

When the AVAssetResourceLoadingRequest method finishLoading is invoked, the data request is considered fully satisfied. If the entire range of bytes requested has not yet been provided, the underlying media system assumes that the resource's length is limited to the provided content.

Available in OS X v10.9 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 16.13.2 Methods

### 16.13.3 available as boolean

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Whether this class is available.

### 16.13.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 16.13.5 respondWithData(data as MemoryBlock)

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Provides data to the loading request.
**Notes:**

data: An instance of NSData containing some or all of the requested bytes.

This method may be invoked multiple times on the same instance of AVAssetResourceLoadingDataRequest to provide the full range of requested data incrementally. Upon each invocation, the value of the currentOffset property is updated to match the amount of data provided.

Available in OS X v10.9 and later.

### 16.13.6 Properties

### 16.13.7 currentOffset as Integer

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The position within the resource of the next byte. (read-only)
**Notes:**

When incrementally loading data you should begin loading at this offset, returning the data by invoking the respondWithData: method. Bytes previous to this value have already been provided.

Available in OS X v10.9 and later.
(Read only property)

### 16.13.8 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 16.13.9 requestedLength as Int64

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The length, in bytes, of the data requested. (read-only)
**Notes:**

If the content length of the resource is unknown, the sum of the requestedLength and requestedOffset properties may be greater than the actual content length. When this situation occurs, an application must attempt to provide as much of the requested data beginning at the requestedOffset property as the resource contains. The application must then invoke either the AVAssetResourceLoadingRequest instance's finishLoading method upon success, or the finishLoadingWithError: method if an error is encountered during the loading.
Available in OS X v10.9 and later.
(Read only property)

### 16.13.10 requestedOffset as Int64

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The position within the resource of the first byte requested. (read-only)
**Notes:**

When all of the requested bytes that can be provided have been loaded—including the possible contentInformationRequest data in the AVAssetResourceLoadingRequest instance that contains the receiver—the delegate should respond by invoking finishLoading.

If the requestedOffset value is beyond the content length of the resource, the AVAssetResourceLoadingRequest instance is sent a finishLoading message without any prior invocations of respondWithData.
Available in OS X v10.9 and later.
(Read only property)

## 16.14 class AVAssetResourceLoadingRequestMBS

### 16.14.1 class AVAssetResourceLoadingRequestMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** An AVAssetResourceLoadingRequest object encapsulates information about a resource request issued from a resource loader object.
**Notes:**

When an AVURLAsset object needs help loading a resource, it asks its AVAssetResourceLoader object to assist. The resource loader encapsulates the request information by creating an instance of this object, which it then hands to its delegate object for processing. The delegate uses the information in this object to perform the request and report on the success or failure of the operation.
Available on Mac OS X 10.9 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 16.14.2 Methods

### 16.14.3 available as boolean

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Whether this class is available.

### 16.14.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 16.14.5 finishLoading

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Causes the receiver to treat the processing of the request as complete.
**Notes:**

If a dataRequest is present and the resource does not contain the full extent of the data that has been requested according to the values of the requestedOffset and requestedLength properties of the request, invoke finishLoading after providing as much of the requested data as the resource contains.

Available in OS X v10.9 and later.
See also:

- 16.14.6 finishLoading(error as NSErrorMBS) 3684

### 16.14.6 finishLoading(error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Causes the receiver to handle the failure to load a resource for which a resource loader's delegate took responsibility.
**Notes:**

error: An error object indicating the reason for the failure.
When a resource loader's delegate takes responsibility for loading a resource, it calls this method when a failure occurred when loading the resource. This method marks the loading request as finished and notifies the resource loader object that the resource could not be loaded.
Available in OS X v10.9 and later.
See also:

- 16.14.5 finishLoading 3683

### 16.14.7 streamingContentKeyRequestDataForApp(appIdentifier as Memoryblock, contentIdentifier as Memoryblock, options as Dictionary, byref error as NSErrorMBS) as Memoryblock

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Obtains key request data for a specific combination of application and content.
**Notes:**

appIdentifier: An opaque content identifier for the application. The value of this identifier depends on the particular system used to provide the decryption key.
contentIdentifier: An opaque identifier for the content. The value of this identifier depends on the particular system used to provide the decryption key.
options: Additional information necessary to obtain the key, or nil if no additional information is required.
Error: If an error occurs while obtaining the streaming content key, the pointer is set to an appropriate error object on output.

Returns the key request data that must be transmitted to the key vendor to obtain the content key.
Available in OS X v10.9 and later.

### 16.14.8 Properties

### 16.14.9 contentInformationRequest as AVAssetResourceLoadingContentInformationRequestMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Information about the requested resource. (read-only)
**Notes:**

An instance of AVAssetResourceLoadingContentInformationRequest that you populate with information about the resource. The value of this property is nil if no such information is being requested.
Available in OS X v10.9 and later.
(Read only property)

### 16.14.10 dataRequest as AVAssetResourceLoadingDataRequestMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The range of requested resource data. (read-only)
**Notes:**

An instance of AVAssetResourceLoadingDataRequest that indicates the range of resource data that's being requested. The value of this property is nil if no data is being requested.
Available in OS X v10.9 and later.
(Read only property)

### 16.14.11 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 16.14.12 isCancelled as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** A Boolean value that indicates whether the request has been cancelled. (read-only)
**Notes:**

True when the resource loader cancels the loading of a request, just prior to sending the message resourceLoaderDidCancelLoadingRequest to the delegate.

(Read only property)

### 16.14.13 isFinished as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** A Boolean value that indicates whether loading of the resource has finished. (read-only)
**Notes:**

The value of this property is NO initially. The value changes to YES when the delegate object handling the request calls the finishLoadingWithResponse or finishLoadingWithError method.
Available in OS X v10.9 and later.
(Read only property)

### 16.14.14 redirect as Variant

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** An URL request instance if the loading request was redirected.
**Notes:**

Value is NSURLRequestMBS.
Set this property to an instance of NSURLRequest indicating a redirection of the loading request to another URL.
If no redirection is needed, the value of this property must be nil, which is the default.
Available in OS X v10.9 and later.
(Read only property)

### 16.14.15 request as Variant

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The URL request object for the resource. (read-only)
**Notes:**

Value is NSURLRequestMBS.
Use the value in this property to identify the requested resource and to formulate an appropriate response object.
Available in OS X v10.9 and later.
(Read only property)

### 16.14.16 response as Variant

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The URL response for the loading request.
**Notes:**

Value is NSURLResponseMBS.
The value of this property to an instance of NSURLResponse, indicating a response to the loading request.
If no response is needed, the value of this property is nil.
Available in OS X v10.9 and later
(Read only property)

## 16.15 class AVAssetTrackGroupMBS

### 16.15.1 class AVAssetTrackGroupMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The AVAssetTrackGroup class encapsulates a single group of related tracks in an asset.
**Notes:**

Instances of AVAssetTrackGroup describe a single group of related alternate tracks, only one of which should be played at a time. Groups of alternate tracks typically contain variations of the same content, such as subtitles in multiple translations.

Clients can inspect the track groups contained in an asset (AVAsset) instance by loading and obtaining the value of the asset's trackGroups property.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 16.15.2 Methods

### 16.15.3 available as boolean

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.9 and newer.

### 16.15.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 16.15.5 copy as AVAssetTrackGroupMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Creates a copy of the track group.

### 16.15.6 trackIDs as Integer()

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The IDs of the tracks in the group. (read-only)
**Notes:**

The value of this property is an array of NSNumber instances that are interpreted as CMPersistentTrackID values, one for each track in the group.
Available in OS X v10.9 and later.

### 16.15.7 Properties

### 16.15.8 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

## 16.16 class AVAssetTrackMBS

### 16.16.1 class AVAssetTrackMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** An AVAssetTrack object provides provides the track-level inspection interface for all assets.
**Notes:**

AVAssetTrack adopts the AVAsynchronousKeyValueLoading protocol. You should use methods in the protocol to access a track's properties without blocking the current thread. To cancel load requests for all keys of AVAssetTrack you must message the parent AVAsset object (for example, [ track.asset cancelLoading ] ). This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 16.16.2 Blog Entries

- Automated video editing with Xojo
- MBS Xojo / Real Studio Plugins, version 15.4pr1

### 16.16.3 Blog Entries

- Automated video editing with Xojo
- MBS Xojo / Real Studio Plugins, version 15.4pr1

### 16.16.4 Methods

### 16.16.5 associatedTracksOfType(trackAssociationType as string) as AVAssetTrackMBS()

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** An array containing other tracks associated with the track using the specified association type.
**Notes:**

trackAssociationType: The association type for which associated tracks are requested.

Returns an array of AVAssetTrack objects associated with the track by trackAssociationType. May be empty if no tracks are associated through the specified association type.

You can call this method without blocking after availableTrackAssociationTypes has been loaded.
Available in OS X v10.9 and later.

### 16.16.6 available as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.7 and newer.

### 16.16.7 availableMetadataFormats as string()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** An array containing the metadata formats available for the track. (read-only)
**Notes:** The array contains String objects, one for each metadata format that's available for the track (such as QuickTime user data). For possible values, see AVMetadataItem.

### 16.16.8 availableTrackAssociationTypes as string()

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** An array of association types used to associate other tracks with the track. (read-only)
**Notes:**

The array contains strings, one for each type of association for which the track has associated tracks. For possible values, see "Track Association Types" in Apple's documentation.
Available in OS X v10.9 and later.

### 16.16.9 commonMetadata as AVMetadataItemMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** An array of AVMetadataItem objects for each common metadata key for which a value is available. (read-only)

### 16.16.10 Constructor

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 16.16.11 copy as AVAssetTrackMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Creates a copy of the object.

### 16.16.12 formatDescriptions as CMFormatDescriptionMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The formats of media samples referenced by the track. (read-only)
**Notes:** The array contains CMFormatDescriptions, each of which indicates the format of media samples referenced by the track. A track that presents uniform media (for example, encoded according to the same encoding settings) will provide an array with a count of 1.

### 16.16.13 hasMediaCharacteristic(mediaCharacteristic as string) as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns a Boolean value that indicates whether the track references media with the specified media characteristic.
**Notes:**

mediaCharacteristic: The media characteristic of interest.
For possible values, see "Media Characteristics" in AV Foundation Constants Reference, for example AVMediaCharacteristicVisual, AVMediaCharacteristicAudible, or AVMediaCharacteristicLegible.

Returns true if the track references media with the specified characteristic, otherwise false.

### 16.16.14 loadValuesAsynchronouslyForKeys(keys() as string, tag as Variant = nil)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Tells the asset to load the values of any of the specified keys that are not already loaded.
**Notes:**

keys: An array containing the required keys.

Calls AVFoundationMBS.AssetTrackLoadValuesAsynchronouslyForKeysFinished on completion.
The completion event will be invoked exactly once per invocation of this method:

- Synchronously if an I/O error or other format-related error occurs immediately.
- Asynchronously at a subsequent time if a loading error occurs at a later stage of processing, or if cancelLoading is invoked on an AVAsset instance.

The completion states of the keys you specify in keys are not necessarily the same—some may be loaded, and others may have failed. You must check the status of each key individually.

If you want to receive error reporting for loading that's still pending, you can call this method at any time—even after an asset has begun to load data for operations in progress or already completed. If a fatal error has already occurred, the completion event is invoked synchronously.

### 16.16.15 metadataForFormat(Format as string) as AVMetadataItemMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** An array of metadata items, one for each metadata item in the container of the specified format.
**Notes:**

format: The metadata format for which items are requested.

Returns an array of AVMetadataItem objects, one for each metadata item in the container of the format specified by format, or empty array if there is no metadata of the specified format.

You can call this method without blocking after availableMetadataFormats has been loaded.

### 16.16.16 preferredTransform as CGAffineTransformMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The transform specified in the track's storage container as the preferred transformation of the visual media data for display purposes. (read-only)
**Notes:** The value of this property is often, but not always, CGAffineTransformIdentity.

### 16.16.17 samplePresentationTimeForTrackTime(trackTime as CMTimeMBS) as CMTimeMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Maps the specified track time through the appropriate time mapping and returns the resulting sample presentation time.
**Notes:**

trackTime: The track time for which a sample presentation time is requested.
Returns the sample presentation time corresponding to trackTime; the value will be invalid if trackTime is out of range.

### 16.16.18 segmentForTrackTime(trackTime as CMTimeMBS) as AVAssetTrackSegmentMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The track segment that corresponds to the specified track time.
**Notes:**

trackTime: The track time for which you want the segment.
Returns the track segment from the segments array that corresponds to trackTime, or nil if trackTime is out of range.

### 16.16.19 segments as AVAssetTrackSegmentMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The time mappings from the track's media samples to the timeline of the track. (read-only)
**Notes:**

The array contains instances of AVAssetTrackSegment.

Empty edits (that is, time ranges for which no media data is available to be presented) have source.start and source.duration equal to kCMTimeInvalid.

### 16.16.20 statusOfValueForKey(key as string, byref error as NSErrorMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Reports whether the value for a given key is immediately available without blocking. (required)
**Notes:**

key: The key whose status you want.
error: If the status of the value for the key is AVKeyValueStatusFailed, upon return contains an NSError object that describes the failure that occurred.

Returns the current loading status of the value for key. For possible values, see "Protocol Methods."

You use this method to determine the availability of the value for a key. This method does not cause an asset to load the value of a key that's not yet available. To request values for keys that may not already be loaded without blocking, use loadValuesAsynchronouslyForKeys and wait for invocation of the completion handler to be informed of availability.

### 16.16.21 timeRange as CMTimeRangeMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The time range of the track within the overall timeline of the asset. (read-only)
**Notes:** A track with CMTimeCompare(timeRange.start, kCMTimeZero) == 1 will initially present an empty time range.

### 16.16.22 trackSamples(formatOptions as Dictionary) as MemoryBlock

MBS AVFoundation Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

**Function:** Queries the track Samples
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.m4v")
dim a as AVAssetMBS = AVAssetMBS.assetWithFile(f)
dim tracks() as AVAssetTrackMBS = a.tracksWithMediaType(AVFoundationMBS.AVMediaTypeAudio)
dim track as AVAssetTrackMBS = tracks(0)

dim d as new Dictionary
dim n as Integer = OSTypeFromStringMBS(AVFoundationMBS.kAudioFormatLinearPCM)
d.Value(AVFoundationMBS.AVFormatIDKey) = n
d.Value(AVFoundationMBS.AVLinearPCMBitDepthKey) = 16
d.Value(AVFoundationMBS.AVLinearPCMIsBigEndianKey) = false
d.Value(AVFoundationMBS.AVLinearPCMIsFloatKey) = false
d.Value(AVFoundationMBS.AVLinearPCMIsNonInterleaved) = false

dim SampleData as MemoryBlock = track.trackSamples(d)

window1.Backdrop = RenderSamplesMBS(SampleData, SampleData.Size / 2, 1, window1.Width, window1.Height,
1, & c88B5C4, & c274C5A, & c203F4E, 15)
```

**Notes:**

Returns nil in case of errors.
Track should be an audio or muxed track.

### 16.16.23 Properties

### 16.16.24 asset as AVAssetMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The asset of which the track is a part. (read-only)
**Notes:** (Read only property)

### 16.16.25 estimatedDataRate as Double

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The estimated data rate of the media data referenced by the track, in bits per second. (read-only)
**Notes:** (Read only property)

### 16.16.26 extendedLanguageTag as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The language tag associated with the track, as an RFC 4646 language tag. (read-only)
**Notes:**

The value may be nil if no language tag is indicated.
(Read only property)

### 16.16.27 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 16.16.28 isEnabled as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether the track is enabled according to state stored in its container or construct. (read-only)
**Notes:** (Read only property)

### 16.16.29 isPlayable as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether the track is playable in the current environment. (read-only)
**Notes:**

If the value of this property is true, an AVPlayerItemTrack of an AVPlayerItem initialized with the the track's asset can be enabled for playback.
Available in OS X v10.8 and later.
(Read only property)

### 16.16.30 isSelfContained as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether the track references sample data only within its storage container. (read-only)
**Notes:**

The value is true if the track references sample data only within its storage container, otherwise it is false.
(Read only property)

### 16.16.31 languageCode as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The language associated with the track, as an ISO 639-2/T language code. (read-only)
**Notes:**

The value may be "" if no language is indicated.
(Read only property)

### 16.16.32 mediaType as string

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The media type for the track. (read-only)
**Notes:**

For possible values, see "Media Types" in AV Foundation Constants Reference.
(Read only property)

### 16.16.33 naturalSize as CGSizeMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The natural dimensions of the media data referenced by the track. (read-only)
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.m4v")
dim m as new AVMovieMBS(f, nil)

dim videotracks() as AVMovieTrackMBS = m.movieTracksWithMediaCharacteristic(AVFoundationMBS.AVMediaCharacteristicFrameBased)

for each videotrack as AVMovieTrackMBS in videotracks
dim s as CGSizeMBS = videotrack.naturalSize
MsgBox str(s.Width)+" x "+ str(s.Height)
next
```

**Notes:** (Read only property)

### 16.16.34 naturalTimeScale as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** A timescale in which time values for the track can be operated upon without extraneous numerical conversion. (read-only)
**Notes:** (Read only property)

### 16.16.35 nominalFrameRate as Double

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The frame rate of the track, in frames per second. (read-only)
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.mp4")
dim a as AVAssetMBS = AVAssetMBS.assetWithFile(f)
dim tracks() as AVAssetTrackMBS = a.tracksWithMediaCharacteristic(AVFoundationMBS.AVMediaCharacteristicFrameBased)

for each t as AVAssetTrackMBS in tracks
MsgBox str(t.nominalFrameRate)
next
```

**Notes:** (Read only property)

### 16.16.36 preferredVolume as Double

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The volume specified in the track's storage container as the preferred volume of the audible media data. (read-only)
**Notes:** (Read only property)

### 16.16.37 totalSampleDataLength as Int64

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The total number of bytes of sample data required by the track. (read-only)
**Notes:** (Read only property)

### 16.16.38 trackID as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The persistent unique identifier for this track of the asset. (read-only)
**Notes:** (Read only property)

### 16.16.39 Constants

### 16.16.40 AVKeyValueStatusCancelled = 4

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the load status of a property.
**Notes:** Indicates that the attempt to load the property was cancelled.

### 16.16.41 AVKeyValueStatusFailed = 3

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the load status of a property.
**Notes:** Indicates that the attempt to load the property failed.

### 16.16.42 AVKeyValueStatusLoaded = 2

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the load status of a property.
**Notes:** Indicates that the property is ready for use.

### 16.16.43 AVKeyValueStatusLoading = 1

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the load status of a property.
**Notes:** Indicates that the property is not fully loaded.

### 16.16.44 AVKeyValueStatusUnknown = 0

MBS AVFoundation Plugin, Plugin Version: 13.2.

**Function:** One of the constants to indicate the load status of a property.
**Notes:** Indicates that the property status is unknown.

## 16.17 class AVAssetTrackSegmentMBS

### 16.17.1 class AVAssetTrackSegmentMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** An AVAssetTrackSegment object represents a segment of an AVAssetTrack object, comprising of a time mapping from the source to the asset track timeline.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 16.17.2 Methods

### 16.17.3 available as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.7 and newer.

### 16.17.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 16.17.5 isEmpty as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Indicates whether the segment is an empty segment (read-only)
**Notes:** True if the segment is empty, otherwise false.

### 16.17.6 timeMapping as CMTimeMappingMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The time range of the track of the container file of the media presented by the segment. (read-only)

### 16.17.7 Properties

### 16.17.8 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

## 16.18 class AVAssetWriterInputGroupMBS

### 16.18.1 class AVAssetWriterInputGroupMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The AVAssetWriterInputGroup class associates tracks corresponding to inputs with each other in a mutually exclusive relationship.
**Notes:**

This class is used to associate tracks corresponding to multiple AVAssetWriterInput instances as mutually exclusive to each other for playback or other processing.

For example, if you are creating an asset with multiple audio tracks using different spoken languages–and only one track should be played at a time–group the inputs corresponding to those tracks into a single instance of AVAssetWriterInputGroup and add the group to the AVAssetWriter instance using the AVAssetWriter method addInputGroup:. If the output format supports mutually exclusive relationships among tracks, the AVAssetWriter marks the tracks as mutually exclusive to each other.

Because the AVAssetWriterInputGroup class is a subclass of the AVMediaSelectionGroup class, clients can examine the media selection options that are available on the output asset before the asset is written. The best results for examining the options of the AVAssetWriterInputGroup are obtained after associating the AVAssetWriterInput instances of the AVAssetTrack objects as appropriate using the AVAssetWriterInput method addTrackAssociationWithTrackOfInput and by initializing each AVAssetWriterInput with a source format hint, where appropriate.
Subclass of the AVMediaSelectionGroupMBS class.

### 16.18.2 Methods

### 16.18.3 assetWriterInputGroupWithInputs(inputs() as AVAssetWriterInputMBS, defaultInput as AVAssetWriterInputMBS) as AVAssetWriterInputGroupMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Creates and initializes an instance of an asset writer input group.
**Notes:**

inputs: An array of AVAssetWriterInput instances to be grouped together.
defaultInput: The instance of AVAssetWriterInput to designate as the default input for the group.

Returns an initialized instance of AVAssetWriterInputGroup.
When the input group is added to an AVAssetWriter instance using the addInputGroup: method, the AVAssetWriterInput property marksOutputTrackAsEnabled is automatically set to true for defaultInput and false for all of the other inputs in the group.

Available in OS X v10.9 and later.

### 16.18.4 Constructor(inputs() as AVAssetWriterInputMBS, defaultInput as AVAssetWriterInputMBS)

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Initializes an instance of an asset writer input group.
**Notes:**

inputs: An array of AVAssetWriterInput instances to be grouped together.
defaultInput: The instance of AVAssetWriterInput to designate as the default input for the group.

Returns an initialized instance of AVAssetWriterInputGroup.

When the input group is added to an AVAssetWriter instance using the addInputGroup method, the AVAssetWriterInput property marksOutputTrackAsEnabled is automatically set to true for defaultInput and false for all of the other inputs in the group.
Available in OS X v10.9 and later.

### 16.18.5 inputs as AVAssetWriterInputMBS()

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The the inputs array. (read-only)
**Notes:** Available in OS X v10.9 and later.

### 16.18.6 Properties

### 16.18.7 defaultInput as AVAssetWriterInputMBS

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** The the default input object. (read-only)
**Notes:**

Available in OS X v10.9 and later.
(Read only property)

## 16.19 class AVAssetWriterInputMBS

### 16.19.1 class AVAssetWriterInputMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** You use an AVAssetWriterInput to append media samples packaged as CMSampleBuffer objects, or collections of metadata, to a single track of the output file of an AVAssetWriter object.
**Notes:**

When there are multiple inputs, AVAssetWriter tries to write media data in an ideal interleaving pattern for efficiency in storage and playback. Each of its inputs signals its readiness to receive media data for writing according to that pattern via the value of readyForMoreMediaData. If readyForMoreMediaData is true, an input can accept additional media data while maintaining appropriate interleaving. If media data is appended to an input after readyForMoreMediaData becomes false, AVAssetWriter may need to write media data to its output without regard for ideal interleaving.

You can only append media data to an input while its readyForMoreMediaData property is true.

- If you're writing media data from a non-real-time source, such as an instance of AVAssetReader, you should hold off on generating or obtaining more media data to append to an input when the value of readyForMoreMediaData is false. To help with control of the supply of non-real-time media data, you can use requestMediaDataWhenReadyOnQueue:usingBlock: to specify a block that the input should invoke whenever it's ready for input to be appended.
- If you're writing media data from a real-time source, you should set the input's expectsMediaDataInRealTime property to true to ensure that the value of readyForMoreMediaData is calculated appropriately. When expectsMediaDataInRealTime is true, readyForMoreMediaData will become false only when the input cannot process media samples as quickly as they are being provided by the client. If readyForMoreMediaData becomes false for a real-time source, the client may need to drop samples or consider reducing the data rate of appended samples.

The value of readyForMoreMediaData will often change from false to true asynchronously, as previously-supplied media data is processed and written to the output. It is possible for all of an asset writer's inputs temporarily to return false for readyForMoreMediaData.

### 16.19.2 Xojo Developer Magazine

- 12.2, page 47: Moving to AVFoundation, Leaving QuickTime behind by Christian Schmitz

### 16.19.3 Xojo Developer Magazine

- 12.2, page 47: Moving to AVFoundation, Leaving QuickTime behind by Christian Schmitz

### 16.19.4 Methods

### 16.19.5 addTrackAssociationWithTrackOfInput(input as AVAssetWriterInputMBS, trackAssociationType as string)

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Associates the track corresponding to the specified input with the track corresponding with the receiver.
**Notes:**

input: The instance of AVAssetWriterInput with a corresponding track to associate with track corresponding with the receiver.
trackAssociationType: The type of track association to add. Common track association types, such as AVTrackAssociationTypeTimecode are defined in Track Association Types.

If the type of association requires tracks of specific media types that don't match the media types of the inputs, or if the output file type does not support track associations, an NSInvalidArgumentException is raised.

Note: Track associations cannot be added after writing on the receiver's AVAssetWriter instance has started.
Available in OS X v10.9 and later.

### 16.19.6 appendSampleBuffer(sampleBuffer as CMSampleBufferMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Appends samples to the receiver.
**Notes:**

sampleBuffer: The CMSampleBuffer to be appended.

Returns true if sampleBuffer as appended successfully, otherwise false.

The timing information in the sample buffer, considered relative to the time passed to the asset writer's startSessionAtSourceTime: will be used to determine the timing of those samples in the output file.

Do not modify sampleBuffer or its contents after you have passed it to this method.

### 16.19.7 assetWriterInputWithMediaType(MediaType as string, outputSettings as dictionary = nil) as AVAssetWriterInputMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns a new input of the specified media type to receive sample buffers for writing to the output file.
**Notes:**

mediaType: The media type of samples that will be accepted by the input.
Media types are defined in AVMediaFormat.h.
outputSettings: The settings used for encoding the media appended to the output. Pass nil to specify that appended samples should not be re-encoded.
Audio output settings keys are defined in AVAudioSettings.h. Video output settings keys are defined in AVVideoSettings.h. Video output settings with keys from <CoreVideo/CVPixelBuffer.h>are not currently supported.

Returns a new input of the specified media type to receive sample buffers for writing to the output file.

Each new input accepts data for a new track of the asset writer's output file. You add an input to an asset writer using the AVAssetWriter method addInput:.

Passing nil for outputSettings instructs the input to pass through appended samples, doing no processing before they are written to the output file. This is useful if, for example, you are appending buffers that are already in a desirable compressed format. However, passthrough is currently supported only when writing to QuickTime Movie files (i.e. the AVAssetWriter was initialized with AVFileTypeQuickTimeMovie). For other file types, you must specify non-nil output settings.
See also:

- 16.19.8 assetWriterInputWithMediaType(MediaType as string, outputSettings as dictionary, sourceFormatHint as CMFormatDescriptionMBS) as AVAssetWriterInputMBS 3707

### 16.19.8 assetWriterInputWithMediaType(MediaType as string, outputSettings as dictionary, sourceFormatHint as CMFormatDescriptionMBS) as AVAssetWriterInputMBS

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Returns a new input of the specified media type to receive sample buffers for writing to the output file.
See also:

- 16.19.7 assetWriterInputWithMediaType(MediaType as string, outputSettings as dictionary = nil) as AVAssetWriterInputMBS 3706

### 16.19.9 available as boolean

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.7 and newer.

### 16.19.10 canAddTrackAssociationWithTrackOfInput(input as AVAssetWriterInputMBS, trackAssociationType as string) as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Whether an association between the tracks corresponding to a pair of inputs is valid.
**Notes:**

input: The instance of AVAssetWriterInput with a corresponding track to associate with track corresponding with the receiver.
trackAssociationType: The type of track association to test. Common track association types, such as AVTrackAssociationTypeTimecode are defined in Track Association Types.

Returns true if the track association can be added; otherwise false.

If the type of association requires tracks of specific media types that don't match the media types of the inputs, or if the output file type does not support track associations, returns NO.
Available in OS X v10.9 and later.

### 16.19.11 Constructor(MediaType as string, outputSettings as dictionary = nil)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Initialized a new input of the specified media type to receive sample buffers for writing to the output file.
**Notes:**

mediaType: The media type of samples that will be accepted by the input.
Media types are defined in AVMediaFormat.h.
outputSettings: The settings used for encoding the media appended to the output. Pass nil to specify that appended samples should not be re-encoded.
Audio output settings keys are defined in AVAudioSettings.h. Video output settings keys are defined in AVVideoSettings.h. Video output settings with keys from <CoreVideo/CVPixelBuffer.h>are not currently supported.

Returns an input of the specified media type initialized to receive sample buffers for writing to the output file.

Each new input accepts data for a new track of the asset writer's output file. You add an input to an asset writer using the AVAssetWriter method addInput:.

Passing nil for outputSettings instructs the input to pass through appended samples, doing no processing before they are written to the output file. This is useful if, for example, you are appending buffers that are already in a desirable compressed format. However, passthrough is currently supported only when writing to QuickTime Movie files (i.e. the AVAssetWriter was initialized with AVFileTypeQuickTimeMovie). For other file types, you must specify non-nil output settings.
See also:

- 16.19.12 Constructor(MediaType as string, outputSettings as dictionary, sourceFormatHint as CMFormatDescriptionMBS) 3709

### 16.19.12 Constructor(MediaType as string, outputSettings as dictionary, sourceFormatHint as CMFormatDescriptionMBS)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Initialized a new input of the specified media type to receive sample buffers for writing to the output file.
See also:

- 16.19.11 Constructor(MediaType as string, outputSettings as dictionary = nil) 3708

### 16.19.13 markAsFinished

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Tells the writer that no more buffers will be appended to this input.
**Notes:** If you are monitoring each input's expectsMediaDataInRealTime value to keep the output file well interleaved, it is important to call this method when you have finished adding buffers to a track. This is necessary to prevent other inputs from stalling, as they may otherwise wait forever for that input's media data, attempting to complete the ideal interleaving pattern.

### 16.19.14 metadata as AVMetadataItemMBS()

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The collection of track-level metadata for association with the asset and for carriage in the output file.
**Notes:**

The array contains AVMetadataItem objects representing the collection of track-level metadata to be written in the output file.
See also setMetadata method.

### 16.19.15 outputSettings as dictionary

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** The settings used for encoding the media appended to the output. (read-only)
**Notes:** A value of nil specifies that appended samples should not be re-encoded.

### 16.19.16 requestMediaDataWhenReadyOnQueue(assetWriterInput as AVAssetWriterInputMBS, AssetReaderOutput as AVAssetReaderOutputMBS, tag as Variant = nil)

MBS AVFoundation Plugin, Plugin Version: 13.2, Platform: macOS, Targets: All.

**Function:** Instructs the receiver to invoke an event repeatedly, at its convenience, in order to gather media data for writing to the output.
**Notes:**

This is a special version of that method where the plugin does the required work.
The plugin provides the block to do the work to copy samples from input to output.
